The work of Mr. William Strang, with its occasional hideousness and its frequent intensity, remains what it has been for some years past—one of the most interesting puzzles that are presented by modern art. The task, I confess, is quite beyond me, to define in a few lines how it is that Mr. Strang is felt to be so distinctly original, so stimulating to the imagination of the beholder, while at the same time he is full of methods that are frankly imitative, sometimes even of a vision of life that is quite obviously "derived." Did anyone ever yet impress us so much, who all the while reminded us of so many of his forerunners? It is this that presents the difficulty, and this too is the cause of the divergence of opinion that exists about him in the minds of educated men. He must appeal only to the imaginative—to those who are enabled in some degree to follow the line of his fancy, while recognising as clearly as do the opponents of his work how much in it is Rembrandt, and how much is Legros, and how much in it is an ugliness which even with the utmost industry he can have learnt from neither. Of his many plates this year I have time to mention but two or three in the course of this present writing. "The Sick Tinker" is a Legros too simply; it would never have been but for "La Mort du Vagabond." "Old Clothes" is a Rembrandt *manqué*. "Drowned" and "Castaways" are both of them informed with a great imagination; each being as different as it is possible to be from the usual melodramatic treatment of similar subjects; each being conceived with vividness and intensity, so that they impress themselves upon the mind of the beholder and force him to believe in their truth.

Mr. Frank Short's work is obviously less open to cavil or criticism than that of Mr. Strang. Not that the people who are able to perceive its daintiness are able, necessarily, to see also its technical excellence, or even the decisiveness and directness of its draughtsmanship. But yet it speaks to them at once, a plain word that they can understand. The "Timber Ship" at Conway—dinner-time, high noon—is the best of Mr. Short's work this year. It is of singular charm and thoroughness. Elsewhere—whatever a first hasty survey may have led me to believe—he is, in his work of the present season, not quite so interesting as in that of last year. May the hope be expressed fervently that he will not permit those commissions which must crowd upon him for work of translation, to interfere unduly with the prosecution of original labour. An artist like Mr. Short—however grateful we may be to him for such an exquisite little mezzotint as that in which he

has spread far and wide the knowledge of a sketch by Constable—owes it to himself to secure for original work some of those months of the year in which his labour is likely to be freshest and most vigorous.

Mr. Jacomb-Hood, Mr. Wilfrid Ball, Mr. Charles Robertson of the Old Water-Colour Society, Mr. Percy Thomas, Mr. W. Holmes May, Mr. Niven, Colonel Goff, and others contribute agreeable and often individual work, in the methods general proper to etching, while plates of easily recognised importance come from Mr. Axel Haig and the Messrs. Slocombe. Mr. T. C. Farrer sends more than one impressive mezzotint, and it is mezzotint also that engages another landscape man, Mr. Finnie. But we will go back again to the pure etchings, that no injustice may be done to artists like Mr. Cameron, Mr. Inigo Thomas, Mr. Oliver Hall, and Mr. Charles Holroyd. Though Mr. Cameron's work bears traces—bears great marks—of the influence of Mr. Whistler and of Mr. Frank Short, and does this, not alone in the treatment, but likewise in the selection of theme, it has yet signs of individuality. "Old Houses, Greenock" (a wharfside with planks floating up to the quay) is one of his best coppers. Mr. Inigo Thomas is an architectural draughtsman, who unites solidity with delicacy—pictorial effect with the evidence of adequate learning. The silvery little plate of "St. Rhadegonde, Poitiers," is, perhaps, the least ambitious, but, perhaps, the most complete of his contributions. It is most legitimately dainty. Mr. Oliver Hall and Mr. Holroyd both of them display the influence of old masters and of great contemporaries; but so long as their work is not servile imitation, and it certainly never is, could we wish such influence away? We say that both of these etchers have studied the earlier classics of design, as writers study, and are bound to study, the classics of literature. Among contemporaries, it is Mr. Seymour Haden who affects Mr. Hall, and M. Legros who affects Mr. Holroyd. But let the students of their etchings grasp the fact very thoroughly—it was not through mere imitation of Mr. Seymour Haden that Mr. Hall was enabled to execute that "Study of Trees," which, while it reminds us of Ruysdael, Crome, and Rousseau, attests also a direct observation of the scene; it was not through mere imitation of M. Legros that Mr. Holroyd was enabled to endow what he calls his "Study from Nature"—stone pines in the Borghese Gardens—with so rich a measure of the virtue of distinction and of the charm of style. The "Study from Nature" has more than nature in it—it has the rare quality of design.

FREDERICK WEDMORE.

PROPOSED EXCAVATIONS AT CHESTER.

SOME repairs lately executed in the North Wall of Chester resulted in the discovery of Roman inscriptions and sculptures, and a further exploration started by the Chester Archaeological Society produced more inscriptions and sculptures. It is now proposed, with the consent of the Corporation, to set on foot further explorations in the same wall. The former discoveries have excited great interest both in England and on the Continent, and Prof. Mommsen, of Berlin, has written strongly urging further search. Of all the historic sites in England, none are so likely to aid our knowledge of Roman history as the Roman military centres; and it is well known that Deva was garrisoned by the Twentieth Legion from the earliest times until the end of the Roman occupation of our island. The exploration will begin in a part of the North Wall

which is now under repair, in which a preliminary search has revealed inscribed and sculptured stones. It will be carried out by the city surveyor, Mr. I. Matthews Jones, who conducted the former excavations to a successful issue. Inscriptions and sculptures found will be the property of the Corporation, and will be deposited, with those previously discovered, in the Grosvenor Museum at Chester. The results of the explorations will be published by Prof. Pelham and Mr. Haverfield. Several subscriptions have been already promised, and an appeal is now made for more. The work is necessarily more expensive than "digging," and the space which ought to be examined is large. The probability of finding inscriptions is, however, very great, and the work has claims on both patriotism and scholarship. Subscriptions may be sent to Prof. Pelham, 20 Bradmore-road, Oxford; or to F. Haverfield, Esq., Lancing College, Shoreham, Sussex.

NOTES ON ART AND ARCHAEOLOGY.

THE spring season is now at its height, in anticipation of Easter. The exhibitions to open next week are some five in number: The Royal Institute of Painters in Water-Colours, in Piccadilly (to which the Empress Frederick paid a visit on the day of the press view); the two Haymarket exhibitions of Mr. McLean and Messrs. Tooth & Sons—the latter including Munkacsy's last work, "Tête-à-Tête"; the much-talked-of collection of drawings by the late Charles Keene, at the Fine Art Society's in New Bond-street; and a representative series of pictures by Diaz, at the Goupil Gallery, in the same street.

THERE is now on exhibition at South Kensington what is known as the Hope collection of Dutch and Flemish pictures, lent by the present owner of Deepdene, Lord Francis Pelham-Clinton-Hope, grandson of the late Mrs. Hope.

MESSRS. L. ALLISON & Co., on behalf of the Librairie de l'Art, have sent us artists' proofs of three plates by French etchers, after English painters who all betray French influence. Mr. Orchardson's "Master Baby," painted in 1886, is reproduced, faithfully rather than with genius, by M. F. Milius. But it must be admitted that this painter's general scheme of colouring does not readily lend itself to the etcher's art. The other two, which are both reproduced by M. Ch. Giroux, are both entirely foreign in their subject and treatment. Mr. Mac Ewen's picture, entitled "A Ghost Story," shows a group of Flemish women of various ages, engaged in their household tasks of spinning, &c., and listening to a tale told by one of their number, not the oldest. The time seems to be broad daylight; and the auditors have interest marked on their faces, but no horror. The other picture, called (after the French fashion) "Maternity," is by Mr. George Hitchcock. It is chiefly noticeable for the extent to which the human figure—there is practically only one—is subordinated to the details of flowers and rushes in a moorland landscape.

MR. THOMAS MORING, of High Holborn, has issued a well-printed pamphlet on *Seal Engraving*, which, though intended as a trade advertisement, deserves notice for its handsome illustrations of seals, stones, &c.

WE must be content here merely to record the death of Senator Giovanni Morelli (Ivan Lermolieff), which took place at Milan on February 28. Next week we hope to give some account of his unique services in assigning fixed principles to the historical criticism of Italian painting.

THE STAGE.

GUY DE MAUPASSANT AS A DRAMATIST.

Paris: March 7, 1891.

"MUSOTTE," a play in three acts, by MM. Guy de Maupassant and Jacques Normand, has just been produced at the Gymnase, and I may say at once that M. de Maupassant's *début* as a dramatist has been crowned with success.

"Musotte" is the dramatised version of "L'Enfant," one of the prettiest of a series of short stories published collectively under the title, *Clair de Lune*. The plot is a masterpiece of clever, but in nowise offensive, realistic observation, of rapid and intense dramatic effect produced by the simplest means; the dialogue is written in the terse and elegant language common to all the works of the author of *Pierre et Jean*.

Jean Martmel (M. Raphael Duflos), a young painter of talent, has just married Gilberte de Petitpré (Mlle. Darland), the sister of his best friend Léon (M. Noblet). Dinner is over; after an exquisite love-scene between the newly married couple, the bride retires to change her dress, while the small family party is enlivened by the sharp repartees of Mme. de Ronchard (Mme. Pasa), Gilberte's aunt, an elderly and rather cantankerous widow, who bestows all her pent-up affections on lap-dogs, and has founded a home for lost and starving members of the canine race. She has a great dislike to artists, which is shared by her brother, Gilberte's father, and both have tried in vain to break off the engagement. In the midst of the general conversation, a letter is handed to Jean; it is from his friend Dr. Pellerin (M. Plan), and is thus worded: "Musotte is dying, and wishes to see you immediately." Aghast, Jean shows the letter to his brother-in-law, asking him what he is to do. "Go, immediately; I will try to keep the family quiet until your return," is the answer. Left alone with his father, aunt, and Jean's good-natured uncle, Léon boldly tells them the cause of the bridegroom's absence. He has often seen Musotte, a model, who became deeply attached to Jean; but from the day the latter met and loved Gilberte, she ceased to see Jean, and for the last six months has led a retired and respectable life, never making any attempt to recall her lost lover. "Ah! I knew we should hear of something of this sort and of some hidden scandal," exclaims Mme. Ronsard; "the minx is shaming and taking advantage of the situation to levy blackmail."

The second act takes place in the room where poor little Musotte (Mlle. Sisos) is dying beside the cradle of her baby. At a side-table, discussing coffee and small scandal, sits Mme. Flache (Mme. Desclauzas), ex-star of the *corps de ballet*, now *sage femme de l'Opéra*, and evidently a near relation to M. Halévy's "Famille Cardinal"; seated opposite her is Lise Babin (Mlle. Blerzy), the nurse, a good specimen of the comely, gaily beribboned *nounou* who steals the coffee, tea, and sugar to send to her family in some far-away village of Normandy. The trio is completed by the arrival of Dr. Pellerin, a cleverly portrayed specimen of the young and fashionable *médecin de théâtre* attached to every Parisian theatre, who runs off to a patient's bedside between the last act of the opera and the first of the ballet. But although the doctor gives Musotte an injection of morphia, she is nervous, excited, and wildly anxious to see Jean. He comes at last. The scene which follows—though it reminds one of the last act of the "Dame aux Camélias"—is less conventional and more truly pathetic: the audience were all in tears on the first night; and it requires something very touching indeed to bring tears to the eyes of the sceptical audience of a Parisian *première*. Musotte, who is aware

that she is dying fast, in feverish, hurried tones unburdens her heart. She tells Jean that no wife could have been more faithful to him than she has been, that had she not been at death's door he would never more have heard of her or the newborn child. But she will be dead in a few hours, and then what is to become of her poor babe, abandoned, with no one to care for him. "Oh! Jean, have mercy on us, have pity on my darling; take him for God's sake, be a father to him." Whispering, she adds: "Your wife is young and pretty and good, I am told, tell her all; she will listen to the prayer of a dying mother, she will take care of my child. For pity's sake, Jean." The latter gently presses her hands, crosses over to the cradle, and kissing the sleeping child, says, "I promise to do all you wish." "Oh! how happy I am," says Musotte, sinking back on the cushions. A deep sigh, and she is no more.

When the curtain rises on the third act we find the personages of the first act as we left them, waiting impatiently for Jean's return; he has been absent two hours, and his wife, who knows nothing of what has taken place, is in despair. Jean returns at last, but he dares not face the family circle; he sends for his brother-in-law, and begs him to explain what has happened, and obtain his wife's forgiveness for what he has done. Never was there a more difficult *scène à faire*, as M. Sarcey would say, than the one which follows. Léon pleads for Jean in the most eloquent terms. He shows that pity, humanity, memory of past times, obliged him to listen to the appeal of the dying woman.

"Suppose you had read the story I have just told you in this evening's paper, would not your sympathy be awakened in favour of the dying mother and living child. You would admire and approve of Jean's spontaneous and noble act. But had you read that he refused to see the dying girl, that he had ordered the motherless child to be sent off to nurse in some out-of-the-way village, to die probably of neglect, then your indignation would have been great, and justly so. Even you, my dear aunt, would have despised him—you, whose kind heart bleeds at the sight of a poor abandoned poodle pup! All I can add is that I entirely approve of Jean's conduct, and like him all the more for his behaviour in this sad affair."

Thus the case is half won when Jean, who can bear the suspense no longer, rushes in, asks to be left alone with his wife, to whom he pleads for pardon. Gilberte, whose jealousy has been aroused at the thought that perhaps he loved Musotte better than her, on finding that pity alone has inspired Jean, not only forgives him, but agrees that Musotte's dying prayer must be granted; she will adopt and be a loving step-mother to the motherless babe. Thus the extremely delicate and complicated question treated by M. de Maupassant in "Musotte" is solved in the simplest and most natural manner. The troubles our faults bring upon us can be easily removed if we allow our better feelings to guide us, if we follow the dictates of our best adviser—our heart. We are thus more likely to attain happiness than by following the rules of worldly prudence and egotism for *Le cœur a ses raisons que la raison ne connaît pas*.

It is needless to add that the admirable acting of the *artistes* of the Gymnase company contributes in no small measure to the success of this clever and unconventional drama.

CECIL NICHOLSON.

STAGE NOTES.

THE Lyceum revival of "Charles the First" was the event of last week. May the play be performed many more times—such is our pious wish—with the same cast that has just been performing it so well. As Henrietta Maria Miss Ellen Terry is very charming, even if she

is not very French. What grace remains hers, what an air of spontaneity, what quiet and chastened pathos! Then it is a pleasure to see little Miss Minnie Terry—most popular and most varied of child-actresses—in the part of the little Princess. And how good a foil to these charms is the grim Cromwell of Mr. Wenman. Mr. Howe, the ever-judicious, and Miss Annie Irish, in a part too small to give evidence of her flexible and sympathetic talent, go far towards completing an admirable cast. Mr. Irving crowns the edifice. The delivery of much weak verse might be pardoned to one who presents the hapless monarch with such dignity and sweetness—with such an air of fatefulness, with an irresolution and want of concentrateness so characteristic of that lovable gentleman who was so inefficient a sovereign. Mr. Irving has never been more pathetic. And, again, though it is conceded that in the minor art of making-up—as in other arts more important—he is without a superior, it has not been sufficiently taken into account how his very features lend themselves to a counterfeit resemblance of a Charles by Van-dyke. As he enters, or walks the stage, the illusion is complete. He is not only Charles, but Charles seen with the finer eyes of the most graceful of portrait-painters.

MR. HARE has at length produced Mr. Pinero's play, "Lady Bountiful," which we shall immediately discuss at befitting length.

MUSIC.

RECENT CONCERTS.

THE seventy-ninth season of the Philharmonic Society commenced on Thursday evening, March 5, with Rubinstein's Overture to "Antony and Cleopatra" (Op. 116). The music, in spite of the title, is to be regarded from an abstract point of view, for the composer has not divulged the "secret of his purpose." The opening is imposing, the themes on which the Overture is constructed are attractive, and the orchestration is effective; but the music can lay no particular claim either to depth or originality, and, further, the general effect may be described as *décousu*. The performance of Beethoven's Symphony in C minor was, on the whole, good; but the slow pace at which Mr. Cowen took the "Fate" notes of the opening Allegro, and a want of decision in certain passages, robbed this first movement of some of its grandeur. Herr Stavenhagen played Beethoven's Concerto in B flat in an effective manner. Dr. Maekenzie conducted his Prelude and Entr'actes to "Ravenswood," and was received with great cordiality. Mme. Nordica sang "Plus grand dans son obscurité" from Gounod's "La Reine de Saba," and the Polacca from Goring Thomas's "Esmeralda" with charm and brilliancy.

The programme of last Saturday's Crystal Palace concert included two works by Berlioz. The first was the Ballad for female chorus and orchestra entitled "La Mort d'Ophélie," the second of three pieces published under the title of "Tristia." The vocal part is not striking, but a weird and plaintive effect is imparted to the music by the colouring of the orchestration. This piece was given here, and probably in London, for the first time. The "Marche funèbre pour la dernière scène d'Hamlet," No. 3 of the "Tristia," is a noble and impressive work: the chorus joins in from time to time, but only to utter the monosyllable "Ah." This March was admirably performed under Mr. Manns's direction. A Concerto in D minor for piano-forte by M. R. Burnmeister was played for the first time by Mme. Burnmeister-Peterson. The composer, a pupil of Liszt's, has held for some years the post of principal professor at the

Peabody Conservatory, Baltimore. The first two movements of this Concerto are clever, but dry. The third movement, an Intermezzo, leading without break to a Finale, march-like in character, is the most satisfactory section of the work. The composer is here less ambitious and more successful. The part for the solo instrument is brilliant, and the influence of Liszt is plainly perceptible. The lady is a skilful and intelligent pianist. The programme included Dr. Mackenzie's Overture to "Twelfth Night," and the third Act of Tannhäuser, in which Miss Thudiehum and Messrs. Lloyd and Barrington Foote took part.

On Monday evening Brahms's revised version of his pianoforte Trio in B minor (Op. 8) was produced at the Popular Concert. The work in its original form was submitted to Schumann nearly forty years ago; but either the composer or his friend was not quite satisfied with it, for it was not included among the works to which Schumann first called the attention of the publishers, Breitkopf and Härtel. There is an old warning against putting new wine into old bottles, and it may be questioned whether Brahms would not have done better to leave the work of his youth untouched. In the revised version he has retained little more than the principal theme of the opening movement, but despite the Schubert-like grace of this theme, the Allegro is satisfactory in neither form: in the old one it seems spun out, in the new one it is too laboured. The lively Scherzo, with its Schubert and Beethoven reminiscences, has scarcely been touched. The opening theme of the Beethoven-like Adagio is the same in both, but afterwards there are important changes: it is a magnificent movement, plaintive, yet dignified. The Finale again has been almost entirely remodelled. Of the four movements the two middle ones are decidedly the most interesting. The original version has never been given at the Popular Concerts, and Mr. Chappell might have produced it first so as to enable musicians the better to institute comparison. The performance of the Trio, by Miss Agnes Zimmermann and Messrs. Joachim and Piatti was exceedingly good. The programme included Bach's Concerto in D minor, which was interpreted by Herr Joachim and Señor Arbos; both played well, but the full, rich tone of the former could easily be distinguished. The pianoforte part was in the safe hands of Miss Zimmermann, who also gave, as solo, some Henselt Etudes. Miss Fillunger sang with success some fine songs by Brahms and Schubert.

A Mass in C minor, by Mr. Arthur Somervell, formerly a student at the Royal College of Music, was produced for the first time at the Bach Choir concert, at St. James's Hall, on Tuesday evening. The music is smooth, solid, scholastic, and if written for a degree exercise would no doubt have more than satisfied the examiners. Mr. Somervell should, however, not confine his skill to imitating the past; young and able composers ought rather to try and express their thoughts and feelings in the musical language of the present. The work was well performed under Dr. Stanford's direction, and the composer was called to the platform at the close. The programme included two interesting novelties—an "Offertorium" and "Tantum ergo" of Franz Schubert's. They have both been only recently discovered, and that they were written only a short time before the composer's death adds to their interest. The year 1828 was not only the last year of Schubert's life, but the one in which he produced some of his greatest works—the C major Symphony, the Quintet in C, the grand Mass in E flat, and many others. Both pieces are supposed to have been intended as additions to the Mass just named. The "Offertorium" for tenor solo and chorus is beautiful, while the "Tantum ergo" for

quartet and chorus is highly impressive. The tenor solo was sung by Mr. Houghton; and the quartet by Miss Liza Lehmann, Miss Hilda Wilson, Messrs. Houghton and Watkin Mills. Another interesting feature of the programme was Bach's fine Concerto in C for two claviers, admirably played by Miss I. Eibenschütz and Mr. Borwick. The concert concluded with Beethoven's Choral Fantasia.

The "Messiah" was given at Covent Garden on Saturday evening. The soloists were Miss Fanny Moody, Miss Enriquez, and Messrs. Lloyd and C. Mannors, who all did themselves justice. The choir sang well. The audience was not a large one, but it would be scarcely right to conclude that the great work is losing its popularity. With the exception of Mr. Lloyd, the vocalists were not oratorio stars of the first magnitude; and further, the weather was extremely unfavourable.

Mendelssohn's "St. Paul," an Oratorio which has come into fashion since Mr. Manns revived it lately at the Crystal Palace, was given at the Albert Hall on Wednesday evening. The choruses were sung splendidly. The principal vocalists were Mme. Nordica, Mme. Belle Cole, and Messrs. Ben Davies and Watkins Mills, who all acquitted themselves well. There was a fairly large audience.

J. S. SHEDLOCK.

MUSIC NOTES.

SIR CHARLES HALLÉ will arrive in London from Manchester to-day (Saturday) to attend the banquet of the Westminster Orchestral Society at the Holborn Restaurant the same evening. General Chas. A. Sim (chairman of the council) is to preside, supported by the Archdeacon of London and a large number of musicians, who will meet to wish the distinguished pianist a prosperous voyage to and from Australia, whither Sir Charles and Lady Hallé are about setting out by invitation from the colonies on their second concert tour.

THE April number of the *Musical Herald* will contain a study of Eugene d'Albert as a pianist, by Miss Bettina Walker, author of "My Musical Experiences."

The *Early English Musical Magazine*, Nos. 1 and 2. (Sampson Low.) The main object of this new magazine is to revive music by the great masters of English song. No. 1 contains songs by Purcell and Lawes, and No. 2, songs by Lawes, and a madrigal by Morley. The object is a worthy one, and deserving of encouragement; for, as the editor truly remarks in his address, "two or three hundred years ago England was one of the pre-eminent nations of Europe in musical culture." There are also biographies of Purcell and Lawes, to be followed by other early English composers. The clear print of this new periodical deserves mention.

POPULAR EDITION, in One Volume.

LIFE, LETTERS, and DIARIES

OF

SIR STAFFORD NORTHCOTE, FIRST EARL of IDDESLEIGH.

By ANDREW LANG.

With a Portrait and View of Pynes. Post 8vo, 7s. 6d.

* * * This edition has been subjected to a thorough revision, and while abbreviating the less important parts of the work, Mr. Lang has made new additions that will be of very considerable interest.

THIS DAY IS PUBLISHED.

BRITISH WORK in INDIA. By

R. CARSTAIRS. Crown 8vo, 6s.

"Politicians who wish to know something of our large Indian Province 'up to date' will derive more benefit from perusing this book than if they had read the whole of the *Encyclopædia Britannica*. It is a very clear description of the fabric of Indian social and political life. . . . In all important respects the book possesses a unique recommendation. . . . His book is certain to make its mark."—*Home News*.

THIS DAY IS PUBLISHED.

SCHOOL SERMONS. By the late

ALEXANDER WILLIAM POTTS, LL.D., First Headmaster of Fettes College. With a Memoir and Portrait. Crown 8vo, 7s. 6d.

NEW ADDITIONS TO

BLACKWOOD'S THREE-AND-SIXPENNY NOVELS

Crown 8vo, uniformly bound in extra cloth.

THE DILEMMA. By the Author of "The Battle of Dorking."

PICCADILLY. By Laurence Oliphant. With Illustrations.

MY TRIVIAL LIFE and MISFORTUNE. By A PLAIN WOMAN.

SIXTH AND CHEAPER EDITION, ENLARGED.

HINTS ON the GAME of GOLF. By

HORACE G. HUTCHINSON. Crown 8vo, price 1s.

"A model of what a work of the kind should be. It is all to the point and full of points."—*Saturday Review*.
"Contains in short and smartly written paragraphs a number of really practical and useful hints."—*St. Andrew's Citizen*.

NEW SIX-SHILLING NOVELS.

COMPLETE IN ONE VOLUME.

TOO APT a PUPIL. By Robert

CLELAND, Author of "Barbara Allan."

"Mr. Cleland's story is interesting and striking. His power of drawing character is remarkably strong, and we know of few more vivid pictures of a foreign adventuress than Mr. Cleland has given us in Assunta Cranston."—*Observer*.

A DOMESTIC EXPERIMENT. By

the Author of "Ideals: a Study from Life."

THREE NEW NOVELS AT ALL LIBRARIES.

I.

A SECRET MISSION. By E. Gerard,

Author of "The Land Beyond the Forest," "Bis," Joint-Author of "Reata," "Beggar my Neighbour," &c. 2 vols., crown 8vo, 17s.

"The reader is held under the spell of a story full of strong human interest, deeply moving and rich in the vivid local colouring found in all this clever author's books. . . . The author's character-sketches are extraordinarily lifelike, while the tragical pathos of the climax could scarcely be surpassed."—*Morning Post*.
"No reader of the novels of the day ought to leave 'A Secret Mission' out of his course of study. . . . The story is certainly a most striking one, even apart from the surroundings, which are so admirably depicted."—*John Bull*.

II.

GLENCOONOGE. By R. B. Sheridan

KNOWLES. 3 vols., crown 8vo, 25s. 6d.

"Clever portrayal of Irish character. 'Glencoonoge' is one of the rare novels treating of Ireland in which her grievances are ignored. . . . Father John the village priest, and Conn Hoolahan the peasant, one of 'Nature's gentlemen,' are fine and conscientiously studied portraits."—*Morning Post*.

"A singularly skilful piece of work."—*Whitehall Review*.

III.

HIS COUSIN ADAIR. By Gordon Roy,

Author of "For Her Sake," "For Better for Worse." In 3 vols., crown 8vo, 25s. 6d. [This day.]

LITERATURE.

Letters and Correspondence of John Henry Newman during his Life in the English Church. With a brief Autobiography. Edited by Anne Mozley. (Longmans.)

A FRIEND and admirer of the Great Cardinal said of this book the other day that to review it would be almost as difficult as to agree with this dictum; and, accordingly, we shall not attempt to give an analysis of Newman's character, or to explain the motives that influenced his conduct at different crises of his remarkable career, but shall content ourselves with the less ambitious plan of selecting a few passages which we may be able to illustrate from our own personal knowledge or recollections.

We must first say a few words about the plan of the work and the general contents of the two volumes, which are such as to make the reader occasionally somewhat doubtful at first sight whether he has before him the words of the editor or of Newman himself. The obscurity might have been lessened by the more frequent use of inverted commas. The Cardinal very naturally decided that the earlier half of his life ought to be treated by an Anglican, and also that it should be based upon a short autobiography, written in 1874, and supplemented by his letters. The book is brought before the world with unusual advantages. It is published within a few months of his death, and has been superintended by an editor of his own choosing (and he could hardly have found a better) with his own annotations on the letters. The "Autobiographical Memoir" is written in the third person, and gives an account of his early life up to the date when the *Apologia* begins—viz., 1833. The selection of the letters for publication was left to Miss Mozley, and most persons will grant that she has upon the whole executed the task with great judgment, though they will also probably think that many of the shorter notes might have been omitted. A table of contents for each volume would have been convenient; but this want is supplied by a copious and excellent index. This indeed is now and then even unnecessarily full; and it also contains a few errors, which could hardly have been avoided. Who but a contemporary could have distinguished between the two William Palmers,* the four Churtons,† and the five Greswells?‡

* "Palmerius Vigorniensis," and "Palmerius Magdalenensis," called respectively the "Pilgrim" and the "Deacon," the latter being also styled "Anathema Palmer" and "Cursing Palmer."

† Edward, Thomas, Whitaker, and William,

Of the numerous subjects of interest treated of in these Letters, we will merely direct the attention of our readers to the Oriel tutorship, 1826-32; the rejection of Mr. Peel as Burgess for the University, 1829; Newman's tour on the continent, 1832-33; and the Tracts for the Times, 1833-36. But there are two other topics which we shall mention at greater length, viz.: (1) his conduct in his parish, and (2) his personal relations with Dr. Arnold of Rugby.

To persons unacquainted with Oxford it may be necessary to state that the parish of St. Mary the Virgin (of which Newman was vicar from 1828 to 1843) was in several respects peculiar. The population was very small, as was also the emolument and the parochial work. The church was used on Sundays for the two University sermons. There was no parish sermon in the morning; but in the afternoon service (which began at four o'clock) were preached those sermons which in Newman's time attracted so large an audience, consisting chiefly of members of the University, and which were so wonderfully influential. But Newman was not content to leave the church services as he had received them from his predecessor. He first began to add "a Wednesday evening's service, . . . which [says he] is followed by a lecture extempore on the Creed. . . . I at first drew above a hundred, chiefly University men, though they fell off" (June 21, 1834, vol. ii., p. 50).

The next improvement was the daily service in the chancel at eight in the morning and four in the afternoon, which, as being in those days most unusual in parish churches, was at first looked upon with wondering curiosity. His own account of the matter is as follows:

"I think I mean on St. Peter's Day, i.e., next Sunday, to announce my intention of reading the morning service daily in the chancel while and whenever I am in Oxford, according to the injunctions of the Church, whether people attend or not. I shall have a desk put up near the altar, facing the south, from which I shall read the Psalms and Lessons, kneeling, however, towards the east. It seems to me that the absurdity, as it appears to many, of Tom Keble's daily plan is his praying to *empty benches*. Put yourself near the altar and you may be solitary. . . . I am the more eager to begin this service because the Provost pointedly refused to let me keep open the chapel at Christmas" (June 21, 1834, ii. 50).

About a fortnight later he says (p. 54):

"After many months' deliberation, I have taken advantage of the Long Vacation, when the college chapel is closed, to begin daily morning service at St. Mary's; how it will succeed is still to be seen."

It did succeed, after a time, completely; and the custom has continued without

three of whom are mentioned in the letters, but only two appear in the index. By the way, Newman writes the name in Greek, *Νυπτορ*, in which word three of the six letters are wrong (i. 90).

‡ Clement, Edward, Francis, Richard, and William, three of whom (Clement, Edward, and Richard) are huddled together under one name in the index. These five brothers were educated by their father, the Rev. W. Parr Greswell, and all highly distinguished themselves at Oxford. Indeed, it was said that Francis of B. N. C., who only got a second class, was looked down upon by his brothers as being a sort of discredit to the family.

essential change to the present day. Very few of the parishioners attended the service, and the congregation never was large, probably seldom amounting to twenty persons. It was largest during the vacations, when there was no service in the college chapels. Some few persons (very few, after the lapse of nearly half a century) will remember these services: how Newman, after putting on his surplice in Adam de Brome's Chapel, entered the large chancel by the western door (there was no other door in those days) a few minutes before the hour, how he walked quickly and quietly up to the altar steps, dropped lightly on his knees, then rose, and stood motionless till the clock had finished striking, and then began the service. They will also remember his reading (who can ever forget it?), so impressive and perfect in its own peculiar style, so offensive and irreverent when imitated by his younger admirers. It seems to us that Prof. Shairp's account of his reading (quoted by Miss Mozley, ii. 255) is somewhat misleading, while it does not do justice to its effectiveness.

"Each separate sentence, or at least each short paragraph, was spoken rapidly, but with great clearness of intonation; and then at its close there was a pause, then another rapidly but clearly spoken sentence, followed by another pause."

This description almost gives the impression of a monotonous succession of pauses after the reader's excessively rapid delivery. But this was certainly not the idea that would occur to anyone after hearing Newman read either one of his sermons or one of the Lessons. He varied the style of his reading as the subject required it, and the pauses were only employed for the sake of emphasis. Perhaps no passage could be chosen more suited to exemplify the two chief peculiarities of Newman's reading than the end of the third chapter of St. Luke, containing our Lord's genealogy, which (it may be necessary to remind our younger readers) was in those days one of the Lessons in Church. The list of names was read over with wonderful rapidity, but "with great clearness of intonation," till he came to "which was the son of Seth," when he made a short but decided pause; then he read, "which was the son of Adam"; then he made a longer pause, and then read in a somewhat lower tone of deep reverence, "which was the son of God."

In 1834 he says (ii. 50): "It is now a year since I have been anxious to begin a weekly celebration of the Lord's Supper, but as yet I have not moved a step. I think I shall begin with Saints' days first." In April 9, 1837, he enters in his "Chronological Notes" (ii. 248): "Early Communion at St. Mary's first time; nineteen persons altogether."

These three services (two of which are still continued) were the only novelties introduced by Newman at St. Mary's. In a letter (first printed in the ACADEMY, August 30, 1890), he says: "I don't think I made any innovation of ritual at St. Mary's down to a surplice for preaching in." He took no active part in parish business (of which there was really very little), and his Churchwarden (who is still alive) does not remember

ever seeing him at a vestry meeting during the last three or four years of his incumbency. It appears from these volumes that he once got into hot water by refusing to marry one of his parishioners who had never been baptized, and that the matter was mentioned (with exaggerations) in the *Times*. However, the lady was baptized after her marriage, as also was another member of her family (vol. ii., p. 131).

But it was at the outlying hamlet of Littlemore that Newman had his chief work as a parish priest, which he enjoyed thoroughly, and where his mother and sisters (who lived for a time in the immediate neighbourhood) were most useful. He was the means of getting a small church built, the first stone of which was laid by his mother, on July 21, 1835. It was consecrated by the Bishop of Oxford (Bagot) on September 22, 1836, and there was daily service there from the time it was opened. He was active also in the school; and his younger Oxford friends (who knew nothing of his musical acquirements) were astonished and amused by the story that one of them had been over to Littlemore to see him (for he passed much of his time there latterly), and had found him "fiddling" to the school children, while they were practising their hymns for Sunday. His catechising the children in church was so attractive that men went out from Oxford every Sunday to hear it (vol. ii., p. 302). Indeed, his affection for the place was so great that he wished to give up St. Mary's and retain Littlemore; but the college (instigated greatly by the Provost) could not be persuaded to consent to this. Accordingly, his connexion with St. Mary's and with Littlemore came to an end in September 1843. In his "Chronological Notes" he mentions that on the 17th he preached at St. Mary's; on the 18th he went to London, and resigned St. Mary's before a notary; on the 19th he sent in his resignation by Mr. Copeland, his curate, to the Archdeacon for the Bishop, and wrote to his Churchwarden the note printed in the *ACADEMY* of August 30, 1890; on the 24th he preached at St. Mary's for the last time; and, on the 25th, which was Littlemore Commemoration, he preached "No. 604, his last sermon" (ii. 424). Thus ended his duties as a parish priest of the Anglican Church; but it was not till October 6, 1845, that he resigned his fellowship at Oriel, and two days afterwards he was received into the church of Rome.

The account of Newman's intercourse with Arnold must be reserved for another opportunity.

W. A. GREENHILL.

Impressions and Opinions. By George Moore. (David Nutt.)

MR. GEORGE MOORE has been described, with impressive inaccuracy, as the English Zola. At what was practically the outset of his career he gained a certain notoriety, which did him, artistically, both good and harm, as the champion of the rights of the novel against Mr. Mudie. It did him good, by calling public attention to an unknown name; it did him harm, by attaching to that name a certain stigma. How wicked a

book must be, said innocent people, if Mr. Mudie and Mr. Smith have declined to circulate it! Mr. Moore, it is true, had been guilty of certain audacities; he had not written precisely for the young person; it was evident that he had lived in France and studied French masterpieces. So, for those who believed in the Continental rather than the Modern British canons of art, his coming was welcomed as the coming of a deliverer. Unfortunately Mr. Moore has delivered nobody, not even himself. He has written one book which to my mind is a masterpiece, *A Mummer's Wife*, and another book which is amazingly clever, *The Confessions of a Young Man*, with four or five other novels which are—well—*manqués*, in spite of their ability, their independence, their unquestionable merits of various kinds. Meanwhile the three-volume novel pursues its placid course; Mr. Mudie and Mr. Smith cater for the young person; and Mr. Vizetelly has not precisely made his fortune out of the one-volume novel.

Mr. George Moore's literary career has been singularly interesting; his character as a writer is very curious. A man who respects his art, who is devoted to literature, who has a French eye for form, he seems condemned to produce work which is always spotted with imperfection. All his life he has been seeking a style, and he has not yet found one. At times he drops into style as if by accident, and then he drops style as if by design. He has a passionate delight in the beauty of good prose; he has an ear for the magic of phrases; his words catch at times a troubled, expressive charm; yet he has never attained ease in writing, and he is capable of astounding incorrectnesses—the incorrectness of a man who knows better, who is not careless, and yet who cannot help himself. The impression produced by his best work is that of large, forthright power, and also of measure, design, the capacity for construction. *A Mummer's Wife* is admirably put together, admirably planned and shaped; the whole composition of the book is masterly. The style may drag, but not the action; the construction of a sentence may be uncertain, but not the construction of a character. The actor and his wife are really living people; we see them in their surroundings, and we see every detail of those surroundings. What is most wonderful, perhaps, is the atmosphere. Mr. Moore, when he turned from painting to literature, preserved the essential quality of the painter. He might have painted his impressions badly in oils; in words he paints them well.

Mr. Moore's new book, a collection of essays, has the appropriate name, *Impressions and Opinions*. The essays are concerned with literature, with the drama, and with pictures. In the first section there are essays on Balzac, Turgueneff, Verlaine, and one or two others; in the second, on an actress of the eighteenth century, "Mummer Worship," "Our Dramatists and their Literature," the Théâtre-Libre; in the third section, on Meissonier and the Salon Julian, Degas, art for the villa, the new pictures in the National Gallery. So interesting, so suggestive, so valuable a volume of critical essays has not appeared since Mr. Pater's

Appreciations. In saying this I had no intention of comparing Mr. Pater and Mr. Moore, who certainly are, in all obvious qualities, extremely unlike. But they have, after all, when one thinks of it, something in common. Alone among English men of letters who write criticism, they have a complete emancipation from English prejudices in art; they alone can be trusted for an unbiased opinion as to the words of, let us say, Goncourt, Flaubert, Mérimée. Mr. Henry James has written some exquisitely subtle and sympathetic chapters on French writers, full of insight and truth; but Mr. James came to grief over Baudelaire. Mr. George Saintsbury, who has written a series of charming and instructive essays on contemporary French literature, also full of truth and insight, writes, after all, with a continual consciousness of a bourgeois audience, and apologises. Mr. Moore, like Mr. Pater, and like no one else whom I can think of, has an absolute devotion to art as art; he is rightly incapable of taking anything into consideration but the one question—is this good or is it bad art? With all those questions that haunt the ordinary English brain he is totally unacquainted—those dragging considerations of tendency, of advisability, of convention. He receives impressions, he forms opinions, and he states his opinions, he indicates his impressions, frankly, simply, without conceiving the need of reservations, without feeling impelled to insist on limitations. So he has written an essay on Balzac, which does really drive home on us the intense and universal power of the man; he has written an essay on Turgueneff, which only a fellow-craftsman could have written; he has been the first to introduce to English readers the greatest living French poet—Paul Verlaine. In his consideration of the drama of to-day Mr. Moore has had the courage to say the truth at all costs—not without exaggeration, at times, but at all events fearlessly and with emphasis. Mr. Moore's views of dramatic art seem to me, as a rule, unimpeachably sound; and it is refreshing to read so much sober good sense on a question which has been more hotly discussed, and to less purpose, than anything public or private outside Ireland. In the section devoted to art, Mr. Moore gives us impressions and opinions which are specially valuable on account of his intimate technical knowledge of the subject. He at least answers to Mr. Whistler's requirement: he is a critic of pictures who has actually painted pictures himself. And nothing in the book is more admirable, both as criticism and as literature, than the brief, expressive study of Degas, the painter who has created a new art, ultra-modern, *fin de siècle*, the art of the ballet, the bathroom, the washing-tub, the racecourse, the shop-window. Here is a paragraph which may be severed, without too much loss, from its context.

"The violation of all the principles of composition is the work of the first fool that chooses to make the caricature of art his career; but, like Wagner, Degas is possessed of such intuitive knowledge of the qualities inherent in the various elements that nature presents that he is enabled, after having disintegrated, to re-integrate them, and with surety of ever finding a new and more elegant synthesis. After the

dancers came the washerwoman. It is one thing to paint washerwomen amid decorative shadows, as Teniers would have done, and another thing to draw washerwomen yawning over the ironing-table in sharp outline upon a dark background. But perhaps the most astonishing revolution of all was the introduction of the shop-window into art. Think of a large plate-glass window, full of bonnets, a girl leaning forward to gather one! Think of the monotonous and wholly unbearable thing any other painter would have contrived from such a subject; and then imagine a dim, strange picture, the subject of which is hardly at first clear; a strangely contrived composition, full of the dim, sweet, sad poetry of female work. For are not those bonnets the signs and symbols of long hours of weariness and dejection? and the woman that gathers them, iron-handed fashion, has moulded and set her seal upon. See the fat woman trying on the bonnet before the pier-glass, the shopwomen around her. How the lives of those poor women are epitomised and depicted in a gesture! Years of servility and obeisance to customers, all the life of the fashionable woman's shop is there. Degas says: 'Les artistes sont tellement pressés! et que nous faisons bien notre affaire avec les choses qu'ils ont oubliées.' ('Artists are always in such a hurry, and we find all that we want in what they have left behind')."

The value of Mr. Moore's book is that it is the work of an artist who understands art, and who is entirely honest, absolutely unaffected, in his noting down of exactly how he has been impressed by this or that novel, drama, or picture. Understanding criticism, as he says, "more as the story of the critic's own soul than as an exact science," he tells us, in the most straightforward and convincing way, just what his own sensation has been, not in the least caring to arrive at any sort of abstract critical truth—as if that were possible!—not in the least caring if he seems in one place to contradict what he has said in another. This truth to one's impression of things, how rare it is! The first difficulty with most people is to know what their own impression is; the next to express it in precise terms. Mr. Moore is never in doubt as to the impression he has received, and that he can be both precise and subtle in expressing it let the following paragraph bear witness:—

"But to whom shall we compare Turgueneff? It would be vain to speak of Miss Austen; her charm is too special, too peculiar to herself. Balzac's genius lies in his universality, Miss Austen's in her parochialism; the former was infinitely daring in attempting almost everything, the latter is infinitely daring in attempting almost nothing. She seems to have formulated her poetic system as follows: I know nothing of the natural sciences, of politics, of metaphysics, nor have I attempted to plumb the depths of the human soul; I am a maiden lady, interested in the few people with whom my lot is cast. If you care to hear how So-and-so married So-and-so I will tell you, and the simple tale I will relieve by an elderly gentleman whose faith is in gruel, and who strives to obtain converts to his favourite nourishment; but if you want to be astonished or instructed, go elsewhere; I can do neither, nor will I pretend to. Now if the reader can, imagine a beautifully cultivated islet, lying somewhere between the philosophic realism of Balzac and the maiden-lady realism of Miss Austen, he will have gone far to see Turgueneff as I see him. Or shall I refer him to Mr. Henry James, who may be said to be allied to

the Russian novelist more than any other writer. The obvious aim of both is subtlety, and both are reserved. On many occasions both have no doubt said, 'I shall gain more by not saying the word than by saying it. Is not nature very often vague? People come and go we know not where or how.' But Turgueneff had a more intellectual audience than Mr. Henry James, and no matter how strong the artistic temperament may be, sooner or later the audience has its way with the artist; and reservation with Mr. Henry James often drifts merely into good breeding; he is often merely social, and, notwithstanding his great qualities, too often like a fashion-plate."

How admirable this is, how admirably expressed! Reading over what I have just transcribed, I am half tempted to go back and alter what I said at the beginning about a writer who can write so well. But no, let it stand: what I said was perfectly true. Yet the author of *A Mummer's Wife*, of *The Confessions of a Young Man*, of *Impressions and Opinions*, has more narrowly escaped being a great writer than even he himself, perhaps, is aware.

ARTHUR SYMONS.

TWO BOOKS ON SPANISH HISTORY.

Chapters from the Religious History of Spain connected with the Inquisition. By Henry Charles Lea. (Philadelphia.)

Etudes Sur l'Espagne. Par A. Morel-Fatio. Deuxième Série. (Paris: Bouillon.)

THESE books are very different in their character and in their special subject, but they are equally excellent. It would be hard to give the preference to the one over the other as thorough conscientious studies of different portions of Spanish history—studies, based not only on printed matter and on documents accessible to all, but on MSS. lying before unrecognised in public libraries or in private hands. They thus are real additions to our knowledge of the subject of which they treat. M. Lea is well known as the latest historian of the Spanish Inquisition; the inedited private MSS. which he chiefly uses are in the possession of Gen. V. Riva Palacio of Mexico, and of Mr. David Fergusson; while M. Morel-Fatio, dealing with the eighteenth century, makes use of MS. letters, journals, and writings of the Condes Fernan-Núñez, of the Prince Salm-Salm, of the Abbé of Viera and others, which he has printed in his Appendix.

Let us take M. Lea's book first, in which, though the style is sometimes negligent, the matter is always valuable. It consists of five studies, or essays: on the Censorship of the Press, on the Mystics and Illuminati, on the *Endemoniadas*, on El Santo Niño de la Guardia, and on Brianda de Bardaxi. Of these the essays on the censorship of the press, and that on the mystics are by far the most valuable; the two last have appeared elsewhere. The article on the censorship of the press is important, not only for the religious, but also for the literary history of Spain. M. Lea brings out well both the independence of the Spanish censorship as regards the Roman Index, and also its perpetual inconsistencies and contradictions, which did more harm

than sustained severity would have done. He well observes p. 124—

"Of all monarchs the King of Spain was the most absolute and the most resolute to preserve his prerogative against papal encroachments. Spain had always asserted the right to regulate the internal affairs of her Church in many points which conflicted with the claims of the Holy See and with ecclesiastical privilege as defined in the canon law."

The long quarrel between the Carmelites and Jesuits on Papenbrock's *Acta Sanctorum* and the contradictory decrees continued after 1643. I have in my possession several such, both MSS. and printed, down to 1759. One is a copy of a strong letter in defence of the Jesuits against the Inquisitor General from the Most August Emperor Leopold Ignacio to our Catholic Majesty—*dada en Viena á 20 de Enero de 1696*. In some parts of this essay, M. Lea allows hardly enough weight to the great part that contraband of all kinds has played in Spain. Somebody has described the despotism of Louis XIV. and XV. of France as a despotism tempered by epigram; so Spain in some respects might be described as a despotism tempered by contraband. Laws were made in Spain but not always observed there. Cánovas del Castillo has noticed the curious fact of the number of subscribers to Diderot's Encyclopaedia in the Basque Provinces. I have found copies of earlier editions of Jansenius, Quesnel, and other Jansenists in private libraries in Northern Spain, dating long before the suppression of the censorship; and such books if once in these parts would easily spread to other provinces.

In the essay on the mystics, Dr. Lea excellently remarks (pp. 21-7) that "the boundaries between heresy and sainthood were often perilously obscure." Mysticism belongs to all religions, and to none. Found in the earliest Buddhist writings and in religions older still, when all forms of external religion and of objective faith have been discarded, this may still remain; as examples in proof, compare the parallel passages of Molinos and Amiel's *Journal Intime*, or Leon Hebraeo's writings with Spenser's "Hymn to Heavenly Beauty." Facts like these show that the Church may be right in keeping strict watch over mystic tendencies and aberrations. At the same time Dr. Lea hardly does justice to the exceeding beauty of the style and thoughts of the best of the Spanish mystics, such as Luis de Leon and Luis de Granada on the one side, and Juan de Valdés on the other; nor does he sufficiently recognise the vast change made when that which is occasional only in an earlier writer is moulded and hardened into a *sine qua non* system by a later one. The infernal slowness and patience of the proceedings of the Inquisition on which he dwells were but exaggerations of the tedious methods of Spanish civil and criminal laws. Asking once one of our ambassadors in South America what gave him most trouble, he replied at once, "not international and political questions, but the Spanish law; even where the innocence was allowed and notorious, it sometimes takes two years to procure the liberation of a prisoner." I may add that the *Ciudad Mystica* of Maria de Agreda (*i.e.* an auto-

biography of the B.V.M.) is by no means dead; there have been two French translations, at least, in the present century, and it still supplies the chief matter to many of the popular manuals used in the *Mois de Marie*.

With regard to the subject of sorcery, the *Endemoniadas*, and *El Santo Niño de la Guardia*, I think that the latter case marks a real attempt at sorcery, casting a spell over the Inquisitors on the part of the Jews. It has nothing to do with a Passover sacrifice of a Christian child. The deed, so far as it was really committed, would be the outcome of terror and superstition. Under the influence of the Inquisition, the kings, after a long struggle, had ceased to protect "mies Judios"; the first *autos de fe* against them had taken place, the first decrees of expulsion were published, extirpation stared them in the face. If converted, they were only more helpless victims to the Inquisition as "conversos" than they had been as Jews. There was no help for them anywhere—in God or in man; what wonder, then, that some should turn to that other help, which everyone believed in at that age, the diabolical help of sorcery. It is a great mistake to conclude that, because witchcraft itself is unreal, therefore it was never practised. So long as spells of any kind were believed to have real power, the belief engendered the practice. I do not say that I think all the details of the case of the Niño de la Guardia, and especially that of the crucifixion, are proved. The evidence is always vague and proof difficult in such cases; but I think that some attempt at sorcery was made, and a stolen Host was used. Because torture was a most uncertain method of extracting evidence, it does not follow that all evidence thus obtained was false. The temptation to add to what was true, when once confession began, was very great; but the initial facts may be correct. In general, the Inquisition dealt (for the times) mercifully with witchcraft; in the great epidemic in the first years of the seventeenth century the Church and the Inquisition showed far more good sense and mercy than the French lawyers. On the other hand, I should state that M. Morel-Fatio alludes to the story as undoubtedly untrue.

To pass from M. Lea's volume to that of M. Morel-Fatio is to go from the dungeon and the torture-chambers of the Inquisition to the life of court and camp, and to the salons of the grandees of the reign of Charles III. Of this life we have here an excellent picture grouped round the central figures of the Condes Fernan-Núñez and the Dukes of Infantado. The third figure, the Prince Emanuel of Salm-Salm, shows us one of the most curious types of the old *régime*; the high-born, half-military, half-courtly adventurer, who, if he could get no post in his own country, took service in that of another with equal indifference. Thus, this prince's career (if career it can be called when he seems to have done nothing in either country) was about equally divided as colonel-proprietor, first of a regiment in Spain for a score of years, then for another score of a French regiment; and yet, when the Revolution comes, he

claims exemption from the laws and *saisie* of France on the ground that he is a German and not a Frenchman. So nearly all the Spanish grandees here represented are more or less *afrancesados*—all tainted with what they called philosophy; not one, from the kings downward, endowed with real military spirit or manly virtues, all children of the decadence, drifting helplessly to the end which would have made Spain a province of France, but for the Spanish people, whom they never understood. The Conde Fernan-Núñez himself is the only character which rouses our sympathies, and under M. Morel-Fatio's guidance we learn to know him well.

Happy would the task of the reviewer be if books of thorough workmanship like these two fell often to his lot.

WENTWORTH WEBSTER.

A Ride Through Asia Minor and Armenia.

By Henry C. Barkley. (John Murray.)

It is difficult to see the *raison d'être* of this book. Isolated passages are interesting; but there are so many errors that one mistrusts the whole; the style, never brilliant, at times sets the reader's teeth on edge; and the information generally is not up to date. Mr. Barkley forgets that while he has kept an expectant public waiting more than twelve years for his book, the march of events has continued, so that we find the author printing such things as—the "Bulgars are very bumptious, and hardly know their position, and are decidedly not ripe to govern themselves without foreign help"—without so much as a footnote to acknowledge that the sturdy little Principality has proved him utterly at fault. In speaking of the massacre of the prisoners and wounded at Plevna, when told by a Turkish soldier that "it was done by the Bashi-Bazonks and Circassians . . . they killed the Osmanli soldiers themselves for the sake of plunder," Mr. Barkley says: "I took this last part with a grain of salt, for what is a Bashi-Bazonk? Simply a lower-order Turk; and what is a soldier but the same? Putting on a ragged old uniform cannot alter the nature of the man, and I believe the soldier that fought in the light often became a cut-throat in the dark."

Yet he makes the distinction later on, and speaks of

"that deservedly ill-reputed force, the Bashi-Bazonks, that is to say, an untrained, self-horsed volunteer, whose object in appearing in the field was to amass all the portable plunder he could for his private use."

Mr. Barkley began his ride at Broussa, a town with which he was much impressed, as all visitors are. But even the valley of Broussa, than which nature has scarcely produced anything richer or more lovely, fails to inspire any graphic passages. Indeed, the author appears to lack the capacity, so essential to the writer of travels, for receiving vivid impressions and reproducing them in his pages. He finds the houses of Broussa "old-fashioned," and sees neither beauty nor grandeur in the mosques which have aroused the enthusiasm of so many travellers. The silk industry, which forms the chief occupation of the

inhabitants, Mr. Barkley tells us, "has been going downhill for some years." This is no longer true, though doubtless correct when it was written. The adoption of the Pasteur system has resulted in the extermination of the disease which formerly ravaged the worm. Of late years the industry has been gradually recovering its old importance, and there are at present in the town of Broussa itself no fewer than forty-two mills, employing about 120 hands each. The seed comes chiefly from France, not "Japan, Italy, or Bagdad." The most interesting branch of the trade is the cottage industry, the beautiful stuffs for which Broussa is renowned being made by the Turkish women at their homes; but of this Mr. Barkley tells us nothing except that he

"visited one or two wretched sheds, where Turkish towels and embroidered handkerchiefs were being made, and nothing could have been rougher than the old-fashioned looms; but the Turkish owners evidently looked on the miserable frames as something to be proud of."

The travellers were plentifully regaled with stories of brigandage and violence; but although the conclusion of peace had flooded the country with disbanded troops, and the Zaptieh force was in a most disorganised state, they were unmolested throughout their wanderings. Their experiences will not tempt any but the hardest to follow in their footsteps. The following is not less inviting than many other incidents:

"The road . . . had been washed away into such deep ruts . . . that the araba must have gone over had it not been for the perpendicular banks on either side on which it fell, and against which it had to be dragged; and this made the work so heavy that the horses jibbed, and eventually sat down like dogs on their haunches. There was nothing for it but to tie up our riding horses, unload the araba, and then altogether give it a shove, till the horses with a plunge took to drawing, and rushed on for a few hundred yards, to stick fast again; and this they did so often that it was an hour before we got to the top, a distance of a mile. Then all the luggage had to be fetched up and reloaded . . . To make matters worse, a heavy thunderstorm came on, and we were soon, in spite of our mackintoshes, a cake of mud and slush."

That in the day time. At night they had generally to sojourn in the villages, of which the following is a specimen:

"The dirt of the villages is beyond belief. Huge heaps of manure are on every available spot . . . Dead dogs and cats lie rotting within a few feet of the doors, while open cesspools are everywhere handy. The stable is never quite cleaned out. When the accumulated filth of years has raised the floor so that there is not sufficient head-room, the owner will clean out a foot or so of the top surface, leaving the good old foundation reeking beneath. Insects swarm; and a night in one of these rooms is death to sleep or rest . . . One of our chief difficulties was to find a flat spot sufficiently clean to pitch our tent on; and constantly, when we had just got it up, we found a dead dog or some equally odoriferous neighbour close to windward of us."

"The village bread consists of flat tough cakes, exactly like old dirty saddle-flaps. . . . In most villages a little honey can be got; in one in three milk is to be had; in one in five, eggs. But in many nothing is forthcoming but the 'saddle-flaps.'"

But there are compensations. At times the scenery is grand; game is abundant in many districts; and pleasant hospitality awaited them at many halting-places. Killidghar was one of these oases. There, on their arrival, they

"were at once taken to a fresh two-storied house on the outskirts of the village, and shown into a room on the upper story, with boarded floor and clean divans, cool, fresh, and sweet, the windows looking into a vineyard filled with fruit-trees [*sic*], and on beyond across the valley, some quarter of a mile wide, to the steep, rugged hills."

Not only were they well lodged, but the villagers brought them bread, chickens, milk, eggs, *yaoutt* (misspelt *yauatt* by Mr. Barkley), and a splendid comb of virgin honey.

We are told a great deal about the misgovernment of the country and the lawlessness of the inhabitants, and something may be learnt from this book of the characteristics of the different peoples. At the time of the author's visit, Circassians were arriving by hundreds; and as the Turkish Government is at the present moment receiving thousands of these emigrants from Russia, and settling them in Asia Minor and Armenia, it is interesting to note the effect of these forced additions to the population. As Mr. Barkley puts it, "They behaved as if they were lords and masters of the country and kicked up a row with every one . . . if all was not exactly to their taste." No wonder they are hated and feared by the settled communities upon whom they prey. The Mudir of one village said:—

"If you send Circassians here, we will shoot the lot at once. . . . Some were sent here years ago. We supported them for a year, we built them houses and gave them land, and all the time they were here they never did an hour's work, but at night they prowled about, stole our cattle and sheep and that of our neighbours, and treated us as if we were dependent on them."

Nor has Mr. Barkley much good to say of the other races with which he came in contact. He scarcely leaves to the Turks even the virtue of bravery, and he says that,

"not only is drunkenness almost as common among the Turks as it is with us, but they have apparently got over thinking it a sin and disgrace, and it is both openly indulged in and openly talked of. Few of the upper classes abstain, and many make it a rule to go to bed drunk every night. . . . The swell Turks delight in making up parties to the kiosks in the neighbouring vineyards, taking their womenkind with them. Several families will join in these outings. All get drunk, men and women, for days together. Husbands get confused, and mistake their neighbours' wives for their own; quarrels, fighting, and murders often take place, and the generally phlegmatic Turk becomes when drunk a raging madman. If this is all true, and we had it so constantly repeated and confirmed in different towns that I cannot help believing it is, the end of the Turk is nearer than I thought."

It would be interesting to know the nationality of the persons who gave the author this information. For those who know the Turks comment is needless, and those who go to the book for information will find their faith in the author too much shaken to accept such astounding statements on his authority alone. He "learnt another fact

at this place"—viz., that a Turkish woman thinks she will lose her husband's affection if she becomes a mother. Perhaps it was there the author also learnt that "five piastres are a shilling!"

Although he claims to have ridden through Armenia, he scarcely entered the chief province; but what he saw of the Armenians does not seem to have impressed him favourably:—

"Emigration or self-help of any sort is beyond them; and even if the men would quit the country, the women would not, and would use their irresistible powers of tears and entreaty to bind their mankind under the Turkish yoke. Poor creatures! hundreds of years of oppression have stamped out all manly feeling and made them what they are—a fit people for slavery, whose noblest ambition is to cheat and outwit their masters, an operation they perform with great skill."

And again:—

"The Turks are the best friends the missionaries have, for they simply leave them alone. . . .

The real enemies to the mission work are the Christians, and they carry their enmity so far that the missionaries and their wives cannot go out into the streets without being abused in the vilest language, mobbed, or stoned. . . . I sadly fear the missionaries lend the cloak of religion to these Armenians, who accept it to hide their swindling, lying, cheating, and other mean vices, and also because they think, and truly, that they may get a little protection from the missionaries, and through them sometimes have justice done them."

The author comes to the conclusion that if the Turks were removed for a short time, the three denominations of Christians would cut each other's throats.

The misspelling of geographical names throughout the book is flagrant, and there is a liberal sprinkling of other errors. The defender of Kars is written Muehtar Pasha; we have Hussein Arni Pasha instead of Hussein Avni Pasha; and we are told that the news of the Battak massacres was published in England in August 1877—the massacres were almost forgotten by that time.

J. B. PINKER.

Parson and Peasant: Some Chapters of their Natural History. By J. B. Burne. (Methuen.)

THERE is an air of truthfulness, as well as of modesty, about this little volume, which cannot fail to create a favourable impression. From the dedication—"To the memory of Francis Rivers, Peasant and Parish Clerk"—to the last chapter, which deals with the worries of a school-teacher's life, there is abundant evidence that the writer is in thorough sympathy with his surroundings. He has found in the small and, as some think, dull sphere of a country parish congenial occupation and numerous opportunities for usefulness, and he possesses that common sense which in such circumstances is likely to be more serviceable than eloquence or erudition. Mr. Burne may, indeed, be both eloquent and erudite. We know him only through his book; and there he simply stands out as a country parson, who loves his work and loves his people, and through this love has acquired an intimate knowledge of both, which he im-

parts to the world in a pleasantly-instructive fashion.

Although inferior to Dr. Jessopp as a humourist, Mr. Burne is by no means wanting in shrewdness of observation and witty remark; and, while thoroughly appreciating the many good points in the English peasant and his genuine virtues, he is also quite alive to his defects. Thus, in the chapter entitled "The Peasant Behaving Pretty," he comments upon those forms of rustic insincerity—one must not call it hypocrisy—with which most dwellers in the country who mix with their poorer neighbours are familiar. The casual visitor from town who tries to enter into conversation with the ordinary labourer or his wife will not, as a rule, get much out of them. But the parson or squire will, at any rate in the southern counties, meet with a good deal of that questionable courtesy which consists in saying what is likely to be acceptable rather than what is true. Such procedure is not the result of any deep-laid plan, but a habit transmitted from a less independent past. The parson will, perhaps, receive a little delicate flattery about his last Sunday's sermon, coupled with an expression of regret that rheumatism—for which there is nothing so good as "new" flannel—so often keeps man and wife from Church. The squire will have a polite inquiry after his honour's health, but an *obiter dictum* on the difficulty of keeping up club payments in these hard times may also reach his ear. But if either parson or squire should happen to be on the other side of the hedge when Hodge and his mate are eating their "nunchoon," or ear-witness when the village matron is scolding a refractory child, there will be irresistible proof that rustic tongues have two sides. But then in that respect there is not much difference between peasant and peer. Their vocabularies are not identical, but with the spread of Board schools and "society" newspapers even that distinction may in time be effaced.

Mr. Burne has some excellent observations on what he calls the "Peasant in Service"—meaning thereby not the agricultural labourer, but the domestic servant who comes from a cottage home. The position of servants in most modern households has undergone a mighty change during the last thirty years. The demand has exceeded the supply. The facilities for changing situations have stimulated the desire for change, and the general spirit of the times has destroyed the old idea of dependence on the one side and responsibility on the other.

"The eye of the maiden of the period looks to the hand of her mistress for nothing but possibly her old gloves—guidance and admonition she is prone to resent. . . . The relation in which she and her mistress stand to each other she is inclined to consider as by way of bargain—a certain amount and kind of work in return for so much money."

Not that the fault is on one side only, for indifferent service is, as often as not, the result of indifference on the part of the employer. The good offices of the parson may in these altered circumstances be as needful as ever, but have certainly become less easy to perform; and in most cases he knows less about the servants in the "great

house" than of any other habitual attendants at church. With the maids of all work he is, however, brought into frequent contact. They are constantly coming home and often are really unfit to go out.

"In their first place probably they were unfortunate; set to work beyond the little strength which they brought with them, their growing limbs were strained, and their constitution was still further weakened by the low diet which was all that their employers could afford them. They came back sadly out of health, and by reason of anæmia, the doctor says, have ever since been incapable of service, except for a short spell. Would that they were as incapable of marriage! From this class come the least capable wives and mothers."

But Mr. Burne is ready to testify to the general thriftiness of the peasant, and one of the most interesting chapters in his book is that in which he discusses the benefits of village co-operative stores. The subject is treated in a very practical way; and the trade accounts of a little business are given, which show that even in a parish with only 600 people it is quite possible to carry it on with profit to the shareholders as well as with advantage to the customers.

"The old village shop owed its failure very much to buying upon credit; so soon as the town grocer got the little tradesman well upon his books, he could shoot the rubbish of his grand shop on to the village counter at his own price";

and, we must add, so soon as the peasant got into debt, he lost the right to complain and the power to go elsewhere.

We have no space to follow Mr. Burne further, and take leave of him with regret. There are many social problems upon which his observations throw light; and, though his experience has been gained in a limited area, it is the experience of a thoughtful man, gathered slowly and digested leisurely, and thus, like the ripe fruit of a cultured tree, is worth having.

CHARLES J. ROBINSON.

NEW NOVELS.

A Bolt from the Blue. By Scott Graham. In 3 vols. (Sampson Low.)

John Squire's Secret. By C. J. Wills. In 3 vols. (Ward & Downey.)

The Prince of the Glades. By Hannah Lynch. In 2 vols. (Methuen.)

The Christ that is to be. (Chapman & Hall.)

A Sappho of Green Springs, &c. By Bret Harte. (Chatto & Windus.)

A Domestic Experiment. By the author of "Ideala." (Blackwood.)

The Golden Lake. By W. Carlton Dawe. (Trischler.)

From some press notices which appear at the end of *A Bolt from the Blue* it would appear that the author is a man. If this is the case, all that can be said is that he has managed by his style of writing to disguise the fact remarkably well. The book in question shows a subtle intimacy with feminine weaknesses, instincts, and impulses, not often possessed by men; while, on the other hand, it exhibits little knowledge of, or sympathy with, masculine attributes, nor

is a thoroughly commendable male character to be found throughout its pages. John Le Breton, the handsome, winning, good-for-nothing libertine, and Reaper Slingsby, the vulgar parvenu and millionaire, are portraits hackneyed in conception and, in regard to at least one of them, overdone in treatment; Sir Robert Strange, the moral young man of the story, is too saturnine and ill-tempered to be attractive; and no other men play important parts. With the women it is entirely different: Mona Le Breton, who, finding after a year of married life that her husband has already been divorced under peculiarly scandalous circumstances, forthwith leaves him, and hides herself under her maiden name in a country rectory, is a delightful creation; and so to a less extent are Maud, Ethel, and Daisy Carpenter, the rector's three daughters, Lady Strange, the mother of Sir Robert, and Julia Slingsby, the vulgar parvenu's still more vulgar daughter. In point of style the novel is above the average, and it contains plenty of shrewd and even original remarks; so that on the whole it might have been declared a good one, but for a distinctly impotent conclusion. That Mona, the lovable, should be put out of the way by the gross expedient of an express engine, in order to let a worthless *divorcé* and his uninteresting wife unite again, is a provoking miscarriage of poetic justice.

Without doubt *John Squire's Secret* is an entertaining book, though, unfortunately, the entertainment is not of a very high order. Mr. Wills is not devoid of valuable literary qualifications: his books descriptive of Persian habits and society have for some time been recognised as valuable contributions to our knowledge of that country; and he has a keen eye for salient points and eccentricities of character, which, united to an easy, bantering style, gives plenty of liveliness to his narratives. More than this, however, is required for a good novel. That the book before us has scarcely any plot is perhaps of no consequence, seeing that the author's strength lies in descriptions and character studies. Its defect is that these studies are far too numerous and in some cases unpleasantly overdrawn. That Jack Cumberbatch and his sister Lucia should succeed in interpreting a hitherto unintelligible cipher in an old Persian traveller's diary, and that Jack on the strength of the information acquired should undertake a journey to the East in quest of buried treasure, is all very well in its way, and a perfectly legitimate *motif*. But one would prefer to read a narrative less overdone with "smart" writing, and less obstructed at every turn with the introduction of new characters, which require from one to half a dozen pages to set them off properly; in particular, the Americans, Solon G. Doubleface, Sacharissa Doubleface, and Abiram P. Skinner, who all indulge in the vilest transatlantic slang, seem imported into the tale merely for the purpose of exhibiting the writer's commanding knowledge of that species of *argot*. The part of the book which deals with Persian life is interesting.

The Prince of the Glades is a story of the Fenian movement by a writer who dedicates

her book to Miss Anna Parnell, and who not only sympathises with the aims of that exploded agitation, but entertains painfully despondent views on the present condition of Ireland under the yoke of foreign aggression. We are gravely assured in the opening chapter that in that downtrodden country twenty years ago

"trade was brisker, the people had more money to spend, and spent it more freely; the summers were warmer and longer, and the look of the land not nearly so desolate and irredeemably bad. Then the general mood was livelier, less thoughtful, and less darkly political; rebellion had no disastrous effect upon wit, and the national jig had not fallen into desuetude, &c., &c."

Luckily for the patience of the reader, this strain is not continued throughout; and, though veiled allusions to Saxon oppression now and then appear, and the rural constabulary are most commonly brought under our notice as "the representatives of foreign rule," the story is not altogether sacrificed to partisan philippics. It is a pity the latter should have appeared at all, for there is plenty of good stuff in the book. The O'Moore of Carrighmore, an absentee landlord, living a butterfly life in Paris, Godfrey his heir, left to vegetate at home, and imbued with wild dreams of liberating his country *vi et armis*, and the Diana-like Camilla Knoys, a veritable hero in petticoats, are all well worth reading about.

We have been rather overdone of late years with what, for want of a better name, we may call the post-dated order of romance, offering us a peep at mankind as he will be 500 or 1000 years hence. Few of them can challenge comparison in point either of imagination or interest with Lord Lytton's *Coming Race*, which initiated this style in fiction; but so far as we are aware, no writer hitherto has ventured upon the experiment of choosing the Second Advent of the Messiah as a subject for an ordinary novel, and *The Christ that is to be* may at least upon this ground lay some claim to originality. Here, however, originality ends. The anonymous author of the book, rejecting popular beliefs upon the subject, places our Lord's reappearance in London in the year 2100 A.D.; and, so far from "coming in the clouds with power and great glory," assigns to him a ministry resembling in all essential particulars the one recorded in Biblical narrative. Christ appears in his original character as a teacher and healer; as before, he is despised and rejected of men; in the end he miraculously vanishes from sight and is seen no more, when just upon the point of falling into the hands of a hostile mob urged on to his destruction by the Pharisees, Sadducees, and Elders of the latter days. Apart from the rather daring nature of its leading conception, the tale does not contain much that is particularly striking. The author displays remarkable clearness in his exposition of popular beliefs, and is judicious in his method of contrasting them; nor, with the exception, perhaps, of Christ's disappearances from sight—which, if not actually suggestive of pantomime, have at all events an Apocryphal Gospel air—does he show other than becoming reverence in

his treatment of a subject which might easily have lent itself to travesty.

Bret Harte is almost matchless as a proficient in the difficult art of writing a short story well. *A Sappho of Green Springs* is the title given to a book containing four tales from his pen of life on the Pacific slope. They abound in those boldly drawn types of Western civilisation, and in that subtle combination of the humorous and pathetic, for which the writer has long been famous. Everyone will give them a welcome reception.

A Domestic Experiment has narrowly missed being a very good novel. At first start it looks as if it were going to be a story of the pattern that is now being rather frequently adopted by lady writers, wherein the central figure is a husband of idiotic or immoral or otherwise objectionable character, whose reclamation and moral enlightenment at the hands of the very superior person he owns for a wife is the crowning achievement of the story. However, Agatha Oldham turns out to be less superior than was at first supposed; she becomes flippant of speech, adopts fast society airs, and allows her feelings towards young Lord Vaincrecourt to run away with her a great deal too far. It is disgust with her husband which is leading her so far astray, but this is an explanation rather than an excuse. The weak point of the story is that it is difficult to imagine a woman of Agatha's clear-sightedness and culture ever having been attracted by such an insufferable snob and utter fool as Paul Oldham. The latter is described as being a society wit, but never makes a remark in keeping with his character throughout the whole course of the book. Where the author does attempt a humorous scene, as in the squabble between Mrs. Stubstile and her man-servant, the result is merely farcical. For the rest, the conversations are lively and natural, and the story only needs a little more intrinsic *vraisemblance* to make it abundantly interesting.

Tales of Australian exploration and adventure have that strong family likeness to one another which might be expected in the case of a country which offers strikingly little diversity in respect either of scenery or human inhabitants, and has scarcely anything distinctive to boast of except kangaroos and the boomerang. *The Golden Lake*, by W. Carlton Dawe, exactly resembles in all its important features a book called *The Lost Explorers*, by J. F. Hogan, published only a few months ago. In both books we find described, at somewhat wearisome length, monotonous marches over wastes of arid sand; and the resources of the English language are almost exhausted in the effort to depict adequately the torments of thirst endured on the journey. In both an inland city, situated close to a lake and volcanic mountain, is reached, an English captive is rescued from the natives, and the travellers only escape from the fury of the latter by the timely aid of a volcanic eruption which overwhelms the enemy *en masse*. However, there is sufficient difference in the treatment to exclude any suspicion as to the latter work being indebted for its plot or incidents to the

earlier one. Nor, even if such were the case, would it make much difference to that younger generation for whom this book is intended, and who will read with breathless interest the marvellous performances and escapes of Archie Martesque, and his cousin, Dick Hardwicke, with their black servant, "King" Jimmy.

J. BARROW ALLEN.

SOME BOOKS ON PHILOSOPHY.

Philosophia Ultima: or, Science of the Sciences. By C. W. Shields. In 2 vols. (Sampson Low.) Notwithstanding an ambitious title and a pretentious style—not wanting, however, in occasional passages of genuine eloquence—this is a very remarkable work. Its crowning point of interest is not its object, but its method; not its original thought, but its wonderful erudition. Briefly described, the purport of the book is to establish a harmony between science and revelation. It would seem that the professorial chair in Princeton College which Dr. Shields so admirably fills was established for that specific purpose. Considered in itself, nothing could more worthily occupy the energies of a broadly-cultured and profound thinker, whether in the study or the lecture-room; but it labours under an obvious defect. The conclusion to be established is foregone. Whatever the line chosen, the journey is bound to end at the appointed terminus. We need not point out how much this fact tends to invalidate the argument on the score of impartiality and sincerity. This has always been a defect in all our religious and Christian apologetics. They put forth at starting the conclusion presumptively reached only by due course of argument. The ratiocination may no doubt justify its alleged conclusion; but, on the other hand, it may not. In either case, the inevitable Q.E.D. haunts the impartial reader like a ghost which he is predoomed to meet whether he wishes to or not. Some writers, when they have this kind of foregone issue to elaborate, manifest their sense of ratiocinative sequence by keeping it so far as possible in the background till the state of their argument justifies, if it does not demand, its presentation; but Prof. Shields scorns any subterfuge of this kind. Like an astute advocate who bends all his energies to impart to a jury his own overwhelming conviction of the validity of his case, Dr. Shields keeps his conclusion continually in the foreground. What that conclusion is we had better let him state in his own terms (vol. i., p. 401):

"Behold, then, at one glance the issue to which we are come. The summary want of the age is that last philosophy into which shall have been sifted all other philosophy which shall be at once catholic and eclectic, which shall be the joint growth and fruit of reason and faith, and which shall shed forth, through every walk of research, the blended light of discovery and revelation; a philosophy which shall be no crude aggregate of decaying systems and doctrines, but their distilled issue and living effect, and which shall not have sprung full-born from any one mind or people, but mature as the common work and reward of all; a philosophy which, proceeding upon the unity of truth, shall establish the harmony of knowledge through the intelligent concurrence of the human with the Divine intellect, and the rational subjection of the finite to the infinite reason; a philosophy, too, which shall be as beneficent as it is sacred, which in the act of healing the schisms of truth shall also heal the sects of the School, of the Church, and of the State, and while regenerating human art both material and moral, shall at length regenerate human society," &c.

As the speculative outlook, or rather millennial

dream, of a thinker of large culture and noble aspirations, these sentences read well. They will not, indeed, bear close investigation or analysis, but there is no mistaking the author's general purport. When we attempt, however, to reconcile this purport with what we are told elsewhere of the character of this universal harmony, we are met with serious difficulties. It would seem that Dr. Shields takes revelation in its traditional Biblical signification, so that every science claiming to be harmonised therewith must needs waive or withdraw all anti-Scriptural discoveries or implications. Thus he tells us of geology (vol. ii., p. 170):

"Such a result [*i.e.* harmony between Biblical and scientific geology] is rendered probable by the fact that devout naturalists and learned exegetes not deterred by former mishaps and failures are still endeavouring to trace a more exact parallelism between the six creative days of Genesis and the great cosmogonic epochs of geology."

Passing from the object of the book to its method, no terms of ordinary appreciation could do justice to Prof. Shield's erudition. His pages bristle with references to books and allusions to authors of every kind and every degree of merit. So much is this the case that some of his chapters present the appearance of an ostentatious parade of learning. At least one-fourth of the names he indiscriminately heaps together might very fairly be put out of court as trivial and unimportant witnesses. It is among these lesser known names that Dr. Shields may occasionally be found tripping. To take a single instance, he describes Pompinatus (vol. i., p. 46) as "an Aristotelian infidel who masked his impiety and vice under outward reverence to the Church." A verdict more shamefully unjust it would be hardly possible to conceive, as Dr. Shields may see for himself by reading the late Prof. Fiorenzino's interesting biography, *Pietro Pomponazzi*. We have given greater space to Dr. Shields's work for the reason that it has excited considerable attention in America, and has been favourably noticed in Continental reviews. It is a work of much research and learning, but he has taken for his subject a theme on which anything like an ultimatum is at present wholly out of the question. In its discussion also he has not adopted the most promising course. Instead of finding a harmony between science and revelation by making the former defer to a Biblical estimate of the latter, he might consider how far every genuine and demonstrable discovery of scientific truth is itself a revelation, and whether any *Philosophia Ultima* is possible or desirable, other than the final vindication and triumph of all truth over all error.

Why Does Man Exist? By Arthur T. Bell. (Isbister.) Some three years ago Mr. Bell published a work entitled *Whence came Man, from Nature or from God?* The discussion of this "previous question" was intended, we are told, to introduce and lead up to the further interrogative "Why Does Man Exist?" Mr. Bell is evidently possessed by the *sacra fames* of knowledge. Like Mr. Arthur Clennam, in his attack on the circumlocution office, he assails our prominent physicists and philosophers with the persistent "wanting to know, you know," which is always so gratuitous and so disquieting to smug self-satisfied dogmatism. But while Mr. Bell may be credited with the first infirmity of noble minds, he cannot claim to have acquired the art of putting his questions in a logical form. Thus in his query of three years ago, "Nature" and "God," regarded as possible sources of man's being, cannot be said to be mutually exclusive each of the other. The question not only admits of another than a categorical reply, but the true answer—that which Mr. Bell himself adopts—is precisely a reply of that equivocal kind.

Thus, the answer might be—"From both: from Nature and from God, or from God through Nature;" and that is Mr. Bell's own solution of his problem, for on page 352 of his earlier work we read:

"To the question then whence comes man—Does he come from Nature or from God? we must, I think, reply:

"That not only Man but Nature also owe their existence to the Infinite Eternal Being—God who created all things."

The answer to the question, "Why Does Man Exist?" we find on pp. 303, 391, 421-2 of his later work:

"Man exists for the self-acquirement of knowledge, for the self-evolution of justice and love, and through their action the self-evolution of happiness."

We have brought Mr. Bell's two questions and their answers into juxtaposition, so that our readers may gain a clear insight into the author's standpoint, and the purport of his two books. They will be able to perceive that Mr. Bell sets himself to criticise those writers and schemes of philosophy which have dealt with the profound enigma of human existence and human destiny. The criticism is characterised by breadth, by considerable insight, and by a refreshing novelty of treatment; on the other hand it is marred by a lack of method, by diffuseness, both in style and matter, and by the adoption in his later work of a singularly uncouth and cacophonous nomenclature. A little consideration might surely have avoided such barbarisms as "efforting," "to effort," "functioning," "gravific action," &c., or such amazing compounds as "patriarch-parent-germ-cell." But with all deductions both as to style and matter, Dr. Bell's present, as well as his former, contribution to philosophical criticism draws the attention of the student. It is certainly a refreshing change from the monotonous wail of pessimism and naturalism which infects our contemporary thought to have man's destiny summed up as it is in his later work in these terms:

"God did not cause man to exist for His own benefit, His own pleasure, His own glory, seeing how great to God is the cost of his existence; but for man's benefit, that man, by his own free action, might make himself good and happy, might learn to know and to love Him more and more for ever."

"MANUALS OF CATHOLIC PHILOSOPHY.—*Psychology*. By Michael Maher, S.J. (Longmans.) This is by no means the least excellent in the series of Manuals to which we have already directed attention in the ACADEMY. Probably the greatest utility of the series for the general reader is to be found in their common attempt to recal to the minds of modern thinkers the substantial progress in mental and moral science which had been effected in the middle ages through the continual influence of Aristotle and the Schoolmen, especially Aquinas. Whether this renewed attention to the writings of one of the greatest of the Schoolmen is to be ascribed to the well-known Rescript of Leo XIII. we will not undertake to say; but at any rate, and speaking in the interests of general philosophical culture, we regard this revivification of the works of Aquinas as one of the most important developments of Romanism in modern times. Whether this new direction of Romanist studies will subserve the cause of Ultramontane orthodoxy, we think very doubtful. Aquinas is essentially a broad thinker; and it is only by the exegetical arts which Pascal exposed in his Provincial Letters that he can be made to subserve the interests of a narrow dogmatism. Father Maher modestly describes his work as "an attempt at an English exposition of the psychology of

Aristotle and St. Thomas." It is, however, much more than that. Aristotle and Aquinas form the basis of the book, but the superstructure is a compendious and accurate survey of all psychological systems and writers from their time to the present day. The Manual has therefore an utility beyond its designed scope. It may be read with interest, not only by Romanist students at Stonyhurst or elsewhere, but by the general reader who wishes to gain a conspectus of psychological science. There is, we need hardly say, in all these Catholic Manuals a particular point or *crux* wherein, if at all, any deviation from philosophical impartiality or undue concession to Romanist dogma may be looked for. In psychology the great *crux* both for Romanist and devout Protestants, is the spirituality of the soul; and we turned with some eagerness to Book ii., wherein that subject is fully discussed, to see if any further light had recently been thrown on it. We have not been able to discover any essential addition to former theorising on the mysterious subject. Both the simplicity and spirituality of the soul are founded on reasons as old as the first speculations on its being. But these reasons are sometimes placed in a new light, and are corroborated by arguments and analogies drawn from the most recent progress of psychology. The Manual, in short, is a genuinely useful contribution both to its subject and to the series of which it forms a part.

The Two Kinds of Truth. By T. E. S. T. (Fisher Unwin.) An interesting chapter in philosophy might be written on duality in relation to truth. Besides the exoteric and esoteric truth of Greek philosophy, we have had the twofold truth of the Renaissance, the explicit and implicit truth of the Schoolmen, and still later speculations as to a duality in the very mode of apprehending truth as if the two hemispheres of the brain discharged their functions unequally. The author of *Two Kinds of Truth* insists on a duality which is not new, and which is not founded on a logical subdivision. He says:

"It must be recognised at the outset that there are two distinct kinds of truth: first, those which belong to the material world and to the natural sciences, all of which prove themselves to our reason by experience and experiment, which have been called arbitrary or empirical, and which we will call Natural Truth; and, secondly, those which are necessarily and universally true under all circumstances, at all time, in all places, and in all relations conceivable by the mind. These we will call Universal Truths" (p. 2).

Our readers will perceive that this distinction resembles the Kantian distinction between synthetical *a priori* knowledge, and empirical knowledge which is founded on perception. But in point of fact no such division is logically possible. Natural truths can only be those which seem to us natural, and universal truths can similarly only exist in relation to our limited faculties. Besides which, the two truth-realms are not distinct. They overlap in every direction. That $2+2=4$ is surely a natural truth; many would also pronounce it to be a universal truth, though philosophers like Mill would deny its universality. On the whole, a genuine truth-seeker cannot be too cautious in making his own personality and experience a criterion of truth, whether merely human or transcending human cognition. T. E. S. T. manifests a considerable amount of scientific acquirement and of original thought, and his book—though we regard its starting-point as unphilosophical—is certainly worth reading.

NOTES AND NEWS.

MISS AMELIA B. EDWARDS has left England this week for the Riviera, Italy, and Sicily—for the benefit of her health. We regret to say that she has never entirely recovered from the effects of the accident she met with, just a year ago, at the end of her lecturing tour in the United States.

MR. WILLIAM SHARP, after wintering at Rome, has now turned his face homewards; but proposes to spend a month in Provence and another in Paris, before returning to England. While at Rome, he passed much of his time in visiting the historic and picturesque scenes of the Agro Romano. As a record of his "memories and impressions," he composed a number of poems, which he has had printed on the spot in a little volume entitled *Sospiri di Roma*. Written from a frankly impressionistic point of view, their manner is also original in that rhyme has been deliberately abandoned for irregular rhythmical cadences. The book may be obtained from the author, care of Miss M. B. Sharp, 2, Coltbridge-terrace, Edinburgh. A limited number of copies will have, for frontispiece, a portrait etched by Mr. Charles Holroyd.

MR. W. CONNOR SYDNEY, having passed the proofs of his two volumes on England and the English of the Eighteenth Century, has at once begun writing his book on the social condition of the country between the Restoration in 1660 and the Revolution nearly thirty years later. He is gathering, from all accessible sources, illustrations of the manners and customs of the age. Some chapters of the work will appear in one of the monthlies, and the first article will be on "London before the Great Fire."

THE Rev. A. L. Mayhew has undertaken to prepare for the delegates of the Clarendon Press a new edition of the famous Early-English dictionary, *Promptorium Parvulorum*, formerly edited by the late Albert Way for the Camden Society. The work is so valuable that it ran out of print, and was so often asked for by students that Dr. Furnivall obtained the consent of the Camden Society to a new edition of it, and then the agreement of the Oxford delegates to appoint Mr. Mayhew the editor, and publish the revised work. He will bring the whole book up to date, while adding to the latter two-thirds of it the same fulness of illustration which Mr. Way gave to the first third, but was unable to continue.

Michael Villiers, Idealist, and other Poems, is the title of a volume by Miss Hickey, shortly to be published by Messrs. Smith, Elder, & Co.

MESSRS. SWAN SONNENSCHN & Co. are adding to their "Social Science Series" a volume of essays, entitled *The English Republic*, by Mr. W. J. Linton, the wood-engraver and poet, who was at one time associated closely with Mazzini and other exiles in this country. The essays have been selected from the pages of *The English Republic*, a serial issued by Mr. Linton during the years 1851 to 1855. They will appear, with the author's permission, under the editorship of Mr. Kington Parkes.

MR. T. FISHER UNWIN's announcements for the spring season include *With Gordon in China*: being Letters from Lieutenant T. Lyster, R.E.; *The Real Japan*: Studies of Contemporary Japanese Manners, Morals, Administration, and Politics, by Mr. Henry Norman, with illustrations from photographs by the author; and *The Stream of Pleasure*: a Narrative of a Journey down the Thames from Oxford to London, by Mr. and Mrs. Pennell, illustrated by the former.

MR. HENRY LING ROTH has just completed a translation of Crozet's *Voyage to Tasmania, New Zealand, the Ladrone Islands, and the Philippines*

in the Years 1871-72. It will be published very shortly by Messrs. Truslove & Shirley, with a preface by Mr. James R. Boose, librarian of the Royal Colonial Institute. The book will be uniform with Mr. Roth's *Aborigines of Tasmania*, and the edition will be limited to 500 copies.

UNDER the name of "The Westminster Library," Messrs. Griffith, Farran & Co. propose to issue, in handsome library form, some of the works of standard theology which have already appeared in their cheap series of *The Ancient and Modern Library of Theological Literature*. Among the earlier volumes will be the First and Second Prayer Books of Edward VI., the Confessions of St. Augustine, and the Prose Works of Bishop Ken.

MESSRS. KEGAN PAUL, TRENCH, TRÜBNER & Co. will publish immediately after Easter a novel in three volumes, by Maxwell Grey, entitled *In the Heart of the Storm: a Tale of Modern Chivalry*; also *There and Back*, by Dr. George Macdonald, in three volumes; *Bonnie Kate: a Story from a Woman's Point of View*, by Mrs. Leith Adams, in three volumes; and a new edition, in one volume, of *A Sensitive Plant*, by E. and D. Gerard.

THE next volume in Mr. Walter Scott's series of "Canterbury Poets," will be a Selection of *American Humorous Verse*, edited by Mr. James Barr.

MESSRS. METHUEN will publish during next month *Old English Sports and Pastimes*, by the Rev. P. H. Ditchfield, rector of Barkham, in Berks.

Historic Thanet is the title of a work by Mr. James Simpson, announced for early publication through Mr. Elliot Stock.

THE next volume of the new weekly issue of "Cassell's National Library" will consist of Sir A. Helps's *Friends in Council*, a book which has not hitherto appeared in the series.

MRS. HUMPHRY WARD's forthcoming novel *David*, as well as many other new works, will be published also by Baron Tauchnitz in his collection, which has now for fifty years contributed so much to the popularity of English authors on the Continent.

THE last Bulletin of the Boston Public Library contains a facsimile of what is known as the 1493 edition of the Latin version of the first letter of Columbus announcing the discovery of America. The copy in the Boston Library is the only one of this edition in America, having been purchased at the Barlow sale in February, 1890. Mr. Barlow had purchased it from Col. Thomas Aspinwall, some time American Consul in London; but its earlier history is unknown. The only other known copies of this edition are in the British Museum. The facsimile has been well reproduced by the heliotype process. Prefixed to it is the translation of Mr. R. H. Major, made for the Hakluyt Society.

MESSRS. MACMILLAN have just completed their cheap edition of the Works of Charles Kingsley, by the issue of the posthumous volume entitled *All Saints' Day and other Sermons*. The whole now consists of twenty-nine volumes, at the price of 3s. 6d. each; whereas previously the twenty-eight volumes of the collected edition could only be obtained at 6s. each. The difference in the number of volumes is accounted for by the edition of the present posthumous volume. Otherwise, they run side by side, except that the numerous illustrations by Mr. Linley Sambourne to *The Water Babies* have superseded the two more familiar ones of Sir Noel Paton. The book-buyer will continue to prefer the Eversley edition of the novels and poems; for the million there is the re-issue of the sixpenny

edition of the novels; but we can imagine nothing more appropriate than this edition for a public, a school, or even a village library.

Corrections.—We were unfortunate last week in our proof-reading. The initials of Mr. S. R. Gardiner, the historian, were wrongly printed; and the editor of the *Register of Winchester Commoners* ought to have been given as Mr. Holgate. We may also mention that the price of that book to subscribers will be 7s. 6d.

FORTHCOMING MAGAZINES.

THE April number of the *Contemporary Review* will open with an elaborate article, communicated by a continental statesman, on the relations between Italy, France, and England, denouncing the Triple Alliance, and urging the re-constitution of a Western Alliance, in concert with the Vatican.

THE wide sphere of interest covered by the newly-named *Imperial and Asiatic Quarterly Review and Oriental and Colonial Record* may be gathered from the titles of some of the articles to appear in the April number. General Teheng-ki-tong will write on "Chinese Culture as compared with European Standards," dealing specially with literature and commerce; Moulvi Rafi-uddin Ahmad will describe the condition of Muhammadan women, and a Brahmin official of the Hindu family, both emphasising the inferiority of Western civilisation; while General Légitime, ex-president of Hayti, will advocate the introduction of an English constitution into his native island. Anonymous articles will treat of railways in Kashmir, and the Emin relief expedition.

IN the April number of the *Antiquary* a paper will appear by Mr. Alfred Hudd, who is now at Luxor, on the most recent Egyptian explorations; Mr. Haverfield will give his quarterly paper on Roman Britain; and the Rev. J. Hirst will describe the "Limes Germanicus," and the intended operations of general investigation shortly to be commenced on that wonderful old Roman rampart by the representatives of five German governments.

THE *Reliquary* for April will contain the first of a series of papers on "Irish Cathedrals," beginning with the Province of Ulster; with illustrations of Armagh, Clogher, Connor, Derry, Dromore, Downpatrick, and Raphoe.

AN article on the "Salons of the Revolution and the Empire" will appear in the April number of the *Century Magazine*, illustrated with portraits of Mme. de Staël and Mme. Roland.

PROF. HERBERT E. RYLE, of Cambridge, has undertaken to contribute a series of articles on "Genesis" to *The Expository Time*. The first article, which will appear in the April number, deals with the origin of the Creation narrative.

UNIVERSITY JOTTINGS.

THE council at Cambridge have accepted an offer made by Mr. S. Sandars to place a series of statues in the empty niches on the exterior of the Divinity School. As agreed in consultation with the divinity professors, the statues will be: Archbishop Parker; Bishops Fisher, Andrewes, Jeremy Taylor, Pearson, and Lightfoot; Erasmus, Benjamin Whichcote, and Daniel Waterland.

THE Syndicate appointed last November to consider the question of agricultural education at Cambridge have reported in favour of establishing a special board for agricultural studies. It is proposed to found two readerships—in agricultural botany and agricultural chemistry—each at a yearly stipend of £450, with the

assistance of the Cambridgeshire county council; and to grant certificates in agricultural science and practical agriculture, after examinations open to candidates who are not members of the university.

THE general board of studies at Cambridge have re-appointed Mr. Marr to be lecturer in geology for another term of five years.

THE library syndicate at Cambridge recommend that the annual grant from the chest towards the maintenance of the library be raised from £4000 to £5000. The estimated expenditure includes £2850 for salaries and wages; £1600 for purchase of books; and £650 for binding.

MR. MICHAEL E. SADLER, secretary to the Oxford delegates for university extension, has written a little pamphlet entitled *On the Eve of Change*, in which he formulates a plan for the establishment of provincial University Extension Colleges, formed by the combination of several towns, and manned by peripatetic teachers. He has worked out in some detail not only a syllabus of systematic instruction, but also a financial statement, in which fees are estimated to yield only £600 out of a total expenditure of £2000. The success of the plan seems to depend entirely upon the probability of obtaining a grant from the Treasury.

THE little volume of *Echoes from the "Oxford Magazine"* has now reached its third edition.

THE free evening lecture next Wednesday at University College will be delivered by Prof. R. S. Poole, who has taken for his subject "The Universities of Egypt: Heliopolis, Alexandria, and Cairo."

ORIGINAL VERSE.

THE OLD BOAT.

A worn-out boat upon the shore,
The children's playground is it now,
The troubled deep it tempts no more,
It lies at rest like rusty plough.

And yet it basks in bright noontide,
It echoes gladly childish voices;
A sailor's wife leans here, and wide
Her outlook till her heart rejoices.

Here lovers meet when dusk draws near,
Their voyages have scarce begun;
Ah! may they keep vows true and dear,
Until their resting days are won.

For 'tis not every craft that lies
So calmly on a kindly shore;
And 'tis not every heart is wise
To cherish love when youth is o'er.

BEATRIX L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

THE March number of *Folk-Lore* (David Nutt), which begins a second volume, contains two articles of general interest: the opening address of the president of the Folk-Lore Society for the current session, Mr. G. L. Gomme, in which he claims a very high rank for his study, urging that it should be allowed an independent section, by the side of anthropology, in the British Association; and a report on folk-tale research in 1889-90, by Mr. E. Sidney Hartland, in which he carefully distinguishes between stories taken down from oral tradition and those wrought up for literary purposes. The room for differences of opinion among folklorists is well exemplified by comparing Mr. Hartland's review of Mr. Joseph Jacobs and Mr. Jacobs's review of Mr. Hartland. Perhaps the most notable paper in the number is that by Dr. E. Gaster on "The Legend of the Grail." In opposition to those who would assign to it a mainly Celtic origin, he contends that the central idea of the quest

is to be found in the post-classical legend of Alexander the Great, and his attempt to force the gates of Paradise, as told by the Pseudo-Callisthenes. This central idea has, of course, been largely modified through the agency of Christian conceptions. Dr. Gaster will continue the subject in another number. We may also mention a note from Dr. Douglas Hyde, the Irish folklorist, who is now in New Brunswick, where he finds that many of the Indian stories are certainly derived from Gallic or French sources, probably through the Hudson Bay voyageurs.

CORRESPONDENCE.

MARY FITTON AGAIN.

London: March 11, 1890.

Out of the frost and fog of London, and in ulster and muffler, I went on Wednesday, February 25, into the bright sunshine at Nuneaton in Warwickshire. Leaving my traps at the "Newdegate Arms," I walked at a swinging pace through Stockingford, and soon got so hot that I had to take off my cap and unbutton my waistcoat. "Why, master, th' as'n't got th' at on," said a boy on the hill; and, soon after, a merry group of children broke into laughter as one said, "Oh, here's an old man without his 'at'!" I laughed back at them, and the little ones ran on with me, saying, "Put on thy 'at,'" "Why, he's got it in his 'and,'" "Put on thy 'at,'" &c., &c.; and so we went merrily trotting on to the North Lodge of Arbury Hall, where I bade the youngsters goodbye, and gave them sixpence for sweets. Another half-mile through the park—George Eliot's country it is, her nephew is agent for the Newdegate estate—brought me to the handsome stables (which I at first mistook for the Hall), and then to the Hall itself, where Mrs. Newdegate, the wife of the present Governor of the Bermudas, kindly welcomed me, and took me up to the picture gallery to see the two or three pictures of Mary Fitton among the heirlooms that had descended from Lady Anne Newdegate, Mary's sister.

We knew that Mary Fitton was the type of woman wanted as the original of the Dark Woman of Shakspeare's Sonnets; that is, she was a well-bred mistress of young William Herbert, and had a child by him in March 1601, soon after he was twenty-one and Earl of Pembroke. Did she answer the other requirements, so as to be the actual person? Was she the "Woman colour'd ill" of Sonnet 144, printed in 1599? Were her eyes the "raven black" of Sonnet 127? Had she no "red and white" in her cheeks, as in Sonnet 430?

"I have seen roses damask'd, red and white,
But no such roses see I in her cheeks,"

Were her "breasts dun" and her hair "black wires," as also in Sonnet 130?

To all these questions the Arbury portraits answered plainly "No." The first picture, dated 1592, is one of the two sisters, Lady Anne (then Mrs.) Newdegate at eighteen, and Mary Fitton at fifteen. Mary is a fair "red and white" girl, with brown hair and dark blue-grey eyes. The second portrait—which may be that of Mary Maxey, or any one else, but looks like Mary Fitton's—is older, but has still the same red and white complexion, brown hair, and blue-grey eyes; while the third—called by a later inscription the Countess of Macclesfield (which Mary was not) and the second daughter of Sir Ed. Fitton, and maid of honour to Queen Elizabeth (both of which Mary was)—is paler, but with the same blue-grey eyes and white breasts. We must, therefore, give up Mary Fitton as Shakspeare's lawless love, while keeping her as the type of that fascinating woman.

Coming down to the library, Mrs. Newdegate kindly showed me the family copies of the First Folio of Shakspeare's plays and his Sonnets. We hoped these had been Lady Anne's books, and that they would contain some contemporary MS. allusions to Mary Fitton; but, alas, they proved to have been bought by a later

Sir Richard Newdegate, while the Sonnets were the 1640 edition, not the original 1609. So we turned to the letters, and in them was plenty of proof of Mary's disgrace with Pembroke, and of the later scandal with Polwhele, whom she married about 1607; but no hint of any connexion with Shakspeare.

In the Calendar of the Carew MSS. is a postscript of Sir Robert Cecil's, dated February 5, 1601:

"We have no news but that there is a misfortune befallen Mistress Fitton, for she is proved with child, and the Earl of Pembroke, being examined, confesseth a fact [the guilt of being the father], but utterly renounceth all marriage. I fear they will both dwell in the Tower awhile, for the Queen hath vowed to send them thither" (Tyler, *Shakspeare's Sonnets*, p. 56).

Pembroke was sent to the Fleet, Mary Fitton probably somewhere else; and her father writes to Lady Anne Newdegate in one of his Arbury letters on April 22, 1601:

"I am in some hope of your sisters enlargement shortly; but what wilbe the end with the Erle, I cannot tell: so soone as [I] canne, you shall heare."

Mary was probably set at liberty soon after, for on May 24, 1601, her uncle, Sir Francis Fitton, writes to Lady Anne:

"I suppose your father by his stolne Jorne (journey) into Cheshyre (unknowne to me) hath acquainted you with some thinges consarnynge your sisters estate; howe true, I knowe not, for I fynd haltinge with me in theyr courses for her: God graunte all be for the beste!"

After this, I suppose Mary Fitton got into her second scrape, though, if her mother in the following letter alludes to Mary's boy by Pembroke directly after his birth, and before he was dead, by March 25 (Tyler, pp. 66-7), the prior trouble which the mother implies by "worse now than ever" may possibly have been one with a player, or some like person:

"I take no joye to heer of your sister, nere of that boy: if it hade plesed God, when I did bear her, that shee and I hade bine beried, it hade saved me from a grāt delle of sorow and gryffe, and her from shame, and such shame as never hade Cheshyre woman; worse now then evar: wright no meer to mee of her."

The mention of the "boy" prevents our supposing that this "misfortune" was the "two bastard daughters" by her cousin Sir Richard Lusan (or Levison), son of the Armada admiral, who took seven Spanish ships, noted in Lord de Tabley's Cheshire Genealogies. At any rate, Mary's first husband, according to the same authority, was a Capt. Polewhele (Tyler, p. 84), who, according to her mother, was a knave, and took her with all her disgrace on her, to prove that she was no better than herself. Says Lady Alice Fitton, about 1607, of her son, to Lady Ann Newdegate, he

"fell into rallyng agaynst you ffor spekyng agaynst the mareg of your sister to Poulewhyell: it was oute of your vmar [humour], and that hee was worthe her. my ladie Francis [Fitton, Mary's aunt] saed she was the vyles woman vnder the sun. . . . Poulwhyell is a veri k[n]ave, and taketh the disgrace off his wyff and all her fryndes, to make the world thynk hym worthy of her, and that she deservard no better."

Yet, just at this time, Mary's uncle, Sir Francis Fitton, wrote on February 4, 1606-7:

"Good Sir John Newdigate, you are verie moche behoulding to my cossen Polewhele for his diligent care and friendly diligens in labringe aboute your cause conteyned in the Lord Chancellors letter to you," &c.

And Sir Francis also mentions Polwhele favourably in his Will.

Admiral Sir Richard Levison has just three mentions of Mary Fitton in 1603-4; but, after 1610, when Francis Beaumont, of Stoughton,

Bedworth, &c., was writing enamoured letters to the widowed Lady Anne Newdegate, who afterwards refused him, he says of her sister, who must surely be Mary Fitton (then Mrs. Polwhele, aged thirty-three):

"Your most honorable and thriseworthy sister, as faire as beautie it selfe, more faire and prettie than sparke of vellett, and as wittie as Pallas, is (and so I long wishe shee may be) in verie good healthe. Worthy shee is to be loved of that wortheie Ladie that loves hir; and shee that loves hir, as worthly to be loved as any Ladie in the world. Of these two sisters I have vowed never to speake without some of their excellent embeliments: so I thinke I doo now, and so wil I ever doe hereafter."

This is doubtless the same Francis Beaumont of Coleorton whose letter about Chaucer is printed in Speght's edition (1599) and who died Master of the Charterhouse in 1624. Assuming that he used the word "sister" in its natural sense, and not in the vague one of friend or distant relative, Beaumont's letter testifies to the charm of the naughty Mary Fitton, who might well have conquered Shakspeare if she ever knew him. But, so far as our present evidence goes, she is not the "dark lady" of the Sonnets. Of the only letter of hers to her sister I have a copy, but it is a mere formal expression of regret that distance bars her from hearing from Lady Anne.

Mrs. Newdegate kindly promises to make further searches, on her next visit, in the Arbury Hall library and muniment-room for the presentation copy to Lady Anne N., of Kempe's *Wonder: A Nine Duties Dance from London to Norwich*, and for other letters that may mention Mary Fitton.

F. J. FURNIVALL.

THE FLEXIONAL INFINITIVE IN ENGLISH.

Oxford: March 16, 1891.

Mr. Mayhew appears quite unconscious of the fact that he has advanced no argument whatever in support of his confident assertion that I am wrong in claiming for the living English language a flexional infinitive. In his first letter he asserted that I had made a confusion between form and function, but he offered no proof of the assertion. He then exhibited the series of descending forms from *lufian* to "love," in a manner as if he thought that somehow was an argument. But it does not come into more than superficial contact with the question in debate. Under this head I admit all he says in the most absolute manner, and I do not see that my flexional infinitive is shaken. That when a new form "love" comes in, the old form *loven* must immediately disappear, is an assertion, not an argument.

This recapitulation was necessary, because Mr. Mayhew, in his second letter, proceeds like one in the position of a debater who had made good his footing by antecedent proof. He indulges in a confident expectation that I shall soon recant, because some years ago I made a mistake, and found out my error and corrected it. What an argument is here! Because when wrong I took the earliest opportunity of correcting my error, therefore now I shall presently acknowledge my error. Does not Mr. Mayhew see that in this fling of rhetoric he is assuming the point at issue.

But Mr. Mayhew forthwith claims the victory; he decrees himself an ovation, and riots in all the petulancies of a Roman holiday. In the exuberance of his glee, he challenges me to say whether in the phrase "The rapture of hunting the Snark" the word *hunting* is an infinitive. Because, if so, he warns me, this word is a different part of speech in this place from what it is in another phrase, such as "The hunting of the Snark." And this, Mr. Mayhew evidently thinks, is an argument invincible. Such as it is, it is the only thing of the nature

of an argument in his two letters, dressed as they are in the superficial semblance of argumentative phraseology.

He answers his own question. "Of course the true doctrine is, that there is here no change in the grammatical or formal character of the word *hunting*, and that the construction is equivalent to 'the rapture of the hunting of the Snark.'" Of course, indeed! In setting myself to reply to this answer which he gives to his own question, my hands seem almost as if they would hang down and refuse to work, for lack of hope to persuade. I have heard this before from other persons professing to be thinkers; and I apprehend that there are a good many persons, even cultivated persons, to whom the rough and ready plausibility of this "of course" will appear reasonable enough if not quite satisfactory. Therefore I will content myself with saying that, though there is no change in the formal character of the word, there is a change in the grammatical character, and that the one phrase is not the equivalent of the other, in the sense that it furnishes the grammatical argument required.

This is a psychological question; it cannot be answered by the new instruments of the exact phoneticians. This is the pivot of the whole issue, for this is the predicate of the proposition in debate. Certain words in *-ing* are before us. The question is, Can we, or can we not, in a given case of *-ing*, in such and such a connexion, say that it is a verb in the infinitive mood? In order to put this question, we ought first be agreed what constitutes an infinitive. Mr. Mayhew seems to attach this idea to a traditional set of forms. I think of it as independent of the form, and I think of the form secondarily, as the vestment of the idea. Herein I fear we are not upon common ground. The word "hunting" in one sentence may be a participle, and in another a substantive; in all that there is nothing to hinder but that in a third it may be a verb in the infinitive mood.

What the three learned Germans who are brought into court against me have to do with it I cannot make out; and, moreover, this was the place for proof and not for authority. There are places where an ounce of evidence is worth a pound of authority, and this is one of them. And I will add that these passages are of the sort which is of the lightest account. My experience of German learning says to me: Use their details and honour their industry; but be shy of their doctrine, and especially mistrust them when they get upon the high horse of big generalisation.

That *-en* passes into *-ing* is too well known to need proof. But I am newly in possession of some good illustrations from Prof. Edward Allen, of the University of Missouri, which I give here as much for their own interest as for their utility to my contention. The title of his article is: "The Origin in Literature of Vulgarisms." *Garden* becomes *garding*, which is found in Coverdale; and Dunbar in "The Thistle and the Rose" has *gairding*: "And enterit in a lusty gairding gent." Prof. Allen thinks the ending *-ing* for *-en* is an inheritance from the northern dialect, and he illustrates this opinion by the following examples. From Sir David Lindsay, "All those quhill *funding* (FUNDEN, found) bene on lyve." From King James: "And some were eke that *fallyng* (fallen) had so sore." From Henry the Minstrel: "This gud knyght said: deyr *cusing* (cousin) pray I the." It survives in: "I am much *beholding* (beholden) to you," which occurs in Roger Ascham: "Lady Jane Grey to whom I was exceedinge moche *beholdinge*." I call attention to the fact that the past participle *-en* became *-ing*, and that in one instance, at least, it is still current. I think this helps to make it easier to admit that *-en* infinitival may have done the same in a certain group of locutions.

Controversy is dreary without a fundamental harmony as to the value of terms and the method of argument. It was like an oasis in a sandy wilderness, when we reached "The Hunting of the Snark." Here is verdure, and water, and birds, and the sound of the wind in the trees. From *Alice in Wonderland* down to the last booklet of this genial writer, entitled *How to Write a Letter*, all is full of kindness and winking humour. Here is that touch of nature which makes the whole world kin. These are the true *litterae humaniores*. There are moments when one would cry: Rather a booklet of his than all the tons of learning in Leipzig fair. Long may that happy pen retain its cunning.

J. EARLE.

THE NEW FRAGMENT OF EURIPIDES.

St. Andrews University, N.B.: March 14, 1891.

In reply to Mr. Housman's stricture, I trust I may be believed when I say that I had taken the correction of *διαφερουμένη* (*sic*) to be too much a matter of course to be worth mentioning, and had at once marked it in my copy of *Hermathena*. Dr. Mayor will bear me out in saying that the same thing happened about the confusion of *στρατεία* and *στρατιά* in the *Athenian Constitution*, until I saw that it had been gravely noted by some one else. It so happened that the line was not one of those which I wrote out. If it had been so, I should have "jumped" with Mr. Housman. The time for "sober criticism" can hardly arrive until the promised photographic facsimile is before the world.

Meanwhile, shall I be adding sin to sin if I make one or two further suggestions?

B. li. 18-22—

Lyc. ió. *Cho.* λόκος πάρεστι, κ.τ.λ.

Lyc. ποῦσθ' ἦν λέγουσι τήνδε προσβήναι πέτραν
δρασμοῖς φυγοῦσαν; τίς δ' ἔρ' ἦν ἥδε στεγῇ;
τίνας δὲ γαίους [ιν] ὄντες ἐκ πολὺς πάτρας;
σήμενε τὸν δίκαιον Ἄρεα, τί πρόσσετον.

A. (Left col.) l. 14—

ἐκτός μένοντες, κἂν τι καὶνὸν ᾖ, δόμων.

C (right col.) 65 and C (left col. 33) (in place of my previous guess)—

γυναικα θάψας, τῇσδ' ὅπως γαίουςσα γῆς
γύας, τρέφουσα τοὺς ἔνοντας ἐκ Διός.

For the blank in C (left col.), l. 30, I had imagined as a link something like

ἀρετῆς ἑκατὶ καὶ φηῖς ἰθαγενέως.

LEWIS CAMPBELL.

THE OSSIANIC SAGA.

University College, Liverpool: March 10, 1891.

Prof. Zimmer's new theory of the Scandinavian origin of the elements of the Ossianic Saga turns wholly on his etymology of the Irish words *fiann* and *féne*. I, for one, cannot accept any of the arguments, linguistic or other, which Prof. Zimmer advances to show that *fiann* and *féne* are Norse loan-words. Mr. Whitley Stokes has sufficiently vindicated the native origin of these words. It would take up too much of your space to discuss the points that Prof. Zimmer has raised to establish his theory. I will only touch a few of the simplest.

A genuine derivative of *féne* is *fénechas*. It occurs, e.g. (in Cormac and in the commentary on the *Amra Columáin* (Chille), in a quotation that speaks for itself: *Is fás fénechas oc ferbaib Dé*, "the Irish law is void beside the words of God." This important word is never once mentioned by Prof. Zimmer. But he has tried to evade its discussion in a manner which, in his own phrase, is instructive. This is what he says on page 84 of his paper:

"Da man nun annahm, dieses durch Patrick und

die Neumercommission,* festgestellte irische Volksrecht sei ans der *bírla fine*, d. h. dem Irisehen vor Patrick's Zeit, umgeschrieben, so bildete man albern Weise nach *senchas* ein wort *fenchas* zur Bezeichnung des vorpatricianischen Rechtsbuches der Iren."

Here Prof. Zimmer is at pains to make his public believe that *fenchas* was the common word used to denote the Irish laws. Yet *fenchas* is not Irish at all, nor ever was, but, if anything, is Shelta!

As to *teim lægda* and Prof. Zimmer's explanation by an imaginary Norse *teimur lægðir*, I may add to Mr. Stokes's remarks that not only does this phrase never occur in Old Norse, but that *lægja* could never have been used in the sense that Prof. Zimmer gives to it. It means "to lower," "niedrig machen."

In order to make an Irish *Rus mac Trichim* into some unknown Scandinavian *Rus Tryggvasonr*, Prof. Zimmer selects the most convenient form, which happens to be the worst spelt. *Trichim* is the genitive of *Trechma*.

Lastly, one word about *Finnuill*, the Irish name for the Norwegians. Prof. Zimmer adduces no evidence whatever that *Heiti* was a frequent by-name among the first Scandinavian invaders of Ireland. It is unfortunate that when this by-name does occur, it is never translated by the Irish *Finn*, but is taken over as *Finn* (J.L. 205^b, 48, *Finn* LL. 172^a, 7, *sfitt* LL. 205^b, 58=*shrítr*) adapted duly to Irish lips. Down to the end of the eighth century *Gaill* denoted the foreigners of the South-western continent. These were no doubt by that time dark in hair and complexion. When the first Norsemen—an extremely blond type—appeared on their shores, it seems natural that the Irish should have called them *Finnuill*, "fair foreigners."

KUNO MEYER.

THE NAME OF THE ANGLO-SAXON RUNE p.

Ghent, Belgium: Feb. 28, 1891.

Independently of each other, Profs. Cosyn and Sievers have recently proved* that the old name of this rune was *wyn*, as actually stated in a Salzburg MS., and not always *wen*, as was hitherto generally assumed.

An additional testimony to this theory may be of interest. The 99th Psalm of the Oxford interlinear version (MS. Junius 27) glosses the first word *Jubilat*, not, as the greater part of the other early English Psalters, by *wynsumiath*, but by *p. sumiath(ze)*. There can be no doubt that we here have a case in point.

I may add that in many other places of the same MS. the forms *wynsumiath*, &c., occur written out in full, and that all *u*-mutations in the MS. are found as *y*. The Late Kentish and Late West-Saxon peculiarity of *e* instead of this *y* (Sweet, *H. E. S.*, §478), which would destroy the force of our argument, does not seem to obtain.

H. LOGEMAN.

TUNIP AND DINHABA.

Weston-super-Mare: March 16, 1891.

On reading my friend Dr. Neubauer's interesting letter in the ACADEMY of last week two things struck me at once: 1. That he was right in identifying the name Tennib, or Tinnab (Tunip, or Dunip of old time) with the D-n-h-h-h of Gen. xxxvi. 32; 1 Chron. i. 43; LXX. Δαναβᾶ; Vulg. Denaba, the capital of B'ela, son of B'eor (LXX. Βαλᾶκ). 2. That it must be a second or third Dunip, not possibly the place in Northern Syria, nor near Pethor on the Sajir.

* See *Anglia*, vol. xiii., pp. 3-7, and Cosyn's "Cynwulf's Runicverzen" in the *Verslagen en Mededeelingen der Koninklijke Akademie van Wetenschappen* (te Amsterdam), Afdeling Letterkunde, 34^e Reeks, Deel vii., pp. 54-64.

I found that in Mr. Armstrong's book *Names and Places*, &c., it is marked as not identified, and I had little hope of finding in the Eastern Edom across Jordan any such name. But on looking at Tristram's *Land of Moab*, and his map, I found our Tennib at once in the best possible position; and his account is most apposite. It is evidently Thenib, east of Ele'aleh, west of the great Hajj road. From Kustul Canon Tristram

"rode on due north, and an hour's quick ride [says he] brought us to Thenib. The buildings of Thenib cover the whole area of an isolated hill, and are much more dilapidated and ruder than those we had recently been visiting. . . . From Thenib and from Kustul I had the finest views of the Belka, as this country is officially called, which we had yet enjoyed." (*Land of Moab*, p. 222).

In the Palestine Exploration Fund new map of Palestine with the ancient names inserted, I find the place marked as Hodbat et-Toneih, but without identification of any ancient site. This then was the capital Dinhabah, and here dwelt Balak, son of Be'or, whose name I suppose survives in the Belka of these days. I must not dwell on his name further than to ask whether Be'or and Pe'or may be identical. Balak seems a dynastic name. The capital is only some dozen miles eastward of the old Piggah, Nebo, &c.

I have not yet seen the map and memoirs of Major Conder's 500 square miles survey; therefore I cannot tell whether he has already identified Dinhabah with Thenib. But it is one more most interesting link between Naharina, Bala'am's land of the sons of 'Ammo, or 'Ammon (as many Hebrew MSS. read it, as well as the Samaritan, and the Syriac, and Vulgate versions) and the Southern 'Ammon; and I fancy our Dunip name may be rightly expressed in the form given in Genesis, and that it may be an Aramaic name. Bala'am also was one of the sons of Be'or, perhaps a clan-name. But I must not linger in this attractive jungle, and I write in haste.

May I take this occasion of saying that I have several good sparkles of light to throw on Dr. Neubauer's valuable *Géographie du Talmud*, as regards places on the Euphrates and in Northern Syria.

For instance (p. 387), Avirid may be Avyareth on the Euphrates; (p. 388) Be-Tarbo, Tereb, south-west of Aleppo; (p. 398) Tuab must be the Tuab of the Thothmes List, Keft Töb, near Hamah; (p. 418) Terbenth is evidently the interesting Terbentha of the Karnak List, No. 217; excellently identified by Prof. Maspero with the fortified village between Aleppo and Antioch Dér Benât, the Castrum Puellarum of mediaeval record.

HENRY GEORGE TOMKINS.

THE EAGLE OF ETAN-GILGAMOS AND HIS KINDRED IN FOLKLORE.

New York: Feb. 5, 1891.

The interesting translation given by Prof. Harper, in the ACADEMY of January 17, of the Chaldean story of the Eagle and the Serpent, in connexion with Mr. Sayce's identification of Gisdhubar with Gilgames, the youth who was carried to a place of safety by a friendly eagle, in Aelian's *History of Animals* (xii. 21), opens up a new mine of research for the student of folklore. While Aelian compares it with the Persens legend, we cannot help thinking of the prominent part played by the bird Simurgh in the Persian legendary lives of Sal, Rustem, &c. But who would expect to find the Chaldean eagle carrying a man in an oxhide in a late Hebrew legend? Yet such is the case. In Buber's edition of Midrasch Tanchumim (1885, I., p. 136) the following tale is given, after an old manuscript:

King Solomon had a beautiful daughter,

Learning from her horoscope that she was fated to marry a poor Israelite of low birth, he built a very high tower with no entrance thereto; and, after providing a large store of victuals, locked her up there. After some time, a poor youth, exhausted from long travel, sought shelter for the night in the carcass of an ox; and, when he had fallen asleep, a large bird alighted upon the carcass and carried it up to the roof of the tower. When the youth awoke and found himself, to his great surprise, in that elevated position, he soon made the acquaintance of the princess. But, being as chaste as he is fair, he writes a marriage contract with his own blood, calling God and the angels Michael and Gabriel for witnesses, before he marries her.

A similar story about King Solomon, though lacking the characteristic features of the Chaldean original, is recorded by Peterman in his *Reisen im Orient* (ii. 110), as from the Mandaean. The question whether man can counteract destiny is illustrated by a heavenly voice challenging Solomon to prevent a prince in the East from marrying a princess of the distant West destined to be his mate. Simurg, the royal bird, sets out on the great task, and carries the ten-year-old princess of the West high up to an inaccessible mountain peak, where none but he can reach her and take care of her. Some years afterwards, however, at the time when the bird had gone back to Solomon's court, the Eastern prince suffers shipwreck near that very rock where the princess resides. She, on beholding the youth, forthwith becomes enamoured of him, and manages to have him hidden in a hollow trunk, and thus be carried by the wise bird Simurg to her mountain-dwelling, where they become united, as destiny had decreed.

There are a number of other Mandaean legends, given by Peterman, which form interesting links between Eastern and Western folklore, and to which I desire to call the attention of students.

K. KOHLER.

"THE LAST DREAM OF JULIUS ROY."

London: March 16, 1891.

Mr. Byrrne shows such a pretty faculty of paraphrase in his version of my short story, "The Last Dream of Julius Roy," in last week's ACADEMY, that I am sorry to have to discourage him in the ingenious art of finding resemblances betwixt his own and other people's stories. Until his letter of last week I had supposed the *Newbery House Magazine* to be a theological review—a very good reason for not going to its pages for fiction. In fact, I had never seen either the magazine or his story. But the suspicion of plagiarism, like that of heresy, is not easily upset; and, supposing my story to have been written after the publication of his, Mr. Byrrne would probably still retain his doubts. So I hasten to add that "The Last Dream of Julius Roy" was written first early in 1889, was read in MS. by various friends during that year, and was eventually sent to the editor of *Macmillan's Magazine* before July, 1890, the date when Mr. Byrrne tells us his story appeared.

ERNEST RHYS.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, March 22, 4 p.m. South Place Institute: "Brahminism," by Sir M. Monier-Williams.
7.30 p.m. Ethical: "The Moral Basis of Social Reconstruction," by Mr. J. H. Muirhead.
3 p.m. East India Association: "The Further Admission of Natives to the Indian Civil Service," by Mr. A. K. Connell.
MONDAY, March 23, 5 p.m. London Institution: "The Orientation of Ancient Temples," by Prof. Norman Lockyer.
8 p.m. Society of Arts: Cantor Lecture, "Photographic Chemistry," III., by Prof. R. Meldola.

S p.m. Richmond Athenæum: "Exhibitions," by Mr. H. M. Cundall.
 8.30 p.m. Geographical: "Travel and Ascents in the Basardjusi District, Daghestan," by Mr. G. P. Baker; "Exploration and Photography in the Caucasus in 1890," by Mr. Douglas W. Freshfield.
 TUESDAY, March 24, 8 p.m. Civil Engineers: "The Reception and Storage of Petroleum Oil in Bulk," by Mr. W. T. H. Carrington.
 8 p.m. Society of Arts: "Uses of Cloisonné for Decoration in Ancient and Modern Times," by Mr. Clement Heaton.
 WEDNESDAY, March 25, 8 p.m. Geological: "Nautili and Ammonites," by Mr. S. S. Buckman; "The Drifts of Flamborough Head," by Mr. G. W. Lamplugh; "A Phosphatized Chalk with *Belemnites quadrata* at Taplow," by Mr. A. Strahan.
 8 p.m. Chemical: Anniversary Meeting.
 8.30 p.m. University College: "The Universities of Egypt: Heliopolis, Alexandria, and Cairo," by Prof. R. Stuart Poole.

SCIENCE.

Plauti Rudens. Edited by E. A. Sonnenschein. (Oxford: Clarendon Press.)

MANY English students of Plautus can remember the days when Ritschl had suspended the publication of his critical edition, feeling the need of a far more thorough study of early Latin than had as yet been made before a sure basis for Plautine criticism could be laid, and when there was no help available but the very poor edition of Weise, and for three plays the fuller but far from satisfactory edition of Lindemann. English scholars had done nothing to supply the lack, with the exception of Hildyard's vigorous but antiquated editions of two plays. It is just a quarter of a century since Ritschl's investigations were made more generally accessible in Dr. Wagner's edition of the *Aulularia*, to which many an English student owes his first introduction to sounder methods of Plautine criticism; and since that time, both in England and in Germany, helpful commentaries have followed one another apace. Among these, two editions by Prof. Sonnenschein, of Birmingham, have already obtained well-deserved recognition. The *Captivi* was so largely drawn from Brix as to be useful rather than striking; the *Mostellaria* was much more original in its matter, and a more valuable contribution to the criticism of the play. And now we have an excellent edition of that delightful play the *Rudens*, which cannot fail to raise still higher Prof. Sonnenschein's high reputation among English Latinists.

In settling the text, which is in too many places seriously corrupt, the editor has had the great advantage of using Schöll's edition, with its elaborate conspectus of readings, and full *appendix critica*, which leaves nothing of importance unnoticed which had appeared up to so recent a date as 1887. He has also had the benefit of Studemund's "Apograph" of the Ambrosian codex, although in this play less is to be derived from this source than in some others,* and has been fortunate enough to be able to publish, for the first time, a number of emendations by Prof. Seyffert of Berlin. Prof. Sonnenschein has also offered a certain number of corrections of his own, so that the book claims to make distinct contribu-

tions to the criticism of the play. With regard to the emendations of Prof. Seyffert, the editor would probably have done better to relegate more of them to the foot of the page, and not place them in the text. He has some just remarks in his proface (p. ix.) on the shifting results of slashing criticism, and the good service done by defending the reading of the MSS.; but can *me mactat* be said to be impossible in v. 96; and is Seyffert's *mandatumst*, neat as it is, quite suited to the context? In 106 his insertion of *quam* is not certain enough to be the only one mentioned out of the various attempts to mend the line. In 210, *neque etiamdum* for *nec dice* is violent; and, in 215, *omnia* perhaps not indefensible. In 243 the insertion of *em* is hardly necessary. In 282, Seyffert's reading seems no improvement on Hermann's. In 399 *sic* may well mean, "as you tell me, she is doing." In 468 we have the tolerably certain emendation *metuis* for *metius*, and in 481 *exi* is obviously right. In 687 *is* is apparently inserted to avoid the hiatus, which is introduced in 684 by an excellent correction. The transposition in 818 is neat, and so are *atque* for *quae* in 910, and the insertion of *mi* in 930, and of *nunc* in 946. In 960 *etiam plus* is rightly welcomed; in 977 *itane* is hardly so good as Leo's *esne*. In 997 the change of punctuation is very attractive. In 1138 the reading *inuis merum* is too bold to deserve a place in the text; in 1195 the emendation is possible, but far from certain; and in 1248 it is confessedly only an attempt of despair. The ingenious *tetrachuma Philippa* of 1314 is very ably supported, but is perhaps not to be preferred to Langen's *auri minae Philippi*; in 1316 *hercle ego* is decidedly good. In 1345 *si quid* is hardly as good as Schöll's *si qui*. In 1401 there is apparently some confusion between two readings: Seyffert can hardly mean us to scan *hercle* (when it does not immediately follow an accented syllable), yet this is the only way of making out the metre; in *Aul.* 831 which he quotes, it has its normal pronunciation; and in *Bach.* 902 *vél hercle* certainly calls for correction. On the whole, it will probably be thought that Prof. Sonnenschein has been somewhat too ready to accept the suggestions of the Berlin scholar.

His own contributions to the text are less numerous, but in one or two cases noteworthy. In v. 2 *Joris* is certainly better than *eius*, though perhaps not to be preferred to *eius ego*. In 189 the verse scans just as well without the addition of *esse me*, if written in Schöll's fashion. In 321 *ornatus* for *natus* is excellent. In 376 *facere* is really too bold; it could hardly have perished without a trace in any grammarian: Schöll's *facere ero* is better than any of the alternatives which Prof. Sonnenschein mentions. In 579, where *A* agrees with the reading of *M*, as the editor has failed to note, he inserts *hodie* to avoid hiatus before a final cretic. The instances of this are so numerous and varied that I cannot help thinking it must come to be recognised as one of the lawful cases. In 528-537 the six instances are doubtless to be explained by the broken speech of the shivering and half-drowned Labrax: but I doubt very much whether Prof. Sonnenschein

can be right in printing the chattering in his text as *al-alges, ut-uterer*, and the like. In *Most.* 319, 331, which he quotes as parallel, there are clear traces of a drunken stammer in the MSS.: here he prints *nine* reduplicated syllables, without evidence for a letter of them. On 676 and 678 it would have been well to note the reading of *M*. In 766 *lignum* for *ignem* cannot be regarded as so good as Brix's *ligna*, until we have a parallel for this use of the singular. In reading *semel bibi* in 884 for *semel bibo*, Prof. Sonnenschein seems to have overlooked the objection to the MS. reading; for his suggestion equally offends against Luchs's canon. In 905 Schöll seems better advised in omitting *sua* from *auris sua uniloquentia* than Prof. Sonnenschein in transposing it; and in 935-6 Schöll's trochaics are nearer the MSS. than Prof. Sonnenschein's anapaests. In 1040 *eo* for *ibo* is attractive, and suits the sense better than *eibo*. In 1052-3 the text seems much more awkward than that of Brix, given in the appendix (with an accent misplaced, by the way): *abi hinc sis* is not a scansion to be lightly adopted. The alteration in 1152 from *te* into *tuom* is not probable, and spoils such point as there is. In 1275 it seems needless to interfere with *etiamne* of the MSS. In 1311 *sine* for *si non hoc*, taking *non hoc* as a gloss in the following *aliud*, is clever; but was anyone likely to explain *aliud*? Spengel does better to keep *sine hoc*.

This minute examination, which could not have been considered worth while in an edition of less importance, may perhaps be regarded as leading to the conclusion that there is not much at once new and convincing. But even if this were the case, which I should be sorry to assert, this might still fairly claim to be the best text yet issued, showing great improvement upon Fleckeisen or Ussing, and much more sobriety than Schöll.

In the explanation of the text Prof. Sonnenschein has found less helpful predecessors. No one can regard Ussing as satisfactory; and besides him, with the exception of Benoist, whom Mr. Sonnenschein has apparently overlooked, there is nothing of recent date. But a thorough attempt has been made to deal with all difficulties. It is indeed hard always to draw the line between the needs of the student and the teacher. Mr. Sonnenschein seems to have kept both in view; and the consequence is, that while the latter may be inclined to regard him as over-liberal, the former will feel that there is much which is not intended for him, and something omitted which he might expect. This last is the case with regard to metrical difficulties. It is hard for an editor to be expected to repeat himself; yet a sketch of Plautine prosody, such as that prefixed to his *Captivi*, followed by an account of the metres like that in the *Mostellaria*, but adapted to the *Rudens*, would have been very welcome to many, and would have saved space in the end. As it is, sometimes difficulties are passed over (e.g., *perdidit* in 222, *atque* in 227: so in 849, 951, 953, 1401). Sometimes remarks are made, needless to anyone who has mastered the rudiments of Plautine scansion (e.g. in

* Mr. W. M. Lindsay's language in the ACADEMY of February 7 would leave the impression that the certain restoration of *Mil. Gl.* 50 was due to the publication of this Apograph. As a fact, it was given in the first volume of *Hermes* twenty years ago.

103). A student beginning his Plautus with the *Rudens* would need to possess the two other plays besides. It is very rarely that one is tempted to differ from the editor's views on scansion; but neither *innocens* nor *indignus* is necessary in 642, and none of the examples quite justifies *clau'tor* in 805.

Perhaps the strength of the commentary may be considered to be in its mastery of Plautine idiom and syntax. There it is at least a worthy companion to the plays edited by Brix and Lorenz. Mr. Sonnenschein's full collections would often have been supplemented with advantage by a reference to Roby's Grammar. Nothing is better for the student than to be guided to a thorough knowledge of such a storehouse; and he would have learnt to enrich it from such notes as those in 247, 349, 403, &c., while the note in 509 would have been strengthened by a reference to Roby, § 482.

A few points may be noted for additions or reconsideration in another edition. *Gn.* (v. 2) is hardly a legitimate Latin abbreviation. *Concinnare* (96) is hardly "put in order" when used of mud; it seems to be the Yankee "fix" or the Lancashire "fettle." It is hard to see why *gravatus* (260) should be separated from *gravor*. On 362 there should be a reference to Prof. Nettleship's conclusive discussion of *invito*. On 420 the Plautine use of *quid ais*? needs a note. On 424, Catull. lxxvii. 8 and *Mil. G.* 93 would be better references than that to Gellius. The note on 496 surely needs limitation. I am afraid that the interpretation of *concha* in 704, given by Forcellini, is too strongly supported to be ignored. In 730 "dressing" seems better than "expression" for *ornatum*. On 753 Key's arguments for *fērumen* might well have been noted. In 883 we have an excellent example of the shifted accent in a disyllabic word. On *volupe* it might have been well to refer to Ritschl's discussion (*Op.* ii. 450), and to Eunius *Ann.* 303 (Müller). *Redducere* (909) is well established for Terence as well as for Plautus. On 1007 does Mr. Sonnenschein take *colaphos* for "fists"? The meaning seems to be always "cuffs," which can hardly "disappear." On 1010 the quantity of *pōlypus* might be explained.

The mature work of a scholar like Prof. Sonnenschein cannot be passed over with a few words of conventional praise. It is so certain to become a standard authority that suggestions for its improvement, even if comparatively trivial, furnish the only legitimate way in which it can be commended. But the purpose of this notice will be mistaken, if it has not made it evident that it is a really valuable contribution to scholarship, and one sure to raise the reputation of its distinguished editor, alike for judgment and for learning.

A. S. WILKINS.

OBITUARY.

FRANZ MIKLOSICH.

Oxford: March 14, 1891.

ON March 7 died, at Vienna, the celebrated Slavist Franz Miklosich, at one time professor in the university of that city.

Miklosich was born in the village of Rado-

merščak (Pichelberg), in Lower Syria, on November 20, 1813, and was thus in his seventy-eighth year at the time of his decease. He entered the University of Gratz in 1830, and took the degree of doctor of philosophy there. In 1838 he went to Vienna, where he made the acquaintance of Bartholomew Kopitar, then the greatest living Slavonic scholar—Dobrowsky having died in 1829. It was Kopitar who first induced Miklosich to devote himself to Slavonic philology; but he had already, in his native province, been familiar with Murko, the author of the Slavonic Grammar and Dictionary, and Stanko Vraz, one of the leaders of the so-called Illyrian movement. In the year 1844 he obtained a post in the Hofbibliothek, but had the misfortune soon afterwards to lose his friend and master Kopitar.

The first work of Miklosich appeared at Leipzig in 1845, and was entitled *Radices lingue Slovenicæ veteris Dialecti*. The productions of this indefatigable worker now followed with great rapidity, and it will only be possible for us here to name the most prominent of them. In 1850 he published his *Lexicon lingue Slovenicæ veteris Dialecti*, dedicated to Prince Michael Obrenovich, of Serbia, whose acquaintance he had made at Vienna—of this work a second edition, much enlarged, appeared in 1862-5. In the same year Miklosich was appointed professor of the Slavonic languages and literature in the University of Vienna.

Among his other great works may be mentioned his *Vergleichende Grammatik der Slavischen Sprachen* (1852-1875), a work of colossal learning, in which, supplementing the labours of Dobrowsky and Kopitar, he first put the Slavonic languages upon a scientific basis; *Etymologisches Wörterbuch der Slavischen Sprachen* (1886); *Dictionnaire Abrégé de Six Langues—Russe, Vieux-Slave, Bulgare, Serbe, Tchèque, et Polonais* (1885). His contributions to the *Denkschriften* of the Vienna Academy are numerous and of great value. He also published some communications in the *Transactions* of the Academy of Agram. Noteworthy among the former are his papers on the Slavonic words in the Hungarian language, and on the Oriental words found among the Southern Slavs. He also wrote upon Albanian and Rumanian philology, and was the greatest authority on the language and traditions of the gypsies.

In 1883 Miklosich retired from his professorial duties at the university, and was presented with a gold medal by his admirers and pupils. He was succeeded by Prof. Jagić, well known as the author of many valuable works, and the editor of the *Archiv für Slavische Philologie*.

Miklosich held the opinion that the old Slavonic or Church Language, as it is sometimes called, was old Slovenish—i.e., the older form of the language now spoken in Styria, Carinthia, and a part of Southern Hungary. The same view was adopted by Kopitar; whereas others (including Profs. J. Schmidt and Leskien) consider it to be Old Bulgarian.

Miklosich was a man of strong physique, and was engaged on literary work to the last, having published several valuable books since his retirement from the professorship. He has left two sons.

W. R. M.

MEETINGS OF SOCIETIES.

GEOLOGICAL.—(Annual General Meeting, Friday, Feb. 20.)

DR. A. GEIKIE, president, in the chair.—The secretaries read the reports of the council and of the library and museum committee for the year 1890. In the former the council once more congratulated the fellows upon the continued prosperity of the society, as evinced by its increasing number and by the satisfactory condition of its finances.

The council's report also referred to the publication of the late Mr. Ormerod's Third Supplement to his Index to the Publications of the Society, to the editing of Nos. 183 and 184 of the Journal by Prof. T. Rupert Jones, to the deaths of the late foreign secretary and the late assistant secretary, and in conclusion enumerated the awards of the various medals and proceeds of donation funds in the gift of the society. The report of the library and museum committee included a list of the additions made during the past year to the society's library, and announced the completion of the glazing of the inner museum.—After the presentation of the medals and the balance of the Wollaston fund and the Murchison and Lyell geological funds, the president read his anniversary address, in which he first gave obituary notices of several fellows, foreign members, and foreign correspondents deceased since the last annual meeting, including the late foreign secretary, Sir Warrington W. Smyth, the late assistant-secretary, Mr. W. S. Dallas, M. Edmond Hébert and M. Alphonse Favre (foreign members, both elected in 1874), Mr. W. M. Davies, Mr. Robert W. Mylne, Mr. Samuel Beekes, Dr. H. B. Brady, Mr. Samuel Adamson, and Prof. Antonio Stoppani (foreign correspondent, elected in 1889). He then dealt with the history of volcanic action in Britain during the earlier ages of geological time. He proposed to confine the term "Archaean" to the most ancient gneisses and their accompaniments, and showed that these rocks, so far as we know them in this country, are essentially of eruptive origin, though no trace has yet been found of the original discharge of any portion of them at the surface. Passing to the younger crystalline schists, which he classes under the term "Dalradian," he pointed to the evidence of included volcanic products in them throughout the Central Islands of Scotland and the North of Ireland. The Urieian series of Dr. Callaway he regarded as a volcanic group, probably much older than the recognised fossiliferous Cambrian rocks of this country. The Cambrian system he showed to be eminently marked by contemporaneous volcanic materials, and he discussed at some length the so-called pre-Cambrian rocks of North Wales. He reviewed the successive phases of eruptivity during the Arenig and Bala periods, and described the extraordinary group of volcanoes in Northern Anglesey during the latter time. The volcanoes of the Lake District were next treated of, and reference was made to the recent discovery by the Geological Survey that an important volcanic group underlies most of the visible Lower Silurian rocks in the South of Scotland. The last portion of the address was devoted to an account of the volcanoes of Silurian time in Ireland; and it was shown that during the Bala period a chain of submarine volcanic vents existed along the East of Ireland from County Down to beyond the shores of Waterford, while in Upper Silurian time there were at least two active centres of eruption in the extreme west of Kerry and in Mayo.—The ballot for the council and officers was taken, and the following were duly elected for the ensuing year:—Council: Prof. J. F. Blake, W. T. Blanford, Prof. T. G. Bonney, James Carter, James W. Davies, John Evans, L. Fletcher, C. Le Neve Foster, A. Geikie, A. Harker, J. C. Hawkshaw, H. Hicks, G. J. Hinde, W. H. Hudleston, Prof. T. McKenny Hughes, J. W. Hulke, J. E. Marr, H. W. Monckton, F. W. Rudler, J. J. H. Teall, W. Topley, Prof. T. Wiltshire, H. Woodward. Officers:—President: A. Geikie; vice-presidents: W. T. Blanford, Prof. T. G. Bonney, L. Fletcher, W. H. Hudleston; secretaries: H. Hicks, J. E. Marr; foreign secretary: J. W. Hulke; treasurer: Prof. T. Wiltshire. The thanks of the fellows were unanimously voted to the retiring members of council: Prof. A. H. Green, Rev. Edwin Hill, Major-general C. A. MacMahon, E. T. Newton, and Rev. G. F. Whidborne.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, March 2.)

PROF. C. C. BARNETON, in the chair.—Mr. Rhodes exhibited, and presented to the society, a small bronze medal found last month in his garden, bearing on the obverse the legend—

ERSKINE AND GIBBS AND TRIAL BY JURY and on the reverse the names of Hardy, Horne,

Tooke, Thelwall and the other conspirators, and the date 1794: Sir Vicary Gibbs was elected member for this University in 1806.—Prof. Hughes, in exhibiting some antiquities lately found at Great Thurlow, first gave a sketch of the line of country at the base of the chalk hills by Haverhill, Bartlow and Linton, along which Roman remains were not uncommon. He showed that the Romans had followed the valley from Haverhill to Great Thurlow, and probably on by Wood-Ditton to Newmarket, pointing out the exact positions in that valley in which other remains of Neolithic and Roman date had been found. He owed the acquisition of the interesting collection exhibited to the generosity of Mr. Wootten of Great Thurlow, who came upon the pit in which they occurred when draining a field, and informed him of the discovery in time to enable him to see the pit open and examine the mode of occurrence of the relics. The pit was situated on the upper part of the slope near the level of the plateau, north-west of Great Thurlow. The surface of the plateau consisted of boulder clay with patches of gravel and a clayey wash, especially on the brow of the hill; on the eastern slope, near the top, the pit was crossed. He saw evidence of two more similar pits a little lower down. The pit was proved to a depth of some six feet or so. It was filled with earth, layers of broken pottery, bones, shells, and various household refuse, containing a good deal of organic matter. There was black and grey pottery of well-known, and some of rarer, form and ornamentation. Handles of *amphorae*, and necks of earthen flasks, *mortaria*, and so on. But the pit was remarkable for the quantity and variety of the Samian ware found in it. It was not of the best class of paste, being rather soft and porous, but the exterior appearance was very good and the ornamentation rich: there was the usual loop-and-tassel border, and the beautiful radially marked margin, like the rim of some sea-shells. Some pieces of pottery had symmetrically twined leaves and fruit, which might be mulberry or alder; on another was a leopard, easily recognised by its slim form and spots. The potter's marks were generally obscure, as if the stamps had been worn and broken—OF ALBI was the only one which he could read, and the L of that was doubtful. There were many large rusty nails, probably from the wood of which charred remains occurred all through the mass. Oyster-shells were common, and bones of pig, sheep, and red deer, and of a small short-horned ox. There were pieces of Niedermendig lava, of which millstones were so commonly made then as now; a plain bronze *fibula* and bits of wire, and a bronze triangular embossed ornament, such as might have formed part of a short sword-scabard, and a small brass coin on which "Claudius Caes" (*Claudius Gethicus*) were the only legible figures. The most interesting object, however, was a small stumpy figure, draped in long straight-falling robes, and holding a long knife in one hand and a bag or purse in the other. It was carved in chalk and stood about three inches high, but the head was unfortunately lost (probably a Vertumnus-Mercury). On making inquiries as to whether there were traces of a camp or villa known anywhere near, or suggested by local names, he could hear of none except that the small channel which ran down the hill-side close by was known as "Castle ditch."—Two communications were read by Mr. R. F. Scott of St. John's College. (1) A letter from Sir Chr. Wren to Dr. Gower, Master of St. John's, relating to the old stone bridge, and two letters from Nicholas Hawksmoor on the same subject. (2) Letters relating to the controversy between Trinity College and St. John's College respecting the enclosure of Garret-Hostel Green. The letters in question are preserved in the "Treasury" of St. John's College. I.—The old stone bridge of St. John's replaced an earlier wooden structure, which is shown in Loggan's view of the college. Sir Chr. Wren proposed: "to turn the River in a direct Chanell over your own grounds, and to make the Bridge directly in the middle vисто of your Quadrangles, and to raise a new but shorter walk as far as your grounds goe, which may terminate in a Seat Statue somehouse or some agreeable object, and returne off to the other walks." He proposed that a new channel, 700 feet long, 50 feet broad, and 8 feet deep, should be dug, the earth wheeled in heaps to the bank of

the old river to be filled in when the new bridge had been built and the new channel opened. "The convenience of all this is a *parterre* to the River, a better access to the walks and a more beautiful disposition of the whole ground. You must excuse the Architect (if his opinion be asked) who gives the designs he judges most proper as an Artist: but this ought still to be with submission to the circumstances of your own affairs of which you are best Judges." The letter is dated from Whitehall, March 31, 1697. Apparently the college shrank from the expense of diverting the river; and in Hawksmoor's letters, written in May and June, 1698, it is assumed that the bridge is to be built abutting on the third court in a line with the central line of the courts. Hawksmoor observes that the bridge would then lie obliquely to the river front of the college, but replies that this is the least fault to be chosen of several. II.—In 1599 Trinity College made an arrangement with the town of Cambridge whereby the college was to be allowed to enclose part of Garret-Hostel Green, and in return to lay out what is now called Parker's Piece for the benefit of the town. St. John's College claimed (Cole MSS. *Brit. Mus. Addl.* 5842. p. 320): "That time out of mind they have used the said waste for walking and other exercises; and their tenants cattle have fed on it, and they have impounded other cattle." The case for Trinity was hotly pressed by Archbishop Whitgift, while Sir Robert Cecil and Thomas Sackville, Lord Buckhurst, took the side of their own college. Archbishop Whitgift wrote to Dr. Clayton, master of St. John's: "Your unkinde and vnneighbourly dealing wth Trinitie College in so small a matter is come to her Maties knowledge together with my endeavour on that Colleges behalf, and I doo assure you that in the hearing of diverse persons her Highness expressed in some vehemencie her dislyke of yo^r frowardnesse in so necessary and reasonable a matter, towards so great and worthie a College of her Fathers foundation." Henry Alvey, the noted Puritan, paid a visit to the Archbishop at Lambeth to lay the case for St. John's before him, and in a very lengthy letter gives an account of his interview to Dr. Clayton. It appears from this that St. John's held that under their statute *De bonis et possessionibus Collegii non alienandis* they were precluded from consenting to the enclosure; while the Archbishop maintained that this did not extend to rights of common. It is not easy to understand how much land Trinity College wished to enclose; in one of Whitgift's letters it is described as "that portion of ground which lyeth beyond the river and behind the College," which seems to include more than what was then known as Garret-Hostel Green. Several letters were read from Robert Bouth or Booth, at one time bursar of the college, but then living with the Countess of Shrewsbury in London. He was willing to compromise the matter by accepting an annual acknowledgment from Trinity College and a branch-pipe from the Trinity conduit, so that a fountain might be set up in the second court of St. John's, which was then in course of erection.

NEW SHAKSPEARE SOCIETY.—(Friday, March 13.)

DR. F. J. FURNIVALL in the chair.—Miss Emma Phipson read a paper on "Shakspeare's References to Natural Phenomena," and began by noting how especially rich the play of "Edward III." was in these references. While most poets only found Nature useful for purposes of comparison, Shakspeare was in the habit of finding and expressing some sympathy between Nature and man, as in the description of the situation of Macbeth's castle, on Duncan's approach; or in the daring idea of "the air, which, but for vacancy, had gone to gaze on Cleopatra too." In this wealth of references to Nature, Drayton (also a Warwickshire lad) came nearest to him; and Chapman followed close. Peele and Greene were artificial, and Marlowe almost entirely classical. To be sure, England's climate gave a poet a great chance; it would be hard if he could not find something to say about the weather. Shakspeare seemed to have been a lover of the sun, which with him represented the spirit of good in the world, and to hate the night; we do not even find him praising it, as every modern poet does, for its gift of rest. It seemed probable that Shakspeare was a bad

sleepers, he seemed so thoroughly to understand the value of repose. The Sonnets were one long wall of sleeplessness, and Caliban alone found delight in dreams. Again, he seemed to have known too well the appearance of first early dawn. What an astrological play "All's Well" proved to be! Both clouds and wind were favourite subjects with Shakspeare for varied treatment. There was no clear evidence that he had ever made a sea-voyage, and even a residence near the sea was not shown by any allusion to the common objects of the shore. It was probably by a slip that Shakspeare made the tide serve only once a day. He must, as a Londoner, have been familiar enough with the actual facts. In conclusion, there was an absence, throughout, of real mountain scenery.

FINE ART.

THE PREPARATION OF DRAWINGS FOR PHOTOGRAPHIC REPRODUCTION.

Practical Notes on the Preparation of Drawings for Photographic Reproduction: with a Sketch of the Principal Photo-mechanical Printing Processes. By Colonel J. Waterhouse. (Kegan Paul & Co.) Photography has of late years been very largely applied to the reproduction in facsimile of drawings of all sorts, whether required for technical or artistic purposes. For this it has the great advantage of being the simplest of all processes for altering the scale, either by enlargement or reduction, with the most absolute accuracy; and, as a rule, it is much cheaper and more speedy of execution than the older methods of lithography and engraving. Lithography is rapidly disappearing before the cheaper photo-lithography; and wood-engraving is fast being superseded for all ordinary purposes by "process blocks." These new applications have largely helped on the increase and popularity of illustrated books, which is so marked a feature of the present day. So extensively are the many new processes now employed dependent on photography that neither authors nor publishers of illustrated works can quite dispense with a knowledge of the various photo-mechanical methods, or of the suitability of each for the satisfactory reproduction of materials of different kinds. And, for the artist whose drawings are to be reproduced, it is of the utmost importance to know how they ought to be prepared and finished so as to reproduce to the greatest advantage by the process to be used, without unnecessary expense for re-drawing or correcting. To meet this growing want, Colonel Waterhouse's *Practical Notes* have been prepared. In wood-engraving and lithography, however roughly drawn or highly coloured the original might be, the skilled engraver or lithographic draftsman could at once put it into satisfactory form; but when such a drawing is put into the hands of the photographer, he can only produce a facsimile of it with all its defects—heightened, perhaps, by the unsuitableness of the original for reproduction by the process employed. To point out clearly all that requires attention in the preparation of drawings, so as not to entail alteration and touching up before printing—which cause delay and expense, and frequently seriously injure the work—is the main object of this handbook. The author's long experience and mastery of the different processes in the offices of the Survey of India at Calcutta, where he has had to reproduce great numbers of plans, drawings, views, &c., by photo-lithography, photo-engraving, photo-collotype, and similar processes, enable him to speak as a practical expert on the subject. The results of this experience are here put at the service of all interested in this department of applied science. The work does not discuss the minutiae of manipulation of the different processes, beyond giving such an outline as

will make them intelligible, though there are remarks even on this matter that may be useful to the workman; but the suitability of each process for the reproduction of different kinds of work, and how the work should be finished in every detail to fit it for the process, is carefully discussed, with detailed instructions, in this most useful little book.

J. B.

OBITUARY.

GIOVANNI MORELLI.

THE death, on the first day of this month, of Senatore Giovanni Morelli, of Milan (Ivan Lermolieff), deprives Europe of the most gifted of her art critics and art historians. He had long been ailing, but had preserved throughout his illness so great a semblance of health and so fine a presence, considering his ripe age of seventy-five years, that his friends were accustomed to look upon him as something of a *malade imaginaire*. He himself until the last scarcely suspected the gravity of his malady; for he cherished the project of visiting England again in this summer, in order to overhaul once more the great collection of drawings at Windsor, Oxford, the British Museum, and Chatsworth, in connexion with the last volume—as yet unpublished—of his much-developed and altered *Kunst-Kritische Studien der Italienischen Malerei*.

It is stated, on the excellent authority of his devoted friend and fellow-worker, Sir Henry Layard, that his last thoughts, his last words, were inspired by his favourite studies, and that almost his final request was that the former should examine a picture in the Accademia delle Belle Arti of Venice, which Morelli suspected to be a copy of a lost Giorgione.

Giovanni Morelli was born at Verona in 1816, and came of a Protestant family, originally of French origin, but long since settled in Switzerland. He was, however, brought up by his widowed mother at Bergamo, which he took pleasure in regarding as his native city. He was educated as a physician—chiefly at Munich and Paris—and to his scientific education owed no doubt the peculiar direction which his artistic studies afterwards took; but he never practically followed his profession. He was an ardent patriot, and took an active part in the war with Austria in 1848, besides being delegated by the Provisional Government of Lombardy to represent them at the Diet of Frankfurt. Although he never played a very prominent rôle in public affairs, he enjoyed the high esteem of his party, his advice in matters of high policy being very frequently sought by the principal statesmen of the Right, Minghetti, Visconti-Venosta, and others.

First coming into prominent notice as a student and critic of an Italian art in consequence of a series of studies, based on the paintings in the Borghese Gallery, which appeared from 1874 to 1876 in the *Zeitschrift für bildende Kunst*, he took the world of art by storm in 1880 with his now famous and in the true sense of the word “epoch-making” work, *Die Werke Italienischer Meister in den Galerien von München, Dresden, und Berlin*, which excited in some quarters the greatest enthusiasm, in others the most vehement opposition. This, like all Lermolieff’s works, appeared originally in German, which language he wrote with singular ease and perfection; there being, as he was reluctantly compelled to confess, no sufficient market for such books if composed in the Italian tongue. It was, however, shortly afterwards translated into English by Mrs. Richter—the wife of the art-historian, Dr. Jean Paul Richter—and later, with some additions and alterations, appeared in an Italian dress. In 1889 Lermolieff published the very important work on the Borghese and Doria-Panfilii Galleries at Rome, which was reviewed at consider-

able length in the ACADEMY at the time. Still more recently—at the commencement of the present year—appeared in entirely altered shape, and with so many improvements and corrections as to make it practically a new book, his last volume, dealing, on the same general lines as his former book, with the Galleries of Munich and Dresden. This contains much new and valuable matter as to the minor painters of the Milanese schools, and with regard to the art of Giorgione, Correggio, Cariani, and Domenico Campagnola. The searching and severe criticism which Morelli brings to bear on the so-called Leonardo da Vinci, a “Madonna and Child” recently acquired by the Gallery of Munich, is in his best, and at the same time his most characteristically militant, style.

It is unnecessary on the present occasion—especially in the ACADEMY—to restate Morelli’s guiding principles in the appreciation of works by the early Italian masters. None but the most ungenerous of detractors would deny the vast influence which he has exercised on the whole body of serious art literature brought forth during the last ten years, or the important revolution of which he has been the pioneer in the methods of approaching, the criticism and demarcation of schools, styles, and individual masters. It is not necessary even for Morelli’s most ardent adherents to accept *en bloc* all his judgments; and indeed he himself, so far from laying claim to infallibility, unhesitatingly recanted those statements of the unsoundness of which he afterwards became convinced. His chief and crowning merit, however, is to have imparted his vivifying influence to the whole subject with which he so genially dealt; to have placed matters on such a basis, through precept and example, that any return to a pre-Morellian state of things, even on the part of his most determined adversaries, would be impossible. Too eager perhaps to take the offensive against his opponents in art matters, he found in the learned, if a trifle ponderous, critics of the North German school, foemen worthy of his steel, who, however vehemently they might combat his conclusions, never dreamt for a moment of denying his artistic position or his commanding influence. Only in certain quarters in England has a childish and incomprehensible spite been shown in the appreciation, or rather the depreciation, of Lermolieff’s life-work. He was prompt enough to rebut attacks made by those whom he deemed worthy of notice, often crushing and overwhelming the over-bold invader; but at such pin-pricks as these he smiled—not even the smile of contempt, but the smile of amusement. It is only fair to add that the great majority of serious students of art in England—including many authorities of recognised weight whose names must be familiar to all interested in the subject—are fully sensible of the immense impetus given to the study of Italian art by Ivan Lermolieff.

It has already been hinted that a last volume, dealing with the Gallery of Berlin, and including much new matter, remains incomplete. It is hoped, however, that this may ultimately see the light under the editorship of Dr. Gustavo Frizzoni, the trusted friend and pupil of the deceased writer, and himself, it need hardly be said, a writer of considerable eminence.

The most fitting way in which Italy—never behindhand in recognising the services of her children—could mark her sense of the irreparable loss which she has sustained would surely be by adopting, in the great galleries of the Uffizi, the Pitti, the Accademia of Florence, and in the public galleries generally, those among the innumerable re-christenings of Lermolieff which have been consecrated by the approval of the great majority of competent and unbiased judges. This course has long

since been adopted in the great galleries of Munich and Dresden, and, to a great extent, also in the Brera of Milan.

CLAUDE PHILLIPS.

CORRESPONDENCE.

THE FRENCH REVIVAL OF ETCHING.

Burlington Fine Arts Club: March 17, 1891.

THE ACADEMY is read so widely by connoisseurs of art that it is in its columns that I would most of all crave permission to do an act of justice in a little artistic matter.

Much credit has been given to me, personally, in the newspapers for the share I have had in selecting and arranging the exhibition of prints illustrative of the French revival of etching at the Burlington Fine Arts Club.

I should like it to be known that Mr. Deprez, of the firm of Deprez and Gutekunst—whose knowledge of etching and etchers is exact and minute—substantially and very kindly aided me in this business; and if the Catalogue had not been obliged to go to press in a hurry, while Mr. Monkhouse, who had done one part of it, and I, who had done another, were separated by a couple of hundred miles, it would have contained that acknowledgment of thanks to Mr. Deprez which both of us felt was due.

FREDERICK WEDMORE.

THE ARCHAEOLOGICAL SURVEY OF EGYPT.

80, Eccleston-square, S.W.: March 17, 1891.

All those interested in the archaeological survey of Egypt, undertaken by the Egypt Exploration Fund, will doubtless remember Mr. Villiers Stuart’s offer, made in the *Times* of October 7, to give £50 to the expenses of the work, provided that forty-nine other persons would do the same. I am happy to say that I have received from a lady—the first of the forty-nine to come forward—a cheque for £50 in response to this appeal, and we hope many others may follow her example.

The survey work has been going on at Beni Hassan since December under the care of Mr. G. Fraser, a skilled engineer and explorer, and Mr. Percy Newberry, a specially trained student. They have been lately joined by Mr. Blackden, an artist, who is engaged in colouring full-sized drawings of the bas-reliefs. Both the officers of the survey are acting with the approval and support of the director of the Ghizeh Museum.

M. L. McCURE.

NOTES ON ART AND ARCHAEOLOGY.

MESSRS. EDGAR BUNDY, Arnold Priestman, and W. Peter Watson have been elected members of the Royal Society of British Artists, in view of the exhibition that will open next Monday.

THERE will also be on view next week, at the Royal Arcade Gallery, Old Bond-street, a series of sketches by Mr. Frank Brangwyn, entitled “From Antwerp to the Lower Danube.”

MR. RALPH NEVILL—whose *Old Cottage and Domestic Architecture in South-West Surrey* (1889) has already passed into a second edition—announces a companion volume dealing with the Golden Valley of Gloucestershire, which has Stroud for its centre. The domestic architecture is here represented by a characteristic style of stone buildings, which will be fully described in the text and illustrated by more than fifty views, besides cuts of details. As in the former volume, topographical and historical notes are added, and there will be a reproduction of Ogilby’s *Book of the Roads* (1675), and other maps. The subscription price is ten shillings; and subscribers should address them-

selves to the author, Rolls Chambers, Chancery-lane.

PROF. NORMAN LOCKYER, who has lately returned from studying the subject in Egypt and the Levant, will deliver a lecture on "The Orientation of Ancient Temples," at the London Institution, on Monday next.

THE Stationers Company having placed their Hall at the disposal of Messrs. Cassell & Co. for the distribution of the prizes gained at the recent *Work* exhibition, the awards—consisting of medals, book prizes, and certificates—will be presented to the successful competitors on Tuesday next, March 24.

THE November and December numbers of the *Proceedings* of the Asiatic Society of Bengal, each contain communications of more than usual interest. One describes a birch-bark MS. brought back by Lient. Bower from Kuehar in Kashgaria, which had been dug out of subterranean mud-structures locally associated with the name of Afrasiab. Some coins were also exhibited, but no description of these is given, beyond that they came from the sands of the Gobi desert. The MS. is written in characters that correspond partly with the ancient Newari, after which the Tibetan writing was shaped in the seventh century. But the Tibetan scholar, Babu Sarat Chandra Das, has failed to decipher it. A facsimile of two leaves of it are here reproduced. The other paper describes a monolith in Purniah district, which is not mentioned in Hunter's *Statistical Account of Bengal*. It is a granite column, at present twenty feet in length, with a hole at the top, which according to local tradition, originally bore the figure of a lion. When excavated, it was found to be entirely destitute of any inscription; but immediately under the base was found a gold coin, of the Indo-Scythic type, bearing the name of Bazodeo (Vasudeva), which is assigned to the second century A.D. It would thus appear to be the oldest known monument in Lower Bengal.

THE STAGE.

"LE MAGE."

Paris: March 17, 1891.

THE *première* of M. Massenet's new opera, "*Le Mage*," took place last night at the Grand Opera. The author of the libretto is the poet, M. Richepin, who has succeeded in imparting interest and poetry to what may generally be considered the most uninteresting, if not the most absurd, of literary productions—an opera book.

"*Le Mage*" is a poetical version of the legend of the foundation of "Mazdeism" some twenty-five centuries before our era. Zarâstra, the great warrior of Iran, has conquered the people of Turan, and returns to Bakhdi laden with spoil and followed by many prisoners, including Anahita, Queen of the Turanians. Among those who first greet the return of the hero is Varedha, daughter of Amru, high priest of Jahi, the goddess of voluptuousness. Varedha, herself a priestess, is passionately in love with Zarâstra, who, on the other hand, loves his prisoner, the fair Queen Anahita. In a fit of frantic jealousy Varedha, in order to prevent the marriage of Anahita and Zarâstra, declares before the king and the assembled people that the latter has sworn eternal fidelity to her before the altar of the goddess. Zarâstra denies the impeachment; but the king, the priests, the people, and Anahita herself, take the part of Varedha, and Zarâstra, heart-broken and indignant, bids farewell to the "land of falsehood," and retires to the Holy Mountain. After undergoing certain mystic ordeals, he is initiated a Magian, and becomes the high priest of Ahura-Mazda, the god of fire. Varedha discovers his retreat, and comes

to tempt him; but he resists. She then reveals to him that Anahita has forgotten her old love, and is about to marry the king. This is Varedha's revenge. The fourth act is set in the gorgeous temple of Jahi, where a splendid entertainment and dances are given in honour of the marriage of the King of Iran and the captive Queen of Turan. At the last moment, Anahita falls prostrate before the king and implores him to set her free, since her old love for Zarâstra is stronger than ever.

"Vers le steppe aux fleurs d'or,
Laisse-moi prendre l'essor!
Laisse-moi voir encor
Mon beau ciel pâle.

"Où la neige en neigeant,
Sous la lune à l'œil changeant,
Fait germer dans l'argent
Des fleurs d'opale."

But the king is deaf to her prayers. She is dragged to the altar, and the sacred gong announces that Amru has united them. At that very moment cries of "Death to all!" resound from outside, and the temple is enveloped in flames; the Turanians have come to rescue their queen. The king, Amru, the priests, the guards, are all massacred, while the Turanian war-song is heard on all sides:

"Par les monts, par les vaux,
Pour trouver des cieux nouveaux,
Au roulis des chevaux
La tribu passe.

Lâ, leïâ, leïâ, leïâ, leïâ, â, â!

"Où va-t-elle en rêvant?
Où s'en va la poudre au vent.
Mais toujours de l'avant
Et vers l'espace.

Lâ, leïâ, leïâ, leïâ, leïâ, â, â!"

The picture of the smouldering ruins of the temple of Jahi, with its vista of the desolated plain beyond, and the star-sprinkled sky above, in the midst of which the fifth act takes place, is one of the finest pieces of scenic decoration we have seen on the stage of the Grand Opera House. Zarâstra slowly surveys the scene of horror and desolation, and in a beautiful lament deplores the ruin of his native land, the death of the King of Amru, and of his daughter Varedha, who lies apparently lifeless beside a broken column. He trembles at the thought that Anahita may also be among the slain, but suddenly the stillness of the night is broken by the trumpet call of the Turanian warriors—Anahita lives! The two lovers are re-united; but the scene of reconciliation is interrupted by the dying Varedha, who rises before them, and in her jealous hatred appeals for revenge to the statue of Jahi, which alone remains standing amid the ruins of the temple. Once more flames arise on all sides, the huge statue falls with a crash to the ground, and the lovers are imprisoned in a circle of fire, fragments of stone, and clouds of smoke. Zarâstra calls upon Ahura-Mazda to save them. Immediately the flames die out, the atmosphere is cleared, and Zarâstra leads Anahita from the midst of the burning ruins to safety, while Varedha dies, uttering a wild shriek of baffled vengeance. The curtain falls to the loud strains of the Mazdean hymn. Such is a too brief summary of one of the most poetical and well-written libretti we have heard, which has afforded M. Massenet numerous opportunities for displaying to the best advantage his various talents as a composer.

The score of the "*Mage*" contains no less than fifty-two numbers, the merit of some of which will be contested; but one and all are written with that consummate knowledge of the resources of modern orchestra and the wealth of melody—at times a little too evanescent—possessed by the composer of "*Hérodiade*," "*Le Roi de Lahore*," and "*Esclarmonde*." Shortly, it may be said that the first and second acts and the first part of the

third are the best; the fourth has several weak points (*des trous*, as the French say); while the fifth is principally made up of cleverly transposed reminiscences of the "leit-motives" already heard in the first and second acts. The "representative theme" of the first act is the song of the Turanian prisoners, with its characteristic chorus for tenors, soprano, contralto, and basses: "Lâ, leïâ . . ." Then follow the Amru (M. Delmas) and Varedha (Mme. Fierens) themes; the beautiful *motif* of the love of Zarâstra (M. Vergnet) and Anahita (Mme. Escalais), and the first part of the Jahi incantation. The first tableau of the second act opens with a very effective air sung by the priestess Varedha, "Encore plus bas dans les ténèbres." The duet with Amru which follows is too long. In the second tableau is heard the gem of the opera, an *arioso* sung by the tenor, "Soulève l'ombre de ces voiles," addressed to the veiled figure of Anahita. A magnificent *ensemble*, sung by Amru and his priests, "Par les Dévas gardiens de tout serment prêté," and a noble finale. This act is a remarkable example of dramatic and impassioned music, of magnificent scenery, of costly and strange costumes, and of the latest innovations in stage decoration and carpentry. The first part of the third act is taken up entirely with the various phases of the Mazdean initiation and rites, which are preceded by a storm with dazzling realistic effects of lightning, thunder, and wind, to which must be added loud and weird trumpet calls. The prayer "Ô ciel d'Ahura," sung by Zarâstra, the Magians, and worshippers, is a truly grand composition. But M. Vergnet's melodious voice was severely tried by the formidable outbursts of the orchestral accompaniment; and in the duet with Varedha which follows he was scarcely equal to the occasion. The ballet of the fourth act (the most important item in the eyes of the *abonnés*) consists of seven numbers, the best of which are the first, fourth, and fifth, and a voluptuous waltz exquisitely danced by Mlle. Mauri. A beautiful *andante* with a dream-like ending, a sweet transposition of a *motif* in the second act, was beautifully sung by Mme. Escalais; and the act ends in the noise and uproar of battle and a scene of carnage. The fifth act consists principally of reminiscences of the first and second, ably transposed to be in unison with the dramatic termination of the melodrama.

Cecil Nicholson.

STAGE NOTES.

THE first performance of Mr. Lumley's long farce, or farcical comedy, "*The Volcano*," at the Court, gave rise to little expectation that the piece would have a great run. A *succès d'estime* seemed to be all that was accorded it. Yet the piece has some excellent notions in it. The character of the Duke, who becomes the possessor of what is called a Society newspaper, is funny; and the lady journalist—or lady reporter, rather—the mere feather-brain, who bustles about and takes a cheerful view of everything, and is enthusiastic on the slightest provocation, and to whom the mediocre appears to be the exquisite—she also is an entertaining person, without quite knowing it, and is a familiar type to boot. But these people—Duke and interviewer—might perhaps both have been made yet more telling than they are, through Mr. Lumley's work at the Court Theatre, where Mrs. John Wood, Miss Carlotta Leclercq, Mr. Arthur Cecil, and Mr. Weedon Grossmith do not produce altogether their usual effect. We doubt whether the successes of "*Aunt Jack*" and "*The Cabinet Minister*"—in both of which the players were fitted so well with their parts—will be matched by the new "*Volcano*."

The New Olympic Theatre¹⁰ is now very busy. "*Ben my Chree*" was given lately at a

matinée; and, while "The Lights o' London" continues to be played at night—along with Mrs. Willard's bright little "Tommy," in which Miss Lillie Belmore is so good—a new piece by Mr. Charles Hudson, the actor, was announced for Thursday afternoon. This was "Father Buonaparte." The cast was to include Mr. Wilson Barrett, Mr. Austin Melford, and Miss Winifred Emery.

ONE night last week Mr. Grein—who seems to be the chief promoter—inaugurated at the Royalty Theatre the performances of an English "Théâtre-Libre." He made the deep mistake of starting with the representation of Ibsen's putrid play called "Ghosts," which no person of sure and exquisite taste could listen to without loathing, and which that great artist and sufficiently tolerant person, Sarah Bernhardt, described truly in a sense, yet even too kindly, as a clinical lecture. There may be moments, conceivably, when it is desirable to read "Ghosts," but on the stage the thing is intolerable. It is ugly; it is disgusting; it is unrelieved by humour; it is without a touch of fine pathos or a line of beauty. That its performance, like that of "Rosmersholm," has been condemned so very frankly and strongly by nearly every organ of authority would be a credit to English journalism, were it not, indeed, entirely obvious that the piece must be repellent alike to every man of plain sense and every serious artist in writing. Mr. Frank Lindo, Miss Edith Kenward, and the other players—we really forget their names—who took part in it, are by this time, it is to be presumed, regretful that they gave it their assistance; for if their assistance was given for money, the money cannot have been worth earning in so loathsome an enterprise; and if their assistance was given for nothing, so much the worse for their taste. The result, in any case, is that the performance has put the literary public—and the cultured general public, we need hardly add—quite out of sympathy, for the time being, at all events, with the aims of the English "Théâtre Libre." Yet Mr. Grein, we fully believe, means well in his undertaking. Before now he has shown his sympathy with manly and original and healthy work. Let him, at all events at the Théâtre Libre, do something that is worth doing. Perhaps if he gave us the promised performance of the "Sœur Philomène" of the De Goncourts, he might purge himself of his contempt.

"EMINENT ACTORS."—*Thomas Betterton*. By Robert Lowe. (Kegan Paul & Co.) The series to be devoted to "Eminent Actors" is coming out but slowly. Many months ago the "Macready" was reviewed in these columns. It is followed at length by "Betterton," a subject which had been confided to Mr. Robert Lowe, who has been known hitherto chiefly by his contributions to the bibliography of the stage, and not as an original writer. To such a student—a man of research, rather than a man of letters—there would however have been no foolishness in confiding such a subject as Betterton. Research was before all things that which was required to justify the appearance of a volume on an actor of Betterton's remote time. But let us say at once that Mr. Lowe—unlike many of the amassers of facts—has of late rather improved than deteriorated as a writer. It would be too much to exact that he should be able to utter a very personal note. That is the province of the pure writer who writes like nobody else, and not of the student who writes with correctness and with just sufficient ease. A pure writer's effects and resources—humour, pathos, earnestness, irony—are not in this book; but a mass of fact, well enough stated, for the careful reader an illumination of Betterton's stage. For, after all, it is rather of the stage of Betterton's period,

than of the estimable actor and worthy man, that Mr. Lowe treats. He has brought his material from all sorts of holes and corners. He is deeply read in these stage matters, and we are put comfortably enough into possession of the results of his reading. His chapters called "The Stage before the Restoration" and the "Restoration Theatre" form a couple of valuable essays dealing, at first hand, so to speak, with their subjects. Mr. Lowe, though he has been known to be dry, is never superficial. His investigations are never perfunctory, and his well established methods are such that we confess we are generally disposed to accept his facts without question. The book will be successful. Even to the ordinary reader of memoirs there is no reason why a volume of stage biography should not be fairly attractive—no reason whatever, except that it happens, in this case (and, for the period of what it treats, this is a rarity) not to be a *chronique scandaleuse*—while to the student of the theatre it will be a welcome addition to such bookshelves as may be stored already with the record of dramatic achievement. We trust no long interval will elapse before the appearance of the succeeding volume of the series.

MUSIC.

RECENT CONCERTS.

MISS AGNES ZIMMERMANN gave her pianoforte recital at Prince's Hall on Thursday afternoon, March 12; and if the programme was not remarkable for novelty, it was, at any rate, well selected and well arranged. It opened with Beethoven's Sonata in D minor (Op. 31, No. 2), but of this we can only notice the Finale, which was rendered in a neat and able manner. Bach was represented by a Fugue in A minor, of early date, of which Spitta says that it "sounds like a Scherzo of Mendelssohn, anticipated by about a hundred years." This was given with much charm. An "Arietta," by Leonardo Leo, the famous Neapolitan composer of the early part of the eighteenth century, of delicate beauty, was charmingly interpreted. Miss Zimmermann's reading of the Schumann "Études Symphoniques" was correct, though somewhat cold. Some modern fugitive pieces, beginning with Chopin and ending with Rubinstein, ended the programme. There was a large audience.

Mlle. Janotha's concert programme on Friday, March 13, included a cycle of songs by Lady Tennyson. The poems by the Poet Laureate are mostly familiar, and some of them have been already set to music. Lady Tennyson has tried to interpret and intensify the meaning of the words, and expresses herself with a certain freedom. Mlle. Janotha, who helped in arranging the pianoforte accompaniments, has certainly added to the effect of the songs. "Airy, fairy Lilian," sung by Miss Carlotta Elliot, was the one which pleased us most. The others were interpreted by Mme. de Swiatlowsky and Mr. Bispham; and Mlle. Janotha was an able and sympathetic accompanist. She was also heard in some solos. Her two showy Gavottes were much applauded. She also played Chopin's Nocturne in C sharp minor, and the same composer's Berceuse; but why did she hurry both of them so? Her best performance of the evening was the Fantasia on Polish airs (Op. 13) by Chopin. This is a graceful, if not great, work, and it was interpreted with charm and delicacy. Mendelssohn's "Melusine" Overture, and other short pieces, were played by the Royal Amateur Orchestral Society, under the direction of Mr. Mount.

The instrumental portion of the programme of the Saturday Popular Concert was selected from the works of Beethoven, and St. James's Hall was filled in every part. Beethoven and Wagner! these are the two names which have

the power thus to draw the public; but, of the latter, Mr. Chappell can make no trial. The works were all selected from the master's so-called second period, and included No. 3 in C of the Rasounowsky Quartets, the Kreutzer Sonata, the Romance in F for violin, and the Variations on a theme from the "Eroica" Symphony. These last were rendered by Mr. L. Berwick with marked skill, although his tone was at times dry. Herr Joachim was in his best form. Mr. Norman Salmond, the vocalist, sang songs by Righini, Brahms, and Gounod with good effect.

The programme on Monday evening included Beethoven's strikingly original Quartet in F minor (Op. 95). Miss Fanny Davies and Signor Piatti played Mendelssohn's Sonata in D (Op. 58). The former did not display her usual vigour. Herr Joachim gave, as he has so often done, a fine performance of Tartini's "Il Trillo del Diavolo." Mr. Plunket Greene sang in a most delightful manner Schubert's "Litanie." He was also heard, though not to equal advantage, in three Irish songs by Dr. Stanford. The second, "The lament for Owen Roe O'Neill," has noble character, and sounds like an improvisation of one of the ancient bards.

Mlle. Jeanne Douste gave her seventh and last pianoforte recital at the Steinway Hall on Wednesday afternoon. The programme included some short drawing-room music, some pianoforte duets of a light character, and some Liszt pieces. The famous virtuoso is certainly a prominent feature of pianoforte literature; but, why, it may be asked, was Liszt's name printed in larger type than Bach, Beethoven, or Chopin? We think Mlle. Douste might have made a better selection of modern compositions; and the next time she gives a similar course of historical recitals, she will do well to include Em. Bach and Schubert, to give greater prominence to Mozart and Weber, and not to include transcriptions in a Chopin programme. On Wednesday Mlle. Douste was heard to advantage in pieces by Pfeiffer, Moskowski, and Wieniawski.

The Westminster Orchestral Society gave a concert on Wednesday evening at Westminster Town Hall. An interesting feature of the programme was Schubert's Symphony in B flat No. 5, which, we believe, has not been heard since it was given at the Crystal Palace in 1881. It was written in the composer's twentieth year; and, although his individuality is revealed in the music, it has not that romantic melancholy which pervades the works of later years. There are indeed many passages which remind one of Haydn in one of his more cheerful moods. The Westminster orchestra, under the direction of Mr. C. S. Macpherson, gave a very good account of itself. The work was well received, and perhaps the Society may feel tempted to try some of the other symphonies of Schubert. Mr. F. Cliffe conducted his orchestral picture "Cloud and Sunshine." Mr. W. C. Hann played successfully two movements from Cottermann's cello Concerto in B minor. Miss H. Saunders and Mr. Braxton Smith were the vocalists. The hall was crowded. J. S. SHEDLOCK.

MUSIC NOTES.

THE Musical Guild, founded in 1889, has made arrangements to give four concerts this summer—on May 6 and 20, and June 2 and 9. The programmes will include Spohr's Nonet, Brahms's Quintet in G (Op. 111), C. Wood's Quintet in F (Wind), G. Henschel's String Quartet in E flat, Brahms's "Liebeslieder," Haydn's String Quartet (No. 14) in C, Mozart's String Quartet in B flat, Beethoven's Piano Trio in B flat (Op. 97), Brahms's Horn Trio (Op. 40) in E flat.

SATURDAY, MARCH 28, 1891.

No. 986, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Light of the World. By Sir Edwin Arnold. (Longmans.)

HAD Sir Edwin Arnold never written *The Light of Asia*, he would probably never have written this poem; but, having written the former, this was no longer an improbability, it was impossible. One can well understand the temptation, mainly suggested to him, no doubt, by much obtuse Christian criticism, which would persist in proclaiming his Buddha as really Christ under another name, missing, in the large correspondence between the two figures, the very essential differentiation. Many seem to have been so absorbed in the consideration of that great world-pity which filled the hearts of each alike, that they seem not to have marked how diverse indeed was "the secret of deliverance" brought by the two teachers: one with the drug of a spiritual euthanasia in his hand, looking out across the world with eyes that saw no comfort save in "the sleep eternal"; and the other bringing the bread of an "eternal life," and assurance of "a very present help in time of trouble."

But, great as the distinction is, it is not of the kind to make a poem; it has no dramatic value, and it leaves the correspondence between the main outlines of the two figures unaffected, the outlines of the typical Messiah. Sir Edwin Arnold chose, and wisely, to take Buddha as the archetype; but in doing so he exhausted the dramatic capabilities of the theme. Had he chosen Christ instead, the result might have been more satisfying than the present poem, though one must doubt even that; for, first or last, there is the one grand difficulty in the imaginative treatment of the story of Christ—the fact of our long familiarity with the great vivid figure which the Gospels, in their inspired simplicity, have given to us.

In the case of Buddha, it was, of course, quite different. The Western mind was in possession of no such picture of him; and *The Light of Asia* came to many as a discovery, its charm for all being the presentment of a story in many respects so like that of the New Testament, under other conditions and with a new background. Yet, however close a correspondence the figure of Siddhartha seemed to bear to Jesus, our imaginative sense was not disturbed; one found pleasure in noting the resemblances, they helped our realisation of him. However like Christ, it was not he, but another. Our minds were virgin to any impressions the poet wished to make. But in the case of Jesus it is all very different; and the poet who should give us a figure to replace that already

so vital in our imaginations would need to be great indeed. Even the genius of Milton made no such attempt; for "the Saviour" of *Paradise Regained* is simply transferred from the Gospels, and the Temptation re-enacted for the sake of a few fine passages. For him even there was no figure to paint because it had already been painted; no story to tell, after the simple sentences of St. Luke. But Milton enjoyed an advantage denied to the poet of to-day who would essay the theme, for he lived in an age when men had not yet left off painting the Magi in the dress of the period, and Mary still wept at the foot of the cross in ruff and farthingale; and he was able, therefore, to retain also the essentially English scenery of the New Testament.

With our present historic sense, however, such a treatment would be obviously impossible; and for the modern poet there remains no alternative save that of presenting an Oriental Christ, amid all the customs and various environment of the East—an appeal almost hopeless to minds so deeply possessed by that great English mediæval type. Of course, it is not impossible that in the hands of a very great poet such Oriental type might be made convincing; but, meanwhile, it is no disparagement of Sir Edwin Arnold to say that he has failed where none of his contemporaries could well have succeeded. I have endeavoured to measure his work by the great standards of poetic aim—such an attempt challenges no less a consideration, Sir Edwin Arnold would ask no less—but, judged by the smaller ideal of mere literary workmanship, there is, within the broad failure, much of charming and strenuous success, many vivid pictures, beautiful lines, and strongly expressed thought.

After a prologue re-telling the birth at Bethlehem, the singing of the angels, and the adoration of the Magi, we are introduced to Mary Magdalene, unfamiliar in our ears throughout as "Miriam of Magdala," who is represented as living on, after the crucifixion, in pious retirement in her native town; and whom, by the way, Sir Edwin accepts as identical with Mary of Bethany. Thence the story is conducted to the end in imaginary conversations, the first being between Mary and Pilate, whom we behold wildly regretful of his fateful indecision, and the rest between Mary and an old Buddhist, one of the Magi returned from India,

"to learn
The setting of that Star of Men, whose rise
His 'younger eyes beheld.'"

Such a plan smacks of modern ingenuity; but it certainly was calculated to display a strong treatment of the only opportunity that was left in the theme for the poet of *The Light of Asia*, the expression of that essential variation between the gospels of Buddha and Christ referred to above.

The fifth book of the poem, "The Love of God and Man," proves that he has been equal to the opportunity; and it is the finest in the poem, because it was really the only one in which he had a free hand. To the new version of the familiar narrative of which the other books are composed it is

perhaps hardly possible to do justice; for it is inevitable that the old accustomed phrases cling about one's ears as one reads, and its Oriental exactness affords but another proof that literalness and truth of impression are by no means the same. One had the same difficulty in taking kindly to the new names which Sir Richard Burton gave to the Arabian heroes of our boyhood, but in the present instance it is a difficulty much greater in degree. We can reconcile ourselves to any possible variation of Aladdin before our ears can become accustomed to "Miriam of Magdala," or recognise the familiar Lazarus in "El'Azar"; while surely Sir Edwin Arnold pushes exactitude perilously near to pedantry when he tells how Mary, following in Christ's train to Capernaum, having cast aside the wanton attire of her former living,

"put on the *mitpachath*,
Ridid and tsaph, dressed as our peasants use
Along the Lake,"

or when for—"and they stripped him and put on him a scarlet robe"—he substitutes,

"and, o'er His back
Some evil-witted Hebrew flung, in spite,
A red paludamentum-laticlave
To robe His sovereignty."

Great poets have made such slips before; but it should be easy for a modern to avoid them, especially since Milton has furnished so terrible an example as his proverbial "tame, villatic fowl."

Sir Edwin Arnold's conception of Christ is that human one which can, of course, be alone acceptable to-day.

"That one supreme, consummate, faultless life,
It was a human life, begun with us,
Continued 'midst us, ended as we end
In woe and weakness, thence emerged to be
A glory sitting equal in the sky
With God's own glory, everlastingly.
That by which we are judged, and that whereby
The race of Man claims place and patrimony..."

Of the theological distortions of him and his mission, he has the following vigorous passage:

"It may be there shall come in after days—
When this Good Spell is spread—some later
scribes,
Some far-off Pharisees, will take His law—
Written with Love's light fingers on the heart,
Not stamped on stone 'mid glare of lightning-
fork—
Will take, and make its code incorporate;
And from its grace write grim phylacteries
To deck the head of dressed Authority;
And from its golden mysteries forgo keys
To jingle in the belt of pious pride:
And change its heavenly cherishing tenderness
To warrant for the sword, the chain, the flame,
Lending hard Hate the sacred seals of Love,
And crying: 'Who believes not, perishes.'
It may be some that heard Him day by day,
Lacking the ears to hear, or losing hold
Of larger thought—perplexed interpreters—
Shall, in the times to be, do Him much wrong
With right intent; saying our sweet Lord
taught
Dark tangled schemes of sad salvation; God
Making Earth ill; which went awry; was lost
For sin; was forfeit to the wrath of Heaven;
Which—for it must exact a victim!—slew
The Son of Heaven Himself, willing and free;
And by His blood, self-shed and innocent,
Washes Earth's sins away, propitiates
That hungry anger of the offended Law.
So I have known some teach—nay, faithful
ones—"

The occasional comments of the Buddhist, as Mary proceeds, very forcibly distinguish

the sad Asian ascetic, for whom this world and the glory thereof was but Maya, and whose gospel was, after all, a selfish mortification of self, from the robust, glad-souled optimist, who came eating and drinking, and loving no less this world than the next.

"Now do these lucent words kindle a lamp
Brighter than what we took from Buddha's lore;
He bade us spurn Self, set the Self aside—
Ahankara—seek always to sink back
Safe to the Infinite; and, for such end,
Break from the sense, with all its sorceries;
Forego delights, disdain what most men prize,
Life's light allurements, tender things of Time,
Soft lips of love, sweet lisp of little ones
Making heart's music in the house; praise, fame,
Wealth, domination. But thou showest us
The subtle spirit, making good its way
From world of sense and self to selfless world,
Not by hard stress of lone philosophies,
Nor scorn of joys, nor sad disparagement
Of life and living things as shadows vain;
But—nearer road and new!—by heart to see
Heaven closest in this earth we walk upon,
God plainest in the brother whom we pass,
Best solitudes 'mid busy multitudes,
Passions o'ercome, when master-passion springs
To serve and love and succour."

I think I have quoted enough to show that in his fifth book Sir Edwin Arnold preaches a true gospel in good poetry. May he see of the travail of his soul and be satisfied.

RICHARD LE GALLIENNE.

"RULERS OF INDIA."—*The Earl of Mayo*.
By Sir W. W. Hunter. (Oxford: Clarendon Press.)

RICHARD SOUTHWELL BOURKE was a good sample of a class which has done the state some service in its day—though that day has gone. When one thinks of Edmund Burke, Sheridan, Grattan, Castlereagh, the Wellesleys, one sees of what the Anglo-Irish gentry were capable, with their combination of English ability and something more racy and genial. Yet these, perhaps, were only happy developments—the general tone was not of that pitch; and, what with their own faults and what with the faults of the English, a noble race is perishing at the hand of that unpropitiable avenger who waits on secular misconduct.

The subject of the present notice was born at Dublin in 1822; the eldest child of a country squire, member of a family recently ennobled for political services, but long known for attachment to the soil and the sons of its adopted country. He passed his boyhood at a country house in County Meath, educated with his brothers by a domestic tutor, and promising more distinction of body than of mind. His education was completed by a short visit to France; and he appears to have graduated at the Dublin University without honours and without residence in college. In 1843 he made his appearance in London society, and soon after made a tour in Russia, an account of which was published by Colburn in 1846.

So far, the young Mr. Bourke was but a normal type of the "English of the pale," gay, chivalrous, and not devoid of mental activity. But in 1847 he entered the House of Commons as junior member for County Kildare; and having, in the following year, taken to wife a daughter of Mr. Wyndham (since Lord Leconfield), he became a figure

in the politics and society of London. "He established for himself," according to a quotation—apparently from a private letter—given at p. 38 of the volume before us, "the position of a sensible country gentleman"; and, *qualis ab incepto*, that continued fundamentally his character. In 1852 he became chief secretary in Lord Derby's first ministry, the Earl of Eglinton being lord-lieutenant. Failing to obtain re-election at Kildare, he entered next time as member for Cockermouth, an English borough at that time influenced by his wife's family; and for the rest of his parliamentary career he continued to be an English representative, though, upon occasion, an Irish administrator. He was now known as Lord Naas, his father having succeeded to the earldom.

The Derby Dilly only ran for ten months; and it was six full years before Naas got back to his office. In the meantime, Irish affairs had assumed a sterner aspect; and it next fell to his unenvied lot to cope with the outrageous conduct of the Fenians, the extreme left of the malcontent Hibernians. In 1867 he lost his father, and became Earl of Mayo; but the promotion was only titular; like Lord Palmerston, he retained his seat as a commoner. On March 10, 1868, it became his duty to encounter Mr. Maguire's motion, "That the House resolve itself into a committee, to take the condition of Ireland into immediate consideration." In his reply, Mayo declared the policy of his Government. It was found to include considerable concessions to popular demand; the question of the Church was admitted to be in need of consideration, but the prediction was hazarded that its fall would inflict incalculable injury on the country; the Catholics were to have a university, which Bright—supporting Maguire—called "a Bill against the earthquake." Sir William Hunter admits that his hero's speech on this occasion was "not successful as a parliamentary utterance."

The fact appears to be that Mayo was more of an administrator than a man for party politics. In that case it was well that the astute professor of white magic who then disposed of British affairs about this time conceived the happy thought of sending his Irish Secretary to succeed John Lawrence in India. The appointment excited general ridicule, which was not justified by the result. People in England did not know what was the precise nature of Indian administration, or what it did and what it did not require. In such employment it is of less importance to have an original genius than not to make mistakes; nor need the mind be very complicated or high-wrought that has to be made up fifty times in a day. It is enough if a man have honesty, industry, good judgment, and a prompt determination. All these qualities Mayo had, together with that massive but manly presence which unconsciously inspires confidence and awe. The Anglo-Indians were naturally inclined to take their cue from the London journalists. To the last some of them laughed at the locomotive ruler who rode everywhere on horseback and looked at bridges and barracks instead of contenting himself with written reports. He was called "the headless horseman," and was said to have every-

thing done for him by two distinguished brothers, whose ability was more believed in than their discretion. But after events brought people to think that the exertions of these eminent Dioscuri were by no means essential to victory, and the extracts from the Governor-General's writings now made public by Sir William Hunter go far to confirm the opinion. Not merely do they show intelligence and judgment, but they crackle with light pleasantry quite unusual in such documents, and not to be looked for in a man expressing the views of others.

There were three departments of Indian business which had got into disorder, and Mayo devoted himself with much success to each in turn. The treasury was in chronic hæmorrhage, dying, it might seem, of slow but hopeless depletion. Not only did he boldly apply temporary styptics, but by a simple measure of common sense he turned deficit into permanent surplus. By the system then in force expenditure was centralised under a purely illusory control. The house-surgeon of an infirmary two thousand miles from Calcutta could not add a sweeper on four rupees a month to his staff without an order from the Government of India; while at the same time all the local governments were engaged in a perpetual competition as to which should get the most out of the imperial budget. By Mayo's "decentralisation" each was guaranteed a special annual grant, in spending which each was unfettered, on the condition that it must be made to suffice. The next matter that engaged the attention of Lord Mayo was diplomatic policy, which in those days meant "masterly inactivity" towards foreign states and small punitive excursions on the frontiers. Mayo reduced the latter to a minimum, laying down a plain useful rule upon the subject which has more or less guided the best of his successors. In regard to native states a consistent policy was adopted. Those which were feudatory were made to feel the directing hand of the paramount power—those which were regarded as independent were unmolested. Towards the Amir of Cabul he showed a friendly but dignified attitude; and, though fettered by an unfriendly Home Government, continued to impress Sher Ali by personal qualities, while avoiding extremes either of concession or intimidation. The third trouble was with public works, where much bad building had resulted from dishonest contractors carelessly supervised; and where the "guaranteed" system of railways had degenerated into an investment at 5 per cent. on the security of a government which could borrow elsewhere at four. All such abuses met with due remedial treatment; and a great impulse was given not only to railways but to canals.

How, amid all these peaceful triumphs, the strong unwearied man was laid low by the sudden impulse of a vindictive felon must be fresh in most memories. In the beginning of 1872 Lord Mayo was assassinated while on a visit of humanity to the penal settlement on the Andaman islands; and the mournful tidings were received with a shudder of horrified sorrow throughout the civilised world.

In telling this story in the monograph

before us, Sir William Hunter has combined his well-known literary skill with an earnest sympathy and a fullness of knowledge which are worthy of all commendation. Mayo cannot be compared with the greatest of Indian rulers, with Akbar, Dalhousie, and the two Hastings, men whose work seems meant for eternity. But he was a good, brave, and just man; and the world is indebted to the author for a fit and attractive record of what was eminently a noble life.

H. G. KEENE.

The Book of Ecclesiastes. With a new Translation. By Samuel Cox, D.D. (Hodder & Stoughton.)

WHATEVER judgment may, in some respects, be passed upon the present work, there is good reason for assenting to Dr. Cox's opinion that Ecclesiastes has, in the grave questions which it discusses, a special adaptation to the age in which we live. Ecclesiastes, says Dr. Cox,

"is a book which can never lose its interest for men until the last conflict in the long strife of doubt has led to the final victory of faith; and seems, in especial, to adapt itself to the conditions and wants of the present age. It deals with the very questions which are in all our minds."

And the answer to these questions, though not precisely what Dr. Cox thinks, is entirely in accordance with certain tendencies of our own times. With the optimism of our eighteenth-century ancestors, who imagined that they could discern in the world a general scheme for rewarding virtue and punishing vice, and who anticipated that a sort of millennium would result from the removal of restraints on human selfishness, the author of Ecclesiastes appears to have had no sympathy. His book does not even allow that we can see in the world "a stream of tendency working for righteousness." In our manhood we learn to discredit the old optimism; but, as Dr. Cox observes, youth must still submit to its sedulous inculcation:

"Nearly all our story-books have a similar moral: it is always, or almost always, the good young man who gets the beautiful wife and large estate, while the bad young man comes to a bad end." But, "as life passes on, we discover that it is the bad boy who often gets the plum-cake, and the good boy who goes to the rod; that bad men often have beautiful wives and large estates, while good men fail of both; when we find the knave rising to place and authority, and honest Good-child in the workhouse or the *Gazette*, then there rise up in our hearts the very doubts and perplexities and eager painful questions which of old time troubled the Psalmist and the Prophet."

Then it is also that our feelings may find expression in the agnostic utterances of Ecclesiastes. The thought may rise within us: possibly, indeed, there may be a plan to which the world and human history are conformed; but

"a man cannot find out the work that is done under the sun, because, though a man labour to seek it out, yet he shall not find it; yea, further, though a wise man think to know it, yet shall he not be able to find it."

"All things come alike to all; there is one

event to the righteous and to the wicked" (Ecc. viii. 17; ix. 2).

The pessimistic tone of Ecclesiastes scarcely needs remark. Dr. Cox, however, maintains that, though there is "a prevailing ground-tone of sadness," yet the book is really "most consolatory and inspiring." This paradox may be left without further answer or refutation.

Ecclesiastes comes also into harmony with the thought of the present age by the decay of religious belief which it reflects. This decay is to be discerned clearly enough in the general contents of the book. It seems impossible to imagine that such a discussion as Ecclesiastes contains could owe its origin to an age of strong and living faith. Daniel and the pre-Christian apocryphal literature show that the Messianic hope was not dead, at least among a section of the Jewish people; but to this hope Ecclesiastes contains no allusion. The book does not even mention the proper name of the God of Israel, Jehovah. One probable reason for the decay of faith and for the pessimistic despair of Ecclesiastes is not very difficult to perceive. There was a marked contrast between the glowing anticipations of the Prophets and the actual condition of Israel after the Captivity. Instead of beautiful garments there was mean apparel. The promised glory had not shone upon Zion. The temple, as it rose again from ruin, was, as Haggai tells us, but "as nothing" in comparison with the house which had been destroyed. Haggai and Malachi still pointed forward to the future; but it was, from the nature of things, likely that there would be disappointment, despondency, and enfeebled faith. These, too, would tend to deepen and increase as generation after generation passed away, and the promise remained unfulfilled.

It is scarcely necessary to say that I have not forgotten the final verses of Ecclesiastes, which inculcate the fear of God and obedience to His commands, in expectation that what in the Divine dispensations appears hidden and mysterious will be revealed hereafter. These verses I regard as of extreme importance. They stand, however, in marked antithesis to the previous philosophical and sceptical discussion. This discussion, with its obvious contradictions, had shown that it is entirely beyond the power of man to find out what God is doing in the world or what He intends. The wearying of the flesh with much study (xii. 12) and the writing endless treatises on the moral government of the world was, therefore, worse than useless. Philosophy must bow to Authority and Faith. This, as I take it, is the lesson taught by the conclusion of Ecclesiastes. It is needless to observe how here again we may see anticipated a marked tendency of our own times.

Dr. Cox assents to the opinion that Ecclesiastes was written after the Captivity. He gives 486 B.C. as a *terminus a quo* for the period during which the book was composed, though he thinks it probable that the actual time was many years later. Evidence, entirely conclusive, as it seems to me, shows the marked influence on the book of the Stoic and Epicurean philosophies,

and places its origin about 200 B.C. The opinion that the influence of Greek thought is to be discerned in Ecclesiastes has found favour with distinguished scholars in this country, and has obtained wide recognition in Germany. Dr. Cox is pleased to allude to it, however, as "the moribund hypothesis of the ingenious Mr. Tyler." I am, of course, duly grateful to Dr. Cox for attributing to me an endowment so desirable as ingenuity. With the failing vitality of my "hypothesis" I was not previously acquainted; and even after reading Dr. Cox's announcement, I feel no very serious apprehensions. I am, moreover, less inclined to accept Dr. Cox's testimony on this matter when it appears from his own confession that his scholarship is not such as to enable him to express an independent opinion on the date of Ecclesiastes. "On such questions as these," he says, "we can only defer to the verdict of men who have made them the study of their lives." And, indeed, in Dr. Cox's New Translation the absence of adequate scholarship is sufficiently manifest. As to the principles which he has followed in translation and exegesis, he informs us:

"Whenever I have had to choose between rival renderings or meanings, I have made it a rule to prefer that which most conduced to the logical sequence of his work or carried the finer sense, deeming that at least so much as this was due to so great a master, and entertaining no fear that I could invent any meaning which would outrun his intention."

There is here some ambiguity in the transition from "choosing" to "inventing" which is scarcely re-assuring. When a translator or interpreter proceeds to select or invent words of "finer sense" it is likely enough that the result will be somewhat unsatisfactory. I may adduce as an example of "invention" a difficult place in the twelfth chapter (ver. 4), where, as it seems to me, the author of Ecclesiastes speaks of the failure of the power of song in old age, and also of the voice "turning again toward childish treble," "piping and whistling in its sound":

"And it becomes* the voice of a bird,
And all the daughters of song are brought low."

Dr. Cox gives:

"And the swallow fly shrieking to and fro,
And all the song birds drop silently into their nests."

A previous translator (Ginsburg) had rendered "the swallow shall rise to shriek." Whether this rendering is suitable or justifiable it is unnecessary now to consider. I would merely point out that Dr. Cox, in quest apparently of a "finer sense," has taken Ginsburg's translation, and has changed "rise to shriek" into "fly shrieking to and fro" without the slightest justification in the original text. Similarly the Hebrew has nothing at all answering to "silently into their nests." Or take x. 2, "A wise man's heart is at his right hand; but a fool's heart at his left."—A. V.

Dr. Cox, however, gives the curious rendering—

"Nevertheless the mind of the wise man turns toward his right hand,
But the mind of the fool to his left."

* Comp. especially the use of *yakim* in Psal. cvii. 29, "He causes the storm to become a calm."

And this, though the Hebrew neither gives nor implies the word "turns." A last example may be found in x. 10, which A.V. renders:

"If the iron be blunt, and he do not whet the edge, then must he put to more strength; but wisdom is profitable to direct."

Instead of the last clause Dr. Cox gives, "But wisdom should teach him to sharpen it." Whether this is to be considered a "finer sense," it is scarcely for me to say; but the original text has nothing like it. And to treat the work of "so great a master" as the author of Ecclesiastes after this fashion can scarcely be regarded as showing either reverence or respect.

What I have said may suffice to show that the student, anxious to penetrate to the meaning of this very difficult book, is little likely to find a trustworthy aid in Dr. Cox's New Translation. The exposition which accompanies the translation shows in parts considerable literary power, though it sometimes, as might be expected, leaves the true sense of the text far away. Ecclesiastes has, however, suffered many things at the hands of translators and expositors; and, notwithstanding faults such as I have mentioned, Dr. Cox's performance would probably compare not unfavourably with many of its predecessors. For homiletical purposes it may possibly have a value which it does not possess for the student or scholar. In the composition of sermons a strict and constant adherence to the meaning of Scripture is too often treated as of subordinate importance.

Dr. Cox is perhaps best known as formerly editor of the monthly theological journal, *The Expositor*. He is, however, the author of works on Job and Ruth, as well as various other productions. The present volume has for its basis a work published in 1867, and entitled *The Quest of the Chief Good*. But it appears that the matter has been entirely re-written; and accordingly the book now bears a new title.

THOMAS TYLER.

Essex Papers (1672-1679). Edited by Osmund Airy. Vol. I. (The Camden Society.)

ARTHUR CAPEL, eldest son of Arthur Lord Capel, created Viscount Malden and Earl of Essex after the Restoration, was appointed Lord-Lieutenant of Ireland in April, 1672, and continued in that office till 1677. A staunch royalist and a devoted adherent of the Anglican church, as his father had been before him, he nevertheless preferred to surrender his office than to prostitute the revenues of Ireland to the king's pleasures; and though a warm advocate of the Protestant interest, he strove his utmost to do impartial justice to Papist and Protestant alike.

"Possessing," says Mr. Airy, "in full measure precisely those qualities which were rarest in the prominent men of the reign of Charles II., he lived his life in the open light of day. He was poor, and yet he preserved complete independence and kept his hand clean of bribes. His family affections were deep, his life singularly pure, his religion unaffected."

On the other hand, he was vain, irascible, and self-opiniative. An ardent lover of field sport, he was nevertheless an indefatigable and industrious servant of the state. Of his public and private letters during the period of his viceroyalty there must be several hundreds in the British Museum, the Public Record Office, Kilkenny Castle, and in the library of the Marquis of Bath at Longleat, in Wiltshire. A volume of letters written by him in 1675 was published in 1772, and a second edition in 1773.

The present collection, which includes not only a selection of his own letters, but others of equal interest as regards the government of Ireland, addressed to him by Arlington, Clifford, Conway, Temple, his private secretary, William Harbord, and other correspondents in England, opens with a letter from Roger Boyle, Earl of Orrery, congratulating him on his appointment. His predecessor, Lord Berkeley, had been suspected of Romanising tendencies, and Essex's appointment was therefore hailed with much satisfaction by the Protestants generally. It was in the beginning of August, 1672, that Essex arrived in Ireland; and one of the first matters which attracted his attention, and upon which the documents here printed throw much additional light, was the regulation of the corporations of Ireland, and more particularly that of the city of Dublin. At the time of the outbreak of the Great Irish Rebellion the freemen of the corporations had been chiefly Roman Catholics, but during the Commonwealth the Catholics had been rigorously excluded and the corporations had passed almost entirely into the hands of the Protestants. At the Restoration the Catholics were restored to their ancient privileges so far, at least, as liberty to trade was concerned, but with a proviso prohibiting them serving as aldermen or common councillors. Nevertheless, so jealously did the Protestants continue to guard the privileges they had acquired as to render even this concession nugatory in a large measure. This was especially noticeable in the case of Cork, when the old Catholic freemen were compelled to live in the suburbs, and the trade of the city was absorbed only into the hands of the Protestants. But it was in Dublin that the efforts of the Catholics to regain their lost privileges attracted most attention. Since the Restoration Dublin had increased rapidly in size and population, so that at the outbreak of the Dutch War, which gave a great blow to its rising prosperity, it had almost doubled itself. The revenues of the city had, of course, increased enormously during this period; and the recorder and several aldermen seeing an opportunity of doing a good stroke of business on their own account, had endeavoured to obtain a farm of the revenues on a long lease. To this end they secured an Act of Parliament for what they called the better regulation of the corporation, which was calculated to "reduce the disposal of the city revenue into a few hands, and those such as would serve their turn"; and, in fact, they had already succeeded in obtaining Lord Berkeley's assent to a set of rules which would infallibly have effected their object, when their intention was discovered and

they were summarily ejected by their indignant fellow-councillors.

In the midst of the uproar and confusion that ensued, Essex arrived in Dublin. His first care was to order the restoration of the recorder and seven aldermen as having been illegally ejected, but at the same time he set about framing a set of rules for the future regulation of the city. These rules, which were intended to apply to the corporations of Ireland generally, were conceived in a liberal spirit and on the lines of the Act of Settlement: they would have enabled the Lord Lieutenant to dispense with the oath of supremacy in the case of any Roman Catholic who was returned, and who it was desirable should find a seat on the Council. Conformably with these rules, accordingly, thirty-three individuals, including ten or eleven Roman Catholics, were elected to serve on the common council. But three weeks later the lord mayor declared this election invalid, and proceeded to a fresh one in which all the Roman Catholics were omitted. Two days afterwards, however, he again found himself mistaken; and, having declared the second election valid, his decision was confirmed by Essex. This decision only served to make matters worse. The Protestants declined to acknowledge the Catholics, and having voted themselves an unlawful assembly refused to transact any business whatever. Further, they declared the rules themselves to be illegal, and demanded their abrogation. Such a step would have struck too deeply at Essex's reputation; and after threatening them with a *quo warranto*, which would have compelled them to surrender their charter, the matter was compromised by the king reversing his decision and declaring the second election, without the Roman Catholics, to be the only valid one. Elated with their victory, the Protestants, relying on the attitude of the English Parliament, struck another blow at the Catholics, which was intended to deprive them of their freedom to trade. This, however, was firmly resisted by Essex, who on this occasion was supported by Charles; and so the agitation shortly fell to the ground, but not without leaving a feeling of much bitterness behind.

Among the papers printed by Mr. Airy are several curiously illustrative of the effect which the prohibition of the exportation of cattle into England had on the growth of a contraband trade in wool with France and Flanders. One of the cleverest methods of eluding the vigilance of the customs officers was by "rolling up wool into great twist and so passing it as yarn, and when it arrives into foreign parts it is untwisted again and becomes wool." Indulgent in a remarkable degree towards the Roman Catholics, Essex was utterly remorseless in his endeavours to extirpate the Tories. His severity was censured by others besides the Irish; but the truth is Essex refused to see in these descendants of the ancient gentry of Ireland, who owed their existence mainly to the English plantations of the sixteenth and the confiscations of the seventeenth centuries, anything but marauding thieves, to be destroyed by whatsoever method possible. Mr. Airy aptly compares his attitude towards them with that of another humane

man, the Earl of Kincardine, towards the Highland "thieves." How little the conditions of social life in Ireland have altered during the last two centuries appears from the following paragraph in a letter from Essex to Arlington :

"I must acquaint your Lordship," he writes, "as a real truth, that there is no nation under heaven where the common people of the Romish religion are so absolutely led by their priests as in this kingdom, for 'tis most certain that in those corporations which are placed in countries inhabited for the generality by Papists, if there be anyone of that religion who sells any commodity, no Protestant of the same trade can subsist or live in the town with him, for the priests do enjoin the people not to buy anything but of those of their own religion. This may seem at first a little strange, but I do assure your Lordship of the verity of it."

There are other points in the present volume, which in a more extended notice would call for special attention, but to which I must here merely briefly allude: such, for example, as the farming of the revenue by Lord Ranelagh and his partners; Essex's conduct in the matter of the proposed gift of Phoenix Park to the Duchess of Cleveland; his criticism of Sir William Petty, than whom "there lives not a more grating man in the three kingdoms"; the publication of a second edition of Sir John Temple's book on the Irish Massacres of 1641, which Charles ordered to be immediately suppressed "as judging the times need rather remedy to reconcile the two parties than any way to exasperate them by the repetition of former hostilities," and which, we learn from a letter not printed by Mr. Airy, was published without Sir John's permission.

The volume, I may add, is on the whole well edited, though here and there I notice a few unimportant blunders which might have been corrected, especially one on p. 316, where the omission of the words "whereby those Papists who have not yet been admitted thereunto" renders the whole of the last paragraph unintelligible.

R. DUNLOP.

NEW NOVELS.

Janet. By Mrs. Oliphant. In 3 vols. (Hurst & Blackett.)

A Secret Mission. By E. Gerard. In 2 vols. (Blackwood.)

A Marriage at Sea. By W. Clark Russell. In 2 vols. (Methuen.)

Under Sentence. By Mary Cross. In 2 vols. (Ward & Downey.)

The Way She Won Him. By Mrs. Hous-
toun. In 2 vols. (White.)

The Quiet Mrs. Fleming. By Richard Pryce. (Methuen.)

MRS. OLIPHANT has written with distinction in several styles, but she is hardly to be congratulated upon the last she has chosen; for *Janet* is just an ordinary sensational novel. Yet nobody would suppose from the pretty Scotch name of the heroine, and the fact that she is a governess going out to her first situation, that the story would take the turn it does. Mrs. Oliphant herself, indeed,

seems to have been in doubt as to what she would do with Janet. At first we supposed she was going to be another Becky Sharp—a distant cousin of the immortal Becky. She behaves like a little minx in the opening chapter, but we find afterwards that there is less vice in her than variability. The part she plays in the story is really an accidental one. A good many things happen with which she has a good deal to do; but she is a novice all the time, and quite innocent of deep-laid schemes for bringing people into trouble. Characters are familiar on the stage who blunder into other people's secrets, and go on blundering until something dreadful happens. Janet is one of these. She finds herself in a household where, to all appearance, everything is as it should be. But there is a skeleton in the cupboard. She stumbles upon the cupboard, her childish imagination supplies the skeleton, and she does not rest till it is brought out. If it had been her curiosity only that led to the discovery of the skeleton there would have been less the matter. But her vanity had something to do with it. She was pretty, she turned one poor young man's head, and she fascinated another, whose attention flattered her. He did not lose his head, or his heart either, but he turned Janet's unsuspecting confidences to mischievous account. The incidents, as they develop, are exciting enough; and if startling incidents were what we wanted in a novel from Mrs. Oliphant, we should be satisfied. Perhaps an inveterate reader of fiction of that sort would complain of the pages of somewhat tepid reflections interposed between the more lively parts, but they can be readily skipped. Possibly they were meant to be a compensation to serious readers, but they are too obviously padding. There is much to be said, however, for the skill with which the characters are drawn. Janet herself is nothing to boast of, but she is what she was intended to be. In Mrs. Harwood, invalid though she is, it is impossible not to see the strong exceptional qualities which enabled her to bury her secret from everybody else, while keeping it ever before herself. Gussy, whose insipidity contrasts to her disadvantage to the end of the tale with Janet's brightness, reveals a strength of character at last which one is hardly prepared for. But Ju, Janet's pupil, is natural throughout—a self-willed, obstinate, unpleasant child, but with any amount of latent tenderness in her, and shrewdness enough to have kept the whole family out of its troubles if she had been older. There is not much to be said for the men. Dolf is rather a dolt; and either Meredith's dissembling and heartlessness are overdrawn, or he is too well treated. The ingenuity of the plot is all that could be wished—from the circulating library point of view—and nothing could be better managed than the mystery of the wing.

A sensational story, in which a political plot and the shifts and resources of diplomacy have much to do with the interest, is almost necessarily of a higher order than one which owes everything to a skeleton in the cupboard. *A Secret Mission* is of this kind. Miss Gerard has probably never done a more vigorous piece of work

than this tale. She gives us a very charming sketch—as idyllic as such a sketch could be—of Polish rural life. The scene afterwards shifts to Warsaw, and we get more than a glimpse of the gaieties of that city, and behind them the stern cruel ugliness of Russian rule. The political plot concerns Germany and Russia, though Polish hatred of the Muscovite is added as a natural ingredient. Love of course enters into the story—man's love, in the old form of infatuation to which all other interests yield; woman's love, as an intense passion to which external hatreds and antipathies give zest; and, last of all, brother's love, bravely unselfish, and accepting the hardest of fates in its true devotion. The characters are admirably grouped and contrasted. The two brothers Starowski are from first to last the chief figures. The almost paternal fondness of the elder seems for a time to lack the appreciation it deserved at the hands of the younger, but in the sequel Roman did nobly. The two sisters, Hala and Luba, make another pair—matched, however, rather than contrasted; both of them simple and rustic, but capable of heroism and self-abnegation when the stress comes. Biruta Massalowska stands alone, as a distinct portrait and a very powerful one. The presence of such a woman in a story could not fail to give the keenest interest to it, just as her crossing of a man's path must needs determine his destiny. *A Secret Mission* has already had many readers, in the serial form in which it was first published, but it deserves to have many more.

It is seldom that materials so slight as those out of which *A Marriage at Sea* is constructed are made to furnish forth two volumes. There is a certain skill in making much out of little; and it must be granted that Mr. Clark Russell's story—notwithstanding that it might all have been told in fifty pages—does not flag though it extends to nearly five hundred. But then it begins with an elopement and ends with a marriage, and the interest which attaches to the first event remains with the reader until that which belongs to the second event supervenes and carries him through. The hero and the heroine are nothing particular. She is his "pet"—a distinction which seems rather commonplace—and he is absorbed in her. They are only of consequence as the chief agents in an elopement and a wedding under difficulties. But the storm at sea, the perils of the "dandy yacht" in which the elopement is made, and the genuine heroism of old Caudel, the master of the little craft, who refuses to leave her when the pair of lovers are trans-shipped at sea—these were worth telling and are well told.

Miss Cross is to be congratulated on the pleasant surroundings of her story. There are some dolorous passages in *Under Sentence*, as may be supposed from that very ominous title; but at least it begins well, in a picturesque part of the Scotch Highlands, and with all the interest inseparable from a pair of lovers. The reader soon finds, however—as readers always do find in novels—that the course of true love runs anything but smoothly. If the lovers had

been left to themselves, they would presently have put up the banns—but then there would have been no story, and nobody would have been “under sentence.” The exigencies of the plot required that the marriage should not come off—at least not in a hurry. A more eligible match is wanted, and other people are brought upon the scene, who bring with them other possibilities of love-making, marrying, jealousy, and so forth. It is astonishing how important a part murder generally plays in novels. There are some plots which can only be worked out by a gun-shot or a dose of poison; after which, strangely enough, everything comes right. In this instance it is a gun that does the business, but in whose hands, and upon what victim, it is the author's privilege and not ours to reveal. Suffice it to say that the story ends as all sympathetic readers would have it end. Miss Cross has something to learn as to the manner of telling a story. Her people talk too scrappily. She perhaps thinks that this defect is made up for by the abundance of quotations with which she strews her pages. But the quotations are really an aggravation. One does not want to be bored, in reading a tale, with elegant extracts which the writer may have learnt at school.

The title of *The Way She Won Him* is probably meant to be descriptive of the story, though who are the “she” and the “him,” and what was the “way,” are matters which may be variously guessed. There is nothing very commendable about this book. The heroine is a good girl, about whose parentage there was a mystery. Under stress of circumstances she sings for a living at the music halls, and is exposed to many temptations. Eventually the secret of her birth is revealed; she is married soon afterwards; and then, though the tale runs on, the reader's interest does not. Ettie's married life is too tame for her enthusiastic temperament. Mrs. Houstoun's power of vivid delineation is not conspicuous when the music-hall period is passed. Her characters, with the exception of Ettie and her lover, Alston, are commonplace. The women are weak, though pretty and winning—far too easily won, in fact—and the men are either bad or empty. The tale has a tragic ending, and the disposal of large sums of money enters into the plot; but these doubtful attractions do not make up for poverty of invention.

Readers who have a liking for the mysterious, and whose keenest interest is aroused when there is a detective on the scent, will enjoy *The Quiet Mrs. Fleming*. The story opens pleasantly and mildly enough, with the unspoken affection of a butler for a parlourmaid on the other side of the street. But the parlourmaid leaves her situation to be married, and Smith, the butler, who has received a legacy from his departed master, consoles himself by marrying Susan, the cook. The couple, as such couples do, retire to a seaside town and let lodgings. Mrs. Fleming, who is particularly anxious for quiet rooms, goes to stay with them. The question of her identity, and her connexion with a

certain diamond robbery about which there are all the particulars in the story, will excite the reader's curiosity not a little. But while Mrs. Fleming is an interesting study, Smith and Susan are anything but ordinary people. Poor Smith, however, though he may have ruled the roast in the old butler days, finds a virtue in self-suppression. As for Susan, her ways and phrases are so quaint that the reader who pities Smith will still, like that unfortunate man, have to give in to her. The story is not too long to be read at a sitting, and it is too interesting to be laid down by any one who gets beyond the first page.

GEORGE COTTERELL.

CLASSICAL SCHOOL BOOKS.

An English Latin Gradus. Compiled by A. C. Ainger and H. G. Wintle. (John Murray.) A new Gradus is not, perhaps, an object upon which we should expect the scholarship of the present day to concentrate itself. Even in the ten years that have elapsed since the inception of this book—the delay being partly owing to the lamented death of Mr. Wintle—the Zeit-Geist seems to have been depreciating in his mysterious way that practice of Latin verse writing which a Gradus is designed to foster. In spite of Prof. Tyrrell's recent assurance that the art is still highly valued at Dublin, it is impossible to doubt that the ascent of Parnassus is becoming less and less trodden, and the view from the top is being enjoyed only by the few; and even they do not say so much about it as of old. There is a touch of Etonian optimism in the plea of the editors that Latin verse writing

“is an unrivalled form of drill for beginners, teaching them in all cases a good deal about the structure and powers of the Latin tongue, forcing them from the very first to think for themselves, and in some cases awakening a true poetic feeling, and a power of appreciating the best thoughts of the best men of all ages and countries.”

This is not quite so. It overrates the Latin poets as thinkers. Only Virgil and, perhaps, Horace can take such literary rank. It assumes, too, that appreciation can only be reached by imitation. But we entirely agree with the editors that the drill has its advantages, both for acquiring the Latin tongue and for developing a sense of poetry, as distinct from mere prosaic expression. Their method is simple and, in its way, thorough. The book is from English to Latin, not, like the old Gradus, from Latin to English. The weary old list of epithets is reduced to one or two English words, which can be looked out in turn; the double sense of many English words is carefully marked, and archaic or post-Augustan words are referred to the authors in which they occur; while those used by Virgil, Ovid, or Horace in *lyrics* stand without references, as beyond question. Here is a specimen, taken at random:

“Hind. subst.

(a) female deer, cerva I.

Ep. timid, woodland, &c.

(b) labourer, rusticus 2; agrestis 3; colonus 2; bubulcus 2; agricola 1; ruricola 1.

E. hardy, patient, &c.”

It is not perfect. “Hind,” in the first sense, often implies the youthful animal; *cerva* is not its only equivalent in Latin. Still, a great deal of essential information as to quantity, declension, and meaning is conveyed in a very manageable form; and by this treatment the whole book, including useful lists of proper and geographical names at the end, is compressed into 442 clearly-printed pages. We do not

quite agree with the authors' depreciation of Quicherat (Preface, p. v.), whose Gradus, though partly open to the objection they take to it, is in its own way a mine of literary wealth and resource.

An Elementary Latin Dictionary. By Charlton D. Lewis. (Oxford: Clarendon Press.) This is described in the Preface as “substantially an abridgment of the author's *Latin Dictionary for Schools*,” which was reviewed in the ACADEMY for July 8, 1889. And, indeed, it stands in the same relation to that work as the “abridged” Liddell and Scott does to the “intermediate” Liddell and Scott. At the same time, it is right to notice that it contains some new features which better adapt it for use in English schools. Notably, the list of authors cited now includes Catullus, Tibullus, Propertius, and Tacitus (the *Annals*); but Plautus is still ignored, though he is read in this country at least as much as Terence. “Brief Helps for Latin Readers” have also been prefixed, giving concise information about certain important matters in history, archaeology, and literature. Prof. Lewis's name is a sufficient guarantee that the claims of philology have not been overlooked. Altogether, we have no hesitation in declaring that this latest work of the American scholar will not be superseded in English schools for many a year.

Aeschines in Ctesiphonta. Edited, with Notes and Indices, by T. Gwatkin and E. S. Shuckburgh. (Macmillan.) It has been the fate of Aeschines, not only to lose his case, but to have his speech overshadowed even in our schools by the greater work of his rival. Mr. Shuckburgh puts this neatly enough: “Aeschines was a man of brilliant natural gifts, who played a part in a great national crisis, perhaps not much less creditably than most of his contemporaries, but whose misfortune it has been to have been matched with a consummate artist, and to have left work which it is for ever impossible to view except in comparison with that of his greater rival. Thus, in spite of his natural facility, his vivid presentation of facts, and the strength of his denunciation, his oratory remains that of an amateur (ὁ πᾶν εὐρεχρος).” Demosthenes' oration *On the Crown* finds many readers for one who has the fairness to hear the other side and listen to the defeated statesman. In the matter of English editions, too, Aeschines has hitherto come off but badly. There is a very ingenious edition of the two speeches by the Messrs. Simcox; Mr. Edgar has published a spirited translation of the *In Ctesiphonta*; but beyond these, the student could not, till the present volume appeared, get much English help. The little volume—the very little volume—in which Mr. Drake dealt with both speeches was much too slight. So far from being (like Demosthenes' motion) μακρότερον τῆς Ἰαίδους, it was not nearly long enough. Mr. Shuckburgh has already successfully revised the Demosthenes-half of that volume; it was natural that he should take the rest in hand; and the scholastic public has reason to congratulate itself upon his having been able to complete the edition of *Aeschines in Ctesiphonta* which Mr. Gwatkin was prevented from finishing. The main strength of Mr. Shuckburgh's work lies, we think, in his excellent choice of illustrations, both for grammar and for matter. A passage of an ancient author is but half dealt with when it is explained. It still lacks parallels and illustrative matter; and these Mr. Shuckburgh supplies fully and judiciously. We might, however, have looked for a word of comment upon the use of παρὰ in § 77, τῶν κατασκήπων τῶν παρὰ Χαριδμῶν, “his spies who were with Charidemus.” Παρὰ with the genitive, idiomatic as it is, is so unlike what a boy who has just got an idea of the Greek pre-

positions would expect to find here, that explanation or illustration of the use would be very much in place. The reference in § 115 to Meidias, "whom Aeschines could, for many reasons, wish yet alive," seems to want clearing up. In § 9, *προκατελάβανον τὰς εὐθύνas*, Mr. Edgar's "smoothed the way for their scrutiny long beforehand" is better, because clearer, than Mr. Shuckburgh's "anticipated long beforehand."

The Cyropaedia of Xenophon. Books VI.-VIII. With Notes by H. A. Holden. (Cambridge: University Press.) Here is another good piece of work by Dr. Holden finished. We have watched its progress through three volumes, feeling that the excellence of the notes made up to us for some very heavy reading. It has been an enjoyment to see the editor correct impartially the slips of Liddell and Scott, of Goodwin, and of Watson, and point out Xenophon's deviations from the usage of Attica or the truth of Herodotus. We have endured the truisms, the misplaced jocoseness, and the occasional false taste of Xenophon's heaviest work. We have survived the regulation speeches of Chrysantas, and the disappointment of never seeing the ponderous generalship of Cyrus fail. That hero we have followed through his priggish life until at last, like Charles II., he takes a most unconscionable time at dying; but we feel that, like Cyrus himself, we have picked up a good deal of Greek by the way. These last three books of the romance are the most valuable from the point of view of history, since they describe to us the institutions of the founder of the Persian monarchy; but we should like to know Dr. Holden's opinion as to how far Xenophon is to be believed when he says that any of these institutions survived in the Persia of his day. The epilogue (Book 8, c. viii.), whoever wrote it, speaks more of moral than of political degeneracy. The editor's plan of annotation is the same as before, and it is carried out with his usual thoroughness. The vocabulary, however (which is, oddly enough, drawn up in two languages, *Canusini more bilinguis*), is not quite complete; it omits to give 7. i. 7, as a reference for *ἀναβαίνειν*. Such points are very small, but the gigantic industry of the editor both draws our attention to them and leaves us little else to criticise. In 7. i. 45, *ἀναγαγόν* wants further explanation. Why should Cyrus fall back after a victory? He could hardly do a worse thing before a barbarian enemy. In 8. 8. 14, *διαφθείρονται ὑπὸ φαρμάκων*, we do not understand Dr. Holden's note, "are ruined." How are people ruined by poisons? It is not = killed, for *ἀποθνήσκουσιν* has just preceded it. Very likely, therefore, Dindorf was right in making it mean *abortu pereunt*.

Herodotus. Book III. Edited, with Introduction and Notes. By G. C. Macaulay. (Macmillan.) It is probable Mr. Macaulay is right in thinking that the third book of Herodotus is as suitable as any to be read in school. It is of manageable length, and it contains some of its author's most interesting episodes. The adventures of Democedes, the pathetic story of Periandros, and the changeful fortunes of Polycrates are decidedly good reading. On the other hand, the reckoning of the tribute paid by the satrapies to Persia will be rather dull to anyone who does not approach it with historical or statistical interests. Indeed, it always reminds us of a celebrated Eastern tale—with a difference—"then there came another locust and brought another grain of corn." But if the book, interesting or uninteresting, is to be read with profit by young students, it must be furnished with adequate notes; and the commentary of Mr. Macaulay does not seem to us really adequate. It gives some of the most curt and meagre notes which

it ever fell to our fortune to peruse. Nor is there always even a short note where a note is wanted. The note on c. 58, l. 7, is so brief that it does not tell us what is to be supplied after *ἐνδρα* to mean "the power to govern," nor from what source in the context the missing word or words may be understood. It is safe to say that ten out of eleven schoolboys will look blank when they come to c. 58, and blanker still when they have turned to the commentary. The words in the same chapter, *μή τῷ κακῷ τὸ κακὸν ἰᾷ*, are dismissed with the information that this is a proverb, but no hint is given as to what are the two mischiefs. In c. 94 Mr. Macaulay's note is perhaps even a little misleading. The words are *Ἰνδῶν δὲ πλεῖστος τε πολλὰ πλείστον ἔστι... καὶ φόρον ἀπαγγέλλον πρὸς πάντας τοὺς ἄλλους ἐξήκοντα καὶ τρηκκόσια τάλαντα*; and Mr. Macaulay remarks—"greater than all the others," literally 'compared with all the others.' But surely this is a confusion of two ideas. *πρὸς* does mean "compared with;" but the idea of "greater than" is got, not from *πρὸς*, but by repeating *πλείστον* out of the first clause. We firmly believe that the writer of an excellent translation of Herodotus can make better notes to his author than these; and we are strengthened in our belief by finding how useful a little accident of Herodotean dialect he has drawn up in his introduction.

Livy. Book XXVII. With Introduction and Notes by H. M. Stephenson. (Cambridge: University Press.) No one who has to get up Book xxvii. for examination or has a genuine interest in the Punic Wars can be ungrateful to Mr. Stephenson. The former will find a due apparatus of useful notes; the latter will discover that the editor is sceptical with good reason about many of Livy's statements. It is probable that Livy's political wisdom has often been undervalued, owing to the great bulk of the story in which his wise sayings are embedded. There they are; they are not few, but they are far between and lost in commonplace. An anthology of Livy's wisdom would probably be small and surprisingly good. But his reflections are better than his facts; and wherever in his account of the second Punic War he has not based himself on Polybius, it is well very narrowly to scrutinise what he says. Mr. Stephenson follows Dr. Ihne in seeing the evil effects of a *laudatio* of Marcellus in the exaggerated stories of that hero's successes. Here no doubt Livy was misled by his authorities, and no one can say more than that he was not critical enough. But no authority need have misled him into making Hannibal march "from Bruttium and Lucania into the country of the Sallentini *per extremum finem agri Larinatis*"—an impossible route. Nor are Livy's facts by any means always consistent. The account of the incident at Mutina in Book xxvii. 21 does not (though the editor omits to mention this) seem consistent with that given in Book xxi. 25. Mr. Stephenson prints a comfortable-looking text of the old style.

"I have ventured," he says, "for the sake of younger scholars, but at the risk, I know, of being severely handled by more advanced schoolboys, to retain some old-fashioned spelling. In particular, following Madvig, I have printed *es* always in the third declension plurals."

Xenophon's Hellenica, Book I. With Analysis and Notes by L. D. Dowdall. (Bell.) Mr. Dowdall has followed up his edition of Book II., by a very serviceable little edition of Book I. of the *Hellenica* of Xenophon. No difficulty seems to be passed over, and the necessary explanations are given with clearness and simplicity. The notes are more compressed than those of Mr. Underhill, but we do not think that they are any the worse for their brevity. We hope that Mr. Dowdall may be induced to push on to the later books of

Xenophon's history. Here he will find no one (or no English writer) occupying the ground before him; and, if there are not yet many readers, the existence of a good commentary may create them. Mr. Dowdall has taken pains to give us a clear analysis of the general course of events; but the flagrant illegalities of the condemnation of the six generals after Arginusæ are not put so plainly in one conspectus as they might be. In c. 3, 17 we cannot imagine why the most obvious meaning of *ἐπιβάτης* is overlooked by Mr. Dowdall. He suggests two explanations of it, (a) it = *ἐπιστολεύς*, but for this there is no authority; (b) "a fellow passenger with Mindarus," but passengers have nothing to do with the matter. Surely *ἐπιβάτης* means that Agcsandridas had been a marine (or officer of marines) under Mindarus.

Livy. Book V. Edited by L. Whibley. (Cambridge: University Press.) The siege of Veii and the capture of Rome by the Gauls are stories which a boy should certainly read at firsthand, and we welcome, therefore, a handy and trustworthy edition of Livy's fifth book. "The text of this edition is based on that of the fifth annotated edition of Weissenborn and Müller." Mr. Whibley has fitted it with a number of clear and useful notes. He seems to know by instinct where younger readers will find a difficulty, and to take a pleasure in making that difficulty vanish. Especially is this the case with questions of grammar or construction, and he is very happy in enabling one to seize the exact thought of Livy—which is not always plain even when the construction of Livy's Latin has been mastered. On questions of usage or law, and on the large field of side-questions about the people, which must inevitably be opened up by every ancient book of history, he is not less accurate perhaps, but certainly less full. A few lines of notes upon *disciplina*, the technical term for the science or art of the Etruscan soothsayers (c. 15), or again upon the exact meaning of *jure vocatis* (c. 18), would not have been out of place.

"BIBLIOTHECA SCRIPTORUM GRAECORUM ET ROMANORUM." (Leipzig: Freytag.) We have received several more volumes of this useful series, which we may briefly notice. Prof. Causer's *Homeri Iliad* xiii.-xxiv. is based on the same principles as his edition of the first twelve books, which was favourably noticed in these columns. Dr. Zingerle's *Titi Livi Libri vi.-x.* is peculiarly welcome, for the second half of Livy's first decade has been rather overlooked by editors. The MS. evidence is of course the same, and no special critical difficulties arise. In the constitution of his text, Dr. Zingerle seems to be duly conservative; he is certainly more cautious and less "brilliant" than Madvig, as, perhaps, is natural. Friedrich Schubert's *Sophokles' Aias* is a good school text, furnished with introduction, illustrations, and a capital appendix on the Attic theatre, which seems to follow Dörpfeld in many points. The text is sensibly done, and there are few emendations; *δεινὸν τ' ἔημα πνευμάτων*, for instance, is allowed to stand in v. 674. Three similar school editions are Klouček's *Aeneis*, Biese's *Römische Elegiker*—a volume of selections—and Keil's *Isokrates' Panegyrikos*. All have introductions and indices; but only Biese's selections have any notes, and they are extremely brief. If an English schoolmaster wanted to read Isocrates or selections from Catullus, Tibullus, Ovid, and Propertius, he might do worse than think of using these texts. Lastly, we have to mention Nohl's *Ciceronis Philippicarum i.-iii.*, and to commend the printing and paper of the whole series. Not everyone likes to write on his book margins; but it is something to find a cheap German text where you can write if need be, and the typography is

admirable. The illustrations are less successful; but, considering the cheapness of the series, they are most creditable.

WE may also notice in this place an excellent Bilder-Atlas, to illustrate Caesar's *De Bello Gallico*, which has been prepared by Dr. Raimund Oehler (Leipzig: Schmidt & Günther). It consists of more than one hundred illustrations, taken from various sources, and seven plans of battles, sieges, &c. Prefixed is a brief but clear sketch of military affairs in Caesar's time, of the Gauls as well as of the Romans. The Commentaries have often before been the subject of pictorial illustration; but the present work is the most ambitious that we are acquainted with.

NOTES AND NEWS.

MR. S. R. GARDINER has sent to press the MS. of the third volume of his *History of the Great Civil War*. It brings the narrative down to the execution of Charles I., thus concluding the work.

MESSRS. PERCIVAL & Co. have ready for immediate publication a volume of *Essays on French Novelists*, by Mr. George Saintsbury. Besides an introductory essay on "The Present State of the French Novel," the authors dealt with are Anthony Hamilton, Alain René Lesage, Charles de Bernard, Alexandre Dumas, Théophile Gautier, Jules Sandeau, Octave Feuillet, Gustave Flaubert, Henry Murger, and Victor Cherbuliez.

MR. T. FISHER UNWIN has in the press a new edition of Prof. Villari's *The Life and Times of Machiavelli*, translated by Signora Villari, containing the author's latest revision and two new chapters.

MESSRS. JARROLD & SONS, of Norwich, announce for issue by subscription a companion volume by Mr. Mark Knights to his *Highways and Byways of Old Norwich*, dealing with ancient buildings and historic sites throughout the county. It will be entitled *Peeps at the Past*; or, *Rambles among Norfolk Antiquities*; and it will have thirteen illustrations from original drawings by Mr. Edward Pococke. The edition is limited to 250 copies, including fifty on large paper.

MESSRS. GILBERT AND RIVINGTON announce a work of considerable typographical interest—The Lord's Prayer, printed in three hundred different languages or dialects, together with an introduction by Dr. Reinhold Rost, the learned librarian at the India Office.

MESSRS. W. H. ALLEN & Co. will publish in a few days *Some Sketches of Indian Women*, by Mrs. E. F. Chapman, with a preface by the Marchioness of Dufferin and Ava. The same publishers have also ready a Welsh story by Mr. Lewis Arnytage, entitled *Spindle and Shears*.

A NEW story by Mr. W. Westall, entitled *Back to Africa*, will be published next week by Messrs. Ward & Downey. In conjunction with Stepniak, Mr. Westall has completed the translation of a second work of Korolenko, whose *Blind Musician* they recently turned into English. It will be entitled *In Two Woods*, and will be ready in one volume in April.

MESSRS. GRIFFITH, FARRAN & Co. announce a volume entitled *Younger American Poets, 1830-1890*, edited by Mr. Douglas Sladen, with an appendix of Younger Canadian Poets, edited by Mr. G. B. Roberts, of St. John, New Brunswick.

MESSRS. SWAN SONNENSCHIEIN announce the publication of a drama, entitled "Rosmer of Rosmersholm," by an anonymous author, who is bold enough to write out at full the antecedent history of the characters in Ibsen's play.

THE two next volumes to appear in the "Adventure Series" are *Kleph and Warrior*, translated from the Greek by Mrs. Edwards, with an introduction by M. J. Gennadius, Hellenic minister at the court of St. James's; and *The Travels of Ferdinand Mendez Pinto*, the Portuguese adventurer, annotated by Prof. Arminius Vambéry.

THE first number of the new *London and Middlesex Note Book*, to be published on March 31, will contain an important article on the chief archaeological discoveries in the city of London during the last twenty-five years, by Mr. Charles Welch, librarian of the Guildhall Library.

MESSRS. MACMILLAN have now extended their system of net prices to the *English Illustrated Magazine*, which is no longer supplied to booksellers, &c., on terms that will allow them to sell it at less than sixpence.

WE hear that Miss Elsa D'Esterre-Keeling's series of papers on "German Literature," which are appearing in the *Parent's Review*, has received the warmest praise from Dr. Max Koch, professor of German literature at Breslau, to whom was submitted the plan of the entire work, together with the first division of it, "What the Germans were doing in Literature up to the Beginning of the Crusades."

A PAPER by Mr. John Addington Symonds, on "The Relation of Painter's *Palace of Pleasure* to the English Romantic Drama," will be read before the Elizabethan Society at Toynbee Hall on Wednesday next, April 1, at 8 p.m.

THE following are the lecture arrangements at the Royal Institution after Easter:—Mr. J. Scott Keltie, three lectures on "The Geography of Africa," with special reference to the exploration, commercial development, and political partition of the continent; Dr. E. E. Klein, three lectures on "Bacteria: their Nature and Functions" (the Tyndall Lectures); Mr. William Archer, four lectures on "Four Stages of Stage History" (the Betterton, the Cibber, the Garrick, and the Kemble periods); Prof. Dewar, six lectures on "Recent Spectroscopic Investigations"; Dr. A. C. Mackenzie, four lectures on "The Orchestra considered in connexion with the Development of the Overture"; Prof. Sylvanus P. Thompson, four lectures on "The Dynamo"; Mr. H. Graham Harris, three lectures on "The Artificial Production of Cold"; Prof. A. H. Church, three lectures on "The Scientific Study of Decorative Colour." The Friday evening meetings will be resumed on April 10, when a discourse will be given by Sir William Thomson, on "Electric and Magnetic Screening"; succeeding discourses will probably be given by Prof. A. W. Rücker, Canon Ainger, Mr. J. E. Harting, Prof. W. Ramsay, Prof. G. D. Liveing, Prof. J. A. Ewing, Dr. David Gill, Prof. Harold Dixon, &c.

THE following have been specially elected by the committee to be members of the Athenaeum Club: Sir Stuart C. Bayley, of the India Office; Mr. Austin Dobson; and Prof. T. E. Thorpe, of the Royal College of Science.

MR. HJALMAR PETTERSEN, of the University Library, Christiania, has published a catalogue of anonymous and pseudonymous works in Norwegian literature from 1678 to 1890. He includes, (1) all works printed in Norway, whether written in Norse or other languages; (2) works of Norwegian authors printed abroad; (3) translations of Norse books; and (4) works in foreign languages about Norway and its authors. The total number of pieces here catalogued exceeds 2100; and for a large proportion of them the real names of the authors have been found. Altogether, this is a very laborious and no less useful piece of bibliographical work.

WE regret to record the death of Dr. Alexander Bennet M'Grigor, the head of the leading firm of solicitors at Glasgow. Besides taking an active interest in all learned and university questions, he was himself a high authority upon the topography of ancient Jerusalem, concerning which he contributed articles to the *Encyclopaedia Britannica* and the *ACADEMY*. He had been in failing health for some time past, and he died at Glasgow on Sunday last, March 22, in his sixty-fourth year.

Correction.—In Dr. Kuno Meyer's letter on "The Osianic Saga" in the *ACADEMY* of last week, p. 284, col. 1, l. 32, for "sit" read "ift," and for "shvitr" read "thvitr."

UNIVERSITY JOTTINGS.

MR. W. R. MORFILL, reader in Slavonic languages and literature at Oxford, has been elected corresponding member of the *Königlich Böhmische Gesellschaft der Wissenschaften* at Prague.

IN consideration of his archaeological work at Naukratis, and as director of the British School at Athens, Mr. Ernest Gardner's fellowship at Gonville and Caius College, Cambridge, has been prolonged for a further term of three years.

PROF. F. Y. EDGEWORTH has resigned the Tooke chair of political economy at King's College, London, to which he was appointed last year on the resignation of the late Prof. Thorold Rogers, whom he has now succeeded also at Oxford.

PROF. HALES has just been presented with a very handsome testimonial from his old pupils at Bedford College, London, on his retirement from the post he has held there for so many years. It consists of a bronze Laocoon and some plate.

A SCHOLARSHIP of £30 a year for three years, or, under certain conditions, for four years, has been presented to Lady Margaret Hall, Oxford, by Mrs. G. J. Romanes. The scholarship will be awarded in October next to a candidate who shall show proficiency either in theology or in classics.

MESSRS. MACMILLAN AND BOWES, the well-known booksellers at Cambridge, have just issued the first part of a Catalogue of Books printed at, or relating to, the University, Town, or County of Cambridge. It covers the early period, from 1521 to 1700; and is to be followed by two other parts, dealing with the eighteenth and the nineteenth centuries. Though it does not profess to be more than a bookseller's catalogue, containing only those books in the possession of the compilers, it may almost take rank as a *Bibliographia Cantabrigiensis*, from the number of volumes enumerated, the extreme rarity of not a few of them, and the minute details given. The entire collection is for sale—by preference, in one lot.

OLD Johnians will be interested to hear that the editors of the *Eagle* have in hand the printing of an Index to the first fifteen volumes of the magazine, which dates from 1858. It will give references to every name that occurs under the section headed "Our Chronicle," besides alphabetical lists of all those mentioned in connexion with the several clubs and societies, thus serving as a clue to the history of the college and its members for the last thirty-one years.

THE Union Society of Durham have acquired a series of drawings by "Cuthbert Bede," which originated *Verdant Green*. They represent scenes at University College, Durham, which were subsequently adapted to Oxford when the famous book was written. An autograph note by "Cuthbert Bede" gives a

curious account of the difficulties he had to surmount before he could get the sketches published. They were originally accepted for *Punch*, and some of them actually appeared in the *Illustrated London News*.

At the meeting of the Cymmroderion Society, to be held on Wednesday next, April 1, at 8 p.m., at Lonsdale Chambers, Chancery-lane, a paper will be read on "The Proposed University of Wales," by Prof. T. F. Roberts, of the University College of South Wales and Monmouthshire.

ORIGINAL VERSE.

HO! FOR THE ORIENT.

Ho! for the Orient in its glory,
Heedless let western shadows fall,
First in the east was told the story,
Peace and goodwill that brings to all.

Ho! for the rosy flush flamboyant,
Op'ning the eyelids of the world;
Eve's hues, though rich, are little joyant,
Ever in gathering darkness furled.

Hail to great Phoebus juvenescent!
Climbing the amber staircase bright,
While sinks the sad and frigid crescent,
Pale from the sorrows of the night.

Westward the star of empire travels,
Eastward the hopes of men are drawn,
Whate'er life's mystery unravels
Comes from the regions of the dawn.

Westward we gaze in ceaseless wonder,
Eastward our knees in reverence bend;
Here sounds the roll of Sinai's thunder,
There clink of coin and strife-cries blend.

Oh! for the happy days of boyhood,
With hope abounding once again;
Oh! for the thrill the tales of Troy could
Send through the eager heart and brain.

Oh! for the vine-draped slopes of Chios,
Oh! for the silv'ry Attic strand,
The flowery eradle-land of heroes,
Hellas! the proudly-templed land.

Worn by my work and very weary,
Nought glads me now that comes to pass;
Love-songs have in them something dreary,
As on a grave the bright, green grass.

Only the Orient in its splendour
Folds up the bat's phantasmal wing;
Only the Orient's voice so tender
Wakes birds their madrigals to sing.

Every fair ship that leaves our haven,
With white sails bulging to the east,
Beckons, and on my heart leaves graven,
The call that stirred the soldier-priest.

Oh! for the crystal dew of Hermon,
Oh! for the olive-girdled mount,
Where from His lips there fell the sermon
Of sweetness and of light the fount.

Ho! for the Orient in its glory,
Heedless let western shadows fall,
Think of the golden day before ye,
Dream not of night's star-spangled pall.

J. C.-B.

MAGAZINES AND REVIEWS.

THE February number of the *Indian Antiquary* (Kegan Paul & Co.) contains an extremely interesting article by Major R. C. Temple on "The Burmese System of Arithmetic," being, so far as we know, the first attempt that has been made to explain this subject. The Burmese system of arithmetic, which has as yet been scarcely at all affected by English education, seems to be in the main identical with that used in Tibet, and also by Hindu astrologers; whereas in India European methods have long been adopted for commercial purposes. The essential feature of it is that all processes—addition, subtraction, multiplication, and division—are begun in the reverse way to

the European processes, that is to say, with the highest not with the lowest ciphers. In fact, it is the natural method of mental calculation, though it is performed and taught on paper. After each stage in the process, the ciphers that have been dealt with are rubbed out, and the new result substituted, so that no means are left for verification. The whole system is made clear by Major Temple with the help of detailed examples, which throw light on the old problem—how the Romans did their sums. Finally, Major Temple suggests an origin for the system in the fact that the ordinary Burman still writes his numbers as he speaks them. Thus, for 1139 he will write 1000, 100, 30, 9. The actual words used, it may be added, are corruptions of the Pali numerals, though numerals of non-Hindu origin are likewise used for ordinary purposes, though not in arithmetic.

THE March number of the *Livre Moderne* opens with a very interesting article on that collection of designs for a never-completed edition of *Les Fleurs du Mal*, which fell the other day in Paris to an American buyer at the Champs Fleury, and all for some eighteen pounds, for which at least one Englishman, if he had known of it, would have tried to "see" that Yankee. M. Uzanne not only gives account of the importunities of Poulet-Malassis (who, whatsoever the failings on his part, was almost an ideal publisher) to MM. Braquemond and Rops to get his notions turned into black and white, but supplies a very handsome *hors texte* reproduction of one of the Braquemond etchings. It is *macabre* enough in all conscience—a skeleton-tree or tree-skeleton with unholy flowers round it. There is also a sketch of a simpler design of the same Traddlesian kind in the text. It is certainly a pity that the idea was not carried out; for the actual editions of what is really in its way an epoch-making book are far from worthy of it, though the first and second are both pretty. Besides this, which is a real possession, the number includes a budget of unpublished letters of divers people, one of M. Gausseron's very well-arranged and well-executed panoramic views not merely of French but of general current literature, and an omnibus article on matters of bibliophilist interest.

SLAVICA.

IN the pages of the leading Bulgarian review (*Periodichesko Spisanie*) Mr. John E. Geshoff has just published the tale of his sufferings while lying under sentence of death in the prison of Philippopolis in 1877. Condemned without any trial, and on the most trivial charges, he was incarcerated for more than two months in this filthy dungeon, a daily witness of the departure for execution of hundreds of his countrymen, and was only rescued from the same fate at the instance of the English Government. Finally, although the military commander of the district, Suleiman Pasha, thirsted for his blood, the great pressure put upon the Turks was successful; and his sentence was commuted into banishment to Aleppo. On October 28, 1877, the whole Geshoff family, including the writer, his father, his uncle and cousin, and the wives and children of those who were married, were sent, to the number of twenty-nine persons, to Constantinople. The Turkish authorities, however, angry at being compelled to release them, had hanged very early in the morning some of their fellow-captives in the streets through which the unhappy prisoners would have to go to the railway-station. Thus, as Mr. Geshoff continues, the last sight which he witnessed in Turkish Philippopolis was that of the agonies of these poor victims. When he returned, the city

was freed from its tyrants. At Constantinople the Geshoffs were again imprisoned; and, finally, owing to the persistent exertions of their English friends, they were allowed to live at the village of Kadi-Keui, under the surveillance of the police, pending the consideration of their sentence. They were all set free by the treaty of San Stephano.

Mr. Geshoff is a man of considerable intellectual power, conspicuous both as an author and a statesman, originally a pupil, we believe, of the Robert College, which has conferred such inestimable benefits on the Christian population of the Ottoman Empire. He has told this terrible story in simple but vigorous language. It ought to be read widely in the West. No comment upon it is needed: the mere narration of such brutalities furnishes the severest indictment against the Turkish Government.

CORRESPONDENCE.

MARY FITTON AGAIN.

London: March 21, 1891.

Dr. Furnivall having kindly placed in my hands his note-book, containing the letters, extracts, and remarks on the portraits copied and written down by him at Arbury, I am in a position to reply to his letter in this day's ACADEMY.

He refers to certain portraits at Arbury as proof that Mary Fitton was not the dark lady of the Sonnets, though he regards her as "the type of that fascinating woman." I have not seen the pictures at Arbury, and I am, therefore, unable to say whether I should admit that they are all really portraits of Mary Fitton, especially having regard to the fact that, according to Dr. Furnivall, the inscriptions on some of them are false. I have seen the painted figure in Gawsworth Church, and there Mary's complexion, hair, eyebrows, and eyes are entirely suitable to her being the heroine of the Sonnets. It has been alleged that the figures on the Gawsworth tomb, which are certainly intended to represent life, have been repainted. I should doubt the truth of this allegation. But if the re-painting ever occurred, it must have been very long ago, for the point on the face of Lady Newdigate, Mary Fitton's sister, was so much decayed that it was impossible to make out accurately the colour of her complexion. Supposing, however, that the figures on the tomb were long since re-painted, it may be maintained with some confidence that the colours used would resemble as nearly as possible those at first employed. From Dr. Furnivall's notes I find that the second (or third) portrait of Mary Fitton, which represents her at, I suppose, just about the age required for the Sonnets, depicts her with "brown hair darker, face a little darker and paler," and with "dark shadows," such as are not to be seen on her sister's portrait. Here, then, a lady is so depicted as to make an obvious approach to the dark lady of the Sonnets. That there should be considerable change in perhaps six or seven years from the girl of fifteen (or fourteen) with "mischievous look," "dark blue-grey eyes (almost sapphire blue)," "hazel-brown hair," and "white and red face" is in no way wonderful. Such change might have been expected, even if the portraits were literal transcripts of nature. But it may very well be doubted whether the portraits are at all probably literal transcripts. The standard of female beauty in this country three hundred years ago was set by the Queen herself, with light or reddish hair and pink and white face. To be like the lady of "incomparable beauty," as Herbert describes the Queen, would be an object of general desire. And so, by "false painting," or otherwise, "each hand," Shakspeare tells us:

" . . . hath put on Nature's power,
Fairing the foul with Art's false borrowed face."

Under these circumstances, it is scarcely to be supposed that artists would conform to strict literality in portraying ladies with characteristics deviating from the recognised standard. Taking these considerations into account, and keeping in view the portrait with the dark shadows, the pictures at Arbury, as described by Dr. Furnivall, present exceedingly little difficulty in the way of our continuing to recognise in Mary Fitton the dark lady of the Sonnets. The considerations just adduced may enable us also to account for the dark-painted figure at Gawsworth. The tomb to which it pertains was not erected till Elizabeth had been dead a good while, and it is not likely that the peculiarities once so highly esteemed were still regarded with equal favour. There was no

longer the same motive for modifying or falsifying the facts.

If we turn now from the portraits to the letters found by Dr. Furnivall at Arbury, we have before us matter of very great interest and importance. The letter from Sir Francis Fitton which tells of Mary Fitton and her father making a "stolen journey" into Cheshire, and which evidently hints that certain unpleasant facts affecting Mrs. Fitton's character had come to light—"how true," he says, "I know not"—and had made some of her friends cease their efforts on her behalf—all this is strictly in accordance with the inferences I drew from an ambiguously-worded letter of Sir Edward Fitton's in the possession of Lord Salisbury (*Sonnets*, pp. 89-92). As to the "boy" of whom Lady Alice Fitton, Mary Fitton's mother, "took no joy to hear," this was not the illegitimate child attributed to Pembroke, whom, apparently, he refused to recognise as certainly his. This last-mentioned boy was born in February or March, 1601, and died immediately or shortly afterwards. But there are, in Lady Fitton's letter, indications that it was written not very long before Christmas (year uncertain). The "boy," therefore, would seem to be another illegitimate child of Mary Fitton's, of which previously we had no information; or she may have had some amorous adventure with a boy, which could be described as an affair "new worse than ever." The description of Mary Fitton as "the vilest woman under the sun" is entirely in agreement with certain passages in the Sonnets, which I need not quote.

The extract which Dr. Furnivall gives from the letter of Francis Beaumont (not the dramatist) is exceedingly curious. I agree with him in thinking that the allusion is to Mary Fitton, who is described in an inflated manner, not only as being "witty as Pallas," but also as like "beautie itself, more faire and prettie than sparke of vellet." This last comparison is very remarkable and difficult. The word "spark" seems to be employed here of a woman, though it is more commonly used of a showy, pretentious man. "Vellet" is, of course, "velvet"; and the "sparke of vellet" would thus be a woman attired in showy velvet. The comparison would appear to imply covertly that Mary Fitton's surpassing charms were not of a conspicuous and showy character. I should doubt whether Mary Fitton was Mrs. Polwhele, thirty-three years of age, when Beaumont wrote this letter. There is nothing in Dr. Furnivall's extract to show that Beaumont was at the time courting Lady Newdigate as a widow. He ends with "As occasion serves your ladiship shall heare from me again," and subscribes himself "Your good ladishippes most dutifullie bound."

Dr. Furnivall speaks of there being only one letter from Mary Fitton to her sister at Arbury. Some others which he has copied are ascribed to her; and on examination of his copies I believe the ascription to be right. They are, no doubt, signed in a curious manner, but Lady Newdigate is addressed as the writer's "dear sister" and "sweet sister."

If a presentation copy of Kempe's *Nine Daies Wonder* was sent in 1600 to Arbury, it is of course desirable that this copy should be found, though there appears to be no record of its existence. But, however this may be, the letters copied by Dr. Furnivall tend strongly to confirm the opinion accepted by the Rev. W. A. Harrison and myself, after Dyce, that Elizabeth had no maid of honour Anne Fitton in 1600, and that there is a mistake in the name as given in Kempe's Dedication. Lady Newdigate (who had been married thirteen years before at the age of twelve) is never called by her maiden name; but what is more important is, that there is clear indication of

her having other affairs to occupy her attention. Writing on April 22, 1601, her mother, Lady Fitton, says "God blesse your lytle ones."

THOMAS TYLER.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

London: March 21, 1891.

P. 20, 3, Διφίλου 'Ανθεμίω τῆρδ' ἀνέθηκε θεοῖς,
θητηκοῦ ὄντι τέλους ἱππῶδ' ἀμειψόμενος.

The problem here is (1) to restore the hexameter by supplying a feminine noun in agreement with τῆρδ, and (2) to show how the present corruption arose. I think the solution is to be found in the insertion of εἰκόνα after τῆρδ.

Διφίλου 'Ανθεμίω τῆρδ' εἰκόν' ἔθηκε θεοῖσιν.

A scribe would naturally change the letters ἀνέθηκε into the familiar ἀνέθηκε, leaving the unmeaning εἰκ to be dropped by the next copyist, who would also be likely to complete the change to a pentameter by reading θεοῖς.

P. 46, 9, ὅθεν καὶ ἡ πρὸς τοὺς Ἀργεῖους ἐνέστη φιλία, καὶ συνεμαχέσαστο χίλιοι τὴν ἐν Παλληνίδι μάχην Πεισιστράτου κομισάντος. I think anyone who considers the situation will feel that the bare κομισάντος is an unsuitable word to be used of the leader and head of the expedition. It may be rightly used of the services of a friend or subordinate, as it is by Herodotus (i. 61), in reference to this very matter, Λόγδοις προθυμὴν πλείστην πορεύετο κομίσας καὶ χρήματα καὶ ἄνδρας. Of Pisistratus we should have expected a word of more definite meaning, such as πείσαντος or μισθωσαμένου; or else to have heard of a visit to Argos, but there is no hint of this. To give an illustration from the religious wars of the Netherlands, we might say, "Hence arose the friendship with England, and English troops fought at Nieupoort, Sir Francis Vere having brought them"; but not "Maurice having brought them," unless we had just heard of a visit of Maurice to England. A very slight change of name, Ἡ γη σιστρατου for Π εἰσιστράτου, will, I think, give exactly what we want. Hegesistratus, as we read above, was son of P. by his Argive wife Timonassa, and would therefore be a likely person to induce the Argives to join in restoring the tyranny. The only question is as to his age at the time, as he is said (i. 17) to have been much younger than Hipparchus. We learn, however, from Herodotus (v. 94) that he was placed in charge of Sigeum by his father, and fought successfully in its defence against the Mytilenaeans. According to Mr. Kenyon's chronology, this must have been within eight years after the battle of Pallene (535 B.C.). Another clue to his age may be found in the statement (i. 10) that P. was married to Timonassa during his first exile (555-551 B.C.). Both statements would be consistent with the supposition that Hegesistratus was about sixteen years of age when the battle of Pallene was fought. As we are told by Herodotus (i. 61) that Pisistratus had sons who were young men at the time of his marriage with the daughter of Megacles in 551 B.C., this would make Hegesistratus some ten or fifteen years younger than Hipparchus.

J. B. MAYOR.

Florence: March 16, 1891.

I find that I was mistaken (ACADEMY, March 14) in supposing that the date of the battle of the Eurymedon was not a matter of dispute; as Busolt, followed by Holm, assigns it to the year 467. But this, if true, makes the case against Aristotle's chronology still stronger.

A. W. BENN.

THE NEW FRAGMENT OF EURIPIDES.

London: March 22, 1891.

If Prof. Campbell will turn to v. 1100 of the *Aias* of Sophocles, he will see what comes of assuming that any correction, however trivial, can be "too much a matter of course to be worth mentioning." He will find that he and his brother-editors — Dindorf, Wunder, Schneidewin, Nauck, Jebb, Blaydes, Wecklein, Paley, and, in short, the whole goodly fellowship—have printed in that verse the non-existent word *λεών*. They mean it for the gen. plur. of *λέως*; but the gen. plur. of *λέως* is *λεών*. And it looks as if another false accentuation were about to gain a foothold in our fragment of Euripides. The text is given in *Hermathena* without accents or breathings, but Frag. B has been twice invested with these perhaps superfluous ornaments—in the *Athenaeum* of January 31, and again by Prof. Campbell in the *Classical Review* for March; and in both places v. 4 begins with *ἵκται*. Now *ἵκται* is the nom. plur. of *ἵκται*, and makes no sense whatever: the word meant is *ἵκται*. The reason why I do not descend so far as to correct the spelling of vv. 40 and 57 in Frag. C is that Nauck or Wecklein, whichever gets hold of the fragment first, can be trusted not to miss the chance of observing "*ἑστως* scripsi" and "*εὐνατήριον* scripsi," and they derive more pleasure from these achievements than I do.

The further fragments of Prof. Campbell's *Antiope* (a drama which I much admire and hope to see completed), published in last week's ACADEMY, have been slightly corrupted by the scribes, and I would venture to restore the poet's hand by the following emendations: for *ποῦσθ'* read *ποῦ 'σθ'*, for *στεγῇ* read *στέρῃ*, for *ἐνόντας* read *ἐνόντας*, and for *ἰθαγένους* read *ἰθαγενούς*.

A. E. HOUSMAN.

LIVES OF SAINTS FROM THE BOOK OF LISMORE.

London: March 16, 1891.

I have read the paper in the *Irish Ecclesiastical Record*, to which Dr. MacCarthy refers at the end of his letter in the ACADEMY of February 21, 1891. That paper is entitled *Anecdota Oxoniensis*, and contains twelve pages, interesting as a specimen of the kind of literature which receives the *imprimatur* of an Irish archbishop, but, from the scientific point of view, hardly worthy of a Todd professor of the Celtic languages. The following list of corrigenda contains the result of all the criticisms contained in that paper which seem to me of any value:

P. lxxiii., col. 1, dele the article *caisel*.

„ lxxvii., col. 1, l. 12, for "ministerium 'credence-table,'" read "ministerium 'sacrorum vasorum . . . congeries et apparatus,'" Ducange, v. 399, col. 2.

„ cvii., l. 20, for *paten*, read *chalice*.

„ 170, ll. 15, 16, for "I . . . even," read "pilgrimage and exile is the world to me even."

Note 2.—For *per mundum*, read *patres mei*.

„ 174, l. 21, for *relics and shrines*, read *reliquaries and service-sets*.

„ 193, l. 8, for *be blessed*, read *greet*.

„ 207, l. 17, for *reflected (?) that*, read *neglected him till*.

„ 219, l. 27, *after to*, insert *my mother*.

„ 250, l. 5, for *curse whoever brought thee here*; read *take (my) curse*. What brought thee here?

„ 287, ll. 4, 5, for *the clerics . . . not*, read *they sought the clerics of the province of Connaught, to banish it from them, and they found none*.

„ 1. 31, for *he raises up*, read *uprose*.

P. 378, col. 1, the twenty-fifth entry should stand thus: *Druim Sailech* 165 = *Dorsum Salicis*, Book of Armagh, 6^o 1, an old name for the site of Armagh.

To the above I may add a corrigendum and three addenda which lately occurred to me.

Luch, "mouse," is a *t*-stem, as we see from the acc. pl. *lochtha*, Book of Leinster, 289^o 17. Therefore, in lines 3744, 3746, for *lochait*, read *lochaid*. A corresponding change is needed in p. lviii., where *luch* is wrongly treated as a stem in *nt*.

For the prep. *la*, meaning "by" (*i.e.*, begotten by),* there is a good *belegstelle* in the Book of Leinster, 287^o: "In *la* Core in mac, a ben?" or Fergus, "Is leis," ar in ben.

Two instances of the gen. sg. of *uathad* with an ordinal† are contained in the *Leabar Brecc*, p. 90: *Aile uathaid esci Mártai in dómnach* is *nessom*, and *Cethrumad uathaid esci Iúin in dómnach* is *nessom*.

The passage in the *Life of Senán* (*Lismore Lives*, l. 2080), where a bishop gets up from his dinner with a thighbone in his hand, is illustrated by the following quotation from Posidonius' account of the Gaulish Celts:

Προσφέρονται δὲ ταῦτα καθαίρων μὲν, λεονταῶς δὲ, τοῖς ἑρσὶν ἀμφοτέροις αἰρῶντες ὅλα μέλη, καὶ ἀποδάκνουντες.

This is one of the proofs that the Gauls of the first century before Christ, and the Irish of the sixth century after Christ, were in nearly the same stage of civilisation.

WHITLEY STOKES.

DEFOE AND MARY ASTELL.

Norwood: March 16, 1891.

In the ACADEMY for March 14, Herr Karl D. Bülbring takes up the cudgels for Mary Astell against Daniel Defoe. As a Presbyterian, I am interested in Defoe; and I certainly think it improbable that he would affirm the priority of his own scheme, had "Mary Astell's book caused Defoe to write his chapter." I immediately referred to the two authorities quoted by Herr Bülbring (*The Dictionary of National Biography* and *Defoe's Essay on Projects*), and I cannot help disagreeing with his conclusions, though I do so with diffidence, being a mere amateur in literary questions.

Herr Bülbring has singled out one point of coincidence—more apparent than real—and has overlooked the fact that the whole aim and character of Mary Astell's institution were very different from those of Defoe's, as indeed Defoe himself pointed out. Mary Astell's proposal was named by herself a "Religious Retirement," and this was evidently the essence of it; in fact, it was "a retreat from the world," and she only refrained from calling it a "monastery" because she realised that such a name would be at once fatal to its success. An institution where the services were performed daily in the cathedral manner, and the Holy Eucharist was celebrated at least once every week, where all the fasts of the Church was observed, must have been primarily religious. So far as the account in the *National Dictionary of Biography* goes, no direct evidence is given of the reason which led its author to allow inmates to leave whenever they wished. However, the mention of the "fear of reproach" certainly suggests that this was due to her perception of the fact that the state of mind fitted for such a life of religious celibacy might, in the course of time, pass away; and that in such a case, it was a praiseworthy course to give up this life, and no one acting thus should feel any fear of reproach.

* See the ACADEMY for February 7, 1891, p. 139, col. 1, note 3.

† *Ibid*, note 6.

Defoe's institution, on the other hand, was due to his feeling that "we deny the advantages of learning to women," and that this was "one of the most barbarous customs in the world." And he goes on to say (as Herr Bülbring quotes in part):

"I mean both the model, the teaching, and the government different from what is proposed by that ingenious lady. . . . Wherefore, the Academy I propose should differ little from public schools, wherein such ladies as are willing to study should have all the advantages of learning suitable to their genius. But since some severities of discipline more than ordinary would be absolutely necessary to preserve the reputation of the house, that persons of quality and fortune might not be afraid to venture their children thither, I shall venture to make a small scheme by way of essay."

His second regulation, which is the point of Herr Bülbring's letter, is one of the means he uses to attain this end, and for this end alone it is introduced. The work of the inmates of his Academy comprises

"all sorts of breeding suitable to both their genius and their quality, and in particular music and dancing"; "besides this, they should be taught languages, as particularly French and Italian"; "they should, as a particular study, be taught all the graces of speech and all the necessary air of conversation"; "they should be taught to read books, and especially history."

"In short," says Defoe, at the end of his project, "I would have men take women for companions, and educate them to befit for it"; and he goes on to quote as a warning a lady who "had been cloistered up all her time."

Mary Astell may have formally and decidedly advocated the educational rights of her sex, as I hope Herr Bülbring will succeed in proving in the *Journal of Education*. But that fact hardly entitles us to look on Defoe, in the face of his express denial, as a plagiarist, especially when a consideration of the character of the two schemes tends to show that they are really independent, and that the one common point was reached by their authors by quite different paths.

S. W. CARRUTHERS.

APPOINTMENTS FOR NEXT WEEK.

WEDNESDAY, April 1, 8 p.m. Cymyrodorion: "The Proposed University for Wales," by Prof. T. F. Roberts.

8 p.m. Elizabethan: "The Relation of Painter's Palace of Pleasure to the English Romantic Drama," by Mr. J. A. Symonds.

THURSDAY, April 2, 8 p.m. Linnean: "Variations in the Floral Symmetry of certain Plants having Irregular Corollas," by Mr. W. Bateson and Miss Anna Bateson; "Two New Genera of Orchids from the East Indies," by Mr. H. N. Ridley.

FRIDAY, April 3, 8 p.m. Geologists' Association.

SCIENCE.

THE BEGINNINGS OF CLASSICAL SANSKRIT POETRY.

Die Indischen Inschriften und das Alter der Indischen Kunstpoesie. By Georg Bühler. (Vienna.)

THIS brilliant essay will arrest the attention of all students of the history of Sanskrit literature. Fergusson was the author of the ingenious but perverse theory, according to which Vikramāditya, of the era named after him, which runs from 56 B.C., really lived in 544 A.D. According to Fergusson, the Brahmins, who in or about 1000 A.D. "invented" the Vikramāditya era, through hatred of a current Buddhist mode of reckoning, chose as the eponymous hero of the new era, a sovereign who defeated the barbarians in 544 A.D., but, for convenience of reckoning,

put him in the year 601 instead of the year 1 of his own era. By and by this odd detail dropped out of memory; and the consequence was that a whole body of literary tradition, which centred round Vikramāditya, was shifted back 600 years, to the utter confusion of the whole subject.

This was the theory to which Prof. Max Müller gave a provisional assent, and on which his own theory of a renaissance of Sanskrit literature (*India, What can it Teach Us?* p. 281 ff.) in the middle of the sixth century A.D. is to a great extent based. Throughout a paper full, as was to be expected, of matter that will always be valuable, Max Müller set himself to show that there was nothing in the facts accessible to us inconsistent with a Vikramāditya reigning in the year A.D. 544, patron of Kālidāsa and other great lights of Sanskrit classical literature. A literary interregnum of some six centuries was put down to invasions of the barbarians.

When Fergusson and Max Müller wrote, it was the fact that no inscription or document of any kind dated in the Vikramāditya era prior to A.D. 544 was known to exist. Too much importance was perhaps attached to that. Inscriptions or documents of any kind are comparatively rare for that early period. Even now we cannot quote any prior to A.D. 544, which are dated in the Vikramāditya era *co nomine*. But the discovery of the Mandasor inscription (427 A.D.) and the identification of the "era of the Mālavās," in which it is dated, with the Vikramāditya era, had already put it beyond doubt that the era was in common use before the year to which Fergusson referred it. The significance of the Mandasor inscription was first pointed out by the present writer. B.B., R.A.S. xviii., p. 381. The question, however, rested here. Attention was drawn to the fact that Patanjali's Mahābhāṣya contained, among other poetical quotations, one from a poet who must have lived after Kālidāsa; and Kielhorn has very recently shown good reason for believing that the author of the Mandasor inscription was familiar with one of Kālidāsa's works. But Müller's theory still held the field.

In the present paper Bühler reviews the whole question, with the aid of eighteen of Fleet's inscriptions (two of which he examines in detail) and of some earlier ones. It would be impossible to speak too highly of the way in which the task is performed. The paper is a brilliant example of what can be done by one who is at once a good epigraphist and a good Sanskritist, in the way of utilising the material which the energy of Mr. Fleet and the liberality of the Government of India have now made accessible. Particulars could not be easily given here to any advantage. It is enough to say that the results arrived at render the "renaissance of Sanskrit literature" theory no longer tenable. The existence of Sanskrit poetry, and of well-known and opposing schools of that poetry, is here traced from the fifth century, through the fourth and third, back to the second of our era. The paper gives a fresh start which was sorely wanted. All future writing on the subject will have to reckon with the

demonstration it affords, that it is to the centuries before our era, and not to the sixth century, A.D., that we must look for the beginnings of classical Sanskrit poetry.

PETER PETERSON.

SOME BOOKS ON CHEMISTRY.

The Meteoritic Hypothesis. By J. Norman Lockyer. (Macmillan.) In this volume are presented the author's most recent experiments and arguments as to the meteoritic origin of stars, comets, and nebulae. The work is crowded with original observations; and no review, however elaborate, could convey a fair idea of the refined experiments and ingenious discussions which Mr. Norman Lockyer here offers to the scientific reader, be he chemist, physicist, or astronomer. The complexity of the subject may be gauged by referring to the headings of the nine parts into which the volume is divided. These are the Fall and Nature of Meteorites, the Spectroscopy of Meteorites, Meteorites in the Air, Meteor-Swarms and Comets, Meteorites in Space, New Grouping of Cosmical Bodies, the Origin of Binary and Multiple Systems, and the Variability in Light and Colour of Cosmical Bodies. The last part contains a summary of the meteoritic hypothesis, and takes the form of twenty-seven "General Conclusions." These strongly support the fundamental idea of a general unity of origin and development in all cosmical bodies. Chemical considerations constitute so large a part of the author's arguments that we are justified in including the volume before us under this heading, and in speaking of it as a very valuable addition to the literature of chemistry.

Elementary Systematic Chemistry. By W. Ramsay. (J. & A. Churchill.) The professor of chemistry in University College, London, has contrived to present, in 350 small pages, a clear account of the leading facts and theories of chemical physics, of the chief elements and their more important inorganic compounds, and even of the main foundations of organic chemistry. To the chemistry of carbon compounds 140 pages are allotted—a larger allowance than usual in elementary manuals of general chemistry having a scope similar to that of the book before us. We may safely say that the entire volume presents a clearly-defined sketch of the science, and should serve, as the author remarks in his preface, to demonstrate the value of chemical study as a training in classification, and as a means of developing the reasoning powers. The only part of the book to which we can take exception consists of the last two pages (343 and 344), in which the author attempts to deal with a whole crowd of organic substances of "unknown constitution." These two pages require searching revision. We cannot endorse the statement that chlorophyll "appears to contain no nitrogen, but iron." Some of the remarks about fibrin, legumin, and haemoglobin are also open to criticism.

"HEINEMANN'S SCIENTIFIC HANDBOOKS,"—*Manual of Assaying Gold, Silver, Copper and Lead Ores.* By W. L. Brown. (Heinemann.) Practically this is a student's handbook for the assay of gold and silver only, as but six pages are given to copper and no more than eight to lead. The volume is, according to a recent protest from the author, an unauthorised English reprint, with some insignificant alterations and additions, of a well-known and—we may without hesitation say—meritorious American Manual. It certainly ought not to bear on its cover and as its short title two authors' names. The editor, Mr. A. B. Griffiths, has done little more than add a chapter of twenty-four pages on the assay of

fuel. The book is calculated to serve the somewhat limited purpose for which, we presume, the original work was prepared. The illustrations in the text are, for the most part, blurred and black. The index has the rare fault of being too full, for many of the entries therein, notably those of the majority of the elements and of a large number of minerals, give references to pages of the Manual where nothing can be found but a name—no further information, in fact, than that afforded by the bare mention made in the index itself.

A Treatise on Chemistry. By Sir H. E. Roscoe and C. Schorlemmer. Vol. III. — Organic Chemistry. Part III. New Edition. (Macmillan.) During the five years which have elapsed since the first edition of this section of the Treatise was published very great progress has been made in the study of the aromatic compounds. The authors have rewritten the volume, and increased its bulk by something like fifty pages. The latest discussions on the constitution of benzene, and an account of all the more important of its recently-discovered derivatives, have been incorporated with the text. That wonderfully fertile conception of the "benzene ring" is fully and clearly developed in the revised edition before us.

"ENCYCLOPÆDIE DER NATURWISSENSCHAFTEN."—*Handwörterbuch der Chemie.* Herausgegeben von Dr. A. Ladenburg, 40 und 41 Lief. (Breslau: Treves.) In these two parts of the great German Dictionary of Chemistry, the eighth volume is completed and the ninth begun. The articles comprised in the two numbers are — Phenanthren and the Xanthon group; Phenazin; Phenols; Phenolic acids, and Phosphorus. We are glad to find a large number of structural formulæ in the text, for, even in an abbreviated form, they are of signal service in elucidating the relationships of some of the more complex bodies under discussion. On the whole, we have nothing but praise for this laborious and useful compilation.

SCIENCE NOTES.

MR. WILLIAM ANDERSON has been elected professor of anatomy at the Royal Academy, in succession to the late John Marshall.

THE publication is announced of a German translation of Mr. Lennox Browne's monograph on *Koch's Remedy, in relation specially to Throat Consumption*. Simultaneously a French translation of his work on *The Throat and Nose and their Diseases* will appear in Paris.

PHILOLOGY NOTES.

AFTER the excitement caused by the publication of the "New Aristotle," it seems strange to find no reference to it in the *Journal of Philology* (Macmillan), which is edited by two of our best Aristotelian scholars. Some of the articles, however, are of exceptional interest. The longest, and perhaps the most important, is that by the Rev. Jos. M. Cotterill, in which he seems to prove decisively the spuriousness of the Epistle to the Philippians attributed to Polycarp, by tracing its contents back to the Homilies of Antiochus Palaestinus, whom he is disposed to regard as himself the author of the Epistle. Next in value we should be disposed to place the statistical investigation of the augment in Homer by Mr. Arthur Platt. His conclusions are: (1) That the augment has been largely added to our text (though also occasionally dropped), since the poems were composed; (2) that the more correct usage is for the gnomic and perfect aorists to have the

augment, not the other aorists, still less the imperfect, and still less again the pluperfect; (3) that the augment was a method of emphasizing, and not purely a sign of past time. Mr. H. E. Malden and Prof. W. Ridgeway continue their discussion upon Caesar's invasion of Britain, the latter reiterating his arguments that Caesar started on both occasions from Cape Grisez and landed in Pevensey Bay. Mr. Robinson Ellis contributes *Adversaria* on various Greek and Latin authors, and Prof. Nettleship continues his notes on the Vatican Glossary 3321.

No less than thirty-six columns of the *Classical Review* are occupied with notes on the text of "Aristotle on the Constitution of Athens," some of which are taken from the ACADEMY and others from papers read before the Cambridge Philological Society; and a further list of similar notes is promised for the April number. A noteworthy feature is that Mr. Kenyon has compared the emendations offered with the papyrus, and himself added a note where they are confirmed by the MS. reading. In a separate article, W. G. Rutherford points out the bearing of the papyrus on some cardinal points in textual criticism, from the point of view of the school of Cobet. Mr. J. B. Mayor gives a list of un-Aristotelian words and phrases contained in the work, in support of the impression, produced on his mind by the general tone of thought and language, that Aristotle was certainly not the author. The fragments of the "Antiope" of Euripides, published by Prof. Mahaffy in *Hermathena*, also come in for emendation at the hands of Prof. Lewis Campbell and Dr. Rutherford. Mr. F. F. Abbott, of Yale University, sends a note upon the etymology of Italian *osteria*, in opposition to the received view that it preserves the old Latin confusion of *hostis*=*hospes*.

THE *Revue Critique* for March 9 opens with a review of "Aristotle on the Constitution of Athens," by M. Haussoullier. It is mainly devoted to a summary of its contents, from the point of view of historic interest. But we may quote the following passage:—

"Le livre est admirablement imprimé, avec ces beaux caractères gros et gras que nous devrions bien emprunter à l'Angleterre. Si je voulais chercher chicane à M. Kenyon, je lui dirais que les fautes d'accent abondent * * * Mais je veux être plus généreux que ses compatriotes qui le malmenent si fort et je lui renouvelle tous mes remerciements."

The next article in the same number is a review of Prof. Ramsay's "Historical Geography of Asia Minor," by M. Salomon Reinach.

M. BARTHÉLEMY SAINT-HILAIRE contributes to the *Revue Bleue* for March 21 the first instalment of a review of the "Constitution of Athens." This review is likewise historical, in the main; but it is worthy of mention that the Nestor of Aristotelian scholars pronounces unhesitatingly in favour of the authenticity of the treatise.

WE have received a copy of the third edition of *Demosthenes De Corona*, by Gabriel Sophocles, of Athens. Three points about it seem worthy of notice. It is published at Athens by a German publisher (Barth & Von Hirst). It is described as being "revised according to the latest European editions." This calls to mind Sir R. F. Burton's epigram, that Lord Stratford de Redcliffe "made a prodigious reputation in Europe—by living out of it"; to which some wisacre retorted that Constantinople is *not* out of Europe. Thirdly, it bears on the verso of the title-page the following legend, duly signed with the autograph of the editor:—

Πάν ἀντίσπον μὴ φέρον τὴν ἰδίῃ χειρὶ ὑπογραφήν μου
δίδεται κατὰ τοὺς περὶ τύπου νόμους ὡς κλοπιμαίον—

from which it may be inferred that the Greek law of copyright does not contemplate editions running into tens of thousands.

MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Friday, March 6.)

TALFOURD ELY, Esq., in the chair.—Prof. Terrien de Lacouperie read a paper on the "Non-Chinese writings of China and Central Asia." The most remarkable of these writings is the Chinese writing itself, whose origin is now clearly shown to have been foreign. The proofs put forward as decisive on the subject belong to four classes: (1) manifest derivation of the oldest Chinese characters, not only in the case of single signs, but also in that of complex symbols, inclusive of the signs for several metals and the cardinal points, from the actual forms assumed by the written characters of Babylonia and Elam at the time of Gudea (2500 B.C.); (2) Souvenirs in the Chinese legends of the cuneiform writing; (3) Cuneitic shapes of some ancient Chinese characters; (4) No traces whatever of a hieroglyphic period of writing in China. The sole traces of a script, should it be so called, before the immigration of the Bak families, civilisers of China, were the cup-marks, found by the latter on the cliffs of the Ho and Loh rivers, which gave rise to the legends of the Ho-T'u and Loh Shu. The Buddhist missionaries, Tse-Kao in 221 and Li Fang in 219 B.C., Kasyapa Mantanga and Gohberana in 67 A.D., and others afterwards, introduced the Sanskrit writing, which, however, was confined to themselves alone. In the fifth century an alphabet of thirteen letters was extensively used at the court of the Wei Tartars, then ruling over Northern China. It was called the Si Yü Hu Shu, and is described as in use as far as Kiu-tze, Kao-tchang, and among the Tuh Kiu-huns; eastwards it formed most probably the Korean writing, and it was apparently a simplification by the Buddhists of a richer alphabet, adapted to the limited exigencies of the Tartar dialects. West of this, in the Tarym basin, at Kashgar, Oeh, Khazandha, Akin, Kutche, and Aksu, the writing closely resembled the Sanskrit character. It is represented by the MS. on birch bark brought back lately from one of the buried cities near Kuchar by Lieut. Bower. And in Tokharistan an alphabet of twenty-five letters from left to right, apparently not Indian in origin, was employed. All this about 630 A.D., according to the statements of the Buddhist pilgrim Hiuen-Tsang. North of the Hu and of the preceding was the Suljek writing, composed of thirty odd characters, spoken of by the same pilgrim. This is perhaps the same as that of the Ienissei and Karakorum inscriptions, which were in use in the latter country in the eighth century, A.D., and is now trying the sagacity of several scholars. This curious script, which is not without resemblances to both the Indo-Bactrian and the Runic characters, was superseded in the following century by the Nestorian writing of Syriac origin, introduced into China in 635 A.D., shown by the celebrated inscription of Si-ngan-fu. From this Semitic writing were derived successively the Uigur so-called, and in 1251-1311 the Mongol, the latter giving birth, in 1599, to the Mandshu, and afterwards to the Kalnuick characters. The northern frontagers of China and its part-conquerors had special writings made for themselves. In 920 the K'ital or Liao Tartars invented several thousand large characters, and also some smaller ones. In 1030 the Tangutans or Si-Hia invented a writing rather complicated, which is represented on some coins and the seventh version of the Kew-yung Kwan inscription. In 1119 the Jurchen or Kiu Tartars invented about a thousand characters, represented by the inscription of Liang-Kium Salikhau; in 1145 the same Tartars invented another writing represented by the Yen-t'ai inscription and a vocabulary of 881 words lately discovered. And in 1269 the Yuen Mongols invented the Bashpa characters, forty-one in number; but these were little used, and disappeared entirely after eighty-five years. In the South-west of China the non-Chinese tribes have had and still have writings of their own. The most remarkable is that of the Lolos, which existed as early as 9 A.D.

in N. E. Yunman and was called the Tsuan writing. Manuscripts have come to Europe which show the number of characters to be at least 450, and a vocabulary is in preparation by a missionary. The Miao-tze of Kueitchou had in 1650 a writing of their own, a specimen of which is preserved by Luh Tze Yuen, a Chinese author of the period. The Shui-Kia or Pu-Shui of S. W. Kueitchou have a special writing, apparently derived from the Chinese Li character; it is represented by a MS. in the British Museum. The Mossos or Nashi have a sort of writing, partly pictorial, and chiefly in use for purposes of witchcraft. It is mentioned by the Chinese in the beginning of the last century; there are manuscripts in London and in Paris. Another writing of about 200 signs, mixed in character, many of them being corruptions of Chinese, is illustrated by a bilingual MS. in the Musée du Trocadéro at Paris; the other writing is Mossos. The Pah-y or Chinese Shans have also a writing of their own, represented by texts from the Ming dynasty downwards, which may be derived from Tibetan. Specimens of twenty-three writings out of the twenty-six mentioned in the paper were exhibited at the meeting.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, March 13.)

DR. J. S. MACKAY in the chair.—Dr. William Peddie discussed the use of dimensional equations in physics; Mr. A. J. Pressland read a paper on some relations between the median and orthic triangles; and a note was submitted from Mr. William Renton on an expansion in the differential calculus.

RUSKIN SOCIETY.—(Friday, March 13.)

THE REV. MARK WILKS in the chair.—Mr. William White, curator of the Ruskin Museum at Sheffield, read a paper on the history and contents of that institution. He stated that the museum, as originally formed at Walkley, near Sheffield, was established by Mr. Ruskin in order to carry out some of the objects of St. George's Guild. The question has often been asked why Sheffield was chosen. The reasons have been clearly stated by Mr. Ruskin himself, one being that it is the centre of iron art industry, in which English work was the most masterful; another reason was that it is not far from some of the finest specimens of architectural work, such as York, Lincoln, Fountains Abbey, &c., &c. In consequence of the inaccessibility of the museum at Walkley, the corporation of Sheffield, when securing Meersbrook Hall, were anxious that the Ruskin Museum should be removed thither. After some delay the present building was formally opened, amid considerable enthusiasm, on April 15 of last year by the Earl of Carlisle. Here are stored the valuable objects which Mr. Ruskin has given to the Guild or bought out of its contributed funds. The contents are for the most part unique examples selected by Mr. Ruskin or specially produced under his direction for a particular purpose, namely study, not of a superficial but of an advanced kind. Mr. White mentioned the splendid collection of minerals and precious stones (so far as individual specimens were concerned, many of them are unrivalled), and the collection of casts taken by Mr. Ruskin himself in Rouen and Venice illustrating ancient Gothic art. There are also specimens of the Italian masters most admired by Mr. Ruskin, many of them illustrating the pictures mentioned in his works. The library contains many valuable volumes—illuminated missals, black-letter books. The number of admissions to the museum has exceeded expectation; the average daily attendance (including the period of three hours opening on Sunday afternoons) during the latter half of last year reached 348.

ARISTOTELIAN SOCIETY.—(Monday, March 16.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. R. J. Ryle read a paper on "The Philosophy of Roger Bacon." The published works of Roger Bacon deal chiefly with his scientific doctrines. These works do not contain more than a popular discussion of the philosophical questions of his day. His doctrine of "Offendicula," or

hindrances to the discovery of truth, are only in a loose and general way comparable with the more comprehensive and systematic *Idola* of Francis Bacon. He insists on language as the first gateway to wisdom, at least for the Latins who have to learn all the sciences from writings in foreign tongues. After language he places mathematics as being indispensable for all other sciences, and as being necessary for the accurate study of all kinds of actions and re-actions. He discusses the various modes of propagation of "Impressions" from one point to another; and in dealing with the controversy as to the origin of "diversity," he combats the view that "form" is the only source of it, as at once unphilosophical and heretical. On similar grounds he opposes the doctrine of the Infinitude of the World. Throughout his writings he regards Aristotle as the greatest of philosophers, and ranks Averroes and Avicenna next after him. On the great mediæval question of Universals he takes the side of individuals as to priority and worth in the system of the world, while he maintains the existence of Universals to be in individuals only. He gives practical proof of his own appreciation of inductive enquiry in many branches of science, more especially in astronomy and optics. His treatise "De Perspectivis" on the latter subject held a position of well recognised authority till the sixteenth century, though the rest of his works were almost lost in oblivion. His chapter "De Scientia Experimentalis," analysed by Whewell in the *History of Inductive Sciences*, is in many parts worthy of comparison with Francis Bacon's *Novum Organon*; but the resemblances of his doctrines to those of later time are often verbal rather than real. His philosophical position was in the main that of the Schoolmen of his age, as appears from his habitual neglect of the distinction between the "sensible" and the "logical," as well as from his treatment of authority and of experience. The paper was followed by a discussion.

FINE ART.

ART BOOKS.

Hints to Amateurs: a Handbook on Art. By Louise Jopling. (Chapman & Hall.) This is a very kind book. Amateurs are sadly in want of hints, and it is not every artist who will take the trouble to give the sort of hints that they want. Most of them probably could not do so if they chose. "Put yourself in his place" is difficult for those who have never been there; and the condition of the untrained aspirant who wants to get on, but has started in every path except the right one, is more or less unknown to the ordinary professional, who has gone through the schools as a serious student. To say that Mrs. Jopling is eminently calculated to direct the amateur is in no way uncomplimentary. She has long passed "the slough of despond," of which she speaks so sympathetically. But if there is no trace of the amateur in her workmanship, it retains the freshness, the freak, in a word, the light-heartedness, which one so often misses in the "professor"; and she has evidently a lively and imaginative sympathy with the struggles of the untrained. Her preface is marked by sound advice, but this is mixed with such cheerful encouragement that it will dissipate the clouds from many a disheartened and anxious face. She can write, too, as well as paint. Her reminder that the "amateur" signifies the "lover" is excellently in place; and happy, indeed, is her distinction between the professional who "very often has made his start in life with a lack of money" and the amateur who has been "burdened with too much." Nor is there any want of brightness in her lessons. They are quite good to read "by themselves," so to speak, and their doctrine is excellent. What, for instance, can be better or more needed just now than this: "In painting a head you must never forget that you are drawing it, although you do it in colour instead of in black and white.

The latter is but modelling in one colour, and the former in many." No amateur that is wise will neglect to acquire this little book.

How to Shade from Models. By W. E. Sparkes. (Cassell.) This is a clearly-planned and intelligently-written manual of instruction on a very important branch of elementary art-training. No doubt the use of the stump has been abused, and too much has been made of neatly-elaborated execution in the drawings sent in for competition for prizes at art schools; but the laws of light and shade are eternal, and a thorough comprehension of them is one of the most necessary equipments of an artist. Mr. W. E. Sparkes teaches theory and practice at the same time, and in the simplest manner; and his book may be recommended to the attention of those who draw, and of those who wish to know how to appreciate the drawings of others.

A Manual of Wood Carving. By Charles G. Leland. (Whitaker.) "Good wine needs no bush," and we hope that "publishers' notes" like that with which the present volume is prefaced are not about to become general. Let publishers, if they think the practice a fair one, continue to advertise a few words out of an adverse review which, divorced from their context, give the impression of a favourable one—let them even, as at least one publisher does, follow the announcement of their new books with criticisms of their own composition; but the pages of the volume itself are usually left for the author to fill, and we think on the whole that this practice is a good one. Otherwise there is little fault to be found with this Manual, which describes the process of wood engraving with praiseworthy clearness.

VERE FOSTER'S WATER-COLOUR SERIES.—*Landscap and Animal Painting in England.* By W. J. Loftie and Stephen T. Dadd. (Blackie.) This is one of a series so well known that it is almost superfluous to say more about it than that it is quite up to the usual level. The care and taste of the Introduction, by Mr. Loftie, are, however, noteworthy; and Mr. Dadd's directions for painting are clear and simple. The merit of some of the reproductions is more open to question.

NOTES ON ART AND ARCHAEOLOGY.

THE publication is announced of an important work on the late Alfred Stevens, the sculptor, by his pupil and friend, Mr. Hugh Stannus. It will be called *Alfred Stevens and His Work*, and will contain a brief memoir and an account of his principal productions. Notwithstanding Mr. Walter Armstrong's careful study of the artist, published some years ago, Mr. Stannus's book will supply a distinct want; and, in spite of the exhibition of the artist's productions at the winter exhibition of the Royal Academy in 1889, much yet remains to be done before due honour is paid to the memory of perhaps the greatest sculptor of the English school. The book will be published by the Autotype Company, who have been assisted in their reproductions by all the possessors of Stevens's most important works, including the dean and chapter of St. Paul's, Mr. Robert S. Holford, Sir Frederick Leighton, Mr. Hamo Thornycroft, and the Corporation of Liverpool. The subscription price of the book is six guineas, and the edition will be limited to 150 copies.

A CORRESPONDENCE has been published between Mr. T. Humphry Ward and the Chancellor of the Exchequer, in which the latter accepts on behalf of the Government an offer made by an anonymous friend of the latter to build a gallery for British art, at his own expense, and at a cost not exceeding £80,000, on a specified site at South Kensington, of which the area is almost as large as that

covered by the National Gallery. It is stipulated, however, that the management is to be entirely separate from the Science and Art Department.

It has been finally decided that the receiving-days for pictures, drawings, &c., at the Royal Academy shall be Saturday, Monday, and Tuesday, March 28, 30, and 31; and for sculpture, Wednesday, April 1.

AT last we are to have an authoritative description of the magnificent sarcophagi discovered some three years ago at Sidon by Hamdi Bey, the director of the imperial museum at Constantinople. It is written in French, with the collaboration of M. Théodore Reinach; and will be published in a superb folio volume, at the subscription price of 160 frs. It will consist of about 250 pages of letterpress, illustrated with fifty plates in heliogravure, and ten in chromolithography, besides a large plan and cuts in the text.

UNDER the title of *Studies of the Gods in Greece at Certain Sanctuaries*, Messrs. Macmillan will publish shortly a series of eight lectures delivered a year ago at the Lowell Institute by Mr. Louis Dyer, late assistant-professor at Harvard, and also a graduate of Balliol college. The temples treated of are those of Apollo at Delphi and Delos, of Demeter at Cnidos and Eleusis, of Dionysus in Thrace and Attica, of Aesculapius at Epidauros, and of Aphrodite at Paphos. The volume will be illustrated with Dr. Dörpfeld's plan of the temple of Eleusis and Mr. Elsey-Smith's plans of Patmos.

THE corporation of Birmingham have concluded arrangements for the purchase of two famous pictures: a "Beata Beatrix," by Rossetti, closely resembling that of the same name presented by the late Lord Mount-Temple to the National Gallery; and Mr. Ford Maddox Browne's early work "The Last of England."

A GENTLEMAN who is content to describe himself as "the father of a foundation scholar," but who is understood to be Dr. Collinson Morley, has presented to St. Paul's School a magnificent series of fifty-nine framed engravings, representing former alumni. The portraits are now hung up along the sides of the hall, with particulars of the personal history printed beneath each. Among them is an engraving of Milton on vellum, and a miniature of Major André.

AT a recent meeting of the Académie des Inscriptions, M. de Mély read a paper upon certain episcopal vestments, which are preserved at Lisieux, and are there ascribed to Thomas a Becket. On a close examination of them, M. de Mély ascertained that both the form and the material belong rather to the thirteenth than to the twelfth century, and also that they are emblazoned with armorial bearings, a kind of ornamentation not in use in the time of Becket. A mediæval parchment kept with them contains only the words "St. Thomas de C." Now, there was in the thirteenth century another English prelate, with the same Christian name as Becket, who likewise obtained the honour of canonisation. This was St. Thomas de Canteloup or Cantilupe, Bishop of Hereford (1275-1282), and for a short time chancellor under Henry III. He belonged to the family of Gournay, and was allied to that of Bockenhams; and it appears that the armorial bearings on the vestments are precisely those which English heralds assign to these two families.

THE most recent discovery at Rome, made by Monsignor Wilpert, chaplain of the Campo Santo at the Vatican, is that of a new chamber in the catacomb of Saints Peter and Marcellinus. The arch of the chamber is ornamented with paintings of the middle of the third century,

representing Christ in judgment, surrounded by the elect; the annunciation; the adoration of the Magi and the Magi beholding the star; and the healing of the man born blind. At the angles of the arch are figures in prayer.

THE STAGE.

"DIAMOND DENE" AT THE VAUDEVILLE.

THE author of "Diamond Dene" is a writer new to stage-writing. Mr. Dam is an American journalist, established, as one hears, in London. He has caught the ear of the Vaudeville management; and Mr. Thorne on Wednesday week produced his four-act play, which has the support of a cast of almost unusual strength, Miss Jessie Millward and a new American actress, Miss Dorothy Dorr, having joined the company.

"Diamond Dene" is not the work of a writer with an individual view of life or character. It is not the work of a very keen observer of human nature or of a master of epigrammatic or graceful style. Yet it is written not at all incompetently; and, in certain points it lacks probability, it manages to sustain interest. This is, in part, by reason of its author having known how dexterously to provide it with at least two strong curtains; in part, because it has a story which, on the whole, is firmly knit; and, in part too, because the Vaudeville interpretation of the piece gives it every chance that it is possible for it to have. I am not disposed to tell its story at any length, for to do so is an especial function of the morning papers. I will proceed with promptitude to what in the present case is the main matter—the acting and the opportunities for acting; and in treating these, however briefly, we shall gather something of the actual tale.

Mr. Thomas Thorne gives, by no means for the first time, an admirable example of an actor-manager's capacity to play with studious care a secondary rôle. He impersonates a divine, a tolerant, sweet-natured, nineteenth-century Vicar of Wakefield. He would appear from his frequent references to Whitby to be a benefited clergyman somewhere in the North Riding; but he makes his appearance only in the town-house of a certain Mr. and Mrs. Dennison, and has little to do beyond being a general mediator, and delivering, in season and out of season, to the willing and the unwilling, whether they will hear or whether they will forbear, somewhat diluted versions of the Sermon on the Mount. After the stage-clergyman of Scandinavian origin, who is presented to us as quite the foolish and quite the commonplace person in a company otherwise composed of free-thinking heroes and free-thinking sinners, he is, it is possible, a relief. He is, indeed, a little nearer the truth; and he is endowed by his impersonator with a measure of charm. But he has too little variety—and it may be even too little novelty—to be exceedingly effective. There are occasions in the course of the play on which his words might be spared. Still Mr. Thorne speaks his words persuasively, and makes a picturesque and always sympathetic figure. The Mr. Dennison, whose stage existence has already been made known, is played by Mr. H. B.

Conway. The author has not been kind to him. He is supposed to be a politician of some weight, an agreeable member of society, and a person whose domestic relations are not altogether blameworthy. Of his good qualities, however, he shows us but little. He is oppressed—almost from the moment he is *en scène* to almost the moment that the curtain falls on him finally—with the hideous burden of jealousy. On the slightest provocation, just as readily as on the greatest, he believes the worst things of the pretty blonde lady whose limpid simplicity of character—along with a little reasonable liking for flirtation—he ought to have been the first to understand. This gentleman, as presented by Mr. Conway, is sulky and morose; nor is Mr. Conway wrong in so picturing him. At last, in one act only—in the strong third act—he has an opportunity of arousing our sympathy. Things look bad against his wife, and he is very fond of her. He has his chance, he uses it, and it is over. I have seen Mr. Conway, as I have seen Mr. Thorne, in a part that has fitted him far better. Mr. Dennison's brother, Robert Dennison of the Blues, is played excellently by Mr. Scott Buist. Mr. Buist is both earnest and simple. Mr. D'Orsay represents a certain Lord Sheldon, who is supposed to unite the manner of Mayfair with the morals of the Burlington Arcade. Mr. Blythe is good as a detective whom the Home Office appears to have invested with fuller powers than is usual. He is not shown to be immensely ingenious, but he is shown to be immensely successful. I could wish to see Mr. Frederick Thorne in a part more proportioned to his talent and long experience than that of the commonest type of stage-butler.

The main interest must really rest with the two women—the woman who, having a very innocent secret, is accused of having a guilty one; and the woman who, having been a good nurse and an accomplished thief, a genial companion and a plotter as deep as Vautrin, impersonates her employer to receive a cheque, and is mistaken for Mrs. Dennison on the staircase of a restaurant to which Mrs. Dennison would only with reluctance have repaired. One of these women is quite good, but a very little foolish, since the courage of entire frankness is denied her; the other is not quite good by any means, but there are so many things—poverty and *l'hérédité* too (most popular of excuses)—to make it very difficult for her not to be wicked. The first of these two women is played by Miss Dorr, with quiet, sympathetic power and reticent art—a pleasant personality, one of elegance and refinement, of course greatly aiding the effect. The second is played by Miss Jessie Millward, who has now a robustness of passion and a range of understanding never revealed in the old days at the Lyceum or the Adelphi. A long soliloquy is delivered by her with feeling, as well as with tact. She holds the stage, and everyone wishes the adventuress whom she personates—the famous Diamond Dene herself—well out of her difficulties.

I do not know that one is warranted in prophesying a very long run for Mr. Dam's

drama; but it has interest, it is strongly acted, and so is worth a visit.

FREDERICK WEDMORE.

"MARIAGE BLANC."

Paris: March 23, 1891.

A CURIOUS incident has marked the recent production at the Comédie Française of M. Jules Lemaitre's drama, "Mariage Blanc." The general rehearsal of a new play given specially for the press is generally supposed to be the last and definite version of the author's work; and this is more particularly the case at the Comédie Française, where the strictest attention is paid to every detail, as well as to the *ensemble* of the dramatic performances. It is therefore taken for granted that when Messieurs les Sociétaires invite the critics to a Répétition Générale everything is *à point*, that we can write our articles on the new play as we have seen it on this occasion, and that, should any alterations be made in the text at the last moment, they will not be of vital importance. Now it happened that, in the course of the general rehearsal of "Mariage Blanc," we were most of us struck with the utter repulsiveness of certain scenes; but the drama was so cleverly written and so admirably acted that we expected that both author and actors would risk the game and give the play as it stood. But it appears that immediately after the rehearsal M. Lemaitre and M. Fèvre, who plays the leading part in "Mariage Blanc," set to work to re-cast certain scenes considered "trop scabreux," and, at the same time, gave a dash of whitewash to the hero. The result of these changes was that the drama presented to the public on the occasion of the *première* was very different from the version given at the general rehearsal; in consequence, almost all the accounts and criticisms which appeared in the newspapers on Saturday last were faulty and have misled public opinion with regard to the new piece. This embroglio is explained by M. Lemaitre, this morning, in his "Semaine dramatique" in the *Journal des Débats*. The indignant confusion of the critics is a comedy in itself, and the whole affair will form an amusing episode in the dramatic annals of the current year. Now for the play as it was acted on and after the first night.

Mme. Aubert (Mme. Pierson), a widow, and her two daughters are staying at Mentone in the hope of prolonging the life of Simone (Mlle. Reichenberg), the youngest daughter, who is in the last stage of consumption. Martha (Mlle. Marsy), the eldest daughter by a former marriage, offers a striking contrast; for she is a tall and handsome self-willed girl who has been somewhat neglected in favour of her sister, and at times resents her mother's neglect of her. The three women lead a retired life, entirely devoted to taking care of the invalid. Their only visitor is a good-natured philosopher, Dr. Doliveux (M. Laroche), who, in an evil hour, introduces a wolf into the fold in the person of the Comte de Thière (M. Fèvre), a rich bachelor of forty-five, who, under the outward appearance of a man of the most polished and fascinating manners, conceals the heartlessness of a cynic and a *viveur*, combined with the greatest contempt for mankind in general and for himself in particular. One morning M. de Thière, while strolling past the Auberts' villa, overhears poor little Simone lamenting her sad fate; but it is not so much the fear of approaching death that causes her grief, as the idea that she will have to quit this happy world without having known the bliss of being loved and loving in return; she can never be a wife or a mother, and at these thoughts she bursts into tears. It suddenly occurs to M. de Thière that this is a fine oppor-

tunity for doing a good action, of making himself at once useful and agreeable. So, with the easy fatuity of a Frenchman, he resolves to make love to Simone, win her heart, and even marry her, "for she cannot live more than a month or two, can she, doctor?" he cynically asks Dr. Deliveux, to whom he explains his charitable intentions. He will play the comedy of real love so well that Simone shall enjoy the sweet illusion and die happy. So the heartless Don Juan plays his part and soon wins the heart of Simone, but, need I add, he is, at the same time, caught in his own trap; for by the side of the sweet, artless girl he learns, for the first time, how to love purely and devotedly. So far the pleasure of the spectator has only been marred by a little too much of the false sentimentality dear to French audiences: Simone is really a little too goody-goody, and her innocence is extraordinary. But the third act changes the state of affairs, M. de Thievre has actually proposed been accepted, and the dying girl is now Comtesse de Thievre. Love which is stronger than death has worked a miracle in a few days. Simone basking in the sunshine of happiness is, apparently, much better; she dreams of coming happy days, she smiles at the phantasmagoria of bliss which lies before her, and forgets that she is standing on the brink of the grave. But her sister Martha, who thought that M. de Thievre came to see them for the purpose of paying his addresses to her, is driven almost mad with jealousy when she finds out her mistake. She becomes frantic, and in a most painful scene accuses Simone of having robbed her, first of her mother's affection, then of the heart of the man she loves, and tells her that she hates her beyond expression. Simone, aghast at this revelation, has a relapse, and is carried fainting out of the room. M. de Thievre returns to upbraid Martha for her unjust and cruel conduct; but the latter in passionate tones tells him of all the disappointments she has endured—of her youth and beauty wasting in despair, of the love she feels for him, and, almost in hysterics, falls into his arms. M. de Thievre is at first quite taken aback at this unexpected outburst; gradually, however, the sensualist awakens, he finds that his sister-in-law is "pas banale du tout," and finally promises to meet her that evening. During this scene, Simone has entered the room on tiptoe; she slowly creeps up to her husband's side, and on hearing him say "à ce soir!" to her sister, she sinks on the floor like a wounded bird. The culprits have neither seen nor heard her; but as her husband turns round he stumbles over the corpse of "petite Simone," who, from the altar to the nuptial chamber, and from the nuptial chamber to the grave, has remained as fair and spotless as the orange blossoms of her bridal wreath.

Such is the brief summary of "Mariage Blanc," which has proved neither a success nor a failure. The general tone of the play is artificial and morbid. The character of de Thievre is an attempt to produce on the stage a personification of one of those psychological studies of moral depravity dear to the Stendhalist school of literature and M. Bourget. It is to be regretted that so much talent, *esprit*, and exquisite dialogue should have been wasted on so poor a plot.

CECIL NICHOLSON.

MUSIC.

RECENT CONCERTS.

EVERYTHING comes to him who waits. Mr. Charles E. Stephens wrote a Symphony seventeen years ago, and yet it was only heard for the first time in London last week at the second

Philharmonic Concert. A composer nowadays must work either on the lines fixed by the great masters or enter upon the tempting, though dangerous, path of programme music. Mr. Stephens resolved on the former course, and he has produced a work in which the thematic material is clearly set forth and cleverly developed. The influence of Mozart is felt, especially in the two middle movements (Adagio and Menuetto), but this can scarcely be a subject for reproach; it is surely safer to follow Mozart than Wagner. Mr. Stephens conducted his own Symphony, and must have been pleased with the cordial reception given to him at the close. Mr. Leonard Borwick played Schumann's Introduction and Allegro Appassionato in G (Op. 92) with his accustomed skill, and with more than his accustomed feeling and vigour. His solos were Mendelssohn's Prelude (Op. 104, No. 1) and Chopin's Ballade in G minor. The latter was well rendered, yet with a little too much German sentiment. Mr. Borwick played as encore Chopin's Prelude in B flat minor. Mr. Hollman gave Bruch's "Kol Nidrei" as 'cello solo in his best manner. Mme. Valda sang Mendelssohn's "Infelice" and an air from Rubinstein's "Demon." The latter suited her the better of the two, and enabled her to show to advantage a thoroughly well-trained voice. Mr. Cowen was, as usual, a careful conductor. The concert opened with Berlioz's "Carneval Romain," and closed with Beethoven's "Egmont."

There was an interesting concert given by the students of the Royal Academy of Music at St. James's Hall last Friday week. The "Tantum ergo" and "Offertorium" of Schubert, recently produced at the Bach concert, were effectively rendered by soloists and choir. Mr. Gerald Walenn, a young but promising violinist, and his brother Herbert played with courage and with no small success Brahms's difficult Double Concerto for violin and 'cello. Miss Margaret Ormerod, in the "Jewel" song, and Mr. Ernest Delsart, in Verdi's "Madamina," both deserve honourable mention. Miss Kate Goodson played the Romance and Rondo from Chopin's Concerto in E minor with neat technique and much taste. Dr. A. C. Mackenzie conducted the concert.

A new work of Grieg's or, at any rate, one newly published, was produced for the first time at the Crystal Palace on Saturday. The composer has set to music three scenes from Björnson's drama "Olav Trygvason." In these is depicted the conflict that arose when the Norwegian king attempted to convert his people to Christianity. The action is supposed to take place in an ancient Norse temple towards the end of the tenth century. The scenes deal only with the anger stirred up in the hearts of the sturdy old Northmen by this zealous missionary for the new faith. Hence the element of contrast is wanting. There is a certain rugged power and picturesqueness about the music, and admirers of Grieg will meet with many a characteristic figure and quaint harmony; but when not heard on the stage, the effect produced is certainly unsatisfactory. In the third scene, with its various temple dances, there is evidently as much intended for the eye as for the ear. Grieg himself, in order to avoid monotony, has marked certain cuts and abbreviations for a concert performance of his work; but, curiously enough, Mr. Manns gave the music in full. The solo vocal parts were taken by Mme. Emily Squire and Mr. W. H. Brereton. The former sang fairly, but the part requires a voice of greater power. The lady was far more successful in an air from Mozart's "Titus." The Crystal Palace choir sang well. M. Ysayé, the Belgian violinist, played Wienrawski's Concerto in D, and solos by Bach and Saint-Saëns. His tone

is wonderfully rich and pure, and his technique irreproachable. He obtained a brilliant success. The concert commenced with the "Rienzi" Overture, admirably played by Mr. Manns's orchestra.

The thirty-third season of the Popular Concerts closed on Monday evening. The Brahms Quintet in G (Op. 111) was repeated, and a fresh hearing of the work helps one better to grasp its meaning and appreciate its beauties. The two middle movements are unquestionably above criticism. The opening Allegro improves on acquaintance, but the Finale still appears to us to lack inspiration. The performance, under Herr Joachim's leadership, was exceptionally fine. A "Serenata" for two violoncellos, by Signor Piatti—a melodious composition, and, as may be expected, effectively written for the instruments—was successfully performed by the composer and Mr. Whitehouse. Herr Joachim and Miss Fanny Davies played four of the Brahms-Joachim Hungarian Dances, and the audience, as a last favour, persuaded them to add two more. Miss L. Lehmann was the vocalist, and her own graceful song, "Printemps d'Avril," was encored. The concert concluded with Schumann's Quintet, with Miss Fanny Davies at the pianoforte.

The season of Popular Concerts just concluded is noticeable for the Brahms novelties introduced. They include the Sonata in C (Op. 1), the Quintet in G (Op. 3), and the new version of the B minor pianoforte Trio (Op. 8). An improvement in the choice of pianoforte solos deserves mention. A few seasons back it was the rule to give fugitive pieces. There has been an improvement. Last season eleven programmes contained pianoforte Sonatas, but this year fifteen, and indeed one might almost say sixteen, for Schumann's Op. 17 might almost be considered one. We think Mr. Chappell ought to set his face against transcriptions of Bach organ fugues. Last Saturday one arranged by Liszt was given. Bach has written very many for the pianoforte, of which all have not yet been heard at these concerts.

J. S. SHEDLOCK.

MUSIC NOTES.

THE Handel Triennial Festival will be held in June at the Crystal Palace. The "Messiah" and "Israel" will be given on the Monday and Friday (June 22 and 26). The programme of the Selection (June 24) will include, as novelties, four numbers from the 95th Psalm, written by Handel at Cannons, one being a sonata for orchestra; the Overtures to "Semele" and "Giustino"; a Minuet for strings from "Berenice"; and a Bourrée from the "Water Music." The principal vocalists engaged are Mme. Albani, Miss Macintyre, Mme. Nordica, Mme. Belle Cole, and Messrs. Lloyd and Santley. Mr. Best will be organist, and Mr. Manns, as usual, conductor. The chorus and orchestra will number 4000 performers.

LITERATURE.

Letters and Correspondence of John Henry Newman during his Life in the English Church. With a brief Autobiography. Edited by Anne Mozley. In 2 vols. (Longmans.)

(Second Notice.)

WE find in these volumes many passages in which mention is made of Dr. Arnold of Rugby. By putting these together we shall be able to form a tolerably correct idea of his relations with the future Cardinal; and it is pleasing to see that, though they certainly did anathematise each other's theological opinions in language which to an ordinary layman appears exaggerated, and which we have no intention of reproducing here, yet each (with one apparent exception) was willing to acknowledge the other's real excellences, and that the personal hostility between them was less than bitter is commonly supposed. In order to secure impartiality, it is better that this sketch should be undertaken by one of the very few persons now living (probably only two or three) who had the privilege of being personally acquainted with both of these eminent men.

Arnold left Oxford and settled at Laleham in 1819, and Newman was not elected fellow of Oriel till 1822, so that they were not contemporaries at the university. The first time they met was in 1828, when Arnold, who had just been elected head master of Rugby, wished to take his B.D. degree, and Newman disputed with him in the Divinity School, this public disputation being in those days a necessary preliminary step. Probably this matter was arranged by the provost of Oriel (Hawkins), who presided at the disputation, March 27, and invited Newman to meet Arnold at dinner the next day (vol. i., pp. 180, 182).

In 1831 we find Bonamy Price, then a junior master at Rugby, consulting Newman (with Arnold's knowledge and sanction) about the qualifications of an Oriel fellow to succeed one of the Rugby masters who had sent in his resignation (i. 247).

Newman was busily employed in tuition at Oriel and in preaching at St. Mary's; and he gave up his tutorship because his endeavours to obtain more moral and religious influence over his pupils were thwarted by the provost. Arnold was continuing his efforts to Christianise a great public school. He had published two volumes of Sermons, the first addressed to ordinary congregations, the second to his pupils in the school chapel. The former volume Newman lent to Dr. Ogilvie,

"who returned it with an expression of much

satisfaction and agreeable surprise. Some sermons," continues Newman (i. 220), "of course he objected to; but the impression was decidedly favourable. I have read some more of them; one cannot but agree with Ogilvie in opinion."

To the second volume of his Sermons Arnold appended an essay on "The right interpretation and understanding of the Scriptures," which, "according to his own belief, exposed him to more misunderstanding than any other of his writings" (Stanley's *Life*, chap. vi.). He had also been striving (but without success) to introduce a more religious spirit into the *Penny Magazine*, and the other popular works issued by the Useful Knowledge Society.

While these two good men were thus engaged most zealously in serving God, each in his own sphere and method, occurred a painful incident, which is thus noticed in a letter, dated October 4, 1833, from Dean Stanley, then a boy at Rugby, nearly at the head of the school, to an undergraduate friend at Oxford:

"I have got into another scrape from telling second-hand stories (though you need not mention it to anyone), viz., what I think I told you about Newman's denying Arnold to be a Christian—which got to Price, and from him to Arnold—who was exceedingly hurt about it, and wished to write to Newman directly. He is, however, to write first (or has already written) to my original authority, Julius Hare,* and if the case is so, will probably write to Newman about it."

This story was at first supposed to be an exaggeration, but it turned out to be almost literally true. Newman's own account of the matter is as follows:

"At that time I was specially annoyed with Dr. Arnold, though it did not last into later years. Some one, I think, asked in conversation at Rome, whether a certain interpretation of Scripture was Christian? It was answered that Dr. Arnold took it; I interposed, 'But is he a Christian?' The subject went out of my head at once; when afterwards I was taxed with it, I could say no more in explanation than (what I believe was the fact) that I must have had in mind some free views of Dr. Arnold about the Old Testament. I thought I must have meant 'Arnold answers for that interpretation, but who is to answer for Arnold?'" (*Apologia pro Vita sua*, p. 33, quoted in *Letters*, vol. ii. p. 47.)

Neither Arnold's letter nor Newman's answer has been preserved. Newman says that Arnold "taxed him with it sharply" (vol. ii. p. 402), which is not altogether unlikely or inexcusable, and may remind us of Newman's own "sharp" answers to Mr. Kingsley and Lord Malmesbury (*Daily News*, Oct. 13 and 28, 1884), though neither of them went so far as to refuse him the name of a Christian. If Arnold's letter to Grant (mentioned vol. i. p. 417) refers to this matter, "he accused Newman among others of identifying high excellence with certain peculiarities of his own, i.e. preaching himself"; but this is a very much less serious charge than the denying his Christianity. We can gather something of the style of

* Afterwards Archdeacon Hare, brother of Augustus W. Hare, who was Stanley's uncle, and who may have heard the story at Rome, where he died, 1834.

Newman's answer from a letter of Hurrell Froude's (vol. i. p. 492), in which he says:—

"First, let me congratulate you on your letter of yesterday. You have done it in style. Polonius would give you most credit for the word 'respond.' Which, of course, has its praise 'is capital.'"

When we bear in mind Froude's especial dislike of Arnold, it must be confessed that this extract is anything but pleasant; nor is our uncomfortable feeling lessened by finding Newman nine years later, in September 1842, just after Arnold's death, writing, "which [viz. the speech at Rome?] I really cannot reproach myself with" (vol. ii. p. 402).

They never met again nor had any direct communication with each other till about four months before Arnold's death, when he went to Oxford to deliver his lectures as professor of modern history, and passed there three weeks of great enjoyment. In a letter written in prospect of his residence in Oxford, Arnold says:—

"In this way [viz. by personal contact] I hope that my opinion of many, very many, of the men who hold Newman's views may become greatly more favourable than it is now, because I shall see their better parts as well as their bad ones; and in the same way I trust that many of them will learn to think more favourably of me." (Stanley's *Life of Arnold*, vol. ii., chap. x., p. 281).

Of this meeting Newman gives the following amusing and interesting account in a letter to his sister, Mrs. J. Mozley, October 31, 1844 (vol. ii. p. 440).

"The second of February, as you know, is our great Gaudy of the year. The provost dines in hall at the top of the table; and in the common-room, to which the party adjourn, sits at the right-hand of the dean, as being the guest of the fellows. Eden was dean, and was taken ill, I think, when the news came that Arnold was coming with the provost, and I, being senior fellow, must take the dean's place. My first feeling was to shirk. 'It is not my place,' I said, 'to take the office upon me. It is nothing to me. I am not bound to entertain Arnold,' &c. However, I thought it would be cowardly, so after all I went, knowing that both in hall and common-room the trio at the top of the table would be provost, Arnold, and I, and that in the common-room I should sit at the top between them as the entertainer.

"The provost came into hall with Arnold and Baden Powell (who made a fourth), I being already in my place at table, waiting for them. The provost came up in a brisk, smart way, as if to cut through an awkward beginning, and said quickly, 'Arnold, I don't think you know Newman;' on which Arnold and I bowed, and I spoke. I was most absolutely cool, or rather calm and unconcerned, all through the meeting, from beginning to end. . . . So, when the provost said, 'I don't think, Arnold, you know Newman,' I was sly enough to say, very gently and clearly, that I had before then had the pleasure of meeting Dr. Arnold, for I had disputed with him in the Divinity School before his B.D. degree, when he was appointed to Rugby. At which Baden-Powell laughed, and Arnold seemed a little awkward, and said, 'Oh, I thought it had been Pusey.' You must know that in the said disputation I was doing him a favour, for he could get no one to go in with him when I volunteered, though in the event it turned to my advantage, for I had not to dispute before Hampden when I actually took my degree [in 1836].

"We then sat down to table, and I thought of all the matters possible which it was safe to talk on. I recollected he had travelled with William Churton, and that made one topic. Others equally felicitous I forget.

"In the common-room I had to take a still more prominent part, and the contrast was very marked between Arnold and the provost—the provost so dry and unbending, and seeming to shrink from whatever I said, and Arnold, who was natural and easy, at least to all appearance. I was told afterwards that on one occasion—made some irreverent remark, and people were amused to see how both Arnold and myself in different ways, as far as manner was concerned, retired from it. At last the provost and Arnold rose up to go, and I held out my hand, which he took, and we parted.

"I never saw him again; he died the June [June 12, 1842] after."

In this extract we have omitted several sentences of minute self-inspection as to his being "absolutely calm and unconcerned all through the meeting." At the end Newman says, "For myself, I don't think I was desirous of pleasing him or not" (p. 442); but why he should take such pains to impress this feeling upon his sister (to whom the letter was written) is not very plain. Arnold also mentioned this meeting very briefly in his Journal, thus: "Febr. 2, Wedn. Dined in Hall at Oriol, and met Newman. Evening at Hawkins's" (Stanley's *Life*, chap. x., vol. ii., p. 286). If he had written another sentence, we might imagine it to have been something like this: "Tried to make myself pleasant, and I have no doubt Newman did the same; so all went off very well." They were probably mutually pleased with each other, and perhaps this feeling was a little surprise to both. Newman himself was ready to subscribe to the Arnold Memorial, thus differing from Keble and Pusey (vol. ii., pp. 401, 2) and says in a letter to Keble (p. 434), "It is very pleasant to think that his [Arnold's] work has been so good a one—the reformation of public schools. This seems to have been blessed, and will survive him." Other passages to the same effect, as intimating an appreciation of Arnold's influence for good, may be found in these volumes, expressed in more or less laudatory terms. Nor was Arnold latterly behind him in this generous feeling, for at the end of the Introduction to the fourth volume of his Sermons, after arguing strenuously against the Tractarian movement (1841), he adds:

"Finally, in naming Mr. Newman as the chief author of the system which I have been considering, I have in no degree wished to make the question personal; but . . . as I have never had any personal acquaintance with him, I could mention his name with no shock to any private feelings either in him or in myself. But I have spoken of him simply as the maintainer of certain doctrines, not as maintaining them in any particular manner, far less as actuated by any particular motives. . . . On the other hand, I will not be tempted to confound the authors of the system with the system itself; for I . . . nothing doubt that there are many points in Mr. Newman in which I might learn truth from his teaching, and should be glad if I could come near him in his practice."

At the same time there is no doubt that Newman's unfortunate words at Rome, and his quasi-justification of them when asked for an explanation, did deeply wound Arnold's

feelings, and are enough to account for his notion (mentioned by Newman himself, vol. ii. p. 442) that he (Newman) was "particularly hostile to him." It must also be borne in mind that we have only Newman's account of the matter, and do not know what might have been said on Arnold's side.

The controversies of good and holy men have always, from the days of Jerome downwards, been painful reading; but in the case of Arnold and Newman (as in many others) may we not believe, that, as they are now removed from misunderstanding and strife, so, even while on earth, they were in reality nearer to each other in all matters of vital importance than either of them would have been willing to allow?

W. A. GREENHILL.

Modern Customs and Ancient Laws of Russia.
The Ilchester Lectures for 1889-90. By Maxime Kovalevsky, ex-Professor of Jurisprudence in the University of Moscow. (David Nutt.)

AMONG the lectures which have been delivered upon the Ilchester foundation in the university of Oxford, those of Prof. Kovalevsky, which are now published, must always occupy an honourable place. The subjects of which they treat are by no means familiar to English readers, and they are subjects upon which Prof. Kovalevsky is pre-eminently fitted to speak. He is already known as the author of a work on the Communal Possession of Land (*Obstchinnoye Zemeladenie*, Moscow, 1879), and, more recently, Law and Custom in the Caucasus (*Zakon i Obichai na Kavkazé*, Moscow, 1890), to say nothing of other writings. The lectures are dedicated with peculiar appropriateness to the memory of Sir Henry Maine, whose name is held in reverence throughout the continent, and especially, we may add, in Russia, as shown by the tribute to his memory from Prof. Sigel, of Warsaw.

It is only on the village community and the serf question that the ordinary English reader can be said to have had any special information up to the present time, and for this he is indebted to the excellent work of Sir Mackenzie Wallace. Prof. Kovalevsky devotes his first chapter to the old marriage laws of the Slavs, the great freedom enjoyed by women in the earliest times being a prominent characteristic of their institutions. This is borne out by many passages in the *bilini*; and even so late as the latter part of the seventeenth century it was to be found among the Cossacks, as Beauplan, the French engineer, tells us in his interesting book. He says: "In the Ukraine, contrary to the custom of all other nations, the husbands do not choose their wives, but are themselves chosen by their future consorts." But the position of women underwent a great deterioration as time advanced, to judge from the *Domostroi* of Sylvester—if it be really his—of the sixteenth century, and also from what is told us by Kotoshikhin, writing at the close of the seventeenth. Herberstein gives us the story of the German Jordan settled in Russia, whose wife complained that he did not love her, because he never beat her.

Prof. Kovalevsky's second lecture treats of the house-communities, an important institution among the Slavs, which has also been the subject of some interesting articles by Mr. Geshov in the *Peridichesko Spisanie* of Sofia. The third lecture is devoted to a consideration of the Russian *mir*, or village community, which has of late been much discussed among us, especially since Sir Mackenzie Wallace wrote about it. Prof. Kovalevsky speaks of it as on the decline, but more hopeful views are taken by the writer in Reclus' *Géographie Universelle*. It is evidently not regarded with favour by the Ilchester lecturer, who criticises it as follows:—

"It encourages, no doubt to a much greater degree than the system of private holdings, the feeling of mutual interdependence and the inclination to mutual help, without which no society can exist. But it is a manifest error to speak of this system as a serious barrier to pauperism. For, although the commoner is prevented by law from alienating his share, he may, and often does, dispose of it in favour of some rich neighbour, who in time of want has offered to pay the amount of the commoner's taxes on condition of having the use of his land. If the Slavophiles were right in their opinion that, thanks to the system of the *mir*, pauperism was impossible in Russia, we should certainly not hear daily of the so-called Koulaks eating up the *mir*, or, what comes to the same thing, sacrificing the interests of the community to their own. The economic disadvantages which the system presents are so evident that I need scarcely insist upon them" (p. 114).

The chapters on the old Russian folk-motes and parliaments are of the highest interest. The *veches*, or public assemblies, which existed at Novgorod and Pskov and became celebrated in Russian history, have been shown by Prof. Sergueievich and others to have existed in various cities throughout the country. We thus find the Russians in their earlier period in much about the same state of political development as other European countries. The centralising measures of Ivan III. and Ivan IV. did much to destroy this condition of things, and upon the ruin was erected the great autocracy. It is curious to find that this political change was aided a great deal by the Tatar subjugation of the country. The Tsars were not obliged to call a *Sobor* for the discussion of national questions, for their political action depended upon their Mongolian conquerors. We remember that the Spanish provinces lost their privileges because, when the sovereigns had the command of the vast American mines, they had no need to summon the Cortes to raise money. The *Sobor*, or parliament of Russia, was never called after 1698. Something might have been done for it by Peter the Great; but Prof. Kovalevsky remarks with truth that when the reforming Tsar of Russia went on his travels he found constitutions and popular governments at a low ebb throughout Europe. There was little to stimulate him in the path of parliamentary government. Perhaps, however, he might have learned something in England; and William III., when for hours he chatted in Dutch with the clever stranger, might have taught him something. The *Sobor*, therefore, like the summoning of the *tiers état* in France, remained in abeyance throughout

the eighteenth century. Attempts were made to revive it in the reign of Alexander I., a benevolent sovereign; and he was aided by his minister Speranski, whose name is still remembered with gratitude throughout Russia. These wise plans, however, were not carried out; partly, no doubt, owing to the terror caused by the conspiracies which were rife throughout Russia in the latter days of that monarch. The reign of Nicholas was not favourable to reform. Alexander II. had determined to revive the *Sobor*; and, to quote the words of Prof. Kovalevsky, "the transformation of the mediæval state into one that answered to the requirements of modern civilisation would have been completed, if the liberator of millions had not been slaughtered on the very day on which he had undertaken to give a constitution to his people"! We thus see that the murder of Alexander was not merely a great crime, but a great blunder.

Prof. Kovalevsky gives us a clear account of the condition of the serfs from their original free condition, often as *polovniki* or *métayers* down to the days of Boris Godunov, who forbade them to leave their masters on St. George's Day (November 26), the time which had been originally fixed for them to do so, so as to interfere as little as possible with agricultural arrangements. This enactment was made completely binding in 1649 by a clause in the *Ulozhenie* or great codification of the laws made in the reign of the Tsar Alexis. Their condition gradually grew worse, though Alexander I. began its amelioration and Nicholas was always eager for it, but was apprehensive of its economic consequences. This great measure, as all know, was carried by Alexander II., who firmly held to the doctrine that the serfs, when emancipated, should be provided with land and not set free without it, as many of the selfish nobles were anxious to bring about. Prof. Kovalevsky says:

"It will be to the eternal glory of Alexander to have answered the requests of the Lithuanian nobility by a decree in which, while allowing the establishment of local committees for the elaboration of measures which might achieve the emancipation in view, he plainly declared that the liberated serfs ought to be secured at least in the possession of their homesteads and of the land belonging to these homesteads (*usadbnia zemlia*)."

Prof. Kovalevsky throws a flood of light upon these matters. He is familiar with all the latest works in Russian literature which treat of them, to mention only such books as Kluchevski's *Boyarshaya Duma* (Council of the Boyars) and that of Sergueievich's *Russkiya Yuridicheska Drernosti* (Russian Legal Antiquities). It is about these matters that sensible people in England want to learn something, and not to be regaled for the thousandth time with silly anecdotes about Catherine II., Paul, and Nicholas, most of which are either untrue or grossly exaggerated, and are only circulated with the view of holding up Russia and her institutions to contempt.

We feel disposed to make some remarks on a few points. When Strahlenberg is quoted on the subject of the coronation oath of Michael Romanov, which, if we remember rightly, one of the editors of Kotshikhin

tries to explain away, it is to be regretted that mention was not made of the English translation (London, 1738) of that book, which would be more serviceable to our countrymen than the somewhat uncouth German of the original. Prof. Kovalevsky says nothing of the attempt to obtain from the Empress Anne some concessions in the way of constitutional government when she was invited to ascend the throne. It is invidious to point out slips in this most interesting and valuable book; but we must call attention to the error by which Sophia (originally Zoe) Palaeologa is styled the sister of the last Byzantine Emperor, whereas she was really the niece, being the daughter of his brother Thomas, who took up his residence at Rome after the fall of Constantinople in 1453. This fact ought to have been more than ever stereotyped in the memory by the interesting work of Father Pierling, who, from a careful study of the Italian archives, has told us of the negotiations for the marriage and the journey of the bride to her new home. We are also grieved to see our old friend Horsey (Sir Jerome), the writer of the graphic and most ungrammatical diary, metamorphosed into Hoarsay! Some of the other names also are a little *estropiés*, as the French would say. These, however, are but trifling slips, in no way interfering with the value of this learned and suggestive work.

W. R. MORFILL.

The Light that Failed. By Rudyard Kipling. (Macmillan.)

"'GOOD Lord! who can account for the fathomless folly of the public?' 'They're a remarkably sensible people.' 'They're subject to fits, if that's what you mean; and you happen to be the object of the latest fit among those who are interested in what they call art. Just now you're a fashion, a phenomenon, or whatever you please.'"

This is part of a conversation between Dick Heldar, a young artist whose work has taken the public, and his best friend Torpenhow. Mr. Kipling will not think me discourteous, if I confess that these wise words bear for me a second application to himself. Thanks to the incessant criticism, panegyric, detraction, and talk, inflicted upon his work in the last year, one feels an unreasoning desire, either to defer the study of Mr. Kipling till the hubbub die down, or to assume an indifference towards him, in the name of sober sense. Either course would be foolish, and neither is possible. Whatever else be true of Mr. Kipling, it is the first truth about him, that he has power: not a clever trick, nor an happy knack, nor a flashy style, but real intrinsic power. The reader of contemporary books, driven mad by the distracting affectations, the contemptible pettiness, of so much modern work, feels his whole heart go out towards a writer with mind and muscle in him, not only nerves and sentiment. To get into the grip of a new writer; not to saunter arm in arm with him, listening to his tedious and familiar elegancies: that is what we want. Style, the perfection of workmanship, we cannot do without that; but still less can we endure the dexterous

and polished imitation of that. It is easy enough to find fault with Mr. Kipling, to deplore certain technical failures, to cry out against his lack of grace; but perfect workmanship is the last good gift, and granted only to the faithful and the laborious in literature. A writer whose first books have flesh and blood, mind and meaning in them, has the right to hope for all things. But the public is less kind than uncritical, when it admires "achieved perfection" in writings that have achieved much else that is good, but not yet that.

The present volume gives us the story "as it was originally conceived by the writer," not as it appeared in *Lippincott's Magazine*. There, as most of us know, the story has a pleasant and conventional close, with a marriage of the consolatory sort, familiar to English readers. It is difficult to think well of Mr. Kipling in this matter; such a conclusion was impossible, upon the stated premises. But the book in its true form is finely and desperately logical. Briefly expressed, this is the idea:—A boy and a girl, brought up together not too happily, part as children, when the boy's sentiment of mere companionship begins to deepen into love, of a childish sort indeed, yet perfectly real. The boy leads a rough adventurous life about the world, and after the most varied experiences, wins a sudden and perhaps precarious success in art. His life has been that of an Elizabethan adventurer, in the altered manner of this century: a life of the reckless sort, wild and free, with all the virtues of *camaraderie*, and with few of the more decorous moral excellences. Settled, more or less, in London, he meets the girl again, whom he has never forgotten; she, too, is an artist, full of ambition, eager for recognition, and singularly selfish. She refuses to think of love and marriage; and he devotes himself, half in hope, half in despair, to her service in art. From the effect of an early wound he grows blind; and the culminating point of interest is reached when the question presents itself to the girl, whom he has loved and served, whether now, in mere compassion and self-respect, she will marry him, and so pay back his devotion by an act of willing self-denial. In sheer selfishness, perfectly natural and immensely strong, she prefers her freedom and her foolish dreams of fame. He cannot endure the idle agony of his life, cut off from all the best things in the world; and he makes his way out to the Soudan, the old scene of his early life, and is there killed, dying in his friend's arms.

The story has a double interest: the interest of character in Maisie the heroine, and the interest of dramatic life and action in Dick the hero and in his friends. Hero and heroine are not the right words, but let that pass. Now, the first thought that occurs to one well acquainted with Mr. Kipling's work, upon reading this, his longest book, is of this sort: why is the interest of character so slight and the interest of action and of life so strong? Scenes of superb vigour and animation, passages of wonderful force and movement, these have struck us and taken hold upon us; but the characters, emotions, the mind and soul, of Maisie and of Dick have not

been felt, and do not remain with us. We remember how they looked, talked, bore themselves in various situations; we still hear their characteristic phrases, we still see their attitudes and motions; but themselves, their inner reality, for all the power and mind of the book, are strange to us. Perhaps this may be the reason. Mr. Kipling, before all things, is an observer, not a thinker. Certainly no one can observe life without colouring or shaping his observations by his thoughts: each has his own way of observing life, according to his own habit and cast of mind. But it is not so much the reflections upon life, as the reflections of life, that Mr. Kipling values; and he leaves the bare facts, in all their intensity and vividness, to create the impression which he desires us to receive. There must be no waste of words, no flow of sentiment, no dwelling upon motives: take the facts, he seems to say, as lifelike as I can show them, and make what you can of them. This may be called cynicism, but it need not be that. Without question it is an effective literary method; but, and here is the difficulty, it is a method of very limited application. It will excellently serve for a brilliant sketch of certain scenes, where the men and women act and speak in character, with all the appropriate peculiarities of manner and speech. A third-class smoking-carriage full of soldiers, labourers, and city clerks, each with his personal or professional dialect and style, and with that curious force and energy which belong to the less cultured, Mr. Kipling's manner serves perfectly to give us that. But a drawing-room full of more sophisticated and of less intelligible persons, all possessing the complicated emotions and using the subtle language of a life externally refined: what will his robust method make of that? Here we turn to Mr. Henry James. He will in twenty pages bring home to us the passion or the intellect at work in that room, perhaps during one hour only; yet each word will be essential and indispensable. If Mr. James try his hand upon coarser material, he fails at once: witness many pages of the *Princess Casamassima*. Hitherto, Mr. Kipling has been successful when dealing with life of a certain vehement intensity, not only in the emotions of it, but in the outward manner: his soldiers, with all their heartiness, or roughness, or swagger, or strength, men "of strange oaths," full of experience, yet children after all in many things; these are admirable. Or his natives of India, whose circumstances, sordid or picturesque, dignified or pathetic, are felt to be impressive; these he can present to us in perfection. But in whatever he handles well, there must be salient points rather than delicate shades. "One crowded hour of glorious life," splendid and intoxicating, he can render into words of marvellous intensity; some scene of touching pitifulness, quite simple and human, he can draw with touches absolutely true and right. He is master of human nature in the rough, in its primitive or unconventional manifestations. His rapid sketches, carefully as they are designed, give an impression rather of an immense capacity of

eye than of a fineness of sympathy and understanding. His work of this "coloured and figured" sort is unrivalled, and stands alone; no one has done anything quite like it. But Mr. Kipling is, or seems to be, so fascinated by these lively effects, that he wishes to treat everything in the same way, which is irritating. He appears almost to despise whatever is not vivid and impressive; to look at everything from the standpoint of a man who knows camps and barracks, wild countries and native quarters. He attempts to play Othello to his ignorant reader's Desdemona, in a manner almost ludicrous. A writer may be intimate with Valparaíso and Zanzibar, without being superior to the reader, who knows only Bloomsbury and Kensington, or Oxford and Manchester. It is impossible to take English life of all kinds by storm, for literary purposes, with the methods applicable to military stations in India. And so, whilst in this book, the scenes in the Soudan, and the riotous humours of special correspondents, are convincing and true to the inexperienced reader, there is a great deal which rings false. Torpenhow's warning comes into our mind, "take care, Dick: remember, this isn't the Soudan." When Mr. Kipling is concerned with Maisie's character, and the less obvious emotions of life, we are constantly thinking, take care: remember, this isn't an Irish private. One striking fact illustrates this comparative incapacity for treating delicate or sophisticated sentiments: we cannot remember the phrases used. Professional terms, technical slang, all varieties of masculine dialect and expression, are easily remembered by Mr. Kipling's readers: everything forcible and boisterous. But of Dick's conversation with Maisie, of the sentiment and psychological description, we can quote not one word. Take away from Mr. Kipling his salient points and lively effects, and then his style becomes merely commonplace. And even in his best passages, the strained expression, the unrelaxed determination to be vigorous, grows wearisome. Contrast with Mr. Kipling the enchanting style of Pierre Loti: that strangely ironical and gentle style, so caressing and unforgettable. For *Les trois Dames de la Kasbah*, we would give many a Plain Tale from the Hills. And, ultimately, Mr. Kipling's incessant vigilance, lest he fall into the hackneyed and the tame, produces an effect of brilliant vulgarity: an effect wholly unjust to Mr. Kipling, yet an inevitable result of his method, when carried to excess. Surely, one protests, we do not want special correspondence, even composed with genius.

Apart from this mannerism, Mr. Kipling's work has innumerable good qualities. Restraint, a dislike of the superfluous, how rare is that just now! To take one small instance: Mr. Kipling makes Dick quote Emerson and Marvell, but he does not mention them by name. In actual life, we do not mention the authors of our quotations: we quote what we suppose familiar to our companions. But in books there seems to come upon the writer a desire to exhibit his reading: he mentions Emerson and Marvell. It is an infinitely small matter, but it is precisely characteristic of

Mr. Kipling. Directness, also; only Mr. Meredith, Mr. Hardy, and Mr. Stevenson, to name three very varied writers, can so give us the absolutely right and infallible phrase. Mr. Kipling, with "his eye on the object," is astounding; with no accumulation of detail, no tiresome minuteness, he brings before us the very reality of life and of character, so far as character can be shown in sketches of talk and action. For there are these limitations to Mr. Kipling's art; within them I recognise with gratitude and admiration a fine writer. But, outside them, I seem to see, if I may make a vigorous quotation in Mr. Kipling's manner, "another good man gone wrong." Let us hope for the best, and enjoy what is already in so great a measure so excellent.

LIONEL JOHNSON.

Historic Oddities. Second Series. By S. Baring-Gould. (Methuen.)

MR. BARING-GOULD can hardly escape the charge of book-making, however original his work in fiction may be, so far as concerns his *Historic Oddities*, of which he has now issued the second series. His procedure largely consists in unearthing curious episodes in history, and paraphrasing the original and often forgotten authorities; but there is no attempt to put the episodes in their proper perspective or to criticise their relations to other events.

This method is conspicuous in Mr. Baring-Gould's treatment of the Anabaptist outbreak in Munster, which occupies nearly half the present volume. He confines himself to retelling the story, and a gruesome one it is, of the Anabaptist Saturnalia as narrated by Kerssenbroeck, who, as a young man, was an eye-witness of the scenes he described. Yet Kerssenbroeck, though he has no pretensions to be more than a chronicler, incidentally throws considerable light on the causes which gave the movement in Munster such unenviable pre-eminence. The so-called Anabaptist movement was, indeed, the result of the extreme development of the Lutheran doctrines, and as such was viewed with peculiar reprobation by the Lutherans themselves, while it was connected in the past with the heresies of the Waldenses and Albigenses. It was in its inception an attempt to establish an ideal Christian commonwealth, with complete equality and community of goods. Such an attempt was naturally welcome to those who resented the feudal and industrial oppression of the days; and in Munster and other towns where Anabaptism took root, a strong repugnance existed among an active-minded population of artisans against the burden of religious houses. Kerssenbroeck incidentally tells us that, even before the Anabaptist doctrines had developed themselves, the guilds in Munster had clamoured against the industrial occupations carried on in the religious houses, who undersold the ordinary artisans in the market. The destruction of looms, &c., in the religious houses was one of the first acts of the new sect, and enabled it to secure control, first of the guilds, and then through the guilds of the entire organisation of the town.

It is equally significant that the Prince Bishop at first connived in this action, from a desire to break up the Catholic establishments and convert the bishopric, as in many other instances in Germany, into a secular principality for his family. But the Prince Bishop soon found he had unchained a tiger. The irresolute policy adopted towards the Anabaptists only emboldened them; and their success attracted daring and fanatical spirits from the Low Countries, who found themselves hopelessly coerced in their native towns by the iron despotism of Spain. It was from these recruits that the real leader of the outbreak was drawn—a tailor called Bockelson, or, as he is generally known from his native place, John of Leyden. But the story of the Anabaptist domination in the fatal city may be left to Mr. Baring-Gould, or rather to Kerksenbroeck. The narrative is a ghastly one, and it is sufficient to notice that the movement ran through all the phases of religious and moral anarchy until its extinction in blood. The visions by which John of Leyden maintained his authority over the Anabaptists, the cruelties by which he enforced his authority, the despotism which his adherents and the believers in the new programme of equality and paternity allowed their king, his assumption of regal titles and extravagance, and the inevitable development of religious into sexual licence—all contribute a melancholy page to history and fixed a lasting stigma on the Reformation.

Mr. Baring-Gould devotes another essay to describing the part which the fanaticism of the Patarines contributed in enabling the Vatican to carry out Gregory the Great's momentous policy of enforcing celibacy on the priests in Milan, where the married clergy cited the example of St. Ambrosius on their side with peculiar force. The Patarine mob, which held doctrines that were possibly ultimately derived from the Gnostic heretics, were certainly enrolled on the side of the Vatican, and afford one of the first instances, but by no means the last, where popular fanaticism has been used by the Church to further an important measure. But the success of one of the cruel struggles which necessarily attended Hildebrand's great reform was as much, if not more, due to the local jealousies and episcopal factions than to the fanaticism of the sectaries, who are credited with having given a name to a quarter of "fair Milan."

Turning to more modern history, Mr. Baring-Gould gives at some length an account of the murder of Father Thomas in 1840, at Damascus, a murder which gave rise to the most general outburst of feeling against the Jews that Europe has witnessed in this century. Such an incident leads by easy transition to a catalogue of the various charges brought in the Dark Ages against the Jews. The topic would seem congenial to Mr. Baring-Gould. He loves, at any rate in this volume, to linger among the unclean shades of religious mania, self-deception, and frenzy, and to dwell upon diseased imaginings. He exhumes for a nineteenth-century episode, under the title of a Swiss Passion play, a case of religious mania ending in self-immolation and a parody of the crucifixion, which occurred not

far from the tourist-haunted Falls of Schaffhausen. Mr. Baring-Gould appears to regard this horror as a natural result of religious frenzy among the Swiss, and suggests that the recollection of it may have influenced the Swiss Government in excluding the Salvation Army from the Cantons. But such horrors belong to no age and to no country, though they may at times break forth in epidemics; and perhaps they are better buried in oblivion than dragged up into the light.

C. E. DAWKINS.

NEW NOVELS.

Stephen Ellicott's Daughter. By Mrs. J. H. Needell. In 3 vols. (Frederick Warne.)

He Fell among Thieves. By D. Christie Murray and Henry Herman. In 2 vols. (Macmillan.)

A Bitter Birthright. By Dora Russell. In 3 vols. (Hurst & Blackett.)

That Affair. By Annie Thomas (Mrs. Pender Cudlip.) In 3 vols. (White.)

The Anglomaniacs. (Cassell.)

Paul Creighton. By Gertrude Carr Davison. (Digby & Long.)

READERS of *Julian Karlake's Secret* and *The Story of Philip Methuen* do not need to be told that Mrs. Needell has done good work before now; but it may be doubted whether she has done anything that will serve to prepare them for a novel exhibiting such a combination of vigour and beauty as is to be found in *Stephen Ellicott's Daughter*. Indeed, the immediate impression made by the book is so deep and sharp that the critic who has to move from the chair in which he reads to the chair in which he writes, and who cannot improvise a consciousness of aloofness from the object of his criticism, must needs feel the necessity of holding himself well in hand, lest in the record of this immediate experience he should do the injustice always done by effusiveness of indiscriminating eulogy. There are, indeed, certain apparent lapses from perfect imaginative realisation, which strike the reader more forcibly on a first perusal than they might strike him on a second. It seems hardly possible that the self-absorbed, morose, and repellent Stephen Ellicott—to whom we are introduced in the first chapter—should develop into the kindly, genial, sympathetic old man whom we learn to know later on; and one feels somehow that, in the story of the shameful career of Lancelot Henderson, there is a "similar apparent breach of imaginative continuity." Mrs. Needell does not exaggerate his possibilities of baseness—his is one of the cases in which such exaggeration would be almost impossible; but it would seem as if her contempt for the miserable hound had tempted her into giving that baseness a somewhat unnatural manifestation. Such a man would have met the prospect of exposure, not with hard, outspoken defiance, but with coaxing, wheedling sophistry—the natural weapons of his tribe; and would not have resorted to the coarser implements of warfare until a time came when nothing

else would serve his turn. If, however, these are defects, they are finely atoned for. Anthony Glynne and Hester Ellicott are a hero and heroine who, though cast in an ideal mould, are full of flesh and blood humanity; while Winifred Henderson, with her indomitable pride, her keen sense of honour, her outward crust of cynical coldness, and her inner fire of passion, is a masterly study. It is hardly too much to say that Mrs. Needell's treatment of the relations between Anthony and Winifred has the touch of genius.

The experiences of the man upon the Jericho road who fell among thieves are to most of us not quite unfamiliar; but Harry Wynne, whose adventures are chronicled by Mr. Christie Murray and Mr. Henry Herman, was an exceptionally unlucky young dog. Indeed, had another title been wanted for the record of his misfortunes, it might have been found in the proverbial phrase "Out of the frying-pan into the fire." Captain Heaton, the gambling club proprietor, Mr. Herbert Whale, professional card-player and amateur money-lender, and their precious ally, Mr. Butterfield, the fashionable jeweller, are certainly people into whose clutches it is not desirable to fall; but they seem dovelike creatures when compared with Mr. William Reid, who is the cleverest swindler in Europe, and Mr. Gilead Gilfoil, who, in spite of his paralysed frame, is equal to either bank-note forgery or scientific murder. Mr. Harry Wynne begins his career as a pleasant, manly, easy-going young gentleman of almost incredible folly, and it is difficult to say whether his getting into the frying-pan or his getting out of it displays the greater amount of idiocy; but by the time he finds himself well in the fire he is in possession of his rather late-developed wits, and proves himself not merely a man, but a man who is unmistakably wide-awake. Though Mr. Christie Murray's name has certainly appeared on the title-pages of novels which represent a higher class of imaginative work than is to be found in *He Fell among Thieves*, the new book has the merit of being a really good story of its kind. It is, as a matter of course, capitally written, and—save in a few chapters in the middle of the book—the continuity of narrative interest is sustained without a break. Even Harry's Bulgarian experiences are related with real spirit, and the record of them is in itself by no means bad reading; the misfortune is that it is, for the most part, pure padding, and even the skill of the writer does not suffice to disguise its true character. Then again, it is surely rather a strain upon the probabilities that a man in Mr. Butterfield's position, who is making a handsome income by a form of scoundrelism not positively dangerous, should put himself within the reach of the criminal law in the manner described in the story; while the employment of that terribly hackneyed plot *motif*, the singular likeness between the hero and the principal villain is unworthy of constructors of the rank of Messrs. Murray and Herman. If, however, novels are made to read, as the razors in the old humorous poem were made to sell, *He Fell among Thieves* fulfils the end of its being, for it is eminently readable.

A Bitter Birthright tells the story of the consequences of a crime, or, to speak with perfect accuracy, the consequences of a repentance; for had Lady Gilmore only let sleeping dogs lie, she might have ended her life in perfect comfort, and left Miss Dora Russell, like the needy knife-grinder, with no story to tell. The deceased Lord Gilmore, who belonged to a handsome race, had a natural prejudice in favour of a handsome heir, and when his first-born proved to be a hunchback he was accordingly much annoyed, his irritation being increased rather than diminished by the birth of a second son whose lines and proportions were all that could be desired. In order, therefore, that family comfort may be restored, Lady Gilmore and a trusted nurse take the heir, ostensibly for the sake of his health, to a secluded village in the north of Scotland, whence the mother returns, bringing with her a small coffin, which, being supposed to contain his body, is consigned to the family vault. The second son, Hugh, thereupon reigns in his elder brother's stead, and in due course succeeds to the title and estates, possession of which he would doubtless have retained to the end of the chapter had he not spoiled his mother's schemes by marrying his sister's penniless governess. This act of rebellion serves to awaken the feminine conscience which has been quietly sleeping for a quarter of a century, and Lady Gilmore is not the first person who has found wonderful satisfaction in an act of virtue, which is also an act of spite. The hunchback, who has grown into a stalwart and not ill-looking young farmer, is brought back, the rebel is deposed, and then the story begins to be lively, with a liveliness imparted by envy, hatred, malice, and all uncharitableness, battle, murder, and sudden death, with paralysis, adultery, and more or less of intoxication thrown in as makeweights. Walt Whitman thinks it would be better if we were all like the beasts, who "do not lie awake in the dark and weep for their sins"; but it seems to need a multiplicity of horrors to enforce the moral that repentance is a mistake.

The constituents of *That Affair* are luscious sentimentality, crude humour, doubtful English, still more doubtful French, and general commonplace of conception and handling. On the whole, the sentimental passages which are meant to be taken seriously provide more amusement than those which seem to have a deliberately humorous intent; but, unfortunately, these are the very passages which the practised novel-reader will skip, because, as he will say, he knows all about them, and they have nothing to do with the story—two pleas which cannot possibly be controverted. The principal personages are mainly distinguished by remarkable eyes, with which they perform feats, physical and psychical, not to be rivalled even by Sam Weller's "patent double million glass magnifier." Those of the hero are very brilliant—differing in this respect from their owner—but in the course of ordinary conversation they "soften curiously," and, when fully softened, are wont to turn upon people "with the power of an electric search-

light." The heroine, on the other hand, has eyes with which, even when they are fixed upon the floor, she sees, "in some occult way, every movement and line of his [the hero's] grand, manly figure; every feature and expression of his splendidly-handsome face." Everyone knows the kind of incident that, as the milliners say, "goes with" this sort of description; but, indeed, there is no lavish profusion of incident of any kind, and, until the third volume, which is rather brisker than its predecessors, both "that" affair and all the other affairs move along rather slowly. In fact, the book can be read with profit only by those who are anxious to enlarge their vocabulary. In curiosities and novelties of language it is decidedly rich.

The design on the cover of *The Anglomaniacs*—a bleeding heart surmounted by an earl's coronet—promises just such a pleasing combination of the aristocratic and lachrymose elements as is commonly to be found in the works of the imitators of Ouida. This promise is, however, unfulfilled; for, though some members of the English Brahmin caste are introduced, they fail to live up to their titles in the approved fashion; and, while the book is not deficient in little touches of genuine pathos, the anonymous writer makes no attempt to be harrowing. Indeed, the most obvious as well as the pleasantest feature of *The Anglomaniacs* is the bright humour which plays over every page. The book is a sketch, evidently studied from the life, of the Transatlantic plutocrats who are, like Mrs. Boffin, "high-flyers at fashion," or, to speak more precisely, at rank; and the story deals with the attempts of Mrs. Floyd-Curtis and her subsidised ally, Mrs. Clay, to transform the pretty, vivacious, Lily Floyd-Curtis into Lady Melrose. Lily, with her thin veneer of cynical worldliness and her clear brain and warm heart underneath, is charming company, and the feminine schemers are a delicious couple. How they fare must not be revealed; for the book, which is full of good things, and not wanting in really brilliant things, ought to be read.

It would be gratuitously cruel, and would serve no useful purpose, to tell the whole truth about *Paul Creighton*. It may suffice to say that it is apparently the work of a very young lady, who is absolutely devoid of literary experience, and who has studied the worst possible models. The story and the telling of it are almost incredibly grotesque.

JAMES ASHCROFT NOBLE.

CURRENT LITERATURE.

Essays, Scientific, Political, and Speculative. By Herbert Spencer. In 3 vols. (Williams & Norgate). Mr. Herbert Spencer's *Essays* have long been accessible in three series, published at intervals between 1857 and 1874; and those who are curious in matters of bibliography must have noticed that they were printed from American types. The truth is that Mr. Spencer, like De Quincey, has been more honoured during his life-time in the United States than in his own country. It was otherwise with Darwin, not one of whose works, we believe, have ever been reprinted in America down to this day. Mr. Spencer wisely accepted the inevitable.

Through the good offices of his friend, the late Prof. Youmans, he was not only able to derive some profit from the American sale, but also to import into the country of origin sheets printed from the American plates—a fact worthy of consideration in the present state of the copyright question. Now, however, the improved state of his health has permitted him to subject all his miscellaneous writings to a thorough revision, to add several not previously reprinted, and to re-arrange the whole in a definite edition. Seven new essays are here given, including the famous address to "The Americans," after his visit to that country; and at the same time references are supplied to as many more magazine articles, which he has not thought it necessary to republish. The original order of the essays, which was largely chronological, has also been recast. The first volume now contains those dealing primarily with the scientific aspects of evolution, beginning with the brief paper on "The Development Hypothesis," which he contributed to the *Leader* in 1852, seven years before *The Origin of Species*. The second volume contains those treating of philosophical and aesthetic questions, including the famous criticism of Comte's classification of the sciences (which has also been published separately), and the postscript to the essay on "The Origin and Function of Music," in reply to the views of Darwin and Mr. Gurney, which appeared only last year in *Mind*. The third volume contains the ethical, political, and social essays, which are by no means the least interesting class, especially when we observe the rigid consistency which animates alike the "Railway Morals" of 1854, and the "From Freedom to Bondage" of 1891. In short, the philosophy of Mr. Herbert Spencer may be learnt from these collected essays as clearly as from any of his more systematic works. We must not omit to mention that the third volume ends with a copious subject-index to all three, compiled by Mr. F. Howard Collins.

The Letters of S. G. O. Edited by Arnold White. In 2 vols. (Griffith, Farran & Co.) For more than forty years—1844-1888—Lord Sidney Godolphin Osborne enjoyed the privilege of using the columns of the *Times* as the channel for expressing his opinions on most social and political matters. Unless his letters had possessed some rare qualities, they would never have gained this almost unique distinction. What those qualities were it is not difficult to see. He had the command of a vigorous pen, and, standing aloof from party, delighted in exposing the shortcomings and inconsistencies of statesmen and administrators, while for the sufferers he expressed so warm a sympathy as to rouse that emotion in the hearts of others. Naturally combative, he never shrank from controversy: but it seems to have been always unselfish in its aim and generally free from personal bitterness. It is true that, in drawing public attention to the condition of the poor in his own county (Dorset), the first subject which engaged his active mind, he could not help exciting the wrath of the neighbouring squires and farmers; and the Home Secretary of the day—Sir James Graham—stigmatised him as a "popularity-hunting parson." But, looking at the matter nearly fifty years afterwards, we must not only acquit him of all blame, but recognise the value of the services which he rendered then, and on many other occasions, to a class which sorely needed a champion. His letters on Ireland are worth studying at the present time, and their general tone may be inferred from the intimacy of their writer with Mr. Walter. In ecclesiastical matters S. G. O. shows himself to less advantage. He writes, indeed, with his usual force, but not with his usual fairness. He is excellent in denouncing abuses, and sometimes in suggesting practical reforms; but his Protestantism

is of a type which has almost ceased to be. Himself a clergyman, he was singularly anti-clerical in his habit of thought, and altogether failed to comprehend the revival of Church life that was taking place around him. Yet, even so, his criticisms are not without their use, and contribute towards making these volumes a valuable commentary upon the chief public events and social questions of the past half century.

Black is White. By The Prig. (Kegan Paul & Co.) "The Prig," as his four or five little volumes tell us, is one of those who hold with Horace and with Milton that

"Joking decides great things,
Better and stronger oft than earnest can."

Perhaps there is something rather mediaeval, or of the Renaissance humour, about his method of controversy by satire: he indulges the broader, Gothic spirit of downright jesting, like those old parodists of holy hymns, or that rare clerical buffoon, Walter de Mapes. Again, he reminds us of Ulrich von Hutten, and his *Epistolae Obscurorum Virorum*, which set all the humanists and friars by the ears. "The Prig's" one aim is to laugh Anglicans, more especially the "Ritualists," out of their theological attitude; to save Rome by ridicule. It cannot be denied, unless by his victims, that he jests with infinite wit, and not a little serious learning underneath the cap and bells. Yet we cannot wholly applaud his present effort. He grows ponderous and far-fetched in his satire. His book is an attempt to reproduce the Reformation in England, under modern conditions, and to show how quibbling and vain are the Anglican pretensions to continue the Catholic Church of Old England, by describing a second Reformation and a second Establishment, with all their consequences. He imagines a Bill brought before Parliament and carried, making a new settlement of religion, by including in the Established Church all religions whatsoever that will join it: the creeds, articles, canons, dogma and discipline, are all reduced to a dead level of agreement with everything. The amusing part of this *jeu d'esprit* lies in its picture of the latitudinarian clergy, the perplexed prelates, the gradual growth of secession and nonconformity. The old Established Church is, of course, considered schismatical by the new; and the old history repeats itself. Clergy of the new Establishments ape those of the old, in "Ritualist" fashion; distinguished persons "go over" to the old body. And so the farce continues. The moral is obvious: the Roman Church alone has the logic of facts on her side; once leave her, and anything may happen—any political vagary may change the very creeds of an Establishment. The idea of bringing the nature of the English Reformation home to men's minds in this fashion is good; but "The Prig's" satire is not so delicate as it used to be. This book is caricature of the broadest type, and therefore not half so effective as, for example, that delightful work, *The Prig's Bede*. In the present book we have satire of this kind; the Marriage Service of the new Establishment runs thus:

"I, M, take thee, N, to be my wedded wife, to have and to hold from this day forward, for better, for worse, for richer, for poorer, in sickness and in health, to love and to cherish till death or a decree nisi us do part, and thereto I plight thee my troth."

This would be more pointed had the Established Church ever given the slightest signs of toleration for divorce in its corporate capacity. None the less, all who have "The Prig's" cause at heart will wish him well in his battle of pleasant wit against dubious wisdom.

SEVEN years ago Mr. Lionel Tollemache printed two volumes of essays, entitled, *Safe*

Studies and Stones of Stumbling, together with some verses by his wife, whose poetical gift is known to readers of the ACADEMY. The volumes were "for private circulation" only, in the sense that they could not be obtained for money; but the edition was not a limited one, and the author was so generous in his distribution that they may be found in the libraries of most public institutions. He has now determined to publish them in the usual way, but at cost price; that is to say, the two volumes, containing more than 670 pages of letterpress, may be obtained from Mr. William Rice, 86, Fleet-street (who is also, most appropriately, the publisher of the *Journal of Education*) for a total expenditure of 7s. 6d. As the essays were reviewed at the time in the ACADEMY (January 10, 1885), we must content ourselves now with calling attention to the new matter, which is mainly contained in an appendix to *Stones of Stumbling*. This includes the "Recollections of [Mark] Pattison," which attracted so much attention on their first appearance in the *Journal of Education*. Together with the notice of Charles Austin (in *Safe Studies*), it must always possess a permanent value, as an unrivalled example of Boswellian portraiture—with the added interest that, in recording the traits of his friends, the author is half-unconsciously revealing some of his own. We take the liberty of quoting part of the (new) dedication of the essays to the late Lord Tollemache.

"Ignoscas, si quis priscae pietatis amorem
Spreverit, hen, genitor ter venerande, tuum.
Quae paupertatis fuerit tua cura levandae,
Testantur nitidae laeta per arva casae,
Exemplum dominis dederas, et certa colonis
Rura tuis. Quis non, te meriente, delet?"

MR. JOHN R. RUSSELL, of Kirkwall, has been at the pains of reprinting, in a limited edition of 250 copies, the pamphlet in which Defoe tells the story of the pirate Gow, the original of Captain Cleveland in Scott's *Pirate*. Apparently, only a single copy of the original is known to exist, that in the British Museum. Like most of the buccaneers whose names have entered into romance, Gow seems to have been a poor creature; and nothing can exceed the feebleness of the resistance which he and his crew offered to capture. In fact, it is just this absence of attractive colours which, in our judgment, attests the authorship of Defoe. The work belongs to the *Captain Singleton* and *Jack Sheppard* period, when Defoe was employed to write for John Applebee, the semi-official Newgate printer, by whom this pamphlet was published. The present editor has added a few notes, tending to identify Gow from local information. His father seems to have come from Scrabster in Caithness; and a few relics of him are still preserved in the Orkneys. The book, which is a very creditable example of Kirkwall printing, may be obtained in London from Messrs. H. Sotheran & Co. Neither the original nor the reprint bears a date on the title-page.

THE Open Court Publishing Company, of Chicago—which we have been accustomed to regard as an organ for the dissemination of philosophy—has sent us, through Messrs. Brentano, a handsome translation, in two volumes, of Gustav Freytag's early novel, *The Lost Manuscript*, "Die Verlorene Handschrift." The name of the translator is not given; but that it appears with the author's sanction may be inferred from the fact that he has himself sent the following graceful motto, which is prefixed to it in a facsimile of his no less graceful handwriting:

"Ein tüchtiges Menschenleben endet auf Erden nicht mit dem Tode; es dauert in Gemuth und Thun der Freunde, wie in den Gedanken und der Arbeit des Volkes."

The book is an admirable specimen of American typography, which, when at its best, possesses the additional attraction of strangeness to English eyes. Though we recognise the feeling that has induced the publishers to enshrine every page in a coloured border, we cannot say that we approve of such a fancy dress for a novel. The head-piece to the second volume also leaves something to be desired. The binding has the double merits of stoutness and elegance. Altogether, this is a worthy compliment to the veteran author, whose Reminiscences also have lately appeared in English.

NOTES AND NEWS.

MR. HEINEMANN has at last ready for issue the long-promised *De Quincey Memorials*, in two volumes. The delay in publication was caused partly by the difficulty in reproducing the portraits with which the work is adorned. The volumes include not only a large mass of correspondence between De Quincey and members of his family, notably his mother, brothers "Pink," and his two sisters, but also letters between himself and Coleridge, the Wordsworths, Hannah More, Christopher North, &c. The Memorials will be followed shortly by the first instalment of De Quincey's Posthumous Works.

UNDER the brief but emphatic title of *War*, Messrs. Macmillan will shortly publish a revision of the article contributed to the *Encyclopædia Britannica* by Colonel J. Frederick Maurice, R.A., to which is now added a list of books on modern wars and the military art in all languages, with notes to assist students in selection.

MESSRS. PERCIVAL & Co. will publish next week a *Short History of Greek Philosophy*, for students and general readers, by Dr. John Marshall, rector of the Royal High School, Edinburgh. The main purpose of this book is to present an account of Greek philosophy which, within strict limits of brevity, shall be at once authentic and interesting—authentic, as being based on the original works themselves; interesting, as presenting to the ordinary English reader the great thoughts of the greatest men of antiquity, on problems of permanent significance and value, in language freed from technicality and abstruseness.

THE Rev. Dr. Atkinson's book, *Forty Years in a Moorland Parish: Reminiscences and Researches in Danby in Cleveland*, will be published by Messrs. Macmillan in about a fortnight. Anyone who has had the good fortune to tramp the Yorkshire moors with Dr. Atkinson, and hear him pour forth his stores of observations on the geology, archaeology, folklore, and history of his district, mixed with anecdotes of the quaint manly folk among whom he has lived and worked, knows what an interesting volume the record of all he has seen, heard, and thought should make.

MR. GEORGE MEREDITH's novel, *One of Our Conquerors*, will be published this month, in three-volume form, by Messrs. Chapman and Hall.

MR. ROBERT BUCHANAN's prose book, *The Coming Terror*, is to be issued by Mr. William Heinemann early next week. It consists, to no little extent, of controversial matter on subjects of the day, its chief object being to protest against over-legislation, especially in matters moral and literary, while showing at the same time that the modern gospel of self-culture may be injurious to society.

THE second volume of the *Talleyrand Memoirs* will be published in England by Messrs. Griffith, Farran, Okeden, & Welsh, and in America by Messrs. G. P. Putnam's Sons, at

the end of the present week. The third volume will appear simultaneously with the French edition on July 1.

Kilmallie is the title of a new novel by the author of *The Chronicles of Glenbuckie*, which will be published next month, in two volumes, by Messrs. Ward & Downey.

THE first volume of the *Economic Journal*, to be published by Messrs. Macmillan next week, will open with an account of the objects, &c., of the British Economic Association, written by the editor, Prof. F. Y. Edgeworth. Among the other contents will be:—"Some Points in French Economic History," by Mr. F. Seebohm; "Economic Doctrine in England during the Eighteenth Century," by the Rev. Dr. Cunningham; "The Fall in Silver," by Mr. H. Hicks Gibbs; and "Difficulties of Socialism," by Mr. Leonard Courtney. There will also be notes and memoranda, reviews, and a list of recent books and articles in periodicals.

THE forthcoming number of the *Religious Review of Reviews*, to be published on April 8, will contain an article entitled, "Christ or Anti-Christ: Is Mr. W. J. Stead a Representative of Christianity?"

THE publishing firm of Messrs. Walter Smith and Innes, in Bedford-street, will henceforth be known by the style of A. D. Innes and Co., Mr. Walter Smith having finally withdrawn from the business, and Mr. T. Slingsby Tanner having become a partner.

THE date of the Folk-lore Congress, to be held in London this autumn, has been slightly advanced. The first meeting will be held on Thursday, October 1, in the rooms of the Society of Antiquaries. A number of foreign folk-lorists have expressed their intention of attending the Congress, some coming from as far as Russia and Finland—both countries to which our own Folk-Lore Society has paid special attention.

At the Royal Institution, Mr. J. Scott Keltie will, on Tuesday next, April 7, begin a course of three lectures on "The Geography of Africa"; Prof. Dewar will, on Thursday next, April 9, begin a course of six lectures on "Recent Spectroscopic Investigations"; and Prof. Sylvanus P. Thompson will, on Saturday next, April 11, begin a course of four lectures on "The Dynamo." The Friday evening meetings will be resumed on April 10, when Sir William Thomson will give a discourse on "Electric and Magnetic Screening."

MR. BADEN-POWELL, C.I.E., the author of a standard treatise on the land-tenures of the Punjab, will read a paper at the Society of Arts on Thursday next, April 9, at 4.30 p.m., upon "The Indian Village Community, with special reference to Modern Investigation." The chair will be taken by Sir Steuart Bayley, political secretary at the India Office.

A PAPER on "Shelley, and his Relations to Christian Dogma," will be read by Dr. A. H. Japp, at the meeting of the Shelley Society, to be held at University College, Gower-street, on Wednesday next, April 8, at 8 p.m.

DURING Wednesday and Thursday of next week Messrs. Sotheby will be engaged in selling a large collection of autograph letters and MSS., brought together from various sources. Perhaps the most notable lot is a series of verses, notes, &c., addressed by Goethe to Caroline Gräfin von Egloffstein. There are also interesting letters of Dr. Johnson, Burke, Burns, Coleridge, Lamb (unpublished), Shelley, Dickens, and Thackeray; and we may specially mention one from Byron to his sister Augusta, in which he is said to give a "complete history" of his relations with the Countess Guiccioli.

UNIVERSITY-JOTTINGS.

THREE courses of lectures will be delivered at University Hall, Gordon-square, during April and May—on Sundays, at 3.30 p.m., by Dr. James Martineau, on "The Gospel of Luke"; on Wednesdays, at 8 p.m., by the Rev. Charles Hargrove on "The Fourth Gospel"; on Fridays, at 3 p.m., by Miss Beatrice Potter, on "The Co-Operative Movement in Great Britain." The fee for each of the two latter courses is 5s., and for members of workmen's clubs, 1s. Application for tickets should be made to the warden, the Rev. Philip H. Wicksteed.

MR. R. T. WRIGHT, law lecturer at St John's College, has been appointed editor of the *Cambridge University Reporter*, in succession to Prof. G. F. Browne, now canon of St. Paul's.

PROF. W. H. BENNETT, of Hackney College, and formerly fellow of St. John's, Cambridge, has been temporarily appointed to the chair of Hebrew at New College, London, vacant by the death of Dr. Evans.

A PARAPHRASE of some of the late Prof. Emslie's Sermons, by Miss M. S. Wright, is announced for publication by Mr. Elliot Stock.

THE March number of the *Eagle*, a magazine supported by members of St. John's College, Cambridge, contains an interesting article on "The College Days of William Wordsworth," who took his degree exactly one hundred years ago. It appears that the set of rooms, or rather the single room, which he seems to have occupied during his whole undergraduate course, is now utilised as a store-room in connexion with the kitchen. Another article prints letters from Archbishop Whitgift and others concerning the opposition of St. John's to the enclosure of Garret Hostel Green by Trinity College in 1600.

WE have received the first issues of *Publications of the University of Pennsylvania* (London: Kegan Paul & Co.), which are to consist of monographs in philology, literature, and archaeology. The series is opened with a learned essay on "Poetic and Verse Criticism in the Reign of Elizabeth," by Felix E. Schelling, assistant professor of English literature. He here deals with the treatises of George Gascoyne, King James, Gabriel Harvey, William Webbe, Puttenham, Gosson, Lodge, and Sir Philip Sidney; and promises hereafter to devote a special study to the life and writings of Gascoyne. Dr. Morris Jastrow, junior, professor of Arabic, describes a stray tablet from the library of Asurnasirbal, which has found its way to America. Besides an excellent facsimile of both sides of the tablet, reproduced by the levitytype process, he gives a transliteration and translation, and shows that it is a fragment of the Babylonian epic of Dilmarru. Incidentally he adduces reason for assigning it to a non-Semitic source. Finally, Mr. Stewart Culin, secretary of the museum of archaeology—who has already written curious treatises on the same subject—describes, with illustrations, two gambling games of the Chinese in America; *fán t'án*, or "repeatedly spreading out"; and *pák káp piú*, or "white pigeon ticket." The series is to be continued by Prof. W. A. Lamberton, Prof. Daniel G. Brinton, Dr. H. H. Furness, and others.

WE regret to record the death of the Rev. Samuel Savage Lewis, fellow of Corpus Christi College, Cambridge, which took place, very suddenly, on Tuesday, March 31. Mr. Lewis, as our readers know, was a most devoted antiquary, and for many years past the energetic secretary of the Cambridge Antiquarian Society. Only last winter he paid a visit of archaeological research to Asia Minor, whence he wrote a letter to the ACADEMY (January 17, 1891),

describing a hitherto unrecorded Greek inscription. He will be greatly missed in many circles at Cambridge.

TRANSLATION.

"EIN GLEICHES"—A PARALLEL.

(Lines written by Goethe, in 1783, on a solitary wooden hut situated on the loftiest point among the pine woods at Ilmenau.)

Beyond all heights

Is peace.

In the tops of the trees

Stirreth no breeze;

Silent the birds in the wood.

Thou hast but to wait,

Soon shalt thou, too, know rest.

H. SCHÜTZ WILSON.

MAGAZINES AND REVIEWS.

THE *Expositor* for April contains two interesting philological articles. Prof. Marshall makes it clearer than before that he does not claim to have solved the problem of getting back to any great extent to the original Aramaic of Jesus Christ's discourses. The thesis which he now hopes to have established is, "that the divergences in our synoptic Gospels are in some cases due to a variant translation of one and the same Aramaic word." It would be strange indeed if this were not the case; but we fear that only the very simplest of Prof. Marshall's instances are provable. He still seems to us to deal too mechanically with his problem. Prof. Sanday continues his survey of the "synoptic" question in a lucid and popular style. Only on one point he seems obscure; does he draw the natural inference from the facts of language referred to on p. 313, viz., that the fourth of the Beatitudes in Matt. v. is not original? If not, what is the Aramaic original of "meek" in Matt. v. 5? Of the other articles, the correspondence between Delitzsch and Hofmann, on the Descent of Christ into Hades, has a doctrinal interest.

CORRESPONDENCE.

CHAUCER AT WORK.

Christ's College, Cambridge: March 14, 1891.

It is interesting to watch Chaucer's method of making a translation. His Tale of Melibous enables us to observe some of his difficulties, and how he attempted to overcome them. It is not easy for us to put ourselves in his place. We must bear in mind that in translating from the French he had no dictionary to refer to, and he had to work from an MS. original, which, as we can plainly see, was either not very legible or else contained mistakes. We may think that some of his blunders are rather singular, but I doubt if many of us, under all the circumstances, would have avoided them.

I now proceed to give examples of his mode of procedure. My references are to Group B, as numbered in the Six-text edition.

In 2187 Chaucer says: "Right as motthes in the shepes flees anyoeth to the clothes," &c. As a matter of fact, he is merely giving a sentence from the Vulgate version of Prov. xxv. 20, which has, "sicut tineæ vestimento," a clause not found in our English version. But he had not the Latin before him. What he had was the French version—viz., "la tigne, ou lartuison, nuit a la robe." Of course, we can easily discover that *lartuison* (see *artison* in Cotgrave) is a mere equivalent to, or gloss upon, the word *tigne*, or the Latin *tineæ*; but Chaucer had no means of discovering this. Perhaps his MS. was miswritten; at any rate, all that he could make of it was *en la toison*, which he promptly turned, correctly enough, into "in the shepes flees." It is rather a desperate solution of the difficulty; but he had to face it, and he was not to be daunted.

In 2515 he tells us that "the litel *wesel* wol slee the grete boie and the wilde hert." As a fact, this represents a line in Ovid, *Remed. Amoris*, 421—

"Parua necat morsu spatiosum *uipera* taurum."

But he had not the Latin before him; he had only the French version: "la petite *viere* occist le grant torel." Unluckily he did not know the sense of *viere*, but he had to say something; so he took it to represent the Latin *uiuerra*, a ferret; and, as the word "ferret" had not, at that date, been adopted into our language, the only available word for him to use was necessarily "*wesel*."

In 2627 we find: "For Senek seith thus; that *maister*, he seith, is good that proveth shrewes." Seneca uses no such word as "*maister*"; he merely says, "Bonis nocet, qui malis parit." And we observe that, in Chaucer's version, *nocet* disappears. The reason is, once more, because all he had before him was the French version: "Cellui *nuist* aux bons, qui espargne les mauvais." Clearly, his MS. was either illegible or faulty; and he read *nuist* *aux* as *maistre*. Or perhaps his MS. had *nuist* *au bon*, or else *maistre bon*. Any way, we see how very easily the mistake arose; *nuist* *aux* represents "*maister*"; and *bons*, or *bon*, represents "is good." Moreover, the word *proveth* points to an MS. reading *esproute*, for *esparne* or *espargne*.

In 2754 we have: "and therefore elepeeth Cassidore poverté the moder of ruine." But Cassiodorus calls poverty "*mater criminum*"; and the French text has "*mere des crimes*,"

Either his MS. was corrupt or illegible; and so *crimes* became *ruines*. Write out these words in medieval letters, and observe how slight is the difference.

In 2866 we have: "For seint Iame seith in his epistles," &c. The editors turn "epistles" into "epistle," on the ground that St. James only wrote *one* epistle; which only shows how little they understand their business. For the French text has: "*Senecques dist en ses escripts*"; and it is notorious that the number of Seneca's letters is considerably more than one. The error is in another place. Chaucer, or his MS., has turned *senecques* or *senecues* into *seint iacques* or *seint iagues*. Here, again, those who are best acquainted with MSS. will most easily see why.

I think we may draw much much instruction from these examples. They show us clearly what sort of difficulties beset our old authors, and to what desperate shifts they were driven in their attempts to overcome them. It would be grossly unfair to jest at their errors, for their difficulties were enormous; and I doubt if modern editors are invariably their betters. Let us rather admire their invincible courage.

WALTER W. SKEAT.

MARY FITTON AGAIN.

London: March 28, 1891.

As I have seen the portraits of Mary Fitton at Arbury Hall, and as Mrs. Newdegate, who has lived with them, agrees with me that they do not correspond with Shakspeare's description of his dark mistress, I think your readers will do well to trust us, who have no theory to support, rather than Mr. Tyler, who has not seen the pictures, and naturally inclines to his own theory. He has not either seen the letters of "M. Ma," or "M. Maxey," which he thinks are Mary Fitton's. I have, and they certainly are not in Mary Fitton's hand. Moreover, though they do call Lady Anne Newdegate "sister," one of them says:—

"So, sweet sister, desiring you to continue me in your love, and remember your pore sister, hoo will always love you as *one of my dere friendes*";

and as I do not think that this is the way in which one sister by blood would write to another, I conclude that M. Maxey used the word "sister" in a general sense, more affectionate than that in which "cousin" was so often employed.

The postscript to the letter quoted above is:—

"Good sister, let me intret you to remember me to sir edwarde fitten and my lady, and to send this letter to my sister fitten, if you send vnto her."

Possibly this "sister fitten" meant Mary Fitton. What we have to do is to search and wait for further information. Whether it may become our painful duty to burn the present Lord Pembroke, and Wilton, if, as dread report says, his lately-bought Mytens portrait of his ancestor, William Herbert, proves swarthy—as he is reported to have said it is—instead of fair, I leave for further consideration. One earl and one house cannot, of course, be allowed to stand in the way of our doctrine, that W. H. is the Pembroke of 1601. The late Dr. Rimbault told me that an inconvenient entry in a Tudor MS. stood in the way of the theory of William Chappell and a friend of his, that Dr. Bull wrote the music to "God Save the King." They clubbed together, bought the MS., and solemnly burnt it, with the pious ejaculation:—"Thank God, we've got rid of that objection!"

But I have asked Lord Pembroke to let me go down and see his picture—as I want an excuse for riding over to Woodyates, to see the changed home of Browning's footman—

ancestor;—and if I see both picture and house I will report on them to your readers.

J. G. FURNIVALL.

March 30, 1891.

P.S.—Lord Pembroke writes to me, under date of March 28:

"The Mytens portrait in my possession makes W. H. possess a *rich* sort of complexion, inclining to swarthy. The Vandyck portrait (according to tradition, not painted from life) gives him, perhaps, a more ruddy but less swarthy look. The Mytens portrait, which I bought, is, perhaps, of doubtful origin; it is not identical with the Mytens portrait, from which the well-known engraving is taken, and which seems from certain curious and exact resemblances to have been used by Van Dyck, as well as the statue now at Cambridge."

THE NEW FRAGMENT OF EURIPIDES.

Kilman, St. Andrews, N.B.: March 28, 1891.

I am far from undervaluing such minutiae as those to which Mr. Housman refers, though half a lifetime spent in elementary teaching has made me weary of insisting upon them. Had I been callous to the distinction between *διαφέρω* and *διαφορῶ*, I should not have written to defend myself.

I am only too well aware of *errata* in my books, as well as in my hasty *jeu d'esprit*. These last may partly be excused by hurry in revision. Certainly, if not following suit, I should have written *ἵκται*; and had I thought twice, I should have remembered that *ἔχρη* does not occur in tragedy. This may well be an accident—just as *ἔφαρ* occurs four times in the *Trachiniae* and nowhere else in Sophocles. But *ἔσπε* would have equally suited my purpose, which was not, of course, to restore at a breath "the hand of Euripides," but to contribute something towards future criticism by indicating the lines of conjecture which a first reading of the fragments had suggested to me. It was only after yielding to the temptation that I bethought me of Phæthon—and of Goethe.

There is only one point of principle, raised in this friendly correspondence, on which I care to dwell. Attempts have recently been made to elevate (?) the emendation of classical texts into an exact science; in other words, to reduce it to a mechanical operation. I do not believe in this, and the revelation in the Aristotelian papyrus, of the two readings of a line of Solon, may support my contention. If a critic had been found to conjecture *χρηῶς πυγόντας* for *χρησὸν λέγοντας*, would he have escaped censure?

LEWIS CAMPBELL.

THE EAGLE OF ETAN-GILGAMOS AND HIS KINDRED IN FOLKLORE.

Dedham, Essex: March 23, 1891.

Dr. K. Kohler, in the *ACADEMY* for March 21 (p. 284), in reference to the Chaldean story of "The Eagle and the Serpent," sees some connexion between it and the old Persian legends relating to Simurgh. The Sim-bird or Simurgh is the Avesta *Saena-meregha* (Skt. *cyena-mriga*), usually rendered by "eagle." Dr. West, in his Pahlavi texts ("Sacred Books of the East," vol. v., pt. i.), translates the Sim-bird by "griffon." In Bundahis xxiv. 11 we read that "first of all birds the griffon of three natures was created, not for this world."

The Simurgh seems to have some connexion with the Hindu *Garuda* or *Garuḍa*, the great enemy of serpents and snakes. In the Chaldaean legend the eagle is clearly described as at deadly enmity with the serpent.

According to Hindu tradition, the *Garuda*, the bird of Vishnu, was the king of the *Suparnas*, whose abode was said to be in the

Simbali forest. In Chinese Buddhist legends we find a reference to the Garuda as the devourer of the serpent-dragon, &c. The Great Rain asking Sūtra says:

"To the North of the great Ocean there is a large tree called Kūtasālmali; it is seven yojanas round at its root, and is embedded twenty yojanas in the ground. It grows one hundred yojanas high, and its branches spread fifty yojanas round.

"... The king of these Garuḍas, when he wishes to seize the dragons, flies up into the tree and looks down on the Ocean; then he flaps his wings and divides the waters to the distance of 1600 yojanas, on which he flies down and picks up the dragons just as he pleases and eats them" (*Iśal's Catena of Buddhist Scriptures*, p. 50).

The Sin-bird's resting-place was also said to be on a sacred tree (see note to Bn. xxiv. 11, in "Sacred Books of the East," vol. v., p. 89).

Gubernatis looks upon the mythological eagle of the Hindus as the winged solar horse; and he thinks that the first trace of the legendary and proverbial enmity between the bird of prey and the serpent is to be found in the contest between Indra, as a cyena or hawk, and Ahi (*Zoological Mythology*, ii., pp. 182, 183).

In the ACADEMY for October 18, 1890 (pp. 344-5), I have suggested that the fabulous Garuda or Suparna was borrowed by the Hindus from a non-Aryan mythology, most probably from the Dravidians through the Babylonians. The Chaldean story renders this supposition highly probable.
R. MORRIS.

"THE GOLDEN LAKE."

London: March 26, 1891.

In the review of my book, *The Golden Lake*, in the ACADEMY of March 21, your critic states that its leading features are identical with those of another Australian story, entitled *The Lost Explorer*, though he was kind enough to add that there was "sufficient difference in the treatment to exclude any suspicion" of my work being in any way indebted to the last named. I may, however, state that I have not read Mr. Hogan's book, that my story was accepted by Messrs. Trischler in last June, and that as *The Lost Explorer* did not appear till the September following, I could not very well have been guilty of appropriating its contents.
W. CARLTON DAWE.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 6, 5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Victoria Institute: "The Apparent Cruelty of Nature," by the Rev. Theodore Wood.

8 p.m. Aristotelian: "Darwin and Hegel," by Mr. D. G. Ritchie.

8 p.m. Richmond Athenaeum: "Sound and Music," by Mr. A. R. Seunett.

TUESDAY, April 7, 3 p.m. Royal Institution: "The Geography of Africa," I., by Mr. J. Scott Keltie.

8 p.m. Biblical Archaeology: "The Baal and Ashtoreth Altar discovered at Kanawat in Syria, now in the Fitzwilliam Museum, Cambridge," by Mr. J. Pollard; "Ideograms common to Accadian and Chinese," by the Rev. C. J. Ball.

8 p.m. Civil Engineers: "The Cost of the Generation and Distribution of Electrical Energy," by Mr. E. E. B. Crompton.

8.30 p.m. Zoological: "The Geographical Distribution of Snugs," by Mr. T. D. A. Cockerell; "The Anatomy of *Dolichotis patagonica*," by Mr. F. E. Beddard; "A Viviparous Bathylial Fish from the Bay of Bengal," by Dr. B. Alcock; "*Bathylaster veielijer*, Wyv. Thoms," by Prof. F. Jeffrey Bell.

WEDNESDAY, April 8, 8 p.m. Geological.

8 p.m. Shelley Society: "Shelley and his Relations to Christian Dogma," by Dr. A. H. Japp.

8 p.m. Society of Arts: "The Durability of Pictures painted with Oils and Varnishes," by Mr. A. P. Laurie.

THURSDAY, April 9, 3 p.m. Royal Institution: "Recent Spectroscopic Investigations," I., by Prof. Dewar.

4 p.m. Archaeological Institute: "The Heraldry of the Cumberland Statesmen," by Chancellor Ferguson; "The Brasses in the London Museums," by Mr. Andrew Oliver; "Further Remarks on Jade," by Mr. James Hilton.

4.30 p.m. Society of Arts: "The Indian Village Community, with special reference to Modern Investigation," by Mr. B. H. Baden-Powell.

8 p.m. Mathematical: "The Representation of Combinations of certain Electrical Quantities by means of the Analytical Forms called 'Trees,'" by Major Macmahon.

8 p.m. Electrical Engineers: "The Design of Multipolar Dynamos," by Mr. W. B. Eason.

8.30 p.m. Antiquaries.

FRIDAY, April 10, 7.30 p.m. Civil Engineers: Students' Meeting, "Modern Locomotive Construction," by Mr. W. W. F. Pullen; "The Design of Locomotive Cylinders," by Mr. John H. Barker.

8 p.m. New Shakspeare Society: "Some Points, chiefly Metrical, in 'Julius Cæsar,'" by Mr. B. Dawson.

8 p.m. Ruskin Society: a Paper by Mr. Andrew M. J. Ogilvie.

9 p.m. Royal Institution: "Electric and Magnetic Screening," by Sir William Thomson.

SATURDAY, April 11, 3 p.m. Royal Institution: "The Dynamo," I., by Prof. Silvanus P. Thompson.

3.45 p.m. Botanic: General Fortnightly Meeting.

SCIENCE.

TWO ASTRONOMICAL BOOKS.

Tycho Brahe. By J. L. E. Dreyer. (A. & C. Black.)

The System of the Stars. By Agnes M. Clerke. (Longmans.)

ALTHOUGH Tycho Brahe is not the greatest name in astronomy, it may be said that without him the greatest would not have been. His observations were, to borrow a phrase of Carlyle's, the sunken column on which the far-shining generalisations of Kepler were reared. Yet in another way, like Copernicus, one may even say, like Bacon, he belonged less to the new than to the old order of thought. In preparing the foundations of modern discovery, he crowned the edifice of Greek astronomy. Living just before the invention of the telescope, he carried the methods of Hipparchus and Ptolemy as near perfection as they could be brought without its aid. He determined the places of standard stars to within a minute of arc, while Copernicus had looked on the reduction of errors of observation to eight minutes as an unattainable ideal of accuracy; and his estimate of the year's length is, according to Dr. Dreyer (p. 333), "only about a second too small"—although obtained without the help of a pendulum-clock. But Tycho, while he could observe and register phenomena with great precision, was little able to penetrate below their surface. In this respect he was a type of his whole age, the second half of the sixteenth century, which produced many excellent observers but only one great speculative genius, the ill-fated Giordano Bruno.

As is well known, the Danish astronomer rejected the Copernican system, so far as it involved the double movement of the earth. He seems to have been one of those worthy people who hold that truth lies between the two extreme opinions. The planets moved round the sun, and there Copernicus was right; but the sun moved round the earth, and there Ptolemy and common sense were right. Of course there were arguments against the earth's motion; but they were not insuperable, as Galileo showed without any assistance from the telescope. Dr. Dreyer thinks that religious bigotry had something to do with his hero's compromise. But the opinions of Luther and Melanchthon, which he quotes in this connexion as opposed to the Copernican theory on the ground of its incompatibility with Scripture, are scarcely relevant, seeing that Luther died in 1546,

the year of Tycho's birth, and Melanchthon in 1560, the year when his attention was first drawn to astronomy. Early in the seventeenth century, when the heliocentric system had been condemned by the Holy See, it could be held with perfect security in Germany, as we learn from a letter of Kepler's to Galileo. How sincere Tycho was in upholding the immobility of the earth is proved by his dying prayer that Kepler would interpret his observations in accordance with that theory. The difference between a mere observer and an observer who was also a great thinker is well shown by the circumstance that, while Tycho and Kepler discovered the moon's annual equation independently of one another, Tycho merely gave a mathematical expression of the fact, while Kepler, as Dr. Dreyer says,

"displayed his wonderful genius by suggesting that the moon might be retarded in its motion by a force emanating from the sun, which would be greatest in winter, when the moon and earth are nearer to the sun than they are in the summer" (p. 342).

although he subsequently abandoned this happy inspiration. It is true that Tycho was the first to establish one great fact in physical astronomy, by proving that comets were heavenly bodies moving beyond the orbit of the moon, and not, what Aristotle had supposed them to be, mere atmospheric exhalations. But this resulted directly from his observation that the comet of 1577 had no appreciable parallax; nor does he seem to have noticed that in thus dealing a blow to the Aristotelian physics, with their system of crystalline spheres, he was destroying the necessary condition of the diurnal rotation of the heavens.

Tycho has been accused of sharing the astrological superstitions of his age; and his public utterances on the subject certainly give countenance to the charge. But Dr. Dreyer has shown by the evidence of a private letter dated 1587 (pp. 384, *seq.*), that such expressions must not be taken too seriously. Tycho drew up his horoscopes rather as a return for the magnificent benefactions of his royal patron Frederick II. of Denmark than from any belief on his own part in the value of such forecasts.

Tycho Brahe was a most conscientious observer, but he seems to have been conscientious in no other way. He has been numbered among the "martyrs of science"; but, in truth, he has no more claim to the title than Bacon. Let me at once add that the haughty independence of the astronomer's character is not less markedly contrasted with the subservience, than are his sterling scientific merits with the presumption of the charlatan chancellor. But of genuine heroism there is little enough to be found in his life, nor was there need of much. The difficulties thrown in the way of his astronomical studies by the aristocratic prejudices of his family and order have been greatly exaggerated by popular biographies, and seem by Dr. Dreyer's account to have been only just enough to test the sincerity of his vocation. The romantic marriage with a peasant girl, about which so much used to be said, turns out to have been, in all probability, a rather dis-

creditable connexion, to which his friends might justly object, and which only long continuance converted, according to Danish custom, into a more legitimate union. At thirty, Tycho found himself more richly endowed for the work of research than had been the lot of any scientific inquirer since the time of the Alexandrian Museum. Thanks to the liberality of Frederick II., he was able to devote twenty years to celestial observations in Uraniborg, the fairy palace of astronomy that he built for himself in the island of Hveen; and if at the end of that time some of the royal benefactions were withdrawn by Frederick's successor, Christian IV., the catastrophe must not be attributed to a coalition of petty spites and jealousies, but to Tycho's own flagrant misconduct. Dr. Dreyer writes biography not only with the indefatigable diligence, but also with the inflexible veracity, of a man of science; and the facts which he relates are quite sufficient to destroy the popular legend which has so long circulated on the subject of the great astronomer's departure from Denmark. A manor was granted to Tycho, saddled with the obligation to keep up a lighthouse belonging to it. This duty he seems to have completely neglected, notwithstanding repeated remonstrances (pp. 108-9). He received a prebend, subject to the customary payment of a year's revenue to the widow of its previous holder; but, "with characteristic coolness," he declined to discharge the obligation until compelled to do so by a peremptory order from the king, and subsequently tried to indemnify himself by throwing on the heirs of his predecessor the cost of certain repairs for which he was himself responsible (pp. 110-11). At a subsequent period we find him persistently refusing to execute similar repairs, although the chapel attached to the prebend was threatened with ruin in consequence of his neglect (p. 221). He also appears to have been guilty of brutally unjust and oppressive conduct towards a tenant of the same prebend, conduct which, as Dr. Dreyer says, "certainly did not improve his credit with the young king, who throughout his life wished to act justly by everybody, irrespective of rank and social position" (p. 221). We can hardly wonder that the astronomer was at last deprived of the prebend, of his Norwegian estate, and of a yearly pension of 500 dalers. His defiant conduct cut off the possibility of a reconciliation with the Danish Government; and the few remaining years of his life were spent in the service of the Emperor Rudolph, whose combined passion for science and incapacity for politics vividly remind one of the royal astrologer in Calderon's most famous play.

Five years ago I had the pleasure of introducing Miss Agnes Clerke's *History of Astronomy in the Nineteenth Century* to the readers of the ACADEMY. Since then the merits of that work have received full recognition from the persons best qualified to speak on the subject; and her authority to discuss the profoundest questions raised in the science about which she writes may now be taken as admitted by all whom it may concern. Her new work addresses

itself to a more select public than her last; that is, it demands a greater familiarity with the subject to take up, and a greater power of sustained attention to read through. It is, indeed, a book which not only the best informed general reader, but also probably many specialists, may consult with profit. It is hard to imagine that everyone who can handle an equatorial or a spectroscope with dexterity carries in his head the enormous mass of facts and ideas relative to sidereal astronomy that Miss Clerke has sifted from piles of scientific archives—English, American, French, German, and Italian—and digested into a series of luminous dissertations: nor is there any other work of reference to which those who wish for the latest and completest instruction can turn with equal certainty that they will find their wants supplied.

To talk about the "System of the Stars" is, of course, a very different thing from talking about the solar system. By the latter is understood a definite group of objects, with whose relative positions, shapes, dimensions, masses, and movements we are perfectly acquainted. But of the sidereal universe, the most we can say with any approach to certainty is that it *does* form a system of finite, though vast, extent, embracing, so far as we can see, the whole sum of material existence, and roughly defined in one plane, even to the unaided eye, by the zone of the Milky Way.

Only a generation ago a different view was maintained by some high scientific authorities, who held that the nebulae constitute galaxies co-ordinate with our own, and succeeded by others without number through the infinitudes of space. But even then some philosophers were of a contrary opinion, and it is they who have turned out to be right. Beyond, or rather within, this most general fact our knowledge is meagre and fragmentary. But the fragments, such as they are, may be exhibited in a certain logical order, advancing from the particular to the general, from the simple to the complex, from the relatively clear to the relatively obscure; and this is the sort of System implied in the title of Miss Clerke's book. Much of it reproduces on a greatly enlarged scale what was rapidly outlined in the relative chapters of her *History of Astronomy*; but so important is the progress made in the last few years that much of it is entirely new. During that period the photographic camera has proved itself a potent instrument of discovery, as well as a veritable weapon of precision, in the hands of the astronomer. We sometimes hear of a dwarf on the shoulders of a giant; but the camera, when superadded to the telescope, is a giant on the shoulders of another giant. The light-gathering power of the one in space is even surpassed by the light-gathering power of the other in time. Prolonged exposure answers the same purpose as increased diameter of object-glass. In this manner myriads of new stars have been revealed, and not only revealed but charted with a hitherto unattainable accuracy. The Pleiades have, for the first time, been depicted for us as they really exist, and as they may be seen in the beautiful frontispiece of this volume—that is to

say, swathed in delicate wreaths of nebulous light; and the great nebula in Andromeda has been shown to present that very configuration of rings condensing round a central nucleus which was demanded by the hypothesis of Kant. In combination with the spectroscope the camera has also supplied what Miss Clerke, not without reason, calls "one of the most remarkable verifications of theory on record" (p. 137) by demonstrating, what was before surmised, that the curious variation of Algol is due to the revolution round it of an enormous but feebly luminous satellite. The same potent combination of instruments working by a different method has analysed Spica Virginis, Vega, and other stars into doubles so close that their components will probably never be seen apart by any human eye. And here, at the risk of exposing his own ignorance, the present writer must confess to a serious difficulty caused by one of Miss Clerke's statements. Certain stars, of which Arcturus is one, have been shown to move through space with a velocity varying from about 100 to 375 miles a second. Now, according to Prof. Newcomb, as quoted in this work (p. 344), such a speed would be

"uncontrollable by the combined attractive power of the entire sidereal universe. For his calculations show that the maximum velocity attainable by a body falling from infinity towards and through a system composed of 100,000,000 orbs, each five times as massive as our sun, and distributed over a disc-like space, 30,000 light years in extent, would be twenty-five miles a second. . . . Now the velocity producible by an attractive system is the limit of the velocity it can control—that is, bend into a closed curve,"

whence it is inferred that the stars alluded to cannot be permanent members of the sidereal system. But one would like to know how far the validity of this calculation depends on the diffusion of the attractive mass over an enormous space, and what is the limit to the velocity generated in a body falling towards another body from infinity or from some more moderate distance. For the components of Vega—which has been analysed since Miss Clerke's book passed through the press—are said to move round their common centre of gravity with a velocity of over 370 miles a second, which velocity nevertheless is self-evidently "controllable by gravitation" since they continue to move in a closed curve. And Miss Clerke herself supplies an instance which, though less extreme, is sufficient for the purpose. She gives Algol's satellite a velocity of 55.4 miles a second (p. 138). Now, any possible division of this amount between the tangential force and the centripetal force must make one or other of them greater than the twenty-five miles a second given as a maximum by Prof. Newcomb's calculation. At any rate, it seems premature to set down Arcturus and other swift stars as homeless and aimless vagabonds in the fields of space.

Let me conclude with a hope that Miss Clerke may be encouraged to follow up this admirable work with a companion volume on the solar system. We shall then possess in a completed and scientific form the latest results of that wonderful evolution, the

various branches of whose history she has already embraced, within the outlines of a single sketch.

ALFRED W. BENN.

PHILOLOGY NOTES.

MESSRS. KEGAN PAUL, TRENCH, TRÜBNER & Co. have added to their series of Oriental Catalogues a very useful *Bibliotheca Sanscrita*, or catalogue of new and second-hand books on Sanskrit literature, extending to sixty pages. It is classified into grammars, dictionaries, texts and translations, chrestomathies, bibliographies, catalogues of MSS., miscellaneous. The texts and translations are further subdivided in such a way that no less than five pages are given to Vedas, and nearly a page to translations from foreign languages into Sanskrit.

At a recent meeting of the Académie des Inscriptions, M. d'Arbois de Jubainville read a paper upon the passage in Livy (v. 34), which describes the original entry of the Gauls into Italy. The MSS. have "per Taurinos saltusque Juliae Alpīs," which is absurd; for Turin and the Julian Alps (Carniola) are situated at the two extreme ends of the Alpine chain. Gronovius (followed by Crevier) has "Taurino saltu invias Alpes"; Drakenborch reads "per Taurinos saltusque invias A."; Madvig conjectured "per T. saltus [vallem] que Duriæ Alpīs." M. d'Arbois would adopt none of these changes: for he contended that the responsibility for the blunder must be laid upon Livy himself, who, as appears from other passages in this chapter, had attempted to combine two inconsistent accounts. One of these—probably that of Timagenes, a contemporary of Livy—placed the entry of the Gauls into Italy two centuries before the capture of Rome, and derived them from modern France by the route of Turin; the other and more ancient one is that of an author who believed that their first arrival was very little earlier than the capture of Rome, and that they had previously occupied an immense tract of country east of the Rhine.

WE have received the *Transactions* of the American Philological Association for 1890 (Boston: Ginn). Besides the Proceedings of the twenty-second annual session, held at Norwich, Connecticut, last July, it contains four papers printed at length. Of the two first of these, we must be content to mention only the titles: "The Order of Words in Greek," by Thomas Dwight Goodell, assistant-professor at Yale; and "Homeric Wit and Humour," by W. Irving Hunt, also of Yale. The third paper is by Dr. R. F. Leighton, of Gloucester, Massachusetts, on "The Medicean MSS. of Cicero," returning to a subject he had before treated in 1878. In opposition to the received view—that these MSS., now in the Laurentian Library at Florence, were transcribed by Petrarch from the archetypes found by him at Verona and Vercelli—Dr. Leighton maintains (1) that Petrarch was altogether unacquainted with Cicero's letters *ad Fam.*, and that (2) the archetype of the Letters *ad Att.* is known to have existed in the Verona Library some years before Petrarch's alleged find.

"Petrarch's connexion with the rediscovery and circulation of Cicero's Letters is narrowed down to a small collection, which was found in his library after his death, and which he copied from a codex found perhaps at Verona, though the place where the find was made is by no means certain."

Finally, Dr. Leighton goes on to show, by cumulative evidence of great weight, that the Medicean MS. were really procured by Coluccio di Piero de' Salutato. The fourth paper is a translation, with notes, of the *Katha-Upanishad*, by Prof. Whitney, of Yale, which claims to have been "made with more conscientious liberalism, with greater independence of the native commentators, than its predecessors."

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, Feb. 28.)

MISS FLORENCE HERAPATH, president, in the chair. —Mrs. C. I. Spencer read "A Criticism of 'The Duchess of Malfi,'" which took the form of a half-hour's conversation round the tea-table of a Devonshire country-house. The play was thus looked at from different points of view. But there was a general agreement that, whatever faults Webster may have had, he could not be accused, as some of his contemporaries might be, of dulness. In reference to the ample allowance of bloodshed, it was urged that this would not be objected to by a seventeenth-century audience, and that justice required the death of the two brothers and of Bosola. Webster's character as a critic was referred to, and his inadequate reference to Shakspeare considered to be proof of his incompetence as such, and yet his frequent imitation of Shakspeare, both in substance and expression, was evident. It was admitted that, notwithstanding that she was not always wise in little things, the character of the Duchess was drawn with great power, and that Webster deserved his place in the front rank of dramatists, for having carried out so ably such a lovely conception, and that the reader's sympathy is justified in going along with her through all the obloquy that followed her, and in all the horrors she had to endure. Of her two brothers it could not be denied that the Cardinal was the greater villain, and some excuse for Ferdinand was found in the probable intention of Webster to represent him from the beginning as having a vein of madness, and ample confirmation of this is to be obtained as the play goes on. It was shown that Bosola was a very complex character: and his combination of scholar and villain, with his occasional moments of remorse, proves Webster's genius in its delineation. The conclusion arrived at was that "The Duchess of Malfi" is a grand play, for the painfulness of it is made supportable by the noble characters of the Duchess and Antonio, by Delio's faithful friendship, and by the devotion of Cariola to her mistress: and justice is vindicated and conscience avenged.—Mr. John Taylor read "A Note on Mr. Swinburne's Statement of the case 'Euripides v. Webster.'" In *The Nineteenth Century*, June 1886, Mr. Swinburne wrote: "As there is no poet morally nobler than Webster, so there is no poet ignobler in the moral sense than Euripides; while as a dramatic artist—an artist in character, action, and motion—the degenerate tragedian of Athens compared to the second tragedian of England is as a mutilated monkey to a well-made man." It might have been thought wonderful even in a wilderness of monkeys to find one of that species so perfect as to be worthy to compare with Euripides; but that a mutilated monkey should be chosen for fit comparison with so consummate a delineator of passion and character as the author of the "Medea" when the writer of "The Duchess of Malfi" is placed beside him as a mental standard, is an estimate which would have surprised Euripides' own countrymen, could they have foreseen the curious criticism just cited. The judges of Euripides on the Attic stage had been the judges of Aeschylus and Sophocles; and though the first of these three had not the majestic manner of his two predecessors, it was surely no more than like the later overpowering of the genius of a Webster by the genius of a Shakspeare. The dismal strangulation scene in "The Duchess of Malfi" is of prosaic coarseness of conception compared with the death of the bride of Jason, and the magnificent exultation of the sorceress Medea is in passionate contrast with the brutal exclamations of the executioners of the Duchess. The pathetic fluctuations of Medea's affection in taking leave of her children are likewise in choice distinction to the utterance of the Duchess to Cariola before her violent death. Judged by the delineation of the Duchess of Malfi—his most interesting character in his best play—the ethical quality of Webster's work may also be easily found fault with.—Miss Herapath read a paper on "Characterisation in 'The Duchess of Malfi,'" saying that the high rank among English dramatists which has been awarded to Webster by competent critics is amply justified by the power of characterisation which he displays in "The Duchess of Malfi." Detailed consideration was then given to the

characters of the Cardinal, an embodiment of Satan, of Bosola, the incarnation of Envy, of the Duchess, an example of noble purity, of Ferdinand, led away by an overweening love of money, and of Pescara, the man of keen intellect; while the scenes in which Antonio and the Duchess are concerned exhibit Webster's power in delineating tender pathos, and altogether the beauties of the play are many and varied.—Mr. R. H. Warren read a paper on "Archæology and Folklore in 'The Duchess of Malfi.'" From the many medical and surgical references in the play, it may be imagined that Webster had a special training, if not actual practice, in the healing art, combining this, as in the case of William of Worcester, with an evident taste for antiquities. The various allusions on the subjects mentioned in the title of the paper were then passed in review, and frequently illustrated by passages from other writers.

ELIZABETHAN SOCIETY.—(Wednesday, March 4.)

FREDERICK ROEBERS, Esq., in the chair.—Mr. Ernest Rhys read a paper on "Thomas Dekker." In the course of his paper Mr. Rhys remarked that his present notes upon Thomas Dekker were intended to complete his account in the "Mermaid" edition of Dekker's plays. Those members of the society who had made a close study of the plays and other writings of Dekker had no doubt realised him for the good-natured vagabond of letters that he really was, whose vagrant life enabled him to give glimpses of many things in Elizabethan times, such as no other dramatist gave so abundantly. Like Charles Dickens, whom he somewhat resembled, Dekker had a profound sense of the tragedy and comedy of what we call low life. He delighted in the unfashionable folk who go to people what might be called the East-End of literature. Dekker, perhaps the most original and most striking figure among the lesser known men of that brilliant array which follows Marlowe, is at the same time one of the most unfortunate in his life and its artistic outcome, judged by the standard of his own genius. It was as if Fortune, to take a figure from his own play, having first presented him with the gift which, as a poet of the time, he most desired—the playwright's great opportunity—then turned upon him and said:

"But now go dwell with cares, and quickly die." If, however, he lived with cares, he laughed at them, and he was too strong to let them kill him outright. But, nevertheless, there they were; they never perhaps quite upset that undaunted good-humour of his, but they defeated him as an artist, they allied themselves insidiously with his own natural weaknesses to defeat the consummation of a really great poetic faculty. Dekker, however, is one of those authors whose personal effect tends to outgo the purely artistic one. He has the rare gift of putting heart into everything he says; and because of this abounding heartiness of his, it is hard to measure him by the absolute standards of criticism. Indeed, after the endless shortcomings and disappointments of his verse and prose have been estimated and written against him, he remains, after all has been set down, still the same lovable, elusive being, a man of genius, a child of nature. For this reason it is disappointing that so little is to be actually learned of his life. As one reads his plays, and marks the strong individuality shown in them, the desire to know how he adjusted himself to the everyday life, and took its little defeats and encouragements, springs very strongly. It is the natural interest that one takes in men of his cordial humanity, and it is disappointing to be balked of its satisfaction. In summing up this strange life and its dramatic outcome, it is easily seen what may be said on the adverse side. Dekker had great defects. He was the type of the prodigal in literature, the kindhearted, irresponsible poet whom we all know, and love, and pardon seventy times seven. But it is sad to think that, with a little of the common talent which every successful man of affairs counts as part of his daily equipment, he might have left a different record. He never attained the serious conception of himself and his dignity as a worker which every poet, every artist, must have who would take effect proportionate to his genius. He never seemed to become conscious in any enduring way of his artistic function: and he constantly threw aside, under pressure of the moment, those standards of

excellence which none knew better than he how to estimate. But, after all has been said, Dekker remains, by his faults as well as by his faculties, one of the most individual, one of the most suggestive figures of the whole Elizabethan circle. Because of the breath of simple humanity in them, his works leave a sense of brightness and human encouragement whose charm lingers when many more careful monuments of literary effort are forgotten. His artistic sincerity has resulted in a picture of life as he saw it, unequalled for its sentiment, for its living spirit of tears and laughter, as well as for its outspoken truth. His homely realism brings before us all the everyday bustle of the Elizabethan streets, the craftsmen and 'prentices, the citizens at their shop doors, the gallants in the middle aisle of St. Paul's. The general feeling is that of a summer's morning in the pleasant Cheapside of those days—more like the street of a little market town than the Cheapside of to-day—where, in the clear sunny air, the alert cry of the 'prentices, "What do you lack?" rings out cheerily, and each small incident of the common life is touched with vivid colour. And if the night follows, dark and haunted by grim passions and sorrows, and the King's Bench waits for poor poets not far away, this poet who had known the night and the prison only too well sang so undauntedly that the terrors of them fell away at the sound. As he had this faith in the happy issue out of his own troubles, so Dekker looked unflinchingly as a poet upon the grim and dark side of human life, seeing it to emerge presently, bright in the higher vision of earth and heaven. Much that at first seems gratuitously obscene and terrible in his dramatic presentation may in this way be accepted in the same vigorous apprehension of the comedy and tragedy of life, which he himself showed. The whole justification of his life-work, indeed, is to be found in these words of his, from the dedicatory epistle to his "Dream," which we may well take as his parting behest:—"So in these of mine, though the Devil be in the one, God is in the other; nay, in both. What I send you may perhaps seem bitter, yet it is wholesome: your best physie is not a julep; sweet sauces leave rotten bodies. There is a hell named in our creed, and a heaven, and the hell comes before; if we look not into the first, we shall never live in the last." Mr. Rhys, in commenting on the singular "Dekker's Dream" at the conclusion of his paper, considered the preface one of the best pieces of prose that Dekker wrote, and most interesting, autobiographically, as seeming to point to Dekker having been driven at one time to a madhouse—a supposition further borne out by various scenes in his plays, describing the interior of such places. The discussion which followed was opened by the chairman, and continued by Mr. James Ernest Baker, Mr. W. H. Cowham, Mr. Frank Payne, Mr. Arthur Nicholson, and other members and friends of the society.

FINE ART.

"LES ARTISTES CÉLÈBRES."—*Turner*, par Philip Gilbert Hamerton; *Barye*, par Arsène Alexandre; *Hobbema*, par Emile Michel; *Madame Vigée Le Brun*, par Charles Pilet; *Jacob van Ruysdael*, par Emile Michel. (Paris: Librairie de l'Art.)

OF this excellent series of critical biographies some thirty or more have now been published, and it promises to become in itself a veritable "Librairie de l'Art." Its peculiar merit as a series, one that too clearly distinguishes it from a similar publication in this country, is that each artist has been treated by a writer of established authority as an art critic, and one, moreover, who has specially studied his particular subject or subjects.

To make a selection for the sake of brevity, and without any invidious comparison, the *Donatello* of Eugène Muntz, the *Rembrandt* of Emile Michel, the *Edelink* of Henri Delaborde, the *Phidias* of Maxime Collignon, the *Delacroix* of Eugène Véron, and the *Van der*

Meer of Henry Havard, are typical examples of that right association between author and subject which is indispensable to the production of valuable work, whether that work be "popular" or not. This excellent principle has not been departed from in the case of the last five biographies.

Among these is one of the greatest of English artists, Turner; and this has been written by one of the best of English critics, Mr. Philip Hamerton, whose special study of his subject is too well known to need emphasis here. He has abbreviated and to a certain extent re-written his English *Life of Turner*, and in doing so has been careful to make clear to the French reader the strange distinction hitherto drawn in England between painters in water-colour and painters in oil, and the attitude of our Royal Academy in this and other matters, which had so marked an influence on the career of the great landscape painters. The work on the whole is excellent, but on one or two small points he falls a prey to that inaccuracy which ever lies in wait for the most careful of writers. Turner's friends at Bristol were called Narraway, not Harraway; and Dr. Munro (of the Adelphi) and Mr. Munro (of Novar), were very different persons. The descendants of the former will be surprised to hear that "l'amabilité du docteur Munro pour le jeune artiste a fini par accumuler un trésor pour ses héritiers." It is to be regretted that the illustrations are so poor. We look in vain among them for "Crossing the Brook" or "Ulysses and Polyphemus" or "The Fighting Temeraire," or any other of Turner's finest and most characteristic pictures. About half of them are unsatisfactory reproductions of etchings for the *Liber Studiorum*.

No such complaint can be made with regard to the two volumes by M. Emile Michel on the Dutch landscape-painters. Van Goyen, the first of them in date, is admirably illustrated by his "View of Dordrecht," in the Louvre; and the brilliant "Haarlem Meer," in the Stadel Museum, at Frankfurt; which remind one of the recent appearance of a charming little picture by the artist in the National Gallery (Trafalgar-square) which has been hid away somewhere at South Kensington for many years. Even better represented are Solomon Ruysdael and his nephew Jacob; and of Hobbema we have the famous "Avenue," from the National Gallery, the "Watermill," from the Louvre, and several other of his masterpieces. Whether Jacob Ruysdael was, after Rembrandt, the greatest artist of Holland is a question upon which all will not agree with M. Emile Michel, although there are few whose opinion in the matter has more authority. On another question, the amount of Ruysdael's indebtedness to Everdingen for the subjects of his Norwegian pictures of forest and waterfall, his views are also well worthy of consideration. It is a point of scarcely less difficulty. Their force, their poetry, raise them far above the representations by Everdingen of similar scenes; and yet, with all their beauty, they have scarcely the freedom and spontaneity which mark his pictures of his own country. The first argument is not

perhaps of very great account, as Ruysdael, by his superior power of composition and finer artistic feeling, might easily—it might be said would infallibly—make more out of Everdingen's studies than Everdingen himself could; but the precision, the details, and the variety of the scenes depicted, make it probable that they were not painted without some personal familiarity. P. Melyn may have gone with him to Scandinavia, as M. Michel suggests; but it is not necessary to invent a companion for him. M. Michel's account of the extinction of Hobbema's fame till its revival, some fifty years ago, is interesting; but we think he has overestimated the decline of his fame so far as England is concerned. He was highly prized by Gainsborough; and the last words of "Old" Crome were "Hobbema, my dear Hobbema, how I have loved you." Crome died in 1821, and his art from the beginning may be said to have been founded on that of Hobbema. But the neglect of this fine painter and of his still finer forerunner, Jacob Ruysdael, is undoubted—both when alive and dead—and it would seem almost necessary for an artist not to rise far beyond the ordinary talent of the day if he wishes to secure both immediate recognition and an equal regard by posterity.

An unusually happy fate—at least, as regards her pictures—befel Madame Vigée le Brun, whose charm, slight and not altogether unartificial as it is, is not to be denied any more by us than by her contemporaries. Although there was one of the latter, a "horrid" Englishman, Hoppner by name, who dared to say ungallant and ungentle things about her art, her fame in life was constant, and even now does not need restoring by the pleasant pen of M. Charles Pilet. Concerning Fragonard we cannot speak so confidently; but, at least in France, the versatility, the grace, the decorative taste of Fragonard are, we hope, sufficiently recognised. It is somewhat different with Barye. His is a greater name, which, although now raised far above the almost complete obscurity into which it had sunk, is scarcely even now held in the honour it deserves. Though sentimentalists may look down upon an artist who concerned himself principally with brute life, and though the modern school of realistic sculptors may regard Barye as "too anatomical," his fame is secure as one of the greatest masters, not only of France, but of all time; for he united accuracy of knowledge with passionate imagination, essential truth with grandeur of style. The study of his life and work by M. Arsène Alexandre is one of the best, as it is one of the most important, of the series hitherto published.

CESMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

THE thirty-eighth annual exhibition of pictures by artists of the continental schools—which had been postponed through the death of Mr. Wallis—will open next week at the French Gallery, Pall Mall.

THE fifth annual conference of the Camera Club will be held on Tuesday and Wednesday of next week in the theatre of the Society of

Arts, while the usual exhibition of photographs by members will be on view in the new clubhouse, Charing Cross-road. Besides the presidential address by Capt. W. de W. Abney, papers are promised by Mr. Joseph Pennell on "Photography as a Hindrance and a Help in Art," by Major J. F. Nott on "Photography and Illustrated Journalism," and by Mr. C. V. Boys on "An Application of Photography." An exhibition of lantern-slides will be shown on the evening of Tuesday, and the annual club dinner will take place at the Criterion on Wednesday. All photographers, including ladies, are invited to the conference.

ON Tuesday next Messrs. Sotheby will sell the library of the late C. Roach Smith, which, besides many valuable works in archaeology and numismatics, includes a number of MS. collections, note-books, and letters from antiquarian friends.

THE Art Union of London has issued a pamphlet, entitled the *Art Union Album*, which contains, besides a brief sketch of the history and work of the society, phototype reproductions of some of the more notable engravings it has published during the last fifty years. The place of honour is given to Mac-lise's "Wellington and Blücher meeting after Waterloo" and "The Death of Nelson," which deserve their reputation as the two historical pictures most popular with the English nation. It appears that the oil paintings from which the plates were engraved, by Mr. Lumb Stocks and Mr. C. W. Sharpe, are still in the possession of the Art Union. Then follow some of the best known pictures of Turner, Stanfield, Landseer, and Frith, together with more modern artists. When looking even at these process-blocks, we admit the truth of the boast made in the preface—that "the Art Union may claim to have kept alive the grand art of line-engraving, which will probably become extinct at no distant period."

As if by way of contrast to the reflections suggested by the preceding, Messrs. Annan & Swan have sent us a large number of specimens of their photogravures, which are produced from negatives at the rate of so much per square inch. For certain kinds of book-illustration the method is, no doubt, very satisfactory—to which some will be tempted to add, "more's the pity." But we must resign ourselves to the inevitable, as the miniature-painters had to do when Daguerre and Fox Talbot first made photography successful.

A CORRESPONDENT writes from Mentone:

"The world of art in England, as well as in France, will learn with regret that Philippe Pady de Charentais died of consumption at Mentone on March 25, at the early age of thirty-four. Philippe Pady, as he always signed his pictures, was regarded by artists and connoisseurs as destined to be one of the foremost of *genre* painters; and his work was highly prized and eagerly sought after by English collectors, to whom he was well known, having passed some years in England. He was a pupil of Meissonier, and had, like his master, wonderful force and finish in detail, while for depth and richness of colour his own countrymen have likened him to Diaz."

THE STAGE.

STAGE NOTES.

THE inadequacy of Joseph Surface, as represented by Mr. Arthur Bourchier, is assigned by more than one theatrical expert as a prominent cause of the very dubious success attained by the long-looked-for revival of "The School for Scandal," at the Criterion Theatre, on Wednesday. To give that part to Mr. Bourchier, which is, as it were, the very backbone of the comedy, argued great confidence on Mr. Wyndham's part. either of the ability of a certainly

gifted actor to hold triumphantly a most important part, or of the capacity of the company generally to pull him through. The event appears to prove that Mr. Wyndham reckoned without his host; but in reality there were other causes which told on the result—and if we hint that the result was not satisfactory, let it not be concluded that the run of the piece will be very short. That does not follow at all, for the Criterion is an exceedingly popular theatre. Mrs. Bernard Beere was the Lady Teazle. Now Mrs. Bernard Beere is a very clever and a very courageous woman; but we must be allowed to say that she has been formed by nature and modified by art, not so much to play the heroines of comedy as the creatures of Parisian melodrama. She is not a genius of laughter: she is an exponent of piled-up agony and of somewhat theatrical passion. Her performance of Lady Teazle was bound to be a *tour de force*. One sighed for a smaller actress, who should ripple and be flexible—the Amy Fawsitt, say, of twenty years ago at the Vaudeville. Still Mrs. Bernard Beere was earnest and determined—a handsome enough lady, playing a juvenile heroine. The Sir Peter Teazle was Mr. William Farrer. He has become a classic in the part, and it was obviously Mr. Wyndham's business to engage him to play it. He is *facile princeps*. When he is to be had no one else is in it. But he has been happier in his own acting when happier in his associates. The Charles Surface was Mr. Charles Wyndham himself, and in his assumption of the part it is reasonable to look for the cause of the present revival of the comedy. Mr. Wyndham's view of Charles is in several particulars original, and it is embodied with skill. Charles will never be the character in which Mr. Wyndham's friends will most prefer to see him, but he will take rank among the highly creditable impersonations of a popular actor. "The School for Scandal," at the Criterion is not a pronounced failure; but we shall hardly have the audacity to say of it that it is a quite assured success.

MUSIC.

MUSICAL PUBLICATIONS.

George Alexander Macfarren. By Henry C. Banister. (Bell.)

THE subject of this memoir had his prejudices, and, like other mortals, his faults, but musicians will do well to note the strong sides of his character: his activity and his perseverance. To say nothing of the affliction which fell upon him even in youth and darkened the later years of his life, he had to put up with many disappointments and to contend against many difficulties; but he worked on and became one of the foremost men of his day. The sketch which he wrote of his father, and his early letters to his mother, show how he honoured his parents. To his father he was indebted for his first knowledge of music, and for much advice and assistance in after years.

There is no need to recount here the history of Macfarren's life, so fully and so impartially told by Mr. Banister. Though born only four years after the death of Haydn, he belongs to the immediate past; for it is not yet a decade since his last Oratorio "King David" was produced at Leeds.

But we would say a word or two about his intercourse with Mendelssohn and Dr. Day, and about his opinions of music and musicians. The first work by which Macfarren became known in Germany was his overture "Chevy Chase," which was given under Mendelssohn's direction at Leipzig in 1843. Macfarren's admiration for the German composer's "genius" was intense, and at times he expressed somewhat extravagant opinions regarding it. Shortly

after Mendelssohn's death he praised his works for their strong individuality, and declared that they show no mannerism, a statement which he thinks "can hardly be attributed to the collected works of any other musician." A somewhat startling *dictum*, as his biographer truly observes. But the following is even more astounding. In an article on Mendelssohn's posthumous compositions Macfarren wrote:

"I call upon the parties, be they whom they may, that hold this trust, in the name of the musical public of England, to leave the music of Bach [referring to the publications of the Bach Society]—which will not become any older or more obsolete for remaining a few years longer in obscurity—... and to give us, incontinent, all that they possess of what we at least esteem treasure above price."

In connexion with Dr. Day, whose theoretical views were so warmly espoused by Macfarren, an amusing tale is told, in which, by the way, Mendelssohn also plays a part. Macfarren had arranged a meeting between the composer and the theorist, so that the latter might have an opportunity of expounding his theory. But Macfarren told Mr. Banister that

"Before Dr. Day had proceeded far with his argumentative exposition, the face of Mendelssohn assumed an expression so suggestive of his having taken a dose of nauseous medicine, that to avoid a scene he [Macfarren] was compelled by bringing the discussion to an abrupt, if not untimely, end."

Throughout his life Macfarren sought "to uphold the claims of English music, to defend it from aspersion, and rescue it from neglect"; and now that the cause of English music is rapidly advancing, his efforts ought to be thankfully remembered. He it was who harmonised all the airs in W. Chappell's *Popular Music of the Olden Time*, and he also wrote articles and delivered lectures on the subject. Opinions may differ as to the merit of his own contributions to English art, but all will admit that they are noteworthy for their skill and earnestness. Macfarren reminds us of Handel, in that he commenced by writing for the stage, and in later life devoted himself almost exclusively to sacred compositions. With regard to his Oratorios produced at Bristol, Birmingham, and Leeds, his biographer quotes opinions favourable and otherwise, and adds a few sensible comments of his own.

Macfarren's hostility to Wagner is well known. It is indeed strange to read his description of Wagner as a composer "whose habit is ill, and whose gleams of light are but misleading." Let us turn from this prejudice, and note his intense admiration of Mozart, and his interesting remarks respecting that composer's pianoforte Concertos. Among other things, he remarks that pianoforte parts, as handed down to us, "present a mere skeleton of the composer's intentions." Cipriani Potter, on the authority of Attwood, Mozart's pupil, told Macfarren that Mozart "never played these Concertos twice alike." They were intended to be filled up according to the discretion and ability of the performer.

LITERATURE.

THE YEAR OF REVOLUTION IN AUSTRIA.

Une Année de Ma Vie. 1848-1849. Par le Comte de Hübner, Ancien Ambassadeur d'Autriche à Paris et à Rome. (Paris: Hachette.)

Two friends talked together about the recollections of old men.

"They are usually," said the elder, "very unsatisfactory. The subject came up once at a house where I was, when both Lord Lyndhurst and Dr. Lushington were present: 'What,' I said, turning to the first, 'is the most interesting thing that you remember?' 'Beyond all comparison,' was the reply, 'the day I passed with Washington at Mount Vernon.' 'And you,' I asked, turning to the second, 'what is the most interesting thing that you remember?' 'Undoubtedly,' he answered, 'the week I spent with Burke at Beaconsfield.' 'Tell us something of what passed,' I rejoined. But, alas! neither could recall anything."

The most exacting of critics will never be able to bring any such charge against the author of this delightful book. Gifted with a memory "wax to receive and marble to retain," and having begun life very early under excellent auspices, he has been everywhere, met everybody, seen everything, and forgotten nothing; while he has, far from trusting exclusively to his powers of recollection, had the wisdom to write down from time to time things which he thought sufficiently important for him to be anxious to be minutely accurate about them.

It is to this habit that we owe the volume before us, which consists of the reproduction, often textual, of a journal kept through the stirring times to which it relates. To this Count de Hübner has added copious notes, together with some observations written quite recently and showing how things looked to him after the chances and changes of over forty years.

The work begins by an entry made at Leipzig on February 5, 1848, in these words: "A despatch from Prince Metternich calls me to Vienna. Why? It does not say." When M. de Hübner reached Vienna he found that his chief was desirous of sending some one to Milan for the purpose of representing the views of the Austrian Foreign Office in the Council consisting of the Archduke Renier, Marshal Radetzky, and Count Spaur, the Governor of Lombardy, which was then charged with the general supervision of Austrian interests in Italy. It was, having regard to the close relations between the Court of Vienna and the small Italian potentates, obviously desirable that some one well acquainted with diplomatic business should be on that Council. The man first thought of had

been Prince Félix Schwarzenberg, but the very anxious position of affairs at Naples made it undesirable that he should leave his duties there; and Prince Metternich's thoughts turned to M. de Hübner, who, although younger by more than a decade and occupying a much less exalted position in the service—that, namely, of Consul-General in Saxony—had already given proof that he possessed all the qualities which were desired.

The reader interested in European politics will examine with attention the record of the two interviews between the aged minister—still so powerful, though so near the end of his power—and his young envoy, which are given at some length. We must not, however, linger over these, but follow the latter to Milan, where he found himself on March 6. Very bright is the description of the society which gathered there, and on which the storm was so soon to break. In all that M. de Hübner writes there are touches of humour, which relieve the gloom of even the most tragic situations, and they are not wanting here; as, for example, in the passage in which he describes Radetzky and Gen. Wallmoden, between whom he sat one day at dinner, both octogenarians and profoundly jealous of each other. The first, in his desire to be particularly polite to the only civilian present in an assembly of paladins, kept helping M. de Hübner to good things with his rather trembling hand. "See how he shakes, he's getting old," said Wallmoden in a whisper, and then went sound asleep. "Look," said Radetzky with a wink, "he is still assiduous in paying his court to the ladies, and, nevertheless, snores in the middle of dinner!"

The news of the Revolution in Paris had reached M. de Hübner near the end of February, before he had his last conversation with Prince Metternich. He was made very anxious during the first ten days of his stay in Milan by receiving no communication from the minister, but it was not till March 17 that he heard of the outbreak at Vienna on the 13th of that month. The intelligence of that event was the spark which exploded the mine so long prepared in Lombardy, and on the 18th began the five days of the Milan revolution. The account of these is given very fully, and is reproduced almost exactly from the diary kept by M. de Hübner at, and shortly after, the time. For the composition of this he had the amplest leisure during the earlier days of his captivity in the hands of the insurgents, which lasted in all about three months and a half.

While the fighting was going on in the streets, he was shut up in the house of an Austrian employé who had provided for his own safety by leaving it and his wife at the commencement of the struggle. M. de Hübner took charge of both till the combat was over; and many, as well as strange, were the adventures through which he passed.

When things had calmed down a little, he surrendered perforce to the victorious party, and was entrusted to the charge of a very worthy man, who, born in the Italian Tyrol, had been the head of a department in one of the offices of account, but had

agreed to serve under the new government. He and his wife were extremely kind to their distinguished prisoner; and it is agreeable to learn, both that he was able to render some service to the husband, when the revolt in Lombardy had been put down, and that the wife, long years afterwards, left to M. de Hübner, when he had become one of the leading personages in the diplomacy of the world, the only thing of value which she possessed. The whole story of Philémon and Baucis, as he calls the pair, is about as pretty a piece of reading as one could easily come across. Early in his captivity he was asked by the Provisional Government whether he would undertake a mission to the camp of Radetzky, with a view to negotiate an exchange of hostages and prisoners, on the understanding that if this could not be effected he should return to Milan. He accepted the mission with alacrity; but in order to fulfil it he had to pass through Brescia, which, like Milan, was in full revolt, and where, unhappily, the worst elements of the population had the authorities, who had taken charge of the town when it was evacuated by the Imperial Army, almost entirely under their command. His visit to this place is described in full detail, and a most brilliant picture it forms at once of the grim and of the grotesque accompaniments of mob supremacy. M. de Hübner very narrowly escaped with his life; and probably not even his coolness and *savoir faire* would have saved him if the murders of Count Latour at Vienna, or of Count Lamberg, at Pesth, had taken place previously, and stimulated to the requisite point the passions of the populace.

Unable to carry into effect the mission with which he had been charged, and the success of which would have been of the greatest importance to the Milanese, having indeed only been got out of Brescia by the authorities there throwing dust in the eyes of the mob, M. de Hübner returned to his captivity, from which he was not released till the 4th of July. On that day he was informed that he would be conducted, along with other hostages, and protected by a good escort, to Coire. He protested against the escort, and begged to be allowed to travel in his own carriage, unattended by troops. "But," said the Duke of Litta, "we cannot send a separate escort with you, and your life will be in danger." "My life," he said, "will be as safe as possible; but I would advise *you* not to traverse the country between this and the Swiss frontier unprotected by soldiers." After letting fly this Parthian arrow, as he called it, which he discharged knowing that the peasantry along the frontier he was about to cross were well affected to the Austrians, he started next day, and was soon in neutral territory.

The reflections with which M. de Hübner closes the account of his sojourn at Milan in 1848 are a curious illustration of the charm which Italy has ever exercised over the Trans-Alpine mind. Neither the calamities of his country, nor his own individual troubles, availed to make him feel bitter against the race which had been the immediate cause of both. Of course he could not believe at that time in a unified

Italy. How many did forty-three years ago? In a paper, however, drawn up in 1890, he fully admits that in all camps, Conservative and Liberal, papal and free-thinking, throughout the peninsula, there is now a determination that Italy must be one. In that paper there is hardly anything, if, indeed, there is anything at all, with which English Liberals would not agree. Even upon the question of the sovereign power of the papacy, so thorny a subject for one who is at once, like M. de Hübnér, an experienced statesman and a convinced Catholic, his language is most moderate and reasonable. Surely some compromise, which would not in the slightest degree interfere with either the prestige or the interests of Italy, will sooner or later be within the reach of diplomacy. "Only through the spaces of time do we come to the centre of opportunity."

It would be unpardonable, before concluding our notice of the first of the two acts into which "*Une Année de ma Vie*" is divided, to omit calling attention to the numerous very beautiful little pictures which are to be found scattered through it in great abundance. Such are the description of the peasant girl transformed into a *Hecuba* at p. 76, of the parting of "*Hector and Andromache*" at p. 105, of the "*Madonna of the needle*" at p. 191, of the group of ladies at *Brescia* at p. 146, and of the sunrise on *Monte Rosa* at p. 232.

The curtain rises again on July 22, by which date M. de Hübnér found himself back in Vienna, whither the Archduke John had just come from Frankfort to open the Reichstag, and where a ministry composed of well-intentioned but not for the most part strong men was engaged in governmental functions mocked by the name of power. Sketches are given, which seem very life-like, of its leading members—of Bach, well and not too favourably known in later days; of Latour, destined to a tragic end; of Wessenberg, who was in charge of Foreign Affairs; and of Krauss, who presided over the Finances. The last two were the comic personages of the drama; and M. de Hübnér gives, in describing their works and ways, free course to the humour which, as we have said, never deserted him, even in the darkest hours.

Alarmed by the utter want of a ruling mind in the councils of the Emperor, the young diplomatist took a bold step, one which had eventually a most favourable influence on his own career, and which extricated Austria, not for long indeed, but still for an appreciable time, from the most imminent peril. He wrote to Italy, and urged Prince Félix Schwarzenberg to come to Vienna.

Meantime, revolutionary things took their natural course in that city. Confusion grew ever worse confounded. There were riots everywhere. In the brief space of six months the capital, which had so long slept under absolute rule, had passed from being in the hands of men whose political temperature was that of 1789, into those of others whose political temperature was that of 1793. At the very end of the month of September, M. de Hübnér was sitting in his room when a man suddenly appeared in the

doorway, whose features, as it was rather dark, he could not at first distinguish. The figure advanced—it was Prince Félix Schwarzenberg. He did not come an hour too soon for his friends. On the 6th of October the revolution had passed into the stage of armed insurrection; Latour was murdered, and Vienna was divided into two hostile camps.

Presently the Emperor and his family, escorted by a large body of troops, left Schoenbrunn and retired upon Olmütz. Prince Félix Schwarzenberg was summoned thither; but being the soul of the resistance to anarchy at Vienna he could not immediately obey the summons, and sent M. de Hübnér, who thoroughly shared his ideas as to what had to be done in the present and immediate future.

There follows a very curious account of what befel in the capital of Moravia and on the route thither. An extraordinary situation it was. The Government had survived the insurrection of October 6, but consisted only of two members, Wessenberg, who was at Olmütz, and Krauss, who was at Vienna, engaged in giving a little money to the Revolutionists to enable them to kill the Imperialists, and a much larger amount to the Imperialists to enable them to kill the Revolutionists.

The real minister, though absolutely without any legal title, was Prince Félix Schwarzenberg. His power, however, was interfered with by many outside influences, and, not least, by his near connection, Prince Windischgraetz, who was the head of the northern army, and who, full of excellent qualities as a soldier and a man, belonged to the race of those who, in politics, learn and forget nothing. Prince Félix Schwarzenberg, on the other hand, though not brought up to politics, and profoundly ignorant of most of the things which a statesman ought to know, had, at least, some comprehension of the world in which he was living, and saw that a return to the old state of things, pure and simple, was out of the question. It is the curse of such a system as that which prevailed in Austria, from the accession of the Emperor Francis onwards, that it rears those employed in the government to be mere clerks, turns the whole of the nobility into soldiers or idlers or both, and throws the professional and mercantile classes into chronic if silent opposition. When the hour of calamity comes, it is fortunate, indeed, if there is some strong-headed, strong-handed man to take the reins; for it is at least better to have a driver who drives indifferently, than to leave horses who are running-away to their own sweet will.

Before, however, the political knowledge, or want of it, in either of the two brothers-in-law could be a matter of much importance, Vienna had to be taken, and Prince Windischgraetz was the only person in a position to do that. M. de Hübnér was accordingly despatched to Prague to urge his marching on the capital. This he was quite ready to do, even with the slender force which was at his disposal, still more so when that force rose, as it shortly did, to the dimensions of a considerable army. The question was: Could the Imperialists arrive

in time to prevent the Hungarians, who were advancing rapidly from the eastward, joining hands with the revolutionary party at Vienna. Fortunately for the Imperial cause, the Ban Jellachich defeated them in an action fought so near that its varying fortunes could be followed with more or less accuracy—with less it would seem rather than more—by the insurgent commander Messenhauser, from an observatory in the spire of St. Stephen's. Their defeat enabled Windischgraetz to pursue his operations undisturbed; and on the 31st the city surrendered, after having tasted, happily only for a few hours, the delights of a reign of terror, and of having been within an ace of losing some of its finest buildings by the fire of the Imperial batteries. Anything more curious than the description of the headquarters at Hetzen-dorf, of the deputations which came to the Marshal from the town, of the gloomy dinner while Vienna was burning, and of the delight when its destruction had been averted by a fortunate storm, it would not be easy to find. We would particularly direct attention to the narrative which M. de Hübnér gives of his saving the life of a young man, who was about to be shot on the 1st November for having been engaged in giving money to corrupt the troops. He does not mention the fact, but it is an open secret, that that young man who so narrowly escaped death lived to be Prime Minister. Strango, indeed, has been the fate of the Emperor Francis Joseph, in many ways, but in none surely more than this—that he has had two successive Prime Ministers, M. de Haymerle and Count Andrassy, who, belonging to totally different races, and to totally different positions in society, had, under totally different circumstances, both been in early life condemned to die by his own tribunals, or by those of his immediate predecessor.

The remainder of the volume, although instructive in the highest degree to those who have followed the marvellous series of transformation scenes which have been presented to the world by the fortunes of the House of Hapsburg since the collapse of the Viennese insurrection in 1848, will be perhaps less attractive to the casual reader than its earlier portions; but he will find, amid much purely political matter, many passages of more general interest. Such are the description of the ceremonies which took place at the abdication of the Emperor Ferdinand and the accession of Francis Joseph; of the last interview between Baron Josika and Prince Félix Schwarzenberg, in which the former tried in vain to combat the ill-considered plans of his friend about Hungary; and of the mission of M. de Hübnér to the camp of Windischgraetz just before the battle of Kopolna. All through this period M. de Hübnér—while agreeing completely with the foreign policy of Prince F. Schwarzenberg, and agreeing also with his views in internal politics, as against the ideas of men who had been more influenced by constitutionalism as it was understood under Louis Philippe—was strongly opposed to the centralising projects to which his chief had become a convert, and which were most unwisely persevered in, till the salutary catas-

trophy of Königgrätz nearly eighteen years later gave to Deák and the reasonable portion of the Hungarians all, and more than all, they had ever asked. But alas! how much blood, how much treasure, and how bad a lesson as to the respective merits of violence and of policy, would have been saved if these ideas had prevailed a year before, instead of more than half a generation after, the outbreak of the Hungarian War!

The book closes with an account of the conversation which took place between Prince Schwarzenberg and its author, when he was told, to his own infinite surprise, that he was to be sent, not as he had asked, to Rio, but to Paris. To Paris he went, and passed there, as the representative of Austria, ten years, which must have been about as anxious as any which ever fell to the lot of a diplomatist. We should all gain much knowledge if only it were possible for him to tell their story, but alas! that must not be. "Scribantur hæc in generatione altera." Here and there the veil has been lifted, as, for instance, near the commencement of Senior's conversations with M. Thiers, where the latter describes the excitement of Louis Napoleon, when the news of the battle of Novara came to Paris, and when a rupture between France and Austria seemed only a question of hours. It will be seen from the conversation alluded to at the commencement of this paragraph that even Prince Félix Schwarzenberg, bold as he was, thought that a quarrel with France might, in the year 1849, mean the fall of the Austrian monarchy.

That the view of the events of the Year of Revolutions which commended itself at the time to M. de Hübnér should be the same as that which then or now was taken or could be taken by English politicians, who suck in constitutionalism with their mother's milk, was not to be expected. The marvel is that, having regard to all the circumstances of that tremendous time, he can be so merciful to his enemies, even to Lord Palmerston! He would not deny that the maintenance of the system of organised do-nothing, which was the leading characteristic of Austrian statesmanship for a long time previous to 1848, was quite hopeless; but he would urge, more strongly than we should, the great difficulties that had been caused in one direction by the over-precipitate legislation of Joseph II., in another by the natural horror inspired by the French Revolution. Undoubtedly, too, he would pass a far more lenient judgment upon some persons whose names figure in these pages than the historian looking at them "sine ira et studio" will ultimately do. We cannot, however, expect contemporaries to write "sine ira et studio." They would give us very bad materials for history if they did.

He must indeed be fanatically attached to his own opinion who, however much he may differ from the conclusions of M. de Hübnér, can resist the charm of this most fascinating work. We have already admitted the impossibility of the writer's giving to us the history of what befel him in the decade so fateful to his country which immediately followed the year he has described; but a man whose recollections go back to the time

when Montalembert and Lamennais went to Rome, about the affair of the *Avenir*, must have a good deal to tell of the years between 1832 and 1848, without trespassing upon departments of the *haute politique* as to which his lips are sealed. Possibly the same may be the case even with regard to the time which intervened between the outbreak of the campaign of Magenta and the first of those charmingly described journeys which, taken in connexion with his diplomatic, ministerial, political, and social experience, give him a better right, so far as we are aware, than any living man, to say with the Ulysses of Tennyson:

"I am become a name;
For always roaming with a hungry heart
Much have I seen and known; cities of men
And manners, climates, councils, governments,
Myself not least, but honoured of them all;"

If the writer of the *Life of Sixtus V.*, of the *Promenade Round the World*, of *Fifty Thousand Miles through the British Empire*, and of the volume under review, has the happy idea of taking his contemporaries once more into his confidence, he may at least be well assured of their gratitude.

M. E. GRANT DUFF.

Canada and the Canadian Question. By Goldwin Smith. (Macmillan.)

MR. GOLDWIN SMITH'S work was passing through the press just as the Canadian Dominion was in the turmoil of a general election. Some of the material of which it is composed and most of its leading ideas have appeared in other shapes. But considering the time chosen for its issue, it may, without offence, be described as a political pamphlet of three hundred pages. Yet it is a pamphlet which no publicist can neglect without the risk of remaining in ignorance of much which he ought to know. Even the "general" reader, whose interest in Canada is of a milder type, will be repaid—in spite of the absence of an index—for the time occupied in its study by the vigorous English and the trenchant criticism, which are the characteristics of this book, as they have been of all Mr. Goldwin Smith's previous writings. Unfortunately, however, for its present persuasiveness, it comes a day behind the feast. The arguments for the adoption of a particular course are clear, if not conclusive. Its arraignment of the Tory party in British North America is more truthful than polite; its demonstration that Canada ought to insist on unrestricted free trade with the United States, even though political union should follow, is so very logical that it is complimentary neither to the Canadians nor to Mr. Goldwin Smith's powers of advocacy to know that the people to whom these pages are addressed have declined to accept his advice. Yet they have decided to support Sir John Macdonald and Protection. Even the provinces which, according to Mr. Smith, would have been most likely to vote in a contrary direction, have returned the largest majority against any steps which might lead to their absorption in the neighbouring Republic.

The thesis which Mr. Goldwin Smith undertakes to defend is that the physical map of Canada does not correspond to the political map, and that the real difficulty of the Canadian question arises out of this lack of correspondence.

"The political map displays a vast and unbroken area of territory, extending from the boundary of the United States up to the North Pole, and equalling or surpassing the United States in magnitude. The physical map displays four separate projections of the cultivable or habitable parts of the continent in the Arctic waste. The four vary greatly in size, and one of them is very large. . . . The habitable and cultivable parts of these blocks of territory are not contiguous, but are divided from each other by great barriers of nature, wide and irreclaimable wildernesses or manifold chains of mountains. . . . Each of the blocks, on the other hand, is closely connected by nature, physically and economically, with that portion of the habitable and cultivable continent to the south of it which it immediately adjoins, and in which are its natural markets. . . . Between the two provinces of Old Canada, though there is no physical barrier, there is an ethnological barrier of the strongest kind, one being British, the other thoroughly French; while the antagonism of race is intensified by that of religion. Such is the real Canada. Whether the four blocks of territory constituting the Dominion can for ever be kept by political agencies united among themselves and separate from the continent of which geographically, economically, and, with the exception of Quebec, ethnologically, they are parts, is the Canadian Question" (p. 3).

The nine chapters which follow are devoted to the most lucid sketch which has yet been written of the political, social, and commercial relations of the Canadian provinces, and to the history of the country prior to confederation. With this portion of Mr. Goldwin Smith's volume no one except an extreme Chauvinist or a fanatical partisan can find serious fault. The same may be affirmed, though in a more qualified form, of the strictures he passes on the present form of government. It has not been an entire success, any more than the constitution of the United States has been; and he must have been a very ignorant optimist who imagined that there would not have been hitches here and there, and friction all along the line, until the discordant elements of rival little monarchies, such as the colonies actually were, got into working order. It took much longer for the United States to get over the colonial jealousies, if indeed they have ever done so. The "government by corruption"—the catching of votes, and the shutting of mouths by building public works where no public works are required, the low political morality which pervades all parties, the pandering to ignorance, or to powerful capitalists who provide election funds, by a needlessly high tariff, the entire lack of consistency when the Jesuit vote is to be angled for—these and a score of other blots in the system in vogue we admit and deplore, though it is not easy to see what other kind of management is possible if the Ottawa authorities are not prepared for disruption or at least for a subdued civil war. But similar drawbacks are notorious in the Australian colonies, and are part and parcel of the "machine" rule in the United States. They are known even nearer home.

Nor is there a word to be said against Mr. Goldwin Smith's contention that Imperial Federation of the kind advocated by theorists is only a dream. It might have been possible in earlier days, but our colonies grew up under no kind of fixed policy. Unlike Greece and Rome in ancient times and Spain and France in more recent periods, we never formulated any conditions for these dependencies, and perhaps to this freedom from leading-strings their lusty prosperity is now due. Everything in their growth was make-shift; opportunism was the only rule in Whitehall. Loyalty of the lip-service sort is as plentiful in Canada as in Australasia, especially among the agents sent to negotiate a loan, or the politicians who have hopes of an order. And, of course, there are always a stream of new-comers who are often more English than their relatives "at home." Among the vast number of colonists, however, there is no such feeling. They are full, no doubt, of a sort of "God-save-the-Queen"—"Rule-Britannia" kind of sentiment, which will not bear the strain of a call for the exercise of self-sacrifice, or as was the case in the old American Colonies—and Virginia was more loyal than any Canadian province until King George's statues were cast into bullets—a feeling that they are being made a convenience of by the mother country. This in a small way is what the Newfoundlanders are at present thinking, and what on a larger scale has more than once been the outcry of the Canadians during the negotiations between England and the United States on fishery questions.

Annexation is, nevertheless, an entirely different matter. The Canadians have pronounced against it, for the simple reason that they can if they choose gain all the advantages of being members of the Union without any of the drawbacks attaching to that connexion. Every geographical difficulty which Mr. Goldwin Smith signalises as a barrier to the political unity of the Dominion applies more or less to the United States. Alaska is entirely detached from the rest of the Republic territory. Dreadful deserts intervene between Texas and part of Arizona. The State of Nevada is, except for its rapidly exhausting mines, a mere sage-brush waste. The Great Basin is little better. Western Oregon is separated from the small portion of fertile land in Eastern Oregon by lava plains; and every range which divides our Pacific province from the rest of Canada acts as a wall of an even more formidable character between the Pacific States and those to the east of the Rocky Mountains. Still, many of these barriers will vanish as settlement proceeds, and in Canada the "wildernesses" which so appal our author must in time become dotted with farms, and logging camps, and mines. Two centuries ago there were worse obstacles between the North and the South of Scotland. Ethnologically, the Republic is quite as diversified as the Dominion. Louisiana is practically French and Roman Catholic. Utah is peopled by citizens nearly all of foreign birth and adherents of a persecuted creed. New Mexico, Lower California, and much of Florida and Texas are Spanish and

Roman Catholic;—all over the country the Irish and Italian feuds and the outcry for sectarian education are giving sore anxiety to thoughtful men; while the gigantic negro difficulty—almost as bad as slavery—which needs to be faced in the near future is not one of the perils which overshadow Canada. Nor does the political system and the antiquated constitution of the United States attract the Canadians. Mr. Goldwin Smith affirms the little provincial governments to be costly. But the State governments are quite as dear; while the impossibility of the people bringing an effective influence to bear upon their rulers except once in four years, and then only in so clumsy a fashion that a president may have a majority in the electoral college and yet be 175,000 in the minority of a popular vote, cannot be regarded as an improvement on the Canadian plan. Canadian opinion would, in any case, be swamped by that of the elder American States. There is, we know, a perfectly good feeling between the two peoples. But the Northern Dominion has no desire to unite with the Southern Republic; and the French Canadians are assuredly not likely to forsake a country in which their faith is endowed, and the influence of their clergy (secured by treaty) greater than that of the church of the *ancien régime* in France. This the United States could not tolerate.

Mr. Goldwin Smith advocates unrestricted commercial union, allowing the political one to come if need be. Theoretically, free trade all over the American continent is admirable; practically, the Canadians, after having once tried it with the United States, do not wish it, knowing that, with few exceptions, they would gain little by it. For the compact would cut both ways. They might have a market over the border. But the men over that border would also invade their market, with a result which would be ruinous. At best the Canadians could only deal with their immediate neighbours in the United States, and even then they would require to compete with the local farmers and manufacturers. They could not send to Colorado, or to Oregon, or to California. These parts of America are further from the Ontario producer than Great Britain, and the cost of despatching goods thither, even were there a large market, is infinitely greater than despatching them by sea to the unlimited buyers of London or Liverpool. We are therefore convinced that, though both are as yet not within the bounds of practical politics, independence will come before annexation, though neither ought to be possible unless the wisdom of English statesmen is reduced to a minimum.

The colonies have much to gain from us—defence, credit, influence; we have absolutely nothing to get from the greater number of them. For they buy from us only when we can sell cheaper than our rivals, and they would do so in any case. They are glad of our surplus population when it suits them, just as they would be glad of them under any circumstances; but the self-governing colonies keep their official patronage for their own sons. On the contrary, these dependencies are our weakness. For assuredly, in war-time the

necessity of detailing fleets to protect them would weaken our home defences; and there is no manner of doubt that, were it not for the covert threat of squeezing Canada, the United States would long ere this have been taught the meaning of a more "spirited foreign policy" than that which they have begun to regard as the normal temper of the British Lion. Mr. Goldwin Smith's thesis must, therefore, be considered inherently weak, though his defence is strong, his information ample, if one-sided, and his entire work as able as any of the previous volumes with which he has enriched our political literature.

ROBERT BROWN.

The Memoirs of Alexandre Dumas (Père).

Being extracts from the first five volumes of "Mes Mémoires," selected and translated by A. F. Davidson. (W. H. Allen.)

"For the rest the translation is a perfectly literal one," says Mr. Davidson, speaking of the manner in which he has "Englished" Dumas's Memoirs, or rather such portion of the Memoirs as are contained in these two volumes; and it may be a question whether the literalness is not almost too literal. In such phrases as the following, for instance, the English is scarcely more than a varnish—the grain of the French is distinctly visible beneath:

"The dogs howled piteously. They understood, poor animals, that in this kind of chase there was nothing for them to do." "Some decision by the University prevented him from keeping a college at his own house; he was, however, allowed to take pupils in the town." "Ah, me! the kings of 1827, like those of 1848, surely ought to have known that it is homage which blinds, and lessons which enlighten." "Imagine ruins inhabited by a people impassive and taking everything as it comes—a people who, pipe in mouth, have no other occupation than to lounge on a bench in front of their doors, and who pass their day like this, troubling themselves very little about their families or children." "The hairdresser required me for ten minutes."

And similar passages might be quoted *ad infinitum*.

No doubt Mr. Davidson has precedent. The standard of translation among us is not high. Few things are rarer than to find a book rendered into English artistically, and so as to give literary pleasure; and, it may be added, few things are a surer test of a feeling for style than the quality of a writer's translation. When Matthew Arnold quotes a passage from a foreign author, he takes the trouble *to-re-think* it into English, to put it before the reader in such a form as the original author would have adopted if writing in English. The many passages of translation in Mr. John Morley's studies of France in the eighteenth century are far less perfect. And the French, who, in what may be called the hack-work of literature, are distinctly better craftsmen than ourselves, translate, as a rule, to much better effect.

Lest these observations should seem harsh, let me hasten to add that in the difficult task of selecting the material for these volumes, and more especially in welding that material together, Mr. Davidson has shown discretion

and skill. He had, in truth, no light task to face. Alexandre Dumas, the great Alexandre—who was it called him one of “the forces of nature”?—had a large way with him, and not only—coadjutors helping—threw off book on book, but amplified his books, made them voluminous, comprehensive, all embracing. His *Memoirs* are in two series. They fill many tomes. They treat of things innumerable. They are historical, literary, biographical, autobiographical. They are the memoirs of Dumas's contemporaries as well as his own. They are the memoirs of his time. To pick and choose among them, keeping this and rejecting that, and yet not to convey an impression of fragmentariness, required some knowledge of the literary joiner's art.

That Mr. Davidson's selection will entirely satisfy those who care for the original *Memoirs* is scarcely to be expected, inasmuch as tastes differ. For myself, with all admiration for Dumas the romancer, I confess to having no excessive belief in Dumas the historian; and I should willingly have spared the relatively numerous pages in these volumes devoted to the career of Dumas's father, in order to have more of Dumas's own career. “It would be quite unpardonable,” says Mr. Davidson, pleading for the pages in question, “to omit altogether as graphic and thrilling a story as can be found anywhere in the range of the author's writings.” But here there is surely room for a *distinguo*. When reading of the three immortal Musqueteers, and d'Artagnan the invincible, or of Monte Cristo and his marvellous adventures, one need never be troubled at all by questions of literal accuracy and verisimilitude. Thanks to the narrator's admirable skill and lucidity, his power of grouping and marshalling facts, his unflagging good spirits, his bright qualities of style, and last, not least, his belief in his own creations—thanks to these, the reader is hurried along, interested, breathless; conscious, perhaps, when he comes to think about it, that what is passing before his mind's eye is only as the “baseless fabric of a vision,” yet still, for the time, more than content to take it all as a reality. When, however, Dumas is professing to record sober facts about his father, the “Horatius Coeles of the Tyrol,” it is not quite possible to maintain the same attitude of mind; and I confess that a doubt sometimes haunts me as to how far General Dumas's feats of arms, like those of General Hugo, may not owe much of their lustre to a son's imaginative power. Be that as it may, I prefer Dumas as the narrator of his own career, and that of his immediate contemporaries.

Here, with occasional doubts perhaps, one may enjoy his great gifts as a storyteller more freely. How, with the scantiest of education, and no advantages of birth or patronage, he battled his way to the front, and, as the author of “Henry III.,” stood forth as a leader and pioneer in the great Romantic movement, will be found recorded in the pages of this book. As to his fame, it may be said, on the whole, to have fared well in England. True, Mr. Percy Fitzgerald, some eighteen years ago, wrote of him a bio-

graphy which is not a good biography—which Mr. Andrew Lang, indeed, does not scruple to describe as “one of the worst books that ever was written.” But Thackeray in the past did him almost obeisance; and now, in the present, his praises are uttered, and with fervour, by such influential “pressmen” as Mr. Andrew Lang and Mr. Henley, and by a writer so popular as Mr. Louis Stevenson. His work is surface work, if you like, but with what excellent qualities, and how effective!

FRANK T. MARZIALS.

Studies in Jocular Literature. By W. Carew Hazlitt. (Elliot Stock.)

MR. HAZLITT's last addition to “The Book Lover's Library” is pleasant reading. Although there is little that is new in it, there is much which we must all be grateful to him for resuscitating. The author is himself struck by the want of originality displayed by the compilers of jest-books and by other professional joke-wrights. Like children and savages, who want the same stories told with as little variation as human frailty permits, the jest-loving public seems to resent all serious innovation in its facetiae. The same venerable repartees are fathered on classic Greeks and mediæval Italians, on eighteenth-century abbés and nineteenth-century reviewers. Tarleton and Swift, Sheridan and Sydney Smith, have been in turn putative fathers of jests which will in due time be transferred to professional pun-makers still in the flesh; and how a new Master of Trinity must shudder at the accumulation of *bon-mots* of which the next generation of undergraduates will at his expense relieve the memory of Whewell and Thompson! *Mutato nomine, de te fabula narratur.*

Some of Mr. Hazlitt's parallels in chaps. ix. and x. are very interesting. There is as much to be learned from variants in this department of study as in other branches of folk-lore; but the likeness sometimes seems less clear than our author imagines. He occasionally appears too much inclined to make the matter of the joke the determining factor rather than the form. But the form is usually of the essence of the joke, while the matter is a mere accident. Thus the Millerism, “‘When did you ever see such a winter?’ ‘Why, last summer,’” can hardly be described as an anticipation of Lamb's (or Coleridge's or Byron's), *not* that “summer has set in with its usual severity.”

Mr. Hazlitt is struck with the marked change in the style of jests and *bon-mots* which took place in the time of the early Georges. He holds that

“The appearance of *Joe Miller's Jest*, or the *Wit's Valet-mecum* under fortuitous [*sic*] circumstances, in the time of George II., marked the new era. It was as if the jest-books of all prior epochs had been gathered unexceptionally up, and burned by the common hangman, to let the British community start afresh. So broad was the line of demarcation between the old régime and the new; and it is not difficult to see that this truly marvellous change is an evolution from novel phases and developments of social life, and was just what was to be anticipated. In this special way, perhaps, a more complete alteration had taken place since the

Tudor period than has taken place between the last century and the present one; or, in other words, in the last hundred and fifty years. We cannot believe that an ordinary reader of Henry VIII.'s days would have had any relish or value for the fun of the earlier half of the eighteenth century; but an ordinary reader of the present time perfectly appreciates the anecdotes and humour—not exactly of the primitive lean *fasciculus* to which *Joe Miller* was at the outset limited, but of the wits who flourished under Walpole and side by side with Pope. This group of men—authors, actors, dandies, and *bons viveurs*—is the lineal ancestry of Sheridan and Matthews, Sydney Smith and Jerrold; and *mutatis mutandis*, the form, temper, and tone of the school have suffered no material variation, since its first rise into an immortal existence under the auspices of Miller within the genial precincts of Clare Market” (pp. 151-2).

Allowing for the obvious exaggeration this seems true in the main. But the change is dated too late. A little further on our author admits that the modern school goes back to the era of the Restoration; and it was no doubt the influence of French wit, then first felt, that drove out of fashion the somewhat crude and clumsy facetiae of the earlier type. The wit-combat in Shakspeare's comedies is related to the neat repartee in Molière's as a bout at quarter-staff is to a duel with rapiers. Brevity, neatness, precision, and polish became the qualities of the ideal jest during the latter half of the seventeenth century, and have continued so until our own time.

Mr. Hazlitt's book makes no claim to completeness of treatment; and many subjects which we might expect to find discussed by the editor of *Shakspeare Jest-Books* are left unnoticed. The suggestion of system and logical arrangement seems little better than a pleasant pretence. But while one readily forgives sins of this sort in a book of this sort, the reader has, I think, a right to complain of the constant omission of references.

F. RYLAND.

NEW NOVELS.

Urith. By S. Baring Gould. In 3 vols. (Methuen.)

Lady Delmar. By Thomas Terrell and T. L. White. (Trischler.)

A Winter's Tale. By Mary E. Mann. In 2 vols. (Bentley.)

Friend Perditus. By Mary H. Tennyson. In 2 vols. (Chapman & Hall.)

Lady Merton. By J. C. Heywood. In 2 vols. (Burns & Oates.)

Bellerue. By W. M. L. Jay. (Griffith, Farran & Co.)

Flower de Hundred. By Mrs. Burton Harrison. (Cassell.)

For King and Country. By Jane A. Nutt. (Sonnenschein.)

MR. BARING GOULD is always clever and striking, and he is both in *Urith*. But the book is a disappointment, being suggestive of febrile rather than of natural strength, or of the flogging of a jaded horse. As an historical novel, it is a decided failure—how great a failure, whoever chooses to compare the last volume with those portions of *Lorna Doone*

which cover in effect the same period, as well as deal with the same district of England, will promptly discover for himself. Then, and above all things, *Urith* is intolerably long. Mr. Baring Gould, indeed, seems to invent fresh villainies for his rather wearisome scoundrel, Fox Crymes, merely to eke out his three volumes. Yet there are strong characters and strong scenes in *Urith*. The heroine herself and her luckless rival Julian, although they are placed too often under the lime-light, are attractive in their way, and have no counterparts even in Mr. Baring Gould's large gallery of fiction. But little can be said of her lover and husband. He is contemptibly weak where he ought to be strong. In some of the minor characters, however, especially old Squire Clevedon, Luke, and (in spite of his interminable songs) Uncle Sol, the author is seen at his best. That is a genuinely effective scene, too, in which *Urith* saves her lover Anthony, and accuses Fox of attempting to murder him.

The writers of *Lady Delmar*, who appear bent on rivalling the co-partnership of Besant and Rice, have certainly succeeded in providing a highly seasoned dish of modern sensations and "ideas"—London ruffianism, a too accurate presentiment of a tragedy, a murder, a Scotch marriage, an heiress in spite of herself, the ways of modern "masherdom," the Russian "cause," the New Socialism, and English Liberalism of to-day—or, at least, of last night. *Lady Delmar* is neither realistic nor idealistic; it is altogether improbable and unmitigatedly melodramatic. That, however, is neither hero nor there, for the book is as clever as it well can be, considering the materials at the disposal of the authors. Lord Delmar, in his character of selfish aristocrat, is an unpleasant caricature; Jess, with a good democratic lover at her elbow, would never have taken to such a fellow. But his murder, happening at the same time as his election to parliament, is as good a bit of melodrama as has been provided in fiction for a long time. Boron, the wonderful lapidary, fanatic, and revenger of dishonour, and the good young democratic, could hardly be surpassed in their own lines. Altogether, *Lady Delmar* suggests, above all things, that Mr. Sims had better look to his laurels.

Murder—or, at least, homicide—and madness play their parts in *A Winter's Tale*, and there is in it the usual amount of love-making of different sorts. But it is a study of character more than a novel. As such, it is rather provoking than quite satisfactory, much less quite unsatisfactory. There are four notable portraits in it—Erica Birch, Barty, Harcourt, and Shadrach Bush—and one's duty as a reader comes in effect to spending half-hours with each in succession. It is rather unfortunate under these circumstances, however, that one should find the artist perpetually touching up her work. Yet this is what the author of *A Winter's Tale* is found doing, more particularly with Barty. In the early chapters he figures as a rather selfish young fellow of the class that read sporting newspapers, and always fancy women have designs upon them. But the story is not half through before he changes

into a muscular and lovable Christian of the Kingsleyan type. Erica Birch, however, is a finished sketch of a thoroughly independent girl, who is conscious that she can command affection, and will not accept any inferior article that is offered her under that name; while the evolution of the selfish, dreaming, and sensual egotist, Harcourt, into a madman has nothing unnatural or strained about it. Some of the incidents in *A Winter's Tale*, too—in particular the death of Penelope, the hapless servant, and the escape of Erica from the mad Harcourt—are managed with a skill which speaks well for the future of the author of *A Winter's Tale* as a writer of sensational fiction.

It may at least be claimed for *Friend Perditus* that the plot is original, and as striking as it is original. John Sherwood, hurrying from India to England to seize and punish Lucien Guadella, who has robbed him of his good name, not to speak of property of another sort, which it is a fashion to consider as of secondary importance compared with a good name, is shipwrecked when on the point of hunting his quarry down. It is with difficulty that his life is saved. As things are, his brain is so seriously injured that when, thanks to surgical skill of a miraculous order, he comes nominally to himself, his memory is gone. He takes to his bosom, in the character of a step-brother, the man who has done him so much harm, and that man's mother as well. They for a time live upon him, plunder him right and left, and finally induce him to surrender to his enemy the girl on whom he has set his heart, and who has set her heart on him. *Friend Perditus*, as Sherwood is preposterously styled, gets disgusted with the character and conduct of his *quasi* mother, who is really a singer of the most vulgar music-hall order. The agitation he undergoes precipitates another physical crisis, as a result of which *Friend Perditus* is re-transformed into John Sherwood, and all ends well. The plot, in spite of its extravagant improbability, is admirably worked out from first to last. There are also several remarkable and finished portraits in *Friend Perditus*. The Guadellas, notwithstanding the brazen vulgarity of the mother, are good specimens of the modern conspirator class; while there could not be better foils to them than Ella Maclise and *Friend Perditus*'s good friends, the Halls. If it be conceded that everything that is artistic is also fair in fiction, then *Friend Perditus* must be accounted a strong and successful novel.

Lady Merton is full of Rome, and, more's the pity, theologically as well as topographically. It is written by a man who is evidently very much in earnest about the eternal controversies of which the Eternal City is still the centre, so much so that his book, able as it is in more respects than one, fails to achieve a success even in the sense in which Lord Beaconsfield's works are successful. And yet there are many things, even many incidents, in *Lady Merton* which, under other circumstances, would have gone to the making of a really good novel. There is the jealousy entertained for *Lady Merton* by her husband. There

is the mischief-making of *Lady Merton*'s step-daughter Vivy. There is the love-story of Nina and Hugh, complicated by the actions of Nina's hot-blooded Italian father. There is, above all things, the episode of the remarkably clever and well-drawn impostor the Hon. Frank Glyder. If Mr. Heywood would let theology alone, he would probably succeed in producing an effective story with a more than ordinarily effective plot. As things are, however, we seem here to be looking on, not at the play of life, but at the doings of an informal Oecumenical Council.

There is in *Bellerue* a good deal of the fine—and, worse still, of the "thoughtful"—writing, which somehow the inmates of rural parsonages are supposed to like. There are acres of such sentences as "The little city of Bellerue still sits among her green hills, with the beautiful river flowing at her feet, and the Delectable Mountains smiling upon her from over the way; and still she is fair." Apart from this—the leading feature of the book—it is a sufficiently readable story of a good young man whose career is a moral success, but who is socially ruined by the fact of his being falsely accused of a murder. This idea, however, is not original. So far as plot, at all events, is concerned, the novelty to be found in *Bellerue* lies in the virtual personation of the supposed murderer by a friend, who desires to clear the memory of the dead, and in the curious circumstance that the murder is not committed by the man whose interest it was to commit it. There is a great deal of love-making of the kind that is always more or less tinged with pathos, and that is always eminently "proper" if not even "genteel." For the rest, one would have liked Rolf Kenwood to have been a little more successful and a little less magnanimous. One feels, indeed, that Captain Murray would have made a better actor in the drama of *Bellerue* than Rolf Kenwood, instead of being merely a successful understudy.

Mrs. Burton Harrison gives, in *Flower de Hundred*, not so much a novel as a picture of a Virginia plantation and Virginian family life before and after the Civil War. Hers is not indeed the style of Thackeray, much less of the late E. P. Roe. Yet both are suggested in the one case by Mrs. Harrison's pictures of the Southern aristocracy—Miles Throckmorton recalls the Warringtons—and in the other by her representations of the blacks that lived and thrived on the plantation. The two leading figures in *Flower de Hundred* are Miles Throckmorton, a gallant young American soldier, who fights with Garibaldi for the unity of Italy, and with his fellow countrymen for the independence of the Confederacy; and his grandfather, whose affection for him is the sheet-anchor of his life. There is also an undercurrent of pleasant, though rather slow-going, love-making. How Miles contrived for so long to misunderstand Ursula's feelings towards him, it will puzzle most girl readers of *Flower de Hundred* to make out. The book is, however, so brightly written and so enjoyable in a variety of ways that it is not likely to be subjected to severe criticism.

For King and Country is, apart from the prologue and epilogue, neither of which is especially lively, a story of France in the period of the struggle between the Republic and La Vendée. The narrator is supposed to be a young French girl, full of piety and loyalty to the cause of monarchy in France, who ultimately finds shelter and chastened happiness in England. Her story is told in a sufficiently simple fashion, and the author aims at being historically accurate, in spite of a very evident bias. There are good things in this book, and one or two historical characters, such as Carrier on the one side, and Jean Chouan on the other, stand out in bold relief. But the story as a whole is portentously long and dull, and somehow leaves in the mouth the taste of Alison's *History of Europe*.

WILLIAM WALLACE.

SOME VOLUMES OF TRANSLATION.

The Inspector: a Comedy. By Gogol. Translated from the Russian by T. Hart-Davies. (Thacker, Spink & Co.) The clever comedy of the great Russian novelist Gogol is almost unknown among us; and therefore Mr. Hart-Davies, who has previously ventured into the field of Slavonic literature by his translation of the poems of the Dekabrist Rileyev, has done a service by bringing it to the notice of the English public. Clever, however, as it is, we doubt very much whether it will be appreciated in this country, the state of society which it describes being so unfamiliar to us. Moreover, as Mr. Davies confesses in the preface to his translation, the characters are throughout too abject and servile to enlist our sympathy, with the exception, perhaps, of Osip (Joseph), the servant, who is a kind of Slavonic Sam Weller. The two women (mother and daughter), Anna and Maria, are thoroughly uninteresting persons—vain and vulgar. It is a great pity that Gogol did not add some characters more capable of winning our regard. The best scene is that of the *dénouement*, when the postmaster finds by opening a letter that the young man who has been living at free quarters among them is not, as they supposed, the Government inspector (in disguise) sent to pry into their malpractices, but a dissipated young coxcomb, who has thoroughly enjoyed and amused himself at their expense. The old prefect (*gorodnichy*) bursts into fits of rage on finding how completely he has been duped, having even allowed his daughter to be engaged to the adventurer. In his wrath, however, he only reflects upon the number of people he himself has cheated, and the fact that he has never been cheated before. He remains a rogue to the last. The comedy has been of great service to the cause of Russian morality, in purifying official life, and exposing to merciless ridicule the peculations and corruptions of the *Chinovniks*. Hence the great pleasure with which, as we are told, it was always welcomed by the Emperor Nicholas. Other satirists have successfully ventured into the same field—to take only one example, Saltikov, who wrote under the *nom-de-guerre* of Stchedrin, and whose "Provincial Sketches" (*Gubernskia Ocherki*), published about thirty years ago, created a great sensation in Russia. Mr. Hart-Davies has given a faithful and spirited version of the comedy. Of course, here and there he has been obliged to employ English equivalents for the untranslatable expressions of the original, especially in rendering the copious terms of abuse showered on each other by the enraged dupes. Just as they are at the height of their disgust, a gendarme announces to them that a *real* official has just

arrived from St. Petersburg. We do not always care for the slang he has introduced, as when he makes the ladies say, "Lor', here's a pretty scene!" "Lor', fancy that!" &c. A short life of Gogol is added, which, however, the reader who knows nothing about him before will be found somewhat inadequate. Hardly anything is said about his wonderful novels and tales. Allusion is just made to the "Dead Souls," and that is all. We hope Mr. Hart-Davies will give a fuller biography on a subsequent occasion: he has already shown himself well acquainted with Russian literature.

The Dramatic Works of Jean Racine: a Metrical English Version by Robert Bruce Boswell. Vol. ii. (Bell.) Mr. Boswell has now translated six more of Racine's dramas—viz., "Bajazet," "Mithridates," "Iphigenia," "Phaedra," "Esther," and "Athaliah." Practice, we think, has improved his blank verse: it is still too monotonous, but rather less stiff than it was in vol. i. It cannot be said, however, that Racine bears the transmutation into English blank verse without losing much of such charm as he possesses. Platitudes often pass muster for ideas, when put neatly and antithetically; but the illusion vanishes with the loss of the original form. Here, for instance, is a speech of Theramenes (Phaedra, Act i., sc. 1.) when Hippolytus has avowed his affection for Aricia. The position is a poetical opportunity; the result is as follows:

"The gods, dear prince, if once your hour is come,
Care little for the reasons that should guide us.
Wishing to shut your eyes, Theseus unseals
them;

His hatred, stirring a rebellious flame
Within you, leuds his enemy new charms,
And, after all, why should a guiltless passion
Alarm you? Dare you not essay its sweetness,
But follow rather a fastidious scruple?
Fear you to stray where Hercules has wander'd?
What heart so stout that Venus has not
vanquished?

Where would you be yourself, so long her foe,
Had your own mother, constant in her scorn
Of love, ne'er glow'd with tenderness for
Theseus?

What boots it to affect a pride you feel not?"
&c., &c.

It is not poetry, but mere argument, untouched with sympathy, unsalted with humour. It is serious, yet how hard it is to take it seriously! and more charm of style than Mr. Boswell possesses is necessary to enliven its flatness. He is better in the choric and hymnal passages of "Athaliah"; e.g., Act i. sc. 4, p. 341:

"Oh! mount of Sinai, let the memory stay
Of that for ever great and famous day,

When on thy flaming head,
In clouds conceal'd, the Lord reveal'd
To mortal eyes a ray from His own glory shed.
Tell us why glow'd those lightning fires up
there,

Why roll'd the smoke, why peal'd in troubled
air

Thunder and trumpet's blare?
Came He that, back to primal chaos hurl'd,
On its foundations of past ages whirl'd—
Came He to shake the world?"

We suppose that the instinct of rhyiming "whirl'd" and "world" is ineradicable. On the whole, we doubt if Mr. Boswell's task be one that can be achieved, to any real satisfaction. To the tiro in French it will be useful, but Racine himself stands in the way of his translator's effort to make his dramas interesting.

Campion: a Tragedy in a Prologue and Four Acts. By Rev. G. Longhaye, S.J. Translated into English blank verse by James Gillow Morgan. (Burns & Oates.) We have never seen the French original, of which the little volume before us is a translation. Edmund Campion was one of the Roman

Catholic sufferers who have recently been beatified by Leo XIII. To those of his own body Campion and his fellows in captivity, torture, and death, appear as martyrs: Protestant Englishmen regarded them at the time as traitors to their Queen and country. Their true position has been fought over with all the zeal that religious controversy never fails to call forth. Whatever may be thought of the cause for which Campion suffered, no one will call in question who knows his history that he risked his life and met a tragic death from motives that to him were holy. His life lends itself easily to dramatic composition; but Father Longhaye, as seen through the medium of Mr. Morgan, is not a poet of a high order. The verse is smooth, and no passage falls conspicuously below what we have a right to look for; but the whole composition is stiff and ungainly. When we think of what a great poet might have made of a theme so noble, we close the book with feelings of disappointment.

The Plays of Euripides. Translated into English Prose from the Text of Paley. By E. P. Coleridge. Vol. I. (Bell.) Mr. Coleridge has accomplished almost the moiety of a very considerable task. There is a particular difficulty in rendering Euripides into English—a less difficult, perhaps, than some which beset the translation of Aeschylus and Sophocles, but a special difficulty for all that. Aeschylus and Sophocles are never prosy; their translator must somehow reach a high level of poetical expression, and keep to it if he can. But Euripides is often, perhaps intentionally, prosy; shall the translator attempt to rise and fall with his original, or to preserve an agreeable flight in a sort of temperate zone? Euripides is doubtless more modern in tone than his great rivals—shall his translator deal freely in modernisms or no? These perplexities may seem light; they are, in reality, very serious, as anyone may find by trying; and anyone who, like Mr. Coleridge, sticks to his task through nine plays has fought a brave fight, whether he wins or loses. To us it appears that the style of the translation has been insufficiently revised. One defect, into which it is easy to fall, but from which it is also quite easy to escape by revision, is the allowing blank verse to intrude into prose. This occurs constantly in Mr. Coleridge's version—e.g., when her father finds Glauce perishing in the folds of the fatal robe (*Medea*, ll. 1204-1221), and clings to her dying form,

"He strove to rise, but she still held him back;"
and if ever he pulled with all his might,

"From off his bones his aged flesh he tore."

This is just sufficiently versified to spoil it as prose. The defect is one which seems to beset Mr. Coleridge more in the iambic than in the choric parts; the familiar form of Greek verse pushes him unconsciously into English verse, while the irregular and less-familiar choric metres allow him to think them out in prose, sometimes in graceful prose—e.g., the closing part of the celebrated chorus in the *Alcestis* (ἐγὼ καὶ διὰ Μούρας, κ.τ.λ.) is well turned. Yet even here, at the opening of the chorus, the translator falls straight into verse cadences:

"Myself have traced the Muses' path,
Have soared amid the stars,
Have laid my hold on many a theme," &c.

On the whole, we think Mr. Coleridge is happier in rendering Euripides than he was in essaying Apollonius Rhodius, yet surely the latter was the easier task for prose! He must get clear of his poetical cadences, however, and especially of his lapses into blank verse, before he can climb into the rank of elegant prose translators; above all, he must avoid the language of newspaper reports—such as "to crave an

interview" (*Medea*, l. 775). So superior is he to the old prose versions that he might well revise his work more thoroughly.

Die Tragödien des Aeschylus. Verdeutsch von B. Todt. (Wien & Prag: Tempsky; Leipzig: Freytag.) Herr Todt, like many an enthusiast for his own subject, is perturbed to see and hear Philistines openly disregarding it, or minimising its importance to the world. With a sigh he repeats, "'Der Hellenismus,' sagt man, 'hat seine Arbeit gethan, der Hellenismus kann gehen.'" But, really, this only proves, if proof were needed, that there are prigs in Germany as well as in England. It is but fair to remember, in such cases, how much triumphant priggishness ere now has been exhibited on the other side. Undeterred, however, by the shrewd remark of a distinguished critic, "Uebersetzungen geben stets nur die Kehrseite des Teppichs," Herr Todt has given us the whole of Aeschylus's seven plays in a readable and, so far as we can judge, a fairly correct form. We regret his decision to avoid all rhyming, "welcher dem ganzen einen zee modernen Austrich geben würde," because, in our view, a translation into a modern tongue is in the main an appeal to those who do not know the original, not to those who do; the "modern tincture" of rhyme makes appeal to their sense of poetry, and unless this be aroused the "cold correctness" of the version will leave its readers cold too. Greek choruses, in fact, lose much of their swing and rhythm by being treated too cautiously. For instance, the notable commencement of the chorus in the *Agamemnon*, l. 681 (τίς ποτ' ἀνέλασεν κ.τ.λ.) is truncated by Herr Todt on the ground that the "Wortspiel" at the beginning cannot satisfactorily be reproduced in German. He actually omits the first eight lines, and commences:

"Helena, die mit dem Speer geworh'ne,
Aus des Ehegemaches feiner Hülle
Fuhr sie hin mit günstigem Hauch des Westes.
Aber viele schilddbewehrte Jäger
Folgt'n ihren unsichtbaren Spuren
Um zu landen am Simois-strande,
Wo die grosse blutige Völkerfehde
Ganze Stämme ins Verderben stürzte."

The faint-hearted omission of the earlier lines, and the lack of rhyme, combine to make the version heavy just where vigour was required. In narrative passages the translation seems to us much more successful. As an example, take the lines (*Prom. Bound*, ll. 351-362):

"Und auch den Sohn der Erde aus den Höhlen
Kilikien, den hundertköpfigen Typhos,
Das stürmisch-wilde Ungeheuer, beklag ich,
Den nun Gewalt gebändiget. Allen Göttern
Trotzt er und schnob mit grimmen Zähnen Mord,
Und blitzte Feuer aus den wilden Augen,
Als wollt er Zeus von seinem Thron stürzen!
Allein ihm kam das wackere Geschoss
Des Zeus herab, der flammensprühende Strahl,
Der ihn aus seiner stolzen Prählerai
Herabwarf. Denn getroffen in das Herz
Vom Donnerkeil ward seine Kraft zu Staub."

This is not by any means a perfect version; the last line is but a pale show of ἐφελαῶν καὶ ἐβροντῇσιν ὁδῶς. But, as a whole, there is of the breath of Aeschylus wandering over it, while in the choric parts we feel the translation laboured—often good in its way, but seldom adequate or inspired. Perhaps an exception should be made for the version (*Choeph.* ll. 585-651) of πολλὰ μὲν γὰρ τριφεῖ κ.τ.λ., the whole of which, and especially the close, is finely rendered.

HERREN GEORG KAIBEL and ADOLF KIESLING have already published (Strassburg: Karl Trübner) a translation into German of "Aristotle on the Constitution of Athens." It forms a neat little volume, printed in Roman type, of 108 pages, with no notes, except an occasional

date inserted in the margin. In their preface, the translators pay a compliment to the work of the original editor, who has certainly thus far received better treatment from foreign critics than from his own countrymen.

NOTES AND NEWS.

WHATEVER may be the ultimate consequences of the new American law of copyright, the first effect will undoubtedly be to produce a stagnation in the English publishing trade during the next few months. It is already announced that the promised edition of Mr. Ruskin's *Poems* will be held back until after July 1, when the American statute comes into operation; and we hear that the issue of Mrs. Sutherland Orr's *Life of Browning* will probably be delayed with the same object. Our popular novelists, who are destined to derive the largest benefit from the American concession, will also certainly be advised to wait. Altogether, May and June will be bad months for the trade.

MEANWHILE, the practice begun by Messrs. Macmillan—of issuing more important books at a net price, so as to defeat the discount system—is rapidly extending. It has been adopted by Messrs. Griffith, Farran & Co. in the case of the *Talleyrand Memoirs*, and this week by Mr. W. Heinemann with the *De Quincey Memorials*.

THE next volume to appear in the series of "Rulers of India" will be *Lord Hardinge*, written by his son, the present Viscount, who was private secretary to his father when in India. No *Life of Lord Hardinge* has hitherto been published, and the memoir in the *Dictionary of National Biography* contains a number of inaccuracies. Though the larger portion of the book is devoted to his governor-generalship (1844-48), several incidents of the battles on the Sutlej being now for the first time made public, a sketch is also given of his entire career—how he helped to raise Sir John Moore when struck down at Corunna; how he gave the order which decided the bloody contest at Albuera; how he lost his right arm when riding in company with Blücher at Ligny; his twenty-four years' membership of the House of Commons, when among other offices he held that of Irish Secretary; and his succession to the Great Duke as commander-in-chief. The volume is dedicated, by special permission, to the Queen; and it will be illustrated with a reproduction of the portrait by Sir Francis Grant, which is perhaps less well known than the picture by the same artist representing him, with his two sons, on the battle-field of Ferozshah.

The Outcast: a Rhyme for the Time, by Mr. Robert Buchanan, will be published by Messrs. Chatto & Windus next week. The statement that this poem is another rhymed version of the life of Christ is, as readers of the ACADEMY have already been informed, quite without foundation. The *Outcast* is Vanderdecken, the Flying Dutchman, who is taken as incarnating the Modern Spirit in all its worst features of materialism, cynicism, and pessimism. The opening scene of the poem is London, and the time the present. The book will contain, besides vignettes, about a dozen full-page illustrations by Peter Maenab, Hume Nisbet, and Rudolf Blind. It is dedicated, in a prose letter, to "C. W. S., in Western America;" and readers may recognise, behind these initials, one of the most charming and original writers America has yet produced.

MESSRS. MACMILLAN have in the press a new book by the Rev. Dr. Edwin A. Abbott, being a discussion of Cardinal Newman's essay on *Ecclesiastical Miracles*. It will be entitled, in

reminiscence of former works by the same author, *Philomythus: an Antidote against Credulity*.

Old Truths in Modern Lights is the title of a volume of sermons by the Rev. Prof. Bonney, which Messrs. Percival and Co. will publish next week. This volume comprises the Boyle Lectures for 1890 on the conflict of science and theology, together with other discourses bearing upon questions which at the present time are exercising the minds of thoughtful Christians.

THE Rev. Dr. Samuel Kinns, author of *Moses and Geology*, has in the press a companion volume, to be entitled "Graven in the Rock": or, the Historical Accuracy of the Bible confirmed by reference to the Assyrian and Egyptian Monuments in the British Museum. The book will be illustrated with a portrait of Sir Henry Rawlinson, and 170 other engravings. The publishers are Messrs. Cassell & Co.

MR. FISHER UNWIN has nearly ready for publication *The Sinless Conception of the Mother of God*, by the Rev. Dr. Frederick George Lee, with a preface by the Very Rev. Father Caesar Tondini De Quarenghi, Barnabite.

MESSRS. LONGMANS will publish in a few days *The Memoirs of the Tenth Hussars*, historical and social, by Colonel R. S. Liddell, with portraits and coloured illustrations by Mr. Oscar Norie.

MR. JOHN LANE—whose bibliography of Mr. George Meredith has recently earned the gratitude of bookmen—is engaged on a bibliography of the books illustrated by Mr. Walter Crane. Mr. Lane would be glad to hear from collectors of Mr. Crane's works—care of Mr. Elkin Mathews, Vigo-street.

MESSRS. GRIFFITH, FARRAN, OKEDEN, & WELSH are about to publish a shilling edition of the well-known *Household Prayers*, prefaced by the late Bishop Wilberforce.

A new and enlarged edition of *The Second-hand Booksellers' Directory* will be issued by Mr. Elliot Stock next week.

A FIFTH edition of *Mademoiselle Ise* is now in the press.

Paper and Press, a trade journal of Philadelphia, is about to publish a series of illustrated sketches on "Leading London Papers and their Editors," by Mr. W. Roberts. The first three will deal with the *Pall Mall Gazette*, the *Saturday Review*, and the *Daily Chronicle*.

IN next week's number of *Cassell's Saturday Journal* will be commenced a sensational story entitled "By Right, not Law," by Mr. Robert H. Sherard, illustrated by Mr. J. Finnemore.

THE Rev. John Owen, rector of East Anstey, will deliver a lecture at the South Place Institute, Finsbury, on Sunday, April 19, at 4 p.m., upon "Skeptics and Skepticism."

THE next meeting of the Library Association will be held in the Clapham Public Library, on Monday, April 13, at 8 p.m., when a paper on "The Formation and Working of the Library" will be read by the librarian, Mr. J. Reed Welch.

THE next meeting of the Ruskin Society will be held at the London Institution, on Friday next, April 17 (instead of April 10), when Mr. Andrew M. J. Ogilvie will read a paper entitled "A Review of Mr. Ruskin's Political Economy."

MESSRS. MACMILLAN are now adding to their cheap re-issue of Miss Charlotte M. Yonge's stories, which they published in about thirty volumes a year or so ago, three historical tales then omitted, which, to many boys at any rate, are not the least popular of her works. These are *The Little Duke*, *The Lances of Lynwood*, and *The Prince and the Page*, with the

familiar illustrations, which now appear, to our critical eyes, to have more merit as woodcuts than as drawings.

A SUPPLEMENT of the *Journal of Education* is almost entirely devoted to the memory of the late Robert Hebert Quick, author of that standard treatise on "Educational Reformers," who died at Cambridge, under somewhat painful circumstances, on March 9. The Master of Trinity, Prof. J. R. Seeley, the Rev. J. Llewellyn Davies, with others, contribute impressions of the man and of the influence that he exercised upon all with whom he came into contact. We miss, however, any precise record of biographical facts.

PUBLISHING SOCIETIES.

THE Early English Text Society has sent out its last book for 1890, and its first books for 1891: Part I. of "The Old English Version of Bede's Ecclesiastical History of the English People," edited by Dr. Thomas Miller, of Göttingen, in two sections, (1) for 1890, and (2) for 1891; "The Earliest English Prose Psalter," edited from its two MSS. by Dr. K. D. Buehling, Part I: these for the Original Series. For the Extra Series, 1891, Part. III. of Prof. Züpitza's edition of "Guy of Warwick," from two texts, the Auchinleck and Caius MSS., has been issued.

THE Chaucer Society has also just issued a few of its texts so long in arrear: (1 and 2), a Ryne-Index to the MS. texts of Chaucer's Minor Poems, by Miss Isabel Marshall and Miss Lela Potter, with an Introduction by Prof. Skeat, both in quarto and octavo to match the Society's Parallel Text and One-Text editions of the Poems; (3) More Odd Texts of Chaucer's Minor Poems, from the Philipps and Bodleian Libraries, including a unique final stanza of the "Balade of Picke," edited by Dr. F. J. Furnivall; (4) a very prettily printed and bound "Chaucer Birthday Book," compiled and presented by Mr. Waechten, of Richmond.

The Wyclif Society has ready for issue its volumes for 1891 and 1892: Dr. R. Beer's edition of Wyclif's *De Ente Prædicamentali* and *XIII. Questiones* (1891); and Prof. Loserth's edition of Wyclif's *De Eucharistia* (1892). Mr. M. H. Dziewicki's edition of *De Blasphemia* is just finishing for 1893, and his edition of Wyclif's *Logica* and *Logicae Continuatio* for 1894 is part printed. The Society sadly wants fresh subscribers.

UNIVERSITY JOTTINGS.

THE senate of Glasgow University have selected two of their former professors—Prof. R. C. Jebb, and Prof. John Nichol—for the honorary degree of LL.D., at the public graduation ceremony on April 24, which closes the annual session. Among those upon whom the degree of D.D. is to be conferred, we may mention the Rev. Joseph Agar Beet, professor of theology at the Wesleyan College, Richmond.

PROF. KARL PEARSON will deliver a further introductory course of four lectures at Gresham College next week on Tuesday, Wednesday, Thursday, and Friday, at 6 p.m., dealing with the geometry of motion, matter and force, and the classification of the sciences, of which last a table is appended to the syllabus. The lectures are free to the public, and the professor undertakes to answer written questions concerning difficulties that may suggest themselves to his hearers.

MESSRS. MACMILLAN will publish very shortly the Hulsean Lectures delivered at Cambridge last year by the Rev. J. Llewellyn Davies, upon "Order and Progress as involved in the Spiritual Constitution of Society."

THE programme is now ready of the fourth summer meeting of university extension students, to be held at Oxford during August. The inaugural lecture will be delivered on July 31, by Mr. Frederic Harrison, who has taken for his subject "A Brief Survey of the Thirteenth Century." New features are the classes to be formed for the study of Homer, Herodotus, and Dante in the original, under the guidance of Messrs. Chambers, Montague, and York Powell; a special class in constitutional history, under Mr. Noel Richardson; and practical work in science at the University Museum and Observatory. Prof. Percy Gardner and Miss Jane Harrison will deliver lectures on Homeric archaeology and the Parthenon marbles. In theology, lectures will be given by Mr. Gore, the present Bampton Lecturer; by Dr. Fairbairn, principal of Mansfield College; and by Dr. Gladden, Ohio; while courses have also been arranged, for the first time, at Manchester New College. The regular courses fall into four groups: (1) medieval history, literature, architecture, and economics; (2) physical science; (3) early Greek history and literature; and (4) miscellaneous.

THE current number of the *Library* (Elliot Stock) opens with a brief article by the late S. S. Lewis, which must have been almost the last thing that he wrote, for it is dated March 19, only twelve days before his sudden death. It gives an account of the library under his charge at Corpus Christi College, Cambridge, dealing specially with the fine collection of English and other MSS. bequeathed to the college by Archbishop Parker.

A NEW fellowship, with an endowment of 10,000 dollars, has been founded at Harvard, for research in connexion with the Peabody Museum of American Archaeology and Ethnology; and the first holder is a lady, Miss Alice C. Fletcher, who has already, as a special assistant of the Museum, done excellent work as an explorer among the North American Indians.

At the meeting of the Ethical Society, to be held at Essex Hall, Strand, on Sunday next, April 12, at 7.30 p.m., the Rev. Philip H. Wicksteed, principal of University Hall, will deliver a lecture on "Two Views of the Old Testament: the Traditional and the Organic." Among future lecturers are Prof. John Nichol, Prof. Henry Nettleship, Mr. Bernard Bosanquet, and Mrs. Bryant.

ORIGINAL VERSE.

TO MY WHEELED COUCH.

HYBRID of rack and of Procrustes' bed,
Thou thing of wood, of leather, and of steel,
Round which, by day and night, at head and heel,
Crouch shadowy Tormentors, dumb and dread;
Round which the wingless Hours, with feet of lead
For ever crawl, in spite of fierce appeal,
And the dark Terrors dance their silent reel;
What will they do with thee when I am dead?
Lest men should ask, who find thee stowed away
In some old lumber room, what wretch was he
Who used so strange an engine night and day,
Fain would I have thee shivered utterly;
For, please the Fates, no other son of clay
Will ever need so dire a bed as thee.

EUGENE LEE HAMILTON.

OBITUARY.

PROF. P. G. RJEDKIN.

Warsaw: April 3, 1891.

WE have to record the death of an eminent Russian scholar, at one time member of the Council of State—Peter Rjedkin, who passed away on March 7 at St. Petersburg.

Born in 1808 at Romni, in the province of Poltava, Rjedkin was educated at the Njejinski Gymnasium of Prince Besborodko (from 1821-1826, where among his school-fellows was the celebrated novelist Gogol) and at the Universities of Moscow and Dorpat. He finished his studies in Germany, whence he returned back a devoted metaphysician of the Hegelian school. Having taken his degree of Doctor of Laws, Rjedkin became the first professor of the *Cyclopedia of Law* at the University of Moscow, where he lectured from 1835 till 1849. In 1863 he was called as Professor Ordinarius to St. Petersburg. Death took him away when he was bringing out the last volume of his lectures on the History of the Philosophy of Law considered in connexion with the History of Philosophy (six vols., St. Petersburg, 1889-91). He used to tell his students that a lawyer must not be content to be a lawyer alone, but also a true son of liberty, for liberty has no natural, but only legitimate children. Unlike some others, Prof. Rjedkin was not a *chinovnik*, but a serious teacher, an excellent guide for his numerous pupils, dispersed through all Russia, who will not forget their "good shepherd."

B. ALEXANDRENKO.

MAGAZINES AND REVIEWS.

WE are always pleased to welcome *The Anti-quary*; for, although many of the papers tell but a twice-told tale, there is generally something in its columns that is new not only to that unsatisfactory person, the "general reader," but to the historical student also. This is true as to the number before us. The paper on cross-bows, by Mr. Cyril Humphreys-Davenport contains much valuable information. We apprehend that many persons make a mistake when they come across examples of this old species of "artillery." The existing cross-bows are most of them not war-engines at all, but have been made at a later time for shooting rooks. They have been used for this purpose in quite recent times. The arrows employed were not pointed, but had a blunt knob at the end; they did not pierce the young bird, but knocked it over. Mr. J. W. Clark's paper on the Augustinian priory of Barnwell, near Cambridge, has much local interest, but is too short. The same may be said of Mr. Frederick Ellis's account of the Romano-British village at Bampton, in Oxfordshire. Canon Scott Robertson has communicated a paper on Richard Thornden, second Bishop of Dover. He was one of the creatures of Thomas Cromwell, Henry VIII.'s vicar-general, a man of "wondrous and shameless plausibility," as the canon tells us. Such persons cross our path in all periods, but the historian is more pestered by them in the sixteenth century than at any other period, except sometimes when the Roman empire was in its long death-agony.

In the *Boletín* of the Real Academia de la Historia of March, F. Codera writes on the state of Murcia under Moorish viceroys about 1350. In "El tambor del Bruéh" Señor Puyol y Camps tells of the first Spanish guerrilla victory over the French, June 6, 1808; the success was greatly due to the beating of a drum, which made the French suppose that the peasants were supported by a regular force, and the retreat quickly became a rout. Padre F. Fita resumes his articles on the Usages of Barcelona; among other documents is a curious will of Bishop Guisilbert, December 5, 1062, and an unedited Bull of Sylvester II. (1003). Señor de Vandewalle attempts to fix the site of Santa Cruz de Mar Pequeña on the north-west coast of Africa. From Lima is announced the publication of memoirs of two of the Viceroys of Peru. The number concludes with a biography

of the late Marqués de Molins, and with the notices, which are rich in Roman inscriptions from Cantabria.

THE TEACHING OF ENGLISH HISTORY.

Appendiculae Historicae; or, Shreds of History hung on a Horn. By Fred. W. Lucas. (Stevens: Great Russell-street.)

PERHAPS the best possible instrument of popular education is history, especially the history of one's own country. The three R's must, of course, have universal precedence. Not even the least experienced and most supercilious of educational infallibilists would, I suppose, deny it, or pretend that the elementary school should begin with French or the piano-forte or chemistry, before reading, writing, and summing have become easy exercises of brain and eye and hand. But when that is conceded, all these extra subjects are to my mind of far less general consequence than an intelligent acquaintance with the history of one's own country. To train the children of the State into good citizens was an aim high enough for a Plato in the prime of his splendid powers; and I doubt if the most downright of the modern zealots of education, however sincere his contempt for Plato and for Greek, would find it easy to propose a better aim than this of the old Greek thinker. Now, to be a good citizen it is not necessary to know the French language; nor is a bad ear for harmony a fatal bar thereto (though, perhaps, on the latter point Plato may have had his Hellenic prejudice). But to be ill-taught in the history of England, to be insensible as a brute to the great deeds of our fathers, who made England and gave her this place among the nations, to be careless of that colossal empire which has been built up by English wisdom and courage and patience and fortitude, is either a supreme misfortune or an unpardonable fault; and, whether fault or misfortune, a serious hindrance to that good citizenship in which patriotic fervour is a principal ingredient. O you whose charge it is, teach boys and girls to be proud of their country; be ashamed to make premature sceptics and early-ripe prigs of them; use some natural reserve with tender souls defenceless against your cynicism, your irreverence, your shallow sneers at a past not understood; abhor the cowardly crime of blasting the natural enthusiasms of youth! It is a sorry consolation for your own disenchantment to damp the ardour and quench the faith of the spring of life. Where is the glory of being a missionary of unbelief, an apostle of despair? Will your educated languors, your cultured spiritlessness, your small dilettantism, your ridiculous self-consciousness, your immeasurable conceit, inoculate the coming race with a just hardness in the defence of their own rights, with a chivalrous regard for the rights of others, with courage to do and dare in the cause of honour and truth and purity? Are you rearing a nation of men, or of poor emaculate neuters, incapable of any strenuous exertion, of any noble ideal or noble endeavour?

I fell into this uncompromising vein after reading in Mr. Lucas's strong yet quiet narrative the story of the bygone struggles for the possession of that New World which, if common speech were not a mirror of the vulgar indifference to truth, might be called Columbia or Cabotia, but certainly not America. Let those who love their country, English or American, and those who can enjoy the ordered exposition of facts gathered in the leisure hours of years with the enthusiasm of the antiquary and the discriminative sense of the historian from all manner of rare and out-of-the-way sources, and those who find their pleasure heightened by large type and broad margins and tasteful

covers, buy this book and read it, and ponder the moral it points all the more powerfully because it does not directly proclaim it.

CORRESPONDENCE.

MARY FITTON AGAIN.

London: April 6, 1891.

Dr. Furnivall does not think that certain letters at Arbury attributed to Mary Fitton are really hers, since the writer, in one of them, speaks of Mary Fitton's sister, to whom the letter was addressed "as one of my dear friends." "I do not think," says Dr. Furnivall, "that this is the way in which one sister by blood would write to another." He need not have gone beyond the letters which he himself copied at Arbury to find a relation nearer even than a sister using a similar mode of expression. Her father, writing to his daughter, subscribes himself "your loving father and friend." After this it is of little consequence that Sir Francis Fitton speaks of himself as the "louinge Vncle and assuredd poore friend" of Mary's sister. As to the handwriting, there is, according to Dr. Furnivall, only one signature—not a letter—as a basis for judgment; and since in youth handwriting is apt to vary a good deal, the basis is rather insecure. The seemingly fanciful signature "M. Ma" may possibly represent a pet name well known in the family. "Maxey," it seemed to me, from Dr. Furnivall's note-book, he did

not recognise till some things in the letters appeared to him inconsistent with their being written by Mary Fitton. I think otherwise. One thing may seem strange about these letters, namely, that the writer, though maid-of-honour to the Queen, says little or nothing about what was going on at Court. But to make such communication by letter might have involved unpleasant consequences. Whyte (*Sidney Papers*) uses cipher in relating matters seemingly quite harmless, thus: "9000 [Lord Herbert] is very well beloved here of all, especially by 200, and 40, who protests in all places they love hym."

There is, in one of these letters, a very curious passage which may possibly refer to one of the pictures now at Arbury. The writer—Mary Fitton, as I take it—in compliance with her sister's request, makes arrangement for sending a portrait. She says:

"I haue, sweete sister, lefte my picter at my brothers logging for you. I thinke it not worth the trobbel in hauing it com downe, for it should haue bine drane on a canis, and this is a borde; but if my brother cooke had bine in the tone, I wold taken order with him for it, but I know if you do send to him, he will send it you in a case; and so, my dere sister, desering you to loufe it for her sake home it tis like, for I doe asner you, my good sister, she doth faithfully loue you, and so desiring you to accepte of my raged lines," &c.

However admirable and witty may have been the writer's oral expression, in written composition she was clearly not very proficient. I thought, at first, the meaning was that, if her "brother's cook" had been in town, she would have wished to entrust him with sending the picture; but I now look upon it as probable that she would have preferred to employ her brother's cook in painting the picture. He may have been, indeed, for aught that appears, an artist of great ability. But however this may be, it is pretty clear that the picture was not painted from life. When the order had been executed, she found that "a board," not "a canvas," as she intended, had been employed. What sketches or other guidance the artist followed we cannot tell. But we have here another reason—in addition to those I have previously given—for regarding a conventional treatment as probable.

Dr. Furnivall states that he has "no theory to support" and that the readers of the *Academy* will "do well to trust" him "rather than Mr. Tyler, who has not seen the pictures, and naturally inclines to his own theory." Well, some time ago I read two papers on "Shakspeare's Sonnets" before the New Shakspeare Society, Dr. Furnivall being in the chair. In the second of these papers I stated that the identification of Mary Fitton with the dark lady was probable, though the evidence was as yet incomplete. I find, however, from the printed Proceedings, with which my recollection is in perfect accord, that

"the CHAIRMAN expressed his own belief that Mrs. Fytton was the dark lady of the Sonnets. Referring to the punning inscription on the Fytton Monument, he drew attention to line 7 of Sonnet 119, 'Out of their spheres been fitted,' the word being seemingly dragged in with a purpose."

I might refer also to more recent utterances. Possibly, Dr. Furnivall would say that he has changed his opinion, and that he ought to have spoken with less confidence. But if so, he need not be surprised if some persons should prefer to "wait for further information" before accepting his present inferences from the Arbury portraits.

As to the possible necessity for "burning the present Lord Pembroke and Wilton" (I hope Dr. Furnivall will never be so wicked), if the evidence from Lord Pembroke's portraits turns out unfavourable to William Herbert being the W. H. of the Sonnets, I do not think, from

what Lord Pembroke says, that the contingency is at all likely to occur. Lord Pembroke's portraits are clearly quite consistent with the Herbert theory. I infer that they represent a man of some forty or forty-five years old, about twenty or twenty-five years later than the age to which the Sonnets refer. With respect to W. H. having at forty or forty-five a "rich sort of complexion, inclining to swarthy," we should recollect that Shakspeare describes himself, even at thirty-four or thirty-five, as

"Beated and choppy'd with tann'd antiquity."

But even from the engraving in the British Museum, executed very shortly after William Herbert's death, by his brother's orders, it is evident that William had the lighter sort of complexion and hair. This engraving is given in reduced facsimile as frontispiece to my Commentary on the Sonnets. Here he seems, perhaps, more swarthy, in consequence of the diminished size, the lines being closer together. But the colour of the hair is scarcely to be mistaken. Probably, if we had a portrait of Herbert at eighteen or twenty, we should think the lavish eulogies of the Sonnets by no means justified. But with respect to Herbert, as also with regard to Mary Fitton, I may be pardoned for repeating a caution as to the interpretation of the Sonnets which I have given elsewhere: "We must beware of treating them as though they were mere prosaic history. Their language is the language of poetry, sometimes of compliment, and as such it should certainly be interpreted."

THOMAS TYLER.

BROWNING'S "THE STATUE AND THE BUST,"
Cambridge, Mass., U.S.A.: March 16, 1891.

As I am not in the way of seeing the papers of the Browning Society regularly, may I ask whether any critic among you has called attention to the fact that in "The Statue and the Bust" the poet has confounded the two Riccardi palaces at Florence?

Browning places his palace in the Via Larga, now the Via Cavour—

"For Via Larga is three-parts light,
But the palace overshadows one,
Because of a crime, which may God requite!
To Florence and God the wrong was done,
Through the first republic's murder there
By Cosimo and his cursed son."

This clearly refers to the old palace of the Medici, at the corner of the Piazza San Lorenzo, one side of which is on the Via Larga, (Cavour). It was built about 1430, under Cosimo I., and here his three sons and his "Magnificent" grandson Lorenzo were born. The building remained in the possession of the family until 1659, when Ferdinand II. sold it to the Riccardi folk.

The palace in the Piazza dell' Annunziata, where the statue of Ferdinand I. stands, with his face turned towards it, was built in 1565, and I can find no evidence that it ever belonged to the Medici. If it was erected by them, they must have sold it to the Riccardi soon afterwards. It appears to have no special history, and is not so much as mentioned in the majority of the guide-books.

The statue was erected in 1608, which fixes the date of the story in the poem as the early part of the seventeenth century. This, you will see, was at least half a century before the other palace was sold to the Riccardi. Of course, the 1565 palace was the Riccardi palace of 1600 and thereabouts, to say nothing of the fact that its situation fixes it as the palace of the poem; but a palace built in 1565 could have no connexion with a "crime" committed by Cosimo I. or any of his sons, all of whom were dead before 1500.

"The Statue and the Bust" was published in 1855, when Browning had been living some eight years in Florence. He had doubtless seen both palaces a hundred times, and it is therefore amazing that he should have confounded them.

Taht he did confound them is evident from an answer which he wrote, in January, 1887, to certain questions addressed to him by a person who appears to have been puzzled to understand how the statue in the Piazza dell' Annunziata could be seen from the windows of a palace, a quarter of a mile away, in the Piazza San Lorenzo. He says:

"The magnificent house wherein Florence lodges her prefet is known to all Florentine ball-goers as the Palazzo Riccardi. It was bought by the Riccardi from the Medici in 1659. [This makes it clear which Riccardi palace he has in mind.] From none of its windows did the lady gaze at her more than royal lover. From what window, then, if from any? Are the statue and the bust still in their original positions?"

Browning's answer proves beyond a doubt that he did not see the point of these questions, as he certainly would have done if he had intended to transfer a part of the history and associations of the earlier and more famous palace to the other. He says, somewhat contemptuously:

"I have seldom met with such strange inability to understand what seems the plainest matter possible: 'ball-goers' are probably not history-readers, but any guide-book would confirm what is sufficiently stated in the poem. . . . As it [the palace to which the questioner refers] was built by, and inhabited by, the Medici till sold, long after, to the Riccardi, it was not from the duke's palace, but a window in that of the Riccardi, that the lady gazed at her lover riding by. The statue is still in its place, looking at the window under which 'now is the empty shrine.' Can anything be clearer. . . . Oh, 'ball-goers'!"

Nothing can be clearer than that the poet "mixed up" those two palaces in the poem without being aware of it; and that he thought the man must be an ass to be perplexed by what seemed to himself "the plainest matter possible."

I may add that there is an anachronism in ascribing the execution of the bust to "Robbia's craft." Luca della Robbia died in 1482, Andrea in 1528, and Giovanni, Andrea's son, in 1530; while the date of the story, as we have seen, is about 1600.

When I first looked up the locality of the poem in Florence, several years ago, I was surprised at finding that the Via Larga (Cavour) was at some distance from the Piazza dell' Annunziata; but other things put the matter out of my head, and it is only within the last week that it has been recalled to my memory by a note in Mr. Cooke's *Guide-Book to Browning's Works* (p. 402), where the palaces are similarly confounded, to say nothing of other mistakes about the allusions in the poem.

W. J. ROLFE.

THE "SCIENCE" OF TEXTUAL CRITICISM.

The Mason College, Birmingham: April 8, 1891.

The concluding paragraph of Prof. Campbell's letter of March 28 (*ACADEMY*, April 4) raises a point of principle which is of the first importance, and on which, I hope, more competent critics than myself will have something to say. Meanwhile I would enter my humble protest against the doctrine of the following sentence: "Attempts have recently been made to elevate (?), the emendation of classical texts into an exact science; in other words, to reduce it to a mechanical operation."

The Baconian identification of scientific method with mechanism has surely been generally given up in the sphere of physical science,

since Jevons and others demonstrated the part played by hypothesis and relegated the "inductive methods" to a subsidiary position. What then is the justification for introducing the pair-of-compasses theory into science as applied to the subject matter of literary texts? For my own part I believe it to be a mere nightmare. Science in textual criticism leaves plenty of room for the operations of genius—nay, demands the "superinduction of ideas" as an essential part of its own procedure; it runs no risk of reducing all minds to a dead level of equality.

I think that textual criticism ought to be scientific, because I hold that it should be based upon evidence. Firstly, we have to determine with all exactness what is the reading of the MSS., and, in the case of MSS. belonging to one family, what is the reading of the archetype to which the *variae lectiones* point. In case we have to deal with MSS. of different families, we have also to determine the relation of the archetypes to one another. Where the archetype or archetypes were themselves corrupt, we must have recourse to emendation, *i.e.*, we must frame a theory as to what words of the author himself may have given rise to the corruption. And here we must call in to our aid all the resources of palaeographical and linguistic science. No emendation can be admitted which is inconsistent with the *ductus litterarum* of the MSS., or with the usage of the author in question, even in regard to details. It is quite true that ἀπαξ λεγόμενα occur in most writers; but we have no right to introduce them. We must recognize when we are at the end of our tether.

If all this is not scientific, what is it? If we call it imaginative, I fear we are pronouncing the condemnation of textual criticism as a study worthy of serious attention. I freely admit that there are cases of deep-seated corruptions, in which editors are often driven by the necessity of producing a readable text to introduce emendations of a more or less imaginative character; but in so far as they do so, they abandon the scientific attitude. To accept this unscientific method as the normal one seems to me distinctly a counsel of imperfection.

E. A. SONNENSCHNEIN.

THE PERSIAN ELEMENT IN MARCIONISM.

13, Northam-gardens, Oxford: April 5, 1891.

In the account of the heresy of Marcion, contained in Ebnik's *refutatio haeresium* in the old Armenian, there occur these puzzling passages: "Marcion in his error opposes *strangeness* to the god of the law"; again, "the *strange one* dwells in the first and highest heaven"; and, again, the good principle—who intervenes in creation, and sends his son Jesus to save mankind from the sufferings inflicted on them by the twain deceivers *matter* (ἔλν) and the God of the Law (the Jewish Creator)—is described as "the god of the good and of the *strange*."

In using the words "strange" and "strangeness" I have rendered the Armenian words *antaruthiun* and *autar* by the only equivalents which, as Armenian words, they can have. Yet it is clear that to give them this, the usual, sense in these passages is to make nonsense. It has occurred to me that *autar* is in this account of Marcion's dualism a transliteration of the Zend word *Ātar*:

"In the Avesta," writes Darmesteter (Introduction to Vendidad, p. 62 of vol. iv. of "Sacred Books of the East," edited by F. Max Müller), "the war in nature is a fight for the possession of the light of *Avarenô* between *Ātar* and *Asi Dahāka*. *Ātar* means *fire*; he is both a thing and a person. He is sometimes described as the weapon of Ahura, but usually as his son, as the fire that springs from heaven can be conceived either as flung by it or as born of it."

It is remarkable that Eznik does not himself identify *autar* with the "fire" of the Persians, because he emphasises the fact that the Marcionite account of creation, as the fruit of a marriage union between the god of the law and matter, was no more than the magi taught about their gods. Another Parsi tenet of the purity of water seems to underlie the accensation levelled by matter at the god of the law and of creation on discovering that this god had acquainted Adam with his coming death, and so estranged him from matter. "Said the material one: from its very source and well-head is his water stirred up and made turbid."

These indications of the actual alloy of magism in the opinions of Marcion and his followers are interesting. The author of the article on Marcion in the *Dictionary of Christian Biography* suspects that Eznik drew all his information from Epiphanius. Yet, living in Armenia, on the confines of Syria, Eznik had as good sources of information open to him as Epiphanius had had; and he actually concludes his summary of Marcion's tenets thus:

"This is the principle of Marcion's heresy, let alone many other viler ones; and it is not all who know this, but only a few of them; and they hand on the teaching one to another orally. They say, the son of Autar bought us with a ransom from the lord of creation; but how or why he bought us, this they do not all know."

I should like to know if the Armenian *autar* could have transliterated *Ātar* in the way I suppose. The Armenian diphthong *au* answers etymologically to the short guttural *a* as in *auṣi* (serpent) = Persian *Azi*, Lat. *anguis*, and transliterated the Greek *au* as *ἰν Παῖδος, δαῦκος, γλαῦκιον*.

F. C. CONYBEARE.

THE EAGLE OF ETAN-GILOAMOS AND HIS KINDRED IN FOLK-LORE.

St. Bede's College, Manchester: April 5, 1891.

Having just treated the above subject with a certain amount of detail in a paper read before the philological section of the Congrès international des Savants Catholiques, now sitting in Paris, and entitled "Cyēna-Simurgh-Roc: un chapitre d'évolution philologique et mythologique," I may perhaps be allowed to supplement Dr. R. Morris's letter in your last issue by a few remarks on several points touched upon by him.

Cyēna, as a name probably of the eagle, and the greatest and swiftest of all birds, is of frequent occurrence in the Vedas. Cyēna-mrga, however, does not, I believe, occur; indeed, mrga, as meaning "bird," except with some epithet like "patarus," is not, I suppose, Sanskrit. Neither does Čaēna-meregha occur in Avestic; but once, indeed, we have meregho čaēnō with the identical meaning (Bahram Yesht, 41). Čaēna as a mystic bird is a well-known character in the Avesta; and while in the Vedas Cyēna is chiefly the natural, zoological creature, with but slight mythical characteristics (except in connexion with the Sōma plant), the Avestic Čaēna is almost purely mythical. Strictly speaking, there seem to have been more than one of these giant birds, and Yesht xiii. 109, is generally interpreted as giving the names of two Čaēnas, Amru and Camru. The latter has become in post-Avestic literature the bird Camrōsh, who has many features of grotesque exaggeration recalling the Hindu Garuḍa, but who is always distinctly put as second to Čaēna (Amru). This latter is the well-known Činō mūrū, or Čin bird, also called the "Čin of three natures," of the Pehlevi sacred books. This curious epithet is, I think, doubtless a Volksetymologie, as if *či-mūrū* = "three-bird," *či* being Pehlevi for "three." One of the characteristics of these Eranian gigantic birds is their wisdom. In my

Paris paper I have ventured (I fear rather rashly) to compare the "wise eagle" of R.V. 322, 7, "Cyēna amūra," with the wise Čaēna Amru of the Avesta; and it is at least curious that, in the Mainyo-i Khard, the Pehlevi form of the name is Činamru.

There is, of course, no doubt that the Persian Simurgh, e.g., of Firdusi, Sadi, &c., is a modernised form of this Pehlevi Čino mūrū or Čin amru. My own idea, too, is that the Perso-Arabian rukh (roe) is formed from the latter part of the name Simurgh, to which supposition the Uigur name for the eagle, simrukha, seems to add some likelihood.

The monstrous Hindu Garuḍa is brought into connexion with the Vedic Cyēna in this way. The Vedas are acquainted with a heavenly bird Garutmān, whose name certainly cannot be separated etymologically from the later Sanskrit Garuḍa, the bird of Vishnu. Now in the Rāmāyana (vii. 6) this Garuḍa is made to be a grandchild of one Cyēni, which is nothing else than a feminine form of Cyēna. In Rāmāyana iii. 162, Garuḍa carries off the amṛta (ambrosia) from heaven, just as the Vedic Cyēna does the sacred Sōma plant.

The Chinese Buddhist legend quoted by Dr. Morris after Dr. Beal is singularly like the description of Camrōsh (not Čino mūrū) in the Bundesh xix. 15, where that giant bird goes about picking up, "as a bird does corn," not dragons, but entire hostile non-Eranian districts! (*Zuk-i . . an-Airān matān čmūt čīgūn mūrū dānak*.) Garuḍa's exploits are nowhere to this surely!

L. C. CASARTELLI.

THE AUTHORSHIP OF THE EPISTLE TO THE HEBREWS.

Little Cheney Rectory, Dorchester: March 28, 1891.

In considering the latter part of the Epistle to the Hebrews it struck me a little while ago that there was a change of style just at the end, commencing, I think, at the twentieth verse of the last chapter. I do not find it easy to give anything in the way of positive argument in support of this idea. There is, however, one point which may deserve attention. While there is a sort of summing-up, and a reference to what has gone before, mention of the Resurrection is introduced, a favourite topic with St. Paul, but not one of the topics of this Epistle. If this Epistle was written by some immediate friend of St. Paul's, and furnished with a conclusion by the Apostle himself, we need not be surprised at the widespread belief in his authorship of it in spite of the deficiency of external testimony, and the negative evidence supplied by the Epistle itself.

FREDERIC T. COLBY.

THE NAME OF THE ANGLO-SAXON RUNE p.

Stockholm: April 2, 1891.

Already in 1886 Prof. Brate has given *wynn* as the original name of this rune in the *Månadsblad* of the Royal Academy of Archaeology of Stockholm.

HANS HILDEBRAND.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, April 12, 4 p.m. South Place Institute: "Religions of Ancient America," by Mr. John M. Robertson.

7.30 p.m. Ethical: "Two Views of the Old Testament—The Traditional and the Organic," by the Rev. Philip H. Wicksteed.

MONDAY, April 13, 8 p.m. Society of Arts: Cantor Lecture, "The Decorative Treatment of Natural Foliage," I., by Mr. Hugh Stannus.

8 p.m. Library Association: "The Formation and Working of the Clapham Public Library," by Mr. J. Reed Welch.

8 p.m. Richmond Athenæum: Selborne Lecture, "Gilbert White: his Life, Surroundings, and Influence," by the Rev. Percy Myles.

8.30 p.m. Geographical: "Two Journeys to Se-chuan and the Tibetan Frontiers of China," by Mr. A. E. Pratt.

TUESDAY, April 14, 3 p.m. Royal Institution: "The Geography of Africa," II., by Mr. J. Scott Keltie.

8 p.m. Civil Engineers: Discussion, "The Cost of the Generation and Distribution of Electrical Energy," by Mr. R. E. B. Crompton.

8 p.m. Colonial Institute: "The Leeward Islands," by Mr. D. Morris, with Lime-Light Illustrations.

8 p.m. Society of Arts: "Decorative Plaster Work: Stucco Work," by Mr. G. T. Robinson.

8.30 p.m. Anthropological: "The Types of the Early Inhabitants of Mesopotamia," by Mr. Theo. G. Pinches, illustrated with Photographs shown by Lime-Light.

WEDNESDAY, April 15, 4 p.m. Mrs. Jopling's School of Art: "The Poets as Painters," IV., by Miss Elsie D'Esteer Keeling.

8 p.m. Society of Arts: "The Sources of Petroleum and Natural Gas," by Mr. W. Topley.

THURSDAY, April 16, 3 p.m. Royal Institution: "Recent Spectroscopic Investigations," II., by Prof. Dewar.

8 p.m. Luncheon: "Lichens from Victoria," by the Rev. F. R. M. Wilson; "Two New Species of Puccinia," by Surgeon-Major A. Borelay.

8 p.m. Electrical Engineers.

8.30 p.m. Antiquaries.

8.30 p.m. Historical: "Selections from State Papers and Accounts illustrative of the Life of a Merchant of the Staple at London and Calais during the First Half of the Sixteenth Century," by Mr. Hubert Hall.

FRIDAY, April 17, 5 p.m. Physical: "A Property of Magnetic Shunts," by Prof. Silvanus P. Thompson; "An Alternating Current Influence Machine," by Mr. James Wimshurst.

8 p.m. Philological: "The Metrical Glossaries of the Mediaeval Irish," by Mr. Whitley Stokes.

8 p.m. Ruskin Society: "Mr. Ruskin's Political Economy," by Mr. Andrew M. Ogilvie.

9 p.m. Royal Institution: "Magnetic Rocks," by Prof. A. W. Rieker.

SATURDAY, April 18, 3 p.m. Royal Institution: "The Dynamo," II., by Prof. Silvanus P. Thompson.

SCIENCE.

RECENT WORKS OF PHYSICAL SCIENCE.

An Introduction to Dynamics, including Kinematics, Kinetics and Statics. By Charles V. Burton. (Longmans.) Another contribution to the already innumerable elementary textbooks on dynamics which have been published during the last few years! It is difficult to know what to say about it, except that it is a good deal better than some, and a good deal worse than others, of the same group of publications. There are some excellent points in the earlier geometrical chapters, although we should be inclined to give no marks to a candidate in an examination who adopted the author's demonstrations of the parallelogram law for variable velocities and accelerations. As for the chapters on Matter and Force, they are just what we are accustomed to find in treatises of this kind. Matter and Force are, we presume, "innate conceptions," as another text-book suggests, for they are not defined. Mass, we are told, is the proper measure of Matter, that is, we presume, of the quantity of the "innate conception." Provisionally, Mass is defined thus:

The mass of a body is that property in virtue of which the continued application of force is necessary to change its velocity; and two bodies are said to have equal mass when a given application of force produces in each the same change of velocity."

Here the definition of Mass is thrown back on that of Force, but Force is of course "that which moves or tends to move a body," &c., and we are soon told that its scientific measure is the product of Mass into Acceleration. So that to get a clear idea of Force we must understand Mass, and so we go merrily round to the very point from which we started. When will these text-books thoroughly grasp Clifford's: "Force is not an entity at all, but the description of a certain kind of motion"? Given a certain "field" or set of surrounding circumstances, a body will be accelerated in a definite manner. Why, no one on earth knows, but each must content himself with observing and measuring motions which are as mysterious to him as the phenomena of consciousness itself. What the observer does find by experiment, however, is this: that the ratio of the accelerations which two bodies produce in each other is the same

for all "fields," and the constancy of this ratio leads to the only scientific definition of Mass, namely: as a ratio of rates of change of motion. Mr. Burton is of course perfectly orthodox when he drags in Matter, the inexplicable, with its apparently spontaneous motions, to confuse the student's conceptions of Mass; but in following all his predecessors into the Newtonian maze, he is for the time the worst culprit, because he is the last. In a critical age even orthodoxy is beginning to regard the laws of logic; and if there be little doubt as to the ultimate facts of dynamic science, there is still less doubt as to the obscurity of the traditional manner in which they are invariably treated in elementary works. We do not blame Mr. Burton because he has not had the courage to free himself from tradition. He stands on the shoulders of the giants, but we should have admired him more had he ventured to see facts from a slightly less exalted position.

"SCIENTIFIC HANDBOOKS."—*The Physical Properties of Gases*. By Arthur L. Kimball. (Heinemann.) This seems to us a capital little book, which has just hit the right mean for a popular scientific handbook. Prof. Kimball has written about the physical characteristics of gases in a manner which ought to be readily followed by the man of average education, and yet has done this without being superficial. It is true he has not told us all the facts nor has he told us new facts, but he has succeeded in selecting the right sort of facts to tell and putting them in clear language. Although the book is not intended for the professed students of physics, but for the great uninitiated, many of the former might profitably spend a few hours by reading through this little work and seeing therein the principal facts relating to the kinetic theory of gases brought to a focus. The chapter on the interpretation of Crookes's radiometer and allied phenomena strikes us as remarkably good for a popular manual. By the by, in the publisher's preface—which with its praise of Ollendorff's grammar and Hume's history might well have been omitted—the attenuated condition of matter considered by Crookes is spoken of as "the third state of matter" instead of the fourth. Only in a minor point or two we must be captious with Prof. Kimball. Thus he says on p. 12: "It may be that the ultimate particles of matter are hard and absolutely incompressible, as Lucretius imagined. . . . We think he might have added 'but in the sight of spectrum analysis it is extremely improbable.' The 'ultimate particle of matter,' if the name has any meaning at all, can hardly be other than the free atom of a monatomic gas; but if this gave even a single spectrum line, it would denote a capacity for vibrating in some manner or other, and vibrating is utterly incompatible with absolute hardness. Again on p. 236 we read:

"What may be the nature of the repulsive forces, and how two molecules can act on each other, is neither an easier nor a more difficult question than how one billiard ball acts on another. Both are insolvable. They are questions which deal with the fundamental postulates of physics, matter and force, and are therefore beyond the ken of the physicist."

Here we have a striking example of the evil use of the terms Matter and Force, and as if to emphasise the example more we read on the following page:

"Beyond force and matter, therefore, the physicist cannot go; experiment can teach him nothing of this realm; he can form no conceptions more fundamental than these; he has reached the *ultima thule* of physical research."

If physicists had pursued all phenomena up to their origins in Force and Matter, they would indeed have left the origins of physical science in pitiable obscurity, namely, that of these

"innate conceptions" of the dynamical textbooks. What has been really achieved is the reduction of all phenomena, step by step, from complex to simple forms of motion. The epicycles were a complex description of planetary motion, the ellipses of Kepler a simpler form, and the law of gravitation of Newton a still simpler one. Every "explanation" in physical science is but the reduction of a complex to a simpler description of motion; and to say that the ultimate atom moves in a certain manner, *i.e.*, with certain accelerations, velocities, and periods, is the *ultima thule* of physical research. Why it moves nobody knows, and to attribute it to Force is merely to introduce a notion from physiological sensations which has too long obscured physical science. It is not at the locked door of Matter and Force—obscure conceptions which physical science might throw overboard with advantage—but at the mystery of apparently spontaneous Motion—a mystery exactly similar to that of consciousness—that physical science at present, and perhaps for ever, must halt. There is no need that it should halt at the "repulsive forces" between the molecules, as Prof. Kimball seems to think. The complex motion of two molecules may some day be thrown back on the simpler motion of an aetherial medium, or indeed, the Matter of the physicist may be what he has been accustomed to call "non-matter" in motion—again, we see it is not Matter and Force, but motion wherein the initial mystery lies. But Prof. Kimball is carrying us beyond our proper functions of critic into the field of hypothesis. We must conclude by congratulating our transatlantic cousins on being able to send us much better books, when they please, than the Carnot of Thurston, which we recently reviewed in these columns.

An Elementary Treatise on Hydrodynamics and Sound. By A. B. Basset. (Cambridge: Deighton, Bell & Co.) This work is principally based on the author's already widely known *Treatise on Hydrodynamics*, and on Lord Rayleigh's *Theory of Sound*. It is especially intended for students reading for Part I. of the Cambridge Mathematical Tripos, but it should be equally useful to those working for honours in the Intermediate Examination of the University of London. Although the work does not involve any knowledge of harmonic analysis, it necessarily pre-supposes a thorough knowledge of the calculus and differential equations. The book opens with the usual definition of a fluid—namely, as "an aggregation of molecules which yield to the slightest effort made to separate them from each other, if it be continued long enough." The author goes on, of course, to qualify this by the remark that the perfect fluid is one which cannot sustain anything of the nature of a "shear"; but it might be as well to remark that a perfectly gas-free column of liquid will withstand an enormous amount of stress however long continued, if it be of the nature of a "pull." The first three chapters of the work deal with the usual problems of hydrodynamics, being occupied principally with those in which the motion is uniplanar or can be expressed by two co-ordinates. Chapter iii., entitled "Motion of a Single Solid in an Infinite Liquid," is especially good. The author has expressed in much simpler language than in his larger work the general theory of the motion of a solid, and he has applied it to several extremely interesting cases, notably to the motion of an elliptic cylinder, which he illustrates by a reproduction of Greenhill's curves. He has also pointed out in general terms the application of his results to the motion of projectiles and to the possible explanation of action at a distance in the case of electrified bodies. Chapters iv. and v. are excellent introductions to the subject of water waves and vortex motion; in

particular the author has been careful to remind the student at an early stage of the important but complex problem of the stability or instability of fluid motion. Part II. of the work deals with the subject of Sound. It is difficult to write on this subject after Lord Rayleigh, and we feel the insufficiency here more from our familiarity with the latter's classical work. On p. 146 we must confess to some dissatisfaction at the treatment of vibrating rods. Mr. Basset, from his figure—he says nothing in his text—apparently assumes the cross-sections to remain plane and perpendicular to the central axis after strain. This they certainly do not, for he does not put the total shear zero. A very few qualifying remarks—notably, that it is sufficient to assume, not that the cross-sections remain plane, but that adjacent cross-sections, as shown by Saint-Venant, take the same distorted form—would, we venture to think, have made matters much clearer. A remark in a footnote on p. 126, that the reports of heavy guns travel with a velocity of 2,034 feet per second, or nearly double the ordinary velocity of sound in air, is extremely interesting. The result appears to be due to experiments recently made by Krupp, and it would be interesting to know whether this velocity is uniform for all distances, and what theoretical explanations have been given for it.

Das Wesen der Elektrizität und des Magnetismus auf Grund eines einheitlichen Substanzbegriffes von J. G. Vogt. I. Theil. "Die Konstellationen der einheitlichen Substanz als die Träger der physikalischen Kraftäusserungen." (Leipzig: Wiess.) Herr Vogt is the author of numerous works on pseudo-science, notably one entitled: *Die Kraft*, which covers between six hundred and seven hundred pages. The present instalment of four hundred and seventy pages of a new work on Electricity and Magnetism is only prefatory, and does not reach beyond the preparation of the ground by the dogmatic and somewhat contemptuous uprooting of previous scientific theory, and the explanation of light, heat, gravitation, chemical action, &c., &c., on the true, or Vogtian, hypothesis. A curious sign of the divorce in Germany between accurate scientific knowledge and every-day life is the manner in which the gospel according to Vogt seems to have been hailed by papers of the standing of the *Allgemeine Zeitung* and the *Kölnische Zeitung*. The former terms a critic who declined to read twice through a Vogtian work of 655 pages, *ein trockner Physiker ohne Talent für philosophische Auffassung*; the latter describes our "crank" as *mit umfassendem Wissen ausgerüstet*. Possibly the collection of pretty pictures and the display of mathematical symbols imposes on the mind of the German literary critic, and we must confess that on the strength of them we cut the pages of the entire volume; but the truth must out, we have read only 149 pages, and we believe that to be more than any other scientific critic, however patient, will succeed in doing. Herr Vogt is indeed tantalising; he is always on the verge of springing into the gulf of paradox, but contents himself for page after page by merely cutting antics along the edge. We are not likely to dismiss any writer because he is scientifically unorthodox; we believe that, although the facts of dynamic science are firmly enough based and are widely understood, yet the language of Force and Matter in which they are generally expressed is extremely unphilosophical. We felt quite a sympathy with Herr Vogt when he proceeded full tilt at Matter, and described the neo-Kantians in language more forcible than polite. He seemed to us perfectly sound when he stated that cause and effect were somewhat dangerous terms, and propounded as the object of physical science the description of sequences actually observed

or logically presumed to exist. It cannot be too often reasserted that all science is but the description of the *how* of certain motions, the reduction of complex motions to simpler motions; but the *why* of these simple motions remains at present, perhaps for ever, obscure. But unfortunately Herr Vogt, although in his 66 pages of *Methodologische Einleitung* showing occasional insight, was bound to jump into the gulf at last; and if we strip his language of its terrible longwindedness, he seems first to have gone head over ears into the mire with regard to kinetic energy. He cannot understand or believe that motion in itself is a form of energy. He begins by asserting that a *perpetuum mobile* is an inconceivable absurdity; but he confuses two sorts of *perpetuum mobile*: the one which does work and the one which does no work. The latter is, of course, a perfectly clear and valid conception, although we cannot realise it mechanically. He apparently supposes all motion to be necessarily accompanied by the doing of work in some form or another; and the conversion of kinetic energy into work, as well as the resistance due to momentum, are for him absurdities:

"Es ist daher z. B. im höchsten Grade absurd und unlogisch, zu behaupten, ein Körper würde sich in einem absolut leeren Raume ohne Widerstand in alle Ewigkeit fortbewegen. Diese eine Behauptung, die die Grundlage des kinetischen Substanzbegriffes bildet, beweist, wie wenig die Kinetiker sich um das eigentliche Wesen des Kraftbegriffes und seine Prüfung auf die Wirklichkeit gekümmert haben."

Even a billiard ball which requires a certain expenditure of force to set it going with a given speed is not, according to Vogt, inert owing to its mass; that would be an obscurity comparable with Newton's first law of motion. No, it is the resistance of gravitation which holds the billiard ball fast, and which the force of my muscles has to overcome! After this, it is not surprising to read of a "resistance of a 1,000 horse-power," or to hear that a vibrating atom is an *Unding*, a *perpetuum mobile*, which contradicts the law of energy. Herr Vogt dispenses with matter, and asserts that it is nonsense to reduce all phenomena to motion, which is itself only a secondary conception. Then he unfolds his monistic theory of the universe which is to explain all things. The fundamental process in physical phenomena is a tendency to *Verdichtung* opposed by a corresponding tendency to *Verdünnung* in the universal substance, presumably the ether. It might at first sight appear that a *Verdichtung* could be reduced to a motion of something, and therefore that motion was a still more fundamental concept; but apparently we must take Herr Vogt's word for it that this is not so—it is in reality a "change of volume"! We have said perhaps enough to warn our readers that Herr Vogt's book is not worth buying, except for the historian of pseudo-science. Herr Vogt will probably consider we have entirely misunderstood him. If so, he must console himself with the fact that the truth will at last triumph, and that when the *Kinetiker*, Newton and Maxwell, are faintly remembered as *Magistri sententiarum*, the name of Vogt will be cherished as the founder of the new learning—the hero of the German daily press, martyred by orthodox and illogical science!

CORRESPONDENCE.

ISAIAH AND PHUT IN THE BABYLONIAN INSCRIPTIONS.

Dababiah Istar, near Assiout: March 31, 1891.

Among the many Babylonian contract-tablets, the publication of which we owe to the indefatigable labours of Dr. Strassmaier, is one that contains the name of Isaiah in its cunei-

form spelling (Strassmaier's *Babylonische Texte* vii., No. 307). The tablet is dated in the eighth year of Cyrus, and refers to a certain Dhabat-Iskhir ("good is the goddess Iskhir") the daughter of Yase-Ya'ava. Mr. Pinches was the first to point out that Ya'ava is the Babylonian representation of the name of the God of Israel in its fuller form. Yase-Ya'ava is therefore letter for letter the Hebrew Isaiah when written with the final *waw*. It is interesting to find the name borne by a Jew at Babylon in the later period of the Exile, and it is also interesting to find that his daughter was named after a Babylonian deity.

Dr. Strassmaier has further published the grievously mutilated text, discovered by Mr. Pinches, which describes the invasion of Egypt by Nebuchadnezzar in the thirty-seventh year of the king's reign (*Babylonische Texte* vi., No. 329). The most important part of the inscription reads as follows:

"[In] the 37th year Nebuchadnezzar king of the country of [Babylon] marched against the country of [Egypt] to make war [and battle with Ama]su king of the country of Egypt. The army [of Amasu] he defeated. The soldiers of the city of Pudhu-Yāvau . . . a distant district which is within the sea . . . many who were within the land of Egypt."

We know, from the Greek writers, that Amasis had a special predilection for the Greeks, and surrounded himself with a Greek body-guard. It must be to these that the name of Yāvau[nā] or "Ionian[s]" refers. But what was "the city of Pudhu of the Ionian[s]" from which they came?

In Hebrew letters Pudhu would be Phut. Now Phut is associated with Lud, the Lydian soldiers sent by Gyges to Psammetikhos, both by Jeremiah and by Ezekiel (Jer. xlv. 9, Ezek. xxvii. 10, xxx. 5). We learn from Ezekiel that the mercenary troops of Phut and Lud served in the armies of Tyre, as well as in those of Egypt; and in Gen. x. 6, Phut is named between Misraim and Canaan. Although the Assyrian monuments speak only of Lydian troops in Egypt, we know from the Greek historians that Ionian mercenaries were employed still more largely by the kings of the XXVth Dynasty; and when, therefore, Nebuchadnezzar refers to "the city of Phut of the Ionians" he must be referring to what was regarded as the chief seat of the Greek soldiery. Can this have been Pelusium, the Egyptian name of which is still unknown? The Greek camps near Pelusium, it must be remembered, were moved to Memphis by Amasis.

At the risk of mixing too many heterogeneous things together, I will add a postscript to the letter in which I pointed out that the name of Khazi, one of the centres of Egyptian influence in Northern Palestine in the age of the XVIIIth Dynasty, occurs in the list of Palestinian towns given by Thothmes III. at Karnak. Khazi must be the Gaza of 1 Chr. vii. 28, which seems to have been supplanted by the neighbouring city of Shechem at the time of the Israelitish conquest of Canaan.

A. H. SAYCE.

SOME NOTES ON GODEFROY'S OLD-FRENCH DICTIONARY.

I.

Stanhoe Grange, Norfolk.

The following notes are chiefly supplementary. Words or word-forms marked with a dagger (†) are wanting in the Dictionary. In a few cases words still in use which are omitted by Godefroy are given here as entering into the composition of phrases or expressions now obsolete:

† *Abeuvrer*, *abuverer*, *va*. To give to drink to, quench the thirst of:

"A toy pour ce de la fontaine Helye
Requier avoir un buvrage autentique,"

Pour rafrener d'elle ma soif ethique,
Qui en Gaule seray paralitique
Jusques a ce que tu m'abuveras."
Eustache Deschamps (ed. de Queux de Saint-Hilaire), vol. ii., p. 139.

† *Abus*, *sm*. Deceit, error, *jouer d'a.*, to cheat, take in:

"Je m'apperochois bien par cest croix
Que mes gens m'out joué d'abus . . ."
Farce nouvelle du Pasté et de la Tarte (ed. Ed. Fournier, Théâtre franç. avant la Renaissance), p. 14.

† *Acueson*, *aguzoun*, *sf*. Sharpening, quickening: "Travail . . . de langur es allegeance, a maladie resteance, savacion des gentz, acueson (*var.* aguzoun) de touz les senz."

Contes Moral. de Nicole Bozon (ed. Toulmin Smith et P. Meyer), p. 142.

Adererer, *add vn*. To be in arrears (of payment): "tout le rent est adereré, et ils distreigneront pur ceo."

Littleton: *Tenures*, § 314.

Afoier, *vn*. Add *afoleier*:

"Cum jo m'aparçui mult plusurs
Grefment afoleier (*var.* afoleir) es murs,
Aesmai a lur fol quidier
Estre a succurre e a aidier."

Etycs de Winestre; L'Afaiement Caton (ed. Stengel), p. 110, vv. 8-12.

† *Agraverer*, *va*. To oppress, injure: "Car cil qui mielz deüssent Saint' Iglise tenser
La voldrent e ses membres del tut agraverer."
Garnier de Pont Sainte-Mazence; Vie de St. Thomas (ed. Hippeau), vv. 5167-8.

Ajorner, *vn*. Add example of the phrase *tolc jor ajorné*, "the livelong day," from *Roman de Renart: Branche viii.* (ed. F. Martin), v. 275.

† *Aleu*, *alleu*, &c. See Burguy on this word, and add:

"Viviens est en l'ales de l'Archant."
Aliscans (ed. Guessard et Montaiglon), v. 394.

† *Amaigrir* for *amaigrir*, in *Roman de la Rose*, v. 11,360.

Ante, *sf*. Add 3 *Ante voir 1 Ente*.

† *Anter*, *var.*, *vn*. To chant? = Lat. *antiphonare*? : "A poinne puet on trouver a jour d'ieu persone qui saiche escrire, anteir, ne prononcier en une meismes semblant meicire, mais escript, ante, et prounee, li uns en une guise, et li aultre en une aultre."

Psautier de Metz (ed. Bonnardot), p. 3.

Araser, *va*. Add to sense 2, to fill, cover:

"Voit des paiens les grans mons arasés."

Aliscans (ed. Guessard et Montaiglon), v. 644.

Asloer, *V. Haller*.

† *Barde*, *sf*. The meaning in the passage quoted from *Chansons du XV. Siècle* seems to be "horse" rather than "saddle." See G. Paris's note in *loc.*

† *Barder*. To mount on a *barde* (see above): "Il fait bon veoir ces hommes d'armes
Quant ilz sont montés e bardés."
Chansons du XV. Siècle (ed. G. Paris), No. cxxviii.

Bel, *adj*. Add example of the phrase *estre bel de*: "Sire, Deux grant joie vos dont
De la riens dun plus vos est bel."

Altfranz. Romanzen und Pastourellen (ed. K. Bartsch), p. 47.

† *Bellie*, *V. Belif*: "Dame, fet il, ge portoie a la premiere foiz un cseu tot blanc a une bende de bellie vermeille. . . . Ge m'en ving hors un cseu a mon col a trois benes de bellie vermeilles."

Roman de Lancelot (extract from MS. Brit. Mus. Lansdowne, 757, printed in Fifth Annual Report of Cambridge, U.S.A. Dante Soc., p. 50).

Berner, *V. 1 Brenier* (see *Berner* in *New Eng. Dict.*). Add:

"El sun de l'aube fu levé
E fait sumundre ses berners
K'il prengent moetes e levers
E des meillurs chens a lur choïs."
Vie de Saint Gille (ed. Paris et Bos), vv. 1694-7.

† *Broissier*, *va*. To embroider. Add to 1 *Brochier*:

"Mere, de coi me chastoiez?
Est ceu de coudre ou de taillier,
On de filer ou de broissier?"
Altfranz. Rom. und Past. (ed. Bartsch), p. 9.

Bronchier. Add example of neut. sense, to lean over, bend down:

"Et ses palefrois achoupa et chei a genous. Et cil broncha aval et chai sur sen col en tel maniere que il le brisa."

Roman de Merlin (ed. Paris et Ulrich), vol. i., p. 84.

Bruce, sm. Add sense, lake:

"Li habundance des aigues soi colt premiers en un estendut bruce [=Lat. lacu], mais al derrains est derieve en un fluet."

Li Dialoge Gregoire lo Pape (ed. Focrster), p. 57, l. 7.

Buce, V. Russe.

Bucecarle, sm. The O.E. "butsecarl," man in charge of "buss," boatman. See New Eng. Dict. svv. *Buscarl*, and *Buss*'.

2 Buschier, bucher. Add neuter sense, to beat a wood in search of game:

"Li meistre vint espurunt
E ad trové les chens ullant—
* * * * *

Il ad comencé a bucher
E a corner e a cercher."

Vie de Saint Gile (ed. Paris et Bos), vv. 1631-38.

† *Bucraige*, sm. Drink, draught (see quotation s.v. *Abeurrer*, above).

PAGET TOYNBEE.

SCIENCE NOTES.

THE first edition of Lord Lilford's *Coloured Figures of the Birds of the British Islands* has all been subscribed, for with the exception of a few of the earlier parts. He is, therefore, making preparations for the issue of a second edition in every respect equal to the first.

MR. R. H. PORTER has nearly ready *The Birds of Sussex*, by Mr. William Borrer. The author claims that the volume will contain an account of all the birds now to be found in the county, with mention and careful verification of the occurrences of the rarer species during the last fifty years.

AT the meeting of the Anthropological Institute, to be held in Hanover-square on Tuesday next, April 14, at 8.30 p.m., Mr. Theo. G. Pinches, of the British Museum, will read a paper on "The Types of the Early Inhabitants of Mesopotamia," illustrated with photographs shown by lime-light. Some tablets in the collection of Sir Henry Peek, to which reference is made in the paper, will also be exhibited.

THE eleventh annual exhibition of the South London Entomological and Natural History Society will be held on Wednesday and Thursday next, April 15 and 16, at the Bridge House Hotel, London Bridge. A special room will be set apart for the demonstration of biological studies with the aid of oxy-hydrogen light; and Mr. F. Enoch will deliver an explanatory lecture on the "Life-History of the Hessian Fly."

IN connexion with the Lower Thames Valley branch of the Selborne Society, the Rev. Percy Myles will give a lecture at the Richmond Athenaeum on Monday next, April 13, at 8 p.m., on "Gilbert White: his Life, Surroundings, and Influence."

AT the last general meeting of the Zoological Society, it was announced that, in recognition of the effective protection accorded for sixty years to the great Skua (*Stercorarius catarrhaetes*) at two of its three British breeding stations—namely, in the island of Unst, by the late Dr. Laurence Edmondston, and other members of the same family, and in the island of Foula, by the late Dr. Scott, of Melby, and his son, Mr. Robert Scott—the silver medal of the society had been awarded to Mrs. Edmondston, of Bunsess House, as representative of that family, and to Mr. Robert Scott, of Melby.

The medals will be delivered to the medallists or their representatives after the close of the anniversary meeting on April 29.

PHILOLOGY NOTES.

AT the meeting of the Philological Society, to be held at University College, Gower-street, on Friday next, April 17, at 8 p.m., Mr. Whitley Stokes will read a paper on "The Metrical Glossaries of the Medieval Irish."

THE current number of the *Babylonian and Oriental Record* (David Nutt) contains several articles of interest. The Hon. John Abercromby, who is known to readers of the ACADEMY as an authority on Finnish, writes on that latest of linguistic puzzles, the Yenisei inscriptions. Without hazarding any new decipherment, he is content to compile a statistical table, showing the relative frequency of certain of the Yenisei characters (both initial and final), as compared with the letters of the six following languages: Uigur, Uzbek, Yakut, Mongol, Ostyak Samoyed, and Kott.

"From the absence of an *r*, and the impossibility of attributing to B the value of a Turkish or Mongol *b*, it would seem certain that the language of the Yenisei inscriptions is neither Turkish or Mongolian of the last thousand years."

Prof. Terrien de Lacouperie adds another to his long series of papers on the derivation of Chinese civilisation from Babylonia, summarising his former arguments, and adding new ones, with special reference to certain written characters and the shifting of the cardinal points. Prof. C. de Harlez, of Louvain, refutes a strange theory that the *Kings* or ancient sacred books of the Chinese are forgeries of the second century B.C.; while Mr. Theo. G. Pinches makes some further remarks upon Sir Henry Peek's collection of oriental cylinders.

AT the last meeting of the Royal Society of Edinburgh, Emeritus-Professor Blackie read a paper on "Bistratification in the Living Greek Language." Modern Greek has been but slightly altered, since the time of Coraes, from classical Greek. The first thirty-one verses of the Gospel of St. John, as published in Athens in 1855, contain only nine departures from the classical type; while the corresponding portion of the Romaic version, published 200 years ago, contains twenty-eight. In the higher walks of Greek literature this purity of literary style is very marked. In thirty-one pages of Tricoupis' *History of the Greek War of Independence* (London, 1853), only fifteen deviations from the standard of ancient Greek appear; and in two chapters of Paspatis' *History of the Capture of Constantinople by the Turks* (Athens, 1890), only ten deviations appear. The standard to which Prof. Blackie appealed is the Greek, not only of Plato and Xenophon, but of Diodorus, Lucian, Polybius, and Chrysostom. In the lower colloquial Greek of common life, very great divergence from classical literary style is evident. Thus, in the first twenty-six lines of the dialogues in a primer of colloquial Greek, published this year in Leipzig, thirty-three deviations from classical style occur. But, even in this lower form of Greek, very few words borrowed from other languages are found, and the accented syllable still remains as it was fixed by the Alexandrian grammarian.

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, April 6.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—Mr. D. G. Ritchie read a paper on "Darwin and Hegel." This subject of the paper was the relation between the two kinds of evolution, which might be called materialist and idealist evolution respectively. Hegel was

influenced to a certain extent by the biological evolution of his day, but the "development" of which he everywhere speaks is a thought-process, not a time-process; yet in human history the thought-process appears as a time-process, most clearly so in the history of philosophy. Darwin's theory of natural selection (of course unrecognised in Hegel's Philosophy of Nature) would remove some of the very objections that have been made against Hegel, e.g., by Prof. Seth, and would harmonise quite well with Hegel's conception of human history as a dialectic movement of thought, the "struggle for existence" appearing in its highest form as the conflict of ideas. Natural selection had restored teleology (not external teleology of course) by explaining structures, &c., by reference to the end for which they exist and not merely by reference to the source from which they come. This would obviate the objection Hegel made to the older evolution theories; and this conception of end (final cause) was predominant in Hegel as in Aristotle. Attention was called to certain resemblances between the two kinds of evolution as applied to ethical and political philosophy, and Hegel's formula "the real is the rational" was defended in the light of the theory of natural selection.—The paper was followed by a discussion.

FINE ART.

The Church Bells of Suffolk. By the Rev. J. J. Raven, D.D. (Jarrold.)

THE author of *The Church Bells of Cambridgeshire* has now added another county to the list of those whose bells have been studied and catalogued in a scholarly manner. He sums up the modern bibliography of English campanology in the following words:

"Mr. Tyssen's *Sussex*, Mr. Ellacombe's *Devon*, and Mr. L'Estrange's *Norfolk* are things of the far past. Mr. Ellacombe added *Somerset* and *Gloucester*. Mr. Dunkin *Cornwall*, Mr. North swept clear the wide area embraced by *Leicester*, *Northampton*, *Rutland*, *Lincoln*, and *Bedford*, leaving, at his lamented death, *Hertford* to be completed by Mr. Stahlschmidt, who by himself gave us *Surrey* and *Kent*, and, in his turn summoned to rest, has placed *Essex* within the reach of a third hand."

Scattered records of the church bells of other parts of the country may be found in the Transactions of local archaeological associations. Thus we may say that the work of record, so far as bells are concerned, is about half completed for England.

Meantime, other ecclesiastical remains are receiving similar attention. Church plate is being carefully studied, not without episcopal encouragement. Wall-paintings have been catalogued with a fair approach to completeness. The monuments of the dead are not forgotten. We recently took note of the fact that a revised and augmented list of English brasses is being drawn up by an energetic body of students. A complete chronological catalogue of stained glass windows is hoped for rather than expected, and perhaps some other branches of decorative art-work are receiving similar attention at the hands of lovers of art and archaeology. No individual student, of course, can be expected to do more than record what comes under his own observation in a relatively restricted geographical area; and every such record, though of immense value as a necessary part of an (as yet) incomplete whole, when taken alone cannot exactly be interesting to read.

Herein lies the difficulty which hinders the still more rapid advance to completion

of the cataloguing process. Many men exist in every county who possess all the necessary qualifications for the work, except that of rendering the results of it readable. No publisher, I suppose, would touch a volume dealing with the subject to which the work under review is devoted. In a superficial sense, it is true to say that the better such a book is the less is it readable; the less, therefore, does it appeal to the purchasing public. Local libraries and institutions are not yet numerous enough to float even a small edition, and local gentry of antiquarian tastes are too few and too poor to render much help in the matter. In fact, there is but one solution for the problem of publication. When county councils can be made to understand that county history and antiquities are matter of general local importance, and depend for their study upon the support of the whole locality, it will be possible (at relatively small cost) to organise the recording of all interesting remains which have come down from the past into our hands, and of which we are trustees for future generations.

Meanwhile, individual effort has to accomplish what it can; and lovers of all things old must not be sparing in their recognition of good work done at the cost of an author's time and money, and with little reward even of fame. Dr. Raven's book merits praise at the hands of all who care about the monuments of the past. It is the result of many years of work. It is written by a man who can ring a bell as well as squeeze an inscription. Moreover, he is acquainted with whatever has been written by others on the subject. All the "Brasiers" are his friends, and he remembers their dates and wanderings. The London founders were worked at by Mr. Stahl-schmidt; Dr. Raven has a few more facts about them to add to our knowledge and a few corrections to make. His most important chapters relate to the mediaeval foundries at Norwich and Bury. He not only describes every bell, but he has hunted up all manner of references to bells in local archives. He tells us what they cost to make and remake. He brings us by many a pleasant touch into the presence of the old founders themselves, he makes us acquainted with the contents of their wills and the passing on of the tools of their craft from generation to generation. He gives a chapter on usages and change-ringing, and closes with a complete catalogue of bells arranged under the names of the places where they now are. The book is also furnished with a useful *Index Nominum*. The author has made his work not only learned, but as interesting to the reader as the subject and conditions permit.

W. M. CONWAY.

THE ART MAGAZINES.

UNDER its new editors, *L'Art* shows no sign of falling off either in illustration or literary matter. We miss the ever ready and incisive pen of "Paul Leroi," as that well-known writer chose to style himself, and we regret the state of health (since happily improved) which compelled him to relinquish his too arduous duties in connexion with the magazine he founded; but he has competent successors in

M. Emile Molinier and M. Théophile Chauvel. In what was once so important a feature in *L'Art*—the etchings—there is certainly an improvement; "L'Age D'Or," by L. Quarante, after Ch. Chaplin; Ch. de Billy's admirable plate after Rubens, "Dame de la Famille Boenen"; Albert Ardail's portrait of M. Carnot; and F. E. Jeannin's etching of Gigoux's "Reverie" are all masterly of their kind, and many charming facsimiles of drawings by Emile Lévy have also appeared in recent numbers. Nor, despite the absorption of some of the old space by matter which would last year have been printed in the extinct *Courrier de l'Art*, has the letterpress suffered in quality. Even the quantity has not diminished perceptibly, as less space is taken up by decorative designs, which were often useless and sometimes not in the best of styles. There are, however, a profusion still of valuable and interesting illustrations in the text; and several capital short papers have appeared upon some lesser artists not too well known, such as Abraham Bosse, the engraver of "Le Jardin de la Noblesse Française," published in 1629, "Claude de Héry," the *medaillieur* of Henry III., and on other interesting subjects like the Chateau de Vincigliata, near Florence. The last is by Emile Molinier, who can reckon among his staff such writers as Henry de Chennevières, Edmond Bouaffé, Pierre Gauthier, Philibert Audebrand, and C. Gabillot.

In the *Portfolio* Mr. Hamerton continues his papers on the present state of the Fine Arts in France; his subject this month is "Impressionism," a study of great care and great tolerance, treating the "rebels" with a consideration and a seriousness which is at least quite equal to their deserts. A paper on Chatsworth and the Derwent, by Mr. J. Leyland, is illustrated by two pretty little etchings by Mr. Alfred Dawson; and the important and sumptuous book on wood engraving, recently published by the doyen of wood engravers, Mr. W. J. Linton, is treated at some length by Mr. Cosmo Monkhouse.

NEITHER in the *Portfolio*, the *Magazine of Art*, nor in the *Art Journal* are the "plates" of very high quality. The best are the photo-gravures after Mme. Le Brunn in the first, and Mr. Strudwick's "Rampart of God" in the last; but the literary quality of the *Magazine of Art* is quite up to the usual high level, being contributed by Mr. Claude Phillips and Mr. Walter Armstrong, among others. Mr. J. Murray Templeton's article on "Benjamin Constant" is also notable and well illustrated; but perhaps the most interesting contribution to this or any other of the English magazines this month is that by Mr. E. Romilly Allen, on "The Crucifixion in Celtic Art," notes on a new subject by a well qualified writer.

THE contents of the *Art Journal* for April are varied as usual, and include continuations of the papers on "The Royal Academy of the last Century," by Messrs. Hodgson and Eaton; "The Progress of the Industrial Arts," and "The Chiefs of our National Museums." The Industrial Art for this month is the colour-printing of chintzes and cretonnes, the "Chief" is Mr. C. L. Eastlake, the keeper of the National Gallery. The literary merit of these articles and of that on Knole House, by Mr. F. S. Farrow, is not remarkable; but Mr. G. Bernard Shaw's paper on the refined idealism of Mr. T. M. Strudwick is of a higher quality.

TWO EXHIBITIONS IN PARIS.

THE seventh annual exhibition of the Society of French Pastellists is simply charming, both as regards the choice and the variety of the subjects. Some may object that the "pastellists," as well as the "aquarellists," of the

present day have progressed far from the simplicity of the "preparations" of the Magician, as Diderot styled La Tour, and that they make too frequent recourse to artificial combinations of pigments; yet the result is so pleasing that it must disarm the most morose of critics.

This year the Society has invited a foreign artist to contribute, and the innovation is to be repeated. On the present occasion the guest has proved himself worthy of his hosts, for nothing can be more original than the three exhibits which M. Boldini modestly entitles "studies." Two of these—full-length personations of that particular form of feminine attractiveness termed by the French *une laide piquante*—are fine specimens of bold and masterly drawing combined with the most delicate colouring, almost the two best things in the gallery. M. Doncet's portrait of a lady in a pale mauve ball-dress, though somewhat *mièvre* in execution, offers a pretty contrast to M. Boldini's energetic work. M. Besnard's ten exhibits are somewhat disappointing, with the exception of a study of the nude and the portrait of a young lady, in both of which the perfection of drawing and the delicacy of flesh tints and shading are equal to the best work of this true artist. M. Dagnan's "Convalescente," which shows us the pale face and pain-worn figure of a sick child seated propped up with pillows, is executed with all the minute finish and perfection of the painter of "Le Pardon." M. Béraud's view of the interior of the Church of Notre-Dame des Victoires is decidedly clever. The church, the worshippers, and their surroundings are plunged in darkness; the sunlight, flashing through the painted-glass window above the altar, makes here and there blotches of light of various colours on the pavement, the columns, or the bent figures of the congregation. The effect is realistic to a degree. M. Duez's sunsets on sea and land, M. Lhermitte's highly (perhaps just a little too highly) finished landscapes, Mme. Cazin's "Petite Bonne," are, one and all, charming examples of what can be done with pastels. MM. Blanche, Gervex, Machard, and Tissot contribute a highly attractive set of portraits of elegantly-dressed beauties of the day. M. Thévenot's portrait of M. Bazire is worthy of special notice; it is a fine study by a master hand. M. Forain, whose illustrations in the *Courrier Français* and *Journal Amusant* scandalise M. Prudhomme, sends a series of very realistic sketches of low life and semi-nude figures, which under their apparent flimsiness are admirably drawn and of no mean artistic merit. As for M. Chéret's pyrotechnical display of flashy posters for the Moulin Rouge or illustrated advertisements of the latest sensational *feuilleton*, they are rather out of place in so elegant a gathering.

THE transition from Petit's pretty gallery to the quiet precincts of Duran-Ruel's rooms, in which the Society of French Painters and Etchers hold their third exhibition, is striking. This society, after having remained for two years in a sort of embryonic state, has at last attained its full development; and this is principally due to the indefatigable perseverance and disinterested efforts of MM. Braque-mont and Guérard, two names familiar to English etchers. M. Braquemont's own contributions are limited to some sketches and studies of little interest beyond great perfection of drawing, and an etching, "Janot lapin," representing a dead rabbit hanging at the larder window, which overlooks a park in which a number of rabbits are playing in the sunshine. M. Guérard is the principal exhibitor—if not in number, at all events in quality. First come a series of nine etchings of the most varied and sometimes weird character, but all bearing the stamp of great originality. He also sends six wood-engravings, two of which

—“Dieppe Harbour by Moonlight,” and “The Grand Canal by Night”—are admirable; in the latter the effect of the scarcely perceptible outlines of the houses and monuments looming in the surrounding darkness, while here and there a lamp forms a luminous, point is most wonderfully rendered. M. Norbert Goeneutte's drawings, etchings, *pointe-sèche*, form a collection of nineteen portraits, landscapes, and female studies, as interesting as they are thoroughly artistic. M. Frédéric Jacque contributes no less than twenty-nine plates, many of which are decidedly good. M. Desboutin's *pointe-sèche* portraits are admirable; while MM. Jeannot, Renouard, and Louis Morin have sent a series of most interesting exhibits. Among the foreign guests of the society I remarked some good work by M. Zorn, the rising Swedish painter, as well as by MM. de los Rios, Storm de Gravesande, and Bauer. Before ending this short notice I must not forget to mention two exquisite “engravings in colours, proofs drawn by the author,” in which M. Guérard has engraved a white rose and a tea-rose, using three colours—white, yellow, and green—with the most delicate effects and great technical talent.

CECIL NICHOLSON.

NOTES ON ART AND ARCHAEOLOGY.

THE contributions of Mr. Orchardson to the forthcoming exhibition of the Royal Academy will be confined, we believe, to two or three portraits. Mr. Pettie will be represented by an attractive canvas which depicts a young lady in the dress of the period of the Empire—dear to Mr. Orchardson, Mr. Charles Green, and Mr. Haynes Williams—and he will likewise send a picture of a violinist, for which his son-in-law, Mr. Hamish McCunn, the rising young composer, has furnished the model.

THE following have been elected members of the Royal Institute of Painters in Water-Colours:—Messrs. William Rainey, Max Ludby, Edgar Bundy, and Robert Fowler.

THE exhibitions to open next week comprise that of the New English Art Club, in the Egyptian Hall, Piccadilly; a collection of water-colour and oil paintings of “The Land of the Rising Sun,” by Messrs. John Varley and Charles E. Fripp, at the Japanese Gallery, New Bond-street; a series of works of the French, Norwegian and Hungarian schools, at the Continental Gallery, New Bond-street; and pictures by Rosa Bonheur, Ulpiano Checa, and W. Dendy Sadler, at Mr. Lefèvre's gallery, King-street, St. James's.

MESSRS. CASSELL & COMPANY will publish in a few days a Memoir of Richard Redgrave, whose career is so closely connected with the foundation of the South Kensington Museum, and with the creation of a national system of art education. The Memoir has been compiled by Miss F. M. Redgrave, who has had the assistance of the Journal kept by her father, which during the earlier years assumed the form of an autobiographical sketch.

THE Glasgow town council have unanimously approved the purchase of Mr. Whistler's famous portrait of Thomas Carlyle, for the sum of one thousand guineas.

MESSRS. DEPREZ & GUTEKUNT, of 18 Green-street, have been appointed agents for the sale of Mr. Seymour Haden's etchings.

SIR JOHN LUBBOCK has introduced a bill in the House of Commons to amend the Ancient Monuments Protection Act of 1882, by extending its provisions to “any ancient or medieval structure, erection, or monument, or any remains thereof.” The existing statute is practically limited to stone-circles, tumuli, cromlechs, barrows, pillars, camps, &c.

THE annual meeting of the Royal Archaeological Institute will be held this year at Edinburgh, probably in the new buildings of the National Scottish Portrait Gallery, beginning on Tuesday, August 11. The following will be the presidents of sections: Antiquities, Dr. John Evans; history, Dr. Thomas Hodgkin; architecture, the Bishop of Carlisle. The council of the Society of Antiquaries of Scotland forms the honorary local committee.

M. JEAN-PAUL-LAURENS, the painter of “St. Bruno” and of “Marceau Mort,” has been elected a member of the Académie des Beaux-Arts, in the room of Meissonier.

THE STAGE.

STAGE NOTES.

THE management of the Vaudeville Theatre promises us for Thursday evening a revival of what is apparently the ever-welcome comedy of “Money”—a piece which, by reason both of its literary merit and of its conception of character, deserves indeed to hold the stage when the romantic platitudes of “The Lady of Lyons” shall have ceased to attract even the actress of most ill-advised ambition. At the Vaudeville “Money” will have the advantage of a very good cast, including the brothers Thorne, Mr. H. B. Conway, Miss Kate Phillips, Miss Ella Banister (in the very unsympathetic part of Clara), and the brilliant and interesting young American actress, Miss Dorr, whose performance in “Diamond Deane” won the approval of most good judges.

M. MAYER, not daunted by the failure last season, proposes again to provide us with French plays, which will include novelties from the Gymnase and elsewhere. Players there will be, too, well up in the second rank, though, it may be, hardly reaching the first. There will be Fabre and Mlle. Reichemberg, for instance. The manager's enterprise deserves a measure of support, and may possibly obtain it; but to a London audience the French play brought to its very doors is not the god-send that it used to be. People go oftener to Paris. That is one reason. Another is that the French stage has not brought forth new writers of the rank of Dumas and Augier. Yet a third is that our own theatre has wondrously improved.

MR. WILSON BARRETT has accepted a new three-act play by Mr. Rudolf Dirks.

THE fifth annual reading of the Shakspeare Reading Society, of which Mr. Irving is president, was to be given on Friday of this week, at the Royal Academy of Music. The play chosen is “Henry V.,” rehearsed and conducted by Mr. William Poel.

MR. EDWIN BOOTH, whose appearances in England have always been welcomed by the judicious, even though they may not have excited any large measure of popular enthusiasm, is, if we may be allowed the colloquialism, on his very last legs in New York at this moment. How it is that the interest of Mr. Booth's performances has ceased somewhat suddenly, has not been explained; but it is asserted that his retirement from the stage is imminent. So distinguished an artist, and so esteemed a man, must not permit himself to lag superfluous.

By the death of Mr. Lawrence Barrett—as well as by the comparative collapse of the finest Lear and one of the finest Richelieus our generation has seen—the American stage suffers distinctly. Mr. Lawrence Barrett was a thoroughly scholarly and painstaking, though never a very impressive or charming, actor. But it was not by the especial merit of his own performances that he was enabled to perform service to the American theatre. It was rather by his determination as a manager to familiarise

his audiences with good literature, and by a certain faculty which he had of persuading them that they did well to be interested in it. Several of what are now accepted as among the classics of English writing owe it to Mr. Lawrence Barrett that they have ever enjoyed an opportunity of being presented on the stage. Thus, indeed, the death of Mr. Lawrence Barrett must be accounted a severe loss; and even from the theatrical point of view it is a loss which the stage in America is at this present time but ill fitted to sustain.

MUSIC.

ITALIAN OPERA AT COVENT GARDEN.

THE success of “Orfeo” last autumn, with Mlle. Giulia Ravogli in the *title-rôle* has not been forgotten; and it is not surprising that Mr. Augustus Harris should have selected this opera for the opening night of his season. Gluck has been unduly neglected in this country, and it will be well if the present excitement about “Orfeo” should lead to the revival of his other important works. Why should not “Alceste” and the two “Iphigenies” be heard here, as well as in Germany? Mlle. G. Ravogli again displayed her vocal and histrionic gifts on Monday. The public applauded her brilliant delivery of the interpolated air by Bertoni, and encored “Che farò.” Why should the first be sung, why the second repeated? The first was inserted to satisfy the vanity of a tenor singer, and at the Cambridge performance last year Dr. Stanford wisely omitted it. The “Che farò” encore, for the sake of dramatic art, ought to be abolished. Mlle. Ravogli, who has won the ears and hearts of the public, could well afford to set a noble example. Her singing in the earlier part of the first act was somewhat cold, but she soon warmed to her work. Her acting in the scene of the Elysian Fields was beyond praise; and by noble declamation, pure singing, and dignified gesture, she rivets the attention and touches the hearts of her auditors. The music is so simple, the movements of the actress are so simple; and it is this very simplicity which produces so deep an impression. “Orfeo” is an old, but not an old-fashioned work; it has the true stamp of greatness. Mlle. Sofia Ravogli was Euridice, and deserves much praise; Mlle. Bauermeister was the Amore. The opera was put upon the stage with great care and considerable effect; the picture of the Elysium was pleasing to the eye, but a little too bright in colour. The evolutions, too, of Mlle. Palladmo, the *première danseuse* were certainly not classical. But in this matter it is dangerous to dogmatise. Though one would wish to find the Grecian step imitated in any representation of the “plains of waving Asphodel,” it must be remembered that “Orfeo” was first presented on the Paris stage; and, therefore, though the voice was classic, the “hands” were, in a great measure, French. The orchestra, under the direction of Signor Mancinelli played, on the whole, well. One or two of the movements in the second act were somewhat hurried. We have no wish to be considered hypercritical, but we think that there should be some clear understanding about the appoggiatura notes in Gluck's score. Whether Signor Mancinelli is right in allowing them to be short in certain bars of Euridice's aria, in the second act may be open to question, although we believe his reading to be wrong; but in Orfeo's recitative (Act i.) singer and orchestra ought, at least, to be at one in this matter. We have gone somewhat into detail about the performance, because, considering the difficulty of catching the true spirit of eighteenth century music, no detail should be neglected to reproduce it as faithfully as possible. Mr. A. Harris deserves the thanks of musicians for his

production of "Orfeo"; if not perfect, it is at any rate one which can be thoroughly enjoyed. Mlle. G. Ravogli alone would cover a multitude of artistic errors, and here it is only a few of which complaint can be made.

"Faust" was given on the following evening (Tuesday) when all interest centred in the new Margherita—Mlle. Eames, whose performances in Paris appear to have given great satisfaction. This lady has a good soprano voice of sympathetic quality, and of considerable strength; and, besides, it has been carefully trained. The Thule ballad was interpreted in a pensive manner, and it was difficult to tell whether the lady was slightly nervous, or whether she was cleverly depicting the maiden's preoccupied state of mind. The Jewel song was brilliantly rendered. Mlle. Eames produced a striking effect at the close of the third act; instead of bending over the dead body of Valentino, she looked towards the audience, as if her brain were beginning to give way. The idea, however, is not an original one. As an actress Mlle. Eames may have something still to learn; but she is young. Her reception was most enthusiastic. Mlle. Guercia, as the Siebel, overdid her part. M. Maurel gave an artistic representation of Mephistopheles, and his grey costume was a novelty. Mlle. Bauermeister was excellent as Martha. M. Ceste was an energetic Valentine. Signor Mancinelli conducted with care and ability.

J. S. SHEDLOCK.

MUSICAL PUBLICATIONS.

De Fidiculis Bibliographia. By Edward Heron-Allen. (Griffith, Farran & Co.) This is the first part, sections 2 and 3, of a series of proposed books and pamphlets on the violin, and, generally, on all other instruments played with a bow in ancient and modern times. It contains an interesting list of books, with comments. Among the various pamphlets, &c., on Paganini, we miss the essay written by Liszt on the great virtuoso in 1841.

Violin Chat for Beginners. By A. H. Raikes. (Fisher Unwin.) This is a small book containing much useful and pleasant chit-chat about violins and violin players. There is some rather doubtful advice in chapter on "What to play," and some rather foolish talk about the so-called "Moonlight" Sonata in the chapter on "Music."

Cabin and Plantation Songs. (G. P. Putnam's.) The slave music of the South presents an interesting field for research, but this collection is not absolutely trustworthy; for, as frankly acknowledged in the preface, some of the songs have been retouched. The music generally is not particularly attractive,

but it can really only be properly judged "amid all the wild enthusiasm of a negro camp-meeting."

A Neglected Subject of Education. By Emma Definger. (Privately Printed). This small pamphlet contains many excellent remarks and hints about the proper mode of teaching the pianoforte—for this is the "neglected subject"; but there are others of too general a kind to be of much practical use, such as "nothing but good music should be studied."

We have received from Hutchings & Romer: *The Naiades of the Rhine*, a Cantata, by Vincent Wallace, arranged from his Opera "Lurline." The popular ballads and melodious choruses (for female voices) may not be as attractive as they were thirty years ago, but they have not lost all power to charm.—*The Sleepers*, Solo and Chorus for Ladies' Voices, by J. Greenhill, is a short and simple composition; the voice parts in the chorus are carefully written.—*Darkness and Dawn*, by Jacques Blumenthal, is a cleverly-written song in the composer's well-known style.—*Whispering Rushes*, by Reginald Foy. This waltz, part vocal, part instrumental, is smooth and sentimental.—*Grannie's Reason*, by C. Lockman, a quiet little ballad with a commonplace ending.—*Humoresque*, for Piano, by C. Lockman, has some good points, but the workmanship is not strong.—*La Gracieuse: morceau elegant, pour Piano*, by A. T. McEvoy, is a lively piece, but scarcely deserves its title; it is arranged as solo and as duet.—*Aminu: Melodie*, for the Pianoforte, by L. H. Meyer, begins fairly well, but becomes vulgar. The mixture of French and English in the title is foolish.—*Golden Rosebuds*, for Pianoforte, by C. Bohm, is a light, harmless piece.

From Paterson & Sons:

Album of Six Songs. By Hamish MacCunn. These songs by the young and talented composer have been noticed in the ACADEMY as they appeared in separate form. "The Ash Tree" and "I'll tend thy bower" are the two which please us best; but there are some good points in all of them.—*Fair is Love*, Song by the same composer, is smooth and graceful. The words are from Barlow's "Pageant of Life."—*Wind and Tide and Ye Waves, divide not lovers long*, two songs by R. W. K. Edwards, are melodious, but not striking.—*The Old Mill*, Song by Arthur Hervey, is a smooth, flowing love ballad.—*Oh, why left I my home and The Scottish Blue Bells*. These are old melodies, skilfully arranged as part-songs by J. Sneddon for Mr. Lambeth's "Balmoral" Choir.—*Mary Stuart*, Danse Antique, by J. W. Moore, is an easy piece, but at times modern rather than ancient.

ISSUE of SIX PER CENT. PREFERENCE SHARES, with FIFTY PER CENT. BONUS.

IMPORTANT ADVANCE in the PRINTING ART.

THE LINOTYPE COMPOSING MACHINE.

"IT IS TO THE PRINTING BUSINESS OF THE PRESENT DAY WHAT THE INVENTIONS OF GUTENBERG AND CAXTON WERE TO THE PRIMITIVE WRITING SYSTEMS OF THE FIFTEENTH CENTURY."

"A MACHINE FROM WHICH I CANNOT BUT ANTICIPATE EFFECTS EQUALLY EXTENSIVE AND BENEFICIAL TO MANKIND."—The Rt. Hon. W. E. GLADSTONE, M.P.

The LINOTYPE COMPANY (Limited) OFFER for SUBSCRIPTION, £5000 of PREFERENCE SHARES of £5 each, bearing interest at the rate of Six per Cent. per annum in addition to a Bonus of 50 per cent. upon all amounts of two Preference Shares and upwards applied for, to be given in fully paid ordinary £5 Shares, thus entitling the holder to a further and future share of contingent profits.

The Six per Cent. interest on the Preference Shares is already covered by income from Royalties on machines now placed and satisfactorily working in various leading newspapers, and printing offices, and machines in course of construction, and the capital to be raised from this issue of Preference Shares is for building machines for which actual signed orders have been obtained by the Company.

The field for these machines is practically unlimited. The Preference Shares are payable in five instalments of £1 each at intervals of not less than two months between each instalment. Interest at 5 per cent. will be paid on investments in advance. The Company already possess manufacturing works at Manchester.

Forms of application for preference shares (with bonus), with copies of reports, pamphlets, and other information of the fullest character, also orders to view Linotype Machines at work, can be obtained from the undersigned.—By order of the Board,

W. G. THOMAS, Secretary.
6, Serjeants' Inn, Fleet Street, London, E.C., April, 1891.

NEW WORK BY F. ANSTEY.

Crown 8vo, 1s.; cloth, 2s.

TOURMALIN'S TIME CHEQUES: a Paralel Extravagance. By the Author of "Vice Versa," "The Tinted Venus," &c.

"Mr. Anstey is always welcome; some think him 'our only humorist.' Mr. Anstey's talent combines very minute observation, with a taste for the farcically extravagant. His motive is odd in such a kindly and friendly way, for he always likes to show us a harmless fellow struggling with the direst series of perplexing circumstances... It is easy to imagine what fun Mr. Anstey gets out of all this, and how ruthlessly he lodges his hero in trouble, while a dilemma is for ever 'sounding her dread horns' at his doors. It is needless to explain how all ends; the reader should not be deprived of the pleasure of his 'loft's vorth,' as Mr. Pickwick's cabman says."—*Daily News*.
"Only a person who had determined to find faults could discover any in this little volume."—*Glasgow Herald*.

Fcap. 8vo, 1s.; cloth, 1s. 6d.

OUR BOYS and GIRLS at SCHOOL: their Naivete, Humour, and Wit. By HENRY J. BARKER, B.A., &c., Author of "Very Original English," &c.

The *Pall Mall Gazette* says: "It is certainly one of the most amusing shillingworths we have ever come across."

Crown 8vo, cloth, 3s. 6d., 2s. 4d. pp.

THE END of a LIFE. By EDEN PHILLIPOTS.

"Novel readers must be prepared to welcome a strong and accomplished artist."—*Black and White*.

NEW WORK BY JEROME K. JEROME,

Author of "Three Men in a Boat."

THE DIARY of a PILGRIMAGE.

Cloth, 320 pages, 3s. 6d., 120 Illustrations. Ready end of April, First Edition, 30,000.

NEW WORK BY DR. W. G. GRACE.

Demy 8vo, 500 pages, 6s., 43 Illustrations, First Edition, 5,000.

CRICKET. By W. G. GRACE.

(Ready April 11th.)

Bristol: J. W. ARROWSMITH.

London: SIMPKIN, MARSDALL, HAMILTON, KENT, & Co., Limited.

TRISCHLER & CO'S NEW BOOKS.

At all Libraries and Booksellers.

THE SOUL of COUNTESS ADRIAN. By Mrs. CAMPBELL PRAED. Crown 8vo, handsomely bound in blue cloth, 1 vol. Ready this day. Two shillings and sixpence.

THE BLACK DROP. By the Author of "Bail Up." SUNDAY TIMES.—"It tells a strong story in a strong and straightforward way, and is thoroughly readable." GLASGOW HERALD.—"The book is most interesting." Cloth extra, 1 vol., Two shillings and sixpence.

LADY DELMAR. By Thomas Terrell and T. L. WHITE. This exciting story of London Life has already been dramatised by Mr. Sydney Grundy. DAILY TELEGRAPH.—"A remarkable novel." TRUTH.—"A striking powerful novel." Cloth extra, 84 pp., Three shillings and sixpence.

A MAIDEN FAIR to SEE. By F. C. Philips and C. J. WILLS. Illustrated by G. A. Storey, A.R.A. SCOTSMAN.—"This novel, both by its pictures (graceful drawings from the pencil of Mr. S. A. Storey) and the general style of its printing, suggests the book for young readers. The story is lifelike, humorous, and clever. Everybody who reads the story will enjoy its tenderness and quiet fun." Foolscap quarto, beautifully bound, with gilt top, Six shillings.

THE ROMANCE of a LAWN TENNIS TOURNA-MENT. By Lady DUNBOYNE. VANITY FAIR.—"An exciting little romance." GLOBE.—"An agreeably written narrative." Picture cover, One shilling; cloth, 1s. 6d.

TRISCHLER & COMPANY, 18, NEW BRIDGE STREET, E.C.

THE GOLDEN LAKE. By W. Carlton Dawe.

With Eight Full-page Illustrations by Hume Nisbet. MORNING POST.—"A welcome addition to the fiction treating of 'The Great Lone Land of Australia,' the effect of which is increased by Mr. Hume Nisbet's numerous illustrations." SUNDAY TIMES.—"A very strong and well-written story of Australian life, told with a swing and 'go' which make it very entertaining reading."

Extra cloth, with bevelled boards, Six shillings.

THE PRISONER of CHILOANE; or, with the Portuguese in South East Africa. By WALLIS MACKAY. With 80 Illustrations by the Author.

THE SATURDAY REVIEW.—"Mr. Mackay is as good with pencil as with pen."

THE SCOTSMAN.—"Written in a bright spirited style, and the illustrations are full of fun and movement." Foolscap quarto, handsomely bound in cloth, bevelled edges, 7s. 6d.

HOLLY. 2 vols. By Nomad, Author of "The Railway Foundling," "The Miroyrs," &c.

In speaking of this author's last work, "The Railway Foundling," the DAILY TELEGRAPH says:—"It is a story that must be read to be understood. There is vivacity and adventure in it, and, good as the author's previous work, 'The Miroyrs,' was, it is not too much to say this is better."

THE TYPE WRITTEN LETTER. By R. H. SHERARD, Author of "Agatha's Quest."

GLOBE.—"Very cleverly put together."

SCOTSMAN.—"The plot is cleverly devised, and the interest of the book is kept well up from beginning to end."

Limp cloth, One shilling; cloth boards, Eighteenpence.

SATURDAY, APRIL 18, 1891.

No. 989, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Memoirs of the Prince de Talleyrand. Edited, with a Preface and Notes, by the Duc de Broglie; translated by Raphaël Ledos de Beaufort; with an Introduction by the Hon. Whitelaw Reid, American Minister in Paris. Vol. I. (Griffith, Farran & Co.)

THE unique career of Talleyrand, which afforded him unrivalled opportunities for acquiring an intimate and correct knowledge of the secret history of France and of Europe during the most eventful period of modern history, and the reputation he possessed for biting wit and for acuteness in fathoming the inmost thoughts of the men with whom he was brought in contact, have caused the publication of his Memoirs to be looked forward to with the keenest expectation. The facts that he should have directed they should not be published until thirty years after his death, and that his literary executor, M. de Bacourt, should have prolonged the period for another twenty years, served to increase the impatience of the public and strengthened the belief that they would be of surpassing interest. Now that they have been given to the world, the universal feeling has been one of disappointment; they contain no startling revelations, no scandalous gossip, no brilliant passages, no fresh light on the characters of famous men; they have been compiled evidently to defend the character of the author and not to blacken the reputations of others; they contain an "Apologia pro Vita sua," not a *chronique scandaleuse*. The feeling of disappointment will soon wear off. Talleyrand's reputation will not suffer because he has chosen, in his posthumous Memoirs, to defend his own career instead of displaying his knowledge, sagacity, and powers of sarcasm in abusing his contemporaries; and the value of the observation, made by this most acute observer on the events of his own time must have a permanent value.

It was certain beforehand that the authenticity of Talleyrand's Memoirs would be called in question. They had passed through so many hands and had been the subject of so many rumours; it had been so obviously to the interest alike of Louis Philippe and of Napoleon III. that the full extent of the great diplomatist's knowledge of the careers of their ancestors should not be divulged to the world, that it was generally believed that they must have been tampered with. The absence of striking revelations in them, now that they have been published at last, has strengthened this belief. The high character of the Duc de Broglie as a historian and a man of honour forbids the shadow of a suspicion that he should

have been concerned in any suppression, emendation, or interference with the text of the Memoirs, which were placed in his hands for publication. But M. Aulard, the learned Professor of the History of the French Revolution, whose knowledge is surpassed only, if it be surpassed, by that of M. Albert Sorel, has pointed out that the text edited by the Duc de Broglie is printed from a copy made from the original by M. de Bacourt, and not from the original itself. M. de Broglie has offered to place this copy in the hands of experts. But no one doubts his *bona fides*; the question at issue is, whether the copy was correctly made from the original, and the original is not forthcoming to decide the question. Unfortunately, the reputation of M. de Bacourt is not unimpeachable. He was a diplomatist and not a historian; he is seriously suspected of having doctored his originals in his publication of the *Correspondance entre Mirabeau et La Mure*; and it is perfectly possible that in making his copy he may have suppressed or altered certain passages of which he did not approve. It is not for a moment intended to imply that M. de Bacourt was a book-maker of the type of Beauchamp, who vamped up the so-called Memoirs of Fouché out of the notes of a former secretary of the famous Minister of Police; but it is alleged by men of knowledge and critical acumen, that he may have altered the text of the memoirs committed to his charge. No doubt rests on the recently-printed Memoirs. M. Sorel, M. Aulard, and the most eminent students of the history of the Revolution and of Napoleon, acknowledge their authenticity. But it is possible, nay it is most probable, that they do not contain the whole of the matter which Talleyrand intended to be published for the edification of posterity; and until the original from which M. de Bacourt made his copy is produced and tested with the copy, this doubt must remain unsolved.

The first question suggested by a careful study of the Memoirs, when it has been ascertained that they contain no startling revelations, is what light do they throw on the character of Talleyrand himself. The veteran diplomatist, the unfaithful servant of many masters, the bishop of the *ancien régime*, and the ambassador of the monarchy of July, has been held up for two generations as the ideal of cynical selfishness, the embodied spirit of treachery and deceit. He knew well the character which was ascribed to him; and his Memoirs are deliberately intended to form a justification, a vindication and an apology for his whole career, both in public and private life. The Duc de Broglie, in an admirable preface, has sketched the nature of this defence. Talleyrand asserts that throughout his life he was urged by but one impulse, the desire to serve France. He argues that it was his ardent patriotism which induced him to give the title of apostolical succession to the first bishops elected under the civil constitution of the clergy in 1791 by consecrating two of them, in the exercise of his own undoubted rights as Bishop of Autun; and that it was equally from patriotism that he served the Directory as Foreign Minister, prepared the *coup d'état* of 18 Brumaire, and eventually, after

acting as Napoleon's most trusted adviser, carefully warned the Czar Alexander against his former master during the conferences at Erfurt. It may have been patriotism; but considering the height of wealth and power to which he rose, this conduct seems to ordinary men as if it had been inspired by motives of self-interest and by a cynical calculation of probabilities. When the Duc de Broglie comes to study Talleyrand's later career he stands on firmer ground. The services which the great diplomatist rendered to France at the Congress of Vienna in 1814, and as ambassador to England after the revolution of July, 1830, are incontestable, and such as no other man of the period could have accomplished for her. Though Talleyrand's public career during the Revolution, under the Directory, the Consulate, and the Empire, may be open to criticism as to his motives, and even to decided blame, if treachery be accounted a crime in a diplomatist, he yet did no particular harm to France during that era; while at the Congress of Vienna he, the representative of a country occupied by the armies of the other powers, saved her from dismemberment, and, by winning the acquiescence of England to the accession of Louis Philippe in 1830, he broke the unity of the Holy Alliance, and prevented any attempt of the continental monarchs to restore Charles X. as king by right divine to the throne of France. These were great services indeed, and Talleyrand, if a traitor to Napoleon and many other masters, was never a traitor to his country. But his Memoirs not only contain a written vindication of his public career, they imply a justification for the errors of his private life. Nothing could be more skilful than the manner in which he dwells on the way in which he was forced to take orders, and thus hints an excuse for his unsacerdotal behaviour: the reader throughout is left to infer the grounds of his defence, and is never forced to listen to an elaborate argument from the criminal in the dock.

The earlier parts of the first volume of Talleyrand's Memoirs deal with the history of the French Revolution, and deserve a few words at once; while parts iv. and v. treat of his conduct during the reign of Napoleon, and will be best examined in connexion with the second volume, after studying all that he has to say upon the subject. The whole of part ii. is devoted to an elaborate examination of the character and career of the Duke of Orleans, Philippe Egalité. His pen seems dipped in gall as he writes of this unfortunate prince, whom posterity justly considers more sinned against than sinning; but he does him the justice to say in conclusion, "[The Duke of Orleans] was not, as I have said, either the principle, the object, or the motive of the Revolution. The impetuous tide carried him along with the others." He also gives an elaborate character of Siéyès, and many valuable remarks on the policy of the Constituent Assembly and on the error of the royalist nobility in emigrating and making themselves appear the declared enemies of France. But, alas! all that he has to say about the history of the Revolution does not amount to much. He gives us no word-

picture of Mirabeau, whom he knew intimately, no vivid account of the events which led to the States-General becoming the National Assembly, nothing on the march of the Parisians to Versailles on October 5, or on the flight to Varennes. If M. de Bacourt has suppressed aught that Talleyrand wrote on this period of his life, he has much to answer for, for Talleyrand knew much which all students long to know; but if M. de Broglie's theory be correct—that the old statesman intended to write a defence of his career and a book of memories, not an autobiography—it may well be imagined that even to the end of his long life he felt that he had little or nothing to apologise for in sharing the excitement and enthusiasm, the noble sentiments and the excusable errors, of the Constituent Assembly from 1789 to 1791. There is one passage which specially deserves quotation, if only for the use of the pseudo-historians, who delight in wasting time and paper in speculations on the causes of the French Revolution.

"If historians make it a point," he writes, "to seek the men to whom they can award the honour, or address the reproach, of having made, directed, or modified, the French Revolution, they will give themselves unnecessary trouble. It had no authors, leaders, nor guides. It was sown by the writers who, in an enlightened and venturesome century, wishing to attack prejudices, subverted the religious and social principles, and by unskilful ministers who increased the deficit of the treasury and the discontent of the people. It would be necessary, in order to find the real origin and causes of the Revolution, to weigh, analyse, and judge questions of high speculative politics, and especially to submit to a profound and skilful examination the question of the struggle between philosophical ideas and prejudices, between the pretensions of the *mind* and those of *power*. For, if we were to take into consideration only the sole results of that Revolution, we should soon fall into error, and end by mistaking M. de Malesherbes for Mirabeau, and M. de la Rochefoucauld for Robespierre."

In conclusion, with regard to this first volume, every reader should take care to study the admirable preface of the Duc de Broglie, and may neglect the introduction by Mr. Whitelaw Reid, for which there seems to be no sufficient reason. The translation is good, and the biographical notes are clear and useful; but it is amusing to notice the translator's suffix of "F.R.Hist.Soc." in such close juxtaposition on the title-page to M. de Broglie's qualification, "of the French Academy."

H. MORSE STEPHENS.

Bonheur. Par Paul Verlaine. (Paris : Léon Vanier.)

SOME years ago, in a book rather of confession than of criticism, Paul Verlaine announced his intention (somewhat too formally, perhaps) of dividing his poetic work into two distinct sections, to be published in parallel series. *Sagesse*, *Amour*, *Bonheur*, were to "make for righteousness"; *Parallèlement* was to be frankly sensual; between them, he imagined, the whole man—that strange, composite, though not complex nature—would be fully and finally

expressed. *Bonheur*, the third part, completing the trilogy, has just appeared.

Bonheur is written very much in the style of *Sagesse*, and a great part of it might be assigned, on internal evidence, to a period anterior to *Amour* and *Parallèlement*. It has none of the perversity, moral and artistic, of the latter book, despite a few experiments upon metre and rhyme. Nor is space devoted, as occasionally in *Amour*, to the mere courtesies of literary friendship. The verse has an exquisite simplicity, a limpid clearness, a strenuous rejection of every sort of artistic "dandyism"—the word is Verlaine's:

"et que cet arsenal,
Chics fougueux et froids, mots secs, phrase
redondante,
Et cœtera, se rende à l'Émeute grondante
Des sentiments enfin naturels et réels."

I take these lines from a poem which may be considered a new "Art Poétique." In that delicate and magical poem—itsself the ideal of the art it sang—Verlaine said nothing about sincerity, except, inferentially, to the fleeting impression of something almost too vague for words. Music first of all and before all, and then, not colour, but the *nuance*, the last fine shade. Poetry is to be something intangible, a winged soul in flight "towards other skies and other loves." To express the inexpressible, he speaks of beautiful eyes behind a veil, of the full palpitating sunlight of noon, of the blue swarm of clear stars in a cool autumn sky; and the verse in which he makes this confession of faith has the exquisite troubled beauty—"sans rien en lui qui pèse ou qui pose"—which he commends as the essential poetry. Now, in this new poem of poetical counsel, he tells us that art should, first of all, be absolutely clear and sincere; it is the law of necessity, hard, no doubt, but the law:

"L'art, mes enfants, c'est d'être absolument soi-même.

* * * * *
Foin! d'un art qui blasphème et fi! d'un art
qui pose,
Et vive un vers *bien* simple, autrement c'est la
prose."

The verse in *Bonheur* is indeed "*bien* simple." There is a poem addressed to a friend—"Mon ami, ma plus belle amitié, ma meilleure"—which even Verlaine has hardly excelled in a kind of plaintive sincerity, full of the beauty of simple human feeling, seeking and finding the most direct expression:

"Aussi, précieux toi plus cher que tous les moi
Que je fus et serai si doit durer ma vie,
Soyons tout l'un pour l'autre en dépit de l'envie,
Soyons tout l'un à l'autre en toute bonne foi."

Verlaine speaks to his friend as if he would say more for friendship than has ever been said before. He would fain find words close and gracious enough to express all the intimacy and charm of their friendship:

"Elle verse à mes yeux, qui ne pleureront plus,
Un paisible sommeil, dans la nuit transparente
Que de rêves légers bénissent, troupe errante
De souvenirs futurs et d'espoirs révolus."

"Remembrances to be, and hopes returned again"—how lovely a verse, French or English! And the emotion, temperate and

restrained through most of the poem, rises at the end into exaltation:

"Afin qu'enfin ce Jésus-Christ qui nous créa
Nous fasse grâce et fasse grâce au monde
immonde
D'autour de nous alors unis — paix sans
séconde! —
Définitivement, et dicte : Alleluia."

I quote this stanza not only because of its place in the poem—its expression of the culminating emotion—but because it is an excellent example of Verlaine's most characteristic technique. Note the rhyme at the beginning of the first line and at the end of the second, the alliteration, the curious effect produced by the repetition of "fasse grâce" (itself an assonance), the tormented rhythm throughout, the arbitrary and extraordinary position and transposition of accents. It cannot be said that all these experiments are always and equally successful; but it is useless to deny that Verlaine has widened the capacities of French verse. He has done what Goncourt has done in his prose: he has contributed to the destruction of a classical language, which, within its narrow limits, had its own perfection. But how great a gain there has been, along with this inevitable loss! In the hands of the noisy little school of *Décadents*, the brain-sick little school of *Symbolistes*, both claiming Verlaine as a master, these innovations have of course been carried to the furthest limits of unconscious caricature. In Paris, at the present moment, a factitious clamour has arisen about a young Greek, Jean Moréas, a person who at one time had a very distinct talent for verse, which he wrote in regular metre, and without more of foreign idiom than his Athenian origin would lead one to expect. At present, as one of his admirers calmly remarks, "il répudie toute règle préalable pour la texture de ses vers." From these extravagances Verlaine has always held aloof; and in an article published last year he has given his opinion very frankly on those young *confrères* who reproach him, he tells us, "with having kept a metre, and in this metre some caesura, and rhymes at the end of the lines. *Mon Dieu!*" he adds, "I thought I had 'broken' verse quite sufficiently." In *Bonheur*, for the first time in his work, there is one short poem—a concession to these young *confrères*—written in irregular unrhymed verse: verse, however, which is still verse, and not delirious prose. There are also two poems in assonant verse, one of them in lines of fourteen syllables, metrically quite regular. It is difficult to see any reason for the rejection of rhymes, but at all events they are rejected without disdain—frankly for a caprice.

Almost all the poems in *Bonheur* are closely personal—confessions of weakness, confessions of penitence, confessions of "l'ennui de vivre avec les gens et dans les choses," confessions of good attempts foiled, of unachieved resolutions. With a touch of characteristic self-criticism Verlaine says in one place:

"Mais, hélas! je ratiocine
Sur mes fautes et mes douleurs,
Espèce de mauvais Racine
Analysant jusqu'à mes pleurs."

And in its measure and degree this is true:

there are times when confession becomes analysis, not to the advantage of the poetry. But, here as in *Sagesse*, the really distinguishing work is an outpouring of desires that speak the language of desire, of prayers that go up to God as prayers, not as literature; of confessions that have no reticences.

One of the finest pieces tells the story of that endeavour to rebuild the ruined house of life which Verlaine made at the time of his conversion, after those calm and salutary eighteen months' of seclusion. This intensely personal poem, which is really a piece of the most exact autobiography, becomes a symbol of all lives that have fallen, that have struggled to rise, that have failed in the endeavour. Towards the end the emotion rises in a crescendo, half of despair, half of hope, as he cries out in the very fury of helplessness against the worst of foes—

"Vous toujours, vil cri de haro,
Qui me proclame et me diffame,
Gueuse inepte, lâche bourreau,
Horrible, horrible, horrible femme !

"Vous, l'insultant mensonge noir,
La haine longue, l'affront rance,
Vous qui seriez la désespérance,
Si la Foi n'était l'Espérance

"Et l'Espérance le pardon,
Et ce pardon une vengeance.
Mais quel voluptueux pardon,
Quelle savoureuse vengeance !"

Elsewhere he writes of his life in hospital—"last home perhaps, and best, the hospital"; of his child-wife, for whose memory he has so strange a mixture of regretful complaint and unassuaged self-reproach; and always he returns to the burden of "Priez avec et pour le pauvre Lélian !"

A few poems, less intimately personal, are scattered here and there—impressions, some of them, almost in the manner of the *Romances sans Paroles*. Here is one, which seems to me not to need its last stanza: so beautiful, so sufficing in itself, is the picture called up before our eyes, the impression—outline, colour, and harmony—evoked in the earlier stanzas.

"La cathédrale est majestueuse
Que j'imagine en pleine campagne
Sur quelque affluent de quelque Meuse
Non loin de l'Océan qu'il regagne,

"L'Océan pas vu que je devine
Par l'air chargé de sels et d'arômes.
La croix est d'or dans la nuit divine
D'entre l'envol des tours et des dômes ;

"Des angélus font aux campaniles
Une couronne d'argent qui chante ;
De blancs hibous, aux longs cris gracieux,
Tourment sans fin de sorte charmante ;

"Les processions jeunes et claires
Vont et viennent de porches sans nombre,
Soie et perles de vivants rosaires,
Rogations pour de chers fruits d'ombre.

"Ce n'est pas un rêve ni la vie,
C'est ma belle et ma chaste pensée,
Si vous voulez, ma philosophie,
Ma mort choisie ainsi déguisée."

ARTHUR SYMONS.

"ENGLISH STATESMEN."—Peel. By J. R. Thurstfield. (Macmillan.)

SIR ROBERT PEEL is remembered, his name is honoured, for those acts of his public life which were most censured by his oldest friends; and the high place he holds in the British policy of the nineteenth century was gained by abandoning the positions he had defended, and by taking up those which he had denounced. Therefore, in any account of Peel's life, we turn most anxiously to witness how these changes are regarded, and to what motives they are ascribed. No writer upon Peel's career has been more thoughtful in this respect, and none has been quite equally candid and successful. Those who have lived much—as has the present writer—among the wealthiest of the merchants and manufacturers of Lancashire can, perhaps, better understand the personal character of Peel, in which humility and pride, each now and then overwrought, with the addition of academic and political distinction, formed a mixture, difficult, it seems, to unravel except by those who have had observation of all the threads of such complex life, especially the homely material fixed in that comparatively humble and unpicturesque house at Bury where Peel's childhood was passed. Of those who have illustrated these characteristics in the highest place, Peel was the first, but not the greatest, representative. In Lancashire, attractions to public life are more vivid than elsewhere, because there is no escape from the clatter and the competition of public opinion. Sloth may affect neutrality and indifference, but energy and talent must take its side. Disraeli has written in *Lothair* of the country gentlemen that "they live in the open air, they know but one language, and they never read." The difference between rural life and Lancashire life is at least as great as that between home education and a great public school. Peel's father, a Lancashire man of the best type—whose conscientious and scrupulous care in business was translated in the son to that which Mr. Thurstfield well describes as "Peel's exalted and almost pedantic sense of the proprieties of public life"—proud of his own success, and, seeking for his son the greater glory of a statesman's career, devoted him from infancy to the service of the country. Such a dedication, when made on reasonable bases, is never unimportant as a factor in the life of the subject. The conscious claim of ascendancy over his fellows was a conspicuous note of Peel's progress. His first great victory was gained at Oxford, and the halo of that success illumined many succeeding years. It was very remarkable.

"The Class List, that new system of examination which was to stamp so many statesmen and scholars, had been instituted in the first years of the century; but it was not until 1807 that the examination had been divided into the two schools of classics and mathematics. Peel, who at school always 'knew his lesson' [that was the opinion of Byron, his schoolfellow], presented himself for honours in both. He came out a double first, being the first of Oxford men ever to achieve that honour, and standing alone in the first class in mathematics."

Under the restricted suffrage which the lower political morality of 1809 then sanctioned in

Ireland, Peel entered Parliament soon after reaching manhood for the borough of Cashel, and, of course, was ready to combat, as he did by speech in 1812, the Roman Catholic claims to emancipation. At that time, Castlereagh was one of the leaders of the Tory party in the House of Commons. As a good example of Mr. Thurstfield's concise historical style, we give the following on Castlereagh:

"In Ireland, his name stands for the cruelty with which the rebellion of 1798 was repressed and the corruption with which the Union was carried; in England it stands for the Six Acts and the policy they represented; in Europe for the Holy Alliance. When he died, the country rejoiced; when he was buried, the mob of Westminster cheered in triumph. He was the scapegoat of that obsolete Toryism which went out of office with Eldon, and was finally extinguished by the Reform Bill."

Yet Castlereagh never denied the Catholic claims, and many will agree with Mr. Thurstfield that "posterity has done him less than justice." As chief secretary, Peel founded the constabulary now so famous in Ireland. It was Irish humour which called the new officer "bobby" and "peeler," nicknames transferred to England—and still current in the slang of London streets—when Peel as home secretary reorganised the metropolitan police in 1829.

In this very frugal, but otherwise most excellent, sketch of Peel, the name of Gladstone, which must rise often in the mind of any reader, occurs first in connexion with a familiar personal incident. All that which in the character of Mr. Gladstone may be termed genius is superadded to the character of Peel. In fundamentals there is an extraordinary resemblance. Like Peel, Mr. Gladstone is "not a man of ordinary parliamentary temper." The greatness of such men is partly derived from their power of regarding their own acts and character as identified with the greatness, the honour, the welfare, and the dignity of their public deeds done in the name of the country. They are jealous of personal dignity and self-conscious almost to egotism. When Cobbett, in moving an address to the Crown praying that Peel should be dismissed from the Privy Council, referred with disdain to the origin of Peel's family, the House would have treated the affair as a sorry joke, but Peel replied in elaborate and impassioned speech.

"So deeply was he moved, so vehemently did he exert himself, that as he spoke the high collars which men wore in those days [Mr. Thurstfield acknowledges this anecdote of the collars from Mr. Gladstone] gradually became saturated with perspiration and fell back in limp disarray, betraying to all who saw him the intensity of his agitation."

We are now approaching the first of the three great tests and trials in which Peel was victorious over his former self, and upon which his fame must rest. These three great surrenders were, (1) on the currency, (2) on Catholic emancipation, and (3) on the corn laws. The biographer must be judged by his success in dealing with these crises. Disraeli attacked these changes of opinion, and declared the mind of Peel to be one "huge appropriation clause." Mr. Thurs-

field is clear and, we think, convincing in his view:—

"This openness of mind, this readiness to follow mature and honest conviction whithersoever it might lead him, is Peel's shining merit as a statesman. His convictions were not determined by personal interest, by narrow views of political expediency, by cunningly laid schemes of party strategy. They were the slow, reasoned, sincere, and inevitable results of patient and painful reflection on the truth of things and its relation to the national welfare."

Peel established that gold standard of the currency which, though questioned, has never been upset. But from 1823 to 1827 the extraordinary spectacle was presented of Canning advocating Catholic emancipation from his place as leader of the House of Commons, and being answered by Peel, the second man in the ministry, from the same bench. That anomaly ended on March 5, 1829, when, in a memorable speech, Peel abandoned his maintenance of the exclusion of Roman Catholics from Parliament and high offices of State, "in consequence of the conviction that it can be no longer advantageously maintained, from believing that there are not adequate materials or sufficient instruments for its effectual and permanent continuance."

This, as Mr. Thursfield says, "is the language not of conviction, but of surrender," and in this matter there appears a defect in Peel's character which no argument can satisfy. He deals otherwise with his change of front as to the currency and the corn laws. Yet in this frank declaration there is no absolute opposition to Mr. Thursfield's concluding judgment, that "the divinity enshrined in the innermost recesses of Peel's nature was intellectual sincerity; to this he rendered unswerving homage and unfaltering obedience." It is on record by his own hand that in 1845 he had become convinced that the corn laws could not be permanently maintained. On the same day, in 1846, that the Corn and Customs Bill received the Royal Assent, Peel was placed in a minority in the House of Commons. It was then, in falling from power at the age of fifty-eight, with every assurance of his country's gratitude and of the impartial testimony of history to the splendour of his public services, that Peel delivered his valedictory speech, containing words which are cut in granite at Manchester, and are graven still more imperishably in the hearts and memories of his countrymen, reminding "those whose lot it is to labour and to earn their bread with the sweat of their brow" that they may, through his self-sacrificing work, "recruit their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened with a sense of injustice."

ARTHUR ARNOLD.

George Washington's Rules of Civility: Traced to their Sources and Restored. By Moncure Daniel Conway. (Chatto & Windus.)

THIS is a delightful and interesting volume, both for the matter it contains and for the sake of the great man who compiled it. The readers of any *Life of Washington* must remember him a stately figure of antique virtue, of simple and gracious

habits. This is the portrait which Thackeray draws of him in *The Virginians*; and it recalls those heroes of the greater commonwealth to whom Washington may be compared, with their stern lives and their simple dignity, as they are celebrated by the poet: Aemilius Paulus, "prodigal of his heroic soul"; Fabricius and Camillus, schooled by their *sacra paupertas*; their desires and their ambition satisfied by their hereditary acres, their manners regulated by the ancient customs of their family, *avitus apto cum lare fundus*. Not alone among the moderns, but certainly conspicuous among the greatest of the moderns is Washington, in his resemblance to an antique hero out of Plutarch: and it is curious to notice how, in every age, the model of good breeding and of austere living is referred to the traditional standard of "an elder fashion." Mr. Austin Dobson talks of "a fine, old-fashioned grace," in one of his most pleasing verses; and Patereulus attributes "an old-fashioned grace" to Sejanus, when he enumerates the real or the imaginary excellencies of that notorious minister. In Tacitus also, the same notion is continually present: his good characters, Agricola, Helvidius Priscus, Thræsea, are always commended for their ancient virtue, and above all for their old-world courtesy; "quicquid mirati sumus manet mansurumque est in animis hominum, in æternitate temporum, famæ rerum." So commanding is goodness, in itself; but so persuasive and abiding is its memory, when it is adorned by what Lord Chesterfield calls "the Graces."

"The different effect of the same things, said or done, when accompanied by them, is almost inconceivable. They prepare the way to the heart; and the heart has such an influence over the understanding that it is worth while to engage it in our interest. People will no more advance their civility to a bear than their money to a bankrupt."

Washington was a votary of "the Graces," and he courted them from his earliest youth. Mr. Conway has re-printed a MS. book of Washington's on manners, written when he was fourteen or fifteen; and he has traced these "Rules of Civility" back to their originals. Washington's master was one James Marye, a Frenchman, an ex-Jesuit; one who wandered to the English settlements in America, and became a teacher there. His "Rules" appear to have been taken from a volume of *Maximes*, an early French work, which was compiled by the Jesuits, and used as a text-book of behaviour in their schools. Of this there was an English version, printed several times in the seventeenth century; and M. Marye, the ex-Jesuit *pasteur*, seems to have made use of the English as well as of the French editions. The "Rules" were either dictated, as Mr. Conway thinks, or they may have been digested by the boys themselves, and then re-written according to their taste or memory; however that may be, Washington's "Rules" are shorter and more vigorous than either of the originals. Mr. Conway has printed the three texts, with all their errors, their variations, and their peculiarities; and he deserves our best thanks for enabling us to compare Washington's rendering with the language of the

older versions. The Jesuit manual was enlarged and plagiarised by a later Frenchman, and this work was turned into English, or paraphrased, perhaps, and added to, by Obadiah Walker, the Master of University College in Oxford. Mr. Conway has done his editing most faithfully, and he has introduced the texts by an admirable preface. If it were possible to reproach him, it would be for denying to his readers any specimen of the "elegant Latin," "the most elegant Latin ever met with," into which Father Périn transformed the "very unpolished French" of the original maxims. It is cruel to be told of this polished Latin and not to see it; and into a book of civility, "the most elegant Latin ever met with" would have fitted well.

But although it is impossible to cavil at Mr. Conway's editing, it may be allowable to challenge one statement in his introduction. He describes the Jesuit manual as "the mother of all works on civility." The earliest notice he gives of it is in 1595; it was then in use at the College of La Flèche, and was sent by the pupils there to the College at Pont-à-Mousson. Now there are two great Italian books on civility, which must be older than this manual of the French Jesuits. *Il Galateo* of Della Casa, and *Il Cortigiano* of Castiglioni, are, so far as I know, the oldest books of civility in our modern literatures. And in England, if we turn from books to practice, we may find something older. In the fourteenth century William of Wykeham endowed his two colleges in Winchester and Oxford, and gave them their famous motto "*Manners Makyth Man*." This device of his colleges we may take to be an epitome of their statutes, which were framed to train not only scholars and pious clerks, but gentlemen. This object was very dear to Wykeham; the end was great and worthy, he considered; his colleges were to be a means of attaining it, and their motto was to be a perpetual remembrance of his intention.

This plan of Wykeham's for teaching civility by practice, and for handing it down as a great tradition, should never be forgotten by those who treat of manners; and perhaps Wykeham's way is the best and wisest, for there is nothing more difficult to write than a book upon behaviour. Many students of Mrs. Chapone must have suspected, as they read her pages, that a person formed upon her rules might easily be an unpleasing character. Della Casa and Castiglioni, however, have treated their difficult subject with a master's hand: the one with common sense, not wanting in politeness; but the other with all the delightful ease of a courtier, of a soldier, and of an accomplished scholar. In those books there is nothing of that formalism and stiffness, which are too evident in Mrs. Chapone. In Chesterfield, again, there is a fund of common sense, which adds to the value and to the reality of his teaching.

"There is a natural good breeding," he says, "which occurs to every man of common sense, and is practised by every man of common good-nature. This good breeding is general, independent of modes; and consists in endeavours to please and oblige our fellow-creatures by all good offices, short of moral duties. This will be

practised by a good-natured American savage, as essentially as by the best-bred European."

Mr. Conway gives an example of this in his preface: A certain witness, in Kentucky, described someone as "a gentleman," and being asked to explain his definition, "If any man goes to his house," he replied, "he sets out the whiskey, and then goes and looks out of the window." This particular instance is not, perhaps, what Lord Chesterfield may have contemplated: he is upon surer ground, when he says more generally, "Good breeding is to all worldly qualifications what charity is to all Christian virtues"; and, again, "a man's own good breeding is his best security against other people's ill-manners." Here he approaches to the first of Washington's "Rules": "Every Action done in Company ought to be with some sign of Respect to those that are present." From this, as from a general principle, the "Rules of Civility" are deduced. "*De minimis non curat lex*" is a maxim wise enough in civil and in criminal affairs; but in social affairs, how often it is that men violate the unwritten law, and their slight offences are criminal to those who suffer from their heedless ways. "In the Presence of Others sing not to yourself with a humming Noise, nor Drum with your Fingers or Feet." "Be not Angry at Table whatever happens." "Speak not of doleful Things in a Time of Mirth, or at the Table; Speak not of Melancholy Things as Death and Wounds."

The maxims, writes Mr. Conway, "are partly ethical, but mainly relate to manners and civility; they are wise, gentle, and true. A character built on them would be virtuous and probably great." He points out that in this admirable school, "in what was little more than a village," three American Presidents were reared; it was to the teaching and to the methods of their ex-Jesuit French master, that Washington, Madison, and Monroe owed something of their greatness. Mr. Conway mentions another school "for children gathered from the street." It began every morning with "a conduct lesson"; for this, the children crowded round the door before it opened, "in their anxiety not to lose a word." And this lesson "gradually did away with all necessity for corporal punishments." The readers of Boswell and of Goldsmith must remember, and must be influenced themselves by, the winning manners of Sir Joshua Reynolds, before whom Dr. Johnson was habitually tender and considerate. The sterner Swift, with all his party feeling, writes of Addison, "they could refuse him nothing; they would make him king if he desired it." It was to "the Graces," even more than to military and political accomplishments, that Chesterfield ascribed the greatest victories of Marlborough and the only real success of Bolingbroke. We admire the stern virtues of the early Romans, as Horace gives them; but we love the hero better, if to his virtues he add "the Graces," if he be not only *animæ magnæ prodigus*, but *ad unguem factus homo*: a scholar and a gentleman, a man full of accomplishment and courtesy.

ARTHUR GALTON.

A Ride to India Across Persia and Baluchistan.
By Harry de Windt, F.R.G.S. With Illustrations by Herbert Walker from Sketches by the Author. (Chapman & Hall.)

NOTWITHSTANDING the title, Mr. de Windt cleverly avoided the most difficult and perilous parts of the land journey between Europe and India by taking ship at Bushire, in the Persian Gulf, for Son Miani, on the coast of Baluchistan. He felicitates himself, however, on having traversed some seventy miles of hitherto unknown road. Perhaps it would be as well had he been content to write a brief description of this portion of the route, since he would then have escaped all suspicion of plagiarism. As it is, I am compelled to point out that a work by Mr. A. W. Hughes (*The Country of Balochistan*, London, 1877) has been made use of in a way which seems utterly indefensible. This is a serious accusation to bring against an author of some repute, but it can easily be proved by means of a few parallel passages. The following extracts will show Mr. de Windt's method:—

HUGHES.

"Owing to the nomadic nature of the great majority of the inhabitants of Baluchistan, the general barrenness of the country, and the consequent absence of any valuable commerce and manufactures, towns and villages are comparatively speaking few" (p. 25).

"The dwellings of the pastoral tribes are simply formed by a number of long, slender poles, bent and inverted towards each other, over which are placed slips of the coarse fabric of camel-hair" (p. 39).

"No large river—like the Indus—flows through any part of this immense territory, and to this circumstance is in all probability due the slight knowledge at present possessed of the interior, where arid, sandy deserts, dangerous alike to the native of the country and to the traveller, are the rule, and cover generally those large open spaces shown upon the map as 'unexplored.' . . . Notwithstanding the great width of the bed of the Purali, in many places, it has no regular embouchure into the sea; but its water, when in flood from rainfall, seems to lose itself in the level plains in a chain of temporary swamps and marshes" (p. 9).

"Vermin and venomous animals are, Pottinger observes, not so common as in Hindustan; but Masson especially calls attention to a loathsome bug, called *mangur*, which he found infested the houses at Kelât" (p. 18).

DE WINDT.

"Owing to the nomadic nature of the Baluchis, the barrenness of their country and consequent absence of manufactures and commerce, permanent settlements are very rare" (p. 228).

"The dwellings of the nomads consist of a number of long, slender poles, bent and inverted towards each other, over which are stretched slips of coarse fabrics of camel's hair" (p. 230).

"There are no permanent rivers in this country. To this fact is perhaps due the slight knowledge obtained up to the present time of the interior, where arid, sandy deserts, dangerous alike to native or European travellers, are the rule, and cover those large open spaces marked upon maps as 'unexplored.' Notwithstanding the great width of the bed of the Purali river, in many places, it has no regular outlet into the sea. Its waters, when in flood from the rainfall, lose themselves in the level plains in a chain of lagoons or swamps" (p. 235).

"Vermin and venomous animals are not so common as in India. . . . We were much annoyed by a loathsome bug, the *mangur*, which infests the houses of Kelât" (p. 247).

Did the same *mangur* which vexed Masson in 1844 also ravage the cuticle of Mr. de Windt in 1890?

HUGHES.

"A very commendable trait in the character of the Baluch is his practice of hospitality (*zang*), . . . the person of a guest being looked upon as sacred" (p. 41).

Zang in the above is possibly a misprint for *nang*. Further on, Mr. de Windt rightly translates *zang* as "betrothal." He is still borrowing, as will be seen, from Mr. Hughes:—

HUGHES.

"With the Baluchis marriage is attended with great festivities. The first step is the *sang*, or betrothal, which is regarded as of a very sacred nature, the final rite being known as *nikkar*. . . . On the wedding day the bridegroom, gorgeously arrayed and mounted on a horse, proceeds with his friends to some notable *ziarat*, or shrine, there to implore a blessing, after which the *urus*, or marriage form, is gone through by a *mulla*" (p. 40).

Mr. de Windt cannot even transcribe his material correctly, as will be seen from the following extracts:—

HUGHES.

"The Baluchis themselves ascribe their origin to the earliest Mahomedan invaders of Persia, and are extremely desirous of being supposed to be of Arab extraction" (page 26). "The Brahui Pottinger considers to be a nation of Tartar mountaineers who settled at a very early period in the Southern parts of Asia" (p. 28).

Mr. de Windt quotes, apparently from Hughes, Pottinger's animated description of a Baluch foray, but must needs add on his own account that Pottinger traversed Baluchistan in the last century, which is another inept blunder. The late Sir Henry Pottinger was born in 1789, and travelled in Baluchistan in 1816. Among other information annexed without acknowledgment from Hughes is that relating to the climate and agriculture of the country. Writing in 1877, Mr. Hughes said that the extreme maximum heat recorded at Kelât was 103° Fahrenheit. Mr. de Windt gives the same figure for the maximum "as yet" (1890) recorded. The stories about dust storms are copied almost word for word from Hughes; so too is the quaint legend of the Hill of the Forty Bodies. The vocabularies in the appendix are not taken *verbatim* from Hughes, Mr. de Windt having introduced fortuitous variations of his own. For example, Mr. Hughes gives *khar* as the Brahui equivalent for "angry." Mr. de

DE WINDT.

"The most commendable trait in the Baluch is his practice of hospitality, or *zang*, as it is called. As among the Arabs, a guest is held sacred" (p. 260).

DE WINDT.

"Marriage is attended with great festivities. The first step is called the *zang*, or betrothal, which is regarded as of a very sacred nature, the final rite being known as *nikkar*. On the wedding day the bridegroom, gorgeously arrayed and mounted on his best horse or camel, proceeds with his friends to a *ziarat* or shrine, there to implore a blessing, after which the *winnis* (*sic*), or marriage, is gone through by a *moullah*" (p. 282).

DE WINDT.

" . . . the Brahui is in the North and the Baluchis in the South. The former (*sic*) ascribe their origin to the earliest Mahomedan invaders of Persia, and boast of their Arab descent; the latter (*sic*) are supposed by some to have been originally a nation of Tartar mountaineers who settled at a very early period in the Southern parts of Asia" (p. 227).

Windt makes out that *khar* means an "ant." *Morink*, however, is the Brahui for "ant," corresponding to the Makrání *mor*.

But the most infelicitous example of Mr. de Windt's clumsy pilfering occurs when he tells us about the troglodyte city of Shahr Roghan. The results of his explorations, he writes, may be better explained to the reader in the words of an older and more experienced observer; and he proceeds to quote (not, I suspect, from the original, but second-hand, as usual, from Hughes) the account Carless gave of the cave-dwellings at Shahr Roghan. Now, Lieutenant Carless of the old Indian Navy travelled in Beluchistan, I believe, in the year 1838. How he could foreordain the results of explorations made by Mr. de Windt in 1890 passes comprehension. Mr. de Windt leaves out the most interesting part of his predecessor's story, the legend about the troglodyte princess, beloved by demons, who was rescued by a handsome young prince from Egypt.

Unscrupulous as he is in presenting the result of other people's researches as his own, Mr. de Windt sometimes omits to borrow when borrowing would have been almost excusable. Referring to the curious stone circles met with in different parts of Baluchistán, he says—

"Our Baluchis could not or would not explain the *raison d'être* of them, though the stones must in many instances have been brought great distances and for a definite purpose. I could not, however, get any explanation regarding them at either Kelát or Quetta."

Yet Mr. Hughes notices that, according to Dr. Bellow, these stone circles are made by the Brahuis in commemoration of marriages.

Perhaps almost enough has been said in the way of exposing Mr. de Windt's remarkable notions of literary morality. His ill-digested and unmaunierly plagiarisms make it impossible to review the book seriously. The customary inscription "all rights reserved" appears on the title-page, but there is no telling how much of it or how little of it is really his own. It is evident, however, that he has forfeited all claims to be regarded as an original explorer; and when he expresses surprise "that Baluchistán should have been so long allowed to remain the *terra incognita* that it is," one can only laugh at the impertinence which ignores the explorations of a long line of travellers, beginning with Pottinger and Christie, and ending with Sir Oliver St. John, Sir Robert Sandeman, Mr. Floyer, Captain Jennings, Colonel Mark Bell, and others, of whom Mr. de Windt seems never to have heard. The idea of Baluchistán being a *terra incognita* till Mr. de Windt appeared on the scene—with Hughes's book in his saddle-bags—is almost too ludicrous.

Besides discovering Baluchistán, Mr. de Windt traversed Persia, no uncommon exploit in these days. This part of his journey was chiefly remarkable from the fact that he was foolish enough to choose the wrong time of year for the trip. He found the Teheran bazaar "on the whole disappointing." He also "experienced a feeling of disappointment on first sight of the ruins of Persepolis." At Kashan he saw a Persian girl "with one of the sweetest and fairest faces it has ever been my good

fortune to look upon." At Isfahan he was puzzled to find in the Palace of the Forty Pillars pictures of ladies and gentlemen in Elizabethan costume, and was unable to discover how they got there. Surely Mr. de Windt might have read the *Adventures of Haji Baba*. The Haji says these pictures are portraits of the Europeans who flocked to the Court of Shah Abbas. That monarch, as Sir George Birdwood remarks in his *Report on the India Office Records*, sent some young Persians to Italy to study painting; and according to Persian tradition they were taught by Raphael of Urbino himself—a curious anachronism. Morier says that Shah Abbas had Dutch painters in his service.

Something should be said about Mr. de Windt's personal adventures in Baluchistán. There is no reason to suppose that he extracted them out of other books, and they do not appear to have been very exciting. He found photographs of Mrs. Langtry and Miss Ellen Terry on sale at Las Beila. He interviewed the Khan of Kelát, who seized the opportunity to suggest that Abdur Rahman of Kabul is no true friend of the English. The Khan's Wazir inquired anxiously after Mr. Gladstone's health. On reaching Quetta, Mr. de Windt accepted the hospitality proffered by an English official there; which, however, does not deter him from pleasantly observing that the chief diversions of English society at Quetta are dances, polo, flirtation, drink, and divorce.

The book is illustrated; and there is a map of Eastern Baluchistán, copied, but without acknowledgment, from the maps of the Indian Government Survey. The author's system of transliteration for oriental names is peculiar. The Jam of Las Beila becomes "Djam"; and a *kandt*, a Persian irrigation aqueduct, is a "Con-naught."

STEPHEN WHEELER.

NEW NOVELS.

The Cobra Diamond. By Arthur Lillie. In 3 vols. (Ward & Downey.)

The Richest Merchant in Rotterdam. By A. N. Homer. In 2 vols. (Sampson Low.)

La Fenton. By Gwendolen Douglas Galton. In 2 vols. (Eden, Remington & Co.)

Mrs. Lincoln's Niece. By Anue Lupton. (Digby & Long.)

A Maiden Fair to See. By F. C. Philips and C. J. Wills. (Trischler.)

Country House Sketches. By C. C. Rhys. (Ward & Downey.)

The Mystery of Ritherdon's Grange. By Saumarez de Havilland. (Trischler.)

The occult mysteries of Indian magic have been cleverly brought into requisition by Mr. Lillie in *The Cobra Diamond*. If the story is highly improbable, it is none the less readable on that account. Paracelsus was quite a commonplace individual compared with Wung Dumpy, the leading "adept" of this new philosophy, brought over from Hindostan to Europe, and crystallised as it were into the great cobra diamond. This precious stone is presented by Jeswunt Sirdar, the great occultist, to the hero of the

novel, Captain Montague Lepel, afterwards Lord Aveling. He finds it a very expensive present indeed; for instead of bringing him good fortune, it makes ducks and drakes of the fortune which he already possessed. Lepel had only to hold the diamond in his right hand and say, "In the sacred name of Jagganátha I desire such and such a thing," and, hey presto, the affair was concluded. But it was a very bad stone, notwithstanding. Although it was able to give Lepel a peerage, old estates, the consideration of the world, and the lady of his choice, each of the gifts had to be very dearly purchased. A father must die and his son be charged with his murder, an uncle must become a maniac, a friend be ruined, and a betrothed lady be hunted down to the grave; for the cobra diamond did not give out and out, but could only transfer—for a consideration. By its spells a lady was magnetised to commit the murder for which Lepel was first arrested, and, after him, one of his dearest friends. The British public will be somewhat exercised to know what Mr. Lillie is aiming at, but that will be no bar to the enjoyment of his narrative. The whole story seems to turn on this psychological hypothesis—"Could a wicked man throw his spirit-body to a distance? Could a wicked man, by the aid of some diabolic spell, cause an innocent person unknowingly to commit a horrid crime?" Some medical experts have maintained this theory, which is based on the transfusion of the magnetic force. In the present case, the diamond is made the agent, and it is supposed to contain within it the magical powers of a thousand professors of the black art. Mr. Lillie's story is very ingeniously put together, and it is certainly not devoid of talent. But are not some of his hits at living personages rather too personal? For example, a young artist is told that he has painted a picture which is plainly an echo of Sir Rose Madder, the fashionable portrait-painter; and that, "unless the fates have some sharp stroke in store, a terrible gulf is yawning before him. He may become a baronet, live in a marble palace, and paint aldermen's daughters in *saccula sacerdotum*."

In *The Richest Merchant in Rotterdam*, Mr. Homer describes the serpentine process by which Mynheer Stephen Vanderhagen, the millionaire in question, gets completely within his toils Sir John Milford, a Devonshire baronet of ancient family but broken fortunes. Sir John's beautiful daughter, Madge, while yet in her teens, betroths herself to a fine young fellow, Philip Moresby; but Vanderhagen, who is old enough to be the girl's grandfather, resolves that the union shall never take place, and that he himself shall be Madge's husband. Such a case of May and December has rarely been seen, even in the great matrimonial slave market. He lays his plans with devilish ingenuity, and they succeed to a nicety—that is, he so winds his coils round the unfortunate Sir John that Madge is obliged to sacrifice herself to save her family. Besides this, a forged letter has been made the means of branding her lover Philip as a criminal. Finally, Vanderhagen has Philip abducted, and he is believed to

be dead. But the villains whom he has employed are defeated in their object; and Philip re-appears in Rotterdam, to the amazement and consternation of Vanderhagen and his accomplices. Another desperate effort is made to crush him on a false charge, but it breaks down, and the dead body of Vanderhagen is found under tragical circumstances. He has been the victim of one of his own experiments with secret doors and underground cellars. The plot is very well conceived and wrought out; and the child-lovers, after many trials, are happily united at last.

For the honour of human nature, we trust there are not many villains in the world like Philip Darrel, the central figure in Miss Douglas Galton's novel, *La Fenton*. He not only poisons his father's mind against his brother and gets him disinherited, but imprisons the old squire himself as a lunatic for two years, entering meanwhile into the full possession of the estates. When the brother who has been betrayed dies abroad, he tries to compel a marriage between his daughter and his own eldest son; but before his last nefarious scheme can be carried through, his conspiracies are exposed, and he meets with a fearful death at the hands of his father—now a lunatic indeed, from his long incarceration. Stella Darrel is a noble girl, who unfortunately gives her love at first to a fickle artist; but she ultimately finds a better mate in George St. John, a man of sterling character. Stella had pictured the world as a "fair elysium, where the men were like Sir Lancelot, and the women like St. Catherine." Though she is to a considerable extent disillusioned, her faith in humanity is somewhat restored by a contemplation of the virtues of St. John. All the characters are drawn with a certain amount of vigour; and if—as we surmise—it be a first work, the novel exhibits some promise.

Miss Lupton's story, *Mrs. Lincoln's Niece*, is of the good old Della Cruscan type. Louisa de Vere, the heroine, is a young orphan left in the care of a cruel aunt. She is very beautiful—therefore she is to be wooed by the men; and for the same reason, of course, she is to be hated by the women. Louisa is accidentally left immured in an old priory, where she makes the acquaintance of a romantic youth named Hubert Beaumont. They of course fall in love, and marry secretly. But unfortunately a wicked baronet, Sir James Beaumont, the uncle of Hubert, persecutes Louise with his attentions, and carries her off, keeping her in security for some time, though without subduing her to his will. In the end she escapes, and after a variety of experiences she and her husband are at length reunited. As for the rest of the chronicles in this moving story, have we not read them again and again in eighteenth-century romances?

The partnership between Mr. F. C. Philips and Mr. C. J. Wills seems to have taken all the naughtiness out of the former and much of the spirit out of the latter. Notwithstanding its irreproachable character, however, *A Maiden Fair to See* is very pleasant reading. There is something sad in the

history of Charles Fairholme, who begins life admirably, attaining great distinction in the legal world, but who, after losing his wife, falls into evil courses and kills himself by gambling and drinking. The "maiden fair to see" is his orphan daughter, who is brought up by humble friends, though she has aristocratic relations living on the mother's side. One boyish character, that of John Graham, is almost worthy of Dickens. We presume that we may put down to Mr. Wills the caustic passages dealing with English barristers and the bar, and that Mr. Philips is responsible for the female characters. The volume is handsomely illustrated by Mr. G. A. Storey.

Mr. C. C. Rhys is extremely smart in his *Country House Sketches*. There is not one that is not piquant to a degree, and some of his observations and descriptions might be voted just a little *risqué*. But no one could conscientiously say the author is dull, and any writer who is lively and amusing in this somewhat frivolous age is pretty sure of a hearing from the novel-reading public. Mr. Rhys, nevertheless, is really clever, as his sketches of "The Widow Watkins," "The Major's Mistake," "A St. Leger Legacy," &c., are sufficient to prove.

Blood-curdling, both in its incidents and in its grammar, is *Ritherdon's Grange*. As a story, it is certainly not devoid of interest; and Mr. De Havilland states that the scenes within the docks of the port of London during the Great Strike, the barristers' chambers and the dining hall of the Temple, the incidents of the voyage to the East, and the marvellous Ceylon experiences, are all within his personal knowledge or that of his friends. But such phrases as "Who I turned out of my gang," grate on the ear; and what are we to think of the very opening paragraph of the novel, "A storm-red setting summer's sun had flashed its lurid rays," &c.?

G. BARNETT SMITH.

CURRENT LITERATURE.

Dante Illustrations and Notes. By P. A. Traquair and J. S. Black. (Edinburgh: Privately printed.) This dainty little volume, which is distinguished by the beauty alike of its printing, paper, and binding, will be welcomed by readers of the *Divina Commedia* as a valuable addition to Dantesque literature. The illustrations by Mrs. Traquair, consisting of twenty diagrammatic plates, form the special feature of the book. We may congratulate the artist on the success with which she has accomplished a difficult task. The designs, which strike one as thoroughly original, give evidence of a detailed acquaintance with the poem they are intended to elucidate. They are well executed, and free from confusion and over-crowding—no slight achievement considering the complexity of the subject and the small space available for the treatment of it. The plates in illustration of the *Inferno* and the *Paradiso*, being necessarily more or less of the nature of diagrams, are neither so original nor so artistic as those belonging to the *Purgatorio*. Like most real lovers of the *Divina Commedia*, Mrs. Traquair confesses her preference for the second cantica of the poem. She devotes to it nine drawings, as against five for the *Inferno* and six for the *Paradiso*. From among the first we may single out for especial

praise the drawings of the Earthly Paradise and of the Mystic Procession, which are peculiarly graceful and poetical. Perhaps the least successful, if not the least ambitious, of all the compositions is the last of the series, in which the artist has attempted to delineate the Celestial Rose and its countless denizens, a subject which hardly lends itself to artistic treatment. *All' alta fantasia qui manco possa!* We may draw attention to an anachronism in the woodcut on the title-page, in which Dante is depicted with the cupola and campanile of the cathedral of Florence in the background. Giotto did not begin his tower until more than ten years after Dante's death, while it was not until the next century, just one hundred years later, that Brunelleschi set to work on his dome. Mrs. Traquair, however, errs here in good company, for Michelino in his picture of Dante (in the Duomo) is guilty of the same laxity. To the mere student of the *Divina Commedia* perhaps the most attractive portion of this book will be the "Notes" of Mr. J. S. Black. These comprise a "Dante Chronology," a brief bibliography, and a catalogue of Dante's library, i.e. a list of books Dante is known or presumed to have been familiar with. In the first of these, Mr. Black has done exclusively for the years of Dante's life (1265-1321), and with more minuteness, what Von Reumont accomplished for the whole period of Florentine history in his well-known *Tavole Chronologiche e Sincrone*. Under the date 1300 is included the chronology of the "Vision," with references to the poem. A great deal of useful information, collected from various out-of-the-way sources, is contained in these notes, as well as in the catalogue of Dante's books. This list, which is compiled in scholarly fashion, is, we believe, the first attempt of the kind; at all events, the first that in any degree approaches completeness. It is especially interesting, as showing what the poet's resources were, and how far he was indebted to ancient and contemporary literature. It is strange that Dante nowhere refers to his great compatriot, Marco Polo. We observe that in the notes Arnaut Daniel is credited with the composition of a Lancelot romance, "which is now lost, and with it (as Witte thinks) the key to the obscure allusion in *Par.* xvi. 14, 15." The finding of the key in question was announced in the ACADEMY four or five years ago. Arnaut's romance has not yet been found, nor is it likely to be; for, *pace* Witte, it never existed. In conclusion, we have but one fault to find with this little book, viz., that it is "privately printed," and therefore practically inaccessible. We hope those responsible may be induced to publish it. By so doing they will earn the gratitude of all students and lovers of Dante.

In the Footprints of Charles Lamb. By Benjamin Ellis Martin. Illustrated by Herbert Railton and John Fulleylove. With a Bibliography by E. D. North. (Bentley.) This book, like Mr. Laurence Hutton's *Literary Landmarks of London*, we owe to the piety of an American pilgrim. Availing himself of the not very abundant traces, he has followed Lamb's places of residence, from the ground-floor in Crown Office Row, Temple, where he was born in 1773, to Bay-cottage, Edmonton, where he died in 1834. Both of these remain comparatively unaltered; so also does that little house in Islington, associated with George Dyer's misadventure in the New River which used to flow by its foot. But some of Lamb's other homes have entirely disappeared, though records of them are in existence. We could have wished that the author had carried out the original idea of his book by giving some description of Lamb's many associations with "pleasant Hertfordshire," as well as of Nether Stowey, and by trying to recover the tradi-

tions about him that must still linger in the India Office. Instead of that, he has expanded his volume into a familiar biography, by collecting the anecdotes about Lamb which are already so numerous. The illustrations are printed in the best style of American reproduction; and the bibliography, which is a very creditable piece of work, is the more useful as Lamb has not yet been included in the "Great Writers" series. We have noticed, however, an ugly misprint in the Latin quotation on p. 151.

Essays in Little. By Andrew Lang. (Henry.) The editor of this new series, called "The Whitefriars Library of Wit and Humour," would indeed be fortunate if he could maintain throughout the standard set by his opening volume. But that, we know, is impossible. For the wide public, though they may just tolerate the scholarly refinement of Mr. Lang's less serious style, will demand in future issues a coarser stimulus and a more direct appeal to the wit and humour of their own daily life. Meanwhile, let us be grateful for another collection of those bright pieces which the author is wont to distribute so freely, at the request of American editors or newspaper syndicates, in quarters where they are not easy of preservation. On Homer, Walter Scott, and Dumas, on Thackeray and Dickens, on Mr. R. L. Stevenson and Mr. Rudyard Kipling, we have—or, at least, we think we have—already heard what Mr. Lang has to say. But his paper on Mr. Thomas Haynes Bayley—that forgotten writer of unforgettable *vers de société*—is most welcome, less for its subject than for the opportunity it has given for a display of kindly railery. The parodies here perpetrated are worthy of the *Oxford Magazine* in its prime. We would also call attention to the "Letter to a Young Journalist," in which for once Mr. Lang drops the flapper and takes up the scourge, to rebuke and punish the latest forms of society journalism. The protest will, doubtless, be ineffectual; but none the less, we thank the author for having thus delivered his mind against one of the most insidious evils of the age. All writers to the press cannot hope to rival Mr. Lang's supreme facility; but they may at any rate follow his example, by making honest copy out of the published books of their friends, rather than by turning into pence the smoking-room gossip about their friends' private affairs. The "get-up" of the series is satisfactory; and the portrait of Mr. Lang is excellent—though we fancy that the editor must have had some difficulty in obtaining from him this concession to the popular demand.

Afghan Poetry of the Seventeenth Century: being Selections from the Poems of Khush Hal Khan Khatak. Edited and compiled by C. E. Biddulph. (Kegan Paul & Co.) In confining himself to the works of Khush Hal, Mr. Biddulph has been guided by a sure insight, for the warrior-poet has not only thrown all his predecessors—with perhaps the single exception of Mirza—into the shade of oblivion, but he retains his popularity at the present day. In his recent great work upon the Popular Songs of the Afghans, M. Darmesteter tells us that when he was collecting his materials, and asked a bard to give him a song, he invariably received the same answer: "Do you want a song of Khush Hal?" The selections are printed in clear and elegant type, and the rendering is admirable in its combination of point and literalness; but no order appears to have been followed in the arrangement. It would have been better, we think, if the selections had been grouped according to their character, as political, gnomic, and amatory; and the addition of a few historical notes would have been of great service to the student. In the preface the author shows himself rather stingy of in-

formation, and has failed to do adequate justice even within the limits of a sketch to so fascinating a subject as the character and adventures of Khush Hal. The grammatical introduction is clear and concise, and will doubtless fulfil its purpose of assisting the studies of beginners; but one criticism with regard to a point of theory may be made in conclusion. When the author says that many words "whose origin could not apparently be traced to any Persian or Arabic source" were "evidently of Sanskrit origin," he is likely to give rise to the misconception that the original nucleus of the Afghan language is Indian, or at least contains Indian elements; whereas we now know that the Indian element is as much a borrowed feature as the Semitic, and that the original affinities of Afghan proper are purely Iranian.

La Espuma: novela de costumbres contemporáneas. Ilustración de M. Alcázar y José Cuchy. In 2 vols. (Barcelona.) *Froth: a Novel.* By Armando Palacio Valdés. Translated from the Spanish by Clara Bell. (Heinemann.) This novel of Palacio Valdés deals with the shady side of club life, with men about town in Madrid, with the worst class of moneyed men and the newly enriched, their wives and female associates. The prototype of the hero was a well-known Madrid banker, and many of the anecdotes given are either current stories of his time, or facts that really happened; but, in spite of this substratum of actual fact, there is little in the book that is peculiarly Spanish. The life of the fast man about town, and of the worthless moneyed upstart, is pretty much the same in all European capitals. Señor Valdés has not succeeded, as Galdos did in his *Familia de Leon Roek* and in *La Desheredada*, in depicting what is more peculiar to Spain—the utter absence of all idea of political morality, and the unblushing robbery of public funds by those who should be the guardians of them; nor has he Galdos' power of drawing the gradual deterioration of individual character from a single original flaw. His picture, gross as it is, does not introduce us to any new society, as does the even more repulsive sketch of Asturian society by Leopoldo Alas in *La Regenta*. We find it difficult to understand why this novel should have been selected for translation rather than some of its predecessors by the same author—*La Hermana San Sulpicio*, for instance, the first volume of which is a really graceful narrative of a side of Spanish life altogether unknown to most Englishmen. It is throughout superior to the present work. The translator, however, has done her work admirably. We have nothing but praise to give to it—that is, to all that she has done, for she has rightly omitted much of the original, which may be more appropriately termed "filth" than "Froth"; it is, indeed, almost gratuitously introduced, and has little or no bearing on the subsequent action. By far the best things in the original are the vignette illustrations. Many of these are excellent, and worthy of a better theme. Barcelona publishers, and not this firm only, have almost a speciality of this kind of small illustrations in the text; they are not always successful, but the best of them are so good that we wonder that they are not better known in England than they appear to be.

Some Poets of the People in Foreign Lands. Second Edition: Revised. By J. W. Crombie. (Elliot Stock.) The greatest change in this new and revised edition of *The Poets and Peoples of Foreign Lands* is in the title; the greatest addition is that of a short Preface giving the reasons for the change. The new title is certainly more appropriate than the old; but the volume remains substantially the same—a pleasant chatty sketch of the life and works of five foreign popular poets, with specimens translated into verse.

NOTES AND NEWS.

MR. EIRÍKR MAGNÚSSON, of the University Library, Cambridge, has been fortunate enough to find, among the unexplored MS. treasures of the Philipps collection at Cheltenham, a valuable Icelandic codex, which has been lost to sight since the beginning of the century. It is the Skarðsbók, or Codex Scardensis, of "Póstulasögur," which contains the fullest known account of the lives and acts of the apostles in Icelandic. When complete, it consisted of ninety-six vellum leaves (of which one is now missing), measuring 16½ by 12 inches.

A MEMORIAL is being signed among men of letters on behalf of Mr. Henry Vizetelly, with the aim of obtaining a pecuniary grant in his favour from the Royal Literary Fund. The appeal is based upon his early work as a journalist, and upon the numerous books that he has himself written. Mr. Vizetelly has reached his seventieth year, and is now, we regret to add, in very broken health.

THE next volume of the Badminton Library, to be published in May, will be *Riding*, written by the two editors of the series, the Duke of Beaufort and Mr. A. E. T. Watson, with the co-operation of the Earl of Suffolk and Berkshire, the Earl of Onslow, and Mr. W. R. Weir. There will also be a special chapter on Polo by Mr. J. Moray Brown.

Volumes 1 and 6 of *The Poets and the Poetry of the Nineteenth Century* will be published by Messrs. Hutchinson & Co. in a few days. The special aim of the work is to be an anthology of unusual magnitude, the text of which will be of an accuracy so impeccable that literary men may use it as fearlessly as though they were referring to the original text. The critical articles in vol. 1, devoted to the Georgian poets, are mainly written by the editor, Mr. Alfred H. Miles. Vols. 2 and 3, devoted to the later Georgian poets, are not ready, nor are vols. 4 and 5, which deal with Lord Tennyson, Browning, Rossetti, Dr. Hake, W. Bell Scott, and others. Among the poets treated in vol. 6 are Mr. William Morris, Mr. Swinburne, Mr. Robert Buchanan, Mr. Alfred Austin, Mr. Theodore Watts, Mr. Austin Dobson, and Mr. Monkhouse. The critical articles upon these are written by Mr. J. A. Symonds, Mr. Buxton Forman, Mr. Mackenzie Bell, Mr. Arthur Symonds, and Mr. Havelock Ellis. This volume will be followed by others devoted to the later Victorian poets.

Apropos of the recurrence of Primrose Day on Sunday next, a few early copies of Mr. Henry Lake's *Personal Reminiscences of the Earl of Beaconsfield*, are ready this week, and the work will be published in a few days by Messrs. Cassell & Co. Mr. Lake was a member of Mr. Disraeli's committee and a worker with him throughout his first canvass for the representation of the county of Bucks. The book will be illustrated with two original portraits, autographs, and a facsimile letter.

MR. ELLIOT STOCK has in the press, for immediate publication, an epic poem descriptive of the achievements of the British Navy, from the pen of Mr. Charles Rathbone Low, formerly an officer of the old Indian Navy, and the author of many works of naval adventure.

MESSRS. G. P. PUTNAM'S SONS have ready for issue in this country the first four volumes of a new History of the United States, by Mr. Henry Adams, covering the period from the first administration of Jefferson in 1801 to the second administration of Madison in 1817. The work will consist altogether of nine volumes. The same publishers announce, in the Knickerbocker series, two volumes of *Representative Irish Tales*, compiled by Mr. W. B. Yeats, with an introduction and notes.

MR. WILLIAM HEINEMANN will publish early next week a novel, in three volumes, by Mr. Henry Harland (Sidney Luska), entitled *Mea Culpa: a Woman's Last Word*.

MESSRS. W. H. ALLEN & Co. have nearly ready for publication a work by Mr. John Ducosta, entitled *A Scientific Frontier*. The writer urges that the time has come when the important question as to the best way of protecting India against a Russian invasion should be withdrawn from the sphere of party politics, and settled upon the safer basis of acknowledged principles and experience.

THE Religious Tract Society will publish next month a volume entitled *In Scripture Lands*, by Mr. Edward L. Wilson, illustrated with 150 engravings on wood from photographs taken by the author; and also a revised edition of Dr. Green's *Swiss Pictures* in the "Pen and Pencil" series.

THE new volume of the "Famous Women Series," *The Court of the Empress Josephine*, will be issued in a few days by Messrs. Hutchinson & Co. The events which took place between the assumption by Napoleon of the imperial title and the end of 1807, including the coronation ceremonies at Paris and Milan and the campaign of Ansterlitz, are here described, as well as the daily life and surroundings of Josephine at the summit of her career. A second edition has been already called for of the first volume in the series, *The Wife of the First Consul*.

MR. ELLIOT STOCK announces for immediate publication a work entitled *King Charles and the Cogans of Coaxden Manor*, a missing chapter in the Boscobel Tracts.

THE first edition of Mr. Robert Buchanan's new book, *The Coming Terror*, has been exhausted within a few days of its publication. The publisher hopes to have a fresh edition ready in about a week.

MR. T. FISHER UNWIN announces that a second edition of *Chess for Beginners and the Beginnings of Chess*, by Mr. R. B. Swinton, has been called for, and will be ready very shortly.

THE April number of the *Economic Review*, which Messrs. Percival & Co. have just ready, will contain the following articles: "The Question of Population," by the Rev. and Hon. Arthur Lyttelton; "Roderbertus-Jagetzow and Scientific Socialism," by Prof. Emile de Laveleye; "Social Conditions in a New England," by Bishop Barry; "The American Copyright Bill," by Mr. C. J. Longman; "Frederick Denison Maurice as Christian Socialist," by His Honour Judge Hughes; "Gross's Gild Merchant," by the Rev. Dr. W. Cunningham, &c.

THE one hundred and first anniversary dinner of the Royal Literary Fund will be held at the Criterion Restaurant on Wednesday, May 7. Lord Halsbury, who has promised to take the chair, will be supported by several representatives of the bench and the bar. Among the stewards are the names of Mr. Austin Dobson and Mr. Rudyard Kipling.

THE following awards have been made by the council of the Royal Geographical Society: To Sir James Hector (Director of the Geological Survey of New Zealand), the founder's medal; to Dr. Fridtjof Nansen, the patron's medal; to Mr. William Ogilvie, the Murchison grant; to Mr. W. J. Stearns, the Back grant (one year); to Dr. David Kerr Cross, the Back grant (one year); to Lieut. B. L. Sclater, the Cuthbert Peck grant; to Mr. A. E. Pratt, the Gill memorial.

THE annual conversazione of the Elizabethan Society, of which Mr. Sidney Lee is president, will take place at Toynbee Hall on Saturday next, April 25.

ACCORDING to the American papers, Mr. George Parsons Lathrop and his wife (a daughter of Nathaniel Hawthorne) have both been received into the Roman Catholic Church.

Correction.—The giver of the pretty vellum Chaucer Birthday-book to the Chaucer Society was Mrs. Waechter of Richmond, and not as printed in the ACADEMY of last week.

UNIVERSITY JOTTINGS.

TERM has begun at Oxford this week; but full term at Cambridge will not begin until next Friday.

MESSRS. KEON PAUL, TRENCH, TRÜBNER & Co. will publish immediately *The Early History of Balliol College, Oxford*, by Mrs. De Paravicini.

PROF. T. E. HOLLAND, Chichele professor of international law, will contribute to the forthcoming number of the *English Historical Review* an article on "The Origin of the University of Oxford," which subject he discussed some two years ago in the pages of the ACADEMY.

THE syndicate appointed at Cambridge to revise the list of benefactors have added several names to the Commemoration service, which now embodies a brief history of the university from "the foundation of a school by Sigebert, king of the East Angles, in the seventh century," down to the current year. Among the new names are: Felix Slade, Joseph Bosworth, Sir George Downing, and Benjamin Hall Kennedy, for the endowment of professorships; Joseph Barber Lightfoot, John Lucas Walker, John Noble, and Augustus Arthur Van Sittart, for scholarships; Henry Bradshaw, for the library; and Robert Stirling Newall, for the observatory.

THE John Lucas Walker studentship at Cambridge is now vacant. It is of the annual value of £250, tenable for three years, and is not confined to members of the university. The student is required to devote himself to original research in pathology.

THE third term of Prof. Reginald Stuart Poole's course of instruction in archaeology at University College, London, will be devoted to mediæval archaeology, both eastern and western. Prof. Poole will himself deal with Arab architecture, with special reference to the mosques and private houses of Cairo (to be illustrated with lantern slides); and he will also deliver an introductory lecture to the entire course, free to the public without payment or ticket, on Monday next, April 20, at 5 p.m. Prof. Cecil Bendall will give two lectures on the monuments of Buddhism in India—cave temples, pillars, and topes—followed by a visit to the British Museum. Prof. Roger Smith will give two lectures on Roman buildings in Western Europe; and Mr. Maurice Hewlett four lectures on the influences which produced mediæval art—Celtic, Teutonic, Norman, and the early Renaissance. A special feature of this term's course will be a series of visits to mediæval buildings in London—the Tower, the Temple Church, Lambeth Palace, &c.—conducted by Mr. R. Elsey Smith; and, if a sufficient number of students can attend, excursions will also be made to St. Albans, Rochester, Canterbury, and Dover.

ON Wednesday next, April 22, Prof. N. Perini will give the first of eight lectures in Italian on "Dante and the *Divina Commedia*," at King's College (Ladies' Department), 13, Kensington-square.

THE medical faculty of Queen's College, Birmingham, with the contents of the museums and other property belonging to it, is to be transferred to the Mason College, where for some

time a part of its work has been carried on. New buildings, adjoining those of the Mason College, and connected with them, but having an independent entrance, will be erected; and in the plans due provision will be made for a largely increased number of students.

MR. JOHN NICHOL, late professor of English literature at Glasgow, will deliver a lecture on "Carlyle" before the Ethical Society, at Essex Hall, Strand, on Sunday next, April 19, at 7.30 p.m.

THE last number (ninth series, III.-IV.) of *Johns Hopkins University Studies in Historical and Political Science* contains three papers—on "The History of University Education in Maryland," by Mr. Bernard C. Steiner, of Yale; a record of the foundation, organisation, and work done during the last five years at Johns Hopkins University, by President Daniel C. Gilman; and supplementary notes on university extension and the university of the future, by Mr. R. G. Moulton.

ORIGINAL VERSE.

CAMILLE COQUILHAT.

(Died at Boma, Congo State, March 24, 1891.)

He said, "They tell me I must die;
No love or care
Can save—what matter if I lie
Or here, or there?"

"How soon the end may be in store,
Or quick, or slow—
If I can work a little more,
Before I go?"

The people, in the darkness of
That land so dim,
Out of their poor, bewildered love,
Cried out on him.

They knew him when he had to stand,
Alone and strong,
One just man in a shadowed land
Of woe and wrong.

When, wounded, spent, and sick to death—
He rose up, keen
To keep his country's broken faith
With English Deane—

And how that grim old King, in all
His power and pride
On Mwéfa, whom he loved, would call
Before he died . . .

He heard, and turned his steadfast face
Towards the South . . .
Twelve months have brought him a resting-
place

By Nzali's mouth.

And Deane sleeps sound at Lokwelé—
Sweet be his rest!
Surely Death might have spared, we say;
But God knows best!

And in the land where Bin Souidi
And Satan reign—
They cry, "Where's Mwéfa? When will he
Come back again?"

A. WERNER.

MAGAZINES AND REVIEWS.

THE new number of the *American Journal of Psychology* (vol. iii., No. 4) is quite up to the level of its predecessors. The truth may as well be told that in the new science of experimental psychology, while American colleges have their laboratories, their professors trained in Leipzig and other German centres, the universities of our country are quite inactive. If, as seems certain, the future of psychology is to bring methodical experiment more and more to the fore, this inactivity means that we are losing not merely the supremacy we once held in the psychological domain, but our place altogether. The *American Journal* illustrates the activity of its country in this field by the

publication of the first instalment of what is evidently going to be a very complete historical and original treatment of the time-question. This is from the pen of Mr. Herbert Nichols, "Fellow in Psychology, Clark University," that is to say, the new "High School" for advanced students under the able management of Prof. G. Stanley Hall, the editor of the *Journal*. The article collects, with perhaps needless fulness here and there, some of the principal views of the nature of time or time-perception, from Aristotle downwards. Of greater immediate interest is the *résumé* of the important series of recent experimental inquiries into what is now called the "time-sense." These inquiries have to do with such points as these: "What particular interval, say between two sounds, can be judged of most accurately, so as to be most faithfully reproduced?" "Is our estimate of time-interval dependent on organic rhythmic change—e.g., respiratory processes?" Quite a mass of research bearing on these and kindred points is now published; and Mr. Nichols has done English students a service by bringing it all together in a succinct form. Another paper in the number illustrating the activity of research at the Clark University is an account of experiments upon cats bearing on the recovery of central ganglia (those of the spinal cord) from fatigue induced by electrical stimulation. The writer, Dr. C. F. Hodge, also a Fellow of Clark University, had previously shown by experiment that stimulation of a nerve running to a spinal ganglion produces marked change in the appearance of the cells as seen under a microscope; and, further, that the amount of change is in general proportionate to the duration of the work. He now publishes further experiments by which he seeks to show that the cells recover from this change, but only slowly, complete restoration requiring about twenty-four hours. The writer hints that he will later on connect his results with the phenomena of rhythmic alternation of work and rest in ordinary life, with reference to which also he has been making careful observations. The remaining article, from the pen of Dr. C. P. Bancroft, is a very interesting account of "Automatic Muscular Movements among the Insane." It is well known that insanity, by weakening the highest nervous centres, and so destroying their inhibitory influence on the lower, leads to a marked increase of that aimless and purely expressive movement which characterises childhood. Dr. Bancroft here adds to our knowledge of these movements, and illustrates his points by some capital reproductions of photographs.

The current number of *Mind* illustrates only too clearly the contrast in the present position of England and America in the psychological world. Only one article, that upon "Thought and Language," by Mr. G. F. Stout, can by any charity be called psychological, and this is chiefly noteworthy from a psychological point of view by reason of its omissions. The article is a further development of the writer's theory of "Apperception," in which he follows closely, though not slavishly, the common Herbartian view. The other articles are another paper on "Free Will," from the hand of Mr. Shadworth Hodgson, who seems to have been roused to new utterance by the supposition of Dr. Martineau that he denies free will; a deeply metaphysical study on "The Nature of Consciousness," by Mr. A. F. Shand, which is as pure a bit of abstract thinking uncontaminated by reference to concrete fact as we have lighted on for some time; and a learned though slightly heavy and academic account of the Flemish thinker, Arnold Geulincx, whose name is generally connected with that development of the Cartesian doctrine known as Occasionalism, from the pen of Prof. J. P. N. Land, who is

about to issue the collected works of Geulincx. As in some other numbers, the best things in this quarter's *Mind* are contained in the sections given over to "Discussion" and "Critical Notices." Dr. A. Bain's "Notes on Volition" are an excellent example of that writer's peculiar subtlety in the minuter sort of psychological analysis.

The current number of *The Journal of Philology* contains an important article on the Epistle of Polycarp from the pen of Mr. J. M. Cotterill. The author compares in detail the language of the Epistle with that of the Homilies of Antiochus Palaestinus, and his conclusion is that:

"When the Homilies and the Epistle are placed side by side, and tested by the method laid down by Bishop Lightfoot for determining which of two writings is the earlier, it appears that the Homilies preceded the Epistle. If inquiry be made as to the authorship of the Epistle, it must be answered that, while it is conceivable that the writer of it may have been a different person, yet that the weight of evidence is on the side of the theory that Antiochus was himself the author."

And he adds:

"This is not the place to produce other arguments which show the spuriousness of the Epistle, but they may be found readily enough."

CORRESPONDENCE.

THE LONDON LITHUANIAN BIBLE.

Oxford: April 13, 1891.

These who are interested in Lithuanian philology are familiar with the strange story of the disappearance of all copies of the Lithuanian Bible, printed in London in 1660. The translation has been attributed to Samuel Chylin'ski, but incorrectly, as appears from an article in the *Archiv für Slavische Philologie* (x. 648). The fullest account of it is given by Jocher: *Obraz bibliograficzno-historeczny literatury i*

nauk W. Polsce "Bibliographical-Historical Sketch of Literature and Arts in Poland" (Wilno: 1842), who states that he saw an imperfect copy preserved at Wilno, which only extended as far as Psalm xl. This copy has not been discovered as yet. It is conjectured that the work was never finished, and that the copy which Jocher saw at Wilno consisted of only a few sheets bound up which had been preserved from the printing-office (see *Mitteilungen der Litauischen Literarischen Gesellschaft*, i. 30).

On examining, therefore, a little work, entitled *Oratio Dominica* πολὺγλωττος, πολὺμορφος nimirum plus centum linguis, versionibus aut characteribus reddita et expressa (London: 1700), I was agreeably surprised to find a version of the Lord's Prayer in Lithuanian on p. 41 with a reference at the side: "Conf. Bibl. Lituan. Lond. 1660." I am inclined to think this has escaped the notice of scholars on the continent. It appears that the compiler of the book had access to this Bible, which must have existed in his time in a form at least as complete as to include the Gospels, whereas Jocher's copy only extended to the Psalms. I subjoin an exact transcript:

"Tewe musu kursey esi danguy,
Szweskis vardas tawo
Ateyk karaliste tawo.
Buk wala tawo kayp and dangaus teyp ir
andziam es.
Donos musu wisu dienu dok mumus szedien.
Ir atlayisk mums musn kaltes kayp ir mes
atlaydziam sawiemus kaltiemus.
Ir newesk musu ing pagundynima.
Bet gief bekumus nog pikto.

AMEN."

Those acquainted with the subject will observe that the version is in the Samogitian or Zemaitisch dialect, as we should expect from the accounts given of the Bible (*Mit. d. Lit. Lit. Gesellschaft*, i. 32). Perhaps, therefore, my communication may possess two points of interest: (a) the preservation of an important fragment of this valuable Bible, the loss of which has been deplored by scholars; (b) a proof that as late as 1700 more or less complete copies of this Bible were accessible.

W. R. MORFILL.

MARY FITTON AGAIN.

London: April 11, 1891.

Mr. Tyler says that the printed *Proceedings* (of the New Shakspeare Society's meetings in 1886) make me say that I, "the chairman expressed his own belief that Mrs. Fytton was the dark lady of the Sonnets."

Being certain that I never said any such thing, I turned to the printed *Transactions* of the New Shakspeare Society (1880–6, p. 105), and there find it duly stated that, I being in the chair,

"the chairman expressed his own belief that Miss Mary Fitton could only be the dark lady of the Sonnets if she could be proved to have been married when she was one of Queen Elizabeth's Maids of Honour; and this he feared was an impossibility."

This is the authorised account of what I said; what Mr. Tyler has quoted from is the temporary and separate issue of the reports of our discussions, of which I unluckily did not see the proofs. I have always insisted on Mary Fitton being the type of woman we want—a well-bred mistress of Pembroke's—and on the need of waiting for further evidence that she was the very woman, see my article in the *Pall Mall Gazette* and *Budget*, &c. Over and over again have I urged this caution on Mr. Tyler, though without much success.

I think Mr. Tyler mistakes the meaning of "my brother cooke." These words I interpret

not as "my brother's cook," but as "our relative or friend Mr. Cooke"—who, if he had been in town, would have sent the portrait down to Lady Anne Newdegate—the word "brother" being used in the like vague sense in which M. Maxey uses "sister." The uses of the word "friend" in the conclusion of some Fitton letters were before me when I made up my mind that M. Maxey's letters were not Mary Fitton's; and I still hold they are not, for both external and internal evidence are against them.

Mrs. Newdegate tells me that no copy of Kemp's *Nine Daies Dannee* is entered in the Arbury Catalogue. My joke about Herbert's picture showed that I did not think the colour-objection fatal to our doctrine that W. H. was William Herbert, Lord Pembroke.

I fear that the Mary Fitton question must be becoming a bore to your readers, and I hope we may have no more speculation on it till fresh facts turn up.

F. J. FURNIVALL.

P.S.—Mrs. Newdegate kindly sends me the following notes on the Arbury portraits. Her No. 1 is what I described as "the second portrait" in the ACADEMY of March 21 (p. 282, col. 2), and said "may be that of Ma[ry] Maxey or any one else, but looks like Mary Fitton's." But as there is another board- or panel-portrait in the Gallery which will do for Ma. Maxey, I accept Mrs. Newdegate's judgment (it coincides with my own) that this second red-and-white portrait on panel is of Mary Fitton.

"The portrait in the Gallery on a board has the following inscription :

"Countess of Stamford, 2nd Daughter of Sir Edward Fitton, Kt."

In this portrait she wears a large oval jewel on the sleeve of her left arm.

"The portrait on canvas has the following inscription :

"Lady Macclesfield, 2nd Daughter of Sr Edwd Fitton, Dame of Honour to Qⁿ Elizabeth."

There is no other portrait unnamed and unknown of that date, except one which is on a board and has flaxen hair.

"There never was any connexion, that I am aware of, between the Newdigate and Stamford and Macclesfield families except this legendary one through the Fittons.

"It is important to note that, in the long and elaborate pedigree of the Newdigate family on a parchment roll which I showed you, there is this entry in regard to Anne, Lady Newdigate's brother :

"Edward
Fitton de Gaws-
worth, Baronet
duxit Annam Barret
et habuit Exitum Pe-
nelopen nuptam Caro-
lo Gerard Militi Pa-
tri Caroli Comitiss
Macclesfieldis."

You will observe this Edwd. Fitton was a baronet, while the father of Anne and Mary was only a knight.

"May it not be possible that the error arose from Mary's living at Stamford, or Stanford, when her portrait was taken, while the subsequent Fitton connexion with the Macclesfield family would explain away this misnomer? I am convinced the portraits are of the same person, and, with the double portrait* of an earlier date, are all portraits of Mary Fitton."

* My first picture, dated 1592, of the two sisters, Anne and Mary.—F. J. F.

"ARISTOTLE ON THE CONSTITUTION OF ATHENS."

Wadham College, Oxford : April 10, 1891.

If you and your readers are not weary of the *Ἀθηναίων Πολιτεία*, I will ask leave to suggest some further corrections of the text, premising that I have not yet been able to see the facsimile.

In p. 3, l. 10, the editor has not been successful, I think, in his way of filling up the lacuna. His text runs thus—*χαλεπώτατον μὲν οὖν καὶ πικρότατον ἦν τοῖς πολλοῖς τῶν κατὰ τῆς πολιτείας [ἀρχῶν μὴ μετ]έχειν*, where the square brackets contain, as always, what he suggests to fill a gap in the MS. It was, of course, pointed out at once that *κατὰ τὴν πολιτείαν* was needed; but some other change is needed too. The writer has been speaking of the wretched condition of the people, cultivating the land of rich men (*τῶν πλουσίων τοὺς ἀγρούς*) for a sixth of the produce, and loaded with debt as well. Is it likely that men so situated should resent with special bitterness their exclusion from office? As Aristotle says in *Pol.* vii. 4, speaking of the agricultural class, *ἥδιον τὸ ἐργάζεσθαι τοῦ πολιτεύεσθαι καὶ ἄρχειν*, *ὅπνυ ἂν μὴ ἢ λήμματα μεγάλα ἀπὸ τῶν ἀρχῶν*. I do not pretend to say what the actual words were; but, if *ἔχειν* is certain, something like *τῆς γῆς μὴ μετέχειν*, or *γῆν οἰκίαν μὴ ἔχειν* would give a reasonable sense. If *ἀρχῶν* was suggested by any indications in the MS., *ἀρχῶν* may have been the word. *τῶν κατὰ τὴν πολιτείαν* (from *τὰ κ.τ.π.*, which occurs p. 76, l. 19) depends on the superlatives.

More infelicitous still is p. 150, l. 2.—*ἐνα μὲν (στρατηγὸν) ἐπὶ τοῖς δολίταις, δεῖ ἡγεῖται τῶν [δηα] τῶν ἂν ἐλίσσῃ*. By this restoration the general is made to command only his own demesmen. One result of this surprising arrangement would be that, as the *taxiarchs* commanded all the men of their respective tribes, one of them must command his commanding officer. I thought first of *τῶν ἀπάντων*. Compare p. 58, l. 1, *τῆς δὲ ἀπάσης στρατίας ἡγεμὼν ἦν ὁ πολέμαρχος*. But probably we should read *τὸν δολιτῶν*, for in the style of this part of the treatise there is no objection to the repetition of a word.

P. 105, l. 2.—*δευτέρα δὲ καὶ πρώτη μετὰ ταῦτα [ἐξ]έχουσα πολιτείας τάξις ἡ ἐπὶ Θησέως γενομένη*. The editor gives us here an at once uncommon and unsuitable word. The MS., it should be stated, has *πολιτείας τάξιν*. Some other emendations have been proposed; and there is certainly something to be said for *μετέχουσα πολιτείας τάξις*, if we compare *Pol.* ii. 10. 1272 b 10, *ἢ καὶ δῆλον ὡς ἔχει τι πολιτείας ἡ τάξις*. But I suspect that the real word is *ὑπάρχουσα*, which may have been corrupted into *παρέχουσα*, and so have given rise to the accusatives. Cobet has corrected *Xen. de Vect.* v. 13 *εἰ μὴδὲνα παρέχουμιν ἀδικούντα* into *εἰ μὴδὲνα ὑπάρχουμιν ἀδικούντες*. If anyone doubts the propriety of calling the arrangement before Draco the *πρώτη ὑπάρχουσα πολιτεία*, he may refer to p. 9, l. 6, where it is called expressly the *πρώτη πολιτεία*. About *πολιτείας τάξις* there is no doubt.

P. 39, l. 2.—*ἐξαράμενος τὰ ὄπλα πρὸ τῶν θυρῶν* cannot be right. *Plut. Sol.* 30 says: *λαβὼν τὰ ὄπλα καὶ πρὸ τῶν θυρῶν θέμενος εἰς τὸν στενωπὸν*. I suggest *ἐξαρ<ης>άμενος*, "having hung up."

P. 47, l. 8.—*Harmodius and Aristogiton acted μετὰ πολιτῶν πολλῶν*. As Thucydides expressly says *ἦσαν δὲ οὐ πολλοὶ οἱ ἐνομομαχοῦντες ἀσφαλείας ἔνεκα*, it has been proposed to read *μετὰ συνειδῶν οὐ πολλῶν*; and the editor says the first letters of *πολιτῶν* are doubtful. It may be worth considering whether *μετ' ὀλίγων ἄλλων* is the real reading.

P. 66, l. 5.—*ὁ μὲν τὰ πολέμια (read πολερικά) ἀσκῶν, ὁ δὲ τὰ πολιτικά διειδὼς εἶναι <δοκῶν>*, where *δοκῶν* is inserted by the editor. If by a very slight change we read *δοκῶν* for *ἀσκῶν*, there will be no need to insert it afterwards. Is it certain that the MS. has *ἀσκῶν*?

The word *πρόσχειν* has had some strange adventures in this text. If I am not mistaken, it has been both corrupted and put in where it has no proper place. In p. 75, l. 11, we read that the people *τὰ μὲν ἐκῶν, τὰ δὲ ἔκων προῆρτο τὴν πολιτείαν διοικεῖν αὐτός*. A much better word would be *προήγετο*. Compare the words a little farther on—*τοὺς τι προαγαγόντας ποιεῖν αὐτοὺς (i.e., the people), for so the προσαγαγόντας of the text has been already corrected*. On the other hand, there is no sense in saying of the Pisistratidae, in p. 45, l. 22, that *τελευτήσαντος δὲ Πεισιστράτου κατεῖχον*

οἱ νικίαι τὴν ἀρχὴν, προαγαγόντες τὰ πράγματα τὸν αὐτὸν τρόπον. Remove the comma and read *παραλαβόντες τὰ πράγματα*, comparing p. 98, l. 19, *παραλαβόντες τὴν ἀρχὴν*. Theramenes is said (p. 80, l. 8) *οὐχ ὥσπερ αὐτὸν διαβάλλουσι πάσας τὰς πολιτείας καταλείναι ἀλλὰ πάσας προάγειν ἕως μὴδὲν παρανομοῖεν, ὡς δυνάμενος πολιτεύεσθαι κατὰ πάσας*. *πρόσχειν πολιτείαν* seems to me a very doubtful expression, and I suspect the author wrote *στεργεῖν*. Theramenes was ready to acquiesce in any constitution that was law-abiding; he knew how to play his part in all.

Several omissions in the text have to be made good. In p. 72, l. 14, where the upper classes are said to have had no *ἡγεμόνα*, an adjective is missing, such as "adequate." P. 99, l. 7—*συλλαβόντες . . . ἡμάρτεον οὐδένος ὅντα δεύτερον τῶν πολιτῶν ἀπέκτειναν*. I think the writer must have said *in what* the man whose name is mutilated was second to none. Was it *ἀρετή*? and is that word contained in or lost by reason of . . . *ἡμάρτεον*. In p. 77, l. 7, read *τῶν εὐγενῶν <ὧν> καὶ γνωρίμων*; and p. 105, l. 9, *δημοτικότερα <ὅσα> τῆς Σόλωνος*. P. 122, l. 15, *ὅ τι ἂν γνῶναι οὐ δικασταὶ <κυρία> ἡ κρίσις ἐστίν*, as in p. 117, l. 18. The same word seems to have fallen out in p. 149, l. 3—*ὁ μὲν νόμος <κύριος> οἱ ἐτι κύριος > ἐστίν, ἡ δὲ κρίσις καταλείνεται*.

P. 26, l. 8.—*πολλὰς* has fallen out before *τάς*, or read *πολλὰς* for *[ἦν] τάς*.

I will add one very doubtful emendation, and several about which I feel more certain. The words *ἀνάγοντι τροχόν*, used of marking a horse in p. 122, l. 20, have given rise to many emendations of the verb. As I learn from passages referred to by Mr. Hicks in the March number of the *Classical Review* that the mark was made by burning, I will venture to contribute another conjecture—*ἐγκάουσι*.

P. 76, l. 11.—*κατεσκεύασε μισθοφορὰν τοῖς δικασταῖς*. *ὅφ' ἂν αἰτιῶνται τινες χεῖρ γένεσθαι*. It has been proposed to add *τὰ πράγματα*, or something else, to *γένεσθαι*; but the fault is not there. Read *δικαστηρίοις*, as on the page before, and *ἀφ' οὗ*.

P. 77, l. 15, and p. 78, l. 5.—If *τῶν ἑτέρων* be wrong, as I think it is, read not *ἐσθλῶν*, nor *ἐπικεικῶν*, but *εὐπῶρων*, which occurs in l. 14.

P. 80, l. 14.—*μετὰ τὴν ἐν Σικελίᾳ γενομένην διαφορὰν*. The editor has done well in not putting *διαφορὰν* into his text, though he suggests it in a note. What occurred in Sicily would not be called a *διαφορὰ*, much less a *διαφορά*. It was a *συμφορὰ*. The prepositions in compound words are in this text constantly wrong.

P. 101, l. 16.—*τῶν δὲ παρεληλυθῶτων μηδενὶ πρὸς μὴδὲνα μνησικακεῖν ἐξείναι*. This is, I think, good Greek and fair sense; but, considering the context, and the words of p. 103, l. 6, *ἐπεὶ τις ἤρξατο τῶν κατεληλυθῶτων μνησικακεῖν*, ought we not to read here *τῶν δὲ κατεληλυθῶτων*?

P. 144, l. 2.—*διαδικάζει δὲ καὶ τοῖς γένεσι καὶ τοῖς ἱερῶσι τὰς ἀμφισβητήσεις τὰς ὑπὲρ [τῶν γε] ῶν ἀπάσας οὕτως*. It is plain that for *γεῶν* we should read *ἱερῶν*.

HERBERT RICHARDS.

THE GAELIC "SGITH."

Chetton Rectory, Bridgenorth : April 2, 1891.

Will you allow me to call the attention of readers of the ACADEMY to a curiously anomalous usage in the modern Gaelic languages.

I refer to the word *sgith*. Its history, so far as I can gather, is somewhat as follows:—In the older language *scith* is an adjective, and means "weary"; this meaning will be found illustrated by examples in Windisch's *Wörterbuch*. The substantive "weariness" is *scis*. This state of things has remained unchanged in Scotch Gaelic, where *sgith* is an adjective, meaning "weary," sometimes taking the preposition *do* after it, e.g.: "Bha e sgith do shonas aonarach" (he was weary of single blessedness); *sgios*, the phonetic equivalent of *scis*, remains in Scotch Gaelic as the substantive. But in modern Irish, it appears, *sgith* has become a substantive, and not only so, but it has undergone a strange change of meaning. I will give an instance from Dr. Hyde's *Leabhar Sgeulaigheachta* (p. 73):

"Thainig siad go teach-osta faoi dheire, agus

chaith siad an la ann sin, ag ithe agus ag ol agus ag le gint a sgith." (At last they reached an inn, and they spent the day there eating and drinking and taking their rest).

Dr. Hyde gives a note: *leig do sgith*, "take a rest," perhaps literally, "lay aside your weariness." Now, if we could accept this explanation, it would be plain sailing; but it appears to me to labour under serious difficulties. In the first place, if this explanation be correct for this particular phrase, we must further assume that from it there has sprung up quite an extended use. As a Saxon I speak here diffidently and under correction, but I infer this from instances like the following. Dr. Hyde's book (p. 117):

"B'eigin do siubhal agus siubhal go luath, mar nach dtug siad aon sgith de." (He had to walk, and to walk quickly, as they did not give him any rest).

There was, moreover, a proverb quoted some time back by an Irish correspondent in the ACADEMY: "Atharrach oibre is geall le sgith e" (a change of work is as good as a rest). I quote from memory, and perhaps incorrectly, but I think not in essentials. There is, however, another objection which applies to the phrase in question as explained in Dr. Hyde's note. In Scotch Gaelic a precisely analogous phrase is used, the verb being the same, but the substantive different, and one which legitimately means "breathing," "rest." I cite a couple of instances from *Waifs and Strays of Celtic Tradition*, vol. ii. (Macinnes & Nutt): p. 138—"Shuidh iad a leigeil an analach" (they sat down to rest); p. 360—"leig e'n sin 'anail" (then he rested). Now, *anail* means "breathing," and so "rest" and the phrase in Gaelic could not have meant "he laid aside his breath." It seems, therefore, that some other explanation must be sought for this usage. It has occurred to me that such an explanation might possibly be found in the adjective *escid*, which Windisch gives as "unermüddlich," "restless." If from the correct meaning of the adjective "unwearyed" there sprang up the very closely allied meaning "restless," it seems just possible that a new substantive *sgith* might be evolved meaning "rest." Of course, this is the merest conjecture; but it would be interesting if some of the Irish-speaking scholars who write to the ACADEMY would tell us what the usual meaning of the word *sgith* is in the present spoken language, whether it generally means "rest," whether it ever has the meaning of "weary."

WALTER J. PURTON.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, April 19, 4 p.m. South Place Institute: "Skeptics and Skepticism," by the Rev. John Owen.
7.30 p.m. Ethical: "Carlyle," by Prof. John Nichol.

MONDAY, April 20, 4 p.m. Asiatic: "Serpent Worship in India," by Surgeon-Major C. F. Oldham.
8 p.m. Society of Arts: Cantor Lecture, "The Decorative Treatment of Natural Foliage," II., by Mr. Hugh Stannus.

8 p.m. Aristotelian: "Comte's Analysis of the Human Faculties," by Mr. Bernard Hollander.
8 p.m. Victoria Institute: "Philosophy and Medical Knowledge in Ancient India," by Surgeon-General Gordon.

TUESDAY, April 21, 3 p.m. Royal Institution: "The Geography of Africa," III., by Mr. J. Scott Keltie.
4.30 p.m. Society of Arts: "China," by Sir Thomas Wade.

8 p.m. Civil Engineers: Discussion, "The Cost of the Generation and Distribution of Electrical Energy," by Mr. R. E. B. Crompton.

8 p.m. Statistical: "The Charitable Aspects of Medical Relief," by Dr. J. Charles Steele.

8.30 p.m. Zoological: "A Skull of *Trogontherium evieri* from the Forest Bed near Cromer," by Mr. E. T. Newton; "Batteries collected by Mr. W. Doherty in the Naga and Karen Hills and at Perak," I., by Mr. H. J. Elwes; "The Birds of the Phoenix Islands, Pacific Ocean," by Mr. J. J. Lister.

WEDNESDAY, April 22, 8 p.m. Society of Arts: "Binetism," by Sir Guilford Molesworth.

8 p.m. Geological: "Results of an Examination of the Crystalline Rocks of the Lizard District," by Prof. T. G. Bonney and Major-General C. A. McMahon; "A

Spherulitic and Perlitic Obsidian from Pitas, Jalisco, Mexico," by Mr. F. Rutley.

THURSDAY, April 23, 8 p.m. Royal Institution: "Recent Spectroscopic Investigations," III., by Prof. Dewar.

8 p.m. Electrical Engineers: "Some Effects of Alternating-Current Flow in Conductors having Capacity and Self-Induction," by Dr. J. A. Fleming; and "A Few Calculations on Electrical Shocks from Contact with High-pressure Conductors," by Major P. Carlew.

8.30 p.m. Antiquaries.

FRIDAY, April 24, 7.30 p.m. Civil Engineers: Students' Meeting—"A New Type of Water-Motor," by Mr. A. Sealy-Allen; and "Hydraulic Power as applied to Pressing-Machinery," by Mr. H. Evington.

8 p.m. Browning Society: "Browning on the Significance of the World and Human Life," by Mr. W. F. Revell.

9 p.m. Royal Institution: "Euphuism, Past and Present," by Canon Ainger.

SATURDAY, April 25, 3 p.m. Royal Institution: "The Dynamo," III., by Prof. Silvanus P. Thompson.

3.45 p.m. Botanic: General Fortnightly Meeting.

8 p.m. Elizabethan: Annual Conversation.

SCIENCE.

Records of the Past. Being English Translations of Ancient Monuments of Egypt and Western Asia. New Series. Edited by A. H. Sayce. Vols. I-IV. (Bagster.)

THE first series of *Records of the Past* began in 1873; it is a monument of the zeal and enthusiasm of the late Dr. Birch and Dr. Sayce. The idea was the complement of that which led to the foundation of the Society of Biblical Archaeology in the preceding year: the society was for the learned discussion of archaeological discoveries, the series of handy little volumes for the creation of a popular interest in these matters, which concern not only a handful of Orientalists but the mass of Biblical and historical students. It may be that sufficient care was not always taken to point out the provisional character of much that was published in the *Records*, and that the popularisers were sometimes too dogmatic. If so, the fault has been corrected, as far as possible, in the new series. Doubtful words in the translations have a note of interrogation added, and the greater fulness of the introductions and the notes enables the student to realise better the actual state of archaeological questions. Of course, as Dr. Sayce somewhere remarks, a question may often be regarded by one scholar as approximately settled, and by another as still open; allowance must be made for the subjectivity of the workers, which is not greater than that of labourers in many another field.

On the whole, the impression produced by these volumes is that both in the linguistic details and in the historical study of the documents all workers have made progress within the last ten years. Dr. Sayce remarks, it is true, that the progress has in some respects been greater in Assyrian than in Egyptian studies, owing chiefly to the larger number of fresh cuneiform texts. No one, however, can read the translations of M. Maspero and other French Egyptologists without feeling that, on the Egyptian side too, there have been not inconsiderable gains. Some of the choicest of M. Maspero's contributions have already appeared in his delightful *Contes populaires de l'Égypte ancienne* (ed. 2, 1889), such as the Adventures of Sinuhit, the Legend of the Expulsion of the Hyksos, the Daughter of the Prince of Bakhtan—the two latter of which, both once regarded as historical, are not without a bearing on the historicity of some better-known narratives. Not that M. Maspero has limited

himself to these reproductions from the French volume. He also gives us an improved version of an inscription already translated by Birch in the first series of *Records*—that of Uni (of the VIth Dynasty), while M. Virey translates the inscription of Amen-em-heb and the Precepts of Ptah-hotep ("the most ancient book in the world," Chabas), M. Mallet, the stele of Thothmes III. and the hymn to Osiris on the stele of Amon-em-ha, and M. Guieysse the Hymn to the Nile (already translated in first series, vol. iv.). Even those who are unable to follow M. Renan in his chapter on Egyptian influences upon Israel, will understand many things in the Old Testament better by the help of these versions. The Egyptians were, in fact, so unlike the Israelites that, while imitation on either side was difficult, friendly relations between the two nations were all the more possible. One passage in Ptah-hotep may deserve to be noticed; it has a bearing, not indeed upon the history, but upon the literature of the Israelites. The practical wisdom of the Egyptian proverbs is stated to be traditional, but Ptah-hotep has given it a rhythmic form to prevent it from being effaced from the memory. This may possibly illustrate the remarkable regularity of the rhythm of the Hebrew Book of Proverbs.

There is something of interest for the student in every item of the contents of these volumes. The Vannic inscription, for instance, at the end of vol. i., shows us that "the land of the *Khate* or Hittites extended as far north as Alzi" (on the southern bank of the Euphrates); Dr. Sayce's notes on page 166 will be appreciated by historical students of the Bible. The Hebrew inscription of Siloam and the Moabitish one of Mesha are by this time familiar to most, but will probably meet the eyes of some young students here for the first time. Passing next to the Assyrio-Babylonian portion, one notices the names of two workers, who will never, alas! take up the pen again, M. Arthur Armand and Mr. G. Bertin. The former, whose skill in deciphering "the non-Semitic language of ancient Chaldaea" is eulogised by the editor, gives us translations of the very ancient inscriptions (how ancient we know not as yet) of Telloh; the latter a hymn to the setting sun, which may have formed part of the Babylonian ritual, and some Babylonian agricultural precepts, which enlighten us as to the system of land tenure in the primitive period. The living contributors are M. Oppert, M. Scheil, Messrs. Pinches, Ball, and Strong, and Dr. Sayce. I must confine myself, however, to those of the editor. They are eleven in number, and include the standard inscription of Assur-natsir-pal (so valuable for geography), the Synchronic History of Assyria and Babylonia, two Creation Stories (one Assyrian, and the other Babylonian), and the Tablets of Tel el-Amarna, relating to Babylonia, Assyria and Syria in the fifteenth century B.C. The last-mentioned contribution is in two parts (vol. ii., pp. 57-71, and vol. iii., pp. 55-90). I will not venture to anticipate the historical revelations which these precious tablets will most surely make. The early chapters of Syrian history may yet be written. Biblical

students should therefore be on the look out, and neither snatch greedily at possibly premature disclosures, nor yet sit idly aloof, waiting for the end which may still be distant. Dr. Sayce's introductions and notes are as interesting as they could be. Now and then a doubt arises whether he is not somewhat too sure of his present conclusions (see e.g., vol. iv., preface, p. iv.); but I cannot help feeling indignant at the unnecessarily bitter tone which M. Halévy has adopted in the *Revue des études Juives*, 1890, p. 200. What pioneer can afford to claim exemption from error? And why did not M. Halévy refer to Dr. Sayce's opinion on the *Khabiri* as expressed in *Records*, ii. 64? On one point I see that both scholars are agreed, viz., that the proper name Abd-asirti or Abd-asrati proves that Ashéra in the Old Testament is the name of a goddess. I advocated this view myself in the *ACADEMY*, but I now think it goes too far. There may after all be only an accidental coincidence.

T. K. CHEYNE.

SOME COUNTY AVIFAUNAS.

The Birds of Oxfordshire. By O. V. Aplin. (Oxford: Clarendon Press.) How it is that the birds of Oxfordshire have waited so long to find a chronicler is a puzzle which it is idle to try to solve; but one cannot help thinking that, as a county, it has been neglected, when one reads the long list of those upon whose labours Mr. Aplin has drawn before publishing his own extensive observations. In this little inland county, so irregular on the map, but so little varied in its physical characteristics, 242 species of birds have been recorded—an admirable tale for any county of its size; a radius of thirty miles from the university city could hardly show a better one. A clear map, so folded that one can consult it open while the text is being read, shows an advance on many similar contributions to local natural history. For frontispiece we have a coloured figure of the alpine chough (*pyrrhocorax alpinus*), to mark its unique occurrence in Great Britain, at Broughton, on April 8, 1881. Those naturalists do not detract from the interest of the figure who maintain what they call an open-minded scepticism as to the possibility of the specimen having escaped from confinement. Certainly Mr. Aplin is not one of those who include a rare species in their list without conscientious consideration. His cautious remarks about the Andalusian hemipode are sufficient evidence of this. Indeed, his book is a very fair specimen of what a county avifauna should be, and it is one likely to stimulate observation over a wider area than that which its author has been able to investigate. His residence in the more northern part of the country is his greatest drawback. Naturalists who have studied the birds inhabiting the districts farthest south could add much to his records; but they seem to hold back their observations lest, were the localities known, the rarer birds should be speedily extirpated. This, indeed, is the danger which nowadays besets any such detailed work as we have here in Mr. Aplin's book. Suffice it to say that whatever Mr. Aplin has done, he has done well. Many an Oxford graduate must wish to-day that such a work had existed in their time. Now those who come after him ought to pay for his labours by adding to his results.

The Birds of Essex: a Contribution to the Natural History of the County. By Miller Christy. (Simpkin, Marshall & Co.) This is

a book well worth buying; its publication redounds greatly to the credit of the energetic Essex Field Club. The preface almost disarms criticism in its author's ardour to do well by his own county. We feel that we get more than we bargained for. Judging the book by ordinary standards, we certainly exceed that estimate. With 162 woodcut illustrations, two plans, and a lithographed frontispiece, we ought to be on the way to contentment. We begin with some nice little quotations, followed by a graceful preface. The introduction gives us succinctly the physiography of Essex, a note on previous Essex bird-lists, the position of the lighthouses and light-vessels where observations are taken for the British Association Migration Committee, the number of birds (272) met with in Essex, the information that the nomenclature and classification are those adopted by the committee of the B. O. U. in their "Ibis" list of British birds, together with some other details. An excellent feature follows, namely, "Biographical Notices of the principal Essex Ornithologists," which contain information difficult to find elsewhere. An account of the chief Essex bird-collections; tables of observations on the arrival of summer migrants, from 1818 to 1845; Mr. J. E. Harting's remarks on hawks and hawking in Essex in the olden time; twenty-four pages with three full-page woodcuts and two plans, anent wild-fowl decoys and wild-fowling in Essex: all these precede the proper "Catalogue of the Birds of Essex," which is wound up by a special bibliography of reference. What can we want more? The author knows his shortcomings better than we do, and a microscopical analysis of them would only postpone his power of making his book quite perfect in a second edition. For the present, no resident in the county, with a taste for birds, can consider his library complete without Mr. Miller Christy's latest work.

The Birds of Norfolk, with Remarks on their Habits, Migration, and Local Distribution. By Henry Stevenson. Vol. III., continued by Thomas Southwell. (Gurney & Jackson.) Ornithologists may well be grateful to Mr. Southwell for having brought Mr. Stevenson's classic to a satisfactory conclusion. The first volume was issued in 1866, and the second in 1870. *The Birds of Norfolk* at once took its place as the best and most elaborate book of its scope, and as a history of the birds of a single county it is likely to remain unsurpassed for many a long year. The delay in the issue of this, the last volume, has long been regretted, especially since it was due to the continued ill-health of the author. His last article, that on the Gadwall, which itself was left unfinished, went to press in 1877; on August 18, 1888, Mr. Stevenson died, in his fifty-sixth year. In the present volume the text up to p. 160 is all that comes direct from the author's pen; from p. 161 to the end, p. 432, is the work of Mr. Southwell, who has also added a memoir and portrait of Mr. Stevenson. Much assistance has, of course, been derived from the author's voluminous notes, and from his contributions to scientific societies and periodicals. But it is plain that, beyond all this, Mr. Southwell has proved himself to be a very capable literary executor; and little, save the less leaded type, distinguishes the continuation from the original, so cordially and thoroughly has the work been done and brought up to date. It is unnecessary here to dilate upon the points which will most please the specialists; but it is incumbent upon any reviewer to indicate the longer articles which can hardly fail to attract every ordinary reader. The history of the mute swan and of swan "upping" in Norfolk is quite a monograph, occupying 53 pages. Lovers of the far-famed meres will find that the habits of the shoveler

duck lend a fresh interest to the scene. Mr. Southwell adds not inconsiderably to our knowledge of the duck decoys of Norfolk; and he is even able to contribute many valuable additions to Mr. Stevenson's already famous account of the great bustard. A view, from the pencil of Mr. J. Wolf, of the breeding haunts of the black-headed gull on Scoulton Mere, whence so many thousands of "plover's" eggs are sent off to London every spring, forms a welcome frontispiece to the volume. Other coloured illustrations there are also, including one of the feathers of the first wall-creeper whose occurrence in England was circumstantially recorded, so long ago as in 1792. Mr. Wolf's figure (to praise the artist is like praising Shakspeare) of the capped petrel (*Oestrelata haesitata*) has a melancholy interest to all. It was taken from a specimen killed at Southacre, in Norfolk, in 1850. The bird's proper habitat was about the West Indian islands of Dominica and Guadeloupe, but it appears to be at the present day as extinct as the dodo.

CORRESPONDENCE.

FURTHER JAINA INSCRIPTIONS FROM MATHURÁ.

Vienna: April 8, 1891.

Since I wrote my letter of January 25 (*ACADEMY*, February 7, 1891), Dr. Führer has sent me impressions of more than forty Jaina inscriptions found in the Kankali Tila during January and February 1891, as well as some interesting notes regarding his archaeological discoveries.

His newest epigraphic finds possess as great a value as the previous ones. While the inscription printed in my last letter proved the existence of a very ancient Jaina Stupa, two among those since discovered teach us something about the age of the Jaina temples at Mathurá.

On a beautiful carved Torana there is a brief dedication, in characters which appear a little more archaic than those of Dhanabhūti's inscription on the gateway of the Bharhut Stupa. More archaic are (1) the letters *da* and the vowel *i*, which exactly resemble those of Asoka's inscriptions; and (2) the position of the Anusvara, which stands, as in Asoka's edicts, after the syllable to which it belongs. Dhanabhūti dates his inscription (*Indian Antiquary*, vol. xiii., p. 138) in the reign of the Śuṅgas, and thus shows that he was their vassal. On this account he cannot be placed much later than the middle of the second century B.C.; for, though the Śuṅga dynasty continued to exist much longer, its power seems to have been restricted in later times to the eastern districts north of the Ganges. Dr. Führer's new inscription may, therefore, likewise be assigned to about 150 B.C. It is written in an ancient Prakrit dialect, which preserves the letter *r* in compound consonants, discards the use of lingual *na*, and forms the genitive of *a*-stems both in *āsa* and in *asa*, i.e. *assa*. In the last word the nominative appears at the end of the first part of a compound instead of the stem. Its text runs as follows:

"*Samanasa Māharakṣitāsa āntevāsisa Vachhiputrasa* [r] *āvakāsa Uvaraddasakā* [d] *sa pāsādo-tora-nanī* [.]"]

"An ornamental arch of the temple (the gift) of the layman Uttaradāsaka, son of the (mother) of the Vātsa race (and) pupil of the ascetic Māgharakṣita."

A second inscription, incised in two lines on an oblong slab, gives us the name of the founder of one of the Kankali temples. It says:

"L. 1. *Bhadata-Jayasenasya āntevāsiniye*
L. 2. *Dhāmaghoshāye dānān pāsādo* [.]"]

"A temple, the gift of Dharmaghoshā, the female disciple of the venerable Jayasena."

Its characters do not differ much from those used in the earliest dated inscriptions of the Indo-Skythic kings. The subscribed *ya*, how-

ever, has its ancient form, and consists of three vertical strokes. The language seems to be the mixed dialect, as the genitive *Jayasenasya* has the Sanskrit termination, while three words show Prakritic endings. I would assign this document to the period immediately preceding the Indo-Skythic times, and assume that it was incised about the beginning of our era.

As two temples have been discovered under the Kankali Tila, the natural inference from these inscriptions would be that one of them was built before 150 B.C., and the other considerably later. Unfortunately, another circumstance has come to light which requires a modification of this assumption. Dr. Führer has found several sculptures which have been carved out of more ancient ones. Thus, a pilaster bearing an inscription in characters of the Indo-Skythic period has been cut out of the back of an ancient naked Jina. Again, there is a small statue with a similar inscription cut out of the back of a sculptured panel, bearing on the obverse a rather archaic inscription. These facts prove that the Jains of the Indo-Skythic period used for their sculptures materials from an older temple. Hence the discovery of the Torana, with its very archaic inscription, shows indeed that there was a Jaina temple in Mathurā before 150 B.C., but not that one of the particular temples of the Kankali Tila necessarily dates from so early a period.

A third inscription makes us acquainted with a new era, and is interesting also in other respects. It is incised on a slab, representing a lady attended by several maid-servants, one of whom carries a parasol. After an invocation of the Arhat Vardhamāna, it records that an *Āyavatī* or *Āryavatī* (the word occurs twice in the text) was set up for the worship of the Arhats by a female lay-worshipper of the ascetics, Amohini of the Kautsa race, wife of Pāla, the son of Hariti, i.e., of a mother of the Hārīta race, in the year 42, or perhaps 72, of the lord (*svāmīsa*) and great Satrap *S'odāsa*. This lord and great Satrap *S'odāsa* is already known from No. 1 of Sir A. Cunningham's collection of Mathurā inscriptions (*Arch. Surv. Rep.*, vol. iii., pl. xiii., and p. 30), where the transcript, however, misspells his name, and makes it *Saudāsa*. Sir A. Cunningham's inscription has no date according to years, but merely, after the name in the genitive, the unintelligible syllables *gaja*, which probably are meant for *raja*, "during the reign." On the evidence of his coins, which imitate one struck by Azilises, Sir A. Cunningham places *S'odāsa* about 80-70 B.C., and conjectures him to be a son of the great Satrap Rajubula. Though the precise date assigned to him by Sir A. Cunningham may be doubted, it is yet not doubtful that he ruled before the time of Kanishka. And Dr. Führer's inscription proves that an earlier era, preceding that of the Indo-Skythic kings, was in use at Mathurā. With respect to the interpretation of the first figure of the date, I do not feel certain. The sign is the peculiar cross which Sir A. Cunningham everywhere reads 40. I have stated elsewhere the reasons why I believe that it was used also for 70. The other point of interest which the inscription offers is the word *Āyavatī* or *Āryavatī*. It is evidently the name of the royal lady represented in the relievo. As she was set up "for the worship of the Arhats," it follows that she must have played a part in the legendary history of the Jains. A fuller exploration of the stories alluded to in the Uttarādhyayana and similar works will no doubt show who she was.

Three other inscriptions give new information regarding the subdivisions of the Jaina monks. One in archaic characters, not later than the Indo-Skythic period, and dated *Saivat*; 18, mentions very distinctly the *Vachchhalijja*

Kula. The Kalpasūtra has two *Vachchhalijja* Kulas, one belonging to the Chārana (*recte* Vārana) Gana, and the other to the Kodīya Gana. In the inscription nothing remains of the name of the Gana except the syllable *to*, preceded by an indistinct sign. As the latter looks more like a remnant of *ya* or *yā* than of *na* or *nā*, I infer that the *Vachchhalijja* Kula of the Kodīya Gana is meant. If that is the case, all the Kulas and S'ākhās of this school, mentioned in the Kalpasūtra, have been identified in the Mathurā inscriptions.

Another very archaic undated inscription, which begins with an invocation of divine Usabha, i.e., the first Tirthankara *Īṣhabha*, names the Vārana Gana and the *Nādika* (or possibly *Nādika*) Kula. The Kalpasūtra has no exactly corresponding name; but its *Mālijja* Kula may be a mistake for *Nālijja*, which latter would correspond with *Nādīya* or *Nādika*. The third rather modern-looking inscription ascribes to the Vārana Gana an *Ayyabhyista* Kula. The Kalpasūtra shows nothing that could explain this very curious form, which may be misspelt, especially as the compound *Ayyabhyista-kulato* does not agree with the usual wording of the inscriptions.

Dr. Führer's new inscriptions furnish also further evidence regarding the antiquity of the worship of the twenty-four Tirthankaras. The occurrence of the name Usabha has already been noted. Two other archaic inscriptions speak, one of a statue of the Arhat Parśva, i.e., Parśvaūtha, and the other of *bhagavā Nemi*, i.e., the divine lord Nemi. The latter words are incised, according to Dr. Führer's notes, on a panel bearing a very curious relief. The principal figure is a Buddha-like male with a goat's head. He is seated on a throne and surrounded by women, one among whom holds a child in her arms. I think there can be no doubt that we have here again an illustration of a Jaina legend. Among the remaining very numerous sculptures without inscriptions—several of which, according to Dr. Führer, are beautifully finished—there is one which apparently possesses very considerable archaeological interest. It is a doorstep, bearing a relief, which represents a Stūpa worshipped by Centaurs and Harpies, or, as the Hindus would say, Kinnaras and Garudas or Suparnas. Centaurs have been found on the Buddhist sculptures at Bharhut and at Gaya, while Mathurā has furnished the Silenus groups and the Hercules strangling the Nemean lion. Dr. Führer's find is a further addition to the monuments which prove the influence of Hellenistic art among the Hindus of the last centuries preceding our era.

In his last letter Dr. Führer states that he expects to finish the excavation of the Kankali Tila in about three weeks. I have, however, not received any news that he has really come to an end of his labours, and I expect that ere long I shall be able to announce further discoveries; but, even at present, the results of the work of 1890-91 far surpass those of other years, and there is very good reason for congratulating Dr. Führer on the important additions to our knowledge of Indian history and art, which we owe to his energy and perseverance.

G. BÜHLER.

PHILOLOGY NOTES.

THE following declaration of adhesion has been forwarded by the Orientalists of Vienna to the Committee of the Ninth International Oriental Congress, to be held in London in 1892:

"Gentlemen,—As your prospectus of February 9, 1891, shows that the committee of organisation, duly elected at Christiania and afterwards enlarged by co-optation, has transferred its powers to you, we have much pleasure in declaring our full concurrence with your plan to hold the Ninth

International Oriental Congress in London during the month of September, 1892."

(Signed by the eight professors teaching Oriental languages and history in the university: G. Bühler, J. Karabacek, J. Krall, D. H. Müller, F. Müller, W. Neumann, L. Reimisch, H. Zschokke; also by Drs. Burkhard, Dede-kind, Geyer, Hein, and Kirste, and by Messrs. Huhler and Morison.)

MEANWHILE, we should also state that the other committee, which proposes to hold the Ninth International Oriental Congress in London in 1891, still maintains its position. Its programme, together with much vigorous polemic, may be found at length in the April number of the *Asiatic Quarterly Review*. It is evident to everyone without *parti pris* that the cause of Orientalism (never too popular in this country) must inevitably suffer from the continuance of this split—which took its rise, no doubt, from dissatisfaction at some of the proceedings of the Christiania Congress, but which has been kept open by technical arguments and by a deplorable appeal to personalities. We trust that it is not yet too late for harmony to be effected by the intervention of some eminent Orientalists who have not yet taken a side. Might not the Marquess of Dufferin and Ava be invited to act as mediator?

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPERE SOCIETY.—(Saturday, March 21.)

MISS FLORENCE HERAPATH, president, in the chair. —Mr. S. L. Gwynn read "A Theory of 'Troilus and Cressida,'" saying that it had been often noticed that Shakspeare reproduced the Latin character with singular skill and fidelity. In the Elizabethan age Latin had not lost its universal sovereignty; it was still a sort of second tongue to all men of education. Latin history was a kind of compendium of all history for the politician or the philosopher. Law, politics, religion, philosophy, had all come to England in a Latin dress; and Shakspeare, even though his personal knowledge of the language was slight, and perhaps little exercised, shows at every turn his familiarity with the genius of Rome. The case was far different with Greek. It was Milton who brought Greek influence in its full potency to bear on English literature. It is alarming to speculate what we should have had from Shakspeare, had he known and felt Greek as Milton knew and felt it, or as it is known and felt by every poet since Shelley. We might not have had "King Lear"; we certainly should not have had "Troilus and Cressida"—not, at least, in its present form. The Greeks whom Shakspeare describes are the Greeks of Juvenal, imperfectly understood. In "Timon," a story of the Greek decadence, they are in their place; but in "Troilus and Cressida" Shakspeare has founded his most unpleasant play upon the most venerable of national legends. It is not too much to say that it is a travesty, a burlesque, of the legend of Troy. The play is a puzzle from every point of view. The circumstances of its publication in two editions in 1609, and of its position in the 1623 Folio, present many difficulties. Apparently the editors of the Folio could not decide how to classify it, and placed it by itself. We cannot blame them; for it would be hard to find a piece which less readily explains itself. In the first two acts the story of the lovers predominates; but it reaches no dramatic conclusion, and so is bound up with the fate of Troy, and the play finds a clumsy ending with Hector's death. Wholly irrelevant is the long description of events in the Grecian camp; and even this has little unity of purpose. The first scene of the long debate seems incompatible with the remaining ones, which are satire bordering on burlesque. Nowhere else in Shakspeare is there so much bitterness and so little humour. Indeed, the whole tone of the play is pervaded by an unfamiliar cynicism. It is a splendid composition, the work of a mind thrown off its balance and set jarring. Rich as it is in passages full of power and beauty, showing maturity of style in every scene; as a whole, it lacks the dignity, the calm, and the self-restraint of great art. By general consent it has

been held indicative of a troubled period in Shakspeare's life, the period which most students hold to be reflected in the later Sonnets. The tone of its reference to women—not only to Cressida, but to Helen—is easily explained by this theory. By connecting the play more closely still with the Sonnets, a plausible reason may be found for Shakspeare's capricious and paradoxical treatment of the Homeric story—so opposed to his usual conservatism when working on the lines of a good author. Why did Shakspeare, who treated Plutarch with reverence, make a mock of Homer's authority? He had not, it is true, that familiarity with Homer which would breed reverence. Yet it is hardly conceivable that Shakspeare, even when out of temper with the world, should have travestied Homer without some ulterior motive. It is not difficult to suggest one. Homer was known to Shakspeare in the version of his contemporary Chapman. Now Prof. Minto has identified (almost with certainty) the rival poet of the Sonnets with the translator of Homer. This rival referred to in Sonnets 75-86 is described—by references easily intelligible to a contemporary—in Sonnet 86. May it not be fairly inferred that in "Troilus and Cressida" Shakspeare, led to a choice of subject by spleen against the sex of Cressida, was further impelled to seize the opportunity of satirising the chosen theme of a man who had won from him the affections of his "better angel"? "These are Chapman's Greeks" is the unspoken argument of half a dozen scenes which have no special relevancy to the tale of Troilus. It may be said that it is unlike Shakspeare to write with such a motive. This may be answered by the fact that for this once Shakspeare unmistakably wrote unlike himself.—Mrs. H. F. Rankin read a paper on "Cressida," saying that in portraying this character Shakspeare has been strangely untrue to his usual clear insight into woman's nature, and has delineated an almost impossibly false and inconsistent woman. One might almost have forgiven her if for some hidden purpose she had been making a dupe of Diomed, and if time had shown that she was true to the man she had loved in silence for so long. But her own words take away all foundation for such a supposition. Yet her relations to Troilus show a considerable amount of steadfastness and strength of will; and then—basest and most unnatural of acts—she gives to Diomed the love-token she has but just received from Troilus. This is impossible. A woman may be false and fickle, but she must be consistently so; she cannot in a few short hours turn completely away from a love that has been the steady growth of long months to yield herself with half-open arms to a stranger—her lover's rival and her city's foe. For there has been hitherto no evidence in her character of these light and frothy qualities. Shakspeare's elaboration of this extraordinary character leaves the mind in a state of incredulous astonishment, and one casts about for some explanation of such aggravated inconstancy. In the law of heredity one explanation may be found; for in her falseness she is following in the steps of her father Calchas, the Trojan priest, who is found in the Grecian camp a traitor to his native town and kinsmen. Nowhere in all Shakspeare's plays can another such wretched specimen of false and frail womanhood be found.

ELIZABETHAN SOCIETY.—(Wednesday, April 1.)

JAMES ERNEST BAKER, Esq., in the chair. A paper sent by Mr. John Addington Symonds, on "The Relation of Painter's *Palace of Pleasure* to the English Romantic Drama," was read by Mr. Frederick Rogers. Painter's *Palace of Pleasure*, which first appeared in 1566, ranks certainly among the most important works of the Elizabethan age. In the history of English prose it occupies a place of great distinction. Moreover, it introduced a new literary world of foreign romance and story to the English public; and finally it determined in a very special way the form and matter of our drama. The sources from which Painter drew his materials are various. To some extent he relied upon the classics; a good number of his tales he took from Queen Margaret's *Heptameron*; one or two may be traced to Spanish authors; but by far the larger number are derived from the Italian novel writers. The result was that he opened a wonderful new world of fiction to

the English, and created that rage for Italian subjects which gave so peculiar a bias to our dramatic literature. The Italian *Novella* must not be confounded with our modern novel. Although they bear the same name, the two species have less in common than might be supposed. Both are narratives; but while the modern novel is a history extending over a considerable space of time, embracing a complicated tissue of events, and implying an analytical study of character, the *Novella* is invariably brief and sketchy. It does not aim at presenting a detailed picture of human life, but confines itself to a striking situation, or tells an anecdote illustrative of some moral quality. For this reason the *Novella* was admirably adapted to dramatic treatment, the concentration and centralisation of its interest upon a single action, or a single pungent motive, gave it just what was wanted by the tragic or the comic playwright. Thus the *Novella* is antecedent, and the modern novel subsequent, to dramatic composition. When we consider the form and spirit of the English romantic drama, it will become still more apparent why the Italian novel proved so acceptable to our Elizabethan playwrights. Without the decorum of deliberate obedience to classic rules, without the decorum of accomplished art, without the decorum of social distinctions properly observed in tragic and comic styles of composition, they dramatised a tale or history in a succession of scenes. Nothing in the shape of a story came amiss to the romantic playwright. Perhaps we cannot penetrate deeper into the definition of the romantic drama than by saying that its characteristic was to be a represented story. The romantic method allowed the evolution of a long tale upon the stage; setting forth, for instance, the whole of a man's life, or the whole of a king's reign, or the whole of a complicated fable. Consequently it was of great importance to the playwright to obtain material for his plots which should narrow the dramatic movement, so far as this was possible, to a single point. This was precisely what the Italian *Novella* supplied. Remaining a narrative, it limited the action to some central incident or clinching motive. The most perfectly constructed of Shakspeare's tragedies, "Othello," follows the tale of Cinthio with very little alteration. Besides Shakspeare, the following dramatists drew their plots from the same source: Greene, Peele, Heywood, Marston, Beaumont, Fletcher, Webster, Massinger, Middleton, and Shirley. Among the best plays of the period the names only of which are known to us from Henslow's Diary and other sources, it is obvious that a large number were founded on one or other of Painter's Italian stories. "Timon of Athens" in its original form is taken through Painter from Plutarch; "Edward III," whether we assign this fine tragedy to Shakspeare or to Marlowe or to some third hand, is based not upon an English chronicle, but on a romantic story told by Bandello. In the original Italian this novel displays a very high quality of rhetoric in the dialogue, and vehement dramatic energy in the treatment of the situations and emotions of the actors. The English playwright had very little else to do than to turn Bandello's language into blank verse. A large number of the Italian novels were founded upon tragedies of actual life, and contained comparatively faithful records of contemporary life. These histories used to be circulated in manuscript; and masses of them still remain embedded in the archives of noble families. They proved singularly attractive to dramatists of the stamp of Marston, Cyril Tourneur, and Webster. The rage for Italian subjects was so strong in London that a play could scarcely succeed unless the characters were furnished with Italian titles. Ben Jonson laid the scene of his most subtle comedy of character—"Volpone, or the Fox"—in Venice. He even supplied that thoroughly English study of manners, "Every Man in his Humour," with Italian personages. Our drama began with a translation from Ariosto's *Supposit*, and ended with Davenant's "Just Italian." In the very dawn of tragic composition Greene versified a portion of the "Orlando Furioso." Kit Marlowe devoted one of his most brilliant studies to the villainies of a Maltese Jew. Of Shakspeare's plays five are incontestably Italian; while others are cast with Italian names to suit the popular taste. Painter and his school supplied the playwright with innumerable and attractive

plots. Such plots were not accessible in any other source, and the *Novella* furnished exactly that particular type of story which the spirit of romantic art demanded. It is not therefore surprising that a kind of conventional Italianism sprang up, and that a growth of art so vigorous as our Elizabethan drama should have tended to produce hybrids. What our literature lost by the fascination of Painter's foreign stories, leading genius astray from national and local motives, cannot be reckoned. But it may safely be said, upon the other hand, that English literature gained from it the salvation of the romantic species at a very critical period of its earlier development.

FINE ART.

The Life and Works of Giorgio Giulio Clovio, with Notices of his Contemporaries, and of the Art of Book Decoration in the Sixteenth Century. By John W. Bradley. (Bernard Quaritch.)

THE author of this elaborate memoir, having successfully completed his Dictionary of Miniaturists, in three volumes, a work requiring a vast amount of research, has availed himself of much of the materials which he must have met with, in bringing into use the notes upon many of the earlier artists, hidden in foreign and but little-known sources, especially Italian and German, often contemporary or nearly so with the artists themselves, and has produced a volume full of both historical and artistic interest.

Unlike the great painters, whose frescoes and drawings on walls and ceilings, or on canvas or tapestry, were visible and appreciable by all men, the book illuminator was little known, except to the patron for whom he worked, and his immediate friends. His labours have, however, had one advantage over those of the wall or portrait painter, that of being secluded from many of the accidents of time, and especially from atmospheric influences, and thus have allowed them to be handed down to us in their original brilliancy. Of these splendid productions, comparatively small as many of them are, none are more elaborate or highly finished than those of Giulio Crovata, more generally known by the name of Clovio, one of the latest of the book illuminators, who was born in the year 1498 at Grizane, a village in Croatia, near the Adriatic Sea, and who, after a most indefatigable and well-honoured life, died at Rome on January 5, 1578, where he received the honour of a public funeral, being buried in the tribune of St. Pietro in Vincoli.

Mr. Bradley has prefixed to his memoir a chronology of twenty pages of the principal events of the life and times of Clovio. Under the advice of his friend, Giulio Romano, he commenced the work of miniature painting as a profession about 1520, entering into the service of the family of Grimani, one of whom, a cardinal legate at Perugia, obtained, in 1531, a papal dispensation for Clovio, who had become a monk at the monastery at St. Ruffino, near Mantua, and by whom Clovio was invited to Perugia.

From Mr. Bradley's volume we perceive how indefatigable Clovio was with his brush, and the number of works which he executed.

These are so little known or recognised by English students that we find Mr.

Humphreys, in his *Illustrated Books of the Middle Ages*, stating that the Soane Commentary of St. Paul, the Vatican Clovio, and the splendid book in a golden (or rather silver-gilt) cover with gems, formerly in the Chapel of the Farnese Palace, with one or two others, are the only monuments upon which the fame of Clovio rests.

The detailed account and list of the works of Clovio given by Mr. Bradley show, however, that even in our own country there are other splendid specimens of his work which, although but little known, deserve to be carefully studied. They are chiefly:—

1. The finely-written Commentary by Marino Grimani on St. Paul's Epistle to the Romans is now in the Soane Museum in Lincoln's Inn Fields. It contains two full folio pages with Clovio's illuminations, of which Mr. Humphreys published excellent coloured facsimiles (not noticed by Mr. Bradley), one with the scene of the conversion of St. Paul as the principal subject, surrounded by elaborately painted marginal borders; of the other, the title of the volume, with borders corresponding to those of the miniature, among which is a portrait of the Cardinal in a red robe. Photographs (too small) of these two pages are also given in the work before us. On one of these pages is the inscription, "Marino Grimano et legato Perusino Patrono suo Julius Crovata pingebat."

2. The Townley Lectionary is fully described by our author, including several of Clovio's miniatures, especially the "Last Judgment,"

"considered by most judges to be not only the finest miniature in the volume, but Clovio's masterpiece. In all the higher qualities of design and beauty of workmanship, I know of nothing to compare with it" (p. 259).

3. The Grenville "Victories of Charles V.," called "L'aquila triumpante," was carefully described by Dibdin from Mr. Grenville's own notes, which stated that the volume came from the Escorial. It bears a title "Giulio Clovio L'aquila triumpante de Carlos Quinto V." The famous miniatures, of which there are twelve, are carefully described by Mr. Bradley.

4. The Stuart de Rothesay MS., "unquestionably the work of Clovio," is now in the British Museum (Add. 20,927). It contains four miniatures with borders, and several very beautiful illuminated initials.

5. The Gonzaga "Offices" in the Bodleian, Oxford (MS., Duce 29), has been attributed to Girolamo dai Libri and to Girolamo Genga; but much of the work in it completely corresponds with works in other MSS. that were painted by Clovio. The miniatures, which are all Biblical, contain "some of the same ornaments as the Berlin Missal of Clement VII., the Corsini Missal executed for the same Pope, the Albani or Ashburnham Missal, and two or three pages in the MS., No. 21,412 in the British Museum; and all these, if any, should be assigned to Clovio" (p. 201).

Lastly, we may mention that Silvestre published a splendid coloured facsimile of the "Paradiso" of Dante in the *Palaeographie Universelle*, pl. clxii., from the MS. of that poet, in three volumes, in the Vatican Library; and that the "Officium B. Mariæ

Virginis," of the Royal Library of Naples, mentioned by Mr. Humphreys, is described by Mr. Bradley (p. 270) as "one of the most unique in the world," the silver-gilt sculptures of the covers contain full-length figures of the Virgin and the Angel Gabriel, with other smaller ones and ornaments.

The work before us is illustrated by eighteen plates, including a photograph of a medal with portrait of Clovio.

I. O. WESTWOOD.

EGYPTIAN EXPLORATION.

THE OLDEST PYRAMID AND TEMPLE.

Medium: March 31, 1891.

My work here is now ended, as the question for which I came is solved: Medium is proved to belong to Snefru, and here, therefore, is the oldest dated pyramid. Moreover, there remains here in perfect condition the only pyramid temple ever yet found entire, the oldest dated building in the world.

As the position of the temple was quite unknown, and its existence only a speculation, I had to work blindly through forty to sixty feet depth of rubbish, piled up around the pyramid during ages of quarrying in its mass. The result justifies the attempt; for though the temple discovered is absolutely plain and uninscribed, yet during the XIIth and XVIIIth Dynasties visitors came here to the festivals of Snefru, and recorded their visits to his temple and pyramid in pious graffiti on the walls. That he was the genius of the place is also shown by a base of a statuette dedicated to the gods of a town, Tat-snefru, by a woman named Snefru-khati.

The temple is joined to the east face of the pyramid. The front is about thirty feet wide and nine high, with a door in the south end of the face. A passage parallel to the front, and twenty feet long, leads to the chamber, which is twenty by seven feet. A wide doorway leads from this into the open-air court built against the pyramid face. The altar of offerings, quite plain, stands in the middle of the court, and an obelisk on either side of it. These obelisks are over thirteen feet high, with rounded tops and uninscribed. Of course I have had to re-bury temple and tombs completely in order to preserve them, in the total absence of all inspection or conservation officially. On clearing the interior of the pyramid, which was open from the north, I found in the rubbish the fragments of a wooden sarcophagus; so the chamber already known was doubtless the sepulchre anciently plundered.

The construction of the pyramid has also been examined. It plainly consists of a small stone mastaba, heightened and built around repeatedly until there were seven steps of construction. Over all these a continuous slope of casing was added, so that it appeared with one long face from the top to the ground. This bears out what I had suggested years ago, that the mastaba repeatedly added to originated the pyramid form.

The tombs here prove to have been elaborately plundered in early times, when their plans and arrangements were well known to some persons. Forced holes leading straight to the chambers have been made, and nothing portable is left for the present age. Many tombs which contained only bodies have not been disturbed; and from these I have collected over a dozen complete skeletons for study, which will give a starting-point at the earliest historical reign for comparing the types of Egyptians of later ages. A very important matter is the mode of burial. Hitherto we have always found Egyptians buried full length; but most of these earlier bodies are crouched, many with the

knees up to the chin. And I am told that many crouched bodies in large earthen jars were found lately at Gizeh, but were all destroyed. These bodies are always on the left side, with the face east, head north. This proves that a special idea was connected with such burials. But no funereal vessels or head-rests are found with these interments; only around the body are sometimes a few scraps of charcoal, as if it had been surrounded by live coals at the time of burial. At the same period full-length burial was practised, accompanied by funereal vessels of diorite and alabaster and head-rests. This distinction seems to be connected with the two races—the aborigines and the conquerors, who were not yet fused together.

A good deal of the pottery of the IVth Dynasty has also been found. It differs from that of all later periods, and completes our historic knowledge of the pottery of Egypt.

The mode of laying out buildings has been found. A mastaba with sloping sides had to be founded on uneven ground. A wall, L shape, was built outside of each corner. Levels on that were drawn a cubit apart; red vertical lines on these walls defined the width of the building at the ground-level, and black lines drawn sloping down outwards from the red at ground-level defined the planes of the faces. From this perfect geometrical arrangement it was easy to start the work, no matter how uneven the foundation.

Besides this exploration, a survey of the place in general, and especially of the exact dimensions of the pyramid, is now done. The first result of this is of great value on the geometric theory. The pyramid of Khufu, as we all know, is so proportioned that the ratio of height to circuit is that of a radius to its circle; and moreover the ratio of 7 to 22 is embodied by the dimensions of height and base being 7 and 11 times 40 cubits, which strongly shows that 7 to 22 was the recognised ratio. Here in the pyramid of Snefru, which preceded that of Khufu, exactly the same ratio of 7 to 22 is found, the angles being alike. And, moreover, the size is such that the height and base are 7 and 11 times 25 cubits. Therefore the proportion in a pyramid and the use of the approximation 7 to 22 are both older than the great pyramid of Gizeh; and this example strongly corroborates that theory of the dimensions.

An illustration of official amenities may interest Englishmen who do not know how things go here. This year an official spy has been appointed to watch me, although I have worked for eight years simply on my honour, and have not concealed anything from the Government. And I am told that I shall be charged for this benevolent attention an amount which is larger than the whole value of the things I remove. Meanwhile, a few miles off, natives have long been pillaging and destroying towns and tombs unchecked in a scandalous manner, because the staff is insufficient to control them! Those who know something of the state of officialdom here can understand what all this means.

W. M. FLINDERS PETRIE.

"POIL ET PLUME."

THE above is the humorous name given to a very original exhibition in the Hall of the Théâtre d'Application, organised by a group of men of letters of artistic tastes. M. Bergerat—the well-known "Caliban" of the *Figaro*—explains in his witty preface to the Catalogue how some literary friends, inspired by him, made up their minds to follow fashion, found a "Petit Salon" of their own, and, as a token of their double calling, style it "The Brush and Pen" exhibition. There are many

examples of painters having succeeded as authors, why should not authors, in turn, show that they can paint as well as write?

"There are, besides, three good reasons," says M. Bergerat, "for a writer trying his hand on canvas: first, because it amuses him; secondly, because it is change for him; and thirdly, *il est*: anything is better than pudding in the quagmire of politics."

The "Poil et Plume" exhibition is divided into two sections, modestly entitled: The Louvre—for deceased masters; The Luxembourg—for living geniuses. Victor Hugo occupies the first place in the Louvre, though his four blotchy pen-and-ink sketches of fantastic castles perched on rocky peaks and surrounded by smudgy clouds owe their principal attraction to the signature V. H. It is a very different case with the portraits in oils and two pretty pastels signed "Théophile Gautier." Here we recognise the fact that the author of *Emma et Camées* might have become an artist of renown had not his shortsightedness obliged him, fortunately, to drop the brush and take up the pen. A little further on, we come upon some interesting sketches of Alfred de Musset; a water-colour "Fantasia" and a portrait of himself by Merimée; also a portrait of Baudelaire, by himself; and the sketch of a girl's head, illustrative of the following verses in "Les Yeux de Berthe":

"Grands yeux de mon enfant, arcanes adorés,
Vous ressemblez beaucoup à ces grottes magiques
Où derrière l'amas des ombres léthargiques
Scintillent vaguement des trésors ignorés."

Gérard de Nerval is represented by half a dozen pen-and-ink sketches of no particular interest. Close by hangs a water-colour drawing of M. Jules de Goncourt, representing the sinister corner of the Rue de la Vieille-Lanterne in which Gérard de Nerval hanged himself. The sketch was made on the spot the day after the suicide. Among other curiosities is a tiny picture by Schanne, the celebrated Schaumard of the *Vie de Bohème*.

The Luxembourg contains a varied collection of semi-serious, semi-comic contributions from living authors. M. Bergerat's water-colours are superior to ordinary amateur-work, while his portrait of Gustave Flaubert is a good likeness. M. Lemonnier's water-colours "after Claude Monnet" form an amusing contrast to M. Montégut's "impressionist" landscapes. M. Edmond de Goncourt has sent a sketch of the celebrated drawing-room of the Rue St. Georges, with his brother Jules seated before the fire. The poets Harancourt, Jean Rameau, Clovis Hugues, Verlaine, and other well-known names, figure on the wall as *pochades* and no more. M. Lemaître, the critic of the *Débats*, has sent a portrait of M. St. Le Roux; M. Sardon a plan for stage scenery; Mme. Valérie Fould (Gustave Haller) a sketch with the following lines:—

"Messieurs de la littérature,
Prenez bien garde à la peinture
Transformer en peintre un auteur,
Faire d'un poète un sculpteur,
L'entreprise est trop hardie
Bah! . . . Je risque ma comédie."

The inimitable Gyp (Comtesse de Martel) contributes some of "Bob's" artistic productions, among which is one of the most amusing skits in the collection. It is a water-colour drawing representing M. Ohnet, the immortal author of *Le Maître de Forges*, attired in a red hunting-coat, yellow breeches, and top-boots, paying his addresses on bended knee to the attractive, lightly-clad nymph, the French Language, who turns away, protesting with uplifted hands at M. Ohnet's impudence.

The receipts of this interesting exhibition are to be devoted to charitable purposes.

C. N.

THE GRAVE OF "ARISTOTLE."

We quote the following from the New York Nation:—

"American School of Classical Studies, Athens:
March 12, 1891.

"Contrary to my wishes, the news has already leaked into the papers here that I have discovered the grave of Aristotle. As I am very anxious that no sensational report be spread, not warranted by conscientious scientific investigation, I feel bound to make public at this juncture the grounds upon which this premature conclusion has been arrived at.

"During the excavations which have been carried on by the American School of Classical Studies under my direction on the site of the ancient Eretria, I was making tentative excavations in the neighbourhood of the city, in order to discover the temple of the Amyrntian Artemis. I came upon beautifully worked marble foundations, which, however, proved to be the enclosures of a family grave, such as exist in considerable number about Eretria. But these walls were of such workmanship and magnificence that I concluded they must be the finest graves in the neighbourhood. After much digging, and opening of two graves, we came upon one within this precinct which contained a number of articles (twenty-three), among them six diadems of pure gold and one laurel wreath of pure gold about the head; furthermore, a most interesting specimen of a writing-pen in silver, and two styluses of the same material; also a statuette of a philosopher, with hands folded, in terra-cotta.

"It seemed evident to me at the time that the person here buried was a man of literary pursuits, and furthermore a man of considerable fame and note. When, in the grave adjoining, containing the remains of a female member of the family, an inscription was found, [B]IOTH [A]PISTOTEAOT, the tempting question flitted through the mind, whether the gold-wreathed philosopher buried with such distinction was not the famous Stagirite? This grew still more tempting when one bore in mind that Aristotle died at Kalchis, and that Kalchis is the adjoining city to Eretria. Finally, Christodoros describes a statue of Aristotle, which he saw in a gymnasium at Constantinople, as "standing with hands folded together," which corresponds to the unique terra-cotta found in the grave. According to Prof. Richardson, the inscription goes back to the third century B.C.

"This is an outline of the facts connected with the discovery. But I should like to refer to the following points which militate against the identification: first, that Kalchis is not Eretria, though it adjoins it, though graves run almost continuously from Kalchis as far as Bathia, two hours beyond Eretria, and though one must not assume that these were the same distinct and inimical communities after the Macedonian period which they were in the previous centuries. One must further remember that there were several Aristotles in antiquity, and that the daughter of Aristotle by his wife Pythias is mentioned in his will, and that her name was Pythias, not Biete: though he might have had a daughter by Herpyllis. Finally, research has not yet considered and settled the question whether the terra-cotta figures in graves had any such direct reference to the deceased as the statuette of the philosopher in the grave in question might tempt us to believe existed in this case; though we can, even now, maintain that a general relation subsisted, such as that of ephebi in graves of youths, children in children's graves, and women with articles of toilet in those of women.

"These are, on the whole, the facts which I can at present make public. Perhaps more light may come to us.

"CHARLES WALDSTEIN."

NOTES ON ART AND ARCHAEOLOGY.

THE exhibitions to open next week are particularly numerous. They include (1) that of the Royal Society of Painters in Water-Colours, in Pall Mall East; (2) Mr. Mortimer Menpes's much-talked-of paintings, drawings, and etchings done in India, Burma, and Kashmir, at the Dowdeswell Galleries, in New Bond-

street; (3) a series of water-colour drawings by Mr. F. G. Cotman, entitled "On the Devon Rivers," at the Rembrandt Head Gallery, in Vigo-street; (4) a series of pictures of the Shetland Isles, by Mr. R. H. Carter, at Messrs. Tooth & Sons' galleries in the Haymarket; and (5) the exhibition of the Society of Lady Artists (professional), in the Egyptian Hall, Piccadilly.

DR. SELAH MERRILL, well known for his services in connexion with researches and explorations in Palestine, has been re-appointed U.S. Consul at Jerusalem by President Harrison. During the past week he has been staying in London, on his way to the Holy City.

ON Wednesday next, April 22, Messrs. Sotheby will sell the small but choice collection of line engravings formed by the late Dr. Alexander J. Ellis.

It is not often that the opuscula of a diletante society are of such real value as the little volume on *Blue and White China*, which Mr. Alexander T. Hollingsworth has recently presented to the Sette of Odd Volumes. It is the best common-sense apologia for the craze we have seen. Many a lover of those "blimy little bits of blue," as Mr. Henley's cockney calls them, may never have thought to formulate his reason for the faith that is in him. To the more technical, Mr. Joseph Grego's notes on the potters' marks will be of much interest and value, while the illustrations to the volume are almost as dainty as the pieces themselves.

THE LOUVRE has recently acquired two curious portraits, which are believed to be those of King René, of Anjou, and his second wife, Jeanne de Laval, and to have been painted by the king himself. These portraits come from the last of the Matherons of Aix-en-Provence, one of whose ancestors, Jean de Matheron, is said to have received them from King René, who was godfather to one of his children. They are painted on tablets of wood, which open and shut like a book, and are in perfect preservation.

We quote the following from the *Times*:—

"An important discovery of Roman remains has just been made in Lincoln. In laying down a new water-main the workmen came upon the bases of three Doric columns, in an admirable state of preservation. These bases are in a straight line with the shattered pillars discovered in May, 1878, and correspond exactly with them in character and arrangement. The new discovery proves that the building of which these columns formed the façade, instead of presenting, as was thought, a six-columned portico of 70ft. in breadth to the street, must have shown a colonnade of at least 11 columns, that number being already accounted for, and extending to the length of 160ft. It must have been a fabric of great size and magnificence, occupying the north-western angle of the north-western quarter of the Roman city. It is to be regretted that, the position of these last discovered columns being in a public thoroughfare, it is impossible to preserve them *in situ*."

THE STAGE.

STAGE NOTES.

MISS MARION LEA and Miss Elizabeth Robins have both in their different ways done such excellent stage work—both of them are artists of so much greater intelligence and sensitiveness than is common—that one wishes them success in the series of *matinées* which they give at the Vaudeville next week, even if the piece chose for representation is, as we think it, unworthy to engage them. The author whom they have selected to give one other chance to can have no hold whatever on the literary, the thoughtful, the genuinely artistic public. His appeal is in chief to the ill-balanced mind, and he finds acceptance only among a *clique*, and

in a corner of "faddists." Still, though for people of ordinary common sense—and yet more for the people of genuine and individual penetration—the effort may be difficult, we would counsel our readers on this occasion to forget the author and to remember only the actresses. Miss Robins is an actress of delicate pathos, singularly discreet, and a mistress of her own method. Miss Marion Lea has before now approved herself not only a brilliant comedian, but an emotional artist of remarkable power. Nor has she said her last word; her finest opportunities are yet, no doubt, to come.

THE Vaudeville revival of "Money" has, as we said it would have, a very strong cast, the Brothers Thorne, and Miss Kate Phillips, Mr. H. B. Conway, and Miss Dorr—the new and highly accomplished actress from America—doing at least their share in the production of a performance which compares well with any that has been recently given. The piece is assured of some considerable run; it is so well constructed, and contains so much of that which is real comedy, that it has aged far less than "The Lady of Lyons." Still, it has aged to some extent; and, though its success is not doubtful, we are not sure that the management would not have done well to have availed itself of a suggestion proceeding from we forget what quarter, to the effect that the period during which the play was written should be frankly recognised by the adoption of the costumes, and, we must add, the interior decorations of the very earliest years of the Queen's reign. "Money" is a contemporary of *Nicholas Nickleby*, the characters in which we always associate with the art of its contemporary illustrator. The sentiment of "Money" would seem less strained, and its peculiar order of cynicism less out of place, if its date were remembered. When it was written, Samuel Rogers was popular, and the Byronic tradition had not passed away. If people were reminded of this condition of things by the costume and appointments, something that now seems false would become acceptable.

MUSIC.

ITALIAN OPERA AT COVENT GARDEN.

Mlle. GIULIA RAVOGLI took the title-rôle in "Carmen" last Thursday week. It seems scarcely possible that the exponent of the faithful Orfeo should achieve equal success as the fickle Spanish girl; that she should throw off her classic bearing and become a coquettish gipsy toying now with a young officer, now with a

bull-fighter. The change was a sudden one, and quite as sudden for the public as for her. She sang admirably, and gave a characteristic reading of the part, but there seemed something wanting. We do not know how to express this something better than by saying that she seemed to be playing the part; that she was a stage, not a real, Carmen. There were many fine points in her acting, especially in the latter part of the opera; but still she never quite carried away her audience. However, this was her first attempt here; and with a better Don Jose than M. Lubert, and a more exciting Escamillo than Mr. F. Celli, she may possibly appear to far greater advantage. For the moment, then, we suspend judgment. M. Lubert, the French tenor, has some good notes in his voice; but the high ones are hard, and some of his acting, especially in the last act, bordered on the burlesque. For Mr. F. Celli all excuse should be made, as he took the part at very short notice. Mlle. Agnes Jansen made a satisfactory *début* as Mercédès, and Mme. Bauermeister proved an efficient Frasquita. Mlle. Sofia Ravogli took the part of Michaela, but her success was not great. Mr. Randegger conducted with care.

"Lehengrin" was given on the following Saturday evening, and the theatre was crowded. The cast was an exceptionally fine one. Miss Eames was not all that one could wish in the matter of acting or singing; but with regard to any shortcoming it should be remembered that she was playing the part for the first time, and that she had not—so it is said—the advantage of proper rehearsal. M. Jean de Reszke as Lohengrin, and his brother as the King, more than satisfied all expectations. Mlle. Giulia Ravogli as Ortruda had a part that suits her admirably, and her singing of the music showed great dramatic power. M. Maurel, the Telramund, was, as usual, most satisfactory. The chorus sang well; and the orchestra, under Signor Mancinelli's direction, played efficiently, though, at times, too vigorously.

J. S. SHEDLOCK.

MUSIC NOTES.

MESSRS. WILLY HESS and Hugo Becker held the first of three violin and 'cello recitals at St. James's Hall on Saturday afternoon. Mr. Hess gave a brilliant performance of Vieuxtemps' showy "Fantasia appassionata," and Mr. Becker was heard to great advantage in two Boccherini movements transcribed by Signor Piatti. Mr. Leonard Borwick played some pianoforte solos, though not quite in his best manner. Bach's short organ Prelude and

Fugue in E minor is ineffective on the pianoforte; and, moreover, the quaint character of the theme is "grievously impaired," if, as was the case on this occasion, the *mordente* is not properly executed. Mr. Borwick played the Schubert Impromptu (Op. 90), No. 3, at too slow a rate. We hoped to hear it, not in the key of G, but in that of G flat, as it is written in the new Breitkopf and Härtel edition of the composer's works. The Henselt "Toccata" was neatly performed. The programme opened with Beethoven's B flat Trio (Op. 97), a work not often heard of late years. Miss Fillunger contributed some interesting songs by Handel and Brahms. There was a fair attendance.

MME. FRICKENHAUS gave a pianoforte recital at St. James's Hall on Wednesday afternoon. The programme was exceedingly well drawn up, and it contained many pieces by no means hackneyed. Of these the principal was Brahms's Sonata in F minor (Op. 5), an early and remarkably interesting composition which has never been played at the Popular Concerts; it was introduced some seasons ago by Mr. Brönnigke at one of his concerts. The Sonata was interpreted by Mme. Frickenhaus in an able manner; her technique was excellent, and she played with much feeling. A Fugue "for the right hand alone" by her master, M. A. Dupont, proved a curious and clever piece, and it was played in a neat and sparkling manner. The concert-giver was also heard to advantage in pieces by Grieg, Cowen, Leschitzky, &c.

GOUNOD's "Mors et Vita" was performed by the Choral Society at the Albert Hall on Wednesday evening. This work, with its many pages of slow "sequence" music, its monotony of cadences, its frequent reminiscences of "Faust"—nay, of the two "Fausts" (Gounod's and Berlioz's)—cannot be regarded as an attractive or original work. It is, in spite of clever writing and at times pleasing melodies, distinctly heavy music. But Mr. Barnby's choir, under Dr. Mackenzie's direction, sang the choral music splendidly. The soloists were Mme. Albani, Miss Hilda Wilson, and Messrs. Lloyd and Watkin Mills. They all sang well, although Mme. Albani at times exaggerated her part, and Miss Wilson was not in her best voice. There was a large attendance.

NOW READY.

IDYLLS, LEGENDS, and LYRICS. By A. GARLAND MEANS. Handsome volume of Love-Sonnets and old-time Love-Stories in Verse. Eminently suitable for Gift-book. Price 7s 6d.

London: KEGAN PAUL, TRENCH, TRUBNER, & CO.

TRISCHLER & CO.'S NEW BOOKS.

At all Libraries and Booksellers.

THE SOUL of COUNTESS ADRIAN. By Mrs. CAMPBELL FRAED. Crown 8vo, handsomely bound in blue cloth, 1 vol. Ready this day. Two shillings and sixpence.

THE BLACK DROP. By the Author of "Bail Up." SUNDAY TIMES—"It tells a strong story in a strong and straightforward way, and is thoroughly readable." GLASGOW HERALD—"The book is most interesting." Cloth extra, 1 vol., Two shillings and sixpence.

LADY DELMAR. By Thomas Terrell and T. L. WHITE. This exciting story of London Life has already been dramatised by Mr. Sydney Grundy. DAILY TELEGRAPH—"A remarkable novel." TRUTH—"A striking powerful novel." Cloth extra, 354 pp., Three shillings and sixpence.

A MAIDEN FAIR to SEE. By F. C. Phillips and C. J. WILLS. Illustrated by G. A. Storey, A.R.A. SCOTSMAN—"This novel, both by its pictures (graceful drawings from the pencil of Mr. S. A. Storey) and the general style of its printing, suggests the book for young readers. The story is lifelike, humorous, and clever. Everybody who reads the story will enjoy its tenderness and quiet fun." Foolscap quarto, beautifully bound, with gilt top, Six shillings.

THE ROMANCE of a LAWN TENNIS TOURNA-
MENT. By Lady DUNBOYNE.
VANITY FAIR—"An exciting title romance." GLOBE—"An agreeably written narrative." Picture cover, One shilling; cloth, 1s. 6d.

THE GOLDEN LAKE. By W. Carlton Dawe.

With Eight Full-page Illustrations by Hume Niebet. MORNING POST—"A welcome addition to the fiction treating of 'The Great Lone Land of Australia,' the effect of which is increased by Mr. Hume Niebet's numerous illustrations." SUNDAY TIMES—"A very strong and well-written story of Australian life, told with a swing and 'go' which make it very entertaining reading." Extra cloth, with bevelled boards, Six shillings.

THE PRISONER of CHILOANE; or, with the Portuguese in South East Africa. By WALLIS MACKAY. With 80 Illustrations by the Author.

THE SATURDAY REVIEW—"Mr. Mackay is as good with pencil as with pen." THE SCOTSMAN—"Written in a bright spirited style, and the illustrations are full of fun and movement." Foolscap quarto, handsomely bound in cloth, bevelled edges, 7s. 6d.

HOLLY. 2 vols. By Nomad, Author of "The Railway Foundling," "The Milroys," &c.

In speaking of this author's last work, "The Railway Foundling," the DAILY TELEGRAPH says—"It is a story that must be read to be understood. There is vivacity and adventure in it, and good as the author's previous work, 'The Milroys,' was, it is not too much to say this is better."

THE TYPE WRITTEN LETTER. By R. H. SHERARD, Author of "Agatha's Quest."

GLOBE—"Very cleverly put together." SCOTSMAN—"The plot is cleverly devised, and the interest of the book is kept well up from beginning to end." Limp cloth, One shilling; cloth boards, Eightpence.

TRISCHLER & COMPANY, 18, NEW BRIDGE STREET, E.C.

SATURDAY, APRIL 25, 1891.

No. 990, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Memoir and Correspondence of the late John Murray. By Samuel Smiles. In 2 vols. (John Murray.)

It is always easy to detect errors in a book of this nature, and the daily press has already abundantly aired its knowledge of literary history in regard to the present volumes; but it should none the less be easy to make liberal excuse for them. When one tries for a moment to realise the mass of correspondence Dr. Smiles must have waded through, the difficulties of selection, the problems of arrangement, it becomes less a matter of grumbling at a date here or a reference there, than of complimenting him on his undaunted industry. The letter-bag of so fashionable a publisher must have been as formidable as Mr. Gladstone's.

And, after all, is infallible accuracy in such a book so momentous as we pretend? Why do we read these countless memoirs and reminiscences? Some few, doubtless, for pigeon-hole purposes, eager of new details; but really so documentary an appeal is very limited, and the majority of us will tell the truth if we confess that our reading begins and ends in the natural appetite for gossip. We cannot all afford to indulge in the expensive fashion of Mrs. Shelley, who, when acknowledging a copy of Croker's *Boswell*, wrote to Murray that she had read it ten times, adding "I hope to read it many more." But certainly we should like to, for there are just a few great figures in our literary history of whom we cannot have too much. Johnson, of course, is one. Byron, and especially Scott, are two more. Yet, admirable as Lockhart is, one cannot be for ever repeating him, and Moore would hardly bear it in any case. Volumes such as these come, therefore, as welcome excuses for mingling once more amid the old faces, and lingering again over the oft-told tale. Besides, one gains a sense of freshness of impression in being thus brought to regard the familiar history from a new standpoint. What was comparatively distant and insignificant is now eloquent in the foreground; our former centre is now a point on the circumference. Before, we were in Italy with Byron writing saucy letters to "My Murray" to insist on "guineas," or making despairing appeals for tooth-powder; now, so to say, we take the letters from the postman in Albemarle-street, and, as we have often wished, watch the courtly publisher's face as he reads them.

"No tooth-powder, no letters, no recent tidings of you," exclaims "the 'hilde," writing from Venice, on July 1, 1817. But it took four more letters to draw forth a

penitent reply; for Murray, unlike the type of great men best-beloved of Dr. Smiles, seems to have been no little indolent at times. On August 5, he at last apologises for his "unpardonable indolence," and ten days later writes:

"By this time Mr. Kinnaird has, I hope, reached you in safety, and presented all my packets of poetry and tooth-powder; and hereafter I hope to receive your comments on the one portion and your thanks for the other."

Turning again to Moore, we find "comments" and "thanks" as follows:

"Mr. Kinnaird is not yet arrived, but expected. He has lost by the way all the tooth-powder, as a letter from Spa informs me. By Mr. Rose I received safely, though tardily, magnesia and tooth-powder, and 'Alashtar!' Why do you send me such trash—worse than trash, the sublime of mediocrity? Thanks for 'Lalla,' however, which is good; and thanks for the *Edinburgh and Quarterly*, both very amusing and well written."

To thus play at dominoes, as Schopenhauer would say, with extracts, is not that the charm of literary biography?

Again, on August 12, 1817, we remember Byron chafing:—

"The copies of *Manfred* and *Tasso* are arrived, thanks to Mr. Croker's cover. You have destroyed the whole effect and moral of the poem by omitting the last line of *Manfred's* speaking; and why this was done I know not. Why you persist in saying nothing of the thing itself, I am equally at a loss to conjecture. If it is for fear of telling me something disagreeable, you are wrong; . . . what you may think irritability is merely mechanical, and only acts like galvanism on a dead body, or the muscular motion which survives sensation."

Now we know how calmly Murray sat down to reply to these fulminations.

"Mr. Gifford, after consulting me, omitted your close of the drama from no other motive than because he thought that the words you allude to lessened the effect; and I was convinced of this myself. . . . I have written up this day to have the page cancelled and your reading restored. In future I propose to send you every proof by post, with any suggestions of Mr. G. upon them for your approbation. . . . I assure you that I take no umbrage at irritability which will occasionally burst from a mind like yours; but I sometimes feel a deep regret that in our pretty long intercourse I appear to have failed to show that a man in my situation may possess the feelings and principles of a gentleman; most certainly I do think that, from personal attachment, I could venture as much in any shape for your service as any of those who have the good fortune to be ranked amongst your friends."

Indeed, Byron had little need to lay such stress on his "guineas," for Murray's dealings with him from first to last were generous to recklessness. One might have thought that the real personal affection which he bore to the poet was the spring of this, did one not find a similar generosity animating all his dealings—from the very beginning of his career, when, after shaking off a deadhead of a partner, the Mr. Highley who had managed his father's estate during his minority, he hastened to offer Colman £300 for the copyright of *John Bull*, till the later years when he gave Moore ridiculous sums for his *Life of Byron*, and suffered for his high opinion of Washington Irving. "A

thousand guineas" is a sum one grows quite familiar with in reading these volumes; certainly it seems to occur on every other page—of the first volume, one should perhaps say, for in the second one finds him becoming a little more chary, at least of poetry. For, need one say, he found no second Byron. Dean Milman would fain have worn the giant's robe; and as Murray had given him £500 for his "Fall of Jerusalem," he came with a quite amusing idea of the value of his second poem, "Belshazzar."

"I give you fair warning," he wrote, "that all the friends who have hitherto seen it, assure me that I shall not do myself justice unless I demand a very high price for it."

"If it had been double I should have hesitated; as it is, I have no scruple in stating that I cannot accede to it," was his reply to Murray's offer; but Murray's rejoinder shows how well he knew to "transfix the flourish set on youth." Opening with regrets that they should not agree, he continued:

"Such a circumstance never occurred to me before, for I have usually had the good fortune to anticipate the expectations of those who have honoured me with the publication of their works. In the present instance you should consider that my valuation is formed upon the sale of your former works, and yours upon the opinions of friends."

As it was, Murray gave 500 guineas for the poem, though, later on, Milman was willing to eat humble pie to the extent of writing—"As to the copyright of 'Samor,' whatever you think it worth I shall be glad to receive"—the sequel to which was, in the words of Dr. Smiles: "Nothing appears to have been paid for it, nor did it even pay its expenses." Dean Milman's prose writings were, of course, "another story."

Though by far the majority of Murray's writers were eager to testify to his magnificent treatment of them, several even refusing the sums he offered them as excessive, yet Milman was not the only one who deemed himself deserving of all he got. Southey was conspicuously another. One never held a very flattering opinion of him, but all through these pages his self-conceit is more nauseous than ever.

"With regard to 'Kehama,'" he wrote, "I was perfectly aware that I was planting acorns while my contemporaries were setting Turkey beans. The oak will grow, and though I may never sit under its shade, my children will. Of the 'Lady of the Lake,' 25,000 copies have been printed; of 'Kehama,' 500; and if they sell in seven years I shall be surprised."

"Turkey beans" or no, one cannot but think that the acorns are somewhat long in coming up.

Again, though he well knew that from his essays in *The Quarterly* came his chief source of income, yet it is in this priggish vein that he acknowledges the extra liberality of its publisher:

"Your pay is very liberal, and the price which I receive for my writings is by no means a matter of indifference to me, but it can make no difference in the manner of my writing. The same diligence, the same desire, and the same power (whatever that may be) were brought to the task when you paid me ten guineas per sheet, as when you raised it to £100

per piece. This last is a great price . . . but I will tell you . . . that I must suspect my time might be more profitably employed (as I am sure it might be more worthily) than in writing for your journal even at that price."

This when twenty-one of his books, published by Longman, were bringing him £26 per annum! After all, it is sad to think that Southey's exquisite handwriting is probably the best expression of himself he has left behind him; those who have seen the MS. of *The Doctor* know how delicious that is.

On the other hand, one to whom Southey bore but little goodwill, and of whom, indeed, we have been accustomed to hear a very different account, appears in quite an original character throughout. Southey bore little love to William Gifford, because he persisted in cutting out the best passages in his *Quarterly* articles; we think of John Keats, and are biased by Hazlitt's splendid invective:

"Sir,—You have an ugly trick of saying what is not true of anyone you do not like; and it will be the object of this letter to cure you of it. You say what you please of others: it is time you were told what you are . . . You are a little person, but a considerable cat's-paw; and so far worthy of notice."

It is difficult to reconcile the Gifford of this contemptuous personality with the earnest recluse whose greatest fault seems to have been unpunctuality in regard to his *Quarterly*—with the Gifford whom we find delighting in children's parties, whom again we find tender with solicitude for an old housekeeper, and of whom such different men as Scott and J. W. Croker wrote with equal regard. William Jerdan even spoke of him as "full of gentleness." One can only reflect that these volumes are inevitably *ex parte*, that the opinions are mainly those of good Tories, and lament that differences of party should have power so to hinder good men from finding each other out. That Hazlitt and Hunt had none the less some measure of truth on their side may be concluded when we find Scott writing in his *Journal* that,

"in general he [Gifford] flagellated with so little pity that people lost their sense of the criminal's guilt in dislike of the savage pleasure which the executioner seemed to take in inflicting the punishment."

Yet one must not forget—though it be such poor doggerel—that even Hunt was obliged to write in reference to him that

" . . . there's something which even distaste must respect,
In the self-taught example that conquered neglect."

Scott is always the same wherever we meet him. He has nothing to fear from sidelights or valets. Always the same brave innocent giant; to read of him in this latter day is to draw in breaths of the upper air. To watch his vast energy in its great unconscious action—what a contrast to the painful affectation of our little masters of to-day. We gain many glimpses of him in these pages, from the great "primal burst" of his poetical fame, when Constable offered him a thousand pounds for his, as yet, unwritten "*Marmion*," giving Murray the eagerly accepted opportunity of a fourth

share in its publication; till, years after, Scott, collecting all his forces for that losing battle that was yet so much more than a victory, wrote to Murray, among other owners of his copyrights, to buy that old share back. Murray's response is quite touching, and says all that need be said for his soundness of heart.

"Mr. Lockhart has at this moment communicated to me your letter respecting my fourth share of the copyright of "*Marmion*." I have already been applied to by Messrs. Constable and by Messrs. Longman, to know what sum I would sell this share for; but so highly do I estimate the honour of being, even in so small a degree, the publisher of the author of the poem, that no pecuniary consideration whatever can induce me to part with it. But there is a consideration of another kind, which, until now, I was not aware of, which would make it painful to me if I were to retain it a moment longer. I mean, the knowledge of its being required by the author, into whose hands it was spontaneously resigned in the same instant that I read his request. This share has been profitable to me fifty-fold beyond what either publisher or author could have anticipated; and, therefore, my returning it on such an occasion, you will, I trust, do me the favour to consider in no other light than as a mere act of grateful acknowledgment for benefits already received."

Meanwhile, in the fruitful years that intervened, Murray and Scott maintained an active intercourse, chiefly in regard to the *Quarterly*, in the establishment of which Scott's sanguine energy counted for so much. Of Murray's visit to Abbotsford, and the historic meeting of Byron and Scott in Albemarle-street, new letters give us further interesting details.

Of the other "tolling names" one instinctively looks for first, Coleridge, Hunt, and Carlyle are the most considerable, though none of them occupy the stage for long or to any great advantage. Indeed, we have Coleridge somewhat at his worst, writing windy involved letters concerning that projected translation of "*Faust*," which never came to anything, and for which one cannot but feel that Murray was hardly as generous as usual in offering the poet the small sum of one hundred pounds. Coleridge evidently thought so, and it is pathetic to see him reduced to blowing his own trumpet in this fashion:—

" . . . the terms proposed are humiliatingly low; yet such as, under modifications, I accede to. I have received testimonials from men not merely of genius according to my belief, but of the highest accredited reputation, that my translation of '*Wallenstein*' was in language and in metre superior to the original, and the parts most admired were substitutions of my own, on a principle of compensation. Yet the whole work went for waste-paper."

But although Coleridge had been introduced to Murray by Byron, and though indeed Murray agreed to give seventy guineas for the unfinished "*Christabel*," "until the other poems shall be completed, when the copyright shall revert to the author," and also £20 for "*Kubla Khan*," together with two fifties for editions of the "*Christmas Tale*" and "*Zapolya*"—in spite of these transactions, one gains a distinct impression that Coleridge and Murray were not sympathetic.

In a letter which completed their correspondence, Coleridge writes:—

"I strive in vain to discover any single act or expression of my own, or for which I could be directly or indirectly responsible as a moral being, that would account for the change in your mode of thinking respecting me."

Looking back at the two men, we can pretty well understand it all. Coleridge's inorganic personality could hardly fail to irritate a man who was none the less a good fellow because he was pre-eminently sane. Before leaving Coleridge we must thank Dr. Smiles for rescuing this little song, which, though it was set to music many years ago, has never appeared in the collected works. It is pretty in spite of its being entitled "*Glycine*."

"A sunny shaft did I behold,
From sky to earth it slanted,
And pois'd therein a Bird so bold—
Sweet bird! thou wert enchanted!
He sank, he rose, he twinkled, troll'd,
Within that shaft of sunny mist;
His Eyes of Fire, his Beak of Gold,
All else of Amethyst!
And thus he sang: Adieu! Adieu!
Love's dreams prove seldom true.
Sweet month of May! we must away!
Far, far away!
To-day! to-day!"

As to Hunt, the short glimpse we have of him is on his vain and impecunious side in regard to "*The Story of Rimini*," of which Murray seems to have held no greater opinion than posterity, unwilling to risk more than a 750 edition, and then gladly transferring the copyright elsewhere. In regard to Carlyle, the story of his hawking *Sartor* in vain round London must never be told again without the addition that he did so after a definite half-profits offer from Murray, which he seems to have attempted to use as a lever with the other publishers. Murray naturally resented this. As the others had declined it, he wrote, he felt it would now be necessary for him to have the MS. read by a literary friend. It was, therefore, handed to Lockhart, who returned it with an unfavourable verdict which reads rather quaintly to us to-day. "Some felicity of thought and expression, with considerable fancy and knowledge," was all he was able to find in it. Then it was that Carlyle took it back to Craigenputtock. Lockhart, by the way, like Gifford, appears in a better light than usual throughout these volumes, though even here no one ventures to describe him as social.

Of Moore we naturally hear a great deal. Dr. Smiles gives us two new verses to add to his works. A scrap of Moore is, however, a very different thing from a scrap of Coleridge. More interesting is the splendid letter which Murray, on one of those rare occasions when the worm turned, addressed to Moore in closing accounts for the *Life* of Byron. Moore is never a dignified presence, but certainly he cuts a somewhat sorry figure here. The letter explains itself.

"May 24th, 1831.

"The *cross* letter, as you term it [letters had crossed in the post], did not reach me until this morning, and, from the manner in which the subject of it had been previously settled, I should not have thought it necessary to allude to it again, were it not for the interference of your 'advising' friends.

"This is not a solitary instance in which some of them have with morbid liberality evinced a kind disposition to give large sums of money to *their own friends*, to be paid by drafts, not upon their own bankers, but upon *mine*. Would these honorary patrons of men of letters enquire into facts, they would sometimes be startled into the meritorious selfishness of making the case their own; and then before they ventured to impugn the liberality of others, they would perhaps consider what, in similar circumstances, they would have done themselves. Had these warm-hearted friends made enquiries on the present occasion, they would have been informed that the copyright of the Life of Byron was purchased by the following sums, viz. :—

1. By discharging the author's bond to Messrs. Longman, with payment of interest thereon	£3020
2. By two bills	1200
3. By cash	100
4. By remitting what was due from America	300
	£4620

Interest on the above £3020 for twenty months before the first volume was published, not charged to author, but paid by publisher	250
	£4870

Besides contributing one-half of the work myself by Lord Byron's letters to his publisher, valued at £2000.	
The printing of the work cost <i>bona fide</i>	4430
Copyright (as above)	4870
	£9300

Total receipt, even if the whole were sold	9000
--	------

Loss on first edition to its illiberal proprietor	£300
---	------

"As a mercantile speculation it is hardly to be thought of, and there has been such a hue and cry raised against certain parts of the work that it is quite a *livre défendu* in some families; so that the entire sale of the work cannot be depended on.

"Let your friends see this statement, and then decide upon the conduct of,

"my dear Sir,

"yours most sincerely,

"JOHN MURRAY."

I have quoted the figures, too, because their statement is so eloquently sarcastic, especially when one remembers that the first item and its interest refer to that £2000 which Murray had originally given Moore for the Byron "Memoirs," and which Moore had returned with somewhat of a flourish on the day when the "Memoirs" were burned, having previously borrowed it from Longmans on a bond that, after all, there was no one but Murray to redeem, at large expense of interest. Much better had it been for him had Moore made no pretence of payment. As it was, he had to pay a round thousand for no other purpose than that the little Irishman should make a good appearance in the Albemarle-street drawing-room while the "Memoirs" were vanishing up the chimney.

Space will not permit us any longer to dwell on Murray's correspondents. The list of them would go far towards filling a column. John Wilson Croker was perhaps the best of them, after Byron. Some of his criticisms on the early numbers of the *Quarterly* are very smart, and how clever was this on Brougham—"an impediment in his speech

would make him a perfect Demosthenes." The traveller, Sir Francis Head, contributes some of the brightest letters in the second volume; but there are none better than John Murray's own, after reading which one can quite believe the tradition that, amid all the wit and learning congregated in his Albemarle-street salon, he had no difficulty in holding his own. He has a real gift of writing: quite a feeling for "the phrase," "the unique word." He is not, as one might have feared of a publisher, interesting only as the channel of other men's greatness; without his famous correspondents he would remain a strong and interesting personality. He published books as others wrote them, as an art rather than a business, as a gentleman rather than a bookseller. Money came; but money was not the end, it was rather the means. As Mr. W. J. Courthope says in his admirable chapter of summing-up, he was not a business-man in the ordinary debased sense of the word; we are not called upon to applaud the smug commercial qualities of commonplace success. That meanness which is the first essential to the service of Mammon was far indeed from John Murray. He is more the patron than the publisher; and when he does touch "business," it is in the liberal spirit of the old world of "merchant-adventurers," when imagination and manly courage still survived in commerce, and the perils of a bill-of-lading included real pirates and "King's enemies." Of course, he knew how to look after himself. He was no fool, as the saying is. But his qualities of shrewdness were more defensive than aggressive, not used to circumvent others but to protect himself. He had one sound instinct of an old-fashioned business-man. He did not like bills. And though he accepted no few in his time to oblige others, he was at last wise enough to decline those of Constable and Ballantyne; with whom, unfortunately, it was not possible to sustain relations on any other terms. Would that Scott had only used his common sense to the same end, and been content with Ashestiel!

Yet without the tradesman's qualities, his speculations—"adventures" one prefers to call them—were in the main singularly successful. He made a few mistakes, of course. He gave too much for Crabbe, over-estimated Washington Irving, and certainly was foolish enough to lose £26,000 over a daily newspaper, *The Representative*, in regard to which young Benjamin Disraeli behaved not a little like the character his enemies have depicted him. But he bore his few losses like a philosopher, regarding them as part of that experience for which one has proverbially to pay. Beyond these exceptions, too, his taste and judgment were rarely astray. His declining the *Rejected Addresses* was a miss, but he hastened to atone by buying the copyright after it had made a success—though, seeing it was in a sixteenth edition, £131 seems rather a low figure. The transaction was typical. Murray's ambition was to have a "list" which should be made up of books that were really literature, as distinct from printed matter. So long as they would pay

their expenses he remained a publisher of the *belles-lettres*. But as the great poetic wave which had risen with Scott and Byron began to be spent, he became more and more the publisher of travels and science—perhaps the reason why the interest of the story begins to flag towards the middle of the second volume. It was not, need one say, for lack of MSS. that he gradually ceased to publish poetry. We deem our own age the special era of the poetaster, but the genus would seem to have been no less prolific then. One example of "correspondence with the writers of rejected manuscript" is too humorous to leave out. A young Quaker had sent him some poems, and Murray wrote to decline them. Now it happened that the young man had been named after his father, and, Murray having omitted the necessary "junior," his letter was opened by the old man, who thus for the first time learnt in horror that he had been cherishing in his bosom that artistic viper, a poet. This quaint letter to Murray was the result:

"Esteemed Friend,

"I feel very much obliged by thy refusing to publish the papers sent thee by my son. I was entirely ignorant of anything of the kind, or should have nipt it in the bud. On receipt of this, please burn the whole that was sent thee, and at thy convenience inform me that it has been done. With thanks for thy highly commendable care,

"I am, respectfully, thy friend,

"JOHN PROCTOR."

How like the first scene in "Every Man in his Humour"! One half wishes for a peep at the sequel, but as the poetry was bad it was surely enough tame.

In regard to Murray's methods of publishing, one may note from this that the half-profits system seems to have been much more in favour then than now:

"Under this system," he wrote, "I have been very successful. For Mr. Croker's *Stories from the History of England*, selling for 2s. 6d., if I had offered the small sum of twenty guineas, he would have thought it liberal. However, I printed it to divide profits, and he has already received from me the moiety of £1400."

Yes, but all publishers are not John Murray, and others object to auditors.

His impartiality in publishing "both sides" is another characteristic. Writing to Hallam, who, from the fact that a hostile review had appeared in the *Quarterly*, had had gained the impression that Murray was subject to Tory influence, he says:

"If I were so foolish as to admit of such influence in the regulation of my business, its operation must inevitably be in the selection of what I should publish, and not in disparaging of what I had incurred both risk and expense in printing. No! I feel it a duty to publish, with equal integrity, for Croker and Leigh Hunt, Scott and Moore, Southey and Butler, Hobhouse and Gifford, Napier and Strangford."

John Murray's catholicity included even a cookery-book, Mrs. Rundell's *Domestic Cookery*, which Dr. Smiles takes a little too seriously throughout, to our occasional boredom. Indeed, a somewhat undue reverence for that great word "author," and a tendency towards the old supersti-

tion which regarded "the book" as a sacred miraculous thing, and used the phrase "became an author" as though it represented some change mystic as transubstantiation—it is that attitude rather than an occasional error which is apt at times to irritate the literary reader of this book. But this is only occasionally in evidence; and a good-natured soul can easily forgive it in acknowledgment of the collection of interesting gossip offered for his desultory delight, and of the variety of which there has been space here to give but slight indication.

I have said nothing here of the actual founder of the house, John MacMurray the First. But though, doubtless, it was to that worthy "lieutenant of Marines" that John Murray the Great owed many of his sterling qualities; and though, indeed, he first gave the great firm "a local habitation" (in Fleet Street), it was undoubtedly his son that won for it the "name." "So, good-morrow to you, good master lieutenant," as Byron was fond of saying.

RICHARD LE GALLIENNE.

Life and Writings of Sir Thomas More, Lord Chancellor of England and Martyr under Henry VIII. By the Rev. T. E. Bridgett, of the Congregation of the Most Holy Redeemer. (Burns & Oates.)

THIS is a companion volume to the author's *Life of Fisher*, Bishop of Rochester, More's fellow martyr, published in 1888; and, valuable as the previous publication was, there is no doubt that the present will attract a far higher degree of attention. For, martyrdom apart, which was alike in both cases, there was little in the life of Fisher that comes home to the sympathies of Englishmen in the nineteenth century like the story of his fellow-sufferer. In fact there was comparatively little to tell. Fisher was but a pious divine who dared to do his duty nobly and to die for it when the occasion came. More, with equal fortitude, was a genial and loving friend, a very model of domestic life, a wit and humorist of the first rank, yet at the same time a lawyer, diplomatist, and man of business, whose talents drew him into public life even against his own inclination.

Moreover, as a piece of biographical work this volume is superior to its predecessor. It contains not a single paragraph that we should have liked to see omitted, and it does justice to every phase of More's life and character. Of no previous biography of Sir Thomas More can it be said that his domestic, his literary, his professional, and his public life have all been treated with equal care, so that we feel the whole man has been presented to us as he is presented to us here. In fact, even his best biographers hitherto have been somewhat wanting in true appreciation of him. Sir James Mackintosh's short *Life* is well composed and written in an excellent spirit, but even it fails in some points to interpret More quite truly. Cayley's work, though longer than that of Mackintosh, is really little more than a sketch; and it is impossible to say that Miss Stewart's biography, published some years ago, makes up for past deficiencies.

Of course Father Bridgett has had a great advantage over previous biographers in the fact that much fuller documentary evidence is now available than was ever before within reach of the most studious inquirer. But he has also made very good use of material not altogether easy of access even now, though quite as accessible in the past as in the present—I mean More's English Works. It seems strange that, after all the literary rubbish printed by the Early English Text Society for the advancement of philological study, no one has yet ventured to give us a new edition of several important treatises of Sir Thomas More which are only to be read in a black letter folio published in the reign of Mary Tudor, of which even the British Museum has only a single copy, and that not absolutely perfect, though the three missing leaves have been supplied in MS. For want of a serious study of his writings we do not understand Sir Thomas' real mind, and a mere record of the incidents of a man's life without a careful study of his mind can never be quite satisfactory.

That the true life, mind, and character of Sir Thomas More should be better understood among us is all the more important, because it would tend to dissipate a multitude of false impressions bearing not only upon history, but upon religion, which it is very desirable should be altogether got rid of. Father Bridgett writes, of course, from a Roman Catholic point of view; but it is not to the credit of Protestantism that we should allow those of his communion a monopoly of truth in some things which are matters of plain historical and biographical fact. It is, for instance, the belief of many to this day—because asserted again and again by writers who ought to know better—that Sir Thomas More was a persecutor. It is not denied that he set forth in his *Utopia* high principles of religious toleration; but it is asserted that he departed from them in practice in his later years, and whipped men for their religious beliefs at a tree in his own garden. Now this was not a mere legend of after times; it was an invention of some of his own contemporaries, denounced by himself as a very impudent lie. More, indeed, hated heresy, and by no means denied that the settled faith of a Christian country should be protected from irreverent onslaught by men who were persecutors themselves; but as regards his own personal bearing towards heretics he says expressly that, with two exceptions, he never gave any of them "so much as a fillip on the forehead." And of these two cases, the one was a young lad in his service trying to contaminate another child; the second was a lunatic who had created a disturbance at mass by gross misconduct, and on whom a little mild chastisement seems to have had a very good effect.

It should be clearly understood, therefore, that whoever attributes acts of religious persecution to Sir Thomas More must be prepared to maintain that the martyr was a positively untruthful, dishonest man. This no one believed in his own day or has believed since, although every encouragement was given to calumniators in his time as soon as it was evident that he could not

be won over to countenance the king in his repudiation of Katharine of Arragon. Yet Foxe the Martyrologist, who was a young man when More died, was not ashamed to repeat, many years afterwards, the stories which More himself had denounced as impudent fabrications. And, owing mainly to the undue credit in which his famous work has been generally held, those falsehoods were again repeated by Bishop Burnet (for the benefit of an age which believed in Titus Oates), and have been further propagated in our own day by Mr. Froude, besides other writers. Truly it is not an easy thing to kill a falsehood!

Father Bridgett devotes a whole chapter of twenty pages to the discussion of More's treatment of heretics and of his mental attitude towards them. The latter is a somewhat more difficult subject to expound in a brief article, and possibly even the space given to it by Father Bridgett may be deemed a trifle insufficient. But practical Englishmen generally judge of a philosophy by its fruits, and they may well be satisfied that neither in mind nor in act was Sir Thomas More a persecutor. On another subject which, carefully considered, throws very considerable light on the history of the English Reformation, Father Bridgett feels it necessary to exercise some delicacy. It is a fact that will perhaps astonish a good many people who think of the cause for which More died, that even in his mature manhood, when he was over forty years of age, he had some doubt whether the papacy was a divine institution or not; and when Henry VIII. was writing his book against Luther, which earned for him the title of Defender of the Faith, More suggested to his Majesty that he had expressed himself on this subject rather too decidedly.

"Whereunto," observes Sir Thomas himself, "his Highness answered me that he would in no wise anything diminish of that matter, of which thing his Highness showed me a secret cause, whereof I had never heard anything before."

This incident is related not only by Father Bridgett, but also by Father Doreau in his recent work on the Carthusians, reviewed by me in this journal a few weeks ago (*ACADEMY*, February 9, No. 981), and I take this opportunity of correcting an oversight in that article. Father Doreau makes the king say in answer to More: "Non, non, je ne puis être trop explicite. N'est-ce pas du Saint-Siège que je tiens ma couronne?" Father Doreau did not mention from what source he had derived his information here; and I confess I could not imagine where he had found it, having quite forgotten at the time that the conversation was recorded not only by More himself, but by his son-in-law Roper, whose words, or rather whose report of More's words, is as follows:—

"To that answered his Highness, 'Whatsoever impediment be to the contrary, we will set forth that authority to the uttermost, for we receive from that see our crown imperial'; which I never heard of before till his grace told it me with his own mouth."

Henry's zeal at that time was extraordinary; but surely he could not have meant to repeat King John's acknowledg-

ment of the feudal subjection of England to the Holy See. If so, well might More say that he never had heard of such an intention before. It is difficult, in fact, to say what the King really could have meant; but the words, if rightly reported, might be taken to signify that Henry was indebted to the Pope for recognising his crown as imperial and not simply regal. In such a matter, papal recognition was enough to settle the question.

There is but one serious inaccuracy that I have observed in this book. Chapter ix. is devoted to a portion of More's career when he is supposed to have been "Secretary and Privy Councillor;" but I know no evidence that he ever held the former office at all. Richard Pace was at that time the King's Secretary; and though Father Bridgett calls him More's co-secretary, there is no warrant for supposing it to have been a joint appointment. More, indeed, wrote letters from court by the King's command, but they were always in his own name and sometimes expressed incidentally very unofficial sentiments characteristic of the writer; as, for instance, after recording a wish of the King, then about to make war on France, that he might soon be "governor" of that kingdom, "I pray God," adds Sir Thomas, "if it be good for his Grace and for this realm, that then it may prove so, and else in the stead thereof I pray God send his Grace an honourable and profitable peace." It was to Henry's credit in those days—before he came under Anne Boleyn's influence—that he was glad to be served by a man of independent mind.

JAMES GAIRDNER.

Tales and Sketches by the Right Hon. Benjamin Disraeli, Earl of Beaconsfield. With a Prefatory Memoir by J. Logie Robertson. (Paterson.)

THE contents of this collection of Lord Beaconsfield's shorter writings are necessarily unequal in value. There is no literary merit in the three juvenile tales—"A True Story," "The Carrier Pigeon," and "The Consul's Daughter": there is not even the extravagance which testifies to undisciplined power, and which may therefore provide some hint of promise for the future; they are simply crude and conventional literary exercises, without a single turn of expression to remind us that we are reading the tentative essays of one who, if not a great writer, was certainly a great phrase-maker. In "Walstein, or a Cure for Melancholy," he has evidently found, or is just about to find, his true *métier*, some of the touches both in the conversational and descriptive passages being characteristically epigrammatic or grandiose; but "Walstein" is a fragment which contains no materials for even a plausible guess concerning its intellectual or artistic justification. The sketches, for the most part oriental, which appear at the close of the volume, have more of formal completeness, but they are in essence equally fragmentary; they are not "works," but highly finished studies or memoranda, interesting mainly as indicating the writer's passion for a somewhat theatrical picturesquequeness. The characteristic sentiment

is, for the most part, held in solution; and only once or twice does it crystallise in direct expression, as in the recognisably Disraelian peroration to the elaborately florid rhapsody upon the glories of Munich.

"It is the fashion of the present age to under-rate the influence of individual character. For myself, I have ever rejected this consolation of mediocrity. I believe that everything that is great has been accomplished by great men. It is not what I witnessed at Munich, or know of its sovereign, that should make me doubt the truth of my conviction. Munich is the creation of its king, and Louis of Bavaria is not only a king, but a poet. A poet on a throne has realised his dreams."

It is not easy to recall an equally brief passage in which the author is so perfectly successful in the assumption of his favourite pose. The manner is as regal as the theme. It is a monarch's *éloge* spoken by a brother monarch.

The main justification for the volume is, however, to be found in the three burlesque narratives, "Popanilla," "Ixion in Heaven," and "The Infernal Marriage," which still remain the best examples of Lord Beaconsfield's lightness of reckless touch in gay, irresponsible, all-round satire; and in the stately monograph "On the Life and Writings of Mr. Isaac Disraeli," which it seems hardly possible to believe could have been written by the same pen, distinguished as it is by a fine seriousness, a judicial dignity, and a classical restraint that stand in startling contrast to the elvish flightiness of the first-named works. "Popanilla" belongs to the school founded by that adventurous traveller Lemuel Gulliver, and represents therefore a class of literature which very speedily becomes old-fashioned, unless, as in the case of Swift's romance, freshness of interest is secured by very rare intellectual or literary power. In this matter of wearing well "Popanilla" is not unworthy to be named in the same sentence with its model; for, though originally published more than sixty years ago, the reader of to-day has no perception of that flatness which seems as natural to the satire of the last decade as to the champagne opened last night. In the sketch of men and manners in *Vraiblenasia* the humour retains its original sparkle, the satire its pristine dryness on the palate; and to say this of a simple *jeu d'esprit* is to say much. For it must be noted that "Popanilla" and its companion burlesques are *jeux d'esprit*, and nothing more. They are satires indeed, but their satire is gay, freakish, indiscriminating; it has no polemical purpose, or indeed purpose of any sort, behind it; it is light mockery for mockery's sake and for the sake of the laughter which it provokes. It would be possible to draw from "Popanilla" the inference that the writer had no convictions, but quite impossible to show that any homogeneous set of convictions is specially singled out for assault. He tilts all round; and before his lance down topple the invented representatives of the very "causes" to which he was supposed to be most consistently devoted, as well as those which were always the objects of his scorn.

"Popanilla" is of satire all compact;

"Ixion in Heaven" and "The Infernal Marriage" are pure burlesques, with here and there a satirical passage thrown in as a makeweight. The former is the more brilliant and idiosyncratic, more richly studded with Disraelian spangles. It is in "Ixion" that we find the often quoted "Adventures are to the adventurous," and the equally quotable "He who laughs at Destiny will gain Fortune," with a frequently recurring touch of jaunty cynicism like the question of Jove to Ixion, "What! was Dia jealous, which is common; or false, which is commoner; or both, which is commonest?" There do not seem to be many personal references; but of course Apollo, the divine bard "whose love of fame was only equalled by his horror of getting fat," is Byron. The satire of portrait-painting is caricature; but even in this portrait the ruling spirit of the piece retains its supremacy, and caricature passes into extravagance.

"A great poet," says Apollo, "cannot be kept down. Look at my case. Marsyas said of my first volume that it was pretty good poetry for a god, and in answer I wrote a satire and flayed Marsyas alive. But what is poetry, and what is criticism, and what is life? Air. And what is air? Do you know? I don't. All is mystery, and all is gloom, and ever and anon from out of the clouds a star breaks forth, and glitters, and that star is Poetry." "Splendid!" exclaimed Minerva. "I do not exactly understand you," said Neptune.

To pass from these sparkling whimsicalities to the almost Quaker-like gravity, decorum, and restraint of the essay "On the Life and Writings of Mr. Isaac Disraeli" is an almost bewildering transition. The former are typically romantic in substance and spirit; the latter is as typically classical, having in its every sentence the classical notes of dignity and severe taste. There is not an exaggerated epithet, not a flamboyant phrase; the younger Disraeli, while *Tancred* was but a year old, wrote of the elder as Addison might have written of Tielack had he survived him. Nor does the biography of the writer suggest any doubt of the perfect naturalness and spontaneity of a manner which at first sight seems so obviously, almost grotesquely, uncharacteristic. It is impossible to think of the author of "Ixion in Heaven" as a successful courtier: it is impossible to think of the author of the essay on Isaac Disraeli as anything else. And it is certain that there never was a more supremely successful courtier than Lord Beaconsfield.

It must be added that Mr. Logie Robertson's prefatory paper admirably serves its purpose as an introduction, and attempts nothing more. Of such a piece of work higher praise is impossible, for adequacy without superfluity is the *ne plus ultra* of editorial duty.

JAMES ASHCROFT NOBLE.

Studies in Statistics. By George Blundell Longstaff. (Edward Stanford.)

THE structure of Dr. Longstaff's work is as heterogeneous as the composition of some of the colonial populations which he has so ably analysed in the course of these statistical studies. The first three chapters are,

as the author says, "of an introductory and elementary character"; but we cannot add with him: "and will be wisely skipped by the expert." On the contrary, they will be read with the pleasure which even experts derive from a luminous restatement of first principles. Nor, indeed, are the reflections in the third chapter concerning the effect of epidemics on death-rate so very elementary.

The central portion of the book is occupied with the growth of population in different parts of the world, with the omission of Asia and other notable exceptions. Not merely the growth of each total population, but the proportions and changes in the proportions of its constituent elements, are the object of Dr. Longstaff's measurement. Thus, he finds that in the United States about 62 per cent. of the inhabitants may be looked upon as of Anglo-American stock. Our colonies in Australasia contrast favourably with the United States in respect of homogeneity. The statistics which Dr. Longstaff employs in this part of his studies are for the most part not absolutely new. For instance, the evidence that population is tending to agglomerate in large cities, both in this country and others, will not come as a surprise to many readers. But the author has made familiar facts his own by the clearness of his exposition and the importance of his deductions. All the devices by which statistical data are submitted to "the faithful eyes"—every species of diagram, curiously coloured and shaded—enrich these sumptuous pages. If the writer is discussing the growth of London, he does not content himself with the figures of birth-rate and the statistics of migration, but he presents the lively picture of a very large baby standing by the side of a wayfaring man with staff and satchel. The height of the baby represents the "natural increase" of London; the much smaller height of the wayfarer represents the growth by migration—the balance of immigration over emigration. All the statistics which Dr. Longstaff employs are not so accurate as those which relate to London. It is not every foreign census which can be absolutely trusted. But the figures suffice for deductions, which often relate to quality rather than quantity, and are politically interesting, if not arithmetically exact. For instance, the distribution of the Irish in America—in the manufacturing centres rather than on the prairies—suggests the question: "Is it that this much-talked-of land-hunger loses its political value in his [the Irishman's] new home?" The author remarks on the danger to the United States from the increase of the coloured population, and on the trouble which the rapid increase of the French inhabitants in Canada may cause in the future. The Cape Colony and Natal are in a still less satisfactory condition. Regretting that "emigration to South Africa is not so active as might be wished," Dr. Longstaff assigns among, or above, other causes for this that "the vacillating policy of the home government, culminating in the surrender of the Transvaal after the disaster of Majuba Hill, has destroyed our prestige,

and caused a general feeling of uncertainty and insecurity."

Dr. Longstaff speaks with more authority on the purely medical and technical inquiries which occupy the latter part of the book. To fully appreciate the worth of the conclusions which he here reaches would require a greater knowledge of the subject-matter than most critics possess. It is at least safe to say that statistical uniformity, the law of large numbers as it has been called, has seldom been exhibited more strikingly than by some of the diagrams relating to the causes and fatal consequences of disease. This general character is hardly applicable to one particular case, the statistics of hydrophobia, owing to the paucity of the observations. These, however, suffice to establish some conclusions. Contrary to popular impression, it appears that hydrophobia is by no means confined to the "dog-days"; while the corresponding disease in dogs, rabies, reaches its maximum intensity in spring and autumn, rather than under the influence of Sirius. It is a curious fact that boys and men die of hydrophobia in very much greater numbers than females of the same ages. Is this difference due solely to the greater rashness of the male, or is it a less accidental attribute of sex? Some colour is given to the latter suggestion by the evidence that dogs are more liable than bitches to the disease of rabies; but the danger of flying to conclusions from statistical data is illustrated by the statement which a good authority has made that, "when rabies finds its way into a kennel of fox-hounds, the mad dogs bite the dogs, but spare the bitches." The cautions with which figures must be interpreted are well inculcated by Dr. Longstaff in some occasional remarks on the logic of statistics, as well as in the general spirit of scientific inquiry which characterises his work.

F. Y. EDGEWORTH.

NEW NOVELS.

The Philadelphian. By L. J. Jennings. In 3 vols. (Hurst & Blackett.)

His Cousin Adair. By Gordon Roy. In 3 vols. (Blackwood.)

The Dower of Earth. By Ethel Glazebrook. In 3 vols. (Percival.)

To Save Himself. By Captain Claude Bray. In 2 vols. (Bentley.)

Not a Moment to Spare. By H. C. Davidson. In 2 vols. (Sampson Low.)

Unequally Yoked. By Mrs. Needell. (Edinburgh: Oliphant, Anderson, and Ferrier.)

The Black Drop. By Hume Nisbet. (Trischler.)

The Elixir and Other Tales. By George Ebers. (Kegan Paul & Co.)

Les Suites d'une Grève. By Maurice Block. (Paris: Hachette.)

It may seem a grudging and unkindly criticism to say that Mr. Jennings's *The Philadelphian* begins so well that it ought to end better. Yet *respicere finem* is undoubtedly one of the first of those rules of art which Mr. Besant would have us critics impress all

the while, in a popular style that the Beaver can well understand, on the said Beaver (this, by the way, will be said to be an unconscious, and therefore damning, acknowledgment of the likeness of the critic to the Butcher, but we cannot help that). A good beginning will make a man read the book, no doubt. A good ending will make him read it again, and that is what has to be aimed at by the artist as distinguished from the circulating library caterer. Not that Mr. Jennings is of this latter kind, but that perhaps he has something to learn before he ranks in the former. The beginning is very good. Colonel Pendleton, a Virginian gentleman and defender to the last of the "lost cause," is attractive. His faithful northern friend and partner Rufus Snapper—whose fidelity makes him a rich man after apparent ruin—is good. His daughter Edith is good. His English or Welsh friend, Roland Clavering, who has made one mistake in his life, though unluckily that is the irremediable one of marriage, is good. The embroilment of these persons with the minor personages—Geoffrey Clavering, Roland's son by a former marriage, who has quarrelled with his father, and has to the knowledge of few people followed his father's mistake; Sam Rafferty, the second Mrs. Clavering's son by her first husband, and the enigmatic Mrs. Martin—is good. The marriages and the murders, those all-important incidents, are managed so well that even a tolerably skilled novel-reader may be as much on the wrong track as was 'cute Mr. Snapper in attributing them to their performers. Yet somehow or other the interest seems to tail off a little, whether owing to the fact that Geoffrey Clavering, who, if not the hero, is the *jeune premier*, is utterly unattractive; or to the other fact that Tom Finch, a scholar out at elbows, Geoffrey's tutor, deluder, and horse-leech, upon whom most of the action turns, is utterly unnatural; or to the third fact that the Irish-American Daly, another very important personage, is dim and theatrical, we need not enquire here. After all, it is no bad compliment to a book to say that it is interesting enough throughout the greater part of it to make us expect it to become even more interesting at the end.

His Cousin Adair speaks very well for Miss Roy's (there is not much doubt about the sex of "Gordon") power of drawing women. The situation of a family of entirely female poor relations, tolerated and patronised by their cousins and neighbours at the Great House, is not a new one; but it offers good opportunities to good talents, and Miss Roy has not baulked them. The selfish, querulous insignificance of the mother is a little hackneyed, and the elfishness of the youngest daughter exaggerated; but the contrast of the helpful and self-sacrificing Adair and her second sister Agnes, who is self-helpful but not self-sacrificing, is, though old enough, well done; while the insolent, though not wholly ill-meaning, prosperity of their cousin Isabel is still better. Good, too, is the actress Cicely Charteris, who marries, half by force, "his cousin Adair's" cousin Douglas, and her final scene of unintentional tragedy is

fairly managed. But Miss Roy, if she had been more of a deaconess in her craft, would have lopped off the postscript of rapture between Adair and Douglas when he is "free." Let her perpend how the delicate and unerring art of Thackeray (oh, Mr. Besant, what toils do we go through to please you!) dealt with this situation in *The Newcomes*; how even the much blunter art of Trollope handled it in *The Bertrams*, and discern that raptures of this kind over a grave are a little awkward.

The Dower of Earth is apparently a first book, and, though there is merit in it, it is very "young." Mrs. Glazebrook has forgotten, or has not perceived, that in order to make us sympathise with the lamentable results of a mistake, the mistake must be "sympathetic." Stella Graham's mistake—that of refusing a man whom she loves because she thinks her father would not like the marriage, and marrying a clever snob whom she hardly knows because she thinks her father would like it—is not "sympathetic" at all. Even Iphigenia does not interest us very warmly; and Iphigenia, poor thing, by no means invited anybody "To draw a sharp knife through her tender throat,"

as the elder and more striking version ran. However, she is badly treated and she is ill, and she is poetical, and she is unlucky in her men-folk, and she perishes in a dying fall that is sufficiently pathetic; and we are inclined to think that the average reader of the present day may very possibly like the book better than we do. It has a good many modern touches which will please him or her.

To people who dislike the improbable, Captain Bray's novel may possibly be shocking. Almost the entire conduct of Lord Cardstone, *alias* Captain St. Ambert, *alias* Hugh Lambert, Esq., in courting, marrying, and concealing his wife, and then in believing her guilty of the murder of their child, leaves the improbable far behind and plunges into the simply incomprehensible. That even the stupidest administrators of "crown's quest" law, or the most incapable J.P. that a heated Radical imagination can conceive, should have discovered any evidence against her at all is unbelievable; but that the grand jury should have found a true bill, and that after that any counsel for the Crown should have attempted to carry on the case or any judge have allowed it to go to the petty jury, requires the addition to the English language of some word which shall stand to "unbelievable" as that does to "not quite likely." Still, there is something rather engaging in the book, and it enforces three excessively sound morals. The first is that no counsel should take unprofessional and private interest in his client; the second, that no one should meddle between husband and wife; and the third, that the very worst use to which you can put a pretty and amiable girl is to try to fix on her a murder of which another woman has been acquitted. These be indeed truths; and in one special conjuncture, when the obliged Lady Cardstone and the harassed Lord Cardstone both turn on Denis Halford and rend him for his

meddling, Captain Bray has displayed real, if not wholly conscious, humour.

There is a murder in Mr. Coleman Davidson's book also; and that will be enough to recommend it to some people, for whom it will also have the attraction of containing the (for a time successful) attempt of a penniless adventurer to get hold of a considerable property. We do not ourselves care very greatly for either subject in itself, and we think we have seen both handled better than by Mr. Davidson; but those who really like such subjects seldom care much about the handling.

The central situation of *Unequally Yoked* is good though not novel, and part of the treatment of it is good likewise. A person of high degree falls in love with and marries an exquisitely pretty girl in quite the lower rank of the middle class—quarrelling with his family to do so. His wife is not bad-hearted; but she has been very badly brought up, and has married him simply to be comfortable and amuse herself. Instead of this she finds herself shut up in a country neighbourhood with no amusements and very little society. Her husband is absent at his parish work for the greater part of the day, and, though deeply in love with her, is neither very demonstrative nor disposed to make himself her slave. To crown it all, an old lover, whom she has jilted, makes his appearance, and one of those amiable persons against whom Middleton warned the other sex in "Women Beware Women" does all the evil she can. The interest of the book is almost limited to the behaviour and character of the heroine; but so far it is not inconsiderable.

Some experience has first led us to form, and then confirmed us in, the belief that in regard to the works of authors like the author of *Bail Up* it is best to say little but "Here is another." For either you must say something about what happens, though the agonised reader cries "Don't tell me"; or you must indulge nasty critical remarks on passages such as that which describes a lady "on the azure velvet sofa *laying* backwards." And what does a reader of *The Black Drop* care whether the lady laid or lay?

Those who chiefly know Herr Ebers by large, learned, and, to tell the whole truth, rather ponderous volumes, may like him better or worse in the short tales which Mrs. Bell has translated. They are something in the familiar Märchen style, but with differences.

M. Block's *Les Suites d'une Grève* is hardly a novel, though it is thrown in story form, and conveys much good advice therein, after a fashion more popular in England some fifty or sixty years ago than now, but not extinct with us. The moral is: "Pour atteindre le but, il faut éviter les conflits entre patrons et ouvriers." With all our heart! even if it be easier to say so than to go and do it.

GEORGE SAINTSBURY.

SOME BOOKS FOR THE COUNTRY.

The River-side Naturalist. By E. Hamilton, M.D. (Sampson Low.) It was an ambitious project to attempt to describe the chief quadrupeds, birds, reptiles, insects, molluscs, and flowers which appear at the river-side, to say nothing of the fish which haunt the streams themselves. The task involved writing on the greater part of the English fauna and flora; yet such is the task which Dr. Hamilton has imposed upon himself, mainly in the interest of anglers, as may be gathered from the bulk of these pages having already been published in the *Angler's Gazette*. It is only fair to state that he has accomplished this with some cleverness, and that a capital index is of the greatest assistance in using the book. Some may quarrel at omissions—ask, for instance, why the hedgehog is not described, or the carrion crow, which, according to an old authority, *secum sola spatiat arena*; or the burbot, a fish of the midland and East Anglian streams; but a moment's reflection shows that the book would have swelled to a great size had it been needful to comprehend these creatures and others which could readily be named. Dr. Hamilton wished to lessen popular ignorance among fishermen, and he has certainly succeeded. Many men go fly-fishing without noticing the marvels of Nature's workmanship which are continually to be observed at the river-side, and yet it is hardly credible that Dr. Hamilton should have known a grayling fisherman who could not distinguish the goldfinch. Others use their eyes to some purpose, and both classes will find instruction and interest in this book. It is well and fully illustrated; and, with the exception of two or three, the student will find these illustrations helpful in identifying the familiar birds of the water-side. In short, it is one of those delightful books which charms every country lover, as enabling him daily to extend his acquaintance among the lower creatures which he sees around him, and which are unusually abundant at the edge of rivers and streams. Of the different divisions of British creatures here treated, the quadrupeds and the birds are excellently handled. Most people are specially interested in birds; and Dr. Hamilton generally gives the salient points in the habits and plumage of each that he describes for the purpose of ready identification, and then adds anecdotes, poetical associations, folklore, and, occasionally, etymologies. Foreign folklore might well have been dispensed with, and Dr. Hamilton's etymologies are sometimes queer, to say the least—as in the word he gives as Aristotle's for the perch. Every here and there are mistakes, such as his assertion that the dipper does not dive. It generally walks under the water, but we have seen that it can and does dive. It is hardly correct to say with Seeborn that the grey wagtail "confines itself entirely to the water-side." We have noticed it in a garden some distance from a brook, but it is undoubtedly almost always found at the waterside. The dotterell, on the other hand, is scarcely a bird that would be expected at the water-side. It breeds on the Cumberland mountains, and is seen on the East Coast at times of migration. Its feathers are valuable for artificial flies, and, in consequence, the bird is becoming more rare annually. The habit of the chaffinch to take flies on the wing in early spring near a river should have been noticed. One of the best chapters is that on the night-jar, and Dr. Hamilton has taken special pains to bring all that is known about its notes into his pages, while the cut of the bird is excellent. When the author reaches the fishes he devotes a sensible chapter to their senses and organisation, although his speculations on the sleep of fish are somewhat crude. A good deal of information is given about the salmonidae. The eels are also carefully treated.

There is so little that is novel, however, to be said of fishes, that it would have been better not to have touched upon them. They can scarcely be termed water-side objects for the naturalist. More than 1500 tons of eels, it seems, are consumed annually by London, of which about 1000 tons, costing £80,000, come from Holland. Water-side insects are well described, particularly the ephemeridae. The researches of Pictet and Eaton are comprised in the accounts of these beautiful flies. Much attention is paid also to the different families of trout flies, and the figures of them are remarkably good, and would much assist identification. Country book-clubs should order Dr. Hamilton's book. It will familiarise many of the resources which Nature offers in lonely neighbourhoods for study, and which makes life more tolerable during the dark, wet months of winter. The author should have the classical words carefully corrected in a new edition. *Pelius, ardea, pteron, pygmaeus*, and *erythra* for *pelius, ardea, pteron, pygmaeus*, and *erythra* scarcely conciliate the reader; while *charadrius* does not mean "the bird which if looked on cures the jaundice," though a superstition to that effect did exist. What shall be said of the guise in which an old friend here appears—"Timcoo Banacos nec dona ferentes"? Several English quotations are similarly murdered. Thus Shakspeare's

"Renegé, affirm, and turn their halcyon beaks," becomes "Revenge, affirm, &c.," and Scott's

"O'er capon, heron-shew, and crane,
And princely peacock's gilded train,"

is expanded into "capon, heron, stew, and crane." It is a pity that a book of considerable merit should be disfigured by such blemishes. Much as we love the river-side, Dr. Hamilton's book points out that there is still something to be learnt there.

Tongues in Trees and Sermons in Stones. By Rev. W. Tuckwell. (George Allen.) That this little book bears the imprimatur of the Orpington publisher is sufficient guarantee for its tasteful appearance and for the quality of the illustrations, which lend it an additional charm. "Tongues in Trees" would have formed a better title, for little or nothing is said of stones. The author discourses in a pleasant informal fashion, like the wild gardens of which it treats, of trees and flowers, and has produced a book which every lover of a garden should possess, owing to its suggestive character and the many points at which it shows that gardens and sundials touch poetry, morals, and the history of our forefathers. Mr. Tuckwell writes like a scholar, with all a scholar's appreciation of nature and rustic science. With regard to trees, their original habitat, the myths, folklore, and sacred associations which cling to them are lightly handled, and a similar treatment is accorded to flowers, the derivation of their names, the doctrine of signatures, and the curiosities of plant-life. There is a good chapter on plant-literature, always a fascinating subject to country dwellers; but the best in the book describes four typical gardens—the Oxford Botanical Garden, New College Gardens, a rectory garden (Mr. Tuckwell's own), and the Thwaite garden at Coniston. A subtle perfume of roses and violets breathes through these pages, and the inspiration of the Sage of Brantwood probably led to their being written. The beautiful lines quoted from Keble, how

—"happier thoughts

Spring like unbidden violets from the sod"—

were, however, written in memory of his sister, and not of Lady Heathcote. Perhaps it is worth noting, also, that, instead of two, five mistletoe oaks have now been found in Herefordshire. The derivation of "foxglove" is

more likely "folks' gloves" (i.e. fairy gloves), than the "foxes' glew" or peal of bells. Rustics have no superstitious feeling in preferring to plant potatoes on Good Friday, but their masters generally grant them that day, or at least the afternoon, in order that they may plant their precious crop. There is no need to describe this dainty volume at greater length. When spring does come, it is just the book to thrust into a pocket and read on the sunny seat in the shrubbery, while the garden favourites fly around "cheep and twitter twenty million loves."

Little Hours with Nature. By Charles Dixon. (Chapman & Hall.) Under this somewhat misleading title the author prints a score of careful studies in bird-life. Like his previous books, they show keen observation, are thoughtful and well expressed. Indeed it is impossible for a lover of birds to peruse them without finding that he has learned much, and that these essays are very different from the ordinary trite writing on British rural life. Mr. Dixon is an ardent evolutionist, and thereby raises a smile occasionally. As when he tells us that "the non-singing Passeres have chosen to court their mates by means of colour; and their powers of song not having been maintained, they may act as ornaments in the woods, but contribute nothing to the melody of the country." This speculation irresistibly reminds the lover of the *Water Babies* of the trout who were too idle to migrate annually to the sea, and have therefore been condemned to remain small stationary fish compared with their big and travelled brethren, the salmon. Throughout these pages, too, Mr. Dixon allows himself to ride a tiff at the scientific study of birds. "Ornithology at the present time," he says, "is little more than a study of hard names"; and he warns his readers impressively against "what pretends to be a scientific study of this or that Order." Now poetic appreciation and scientific precision in the study of birds are perfectly distinct, though certainly not incompatible. A man may possess the richest poetic sensibility with regard to his outdoor favourites, and yet strictly subordinate his enthusiasm to scientific methods when he writes of them. At all events, if he is passionately fond of observing bird-life in the fields, he need not decry the patient labours of the scientific ornithologists, as Mr. Dixon invariably does. It is necessary to make one more remark. Hampered by the exigencies of a theory, Mr. Dixon ascribes "great intelligence" and even reasoning power to birds. "Their habits are not governed by instinctive impulse, or by a blind, unreasoning, and infallible power, but are controlled by reason." It will be nearer the mark to say that the actions of birds are controlled by adaptive instinct. With these deductions, it is pleasant to welcome the author's loving work. He gives an excellent life-history of the swallow, which may be commended to the many admirers of this bird, and describes in glowing poetry the flight of the sky-lark. Among the birds which sing during the night, he may add this bird, and remember how Milton observed it "singing startle the dull night." Herons do not associate merely during the breeding season, however, and black-cocks do not desert the hens as soon as the eggs are laid. We have seen a black-cock doing his best to lead away intruders from the young brood. Every page of this book is not only eloquent, but also suggestive. Mr. Dixon possesses a large and varied knowledge of birds, and a keen appreciation of their habits. But we do not exactly think that the mystery of migration is now solved, in spite of his eleven chapters on the subject. "Nothing can be more easy to understand," he assures his readers; and yet some people are sufficiently old-fashioned to see not a few

difficulties in the two great annual waves of bird-migration.

Bird-Songs about Worcester. By Harry Leverett Nelson. (Boston, U.S.: Little, Brown & Co.) The locale of this pretty little book is not our English Worcester, but a town in the State of Massachusetts, situated some forty miles inland from Boston. We learn from the preface that the author died in August last year, when he had hardly passed the portals of his professional career. The book consists of ten letters, addressed to the editors of Worcester newspapers. They are all about native birds, with the exception of the last, which is a particularly graphic account of a whaling expedition in Massachusetts Bay. Mr. Nelson was evidently an acute observer of bird life, and one feels a sad regret that he did not live long enough to make us more familiar with the songsters of his native land. Here in the old world we think that our warblers are unsurpassed by any in the new, and we look upon the American warblers as an uneducated, if not tuneless, race. It is, indeed, difficult to make an accurate comparison. John Burroughs, from whose delightful writings we have learnt most upon the subject, thought that our cuckoo's note was little better than a "gross plagiarism on the cuckoo-clock"; but we cannot take his dictum without the proverbial pinch of salt, because he believed that, in England at least, the nightingale was very rare. The rarity must have been the outcome of the ignorance of his advisers. But whatever the truth may be, it makes one feel rather envious of the Americans if they can ordinarily find so many different kinds of birds *en évidence* by their song, as Mr. Nelson did in his various walks about the town of Worcester, on any single day. Perhaps the most strange thing about the present work, and not the least agreeable one, is that its author does not raise his voice in the chorus so universally sung against the evil-doings of the English sparrow in America. It is a case of rare charity, for the sparrow is the only bird which the State of Massachusetts allows to be destroyed without restriction.

NOTES AND NEWS.

MR. DAVID NUTT will publish on May-day the long-expected edition of *Pearl*, the first of English "in memoriam" poems, edited by Mr. I. Gollancz, of Christ's College, Cambridge. It consists of the Middle-English text, edited with critical notes from the unique MS. in the British Museum, together with a modern rendering on the opposite side of the page. The Laureate has enriched the volume with a prefatory quatrain; and it will have for frontispiece a drawing by Mr. Holman Hunt. It is printed in a limited issue of 500 copies, besides a few on Japanese paper. It is hoped that *Pearl* may be the first of a series of pre-Tudor texts, selected with reference to their literary merit, to appear under the same editorship.

PROF. NAPIER has nearly ready for press his collection of Aldhelm Glosses for the Oxford "Anecdota" series. Wanley noted in his famous Anglo-Saxon Catalogue that three MSS. of Aldhelm had Saxon glosses. Prof. Napier verified this statement, and then hunted up the other seventeen Aldhelm MSS. in England, and found that fifteen of them had also Saxon glosses. From them he copied twenty thousand slips; and though some of them proved to be only repetitions, yet many are fresh examples of rare words, while others are unique.

MR. REGINALD L. POOLE has in the press his edition of Bale's material for his *Scriptores*, from the MS. at Oxford. The special advantage of this MS., and consequently of Mr.

Poole's edition, is that Bale gives the name of the library in which he saw every book. The work will be in the alphabetic order of the authors' Christian names, with a full index of subjects, and will appear in the "Aneodota" series.

THE fourth volume of *Book Prices Current*, containing the prices at which books have been sold at public auction in London from December 1889 to November 1890, will be issued immediately by Mr. Elliot Stock.

MR. RICHARD JACKSON, of Leeds, announces for issue by subscription a History of Sedburgh, Garsdale, and Dent, by the Rev. W. Thompson, formerly scholar of Queen's College, Oxford, illustrated with forty drawings by Mr. J. A. Symington. The character of the work may be learnt from its sub-title: "Peeps at the Past History and Present Condition of some Picturesque Yorkshire Dales."

Justine; or, A Woman's Honour, is the title of a novelette by a new writer, Mr. Walter Calvert, which Messrs. Eglington & Co. will shortly publish. The cover of the book and the illustrations are reproduced from original designs by Mr. A. Ludovici, jun.

THE annual general meeting of the Camden Society will be held on Saturday next, May 2, at 2.30 p.m., in Rolls House, Chancery-lane.

A CORRESPONDENT writes: "Why cannot the Camden Society issue the separate papers of its volumes of *Miscellanies* as they are printed, as well as afterwards in a volume, instead of as now, keeping all the papers back till they are enough to form a volume? The cost would be but slight, while the gain to students would be great, both in having much earlier access to the papers and in being able to bind each with the set of other essays and documents of its class. The sight of an unissued paper by Mr. C. W. Firth on Wentworth (Stafford) leads us to make this suggestion to the Council of the Camden Society."

DR. E. E. KLEIN, lecturer on physiology at St. Bartholomew's Hospital, will on Tuesday next, April 28, begin a course of three lectures at the Royal Institution on "Bacteria: their Nature and Functions," and Mr. H. Graham Harris will on Saturday, May 9, begin a course of three lectures on "The Artificial Production of Cold."

ON Tuesday of next week and the two following days, Messrs. Puttick & Simpson will be engaged in selling the valuable collection of autographs and historical documents formed by Mr. Lionel Oliver, of Heacham, King's Lynn. The collection includes a number of letters relating to Dr. Johnson and his contemporaries; the political correspondence of Sir Richard Bulstrode in the early part of the eighteenth century; letters of foreign poets and musicians; and authenticated relics of Napoleon.

A CORRESPONDENT writes:—

"What a great poet politics have robbed us of, in the person of Cánovas del Castillo!" is the exclamation of a writer in the *Revista Contemporánea* of April 15, in an article entitled "Nuestros políticos Poetas."

"It is only the prejudices and hatreds of party-politics, and his own too modest preface to the volume of his published verse, that have hindered the recognition of this fact. The matter of the poems more than atones for occasional faults of versification. [These seem to be chiefly in the use of alliteration, which is not tolerated in Spanish, as with us. The influence too of Leopardi is strongly felt in the earlier productions.]"

If this estimate be at all near the truth, the Prime Minister of Spain almost rivals Mr. Gladstone in literary versatility. In Greek, the *Politics* of Aristotle is the favourite study of the

one, Homer of the other. Cánovas del Castillo has not, so far as I am aware, meddled with theology, and must therein yield the palm; but his works of biography and in history are more important than those of his English compeer, and more likely, I think, to live. I am not acquainted with any original, i.e., not translated, poetry of Mr. Gladstone; but I remember to have been much impressed, years ago, in a chance periodical, by a poem entitled, 'La Mitad de la Vida,' signed, Cánovas del Castillo."

WE have received the eighteenth annual issue of Willing's (late May's) *British and Irish Press Guide for 1891*. The total of serial publications here recorded—including newspapers, class journals, periodicals, and annuals—amounts to 4544, showing a slight decrease when compared with 1890. Contrary to preconceptions, it would appear that the number of deaths (among periodicals) last year exceeded the number of births.

FORTHCOMING MAGAZINES.

MR. F. HOPKINSON SMITH, during a sojourn at Sofia last summer, made several sketches of characteristic life in the capital, which will be embodied in an article by him to appear in the *May Century*, under the title of "A Bulgarian Opera Bouffe." The illustrations include portraits of Prince Ferdinand, his mother, Princess Clementine, and M. Stambouloff.

THE May number of *Harper's* (the last to be published by Messrs. Sampson Low) will contain a paper on "The Warwickshire Avon"—the first to which Mr. A. T. Quiller Couch has signed his name in full—with illustrations by Mr. Alfred Parsons; and another illustrated article, on "The English Ancestry of Washington," by Mr. Moncure D. Conway.

THE forthcoming number of the *Jewish Quarterly Review* will contain, beside a long account of the Jews of France, an article by Mr. I. Abrahams on "Jewish Ethical Wills," a form of literature long popular with Jews.

A SERIAL story, entitled "A Social Earthquake," by Dr. Heinrich Felbermann, the subject being the Kabalah and its influence on the present period, will commence with next issue of *Life*, and will appear afterwards as a three-volume novel.

A NEW illustrated threepenny magazine, entitled the *Ludgate Monthly*, is to appear on May 1. Among the contributors to the first number will be Mr. Rudyard Kipling, Mr. James Greenwood, Mr. F. E. Weatherly, Mr. John Augustus O'Shea, and Florence Marryat.

THE first number of a new bi-monthly, *The Organist's Magazine of Voluntaries*, edited by Mr. E. Minshall, organist and director of the music at the City Temple, will be issued on May 1. The aim of the publication is to supply organists with moderately easy but really good and effective voluntaries.

ANOTHER bi-monthly magazine, *Playtime*, printed in braille type for blind children, is announced to appear in June. It will be edited by F. Nevill, of Brighton, and will be published by the British and Foreign Blind Association. The subscription price is three shillings a year.

UNIVERSITY JOTTINGS.

PROF. MONTAGU BURROWS is preparing for press his course of lectures on "English History from the Earliest Times to the Present." He will make one volume of them, and will bring into greater relief than previous historians have done (1) the fact of England being mainly a

continental power after the Conquest, and (2) its naval history.

BY appointment of the delegates of the common university fund, Sir Alfred Lyall will deliver two lectures at Oxford, in the hall of All Souls' College, on May 1 and May 8, upon "The Growth of European Predominance in Asia."

ON Thursday next, April 30, two public lectures are to be given at Oxford: by Prof. Cheyne on "Critical Problems of the Second Part of Isaiah"; and by General Pitt-Rivers, on "The Original Collection of the Pitt-Rivers Museum, its Principles of Arrangement and History."

DR. MANDELL CREIGHTON, who is still officially described as "Dixie professor of ecclesiastical history and bishop elect of Peterborough," is the select preacher at Cambridge on Sunday next.

PROF. SWETE will lecture at Cambridge this term on "Ancient Liturgies and their relation to the Anglican Order for Holy Communion."

EDINBURGH, like Glasgow, has conferred the honorary degree of LL.D. upon two of its former professors, whose occupation of their chairs terminates with the present session: Prof. A. Campbell Fraser, the editor of *Berkeley*; and Sir Herbert S. Oakeley, professor of music. No less than three important chairs at Edinburgh are now vacant; for that of Humanity, rendered empty by the death of Prof. A. Y. Sellar so long ago as October last, has not yet been filled up. Among the other recipients of honorary degrees at Edinburgh last week, at the annual graduation ceremony, were Dr. John Beddoe, late president of the Anthropological Institute; Major Claude R. Corder, of the Palestine Exploration Fund; Prof. Felix Dahn, of Breslau; and Sir George M. Humphry, professor of surgery at Cambridge.

WITH reference to the paper read before the Cambridge Antiquarian Society last term upon the Book of Observances of the Augustinian House of Barnwell (of which a report appeared at the time in the *ACADEMY*), we now hear that Mr. J. Willis Clark proposes to print the Observances, from MS. Harl. 3601 in the British Museum, together with an English translation, and a plan of an Augustinian monastery, drawn in accordance with the researches of Mr. W. H. St. John Hope. It will be published in a limited edition, by Messrs. Macmillan & Bowes, of Cambridge.

THE *Oxford Magazine* for April 22 prints the Latin speech recently delivered by the senior proctor on the conclusion of his term of office. As usual, it records the more important events of the academical year, which has been marked by an exceptional number of deaths of distinguished personages; but it also contains a quite unusual number of quotations from Seneca.

THE summer term of the School for Oriental Studies, in connexion with the Imperial Institute, was opened on Thursday with a public lecture at King's College by Prof. Minasse Tchérax on "The Armenians, their Language and Literature."

A COURSE of twelve lectures, in Italian, on "Dante's *Purgatorio*" will be given by Prof. A. Farnelli, the Barlow Lecturer, at University College, London, beginning on Friday, May 1, at three p.m., and continuing for six consecutive weeks, on Tuesdays and Fridays. The lectures are open to the public without payment or ticket.

THE Drapers' Company have given five hundred guineas to the extension fund of the Maria Grey Training College, which now amounts to £7532.

ORIGINAL VERSE.

"Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool."—ISAIAH i. 18.

LORD, whose sins were scarlet,
And he went far astray,
These long years have I prayed Thee,
Show him the narrow way.

Though with the swine he feasted,
O! bring him back to Thee;
My youngest horn, O! save him,
Wherever he may be.

The only prayer now left me
Is, Lord, that Thou would'st turn
His heart to Thee in sorrow,
Thus, Lord, that he might learn;

Though sin may not come nigh Thee,
The sinner may find grace;
If he repents him truly,
Thou wilt not hide Thy face.

For years, Lord, has he wander'd,
Let him arise and say,
"Against Thee have I sinned,
No longer here I stay;

"I will return unto Thee,
And at Thy feet will pray,
That, like the prodigal of old,
I be not turned away."

It may be, Lord, that never
He will come home to me;
I dare not pray for that, Lord,
While he is far from Thee.

Yet, Lord, all things are possible,
And mighty is Thy grace;
It may be the day cometh
That I shall see his face.

The face of him who left me,
My youngest horn, my pride:
There came a day I deem'd it,
Far better he had died.

But now my prayer is only,
O Lord, Thy will be done;
It may be in Thy mercy
Thou wilt bring home my son.

F. P.

MAGAZINES AND REVIEWS.

NOTHING could seem from the English point of view more unliterary than a collection of street bills and posters, or an article on such a collection. France, however, is not as England; and the article with which the *April Livre Moderne* opens contains a catalogue, not without examples in black and colours, of designs for the purpose by a mighty list of such persons as Déveria and Nauteuil, Gavarni and Johannot, Charlet and Raffet, Daumier, Manet, Bracquemond, Flameng, and who not. It is followed by some letters of M. Zola's on *La Bête Humaine*, and by some unpublished verses of M. Edmond Raraucourt's. The ever-ingenuous M. Gausseron has thrown his *Compte Rendu* of the latest French books into the form of a dialogue between Talleyrand and Madame de Staël, in which Talleyrand very characteristically does not give us the word of the enigma of the Memoirs. There are some minor papers, including a notice of the recent exhibition of bindings at the Caxtons-head in London.

INDIAN CODIFICATION.

AFTER an interval of nearly nine years, the official pendulum in India seems to be swinging in the direction of codification. Thus, the Probate and Administration Act (V. of 1881), which till lately applied only to Bengal, the Panjáb, Assam, Burma, and the Andamans, has now been extended to the rest of British India. The act codifying the law of guardian and ward (XIII. of 1874), which until last year applied only to European British minors in the Panjáb and the Chief Commissionerships,

has been repealed and re-enacted by Act VIII. of 1890, which applies to all guardians and wards throughout the Indian empire. And the Easements Act (V. of 1882), which, when passed, extended only to Madras, the Central Provinces, and Coorg, has lately been extended, at the request of the local governments and high courts, to the Presidency of Bombay and to the North-West Provinces and Oudh. In moving for leave to introduce a Bill to effect this extension, the law-member (Sir Andrew Scoble) observed that the author of the Act, Mr. Whitley Stokes, was fully entitled to say: "It has worked well during the last eight years among the forty millions to whom it applies, and has falsified the prediction that it would give rise to litigation" (*The Anglo-Indian Codes* i. 888). It is to be hoped that Sir Andrew Scoble's successor will lose no time in introducing the bill to codify the law of torts, which was drawn about five years ago for the Government of India by the skilful hand of Sir Frederick Pollock.

The acts relating to cantonments and railways respectively (XIII. of 1889 and IX. of 1890), prove that the kindred process of consolidation is also again in favour.

CORRESPONDENCE.

THE NINTH CONGRESS OF ORIENTALISTS.

Settlington Rectory, York: April 20, 1891.

I have read no wiser words on the deplorable split among Orientalists than the counsels of peace which are given in an editorial note in the *ACADEMY* of April 18.

Returning a few days ago from a prolonged absence in the East, I find that my name stands on the committees of both the rival Congresses. Having taken no side in the controversy, I put myself into communication with the secretaries of both Congresses, and ventured to propose certain terms of union, which I thought just and reasonable. Both parties accepted these terms in principle, and professed themselves anxious to secure "peace with honour." Subsequent difficulties which have arisen resolve themselves into points of detail which seem to me, as a neutral observer, of small importance.

I proposed, first, that the expenses already incurred on either side should be defrayed out of the common fund. This condition was mutually accepted. The questions as to the technical rights and authority on either side are so obscure and complicated as hardly to be capable of solution, especially as both parties seem to have committed irregularities; but this difficulty may well be waived, as it would disappear if a fusion could be effected.

The only real difficulties—the difficulties which lie at the bottom of the schism—consist, I believe, in certain personal animosities and jealousies, called forth, in part, by proceedings at Stockholm, and intensified by the subsequent vigorous polemics alluded to in the editorial note to which I have referred. The French and German Orientalists have, very naturally but most unfortunately, taken opposite sides. The French, not without reason, object to meet on the neutral ground of England under the presidency of an eminent scholar, who, though long resident in England, is a German by birth, and who, at the time of the Franco-German war, showed himself to be still a German in sentiment. As might be expected, this is not felt to be a difficulty by the Germans, who, however, object, not without reason, to the personalities with which certain venerable German Orientalists have been assailed by the secretary of the other Congress.

But it so happens that the president of one Congress—the Marquis of Dufferin and Ava—is a man to whom no personal objection can be taken, and who, on numerous grounds, is eminently fitted for the post; while the same may be said for Prof. Douglas, the secretary of the rival Congress.

Under these circumstances, I proposed that the Congress should meet, either in 1891 or 1892, with Lord Dufferin as president and Prof. Douglas as secretary—posts of honour being accorded to the two officials displaced. Both parties agreed that a fusion might be effected on this basis.

If a small committee of conciliation could be formed, consisting of half a dozen Orientalists, who, as you suggest, "have not yet taken a side" and to whose decisions both parties would agree to submit, the scandal might be avoided of two rival Congresses, one composed largely of French, the other of German scholars.

If a fusion cannot be effected in this or some other way, it seems to me that it would be better that both Congresses should be given up, or that the ninth Congress should be held in some neutral country—Belgium, Switzerland, or the United States—say in 1893, when animosities would have had time to cool down.

In making these proposals I shall probably encounter the proverbial fate of the bystander who intervenes in the domestic differences of man and wife; and I only venture to come forward in the forlorn hope of preventing one of the most serious calamities which could impede the progress of Oriental studies.

ISAAC TAYLOR.

[We have also received letters on the subject from Sir Patrick Colquhoun, the president, and Dr. G. W. Leitner, the secretary of the organising committee of the proposed Congress of 1891. But as they are of a controversial nature, and do not add anything to the statements that have already appeared in the *Asiatic Quarterly Review* for April, the cause of conciliation (which was our sole object in again referring to the question) would not be furthered by their publication.—ED. ACADEMY.]

EGYPT AND SYRIA DURING THE NINETEENTH DYNASTY.

London: April 13, 1891.

You were good enough to print one or two letters of mine on "Tunip and the Land of Naharina," which led to an instructive discussion. Perhaps you will allow me to draw a somewhat wider lesson from my reading of the records of the XIXth Dynasty.

The impression they have created on my mind is that the domination of Egypt over Syria during the whole period when that dynasty reigned was more complete than is sometimes imagined—so complete that I cannot see how we are to explain the conquest of Palestine by the Hebrews unless we put it at a later period.

In this matter I cannot follow my accomplished friend Mr. Sayce, from whom I have learnt so much. In his memoir on the Hittites published by the Religious Tract Society he says:

"The long reign of Ramses II. was a ceaseless struggle against his formidable foes. The war was waged with varying success. Sometimes victory inclined to the Egyptians, sometimes to their Hittite enemies. Its chief result was to bring ruin and disaster upon the cities of the Canaanites. Their land was devastated by the hostile armies which traversed it, their towns were sacked, now by the Hittite invaders from the north, now by the soldiers of Ramses from the south. . . . We can understand now why they offered so slight a resistance to the invading Israelites. The Exodus took place shortly after the death of Ramses II., the Pharaoh of the oppression; and when Joshua entered Palestine he found there a disunited people and a country exhausted by the long and terrible wars of the preceding century. The way had been prepared by the Hittites for the Israelitish conquest of Canaan."

All this is inexplicable to me. Ramses apparently had a struggle with the Hittites at

the very beginning of his reign. In his fifth year he had a serious war with them, the result of which was a considerable addition to Egyptian prestige, and, apparently, also the pushing back of the Hittites from the upper Orontes valley. A year or two later he apparently advanced into the Hittite territory to punish the city of Tunip for having ill-used his statues. After this, to the end of his exceptionally long reign of over sixty years, there is no record of any hostile engagement between the Egyptians and the Hittites. On the contrary, their intercourse seems to have been of a friendly character, and culminated in the famous treaty between the two powers and the matrimonial alliance of their rulers.

So much for the Hittites. In regard to the Canaanites, there was certainly a revolt among them in Ramses' eighth year, but after that I know of no struggle from which they suffered; and Ramses seems to say most explicitly that he waged no war after his tenth year. His whole reign thence onward seems to have been occupied with his great building and other schemes at home.

Again, on p. 37 of the same memoir, Mr. Sayce tells us that, as a result of the treaty between the two kings—

"Syria was handed over to the Hittites as their legitimate possession; Egypt never again attempted to wrest it from them, and if the Hittite yoke was to be shaken off it must be through the efforts of the Syrians themselves."

Of this I know of no evidence whatever. Nothing of the kind appears in the treaty itself, nor in any document accessible to me. So far as I can see, Ramses continued to the end of his days to be the suzerain lord of the petty chiefs of Canaan as far north as beyond Kadesh, where the Hittite dominions began. The same was the case with his successor Menephtah, who seems to have cultivated the friendship of the Hittites, and sent them a welcome supply of corn when they were pressed. Brugsch has published some notices of the doings of his officials in Syria, pointing to the business-like dealings of an over-chief with his vassals; and I know of nothing in the shape of evidence to show that he was not complete master of the country during his reign, and that the same state of things did not continue till the end of the dynasty.

The matter is interesting and important, and perhaps may lead to a fruitful discussion if you can find a corner for my letter.

HENRY H. HOWORTH.

MARY FITTON AGAIN.

London: April 20, 1891.

As Dr. Furnivall is not quite accurate in the matter of date, it seems necessary for me to say that my papers on "Shakspeare's Sonnets" were read before the New Shakspeare Society on May 30 and June 13, 1884. The *Proceedings*, from which I quoted, were issued not very long after these dates. But since the *Transactions* extend to 1886, it is pretty clear that a period of some two years intervened between the one issue and the other. It is desirable that this fact should be borne in mind, with reference to the discrepancy between the two quotations. I may add that my own recollection of what was said certainly does not agree with the *Transactions*, as quoted by Dr. Furnivall.

Dr. Furnivall suggests a contrast between my impetuous rashness and his own prudent caution. This is a matter which it would scarcely be suitable for me to discuss. The reader who has taken the trouble to follow the course of this discussion has had, I think, brought before him materials on which he may form his own judgment with respect to this suggested contrast.

The information given by Mrs. Newdegate with regard to the Arbury pictures and the "Countess of Stamford" and "Lady Macclesfield" is a little perplexing. I hope that, in the ensuing summer, an opportunity may be afforded me for subjecting these pictures to a somewhat close examination.

THOMAS TYLER.

M.E. "BIDENE," L.G. "BINENE," AND M.E. "QUOD."

Ann Arbor, Michigan: March 17, 1891.

As to the derivation of M.E. *bidene*, I have noticed nothing later than what is given in the Oxford Dictionary; the new edition of Stratmann has not yet come to hand. I would here take up the explanation given by Stratmann in the old editions. He says *bidene* < *bi+ene*, Low German *binene*; but he does not explain the *d* of the English or the *n* of the L.G. form.

For the English I would make the following series: *biþe ene* > *biðe-ene* > *bidene*. *bi þe ene* was formed after the article had become inflectionless, and so differs from the analogous phrase for *þen enes*, which had been formed earlier. *þ* > *ð* medially. *ð* drops out before the accented vowel, as in O.E. Sievers', § 110, A 1. Thus *ð* comes to be accented; but accented *ð* is anomalous in M.E., and so becomes stopped, or *d* (Sweet H. E. S., § 732). Similarly, M.E. *quod* became, in unaccented positions, *quod*, and then, joining a following *T* or (*h*)e (*cf. a-tall' < at all*), gave *quo-dē* and *quodē* = *quod I* and *quod he*. This explanation will be seen to differ slightly from Sweet's.

For L.G. we have: *bi den ene* > *binene*, with the same contraction as in H.G. *bei dem* > *beim*, GEORGE HEMPEL.

PEEL AND THE CURRENCY.

Oxford and Cambridge Club: April 20, 1891.

Will you permit me to correct an error in Mr. Arthur Arnold's review of Thursfield's *Life of Peel* in the ACADEMY of April 18?

Mr. Arnold says: "Peel established that gold standard of the currency which though questioned has never been upset." This is an error. Our present system of coinage was established in 1816 by the Act 56, Geo. III., c. 68, which embodied the doctrines set forth in Lord Liverpool's *Treatise on the Coins of the Realm*, published in 1805. In 1816 Mr. Peel was Chief Secretary for Ireland, and there is no reason to suppose that at that time he had ever given any attention to the subject of the currency.

H. D. MACLEOD.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, April 26, 7.30 p.m. Ethical: "Democratic Literature," by Mr. J. A. Hobson.

MONDAY, April 27, 8 p.m. Society of Arts: Cantor Lecture, "The Decorative Treatment of Natural Foliage," III., by Mr. Hugh Stannus.

8.30 p.m. Geographical: "Our Present Knowledge of the Himalayas," by Col. H. C. B. Tanner, illustrated by the Oxy-hydrogen Lantern.

TUESDAY, April 28, 3 p.m. Royal Institution: "Bacteria, their Nature and Functions," I, by Dr. E. E. Klein.

8 p.m. Civil Engineers: Discussion, "The cost of the Generation and Distribution of Electrical Energy," by Mr. R. E. B. Crompton.

8.30 p.m. Anthropological: "A Message Stick from Jardine River, and Notes on Queensland Natives," by Prof. A. C. Haddon; "Superstitions, Burial, and other Customs of the Natives of Borneo, from the Papers of the late Brooke Low," by Mr. H. Ling Roth.

WEDNESDAY, April 29, 8 p.m. Cymmadorion: "Wat's and Offa's Dykes," and "The Western Isles of Scotland regarded from a Welsh Standpoint," by Mr. Alfred N. Palmer.

8 p.m. Society of Arts: "The Use of Petroleum in Prime Motors," by Prof. William Robinson.

THURSDAY, April 30, 3 p.m. Royal Institution: "Recent Spectroscopic Investigations," IV., by Prof. Dewar.

4.30 p.m. Society of Arts: "The Perrier Irrigation Project in Madras," by Col. J. O. Hasted.

8.30 p.m. Antiquaries.

FRIDAY, May 1, 5 p.m. Royal Institution: Annual Meeting.
 8 p.m. Oeologists' Association.
 9 p.m. Royal Institution: "Hawks and Hawking,"
 by Mr. J. E. Harting.
 SATURDAY, May 2, 2.30 p.m. Camden Society: General
 Meeting.
 3 p.m. Royal Institution: "The Dynamo," IV,
 by Prof. Silvanus P. Thompson.

SCIENCE.

The Principles of Psychology. By William James, Professor of Psychology in Harvard University. In 2 vols. (Macmillan.)

ABOUT twenty years have elapsed since Mr. Spencer issued his fully elaborated treatise with the above title as the second main division of his constructive philosophy, an interval marked by the production of no work written in English in the same scientific department equal in thoroughness and originality to the one forming the subject of the present notice. There have been plenty of books, both large and small, with undeniable merit in certain directions; but for general mastery and independence of treatment combined Prof. James must be at present admitted to lead the van.

Considering what the author of this new presentation of the principles of psychology has accomplished, it is a pity, however, both for his subject's sake and for his own recognition as a systematist of the first rank, that his work is so defective in a formal point of view. The "physiological preliminaries" are first clearly and sufficiently disposed of. Then, after a couple of chapters on methods of inquiry and "the relations of minds to other things," the main business is entered upon.

"We now begin our study of the mind from within. Most books start with sensations, as the simplest mental facts, and proceed synthetically constructing each higher stage from those below it. But this is abandoning the empirical method of investigation. No one ever had a simple sensation by itself. Consciousness, from our natal day, is of a teeming multiplicity of objects and relations; and what we call simple sensations are results of discriminative attention, pushed often to a very high degree. It is astonishing what havoc is wrought in psychology by admitting at the outset apparently innocent suppositions, that, nevertheless, contain a flaw. The bad consequences develop themselves later on, and are irremediable, being woven through the whole texture of the work. The notion that sensations, being the simplest things, are the first to take up in psychology, is one of these suppositions. The only thing which psychology has a right to postulate at the outset is the fact of thinking itself, and that must first be taken up and analysed."

This is, in the main, well said, although we cannot but think the charges indicated are a trifle exaggerated. But then, if the synthetic procedure is discarded, the analytic should be strictly adhered to; and the richest content of the adult mind being first dissected, we should have, in significant terms, retraced for us the path by which the progressive mind gradually came into possession of this wealth of consciousness. But our author's "empirical method of investigation" does not come to that. It means sealing the individual's senses, and then primarily observing what goes on in the self-secluded mind. So that, having learnt what "the self" is in its various acceptations, having

distinguished correct from incorrect views of abstract ideas and universals, having followed the exposition of the laws of association and analysed the time-consciousness, chap. xvii. opens: "After inner perception, outer perception!" Why "after?" Is not the "multiplicity of objects" as actual as the "multiplicity of relations?"

But when we have arrived at outer perception, we find the disparaged method of the "books" adopted, and the chapters follow on in order: "Sensation," "Imagination," "The Perception of 'Things,'" "The Perception of Space," "The Perception of Reality," "Reasoning." In fact, the logical sequence of topics does not seem to have been a matter of much concern to the writer. This *insouciance* may be connected with another point on which a few words must be said. Out of the twenty-eight chapters, amounting to well-nigh 1400 pages, no less than ten have appeared, either in whole or part, in periodicals. Such tentative and piecemeal treatment inevitably affects the coherence, as it colours (not always advantageously) the style, of a scientific treatise. Doubtless, it requires much self-restraint in this novelty-erasing age for an ardent investigator to keep back the fruits of his labours; but one who aspires to establish the "principles" of a great science should be ready to pay the price of a more enduring influence than that of the brilliant essayist.

In the matter of style (to complete our formal criticisms) we think there are few readers who will fail to render their tribute of admiration. It is truly refreshing, after being wearied by the severe and ultra-prosaic diction of the most approved treatises, to come across a writer who can be sparkling as well as profound, who "lets himself go," as one may say, using the phrase and metaphor that spontaneously offer themselves, and freely yielding to the mirthful impulse when it possesses him. That there are no deviations from good taste we should be hardly prepared to assert. There are occasionally slighting epithets and personal animadversions, which seem neither deserved nor fitting in the pages of the younger investigator. At the same time, it must be said that Prof. James is no niggard in his praise, and is (in the better sense) no respecter of persons. The independence of mere authority is undoubtedly a merit, and we should not boggle too much over its price. One other matter. Quotations run to an inordinate length. The volumes are bulky enough, and it would have been an error in judgment to attempt to enlarge them; but room should have been found at least for an examination of pleasure and pain, and without any sacrifice of necessary detail, ample space might have been afforded at the cost of various anecdotes and extracts from easily accessible writers. In conclusion, we do not quarrel with a vein of edification occasionally cropping up. A treatise on psychology is just the place for pedagogical remarks, and ingenuous youth may sit at the feet of many preachers before meeting with such terse and incisive moral sermons.

To appraise a book such as the present as a contribution to the science of psychology requires much time for consideration and

room for detail; all that will be offered here is an indication of the author's view of one or two fundamental questions.

Prof. James is clear in his own mind as to the nature and limits of the science of which he treats. Psychology is a branch of positive general knowledge. It accepts the broad distinctions of practical experience. Taking for granted personal thoughts and an indefinite sphere beyond, it endeavours to explain the course and inter-connexion of the former without invoking at any stage the assistance of metempirical hypothesis. Seeing, however, how recent the notion of positive science is, and how large a part metaphysical conception plays in the elaboration of common knowledge and belief, it is hardly undesirable in an exponent of mental science to illuminate his matter-of-fact standpoint by indulging in a brief polemic against speculative intruders of various kinds. In the absence of such express criticism, it is wont to be assumed that the scientist is unaware of the deeper problems that press for solution when his own last word has been said, and that he is only anxious to hide out of sight difficulties he finds it uncomfortable to acknowledge. One of these trying questions is the meaning of Self, the consciousness of personality that clings to all feeling and action. Who are "we that know, do, and remember? The passing thought." "The *I* . . . is a *thought*, at each moment different from that of the last moment, but *appropriative* of the latter, together with all that the latter called its own." This is clear speaking. Each thought as it fades bequeaths its vitalised content to its successor, so that the last thought links itself on to the first by inheriting a peculiar "warmth and intimacy," which further serves as ground of separation of each concrete self from all others. The rationalist philosopher need not be disturbed, however; this version does not touch *his* identity, *his* selfness. It is only that speculative hybrid, the metaphysico-psychologist, who need take offence. If we keep strictly to what we *know* and alone can know, the psycho-physical *knot* (so to speak) of indivisible thought and correlated unified nerve-function is the empirical ultimate. But for the benefit of the timorous the professor adds—

"A phenomenon would not itself be unless there were something *more* than the phenomenon. . . . So in the present instance, we ought certainly to admit that there is more than the bare fact of co-existence of a passing thought with a passing brain-state. But we do not answer the question, 'What is that more?' when we say that it is a 'soul' which the brain-state affects. This kind of more *explains* nothing; and when we are once trying metaphysical explanations we are foolish not to go as far as we can. For my own part, I confess that the moment I become metaphysical and try to define the more, I find the notion of some sort of an *anima mundi* thinking in all of us to be a more promising hypothesis, in spite of all its difficulties, than that of a lot of absolutely individual souls."

The topic handled at greatest length is that of Space. And here our bold investigator does battle for a comparatively unbefriended cause. Two lines of thinkers during the last hundred years have disputed

this field with remarkable skill and with dubious result. The English school, following the lead of Berkeley, and working to the utmost the potent engine of Association, have essayed to reconstruct the space-idea out of intensive elements of sense-experience, latterly out of feelings of muscular movement, conjoined with subordinate tactile and retinal sensations. In Germany, on the other hand, the a-priorists (with Kant as protagonist) have energetically maintained that it was a piece of question-begging to try and derive Space from sense-experience, in that perception implied it as a pre-condition. Space is realiter indivisible, all-present and abiding; while the external objects of cognition arise and fade. The foregoing represents the opposition of opinion at its extremes, ignoring those who regard Space as the product of an intellectual act, and others who allow a certain defined part to sense arrangements and constructions in respect of experiential realization, though not of origination.

Now, all attempts to assign a formal or an intellectual origin to the space-idea are speedily dismissed by our author as "mythological."

"I have no introspective experience of mentally producing or creating space. . . . That the higher parts of the mind come in, who can deny? They add and subtract, they compare and measure, they reproduce and abstract. They inweave the space-sensations with intellectual relations; but these relations are the same when they obtain between the elements of the space-system, as when they obtain between any of the other elements of which the world is made."

It is with the empiricists that Prof. James has his controversy. According to him, space is given in all sensation as one of its modes. The original of the notion is the element of "voluminousness" in sense-consciousness. That there is this element of "extensivity" in all our sensations, and that by no manipulation of merely intensively distinguished sensations can such extensivity be obtained, are the positions that the professor endeavours to make good through many pages of elaborate argumentation. Contrary to the prevailing opinion that the motor sensations play the characteristic part in a psychical synthesis, whereby non-spacial elements are transformed into the space percept, he holds that their influence is practically insignificant, the illusions of visual perception, on which much stress has been laid in this regard, being explicable without their aid.

There can be no question, we take it, that Prof. James has materially advanced the discussion of this important question by the clearly-defined and well-sustained attitude he has assumed. Considering how few are his allies, and how doughty are the champions he opposes, if his ground be ill-chosen he should be easily routed.

The succeeding chapter on "The Perception of Reality" is less one for the specialists. It is practically a discussion of the nature and function of belief. In the whole range of psychology there is no subject of equal importance. What is belief? how and why do we believe? are questions so far from "academic" that every serious mind asks and answers them

for itself in some vague way. Psychologists *ex professo*, to whom we look for full and clear light on the subtler modes of consciousness, are apt, however, to be disappointingly brief just at this point. The writer whom we are studying contrariwise is particularly suggestive at this stage, and sends the reader anything but empty away.

These averments in particular are deserving of being pondered: "Any relation to our mind at all, in the absence of a stronger relation, suffices to make an object real"; and "Will and Belief, in short, meaning a certain relation between objects and the self, are two names for one and the same *psychological* phenomenon." The first proposition asserts the homogeneity of ideality and reality, and probably only requires a little illustration to be universally assented to. The second proposition is a grave one indeed, and needs much explanation before it is either intelligible or acceptable. To see its full force we must peruse the chapter devoted to Will. Will is there resolved in effect into Attention, and the *rationale* of volition consists of an account of the way in which ideas obtain prominence in consciousness:

"In closing in, therefore, after all these preliminaries, upon the more *intimate* nature of the volitional process, we find ourselves driven more and more exclusively to consider the conditions which make ideas prevail in the mind. With the prevalence, once there as a fact, of the motive idea, the *psychology* of volition properly stops. . . . *Effort of attention is thus the essential phenomenon of Will.*"

The key accordingly to both Will and Belief must be sought in Attention. How do ideas come to prevail in the mind? But let us hear to the end:

"The effort to *attend* is, therefore, only a part of what the word 'will' covers; it covers also the effort to *consent* to something to which our attention is not quite complete. . . . So that, although attention is the first and fundamental thing in volition, *express consent to the reality of what is attended to* is often an additional and quite distinct phenomenon involved."

How is this "consent" to be gained? We are back again apparently at the old question of the "self." Belief is what we *will* to be, and Will means what the self finds consonant to its own nature. The empirical self or a metempirical self? "The free-will question arises as regards belief. If our wills are indeterminate, so must our beliefs be," &c. So hard is it to keep metaphysics out of court, after all!

Heresies—taking the present drift of inquiry and theorising as orthodoxy—abound in Prof. James's volumes. Herbart is politely contemned; Fechner's laborious psycho-physical generalisations are pronounced utterly futile; emotion is regarded as the consequence of bodily expression, not the cause; and, in a final chapter, the mind's (or brain's) independent power is asserted against the Spencerian evolutionists, to whom the inner order is only a mirror of the outer.

Protracted meditation of this latest, and broadest, treatment of the principles of psychology will not improbably deepen previous suspicions in regard to the immaturity of the science of mind. Lewes's opinion, expressed in 1874, still holds good,

that "it is very much in the condition of chemistry before Lavoisier, or of biology before Bichat." This, however, implies no disparagement of a book like the one before us. We have found it impossible to give an estimate of its varied wealth within present allowable limits. Almost every chapter teems with fertile suggestions, and none the less evinces a first-hand acquaintance with all the important work previously done. The general reader, it may be added, will find the book anything but a dull one. Particularly interesting is the summary of recent researches in regard to unusual or abnormal phenomena. The academic *clientèle* must be looked for in the New World, where the educational programme is adapted to the mental needs, and not *vice versa*.

W. C. COUPLAND.

CORRESPONDENCE.

JAINA INSCRIPTIONS FROM MATHURA.

London: April 18, 1891.

I have read with much interest Dr. Bühler's account of the successful exploration of the Kankali tila at Mathura by Dr. Führer. I write now with special reference to the dated inscription of the Satrap Sodasa. Dr. Bühler notices my conjecture that Sodasa must have been the son of the great Satrap Rajubala. Luckily this is no longer a conjecture, as one of the short inscriptions on the famous Satrap capital, found at Mathura by Pandit Bhagwan Lal, distinctly announces the fact. The capital is now in the British Museum, where in Gandharian characters I read:

Mahachatravasa-Rajulasa-patra Sudasa Chatrava.
"The great Satrap Rajula's son Sudasa Satrap."

The dialectal peculiarity of the use of *v* for *p* in the title of Chatrava is found also in the word *thava* for *thupa*, in the main inscription of the same capital. It still exists in the Panjab, in the name of Rai-wind for Rai-pind.

My chief interest lies in the date of Sodasa, which I read without any hesitation as 72 and not 42. I would now suggest as a matter for Dr. Bühler's consideration whether the few known inscriptions of the Sakas may not all refer to one and the same era. That era I would suggest as the date of the Great King MOGA, which is used by the Satrap Liaka-Kusulaka, in the well-known copperplate inscription found at Taxila. I have formerly suggested that MOGA might be identified with MOA or MAUA of the coins—who certainly reigned in the early part of the first century B.C., or say 100 to 80 B.C., as he must have come soon after Menander. The other Saka inscriptions to which I refer are those of Nahapana in 42 and 46, or perhaps 72 and 76, and of Gondophares in 103, or perhaps a few years later. Referring all three dates to the proposed era of MOGA, I obtain the following:—

Nahapana.....	42 = 58 B.C. or 38 B.C.
.....	46 = 54 " or 34 "
Sodasa	72 = 28 " or 8 "
Liaka Kusulaka ..	78 = 22 " or 2 "
Gondophares.....	103 = 3 A.D. or 23 A.D.

On the same capital there are the names of several other Satraps, all written in Gandharian characters. Among them is Chatravasa Kusulaasa, whom I take to be the same as Liaka Kusulaka of the Taxila inscription, and the * * AKA KOZOTAO of my two silver oboli.

The establishment to which this famous pillar-capital belonged consisted of a Stupa and a Sangharama (or monastery), with relics of Buddha (*sarira Bhakavato saka Munisa Budhassa*). They were the work of the principal Queen of the great Satrap Rajula, named

Nandasriyaka, for the benefit of all the people of Sakastana (*sarasa Sakastanasapaya*). This statement shows that Rajula and his son Sodasa, and all the other Satraps who are named in these inscriptions, must have been Sakas.

A. CUNNINGHAM.

ON A PASSAGE IN THE DHAMMAPADA.

Dedham School, Essex: April 8, 1891.

"Sabbattha ve sappurisā vajanti
na kāmakāmaṃ lapayanti santo."

(Dhammapada, v. 83.)

This part of a verse from the Dhammapada has given some trouble to the translators, who have derived but little help from the Commentary.

Prof. Fausbøll's rendering of these lines is:

"Ubique certe homines probi versantur, amoris dediti non queruntur probi."

That of Prof. Max Müller's is somewhat different:

"Good people walk on whatever befall, the good do not prattle, longing for pleasure."

Gray's version, based on the Commentary, is as follows:

"Good men, under all circumstances, are truly self-sacrificing: good men, being desirous of objects of gratification, do not express (their desires)."

These various renderings agree in ascribing to good men, that is to Buddhists, the longing for sensual gratification; but this is quite against true Buddhist doctrine, for good men are free from all evil or low passion and desire, and cannot be kāmakāma. Compare "*kāma-kāmaṃ nam' eṣanto*" (Therī Gāthā, p. 216).

In a Chinese collection of Scripture verses, which Beal wrongly calls a version of the Dhammapada, we find a verse that may possibly be meant for a rendering of the two lines quoted above:

"The great man is entirely free from covetous desires—he dwells in a place of light, himself enlightened."—(*The Dhammapada from the Buddhist Canon*, c. xiv., p. 81.)

The Chinese translators did not make the serious blunder of ascribing *kāma* to a good man, though they have made sad havoc in the paraphrase of their original text. This version presupposes some curious variant readings, corresponding in Pāli to *sabbāññā* for *sabbattha* and *ālayam santam* (= *padam santam*) for *lapayanti santo*.

The mistake made by recent translators seems due to taking *kāmakāma* as an adjective in the nominative plural. Childers gives only one reference, and that from the passage we have quoted, for the use of this term, which he defines as "fond or desirous of sensual pleasure." Unfortunately *kāmakāma* does not occur very frequently in our Pāli texts, though *kāmukāma* (not in Childers's) is somewhat less rare. (See Jāt. iii., p. 154; Itivuttaka 107; Anguttara iv. 53. 7; 54. 7; Petavatthui. 3. 3.)

In Therī Gāthā there is a verse (506) that Prof. Pischel declares to be "hopelessly corrupt" which contains *kāmakāma*, employed much in the same way as it is in the Dhammapada:

"Mokkhamhī vijjamaṇe kin tava kāmehi yesu vadhabandho?"

kāmesu hi vadhabandho *kāmakāmaṃ* dukkhāni anubhonti."

Here *kāmakāma* might easily be mistaken for an adjective, but the Commentator explains it by *kāmesu kāmahetu*. This agrees with *kāmahetu* in the Dhammapada Commentary; and shows us that *kāmakāma* is not a nominative plural, but an ablative singular, and means "from (or on account of) a longing for sensual gratification," the real nominative to *anubhonti* being the word *sattā* understood. Compare

"*purinabuddhesu katādhikārā*" = "on account of service rendered unto former Buddhas" (Therī Gāthā, p. 180).

Dr. Pischel's "conjectural text" makes very good sense, and we venture to translate it:

"If thou hast attained to Arhatship (and art free from all lusts), what then hast thou to do with sensual pleasures, in which (are involved) death and bonds? Since death and bonds (are inherent) in lusts, (therefore) from a desire of sensual indulgence creatures suffer the pains (of death and bonds)."

For the use of *vadha*, *bandha*, see Therī Gāthā, verse 345.

With these few remarks upon *kāmakāma* we risk another translation of the foregoing extract from the Dhammapada:

"Good men, indeed, walk (warily) under all conditions; good men speak not out of a desire for sensual gratification."

R. MORRIS.

MEETINGS OF SOCIETIES.

MANCHESTER GOETHE SOCIETY.—(Wednesday, April 15.)

PRINCIPAL WARD, president, in the chair.—Mr. James Tait read a paper on "The Literary Influence of Goethe's *Faust* in England, 1832-1852, with special reference to Mr. P. J. Bailey's *Festus*." He pointed out that, until the very end of Goethe's life, his influence and that of German literature in general had to contend with strong prejudice and misunderstanding, and made no great way: the revolutionary movement on the continent caused everything foreign to be looked upon with dislike or suspicion in England. The current estimate of German literature was formed upon the most eccentric manifestations of the Sturm and Drang and the romantic school. Goethe was very generally judged and condemned by *Werther* and *Wilhelm Meister*. The *Edinburgh Review* spoke (in 1817) of the *Aus Meinem Leben* as "abounding in characteristics which we fear will be regarded as detracting from the respectability of the work and the author." William Taylor's translation of the *Iphigenia* fell entirely flat. Most translators from the German thought it incumbent upon them to deal very freely with their originals in deference to English taste, and even Coleridge debated with himself whether it became his moral character to render the Prologue of *Faust* into English. Those of the great poets of the first quarter of the century who in any way came under the influence of Goethe were just those, with the exception of Scott, who broke most violently with insular prejudices. But these prejudices began to subside after the Peace. Carlyle towards the close of the twenties impressed the real greatness of Goethe upon the English public; the death of Goethe called forth a chorus of laudation and a flood of magazine articles and translations—half the numerous translations of *Faust* which have appeared in English were produced between 1832-1850. *Faust* thus came to exercise a somewhat remarkable influence over the young poets, who were welcomed with rather uncritical praise in the slack water between the disappearance of the older generation and the general acceptance of Browning and Tennyson. In Browning's own *Paracelsus* (1835) a problem is worked out clearly suggested by the current popularity of the *Faust* legend. A much more direct filiation connects with *Faust* the *Festus* (1839) of Mr. Philip James Bailey, who has lived to see a jubilee popular edition of the poem which he published at the early age of twenty-three. *Festus*, the name of the hero, is simply a variant of *Faust*. The poem opens with a Prologue in Heaven, in which, after the opening song of the cherubim and seraphim, Lucifer requests the usual permission to tempt *Festus* in a reverential address to God, which is obviously intended to convey a tacit rebuke of Mephistopheles's "blasphemy." In fifteen thousand lines (since more than doubled) of dreary, mystical monologue and conversation, *Festus*, with the help of Lucifer, expounds the theological doctrines corresponding to Goethe's non-theistic position that

evil is purely negative: "eine Kraft Die stets das Böse will, und stets das Gute schafft." Lucifer confesses himself but "the shadow cast from God's own light." He can only act for the glory of God. In the course of the argument *Festus* and Lucifer are made to visit Heaven, Hell, and the Moon; and other scenes are laid in Space, the Centre, Anywhere, Elsewhere. Love scenes are interspersed, in which *Festus* puts to the proof Lucifer's promise that he "should love ten as others love but one," carrying off the last fair one from Lucifer himself. Mr. Bailey's imitation of *Faust* is not disguised; there are scenes between *Festus* and Helen, *Festus* and a student, *Festus* takes an aerial journey, and so on. The poem ends at last with the salvation of *Festus* and all mankind, together with Lucifer and his host. Though formless to a degree, and destitute of real poetical merit, it had a surprising success, running through five editions in fifteen years. It fell in with a vague emotional revolt against the material character of the time, and gave an impulse to some young poets like Dobell, of greater merit, whose work also shows signs of their study of *Faust*. They were laughed into obscurity as the Spasmodic School by Prof. Aytoun in his racy burlesque, *Firmilian*. Mr. Tait concluded with some account of Clough's *Dipsychus*, which has been not wholly unappropriately called "the English *Faust*."

ROYAL HISTORICAL SOCIETY.—(Thursday, April 16.)

SIR M. E. GRANT DUFF, president, in the chair.—A paper was read by Mr. Hubert Hall on "The Commercial and Social Surroundings of a Merchant of the Staple at London and Calais from the latter part of the Fifteenth Century to the Middle of the Sixteenth Century, based on State Papers and Exchequer Accounts."—A discussion followed, in which Dr. Cunningham pointed out the importance of the statistics referred to in the paper for the elucidation of several obscure features of the Staple trade in the sixteenth century. Mr. Oscar Browning and other speakers followed; and it was intimated that, in consequence of the importance attached to the commercial history of Calais by English and continental historians in the present day, the Council would consider the desirability of authorising further researches on this subject.

PHILOLOGICAL SOCIETY.—(Friday, April 17.)

HENRY BRADLEY, Esq., president, in the chair.—Mr. Whitley Stokes read a paper on "The Metrical Glossaries of the Mediaeval Irish." The Irish, like the Hindus and the Norsemen, had metrical vocabularies, fragments of which are found in twelfth-century MSS. in Dublin and the Bodleian. These vocabularies comprised not only rare or obsolete Gaelic words, but also Gaelic synonyms and homonyms. The Irish also had glossaries in verse of Latin vocabularies. The present paper set forth the fragments above referred to, and then dealt with three unpublished metrical glossaries of old Gaelic words. The first was called *Forus Focal*, "Knowledge of Vocabularies," from the phrase with which it commenced; the second was called, from its first line, *Deirbhshuir don éagna inn éigsi*, "Poetry is sister to Wisdom"; the third was a fragment of a metrical glossary in Egerton 90, a vellum in the British Museum. The first, of which there are several MS. copies in Dublin, is generally attributed to John O'Dugan, who died in 1372; it contains 75 quatrains and defines about 350 words; the second, of which there are also copies in Dublin, contains 62 quatrains and defines about 193 words; the third contains 29 quatrains and defines about 154 words. To these three glossaries Mr. Stokes added an index, including references to the extant Gaelic prose vocabularies in Dublin, Edinburgh, the British Museum, and the Bodleian, many *Belegstellen* from the mediaeval Irish literature, and etymologies and comparisons with words in other Indo-European languages. Of these comparisons the following are believed to be new:

4' "height," Lat. *asa*, *ara* (so *altaria* is connected with *altus*).

4' "one," from **airo-s*, Cypr. *olFos*, *olos* "alone," O.Pers. *aira* "one," Skr. *era* "alone," "only."

Ail "stone," gen. *ailcech*. Either *ἀλφ·πέτρα*, Hesychius, or, if *p* have been lost, *πέλεος*, Skr. *paraqu*.

Alt "house," from **paltā*; *alt nime* "vault of heaven," *Ennius' palatum caeli*.
A'in "rushes," Lat. *iūni*- from **iōini*- in *iuniperus*, *iuniculus*, *iuncus*.

Barann "a blow," Lat. *ferio*, O.N. *berja*, Skr. *bhara* "fight."

Bath "manslaughter," Gallo-Lat. *batuere*.
Bé "night," Gr. *φοῖός*, "dusky."

Bil "hair," borrowed from Lat. *pilus*, as *bellec*, *béc* "kiss," and *brolach* from *pelliceus*, *pācem*, *prologus*.

Blose "voice," "sound," from **bhlozgo-s* = *φλοῖστος*.

Caer "candle," "flame," Goth. *skeirs*, A.S. *scīr*, Eng. *sheer*.

Cé "night," from **skaiā*, Skr. *chhāyā*, Gr. *σκά*.
Chānor "satire," borrowed from O.N. *klām-orð*, a libel in verse.

Dae "house," *θαμῶς·οἰκία*, Hesychius.
Dag "good," *ταχός* (from **taχús*), compar. *θάσσων*, just as, according to Collitz, *hús* "good" is = Skr. *áyu* "active."

E'ic "moon," from **penci-*, Skr. *pājas*, Gr. *φῆγγος* (from *σπέγγος*) and Mod. Gr. *φεγγόρι*.
Esc "water," Ptolemy's river-name *Ἰσκα*, from **pidkā*, cogn. (like O.W. *nise*) with *πίδοξ*, *πιδέω*.

Fael "wolf," Arm. *goil*.
Fáth "a kind of poem," W. *gwawd*, A.S. *wōð*, O.N. *ðr*.

Féid "science," W. *gwydd*, Skr. *vedas*.
Fuádir "word," Skr. *vad*, *vadati*, Gr. *ῥέω*, *ἰδέω*.

Gael "a wound," Lith. *žaiža*, eine Wunde, ein Schaden (Nesselmann).
Gen "sword," Lith. *genu* "to cut branches."

Grith "sun," from **ghrti*, cognate with Vedic *ghrīmā*.
Icht "children," Germ. *echt* "genuine," from **ahti*.

Lang "fraud," Gr. *ἐ-λεγχος*, "reproach," "disgrace."

Losc "blind," Lat. *luscus*.
Loth "fierce," Gr. *λύσσα* "rage," from **λυτja*, Lith. *lutis* "storm," Ch. Slav. *lytu*.

Luis "hand," from **loe-si*, Lat. *al-le-x*, *pol-le-x*.
Mdl "tribute," W. *mdl*, borrowed from A.S. *mdl*, Eng. (black)mail.

Núa "noble," Lat. *gnavus*, *i-gnavus*.
Ong "hearth," Skr. *algāra* "glowing coal," Lith. *anglis* "Kohle," Eng. *ingle*.

Pell "horse," borrowed from some cognate of Eng. *ful*, Goth. *fula*, pre-Germanic *pelōn-* (Kluge).
Rén "a span," from **regno-*, cogn. with *δρυνίω*, as *réise* "a span," from **rexiā*, cogn. with *δ-πέξis*.

Sin "necklace," cogn. with *hyla*.
Smer "fire," *μαῖρα*, *μαριεύς*.

Tni "fire," Zend *tafiu*.
Triath "king," from **(s)treito-s*, Lat. *strit-avus*, *trit-avus*.

Mr. Stokes also read a paper, by Prof. Henri Gaidoz, entitled "On Folk-etymology and Analogy in Irish." The words dealt with in this paper were: *Luittifer* "Lucifer"; *annchlara* "spiritual director," literally "soul-friend"; *baisidm* "I baptise"; *brisca* "biscuit"; *caindel* "candle"; *callaid*, from Lat. "callidus"; *coiltir* "a quarry"; *coiseread* "consecration"; *conblicht* "a conflict"; *cruthmther* "priest"; *cruththaigtheoir* "the Creator"; *espartain* "eventide"; *umal* "humble"; *ithfern* "hell"; *murchat* "sea-cat"; *ordagraiffe* "orthography"; *semmóir* "sermon"; *serreend*, "a kind of ship"; *sabaltair* "sepulture." Proper names were: *Anerist* "Antichrist"; *Annargach* "a Dane"; *Antuaid* "Antioch"; *Apstalon* "Absalom"; *Cennitirio*; *Diuternoin* "Deuteronomy"; *Farsaid* "Pharisee"; *Ganfaman* "Gethsemane"; *Golgotha*; *Hiruath* "Herod"; *Scarioth* "Iscariot"; *Laimiach* "Lamech"; *Nennruaidh* "Nimrod"; *Patiforsa* "Balthasar"; *Torinis* "Tours." As instances of the operation of analogy, Prof. Gaidoz cited *sethar*, the gen. sg. of *siur* "sister"; *cechtarda*; *anglaimehail* "angelic"; *esidein*, "he, himself"; and *Octimber* "October."

RUSKIN SOCIETY.—(Friday, April 17.)

THE REV. J. P. FAUNTHORPE in the chair.—Mr. Andrew Ogilvie read a paper entitled "A Review of Mr. Ruskin's Political Economy," showing how Mr. Ruskin's chief literary work naturally falls into two divisions. The first, occupying the period

between 1840 and 1860, or from the twentieth to the fortieth year of his age, consists almost entirely of pure art-teaching, embodied in three great works—*Modern Painters*, *Seven Lamps of Architecture*, and *Stones of Venice*. The studies of nature, art, and society necessary for these works furnished the foundation on which were based the doctrines taught in the works of the second period, extending roughly from the fortieth to the sixtieth year of Mr. Ruskin's life. These works were all either wholly or in part devoted to social doctrine, especially such books as *Unto this Last*, *Munera Pulveris*, *Time and Tide*, and *Fors Clavigera*. The paper then reviewed some of the conditions influencing these books, and proceeded to a comparison of their chief doctrines with those of contemporary political economy, as set forth in the works of Mill and Fawcett. An estimate was also attempted of the extent to which political economists have modified their doctrine so as to approach nearer to Mr. Ruskin's views, and also of how far the course of events has justified Mr. Ruskin in his opposition to theories commonly held. An opinion was hazarded that this had come to pass to a rather remarkable extent.—A discussion followed, in which Messrs. Williams, Hewitt, West, Peartree, and the chairman took part.

ARISTOTELIAN SOCIETY.—(Monday, April 20.)

SHADWORTH HODGSON, Esq., president, in the chair.—Mr. B. Hollander read a paper on "Comte's Analysis of the Human Faculties." Auguste Comte's guide to the analysis of the human faculties was Gall, with whom he agreed as to the futility of metaphysical speculations, and whose discoveries regarding the relation between brain and mind, that the cortex is the seat of all mental and moral activity, that distinct kinds of physical operations are carried on in distinct parts of the cerebral hemispheres, facts which were denied as recently as twenty years ago, he accepted without reserve. Regarding the analysis of the faculties and their localisation, there are, however, differences between the two; and little justice is done by Comte to the founder of cerebral physiology. He was probably influenced by the futile experiments of Flourens, for he declared that anatomy and physiology are of little aid to the discovery of the fundamental faculties, but that a study of human progress as a whole, that is of sociology, is necessary for this purpose. Sociology, the lecturer observed, may certainly throw some light on the question, but the author of the Positive Philosophy has gone too far in attempting by a method of pure reasoning, without the aid of observation or experiment, to localise the faculties in definite regions of the brain; and he proceeded to demonstrate in detail the errors into which Comte has fallen. While acknowledging his courage in attempting to solve the problem of the analysis of the human mind and its connexion with the brain, which may be said to be the greatest problem of the twentieth century, the lecturer argued that the result was far from what Comte himself called "positive."—The paper was followed by a discussion.

FINE ART.

THE TEACHING OF INDUSTRIAL ART IN ENGLAND.

Rapport sur les Musées et les Ecoles d'Art Industriel en Angleterre. Par M. Marius Vachon. (Paris: Imprimerie Nationale.)

M. MARIUS VACHON's missions to the different countries of Europe in order to report to the French Government on their systems of art instruction have apparently now terminated. In his last report he reviews the Museums and Schools of Art in England, and sums up the result of his inquiries in Germany, Austria, Belgium, Holland, Switzerland, Italy, Russia, Denmark, Sweden, Norway, and England.

We may, on the whole, congratulate ourselves upon the verdict of so competent and im-

partial an observer. He approves generally of our system; of its principle of self-support or partial self-support, as against gratuitous teaching; of the interference by the Government in the provincial schools being limited to the annual competitions; and even, if we mistake him not, of the grant of subventions "by results." He recognises the great progress in artistic design that has been made in England during recent years, and he appreciates the freedom and individuality of our architecture. It is still more gratifying to find how firmly he is convinced of our determination to maintain the credit of our manufactures, in spite of the superior cheapness of German work and the good taste of French. This determination he finds not only in the metropolis and large cities, but spread throughout the land. If this be a truly trustworthy opinion, he may well recommend his own countrymen to watch us and to renew their exertions, for Englishmen are not easily deterred from a purpose which they have thoroughly at heart.

Without indulging in anything like "Jingoism" in relation to English art, whether or not "applied to industry," as the favourite phrase has it, there can be no doubt that, if we have been slow and late in production, we have never been lax in our appreciation of works of art. If we have not produced, we have at all times imported and bought; and our country is a museum of the finest art treasures in the world. Nor in the matter of production have we been altogether so slack as we, with our usual self-depreciation, are wont to think. Our work has of its kind been excellent in many branches of industrial art, and we have always striven against the most important of disadvantages, not climate nor defective taste, but the absence of art education. This has now been supplied, and has already borne visible fruit in the improvement of almost every description of artistic design. The system of South Kensington has been disparaged, and it is indeed far from perfect; but it has done excellent work, and those who would destroy its admirable organisation are the most short-sighted of advisers. According to M. Vachon, its operation does not tend to centralisation; and he avers, on the authority of Mr. Sparkes, that, in awarding grants to the different local schools, every encouragement is given to the development of local originality. If this really be the case, it should be more widely known, as there is certainly a strong contrary opinion prevalent, which finds forcible expression where artists most do congregate.

But, even if the "system" is as bad as its enemies declare it to be, it is not past mending. More judgment as to payment by results; more regard to the relation between design and material; and, wherever possible, practical as well as theoretical instruction, not only for advanced students but beginners—and the "system" would need little further improvement. If we are really to have a true growth of national art among us, every opportunity should be given to the development of local idiosyncrasy, and nothing in the nature of a true art-spirit can be evoked unless students are at the earliest possible moment taught to think in the material in which the design

is to be executed. It is not, of course, to be expected that the State should provide workshops in which the practical execution of every local industry should be taught, but this could be done by the municipal authorities or by the manufacturers themselves; and it is by the association of the great State machine with such local efforts that the best results may be expected. Such an atelier in connexion with the manufacture of jewelry at Birmingham has already been instituted; and if, as M. Vachon thinks, Englishmen are in earnest in this matter, the example will be generally followed in all great centres of art industry—and the "English Renaissance" will become something more than an "aesthetic movement."

COSMO MONKHOUSE.

THE NEW ENGLISH ART CLUB.

THE New English Art Club is more Impressionist than before—in this sense, at least, that it has very few exhibitors who are not of the Impressionist school. It is to be noted, however, that at least one portrait which may receive, and not unworthily, the often doubtful tribute of popularity, belongs expressly to another school, and is, as has been said elsewhere, to some extent the result of a steady gazing at Holbein rather than at Velasquez. We refer to Miss Cecilia Harrison's portrait of Mr. Somervell (No. 75)—a very charming little work, with far more interest than belongs generally to contemporary portraiture. Mr. George Thomson's "Skating Rink" (No. 4) illustrates exactly the kind of subject to which Impressionist art most rightly addresses itself. By its veracity of movement is quickly caught. "Prima Ballerina Assoluta" (No. 15)—a bared stage and the one *danseuse*—by Mr. P. Wilson Steer, is another ease in point. The work is possibly audacious, but it is certainly interesting. In another kind, as to subject, and represented in somewhat violent perspective, is the portrait of Mrs. Cyprian Williams—by Mr. Steer likewise. It is attractive in the intensity of its realism; and this sense of realism would not have been secured but by the exercise not alone of clear observation, but of technical merit. Blanche—who may be known to some of our readers as one of the true masters of pastel—has a very characteristic portrait of Miss Pash; Mr. Ludovici, the younger, puts plenty of character into his abstract and brief chronicle of a certain Mr. Coulon, who, if we mistake not, is great in the world of *La Danse*. The "Brighton" of Mr. Roussel (No. 20) again illustrates that capacity so dear to the Impressionists, and possessed by them so much, of recording the aspect of the passing crowd. Mr. Roussel sees his subject with refinement and presents it with vivacity. "Old and New Battersea Bridge" (No. 30), by Mr. Sidney Starr, is one of the most poetic and interesting of the many pictures that have been painted of Thames subjects from the days of Samuel Scott—a minute chronicler indeed—to those of Mr. Whistler. Mr. Arthur Tomson's "The Regent's Canal" (No. 46) is as refined as any of his previous performances, and probably stronger. Mr. Bernhard Sickert is at his best in the by no means easy subject—"A View of Chatham from Rochester Old Pier." Mr. Harry Tuke gets truth of action in "Reefing the Main-sail: a Sketch at Sea." Mr. Walter Sickert's principal and most characteristic contribution is a lively vision of his favourite Dieppe. Mr. Francis Bate sends work that should be noticed, and so does Mr. Moffat Lindner. Mr. Edward Stott displays the instincts of a colourist. Mr. Paul Maitland knows how to

interest us in the illumination of the Hollywood Arms—where are they? curiosity prompts us to demand—by the brilliant "Sugg" gas-lamp. Mr. J. J. Shannon sends picturesquely conceived sketches in portraiture; and the best still-life piece—"Impressionistic" only in the larger sense, for Chardin might almost have signed it—is Mr. Otto Scholderer's "Oysters," in which the amiable bivalves are fitly accompanied by exactly the right quantity of amber Barsac. This picture, so to say, is an altar-piece for the dining-room; its place is very near the sideboard.

CORRESPONDENCE.

THE GRAVE OF ARISTOTLE.

King's College, Cambridge: April 23, 1891.

The letter which I sent to the *New York Nation*, quoted in the *ACADEMY* of April 18, was written just before the conclusion of the excavations at Eretria. I was chiefly actuated by the desire not to overstate the case, and to wait for future light before announcing to the public a discovery of such great interest and importance as the finding of the grave of Aristotle. This will account for the somewhat negative character of my letter.

But I have come more and more to the conclusion that the probabilities speak in favour of the tomb at Eretria being that of the great philosopher. I am still engaged in sifting the evidence; and, when this is done, I shall make free to write to you again.

CHARLES WALDSTEIN.

NOTES ON ART AND ARCHAEOLOGY.

THE one hundred and twenty-third exhibition of the Royal Academy of Arts will open, as usual, on the first Monday in May. The private view is fixed for Friday next, May 1.

THE exhibitions to open next week include: (1) a third series of water-colour drawings by Mrs. Allingham, at the Fine Art Society's; (2) "Views about Plymouth" and other drawings by Mr. Jules Lessore, at Messrs. Buck & Reid's; (3) M. Edouard Detaille's famous picture entitled "Vive l'Empereur," at the Goupil Gallery; (4) a collection of water-colour drawings by Mme. de L'Aubinière, comprising "A Day in Shakspeare's Land," and scenes in France, Italy, &c., at the Modern Gallery; and (5) Messrs. Hollender & Cremetti's summer exhibition of oil paintings, together with a collection of Dutch water-colours, at the Hanover Gallery. All of these are in New Bond-street.

MR. RUDOLPH BLIND's new picture, "The World's Desire," will be on view at Stacey's Gallery in Old Bond-street next week. It is a large canvas, and ambitious beyond any previous attempt of the artist. "The World's Desire" is, of course, "Das Ewig Weibliche," personified in the central figure, a graceful nude, with auburn hair, whose somewhat slender veil has been lifted from her, on the left by Eros, a charming study, and on the right by little floating "loves." On a lower level, in the foreground, is a series of striking figures—sage, soldier, poet, lover, and priest—the first three gazing on Beauty personified, the priest attempting to persuade the young lover to more serious thoughts. There is much force shown in the treatment of these, and the whole composition is original and powerful.

THE fourth spring series of the practical lectures of the Guild and School of Handicraft will be opened on Wednesday, May 6, by Prof. Herkomer, with "A Technical Talk." Other lectures will be given by Mr. H. L. Rathbone (of Liverpool) on "Hammered Hollow Ware";

by Mr. G. Thomson (of Huddersfield) on "The Industrial Partnership of Woodhouse Mills"; by Mr. Francis Inigo Thomas on "The Relation of the Architect to the Handicrafts"; and by Mr. G. F. Newberry (of Glasgow) on "Impressionism and Design." The lectures will be delivered at the new workshop of the guild, Essex House, Mile End-road.

WE are informed that the lectures given by Mr. Frederick Wedmore last season upon Turner, Meryon, and the Revival of Etching, are likely to be repeated in two or three principal cities during next autumn.

MR. HENRY SCHEU, of 263 Strand, has sent us an artist's proof of an engraving on wood, done by himself, of a large drawing of Mr. Walter Crane's, entitled "The Triumph of Labour," which is dedicated to the workers of the world on the occasion of their celebration of May 1 as an international holiday of labour. It is a fine design, finely engraved, though there is something to complain of in the joining of the wood-blocks.

WE quote the following from *The Times* of April 22:

"The discovery of Roman remains in Lincoln proves to be of greater importance than was at first supposed. The group of two insculpting columns discovered last Thursday is not the termination of the facade, as was anticipated. At a distance of 18ft. 6in. another similar double column has been unearthed, succeeded by three bases in the same line. Yesterday morning the workmen laid bare another double column of larger dimensions. It is possible that further discoveries will be made as the excavations proceed southwards. A deputation from the Society of Antiquaries (including Mr. St. John Hope, the assistant secretary, and Mr. G. E. Fox) will visit the excavations to-day. Though it is impossible to allow these interesting evidences of the magnificence of the Roman city of Lincoln to remain open, being in one of the main thoroughfares of the city, careful drawings and measurements of them are being taken, and they are being laid down to scale on a plan."

THE STAGE.

TWO PLAYS.

WERE it not for the excellent performances of Miss Robins and Miss Marion Lea—and the quite clever performances of Mr. Sugden, Mr. Scott Buist, and Mr. Elwood—I should pass by without a word of comment the dull and ugly play which has been put upon the stage for a few mornings this week at the Vaudeville, and of which we shall see no more. "Hedda Gabler" does not address itself to the cultivated layman—to the man or woman who at the theatre asks to be amused with brilliant comedy or touched by noble pathos—it addresses itself, presumably, to the student of mental disease, more especially of moral insanity; and he, of course, as a scientific person, finds insufficient and unsatisfactory the study in which the dramatist has forsaken his proper function to fulfil, but ineffectually, somebody else's. Of "Hedda Gabler"—less putrid indeed than "Ghosts," less hopelessly enigmatical than "Rosmersholm," less simply nonsensical than the "Doll's House," and yet quite morbid, quite mysterious, and quite silly—of "Hedda Gabler," not one other word. One word of recognition, however, alike of the mistaken courage and of the interesting art which the two actress-manageresses brought to bear

upon the performance. Miss Robins powerfully enough represented Hedda Gabler as what she is: not a woman, but a thing; a beast degraded from womanhood; half an idiot, and very much of a devil. Miss Lea, by a performance full of simple pathos, made us believe, so far as it was possible to believe, in the reality of that almost impossible person, young Mrs. Elvsted. If with material so inevitably repulsive or ridiculous these interesting actresses could do so much, what might they not accomplish if they brought their efforts again within the lines proper to literature—within the field which offers itself generally to people of sense and of taste!

The latest and not least important production of Mr. Wilson Barrett's season, at the New Olympic, is that of "The Acrobat," which was done on Tuesday, and which is a revival, practically, of the long familiar melodrama of "Belphegor." "Belphegor," associated with the triumphs of more than one actor of eminence, belonged to a period in our dramatic history when we were much more naïve than we are at present—when we accepted without question romances as to which we should now be sceptical. If the piece were written wholly afresh to-day, it would be fortified by a treatment of incident more detailed and less theatrical. If, in a generation that is not willing to accept anyone as wholly good, yet too tolerant to believe that anyone is wholly evil, the villain were permitted to be a scoundrel as unadulterated, he would have at least to justify his existence by the display of much greater ingenuity and shrewdness than any of which he gives sign in "Belphegor." And as it is a little difficult to credit the rogue's somewhat easy successes, it is difficult likewise to take quite seriously the hero's troubles, when, by a stratagem, his wife is wrenched from him, and he is left a bereaved husband, an ideal father, and an acrobat who, had his lot but been cast in happier times, would have made the fortune of a transpontine music-hall.

But difficult as the story is to accept, the acting of the principal part is at the Olympic so excellent that the obstacle is in a measure overcome. Mr. Wilson Barrett has never played with more earnestness, and never with greater resource. From the first moment of his entry in his travelling waggone—with the child, slim and graceful beside him, with Mr. George Barrett beating the big drum, and with Belphegor's wife, Miss Emery, sitting sad and sweet and an ornament of the show—to the time when, his troubles over, he is accepted in society and re-united to his wife, Mr. Wilson Barrett does not fail to be picturesque and forcible. Nay, he is more—he is convincing. Over and over again there are fine stage pictures to which his art and presence contribute so much. Hearty and jolly as the acrobat in public, he is tender and solicitous as the acrobat at home. It is some time since I have seen a bit of pantomime more significant than the scene at the supper table, at which, in presence of the ever noisy Flip-Flap, and of the child of the handsome neighbour, Belphegor becomes cognisant of the sadness of Madeline. The apprehension on the one face, the pathos on the

other; and between them, on the part of the others, the clowning and the gaiety. Again, the scene in Mademoiselle Flora's garden, where (in a passage from which it may be that Mr. Gilbert took a hint when he constructed his one-act piece for Miss Anderson, and to which even "Dr. Marigold" may owe something) Belphegor promises to make the spectators laugh when the tears of a real sorrow are in his eyes, is, to say the very least of it, remarkable and poignant, and it is played by Mr. Barrett with such fervour and skill that he carries all before him. Miss Winifred Emery brings to the colourless yet of course not unsympathetic part of Madeline, her peculiar charm of womanliness and refinement. And, unlike certain other rôles that she has assumed, the part does not tax her beyond her strength. It exacts from her nothing that she cannot perform. The villain, though his machinations bid fair to be successful, is, as a stage personage, insignificant. He wants characterisation, and the signs of vitality. He is a part of certain rusty and old-fashioned machinery—that and nothing more. Miss Hanbury plays very prettily a more or less treacherous but repentant neighbour of the humble Bohemians. Miss Lillie Belmore, as a greater person, acts with authority and geniality. Mr. George Barrett's part is performed quaintly; and the child, Edie King, goes far to reconcile one to the generally unwelcome appearance of such young things upon the stage. May it be chronicled, in addition, that the piece gains by all the pretty dresses "Elita et Compagnie" have made for it, and by appropriate scenery, and by a stately dance?

FREDERICK WEDMORE.

THE "OEDIPUS REX" AT UTRECHT.

Ghent, Belgium: April 20, 1891.

A MOST interesting performance of Sophocles' masterpiece was given at Utrecht on Saturday, April 11, and repeated during the following week. All the parts, with the exception of one or two choristers, were taken by undergraduates. On the first day several cabinet ministers, beside the majority of the curators and senate of the university, were present; while many art critics, professors, and others interested in such performances—all but unique as yet in Holland—had come from afar to witness it.

Unlike the revivals of Greek plays in England, the text chosen was in the vernacular—namely, the metrical translation of Prof. van Herwerden. Of the merits of this translation—already apparent in the published text, though we observed how frequently the words as spoken differed *in bonam partem*—suffice it to remark that they are allowed on all hands to be great.

We do not intend to enter into an analysis of the play, nor are we prepared to reconsider the vexed question whether a revival of the ancient drama for the general public would be possible. What we may and must record is the unqualified success of the performance. The actors may fairly claim the credit of having produced something palatable to the *élite* of an academical society. If we lay the greatest stress on their work, it is not because the translation, the music, and the *mise-en-scène* were not excellent in their way. Dr. Van Riemsdijk's merits as a composer were conspicuous, not for the first time, before an appreciative audience, nor is Mr. Mendes da Costa unknown as a thorough

student of the Greek drama and its accessories. But the undergraduates brought little else to their difficult task than an earnest wish to succeed; at least, they had had no previous experience of this sort of acting. We would especially mention the parts of Oedipus and Jokasta (Messrs. Jansen and Royaarts van Scherpenzeel) as those whose rendering struck us as most true, most pathetic.

It is to be hoped that this second in the series of Dutch revivals—the "Antigone" was performed a year or two ago at Amsterdam—will be succeeded from time to time by others, and that the actors and managers may see their way to confer upon others than a Utrecht audience the benefit of this highly intellectual pleasure.

H. LOGEMAN.

STAGE NOTES.

THE next revival at the Lyceum will be "The Corsican Brothers," which is to be given on Tuesday, May 12. The performance will be preceded by Charles Reade's one-act comedy, "Nance Oldfield," with Miss Ellen Terry for the first time in the part of Mrs. Oldfield.

MISS BESSIE BYRNE, the American actress, will appear as "Leah the Forsaken" at a matinee at the Vaudeville on Thursday, May 7, for the benefit of the Women's Trades' Union League.

MR. EDWARD COMPTON will produce in the autumn, at the Opera Comique, a poetical play by Mr. F. Frankfort Moore, entitled "The Queen's Room."

MUSIC.

MUSIC OF THE WEEK.

WAGNER'S "Tannhäuser" was given on Saturday evening at Covent Garden. Mme. Albani as Elisabeth, and M. Maurel as Wolfram, obtained a great success. They were in fact playing familiar parts, and their appearance reminded one of the long interval since this opera has been heard in London. It is indeed strange, considering the popularity of "Lohengrin," that this opera should have been so neglected of late years. Whether it be as fine as "Lohengrin" may be an open question; but surely for the public it is equally, if not more, attractive. The good singing of the chorus deserves mention. The orchestra was under the vigorous direction of Signor Bevignani.

From "Tannhäuser" to "Traviata" is a far cry. The latter work was given on Monday night. Mme. Albani, as Violetta, was in splendid form; she did not spare herself, and acted and sang with immense energy and abandon. M. Maurel, as Germont, sang magnificently, but over-acted. M. Montariol, on the whole, was very good in the part of Alfredo. The house was far from full.

Rigoletto was given on Wednesday evening, with Mme. Albani as Gilda, and M. Maurel in the title-rôle; and both gave great satisfaction. With such accomplished and experienced artists such a result is only natural. There was a fairly good attendance. We notice that "Tannhäuser" and "Lohengrin" are announced for Thursday and Friday, and "Faust" on Saturday. This is perhaps not quite so bad as the "sandwich" arrangement, to which Wagner objected. In writing from London with regard to his "Ring," he said that he did not wish to see it produced at an ordinary theatre between "Martha" and "Le Prophète."

There is not much to say about the third Philharmonic Concert on Thursday, April 16. M. Paderewski gave a brilliant performance of

Saint-Saëns' pianoforte Concerto in C minor; for an encore he played a Chopin valse. The orchestra under the direction of Mr. F. H. Cowen gave a good account of itself in Sterndale Bennett's charming Overture "Paradise and the Peri," and also in Schubert's great Symphony in C. Mr. Iver McKay was the vocalist.

Mr. Frederick Dawson, a new pianist, appeared at Messrs. Hess and Becker's second recital on Saturday. He played Chopin's "Andante Spianato and Polonaise" (Op. 22). He is young and talented; he has a good touch and his execution is wonderfully neat. There was great vigour and character about his playing, and he really shows good promise. He may be somewhat extravagant at times, but this is far better than a tame performance; extravagance can easily be toned down. A feature of the programme was a long, uninteresting Suite of Popper's for two violoncellos, admirably written for the instruments, and admirably interpreted by Signor Piatti and Mr. Beecher. Mr. Hess played some solos with marked effect, and Miss Marguerite Hall may be commended for her careful rendering of an Aria from Handel's "Alexander."

Miss Winifred Robinson gave a concert at Princes' Hall on Wednesday afternoon. She played an "Andante and Rondo Capriccioso," by David, with good technique and more than usual feeling. The programme opened with an interesting Quartet by Svendsen, well rendered by the Misses Winifred and K. Robinson, Miss Gates and Mr. Whitehouse; Miss Mary Davies and Mr. A. Thompson sang with success.

MUSICAL PUBLICATIONS.

Wohltemperirtes Klavier. Von J. S. Bach. Erster u. Zweiter Theil. (Breitkopf & Härtel.) Many editions of this great work have been given to the world, and yet the last word never seems to have been said. In the critical edition of the Bach Gesellschaft, Herr Kroll followed the principal autograph for the first part, and what he considered the best MSS. (there being no complete autograph) for most of the numbers of the second part. Further, in an appendix he gave the various readings of the autographs and principal MSS. and editions. Messrs. Robert Franz and Otto Dresel, the editors of the volumes under notice, have selected from these sources what seems, to quote their words, "best to accord with the composer's intention." For the benefit of readers who may not be conversant with the subject of the autographs and MSS. of the *Wohl. Klavier*, we may mention that of these various readings some are derived directly from Bach, and others, not in his handwriting, may yet have had his sanction; for Bach in his autographs was constantly changing passages, and alterations by word of mouth may have been handed down by pupils.

Students will be interested in comparing this new text with the Bach Gesellschaft edition. Instead of commenting on many readings which show how carefully the choice has been made, we should like to note some which considerably surprise us. The bar interpolated by Schwenke in Prel. 1., Book I., has been retained. We are not aware of any authority for considering it "according to the composer's intention"; and, so far as internal evidence goes,

it seems completely to spoil the effect of the entry of the long dominant pedal two bars later. Then, again, surely the added octaves extending to contra D at the end of Fugue V., Book I., cannot be justified. For a similar reason, the octave at end of Prel. 21, Book I., seems wrong, to say nothing of the fact that the bar itself is in none of the autographs. If, as the editors say, "artistic value" is to be the test, surely the cut given in the "Zürich" autograph might have been adopted in Prel. 20, Book I. The reading of bars 8 and 9 in Prel. 9, Book I., with the A sharp, appears strange after the explanation in favour of A natural given by Kroll in his appendix. In Prel. 12, Book I., the fine reading of bar 21 as given by Forkel would seem to have deserved a place.

These and other points have attracted our attention, and we wish that, at any rate, a few footnotes had been added with respect to certain readings adopted. Robert Franz is a great authority on Bach, and one would have liked to know the reasons for his decision in these passages. The Preludes and Fugues are carefully fingered and phrased; and the parts are frequently arranged in a new manner on the two staves, so as to make clear how they are to be distributed between the two hands. One useful footnote is given to Prel. 13, Book II., explaining the true value of the dotted note. It would, perhaps, have been still better to have given Bach's text in Fugue 5, Book I., and to have inserted the footnote there, thus showing earlier in the volume Bach's peculiar use of the dot.

J. S. SHEDLOCK.

JAMES R. OSGOOD, McILVAINE, & CO.'S ANNOUNCEMENTS.

HORACE WALPOLE: a Memoir. By **AUSTIN DOBSON.** Illustrated by Percy and Léon Moran. EDITION DE LUXE, £3 3s. [Ready.]

A GROUP OF NOBLE DAMES. By **THOMAS HARDY.** Crown 8vo, cloth, 6s. [In May.]

INTENTIONS. By **OSCAR WILDE.** Crown 8vo, cloth, 7s. 6d. [Immediately.]

A NEW ENGLAND NUN, and other Stories. By **MARY E. WILKINS** (Author of "A Humble Romanec, and other Stories"). Crown 8vo, cloth, 6s. [Immediately.]

A LITTLE BOOK OF PROFITABLE TALES. By **EUGENE FIELD.** [Immediately.]
A LITTLE BOOK OF WESTERN VERSE. Crown 8vo, cloth, 5s. per vol.

STRANGERS and WAYFARERS. By **SARAH ORNE JEWETT.** 16mo, cloth, 5s. [Immediately.]

JERRY: a Novel. By **SARAH BARNWELL ELLIOTT.** Crown 8vo, cloth, 6s. [In May.]

RED LETTER STORIES.

THIS is the title of a Series which will contain both Works by contemporary Continental Authors, translations of which have not as yet appeared in this country, and Works by American Authors, to be published here exclusively in this form in the first instance. Among the first volumes will appear:—

THE CRIME of SYLVESTRE BONNARD, Member of the Institute. By ANATOLE FRANCE. | **BALAAM, and other Stories.** By JOEL CHANDLER HARRIS ("Uncle Remus").

THE HOUSE by the MEDLAR-TREE. By GIOVANNI VERGA. | **GALLEGHER, and other Stories.** By RICHARD HARDING DAVIS.

Each volume, cover, 2s. 6d.; cloth, 3s. 6d.

Beginning with the June Number, the European Edition of **HARPER'S MAGAZINE** (hitherto published by Messrs. Sampson Low, Marston, & Co.) will be published by

JAMES R. OSGOOD, McILVAINE, & CO., 45, Albemarle Street, London, W.

SATURDAY, MAY 2, 1891.

No. 991, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The First Crossing of Greenland. By Fridtjof Nansen. Translated from the Norwegian by Hubert Majendie Gepp. In 2 vols. (Longmans.)

It is now more than two years since Dr. Nansen performed the remarkable feat which first brought his name prominently before the world; and as he himself told the story of his adventures to the Royal Geographical Society and the British Association soon after his return to Europe, the main facts have been familiar to the public for some time. The full narrative of the journey is therefore somewhat late, and does not materially add to our previous knowledge, so far, at least, as the crossing of Greenland is concerned. On the other hand, it is peculiarly interesting at the present time—apart from the value which it must always possess as the authentic record of a singularly daring and successful expedition—as an index to the character and capacity of the man who proposes next year to attempt to reach the North Pole by means which, in a different way, are at least as hazardous as the scheme which was so freely criticised in 1887. In that year Dr. Nansen astonished the world in general by calmly announcing his intention of getting as near to the east coast of Greenland as possible, in about 66° N. latitude, on board a Norwegian sealer, crossing with small open boats through or over the stream of ice which drifts southward along the coast and has more than once proved fatal to stout ships, and, having climbed the forbidding mountain barrier between the inhospitable coast and the still more inhospitable interior, to drag sledges, provisions, and instruments to Christianshaab, on the west coast, a distance of about 420 miles across what was generally supposed to be practically an ice continent. Next year he proposes, with serenity unruffled by his Greenland experiences, to reach the New Siberian Islands by way of Behring's Strait, push as far as possible into the ice, and "just go with the current," which, according to his theory, ought to carry him across the Pole to the sea between Spitzbergen and Greenland in the course of two years. The vessel is to be built with sloping sides, so that when nipped by the ice she will "only be raised up and lie safe and sure"; but should she be crushed, he considers there will be "little risk" in deserting her and taking to the ice. It will be remembered that, when the *Tegethoff* was "raised up" in this way, the ice floes accumulated under her until she was high and dry on the top of a miniature ice mountain, like the Ark

on Mount Ararat; and the risk involved in taking to the ice with open boats, and "taking," or being driven, from the edge of the drifting pack to the open sea, is not generally considered a "trifle" by those who have had similar experiences.

It is evident from his book that Dr. Nansen's powers of endurance and perseverance are very great, and that he also possesses a large share of that "calm open-eyed rashness" which the present Professor of Poetry at Oxford regards as the special attribute of "Englishmen born." But it is equally evident that he has not had much experience of ice-navigation, and that on some points he is an "enthusiast," who has been humorously defined as "a person who believes about four times as much as he can prove." His first venture was a brilliant success; and it is within the bounds of possibility that the more formidable undertaking which he now contemplates, although the plan of operations appears to violate some of the first principles laid down by eminent Arctic authorities, may have an equally happy result. But it should not be forgotten that, while nothing succeeds like success, success does not necessarily prove the correctness of the theory which may have led to its achievement; and Dr. Nansen's own account of his adventures and hairbreadth escapes is the best justification of the criticisms and warnings which he now seems to think were unfounded. A man may jump out of window, and reach the ground without breaking his neck; but it does not follow that those who advised him to descend by the staircase were the victims of "absurd hallucinations" (vol. i. p. 14). And since failure, however glorious it may be, has a tendency to injure a cause in the eyes of the public, who naturally do not look very far beneath the surface, it is well to bear in mind, in the true interests of Arctic discovery, that the happy issue of Dr. Nansen's first expedition does not in any way imply the probable success of the next, except in so far as the assurance of bold and resolute leadership is concerned.

Whatever may be thought of Dr. Nansen's theories and hypotheses, his practice must needs command general and unstinted admiration. No one can read his book without being impressed by his earnestness of purpose, and his unaffected cheeriness and good humour. He considers every detail of his equipment as carefully and thoroughly as a certain distinguished Arctic explorer of whom it used to be said that he shaved his lead pencils in order to reduce the weight on his sledge; and he faces extreme cold, hardship, and privation with unfailing courage and equanimity. Both by physical training and by the habit of scientific research, he is specially qualified as an explorer, and his eminently readable book shows that he also possesses considerable literary talent. He gives a full account of everything connected with the expedition, including an extremely interesting chapter on "ski," the Norwegian name for the form of snowshoe in general use among the nations of the old world; an account of previous attempts to explore the inland ice and to reach the east coast of

Greenland; a graphic sketch of the Eskimo; and a summary of the scientific results of the expedition. So that, although the two volumes contain upwards of a thousand pages, about one-third only are devoted to the actual work of the expedition, from the time of its leaving the *Jason* off the east coast to its arrival at Godthaab on the west coast. The whole book is, however, so full of information, and at the same time so bright and entertaining, that even such familiar subjects as Iceland, and the pure and hybrid Eskimo races of East and South Greenland, are invested with a fresh interest, while many portions are of real value. The chapter on equipment, for instance, will be most useful to any future expeditions that may be organised on similar lines; and, as it has now been proved that the difficulties of the journey across the inland ice can be overcome by skill and determination, it is more than likely that attempts will be made, sooner or later, to explore the more northern parts of the country.

Dr. Nansen states that the expedition "owed its origin entirely to the Norwegian sport of 'skiløbning,' or running on 'ski.'" Every member of the party was an experienced "skiløber," and all their "prospects of success were based upon the superiority of 'ski,' in comparison with all other means of locomotion when large tracts of snow have to be traversed." Later on he tells us that "they were an absolute necessity," and that without their help the expedition would "have advanced very little way, and even then died miserably, or have been compelled to return."

"For nineteen days continuously we used our 'ski,' from early morning till late in the evening, and the distance we thus covered was not much less than 240 miles."

So little is known about the sport of "skiløbning" outside the few countries where it is practised, that Dr. Nansen's account of the history and astonishing development of the art of late years will seem little short of marvellous to those who, to quote the author of the old Norse treatise *Kongespeilet*,

"know not the art and cunning whereby boards can be trained to this great speed; who know not that on the mountains there is nothing among things which run upon the face of the earth which can outstrip or escape the pursuit of that man who has boards beneath his feet, even though he be left no whit swifter than other men as soon as he has taken the boards from off his feet."

Though not exactly "boards," in the ordinary sense of the word, "ski" are, in fact, long, narrow strips of wood, eight feet more or less in length, from three to four inches in breadth, and about an inch thick in the centre under the foot, decreasing to about a quarter of an inch at either end. They are curved upwards and pointed in front, and sometimes at both ends, and are attached to the feet by loops and straps. The idea of "sending some strong young Norwegians, who were accustomed to traverse the mountains in the winter on 'ski' in pursuit of game," to explore the interior of Greenland, was started in Denmark so long ago as the year 1728; and several expeditions have actually

been provided with "ski," "but, on the whole, more to their hindrance than their help." The only time they have done good service was in the case of Nordenskiöld's two Lapps in 1883; and, for anything that appears to the contrary on the face of his narrative, it still seems open to question whether Dr. Nansen himself might not have achieved equal results without their aid. In Nordenskiöld's case the two Lapps were the only "ski" runners of the party; but Ravna and Balto, the two Lapps who accompanied Dr. Nansen, were found to be "of no particular use," as far as the accomplishments which he expected to find in them were concerned, "and, as a matter of fact, they were never used for reconnoitring purposes." They were, however, a source of constant amusement to the four Norwegian members of the expedition, and had a habit of reading the New Testament and forming resolutions to lead better lives whenever danger threatened.

Dr. Nansen's reason for landing on the east coast was that it left "no choice of routes, 'forward' being the only word"; and having thus burnt their ships behind them, they would need no urging to induce them to reach the inhabited west coast. The landing, however, proved to be the most difficult part of the undertaking; for, as the sealing vessel which took them to the edge of the ice belt was not entirely at their disposal, they had to force their way through ten or twelve miles of drifting floes, and were swept about 250 miles southward of the place where they wished to begin their overland journey. After twenty-four days of hard, dangerous, and sometimes apparently hopeless work, they at last reached a place called Umivik, in about 64° 20' N. lat., and started for Christianshaab. But by that time it was late in the season; and they soon found the snow so soft, the going so heavy, and the weather so bad, that they were forced to take a westerly course towards Godthaab. After forty-six days' travelling, passing two weeks together at an altitude of more than 8000 feet, and enduring the most intense cold, they reached Ameralikfjord, on the west coast, on the 26th of September, 1888, just too late to catch the last vessel of the season sailing for Denmark. The distance passed over the inland ice was about 260 miles.

The chief and, indeed, the only feature of the scenery in the interior was its absolute monotony. The travellers "saw only three things, snow, sun, and themselves"; but sometimes they encountered snowstorms, and then they saw nothing but drifting snow. One day, September 8, they were obliged to remain in their tent, while it was nearly torn to pieces by the storm; and they often had to dig themselves out in the mornings and hunt for their sledges, which were completely buried. Washing, under such conditions, was of course entirely out of the question, and they suffered severely from cold, thirst, and want of fatty food. Not the least adventurous part of the journey was Dr. Nansen's voyage of fifty miles from Ameralikfjord to Godthaab in a boat made of willow boughs, bamboo rods, and the canvas floor of the tent—a frail and

leaky craft, which, judging by the illustrations (pp. 147 and 162, vol. ii.), was well described by the Eskimo as "half a boat." On October 12, however, the whole party were gathered at Godthaab, and soon became reconciled to the idea of spending the winter there. They lived much with the Eskimo, studied their methods of hunting and seal-catching, became expert *kayakers*, and learnt "to appreciate such dainties as raw blubber, raw halibut skin, frozen crowberries mixed with rancid butter, and so on." Indeed, this remarkable adaptability to circumstances was one of the secrets of their success. They had made up their minds from the outset to "scorn delights and live laborious days," and their diet was of more than Spartan simplicity. Spirits were strictly tabooed, and, during the crossing, the unfortunate smokers of the party were allowed only one pipe "on Sundays and other specially solemn occasions." Raw pony was considered "a nourishing and wholesome dish"; but the Lapps, like "other unenlightened folk," preferred tinned beef, and maintained that "none but heathens and beasts of the field would eat raw meat." Moralising on this strange perversity, Dr. Nansen remarks—"How common it is to see things in this life turned completely upside down by prejudice."

In considering the scientific results of the expedition, it must be remembered that the party were pioneers, and that their first business was to cross Greenland. Their main energies had therefore to be devoted to their advance and personal safety, and all that they "could do in the way of scientific observation was no more than was compatible with rapid progress." Dr. Nansen has, however, proved that, at least in the southern part of Greenland, the inland ice stretches in an unbroken sheet over the entire face of the country, not even a "nunatak" projecting from the monotonous plateau, except near the edges. "The ice-sheet rises comparatively abruptly from the sea on both sides, but more especially on the east coast, while its central position is tolerably flat." The mass thus presents the form of a shield, with its highest point nearer the east side than the west. As yet we have no data to show how far north the ice-sheet extends continuously; but it is in any case quite sufficiently large to allow us to study the various phenomena and conditions connected with a glacial period, and to show the actual working of forces whose results are so plainly visible in the northern and central parts of Europe. Thus, as Nordenskiöld puts it, a journey across the country "affords as much interest to the geologist as an archaeologist would find if he had the opportunity of exploring a fully preserved settlement from the age of lake-dwellings." The number of crevasses was surprisingly small, though several of the party narrowly escaped being entombed by them, and of surface rivers there were practically none.

Geologists will probably be a good deal exercised by some of Dr. Nansen's opinions and theories with regard to ice-action, and it would be interesting to know why he considers red veils preferable to blue or green

as a protection from snow-blindness. His altitudes and temperatures are also somewhat questionable. He tells us in the appendix that the highest point reached was 8,970 feet; but the narrative is contradictory on this point, and it appears that the highest altitudes were determined by means of aneroid barometers which were at the end of their graduated range at a height of 7,930 feet (p. 58, vol. ii.). The thermometers were also unequal to the occasion, as the cold experienced was far beyond all expectations, and the sling thermometers only read as low as -22° Fahr. The lowest temperature could not therefore "be determined with accuracy" (p. 58, vol. ii.); but on the night of September 11 Dr. Nansen put a minimum thermometer under his pillow, and "in the morning the spirit was a good way below the scale, which marked -35° Fahr."—and this was in the tent, in which six men were sleeping, and in which they had cooked their food with the spirit-lamp. As Dr. Nansen mentions (p. 67, vol. i.) that the mercury used for the artificial horizon "never froze at mid-day," we may infer that it did freeze at night; and Prof. Mohn has calculated that the lowest records "probably" reached "something like -50° Fahr.," which is beyond all comparison the lowest temperature ever observed in the month of September. Considering the limited means at his disposal, and the difficulty of taking observations at all on such a journey, Dr. Nansen has every reason to be proud of the results obtained; and, as he modestly observes, his experiences "will enable future expeditions to manage their affairs better, and to go more leisurely and systematically to work."

The volumes are well and profusely illustrated, there are some useful maps and sections, and the translation leaves nothing to be desired. Altogether, the book is worthy of the memorable achievement which it chronicles, and both will take an honourable place in the records of Arctic exploration. Apart from the intrinsic merit and value of his work, all who have the cause of geographical discovery at heart will be grateful to Dr. Nansen for having done so much to take away the reproach which certain recent events have so unhappily brought upon it. We can "close this book" with a comfortable feeling of security that there are no discreditable, or even unpleasant, "revelations" to follow.

G. T. TEMPLE.

The Sisters' Tragedy, with other Poems. By Thomas Bailey Aldrich. (Macmillan.)

THIS gift from an American poet to English poetry is charming for its daintiness, and welcome for its intrinsic worth. Mr. Aldrich is not a stranger to English readers, who long since learnt to prize the peculiar excellence of his verse. It has a refinement of form, a delicacy and grace of style, which belong to no common type and are entirely its own. There is perhaps no living poet, either in England or in America, who has greater skill in the handling of our not too mellifluous language. He can make it express whatever he wishes to convey in it,

with a softness and elegance as marked as those qualities in the languages of Southern Europe, or with a terseness and epigrammatic force of which they are not capable. His genius has its limitations, of course. He does not attempt great subjects, or any that demand—to borrow an illustration from a sister art—a broad canvas. His poems are cabinet pictures. But just as the accomplished painter of cabinet pictures achieves results upon a small scale which are often more beautiful and effective than those obtained upon a larger one, so Mr. Aldrich compresses into a few pages matter which another writer might have elaborated, with far less effect, over many. The reader is not conscious of any compression. He misses nothing; there is indeed nothing absent that could have contributed to the completeness of the picture. Colour, atmosphere, story, essential details, all are there. What is not there is only that which would have been valueless if it had been present—the padding and subordinate filling-up which a big canvas makes necessary. The poem which gives its title to this volume is less than a hundred lines in length, but within that narrow compass is told the tragedy of two loves by which two lives were darkened.

“Two sisters loved one man”;

to one of them he was married, but her passion for him was not returned. The other he really loved, but her passion for him was dissembled and hidden. When he was dead the sisters told each other the grim truth they had each before kept secret:

“each to each

Unveiled her soul with sobs and broken speech.
Both still were young, in life's rich summer yet;
And one was dark, with tints of violet
In hair and eyes, and one was blond as she
Who rose—a second daybreak—from the sea,
Gold-tressed and azure-eyed. In that lone place,
Like dusk and dawn, they sat there face to face.”

The passage quoted is a fair example of Mr. Aldrich's skill in suggested portraiture. Half a dozen lines suffice, if not to present to us the actual faces of the women, yet to enable us to realise their dark and fair beauty as completely as though we saw it. The “tints of violet in hair and eyes” are both a lovely image and a piece of accurate description; the phrase “gold-tressed and azure-eyed” may sound a little hackneyed, but it is raised from the commonplace by the allusion to Venus; while the pithy pictorial character of the last line—

“Like dusk and dawn, they sat there face to face”—
is inimitable.

Mr. Aldrich can tell a powerful story with as little waste of materials as is observable in his pictures. Witness this bit of reflection in the Tuileries gardens:

“A spot to dream in, love in, waste one's hours!
Temples and palaces, and gilded towers,
And fairy terraces!—and yet, and yet
Here in her woe came Marie Antoinette,
Came sweet Corday, Du Barry with shrill cry,
Not learning from her betters how to die!
Here, while the Nations watched with bated
breath,
Was held the saturnalia of Red Death!
For where that thin Egyptian shaft uplifts
Its point to catch the dawn's and sunset's drifts
Of various gold, the busy Headsman stood . . .
Place de la Concorde—no, the Place of Blood!”

Another passage from the same poem—“The Last Caesar”—will show Mr. Aldrich's power of terse epigrammatic expression:

“How little lasts in this brave world below!
Love dies; hate cools; the Cæsars come and go;
Gaunt Hunger fattens, and the weak grow strong.
Even Republics are not here for long!”

Two of the most striking poems in this volume are dramatic in form; and though one would not say that Mr. Aldrich's genius has much of the dramatic quality, he has yet given to the characters and incidents in these poems a true vividness. In one of them there are two characters only: one a Count Sergius, the other a lady masked (it is at a ball), whom he supposes to be the Pauline he wants to marry but cannot, while she is really the high-born Nastasia to whom he is pledged. The situation admits of bold treatment, and such it receives. The other drama—for it is of importance enough to be so-called—deals with a Franco-Spanish subject, and abounds in fine touches.

But it must be admitted that Mr. Aldrich succeeds best in lyric verse. One would imagine that he does not take life too seriously. All the charm of it, all the love and joy and beauty of it, serve him for the matter of his songs; and it is in this strain that he sings most happily—

“I'll not confer with Sorrow
Till to-morrow;
But Joy shall have her way
This very day.

“Ho, eglantine and cresses
For her tresses!—
Let Care, the beggar, wait
Outside the gate.

“Tears if you will—but after
Mirth and laughter:
Then, folded hands on breast
And endless rest.”

GEORGE COTTERELL.

Faith and Unfaith, and other Essays. By C. Kegan Paul. (Kegan Paul & Co.)

A SERVITE father lately gave from his pulpit the following exhortation:

“My children, if the Devil ever tempts you to think yourselves very superior persons, and to give good advice to poor sinners, who would be much better without it, say an *Ave Mary*, that you may have the grace to keep quiet.”

This excellent warning might well be applied to men of letters, in their critical capacity. The present age swarms with superior persons, enamoured of their own virtues, and ever set upon preaching the way of salvation in literature to poor simple folk, who are merely worried by fine theories and subtle expositions. There lives and writes among us but one critic who has the right to speak with authority; who by his great scholarship, his unflinching taste, and his complete mastery of style, may command our attention. That critic is Mr. Pater. Beside him, there is no one of supreme power; able writers there are, learned and weighty, graceful and attractive, but not invested with plenary rights. It is not that we look with favour upon a monopoly in good criticism; but if truth will out, that is the truth. And sometimes, wearied and confounded by the hubbub of voices, all confident and clamorous, the simple reader longs to for-

swear the reading of all books but the great classics of the world. Yet we cannot always live at that great height; the immortals cannot be our constant companions, because we are unequal to them. Who could read Milton at odd moments? Milton, before reading whom, said Lamb, there should be “a solemn service of music.” And so, to take Congreve's phrase, we “refine upon our pleasures”: and, instead of reading the great classics, we sometimes like to read wise and pleasant things about them. But, unless the critic be himself a man of great genius, we resent his patronage of the great; and when clever writers chatter to us about the profound insight of the New Criticism, with all its show of scientific method, we innocently wonder whether, in the opinion of these gentlemen, the great classics exist only to be classified. Reverence, courtesy, gentleness, are the becoming virtues of all who write upon the great achievements of literature.

It is because criticism in this age has become thus arrogant and thus tedious, that we welcome the more heartily such a book as this collection of essays by Mr. Kegan Paul. It is sane, and it is simple; and how ill-used many an essayist would consider himself upon receiving that praise! For, whereas sanity and simplicity were once counted for good gifts, in these days an obscure and unwholesome manner is preferred: to be sensible is to be inartistic, and to cultivate sobriety is to hinder beauty. Could but an Horace or a Pope, a Quintilian or a Dr. Johnson, come among us, and visit our affectations with the scourge of his wit! Failing that, the best thing is to cherish those books which quietly and pleasantly put before us the forgotten virtues of sound reason and of common sense. Mr. Kegan Paul has here gathered together seven essays from among his contributions to various magazines. Four of them, “Faith and Unfaith,” “Thomas à Kempis,” “Pascal's Pensées,” and “The Story of Jean Calas,” deal with matters of religious sentiment; the rest, upon “What we know of Shakspeare,” “The Production and Life of Books,” and “On English Prose Style,” deal with literary things. These are somewhat varied topics; but the careful reader will assent to the writer's claim when he says:

“To myself there appears a spiritual affinity in most of them, in that they were the outcome of doubts and difficulties now at rest. It has seemed right, however few the matter may concern, that since the record of inward strife was given to the world, the same essays should be published with trilling necessary changes, showing that the strife is over, and with the intimation that, if I have been in error in what I have said concerning any of the church's doctrines, I submit in this, as in all things, to her teaching.” The book has, therefore, this especial interest: that it is the work of one who has handled the great records of spiritual life and history in the spirit of inquiring Liberalism, and who has found an answer in the august doctrines of Catholic Christianity.

“Plurima quæsi: per singula quæque ecurri:
Nec quidquam inveni melius quam credere Christo.”

Now the signal merit of the first essay, “Faith and Unfaith,” lies in its clear,

broad statement of the facts; it has no patience with elaborate compromise, and nice calculation, and precarious balance. There are certain things in which the mean must be wrong, and one of two extremes must be right. In the question of Faith and Unfaith, the mean is tentative Christianity in all its forms; the extremes are the Catholic and Roman Church, and Positive Science. Probability is, indeed, as Butler and as Newman insist, the guide of life; but probability has its degrees, and a probability which is merely the expression of cowardice, prejudice, or fear, is worth little. The countless sects and heresies of Christendom have just this sort of probability on their side; religious truth, they say, is uncertain, and Rome must be wrong, because to think so is a first principle of common sense; let us scrape together what beliefs we can, and trust in Providence. So, in the hope that what they hold will prove enough for safety, the severed churches and congregations abide in their narrow borders. Mr. Kegan Paul appeals primarily to such believers, showing that from the first premises of faith follow in logical order and in grand procession the whole array of Catholic doctrines. "The first step, I am master not to take"; but, that step taken, the whole journey is undertaken. You may halt here and there, and imagine that you have found a home in some half-way house; none the less, between the complete suspension of judgment and the complete venture of faith, there is no tenable position. This is worked out by Mr. Kegan Paul in detail; and, while there is no question of his strong assurance that truth lies only upon the Catholic side, he shows a generous appreciation of whatever is estimable in the doubts and difficulties of other men. Those who know his earlier volume of *Biographical Sketches* must have admired the cordial sympathy which, with no sacrifice of logic, could discern and respect the various excellences of Catholics, Anglicans, Protestants, Latitudinarians, and Agnostics. In the two essays upon Thomas à Kempis and upon Pascal, there is presented to us a fine contrast between two spiritual characters: the profound peace of cloistral meditation, and the profound faith of a soul long troubled by philosophy and by the world. Quietist and enthusiast! both Thomas and Pascal have something of either spirit; but the one gives us a calm consolation, and the other a consuming ecstasy; and those in modern days, whose minds are restless and ill at ease, can find much to help them in these two teachers *de contemptu Mundi*. In contrast with such unhappy and querulous thinkers as Amiel and his fellow mystics of science, Thomas and Pascal are healthy and practical, for all their withdrawal from the noisy world; for, as St. Bernard said, "Si de fatuis virginibus, congregatio tibi necessaria est: si de prudentibus, tu congregacioni." Wherever the *Imitatio* and the *Pensées* are read, Thomas à Kempis and Pascal have their congregations.

The essay upon "The Story of Jean Calas" naturally induces the reader to compare it with Pattison's essay, written, we imagine, at the same time, and certainly

suggested by the same book: Coquerel's *Etude Historique*. Mr. Kegan Paul's essay is not that which suffers in the comparison; it shows admirably the artistic superiority of moderation to rhetoric. Pattison, for all his learned taste and his severe ideal, never wrote anything perfectly sober in tone; his prejudices, and a strange intellectual irritability, got the better of him. The concluding paragraphs of either essay will illustrate the difference of manner. Pattison writes:

"M. Coquerel ought to know his countrymen better than to think that even demonstrative evidence will procure from Catholic opinion justice for a Protestant. Reasonable and well informed men of course will see the truth. But the mass of Catholics are carefully protected from reason and information. We have little doubt that as long as the Catholic religion shall last, their little manuals of falsified history will continue to repeat that Jean Calas murdered his son because he had become a convert to the Catholic faith."

Mr. Kegan Paul, who no less strongly condemns the cruel bigotry of the outrage, concludes thus:

"I have endeavoured . . . to make more audible, perhaps, to some, the cry, which rises louder and louder from men of all parties and creeds, for toleration and forbearance, greater belief in the virtues of our adversaries, and greater trust in man."

There can be no doubt which of these passages has the greater sweetness and light.

Of the other essays directly concerned with literature that upon English Prose is the most profitable for the present day. It insists upon the necessity of good workmanship in an age tolerant of slovenliness. To take once more a writer so scholarly as Pattison, we find him writing thus in his *Memoirs*:

"Even at this day a country squire or rector on *landing* with his *cub* under his *wing* in Oxford, finds himself much at *sea*, &c."

And of late Mr. Symonds and Mr. Arthur Galton have exposed many similar faults in his style. When so laborious and judicious a writer can so fail, what can be expected of the *canaille écrivante*, of the scribbling herd? Mr. Kegan Paul has no mercy upon technical blunders; good writing must be correct, before all else. He gives excellent advice and useful warning; he points to approved patterns of good work; he dwells upon the patience, care, and simplicity indispensable to success. The account of Shakspeare is itself a fine example of an enthusiasm which is ardent yet perfectly restrained: no German heaviness, no fashionable English rhetoric. Mr. Kegan Paul can read without self-reproach the last words of his own book:

"A great responsibility is laid on those who write, and also on those who read. If we leave the circulating library on one side, and study the acknowledged great writers, in them devoutly read by day, on them meditate by night, so shall the great treasure of speech committed to our charge suffer no diminishing nor loss."

LIONEL JOHNSON.

"GREAT WRITERS."—*Sheridan*. By Lloyd C. Sanders. (Walter Scott.)

MR. SANDERS was at a two-fold disadvantage in writing this monograph. In the first place, any attempt to draw a very accurate portrait of Sheridan is foredoomed to failure, or at least to slight success. Notwithstanding the interest he excited by his wit, his eloquence, his social gifts, his relations with the Prince of Wales, and the contrast shown between his early success and final penury, we are still without anything that can be called a full and authentic record of his career and character. Moore might have produced such a work in his well-known "Life"; but it unfortunately happened that he did not take very kindly to his task, merely glanced at the family correspondence placed at his disposal, often allowed the biographer to be sunk in the partisan, and wrote too soon after the dramatist's death to speak freely upon matters which we should be glad to see completely elucidated. Mrs. Norton, after pointing out many errors in the biography, announced an intention to fill this gap by means of the papers just referred to, but died before she could pen a syllable for the intended book. The second disadvantage under which Mr. Sanders labours is that, in the treatment of the subject on a small scale, he has been forestalled by other able writers, notably by Mr. G. G. Sigmund, who approached it with no little sympathy and insight, and by Mrs. Oliphant, whose volume on Sheridan is not one of the worst in the "Men of Letters" series. His temerity in this case, however, is not ill-justified by the result. If the comparisons he risks are sometimes in his disfavour, it must at least be said that he has given us an attractive little *mélange* of biography and criticism.

Naturally enough, a good deal of space is devoted to Sheridan's achievements as a dramatist, upon which nine-tenths of his fame now depends. For one person who has read the imperfect reports of his speeches against Hastings there are thousands who are well acquainted with the "School for Scandal" and "The Rivals." It is curious to think how little power of invention is shown in any of the plays bearing his name. He was usually content to take his incidents and characters from what he had seen on the stage or read. Mr. Sanders regards these literary thefts as insignificant, but is constrained to make admissions that warrant a somewhat severer view of the matter. It is permissible to doubt whether the "School for Scandal" would have existed at all if Congreve had not written "The Double Dealer." Joseph Surface's relations with Lady Teazle and Maria, as Mr. Sanders points out, are "very similar to those between Maskwell, Lady Touchwood, and Cynthia, though Congreve provides an additional complication by making Lady Touchwood in love with Mellefont, the Charles Surface of the piece, who, it may be noted, has a friend called Careless." The late Mr. Oxenford once told me that an anticipation of the screen-scene occurs in a Spanish comedy which found its way to the Parisian stage in the seventeenth century; but it is needless to look

beyond the *dénouement* of "The Double Dealer" to detect the genesis of this most effective device of theatrical art. Charles and Joseph Surface obviously come from *Tom Jones*, with the addition in the second case of touches borrowed from Malvil in Arthur Murphy's "Know Your Own Mind." For the scandal-scenes Sheridan was indebted to the "Misanthrope," to Wycherley's so-called adaptation of that play, and again to the ever-present "Double Dealer." In his mother's story, *Miss Sidney Biddulph*, there is something analogous to Sir Oliver Surface's return from India in disguise—an incident formerly supposed to have been derived from Regnard's "Retour Imprévu," produced at the Théâtre Français in 1700, or from Fielding's ingenious little adaptation thereof. As for "The Rivals," neither Bob Acres nor Mrs. Malaprop is an original character, the latter being simply an elaboration of Mrs. Tryfort in "A Trip to Bath." Molière supplies the groundwork of "St. Patrick's Day," and "The Critic" is substantially an old idea in an altered form. But all these plagiarisms should not blind us to the fact that in other respects Sheridan's plays have an excellence peculiar to themselves. He usually contrived to improve upon what he appropriated. He was a dramatic milliner of the first order. He brought to his task a combination of qualities separately rare—sparkling wit, fine satirical humour, wide observation of the world about him, and an intuitive perception of the laws of theatrical effect.

For many reasons it would have been better for Sheridan if he had never entered the House of Commons. Regarded as a whole, his political career does him but slight honour. Eloquence was the only gift that he possessed for parliamentary life. He had none of the breadth of vision or the calculating sagacity of the great statesman. His powerful declamations against Hastings show "no appreciation of the necessities of empire." The real character and tendency of the French Revolution entirely escaped his notice. He long occupied the position of a mere party gladiator, of a resolute and acrimonious opponent of anything the ministry might propose. He could even resist Pitt's free-trade measures for Ireland, well aware as he must have been that they were of the highest importance to the welfare of that country. Mr. Sanders goes so far as to think that no real conviction is to be traced in Sheridan's casual advocacy of the cause of reform and abolition, and that his praises of the Revolution were inspired quite as much by faction and party spirit as by any real zeal for liberty. How little his fighting ardour was blended with discretion or political knowledge was shown towards the end of 1788, when, in one of the debates on the Regency Bill, he not only echoed Fox's contention that the Prince of Wales had an inherent right to the government during the King's incapacity—a strange doctrine, as Pitt hastened to point out, to be propounded by a Whig—but warned the House of the danger of provoking his Royal Highness to assert that right. If, as Mr. Sanders suggests, the rivalry between

Sheridan and Burke had become keen enough to make a quarrel between them inevitable, it did not excuse or even palliate the wanton and insulting attack by the former on the latter, so long his friend, in reference to the Revolution—an attack which helped in no inconsiderable degree to break up the great Whig party. Self-respect was not one of Sheridan's strong points, but he never showed less of it than he did in consenting to figure as a sort of henchman to the Prince of Wales, as "a minor actor on the ignoble stage of Carlton House politics." Either from laziness, or want of conviction, or very probably both, his name is unconnected with a single legislative measure, although a thousand evils in those days were calling loudly for redress. Altogether, there is comparatively little in Sheridan's political record to evoke admiration. That little is made up of his prowess as a speaker, an incorruptibility proof against all temptation, and the patriotic part he played on one or two occasions in his declining years.

Mr. Sanders omits to notice one speech by which Sheridan produced a deep impression on the country. In 1810, when the inquiry into the policy and management of the wretched Walcheren expedition came on in the House of Commons, Charles Yorke, at the instance of the government, moved the standing order for the exclusion of strangers, thereby getting rid of the newspaper reporters. Sheridan had already argued against the power of a single member to stifle publicity in this way, and was not sorry, of course, to have an opportunity of returning to the charge. No one who is alive to the power of words can read with indifference what he uttered on this occasion:

"Give me but the liberty of the Press and I will give the Minister a venal House of Peers—I will give him a corrupt and servile House of Commons—I will give him the full swing of the patronage of office—I will give him the whole host of ministerial influence—I will give him all the power that place confers upon him to purchase up submission and overawe resistance; and yet, armed with the liberty of the Press, I will go forth to meet him undismayed; I will attack his mighty edifice with that mightier engine; I will shake down from its height corruption, and bury it amidst the ruin of the abuses it was meant to shelter."

More than one writer has thought that in this speech Sheridan eclipsed all his previous efforts. "The few sentences in which he thrilled the House on the liberty of the press in 1810," writes Brougham in his *Statesmen of the Reign of George III.*, "were worth, perhaps, all his elaborated epigrams and forced flowers on the Begum charge, or all his denunciations of Napoleon." They at least prove that his command of a certain kind of oratory had not diminished with lapse of time.

FREDERICK HAWKINS.

NEW NOVELS.

- The Other Man's Wife.* By John Strange Winter. In 2 vols. (White.)
Her Evil Genius. By F. Boyle. In 3 vols. (Chapman & Hall.)
Guy Merrin. By Brandon Roy. In 3 vols. (Spencer Blackett.)
A Modern Marriage. By the Marquise Clara Lanza. (Heinemann.)
The Slave of his Will. By Lady Florence Cuninghame. (Spencer Blackett.)
The Lost Heiress. By Ernest Glanville. (Chatto & Windus.)
My Brother Basil. By E. Neal. (Edinburgh: Oliphant & Co.)
The Romance of a Lawn Tennis Tournament. By Lady Dunboyne. (Trischler.)
The Type-written Letter. By R. H. Sherard. (Trischler.)

THERE are certain novels which come as a boon and a blessing to the jaded reviewer, worried out of his temper in the effort to mentally gauge, and afterwards describe judicially, the precise merits and defects of that mild mediocrity which is the pervading feature of modern fiction. John Strange Winter's novels belong to the class mentioned. You know in a moment what to expect when you take up one of her books. There will be nothing in it of a profound nature, nothing intensely tragic or morbid or sensational; and—greatest blessing of all—there will be no attempt to illustrate dreary truisms by page after page of shallow philosophy. She is an author whose aim is to amuse rather than to instruct; and within the limits she has set herself the work is undoubtedly well done. The aim is not very exalted; the portraits are, perhaps, even getting a little hackneyed; but the narrative is always natural and entertaining. There is no striking novelty in *The Other Man's Wife*. Neither Major Cosmo Dennis of the 15th Hussars, who behaves in a brutal manner to his wife Ethel, nor Lieutenant Trevor, his junior officer, who is led into a dangerous though not dishonourable intimacy with the latter, who has been his favourite playmate in boyhood, is treated on different lines from the usual run of this author's military characters. Yet there is scarcely a dull page from beginning to end; and the reader's only complaint will be that the ultimate fortunes of some of the subordinate characters, notably the stolid servant, Judge, who makes such charmingly ridiculous love to Ethel's French maid, are passed over in silence.

Mr. Frederick Boyle, who has already appeared more than once in the character of a novelist, is in many respects the complete opposite of the writer whose work we have just noticed. His scenes are by no means limited to garrison towns, many of his characters are decidedly original, and his style is altogether of a more ambitious order. Yet *Her Evil Genius* is not entitled to rank highly as a novel. Perhaps it is the very ambitiousness of the composition—composition is the word which best expresses his writings—that is the author's greatest

stumbling-block. Himself evidently a man of considerable culture and thought, he has unfortunately failed to make his puppets anything more than the reflex presentments of his own individuality, so far, at least, as regards their conversational methods. The words may be nominally the words of Sir Fairfax Garbel, the cynical old diplomatist, of Henry Garbel, his grandson and heir, of Richard and Blanch Plowden, the discontented grandchildren, or of John Oliver, the artist-philosopher; in reality they are the words of Mr. Boyle, as he would have spoken, had he for the moment assumed the character of any one of these personages. We get whole chapters replete with polished epigram and sparkling repartee; but the generality of readers soon weary of conversations kept up at high pressure, and prefer something that makes less demand upon their intelligence. The plot, though rather complicated, is a fairly good one; and Nellie Garbel, a child of nature reared among Indians, who turns out to be a granddaughter of Sir Fairfax, is an ingenious and interesting creation.

Guy Mervin is a book written with a good deal of vigour and dramatic liveliness, and it is not till the first volume is past that the narrative begins to assume a distinctly religious colouring. In itself there is, of course, no reason why the introduction of a pious element should detract from the interest of any novel. If Sir Guy Mervin, a raw and by no means religiously disposed youth of twenty, has the misfortune to fall violently in love with Lady Elaine Monk, his neighbour's wife, it is no doubt satisfactory that an awakening to the knowledge of divine truth should opportunely occur, and give him strength to resist the insidious temptation. Still one would prefer to find some more solid and tangible scheme of belief than is formulated in these pages. The use of such vague expressions as "finding the Saviour," or "reposing in Divine Love," as a comprehensive definition of religion, apart from any detailed creed or any system of practical worship, reduces religion to a mere matter of sentiment and emotion. It is insufficient for the deeper inquirer; it is wholly unsatisfactory as a basis of morals; and, as a matter of experience, it is associated with some of the worst features of revivalism. That Lady Elaine Monk, after being liberated by the death of her brutal husband, and enabled at last to marry Sir Guy Mervin, should fall into a rapid decline and die peacefully in all the bliss of a complete, if rather tardy, conversion, is in keeping with the traditional method of story-writing adopted by authors holding religious views of this sort.

There is a species of pleasantry, beloved of schoolboys and not unpractised by older persons of feeble wit, known as the "sell." Its point consists mainly in absence of point; the fun, such as it is, lies in arousing the interest of your audience by what promises to be a good story, and then disappointing them with some inane anticlimax. *A Modern Marriage* certainly deserves to be ranked as a "sell." Philip Latimer, a plodding literary man, has been married for a year or so to a shallow-natured and vain little

woman, who, becoming tired of poverty and humble surroundings, allows herself to fall an easy victim to the first gentlemanly scoundrel who addresses himself to the task of leading her astray. So far all is well; and the story, pitiful as is its theme, is cleverly managed up to a certain point, and embellished with a number of racy anecdotes, in the best style of the society journalist. It is rather hard, therefore, upon the reader that, when the narrative has reached the point where Philip surprises his wife in the bachelor apartments of Harold Wayne, her lover, and vigorously denounces him, it should suddenly stop short, just when one is most anxious to know how the matter finally ended. However, there is not, perhaps, much lost to the world by the omission.

In *The Slave of his Will*, Iris Winton, a young heiress of great personal beauty, falls under the spell of Ivan Zellanoff, a Russian possessed of dangerous mesmeric powers, and not very scrupulous in his use of them. Ultimately she is married to Jack, son and heir of Lord Enderby; but Zellanoff continues to employ his faculty of fascination, until finally induced to desist. As the rank of a science is now claimed for the phenomena of hypnotism, it must, we suppose, be admitted as a legitimate theme for a novel; but it is a theme which few writers seem able to handle temperately. Lady Cuninghame is not guilty of any particular extravagance in her descriptions; and as she is gifted with a light and lively narrative vein, her book might have deserved a warm recommendation, if she had not chosen so unlucky a subject. We are tired to death of hypnotic novels, and there is so little variety in the phenomena that scarcely any room is left for original treatment.

Although *The Lost Heiress* is a story best suited for boys, there are many older readers who will be interested in Mr. Glanville's narrative of some episodes in the Zulu war, including personal notities of several British officers and Zulu warriors actually engaged in the contest. As regards the construction of the tale, its merely descriptive parts leave nothing to be desired, but the plot would be clearer if the family relationships and antecedents of the leading characters were explained a little more fully. And although the reader is sufficiently prepared in the course of the narrative for the identification of Mary Rath with the lost heiress, there is no satisfactory reason given why she and her father should have been hiding themselves for ten years or more in the wilds of Africa.

When a novel opens with the rescue of an unknown infant from death, and the next scene discloses the same foundling, now grown up to manhood, but still ignorant of his parentage, while at the same time it is incidentally mentioned that the Earl of Otterbourne, whose estate is in the neighbourhood, lacks a direct heir through the supposed loss of an only son in infancy, not much ingenuity is required for guessing the ultimate dénouement. *My Brother Basil* is not a badly conceived story, though the author often writes with that sublime indifference to probability which is common

among lady novelists. Thus, Colonel Hazelford, the wicked heir-presumptive, who uses all his art to prevent the discovery of the real heir, is conveniently sent off at the end of the tale to hide his head in fear and shame, leaving Basil in undisturbed possession. In real life, Colonel Hazelford would only be waiting quietly for the death of Lord Otterbourne to lay claim to the title and estates with every chance of succeeding. There is a gushing amiability and tone of reverent hero-worship about the narrative, which will find great favour among a certain class of readers; and to these the conclusion of the story, which lands hero and heroine in the elysium of the British peerage, will also be an attraction.

Two shilling novelettes from the same publishing firm conclude our list. A good deal of smart business is transacted during the week of gaiety over which the action of *The Romance of a Lawn Tennis Tournament* extends. Within that period a young Irish peer and an elderly English colonel have had time to make the acquaintance of, fall in love with, and propose marriage to, a young lady recommended by her beauty, her manners, and her extraordinary skill in lawn tennis, but unfortunate in possessing a disreputable father and a sister of advanced Bohemian proclivities. The incidents are certainly romantic enough, and the style lively.

The Type-written Letter contains, among other things, the murder of a husband, the condemnation to death of his innocent wife, a sensational reprieve, a broken head, a six weeks' delirium, a second murder, and, finally, the arrest of the authors of all this mischief. From this it will be evident that there is no lack of excitement in the book; and, if probabilities are a little violated here and there, no one will on that account quarrel with an author who keeps us thoroughly well interested by means of ingenious and thrilling narrative.

JOHN BARROW ALLEN.

SOME BOOKS ON GREEK HISTORY.

"HEROES OF THE NATIONS."—*Pericles and the Golden Age of Athens*. By Evelyn Abbott. (Putnam's Sons.) The famous son of Xanthippus makes by his position and talents an excellent centre round which to group a general picture of his town or even of his nation. Such Mr. Watkiss Lloyd found him in his admirable *Age of Pericles*, and so Mr. Abbott has now treated him in a sketch which, though it includes a great deal, is on a smaller scale. That Mr. Abbott does not judge altogether favourably of his hero is, in our opinion, a misfortune; but he writes of him without bitterness, and generally gives his readers means of deciding for themselves. It is true that no serious attempt seems made to justify the first of his two charges against Pericles—"that he destroyed a form of government under which his city attained to the height of her prosperity, and that he plunged her into a hopeless and demoralising war." But as to the second, and as to certain smaller points connected with it, Mr. Abbott is explicit (pp. 200, 248, 262, 359), and argues fairly enough, if not so as to carry conviction. Pericles' hostility to Sparta was, he seems to think, the fatal thing. Yet it would be difficult

to show from our authorities that Pericles had any settled hostility to Sparta. If Sparta would have left Athens alone and abstained from underhand plots against her, Pericles would have been glad to leave Sparta alone. If there was direct hostility anywhere, it was felt against Pericles by Sparta, by the state which demanded the expulsion of the Curse of the Alcmaeonidae. If, again, Pericles' "constant efforts to win the control of the Corinthian Gulf brought on him" (? on Athens) "the bitter hatred of Corinth," we must remember that, if the war had found Athens without any footing on the Gulf, things would have gone much more hardly with her. Mr. Abbott is too good a strategist to have overlooked the value of Sicily to Athens, and Pericles was but doing his duty to the state which trusted itself to him. But, apart from our difference of opinion here, we find everything to praise in Mr. Abbott's book. It is needless to say that it is accurate, and that it is clear. It contains a wonderful variety of topics, and some of the very best of Mr. Abbott's writing is to be found in his remarks on Attic tragedy. The whole volume gives a well-balanced picture of the Golden Age of Athens: the lights and the shades are all there; and one feels that it is the creation of a man long acquainted with all the evidence which bears upon his subject. The manner is wider and more free than in Mr. Abbott's *History of Greece*; there is more amplitude of style and happy boldness in assertion. Too guarded writing, that great danger of learned men, has been avoided; and a judicious use of the language of Herodotus, Thucydides, and Aeschylus strengthens the local colouring. The plates are numerous, often good (as especially those at pp. 72, 96), rarely poor (as at p. 134). The villa Albani, by the way (p. 326), is near Rome, not near Naples.

Griechische Geschichte. Von A. Holm. Dritter Band. (Berlin: Calvary; London: Nutt.) Twenty-nine chapters, as full of matter as an egg is full of meat, here carry the story of Greek affairs down to the deaths of Timoleon and of Alexander the Great. The former, an elderly man, who did useful work, but was studiously moderate in his language about himself, has given rise to little discussion. The latter, young, brilliant, and knowing well how to advertise himself, has exercised countless pens, ancient and modern. But not all have contributed to his good name. Notoriety brings obloquy, and it is a nice question how far an honest historian is bound to mention all that has ever been said against his hero's character. On the one hand, to omit discreditable rumours might be called suppression of facts. On the other, evil may be said of anyone. Mistakes may blacken a character, and there is no limit to the activity of lying tongues. If a historian once print an accusation, readers will believe it, or at least remember it, even when he shows that he can find no foundation for it. Why should he be compelled to repeat what he does not believe, merely because someone once said it? Holm settles the question rightly, as we think, by omitting much personal gossip about Alexander. He is not blind to that prince's faults, but he only notices what is well-attested. Indeed, there is so much matter extant about Alexander that it is quite necessary to make a selection, and, while doing no violence to the record, to bring out most plainly what seems to the historian most true and most weighty. In Holm's picture we miss, without great regret, many familiar details. The drunken tyrant, the knight-errant, the lover of Thalestria, is out of sight. The civilising conqueror has taken his place. But the latter cannot civilise, though he may conquer, without careful adjustment of means to ends. He is more reasonable and less interesting than

a creature of impulse and adventure. But, if Holm has conceived his character of Alexander in plain and sober fashion, that monarch is saved from being prosaic by the greatness of his acts and of their results. He did too much to be commonplace. But, it may be asked, did he mean to do all that he actually brought about? Or did he merely set blind causes at work which Hellenized the Eastern world? Or, as a third possibility, was he merely the tool of his age? We have to ask similar questions about several great men of antiquity, and we can seldom answer them with certainty, because of our want of documents. We have no intimate letters of Alexander, no speeches laying down and justifying a policy. We have little more than a bare statement from outside of what he did. To infer from this what he meant to do is more or less hazardous; and a great living historian has always seemed to us to be on dangerous ground in delivering as sure his subjective reconstruction of Caesar's character and aims. But there are some facts which speak as plainly as documents—though historians often exaggerate their number—and there is evidence of this kind that Alexander fully intended not merely to conquer the Orientals, but also to humanise and civilise them. (See, for instance, Strabo, p. 517, of which passage Holm makes no mention.) A point about Alexander, on which, perhaps, opinion cannot be so firmly made up as on his plans for civilisation, is his attitude towards his own divinity. Did he believe in it? or did he consciously mean to deceive the world and to use his imputed deity as an aid to government, like Lysander or Napoleon I.? Holm chooses the former alternative. He reminds us that Alexander was the son of the superstitious Olympians. He thinks that the priests of Ammon were perhaps serious in their oracle, and that the king might well believe what was affirmed on such authority. But, for ourselves, we should like to unite both points of view. Alexander seems to us more calculating in this matter than Holm makes him. He probably did believe, at least sometimes, in his own godhead—otherwise he would have convinced but few persons; but he was also determined that the part of a god should not suffer by his acting. He had an enthusiastic side, which made him take action on some of his Homeric studies; but he also understood what was expected of a new Dionysus, and he carried it out. In short, he was young, but he was crafty. The town-name Alexandria boldly ranged him along with the deities who gave names to Herakleia, Poseidonia, or Apollonia. We have not space to deal further with the many interesting questions which Holm's new volume raises; but we must say of it, as we said of the earlier ones, that it is excellent. Critical, sober, yet entertaining, it is one of the best histories which have appeared in our time.

Theben. Von E. Fabricius. (Freiburg I.-B.: Mohr; London: Williams & Norgate.) No one of the larger Greek towns has so slight remains of ancient buildings to show as seven-gated Thebes. The lie of the ground does not offer any great help to the modern enquirer, and the allusions of classical writers to Theban topography are generally indefinite and often contradictory. It is, therefore, no wonder that the topography has been a matter of great uncertainty, and Prof. Fabricius has done well to publish the results to which he has been led after a personal inspection of the site. Discontented with the views of Ulrichs (1841) and Forehammer (1854), he has walked over the ground and searched it for remains; and the theories arising in this way he has tested by confronting them with ancient texts. His surest guide seems to have been fragments of well-burnt tiles, glazed on one side, found

apparently not in masses but in lines, and sometimes accompanied by low banks of earth. In these tiles he recognises the coping put on top of walls of sun-dried brick to throw the rain off, and in the banks he finds degraded remains of the brick itself. On these lines then ran the city wall, and he maps the city out as occupying an irregular oblong, longest from east to west. In one place at least his view has been confirmed by the later discovery underground of stone foundations, apparently belonging to a gate tower. So far as one can judge without personal inspection, his outline of the walls seems better substantiated than his identification of sites within their peribolos, though here he has been very ingenious in combination. He is, however, probably right in identifying (with Ulrichs) the Kadmeia with the site of the present town, and in making the south wall of the Kadmeia coincide with the south wall of the city. Thebes had shrunk back into its acropolis, the Kadmeia, in the time of Pausanias; and Arrian's account of the attack of Alexander on the city seems to require but one wall on the south side. Yet it is hard to tell why Pausanias spoke of the rest of Thebes as *ἡ πόλις ἡ κάτω* if it included hills higher than its own acropolis.

Wanderungen auf Klassischem Boden. Von W. Freund. Hefte 1 und 2. (Breslau: Wohlfarth; London: Nutt.) An excellent little reading-book for anyone who wants easy German on an interesting topic, or wishes for a good series of sketches of the fields and seas made famous by Greek victories. The sites dealt with are Marathon, Thermopylae, Salamis, Plataeae, Delphi, and Olympia; and each is illustrated with a plan or views. We strongly recommend Herr Freund's pamphlet to all students of ancient history. He puts the obscure battle of Marathon in the clearest light we have yet seen, and makes it more probable than it appeared before that the Persian cavalry was on board the ships when Miltiades attacked. Miltiades had fairly out-generalled Datis and Artaphernes by appearing, not on the plain of Marathon, but in one of the narrow valleys which lead inland. Here the Persian cavalry could not be used; and, if the Athenians were attacked and defeated, they would not be annihilated, but would merely be pushed further inland. In short, the Athenians could not well be got at; and yet their position enabled them to take the Persians on the right flank, if the Persians marched on Athens by the road. Darius's generals, therefore, having lost all the advantages of the ground, shipped the cavalry and prepared to sail round to Athens. But then this view reduces the battle so much in importance that one does not see why the Persians were afraid to fight again elsewhere on Attic soil. Nor is it perhaps quite likely that the Persian camp was "etwa zwischen dem heutigen Kato Suli und dem Drakonera-Gebirge," for then it would have been planted exactly on the larger marsh.

NOTES AND NEWS.

WE hear that the Hibbert trustees have invited M. James Darmesteter to deliver the annual course of lectures for next year, and that the subject will be "The Religion of the Persians."

THE next volume in the series of "The Queen's Prime Ministers," to be published in May, will be a Life of Mr. Gladstone, written by Mr. George W. E. Russell. It will have for frontispiece a new portrait, reproduced in photogravure.

MESSRS. JAMES R. OSGOOD, McILVAINE, & Co., of Albemarle-street, have this week made their first appearance as London publishers,

Among their announcements are Mr. George Du Maurier's novel, "Peter Ibbetson," illustrated by the author, which will first appear in *Harper's Magazine*, beginning with the June number; a novel written by Rhoda Broughton in collaboration with Elizabeth Bisland—who is, we believe, a travelled American; and two volumes of Essays by Prof. St. George Mivart. In addition, many American books are promised, and a series of foreign fiction, to be entitled "Red Letter Stories."

MR. LAIRD CLOWES, one of the council and a member of the arts committee of the Royal Naval Exhibition, has prepared a popular handbook entitled *All about the Royal Navy*, which will be published in a few days by Messrs. Cassell & Co. The book will treat of such subjects as the duties of the Navy, battle-ships and heavy guns past and present, torpedoes and explosives, sailors as they were and are, how to enter the Royal Navy, &c. It aims generally at furnishing such information as will enable laymen to take an intelligent interest in the exhibition.

MR. T. FISHER UNWIN has nearly in readiness *With Gordon in China*, being Letters from the late Lieut. T. Lyster, R.E., edited by his sister, Miss E. A. Lyster. The substance is given of many letters by "Chinese Gordon" to the Lieutenant, who was his personal friend for many years; and the book will also contain a portrait of Lyster.

MRS. OLIPHANT'S memoir of Laurence Oliphant will appear immediately. It will be in two volumes, with portraits of both Laurence Oliphant and his wife.

MR. WILLIAM MARKHEIM is preparing for publication with the Clarendon Press an edition of *The Misanthrope*, with an introduction and notes, intended to illustrate the social history of the times, the dress, manners, and the historical characters depicted in the play. An account is given of the two genuine portraits of Molière, one of which is in the green room of the Comédie Française at Paris, and the other in the Duke d'Aumale's gallery at Chantilly. A letter from the great actor Delaunay about the leading character in the play is inserted in the introduction.

MESSRS. C. WHITTINGHAM & Co. announce the publication, in May, of a small volume of poems by Mr. Herbert P. Horne, entitled *Diversi Colores*. The volume will be printed at the Chiswick Press, with ornaments from the designs of the author, and issued in a limited edition of 500 copies.

AMONG Mr. Elliot Stock's announcements for the present season are the following volumes of verse: *Songs of Day and Night*, by Dr. A. B. Grosart; *Dora*, by K. Fenton; *Day Dawn and other Poems*, by J. Mellor; and *Weeds from a Wild Garden*.

MESSRS. ALEXANDER & SHEPHEARD have in the press a new edition of the *History of the Free Churches of England*, by the late Herbert Skeats. As the author was unable before his death to carry out his intention of thoroughly revising the work, it will be undertaken by Mr. Charles S. Miall, author of "The Life of the late Mr. Henry Richard," who will continue the history from 1851, at which it stopped short, to the present time. The volume, which will be issued in a popular form, will contain an account of the rise and progress of Dissent from the Revolution downward, with sketches of its prominent representatives.

THE Wyclif Society has now ready its volume for 1892, Prof. Loserth's edition of *De Eucharistia*, with a full introduction by the editor, discussing the Reformer's views of the sacrament. The volume for 1893, *De Blasphemia*, edited by Mr. M. H. Dziewicki, is

nearly ready; and the books for 1894 and 1895 are in the press. When Mr. Dziewicki has finished his edition of Wyclif's works on Logic, he means to edit the miscellaneous Philosophical Works in one volume.

THE first edition (consisting of one thousand copies) of the Rev. Dr. Kinns's new work, *Graven in the Rock*, was more than subscribed for before the day of publication. A second edition is now in the press, and will be ready in a few days.

MR. W. ROBERTS is contributing to *The Queen* a series of papers on "Women as Book-lovers," the first of which appeared in last Saturday's issue.

AT the dinner given by the American Copyright League in honour more particularly of the Congressmen who have had charge of the Copyright Bill, and of the two secretaries, Messrs. R. W. Johnson and G. Haven Putnam, who have been responsible for the direction of the campaign, it was announced by Comte Emile de Kératry, delegate of the Société des Gens de Lettres, that the French government has conferred the cross of the legion of honour upon the two last-named gentlemen.

ON Monday and Tuesday next Messrs. Sotheby will sell what is described in the catalogue as "the valuable library of a gentleman." For the most part, the collection consists of those classical works of English literature "without which no gentleman's library is complete"—works, we fear, now less in demand than they were a century ago. There are several county histories and genealogical works. But the chief rarities seem to be La Fontaine's own copy of *Les Amours de Psyché et de Cupidon*, with important corrections in his autograph, which have never been published; and first editions of Hakluyt and of Burton's *Anatomy of Melancholy*.

MR. ALBERT H. TOLMAN, professor of English literature and rhetoric at Ripon College, Wisconsin, has sent us a revised copy of the dissertation which he wrote in 1889 for the degree of Ph.D. at Strassburg. It is entitled "Shakspeare's Part in 'The Taming of the Shrew,'" and it consists of a most elaborate examination of the sources of the play, both direct and remote, with a criticism of the various theories that have been suggested. His conclusion is that Shakspeare probably did not write any part of the earlier play, "The Taming of A Shrew"; but that about one-half (discriminated line by line) of "The Taming of The Shrew" is his, including the core of the play, the actual taming of Katherine, the remainder having been written in afterwards, possibly by an ardent admirer of Greene's work.

IT is worthy of notice that Messrs. Macmillan have already republished, in cheap editions, two of their handsome works which first appeared shortly before Christmas last. These are Sir Samuel Baker's *Wild Beasts and Their Ways*, compressed from two volumes to one, and Mrs. Oliphant's *Royal Edinburgh*, reduced from medium to crown octavo; both with all the original illustrations.

UNIVERSITY JOTTINGS.

MR. A. H. SAYCE, on his return from Upper Egypt, will find an invitation awaiting him to come back to Oxford with the title of professor. On the recommendation of the delegates of the common university fund, a decree will be proposed in Convocation on Tuesday next, creating for him a chair of Assyriology for a period of five years, with an annual stipend of £150. It has long been known to Mr. Sayce's friends that he has always desired this academical

recognition of his favourite study, to which he has himself been devoted from his undergraduate days.

CANON CHEYNE, Oriel professor of the Interpretation of Holy Scripture at Oxford, has been compelled by ill-health to postpone his second public lecture upon "Possible Zoroastrian Influences on the Religion of Israel."

MR. WILLIAM MARKHEIM, Fellow of Queen's College, Oxford, will deliver a public lecture at the Taylor Institution on Tuesday, May 12, upon "Molière and the Misanthrope." He proposes to show how the author's own married life is represented in the play.

UNDER the sanction of the board of legal studies, Mr. Lewis T. Dibdin, chancellor of the dioceses of Durham, Exeter, and Rochester, will deliver a course of three lectures at Cambridge during the present term on "Ecclesiastical Law." He will treat of the clergy, the parishioners, the church, and the churchyard.

MR. J. Y. BUCHANAN, university lecturer in geography, will give a course of six lectures at Cambridge this term on "Climatology."

MR. W. R. MORFILL, reader in Russian at Oxford, was to deliver a public lecture on Friday, May 1, upon "Serbia, Historical and Literary."

THE life-size portrait of Canon Liddon, by Prof. H. Herkomer—which has been for some time on view in the University Galleries—has now found its permanent place on the wall of Christ Church hall. On all hands it is considered an admirable likeness, though we hear that the painter had never even seen his subject, and had nothing better than an enlarged photograph to work from.

MR. ISRAEL GOLLANCZ, of Christ's College, Cambridge, university lecturer in English under the modern language tripos syndicate, and editor of *Pearl*, has been elected to the Quain studentship in English literature (£150 a year) at University College, London. He has already begun a course of lectures there on "The History of the English Language."

PROF. HENRY NETTLESHIP will lecture on "Religion and Criticism" on Sunday next, May 3, at 7.30 p.m., before the Ethical Society, in Essex Hall, Strand.

PROF. ALFRED GOODWIN, of University College, will begin a course of four lectures on "The Odyssey," at the Chelsea Town Hall, on Monday next, May 4, at 3.15 p.m.

WE may mention here that Mr. John Murray has brought out a new edition, in one volume, of the late Dean Burgon's *Lives of Twelve Good Men*, which—apart from its record and criticism of the Oxford Movement—will always possess an academical interest because of its reminiscences of President Routh, Provost Hawkins, and "Bodley" Coxe. The present edition is enriched with an admirable series of portraits of all the "twelve good men" commemorated, with one of the author for frontispiece. Otherwise, it seems unchanged.

THE rectorial address recently delivered at St. Andrews by Lord Dufferin has been published, in handsome pamphlet form, by Messrs. Blackwood. Suffice it to say that it recalls—in its style, if not in its subject—the great addresses of John Stuart Mill and Carlyle.

MR. JOHN PARK HARRISON has printed (London: Henry Frowde) the paper which he read at Oxford last year, arguing that both the original design and also some of the existing stone-work of the cathedral date from pre-Norman times. He has added three plates, in order to exhibit the ornaments of the Christ Church capitals side by side with illuminated designs from Anglo-Saxon MSS.

ORIGINAL VERSE.

AN ANSWER.

(See ACADEMY, April 11, 1891.)

BROTHER in pain! thou art not all alone;
Thousands share with thee thy sad, weary moan
Against "the wingless hours with feet of lead."
I, too, lie stretched for ever on a bed
Which cannot move from the dark, grimy wall,
Where never freshened airs or sunbeams fall;
While all the weary night I must not dare
To turn, or groan in pity for the worn—
The weary sleepers, who, with toil o'erborne
And hunger pangs, this couch with me must share.
No, leave thy couch to me if Brother Death
Prefer thee first to Heaven; so may my breath,
Drawn easier by the window, heave this sigh,
"The angels make the bed where thou dost lie!"

E. N. P.

THE FOLK-LORE CONGRESS OF 1891.

THE literary sub-committee of the Folk-lore Congress of 1891, of which Mr. Joseph Jacobs is chairman and Mr. Alfred Nutt secretary, have drawn up a report for the work of the congress, which has been adopted by the organising committee.

The work of the congress will be divided over the five working days, Thursday, October 1, to Tuesday, October 6, 1891; thus: On Thursday, October 1, the congress to meet in the afternoon to hear the president's address, and to elect the presidents of sections, the (European) folk-lore council, and a special committee on methodology.

The congress will be divided into three major sections: (1) Folk-tales and Songs; (2) Myth and Ritual; (3) Custom and Institution; and it is proposed that Mr. E. Sidney Hartland, Prof. Rhys, and Sir Frederick Pollock should preside over these sections respectively, and that Prof. T. F. Crane should preside over the methodological committee.

The committee recommend that under each section the papers and discussions should be taken, as far as possible, in chronological or logical order, dealing in turn with the relations of the subject—tales, myths, or customs, in their present phases—to those of savage, oriental, classical, and mediæval times and conditions. It is suggested that the papers, so far as practicable, should serve to test a conception now widely held, especially among English folk-loreists and anthropologists—the conception, namely, of the homogeneity of contemporary folk-lore with the earliest manifestations of man as embodied in primitive records of religion (myth and cult), institutions, and art (including literary art).

Thus, on the day devoted to Folk-tales it is hoped that papers and discussions will be forthcoming on the incidents common to European and savage folk-tales—ancient and modern folk-tales of the East, their relations to one another, and to the folk-tales of modern Europe—traces of modern folk-tales in the classics—incidents common to folk-tales and romances—the recent origin of ballads—the problem of diffusion. On the day devoted to Myth and Ritual such subjects may be discussed as: The present condition of the solar theory as applied to myths—modern folk-lore and the Eddas—primitive philosophy in myth and ritual—sacrifice rituals and their meaning—survivals of myths in modern legend and folk-lore—witchcraft and hypnotism—ancestor-worship and ghosts—charms, their origin and diffusion. On the day devoted to Custom and Institution it is suggested that some of the following topics be discussed: identity of marriage customs in remote regions—burial customs and their meaning—harvest customs among the Celtic and Teutonic populations of Great Britain—the testimony of folk-

lore to the European or Asiatic origin of the Aryans—the diffusion of games—the borrowing theory applied to custom.

Besides those papers, and others that may be suggested by members of the congress, it is proposed that each day shall open with a presidential address from the chairman of the section. Thus, four out of the five days being accounted for, it only remains to determine the work of the last day. This, it is suggested, should be taken up with the reports of the methodological committee, appointment of committees of the International Folk-Lore Council, and discussion of special points to be brought before the next congress. Besides this, it is hoped that arrangements may be made by which a conference may be held on this day between the congress and the Anthropological Institute, to settle the relative spheres of inquiry between folk-lore and anthropology. Also, it is anticipated that a detailed account of the Helsingfors Folk-lore Collection will be forthcoming, as well as descriptions of the folk-lore subjects of interest at the Ashmolean and the British Museum.

THE UNIVERSITY FOR LONDON.

THE Senate of the London University has put forward a "Revised Scheme" for the re-organisation of the university, which will shortly come before Convocation for approval; and it is high time that some public notice should be taken of the lines upon which it is proposed to reconstitute the existing university system.

Unfortunately, the English, and especially the London, public has small appreciation of what higher education and sound intellectual training really denote. It will subscribe thousands of pounds for Polytechnics, without the least clear understanding of what those institutions are intended to accomplish—whether they are to inculcate cleanliness by aid of swimming baths, to train apprentices in the folding of eretonnies, or to teach shorthand, chess, and the rudiments of drawing on the South Kensington plan. But for the education and training of those citizens whose knowledge and thought are to leaven the community, for the teaching of the teachers, for the preparation of that staff of scientists, specialists, leaders of industry, and representatives of culture in and outside the learned professions, upon whom the welfare of the nation so largely depends—for these objects the greater public has no sense whatever. Nor is the reason far to seek. The universities in England have always been class institutions; their enormous endowments have never served as nets to catch talent and ability from all classes of the community; and to this day there is no obvious and direct road from the Board school to the university. It may be the merest fraction of a percentage of Board school scholars whose talent is sufficient to render it a gain to society that they should find a regular ladder to a secondary education and to the universities. But for this fraction, a regular ladder, at least from secondary education to university, is entirely wanting. For this reason, among others, the universities fail to appeal to the imagination of that democratic public, which is more and more extending its control over local and central politics. It is true that the various societies for the extension of what is termed "university teaching" have made strenuous endeavours to popularise the name at least of "university teaching." But useful as their work has been, the placing in Cambridge or Oxford of half-a-dozen artisans for a few weeks in the vacation cannot nationalise those places like the presence of half a hundred sons of artisans enjoying the complete course of academic instruction and participating in the ancient endowments. Nor

in our opinion, can any course of "university extension," however long continued, replace the steady years of work and devotion to one occupation which we associate with the idea of an academic training. It may do most useful, nay, yeoman service; but without the laboratories, museums, libraries, the persistent daily study, it cannot claim to replace university life. "University extension" has more of the university spirit about it than the examining board at Burlington House, because its first object is to teach; but it, nevertheless, is quite incapable of supplying the place of a great teaching university in London, which the democracy shall appreciate, and which shall not hang its head in very shame before the like institutions in Berlin or Vienna. University extension is a valuable accessory, but it cannot supply what is needed in London. Nevertheless, university extension, largely owing to the energy and persistency of its London secretary, has succeeded in reaching people's imaginations, while the higher scheme has fallen flat. Some attempts to form a ladder from the Board school to University College failed, apparently owing to the apathy of its council; and the London colleges, till within the present year, have done nothing to render themselves popular with our modern democracy. They have been rightly or wrongly looked upon as rather expensive institutions for the education of the middle classes; and their appeal to the County Council for assistance was not unnaturally rejected, while grants were made to both the London Society for University Extension and the City and Guilds' Committee.

It may be asked how far the revised scheme of the Burlington House Senate goes in the way of providing a really great teaching university for London—something which can appeal to the imagination, not only of teachers and taught, but of the population among which they live? We can only answer—*absolutely nothing*. Nor was it to be expected that it could. Its failure was foreseen by all the teaching element on the Royal Commission. A Senate largely composed of gentleman who have had no experience of academic life such as it is at Oxford or Cambridge, or in the continental universities; who through long years have associated the name University with examinations, and not with the idea of teaching; who have tried to negotiate with a dozen conflicting interests and please them all, while virtually retaining power in their own hands—was not a body which could produce a satisfactory scheme for a great *teaching* university. As a teaching scheme their plan is a pitiable failure, containing in it only one germ of possible good. We cannot too often repeat that the fundamental purport of a university is to teach, to educate its scholars through its professors, and its professors themselves by aid of the laboratories and means of research which it places at their disposal. Now the present scheme put forward by the Senate bears on the face of it all the signs of having been produced by a body which has lived in an examining and not an academic or teaching atmosphere. It is a gigantic and complex scheme for the redistribution of examining power, and not for the provision of wider and more efficient teaching. It is no wonder that such a scheme was rejected by the professorial bodies of King's and University Colleges, in the latter case by an unanimous vote. Even in the council of the latter college a modified approval was only carried by the casting vote of the president, or, as it might otherwise be expressed, by the vote of a member of the London University Senate. Now it is the professorial element in the London colleges, not their councils, who would really have to carry through the committee and faculty work

of the new scheme so far as it concerns university teaching in arts and science; and its unanimous rejection by the college teachers is a point which Convocation and the outside public ought to bear clearly in mind when they are considering the Senate's proposals.

Those proposals may be considered under three headings—first, as to the manner in which they deal with the London colleges; secondly, as to the manner in which they deal with the provincial colleges; and, thirdly, as to how far they provide any real teaching university for London. In the first place, as to the London colleges. These colleges have a certain claim on the public; for years they did yeoman's service in the matter of academic education for London, but a certain proportion of their teaching at present is of an elementary character; and in other cases, principally from the need of proper laboratories and appliances, their instruction is probably not as efficient as at certain special institutions—in particular, the City and Guilds Central Institution. There is an alternative future open to these colleges: either they must raise themselves to the highest academic level, or they must content themselves with the preparation of students for the pass and lower degrees of the proposed university. The revised scheme of the University Senate practically takes the latter view of their future. It proposes to give the teachers of the London colleges control of the pass examinations in arts and science, so far as concerns their own students. It reserves the honours examinations. The instruction at these colleges would become, more even than it is at present, of a pass character; and this must ultimately involve the reduction of the teaching to the standard of poll-men, and the teachers to the well-known type of poll-lecturers. This may be a useful function for these colleges. As their councils appear to have accepted a scheme which places the honours examinations out of touch with the college courses and teachers, these councils presumably think it their most suitable function. But even in this matter of redistributing the examining power for a poll-degree, King's and University Colleges cannot hope for a monopoly. For the degrees given for the sciences preparatory to engineering, the City and Guilds Central Institution by its equipment and teaching has an equal right to admittance, and, therefore, may justly claim representation on the faculties. In fact, so soon as the scheme appears in its true light—as a redistribution of examining power, and not as the organisation of a teaching body—there is no legitimate ground for excluding from the faculties any London body which is capable of preparing students for a certain level of poll degree. The moment the London colleges accept as their function this lower standard of academic teaching, they must be prepared for the admission of any number of London constituent colleges. So far as the ultimate source of authority is concerned—the future senate—these colleges would have twelve members in a total of fifty-two, assuming, indeed, the faculties of arts and science to be solely constituted from these colleges, a position they could hardly maintain indefinitely.

As the Senate reserves to itself the right to appoint professors and lecturers, not necessarily attached to the colleges, and to assign them representation on the faculties, we have the germs of an honours school apart from the colleges; and the reduction of the colleges to groups of teachers preparing for pass degrees becomes more and more their evident future. This may or may not be to the public advantage; but it should certainly be borne in mind, when discussing the scheme, that the future teaching university will not arise from the colleges, but from the professors and lecturers whom the Senate reserves the right to appoint. The sop-

thrown to the colleges in return is the power to pass students for poll degrees.

Turning in the next place to the provincial colleges, we find that they contribute eight members to the ultimate governing body of the new university. On the senate, therefore, they will have small power, unless, with a view to obtaining proper regard for local interests, they make themselves obstructive, which they will certainly be justified in doing. The proposed senate, indeed, is simply a conglomeration of the representatives of half a dozen different interests, which have nothing in the least in common. What, for example, have the representatives of the London medical schools and the President of the Council of Legal Education to do with the teaching of arts and science, say, in Sheffield? But the provincial colleges have really little to fear. So soon as they arrive at a certain degree of strength, the parliamentary influence of their local representatives will soon provide them, either in groups or individually, with charters as independent universities. The case of the London colleges is different: they will have bound themselves once for all to Burlington House, the local energies of which will increase as its provincial supplies of examinees diminish. Meanwhile, a provincial college may gain that greater control over the education of its own poll students which is connoted by the power of discussing the schedules of examination with other colleges scattered over the length and breadth of England. The expense in time, energy, and railway fares will soon lead to a vigorous movement for home rule.

Lastly, out of this elaborate scheme for the redistribution of examining power, the medical side of which we have not even referred to, what is there of a real teaching university? In the first place, we venture to say, so far as the colleges are concerned, *nothing*. The college professors will be quite independent of the new university. There is no provision in the scheme for putting the election of the college teachers in the hands of the new university committees. The college laboratories and the college work will be beyond the control of the university authorities. To speak, therefore, of these colleges as an integral part of the university is simply absurd. A professor the university does not appoint, a laboratory the university has no control over, are not, for practical purposes a part of the university at all. We shall again have a governing board with nothing to govern, a university without professors and without equipment. The only germ of hope for a real university in the whole scheme lies in the last clauses, which reserve the right to the senate to hold real property for the purposes of the university and for the establishment of professorships and lectureships. How long, however, will it take to establish and endow a real university in this way, especially in the face of the active opposition and competition of the colleges?

The scheme seems to us hopelessly unworkable. The already overburdened teacher, in order to carry out some development of teaching which may have a bearing upon university examinations, will have to see it safely through college faculty, college senate, and college council; then he will have to carry it through university board of study, university standing committee, and, possibly, university senate. His whole energy, which ought to be devoted to teaching and research, will either be absorbed in the round of committee, or he will disregard the new university *in toto*. Both alternatives are equally undesirable. The senate of the university, on the other hand, if it considers anything desirable in London teaching, will have to see it discussed by university standing committees, faculties, and boards of study, by

college councils, senates, and faculties; ultimately, perhaps, to be rejected by a teacher over whom it has no control, and in whose selection it has no voice.

We can only repeat, in conclusion, what we have stated in the ACADEMY before, that what is needed in London is the establishment of a teaching side to the existing University, practically independent of the Senate which conducts the imperial examinations in Burlington Gardens, and the absolute absorption by this teaching side of the plant and staff of the London colleges. Inefficient lecturers ought to be gradually replaced or pensioned off; all new appointments ought to be in the hands of the ultimate governing body of the teaching side; while the complete control of laboratories, equipment, lecturers, and endowments ought to belong to one single body, so soon as such a body can be firmly established. Such a reconstruction would give us a teaching university in London, a university starting with some half a million in endowments and buildings, and capable of making a legitimate appeal to the public for further aid. A university, it would be, with something to develop, and with power to command respect. It, and it alone, would be the rightful heir to such funds as the local London bodies may have in the future to dispose of—above all, to whatever, in the course of the next ten or twenty years, may be available from the Gresham estate for the further development of university teaching in London.

CORRESPONDENCE.

THE NINTH CONGRESS OF ORIENTALISTS.

Louvain: April 28, 1891.

Allow me to express, in the name of my Belgian friends, the wish that an end may be put to the Great Oriental Schism, and that the sage counsels of Dr. Isaac Taylor may be listened to. In my opinion the best means would be that no leading member of either party be excluded from the ultimate council. May the distinguished scholars of England, France, and Germany not forget the two valuable principles, *L'union fait la force* and *quam bonum habitare fratres in unum*.

C. DE HARLEZ.

[We have received another letter from Dr. Leitner, which we do not think it advisable to print, for the same reason as mentioned last week. Suffice it to say that he offers to make no concessions. It only remains, therefore, for the general body of orientologists, if they are desirous of avoiding the scandal of a schism, to compel the committees of the two rival Congresses to submit to some plan of compromise.—ED. ACADEMY.]

SIR THOMAS MORE'S TREATMENT OF HERETICS.

Athenaeum Club: April 26, 1891.

May I be allowed to appeal to Mr. Gairdner to help me through a difficulty with respect to the treatment of heretics by Sir Thomas More. I find More writing to Erasmus on the occasion of his resignation of office—by permission of the "most indulgent of sovereigns." (So Shakspeare, true as ever to the spirit of the time, makes Buckingham, going to execution, compliment the king on his mercifulness—this by the way.)

In the same letter, More sends the epitaph he has written for himself. It recites, among other characteristics, that in the conduct of his judicial functions he had been

"furibus autem homicidiis haereticisque molestus."

We have here an ascending scale of intervals even more serious than from pitch and toss to manslaughter. Heretics are as much worse than murderers as murderers than outpurses; and their due of molestation would doubtless be correspondingly aggravated. We catch the tone of him who talked so complacently to "Son Roper" of "treading heretics underfoot like ants."

So it strikes me at the moment; but my confidence in my critical faculty has been so shaken lately by Bishop Creighton's relative estimate of Alexander Borgia and Savonarola that I dare not be hasty. Hence it is that a hint from Mr. Gairdner how to put all these facts into historical perspective will much oblige his obedient servant,

W. WATKISS LLOYD.

THE PERSIAN (?) ELEMENT IN MARCIONISM.

Oxford: April 23, 1891.

As an appendix and, I may say, corrective of my note on Marcionism in the ACADEMY of April 11, permit me to send you the following

remarks of an anonymous Armenian correspondent whom I take this opportunity of thanking for his communication. In my note I suggested that the Armenian word *autar* in Eynik's account of Marcion's heresy might be a transliteration of the Persian *âtar* = fire. My correspondent writes:

"It seems that we cannot accept the equation of *autar* = *âtar*, since there exists an Armenian representative of this Persian word in the Armenian *atr*, which only occurs in compounds, as e.g., the well-known province Atropatene, on which see Lagarde, *Arm. Studien* (sub. verb.)—who, besides, adduces the word *atrageju*, 'fiery'; Ciackiak gives yet others. . . . But, secondly, there does not seem to be any necessity for assuming the proposed equation. The 'other' is the higher God, the Christians', and father of Jesus, whom some of the Gnostics, not Marcion only, opposed to the god of the Jews, of the Thora; while Eznik, as an orthodox Christian, held his god to be the same as the Jews. Marcion, erring, introduces otherness as against the God of the law. Eznik condemns him for deeming it at all necessary to invent another god."

I must admit that the fact of *atr* being already in use as the Armenian form of *âtar* is fatal to the suggestion that in *autar* we have a transliteration of *âtar*; the more so as we find compounds of *atr*, e.g., *atrashêk* (= πεπυράμενος), used by an Armenian contemporary of Eznik in his version of Philo. In spite of a certain awkwardness, therefore, in the phrase "the god who is good and other," we must accept it without seeing in it the tempting reference to the Persian fire-worship.

I may add that I should have written, in the sentence of Eznik's cited at the end of my letter, not "the son of autar," but "this autar" (= ὁ ἀλλότριος). Of course, I did not regard *autar* as the philological equivalent of *âtar*, but only as a transliteration; and I thought that *autar* might have been fixed upon by the transliterator, because it was already a common and familiar word, just as the English sailor turns Bellerophon into Billy Ruffian.

F. C. CONYBEARE.

HERBERT SPENCER'S ESSAYS IN AMERICA.

Library of Congress, Washington, U. S. A.: April 17, 1891.

The writer of the notice of the new edition of Spencer's *Essays* in the ACADEMY of April 4 (p. 322), appears to have been misinformed concerning the American editions of the works of Darwin and Spencer. A note of correction, therefore, may not be out of place.

The first volume of Spencer's *Essays* was printed and published in England in 1858 and the second volume in 1863. The first American edition appeared in 1864 with the title *Illustrations of Universal Progress*, and consisted of essays selected from both the English volumes. In 1865 another volume was published at New York with the title *Essays, Moral, Political and Aesthetic*, also made up of essays selected from the two English volumes. The third series of essays was the only one published first in America.

As for Darwin's works, several have been printed and published in America: such as, for example, his *Variation of Animals and Plants under Domestication*, issued by Orange Judd & Co., of New York, in 1868.

D. HUTCHESON.

[We print the above, out of consideration of the quarter from which it comes. But the writer seems to have misunderstood the notice in the ACADEMY. We never said that Mr. Herbert Spencer's *Essays* were first collected and published in America, but only that the three series of *Essays*, which have "long been accessible," were "printed from American types." This is strictly true; and the whole

story will be found in the preface to Vol. I. of the library edition (Williams & Norgate), which we were then reviewing. Mr. Spencer there states that "for economy's sake," he had imported supplies of the two first series printed from the American plates, and had re-printed the third series from plates partly American and partly English.

We may add that our corrector is himself not quite correct. *Teste* Mr. Spencer, in the preface mentioned above, the first series of *Essays* appeared in December 1857, not in 1858; and the third series was published first in England, not in America.

With regard to Darwin, what we said was, "not one of whose works, we believe, has ever been re-printed in America down to this day." Our belief was, it appears, erroneous; but it still seems to us notable that our well-informed correspondent does not mention an American reprint of *The Origin of Species*.—ED. ACADEMY.]

THE LORD'S PRAYER IN LITHUANIAN.

Taylorian Institution, Oxford: April 25, 1891.

Mr. Morfill has quoted, in the ACADEMY of April 18, a Lithuanian text of the Lord's Prayer, which, it may be worth while to point out, is identical with that contained in the *Oratio Dominica* in *CL' linguas versa*, printed in the famous type of the Bodoni Press (folio, Parma, 1806). Its source is there given as "Ex Sylloge Londinensi," presumably the same book as that mentioned by Mr. Morfill.

H. KREBS.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, May 3, 7.30 p.m. Ethical: "Religion and Criticism," by Prof. H. Nettleship.

MONDAY, May 4, 4.5 p.m. Royal Institution: General Monthly Meeting.

8 p.m. Society of Arts: Cantor Lecture, "The Decorative Treatment of Natural Foliage," IV., by Mr. Hugh Stannus.

8 p.m. Aristotelian: "The Principle of Authority in its relation to Ethics," by the Rev. H. Rashdall.

8 p.m. Victoria Institute: Papers by Messrs. E. Charlesworth and J. Allen Brown.

TUESDAY, May 5, 3 p.m. Royal Institution: "Bacteria, their Nature and Functions," II., by Dr. E. E. Klein.

8 p.m. Biblical Archaeology: "Tales of the Westcar Papyrus," by Mr. P. Le Page Renoult; "A Bilingual Papyrus in the British Museum," by Prof. E. Revillout; "Haran in Mesopotamia," by Mr. W. F. Ainsworth.

8 p.m. Civil Engineers: "Railway-Train Lighting," by Mr. W. Langdon.

8 p.m. Society of Arts: "Armenia and the Armenians," by Capt. Buchanan Telfer.

8.30 p.m. Zoological: "The Fauna of British Central Africa," by Mr. Slater; "New Land-Shell from the Indian Region," by Col. Beddome; "A New Pigeon of the Genus *Carpophaga*," by the Hon. L. W. Rothschild.

WEDNESDAY, May 6, 8 p.m. Geological: "A Rhaetic Section at Pylle Hill or Totter Down, Bristol," by Mr. E. Wilson; "A Microscopic Study of the Inferior Oolite in Gloucestershire," by Mr. E. Wethered.

8 p.m. Elizabethan: "The Plays of Cyril Tourneur," by Mr. J. E. Baker.

8 p.m. Society of Arts: "The Sources and Applications of Borax," by Mr. E. L. Fleming.

9 p.m. Royal Society: Conversation.

THURSDAY, May 7, 3 p.m. Royal Institution: "Recent Spectroscopic Investigations," V., by Prof. Dewar.

4 p.m. Archaeological Institute: "Bath as a Roman City," by Mr. E. Green; "Queen Eleanor's Crosses," by Mr. Walter Lovell.

8 p.m. Linnean: "The Anatomy of the Genera *Pterygopus* and *Stimonia*, and their Relationship to the recent *Arachnida*," by Mr. Malcolm Laurie; "The Diseases of the Coco-Nut (*Cocos nucifera*, L.)," by Mr. M. Cresse Poter.

8 p.m. Chemical: "The Action of Alkalis on the Nitro-Compounds of the Paraffin Series," by Prof. Dunstan and Mr. T. S. Dymond; "The Addition of the Elements of Alcohol to the Ethereal Salts of Unsaturated Acids," by Prof. Purdie and Mr. W. Marshall; "Some New Addition Compounds of Thiocarbamide affording Evidence of its Constitution," by Prof. Emersn Reynolds; "The Action of Acetic Anhydride on Substituted Thiocarbamides," and "An Improved Method of preparing Aromatic Mustard-oils."

8 p.m. Electrical Engineers: "Some Effects of Alternating-Current Flow in Conductors having Capacity and Self-induction," by Dr. J. A. Fleming; "Some Points connected with Mains for Electric Lighting," by Mr. W. H. Preece.

FRIDAY, May 8, 4 p.m. Botanic: "Parasitic Plants, Native and Exotic," II., by Prof. Marshall Ward.

7.30 p.m. Civil Engineers: Students' Meeting,
 "Malta Dockyard Chaisson," by Mr. J. W. Brown.
 8 p.m. New Shakespeare: a Paper by Mr. R. G.
 Moulton.
 8 p.m. Ruskin: "Ethics of the Dust," by Mr. Arthur
 Boutwood.
 9 p.m. Royal Institution: "Liquids and Gases," by
 Prof. W. Ramsay.
 SATURDAY, May 9, 3 p.m. Royal Institution: "The Artificial
 Production of Cold," L., by Mr. H. Graham Harris.
 3.45 p.m. Botanic: General Monthly Meeting.

SCIENCE.

Essays of an Americanist. By D. G. Brinton.
 (Philadelphia: Porter & Coates.)

DR. BRINTON has been well advised in re-publishing his "Essays." They form a connected whole, and throw a light on the culture and languages of the American tribes such as we should probably look for in vain from any other scholar. Dr. Brinton has devoted his life to the study of the people who inhabited America before the arrival of the whites, and has brought to the study an unusual amount of critical judgment and comprehensive learning. It is more particularly in the domains of aboriginal literature and speech that he has earned the gratitude of scholars.

His "Essays" are divided into four parts—Ethnologic and Archaeologic, Mythology and Folk-lore, Graphic Systems and Literature, and Linguistic. No department in the psychological history of the American natives has, it will be seen, been omitted. We begin with the earliest relics of the palaeolithic age which have been found in Brazil or North America, and we end with the books of the Mexicans and the Mayas and languages of existing tribes.

It is only recently that American anthropology, in the strict sense of the term, has attracted serious attention. The vague theories of the descent of the American aborigines from Mongoloid ancestors were advocated or combated with little regard to physiological facts. It is only now that students are beginning to perceive that a markedly dolichocephalic population like that of the American aborigines can have no connection with the brachycephalic Mongols. Not but that brachycephalic tribes exist in America; and what is most curious is that they seem to have been the first inhabitants, at all events of Brazil. Here in the shell-mounds the skulls are all brachycephalic, in contrast to the skulls found in the caverns, which, like those of the present inhabitants of the country, are dolichocephalic in type. Nevertheless, in spite of this craniological difference, the natives of the American continent all present, as Dr. Brinton remarks, a common and a permanent type. The fact is one which ought to be remembered in anthropological enquiries: similar conditions of life and climate produce a similarity of type; it is only the shape of the skull that remains unchanged. It is the same in language; here, too, we find a common morphological type prevailing over a certain geographical area, though the languages spoken within that area have no genealogical relationship one to another.

Dr. Brinton's account of the literature and writing of the Mayas will be read with special interest. He has vindicated the trustworthiness of Landa's list of characters, and has pointed out that not only do the

hieroglyphs of the days given by the Spanish bishop correspond with those in the manuscript of the "Books of Chilán Balam," but several of the hieroglyphs of the months do so as well. If, however, we wish to see what can be done, even now, towards deciphering the records of the ancient civilised populations of America, we need only turn to Dr. Brinton's essay on "The Stone of the Giants," near Orizaba, in Mexico. The essay is a triumph of ingenuity, and leaves no doubt on the mind that he succeeded in finding in its inscription a commemoration of "the death of the emperor Ahuitzotzin some time in February, 1502."

What Dr. Brinton has to say on American mythology is well worthy of attention. It will be a useful corrective to the one-sided modern school which sees in a myth little more than the "idle tale" of a savage or barbarian. But we shall never get very far in our explanation of mythology without the help of language. It is through language that mythus live and grow; and though the advocates of the so-called philological theory of mythology have thrown discredit on their system by wild etymologies and a determination to fit everything into the same lock, the fault lies not in the system but in its expounders. A single fact brought forward by Dr. Brinton is worth more than pages of argument and theorising. The chief Chipeway deity Michabo is known as "the Great Hare," on the supposition that it is derived from the words *michi* "great" and *wabos* "a hare." The myth, however, has its origin in a false etymology. The second element in the name is really *wabi* "white," and the god primarily represented the white light of the dawn.

I have left myself no space to speak of Dr. Brinton's interesting account of the American languages, and of the many questions which they raise in the mind of a comparative philologist, or of his exposition of that curious linguistic fraud "the Taensa Language." Nor can I do more than allude to his proof of the fabulous character of the Toltecs and their empire. But I must not close this review without a word of praise for the excellent and useful indices with which the book concludes.

A. H. SAYCE.

CORRESPONDENCE.

NOTES ON SOME PĀLI AND JAINA-PRĀKRIT WORDS.

Dedham School, Essex: April 9, 1891.

I.

Aniḡha, Kamina, Pāśaka, &c.

Childers, following the Commentator on the Dhammapada, explains *a-niḡha* by "free from suffering, uninjured, scatheless," and refers to *niḡha*, "grief, suffering, woe." With regard to the origin of the word, he says: "I have not found any equivalent of this word in Sanskrit. Fausbøll suggests the etymology *ni + agha*; but this is far from probable." We may add that *niḡha* (with long *i*) has not, as yet, been found in any Pāli text; and the word rests only on the authority of the Abhidhānappadipikā. Looking at the passages not quoted by Childers, we find a trace of two distinct meanings. In Itivuttaka 112, p. 123 = Aṅguttara iv. 23, it

has the force of "independent," "free (from all human passions)";

"Esa khināsavo buddho *anīḡho* chinna-samsayo." (See also Itivuttaka 97, p. 97.) It has this sense in Petavatthu iv. 1. 34, p. 49:

"Santo vidhūmo *anīḡho* nirāso."

The Commentary explains it by *niddukkho*, "free from grief or pain." (See Dhammapada, verse 294, and Com., p. 390, Thera-gāthā, v. 1234.)

In a corresponding verse of the Tibetan version, *anīḡha* is rendered "without sin," as if the original were *an-ayha*. (See "Udānavarga from the Buddhist Canon," v. 70, p. 197.)

The second meaning is "harmless," "innocent":

"Sabbe sattā averā hontu abyāpajjhā *anīḡhā* sukham attānam pariharanti."

(Jāt. ii., p. 62.)

"Ime sattā averā abyāpajjhā *anīḡhā* sukhi attānam parihareyyum" (Milinda-Pañha, p. 410.)

In the sense of "scatheless," that is, not suffering harm, we find a good example in Thera-gāthā, l. 745, p. 73.

"Pañca pañcāhi hantvāna *anīḡho* yāti brāhmaṇo."

All these meanings seem to arise out of the original sense of *nīḡha*, as an adjective signifying "dependent," "tied." The corresponding Sanskrit is *nighna*, which might become (1) by transposition *nīḡha*, (2) by loss of nasal *nīḡha*. For the transposition compare Sanskrit *ciḡha*, *budhna* with Pāli *cinha* and *bunda*; and for the lengthening of vowel after loss of nasal compare Sanskrit *saundamsa*, *simha* with Pāli *saundāsa* and *siha*.

As Sanskrit *nighna* and *nīhan* are connected with the root *han*, "to strike, hurt, kill," there must have been in Pāli a form *nīḡha* in the sense of "hurting, hurt," from which the other meanings of *anīḡha*, "harmless," "scatheless," would arise. Dr. Fausbøll's suggestion of *nī-ayha* is based upon the use of *an-ayha*, "free from suffering."† Compare Prākṛit *anaha*, "unhurt" (Paiyācehi, p. 115), "free from sorrow" (Setubandha xi. 120).

There is a somewhat similar crux in Jaina-prākṛit with regard to the words *aniha* and *nīha*:

"*Aniḡhe* sahie susamvude,"

Free (from human passion), wise, and well restrained (Śūyagadamga-sutta i. 2. 2, § 30, p. 141). This in Pāli would be

"*Anīḡho* sahito susamvuto."

The commentators give two etymologies—(1) from *a-sniha* = *mamatva* - *rahita*; (2) from *han + ni*, "parishahopasargais na nihanayata iti *aniho* va." Curiously enough there is the v. l. *an-ayha* = *niravadya*."

We have another example of *aniha* in i. 2. § 12, p. 111—

"*Aniḡhe* se putṭhe ahiyāsae."

We might with a slight alteration turn this into Pāli—

"*Anīḡho* so phuttho † *adhiyāsae*,"

Free from all worldly cares, he should, if beset (by trouble), patiently endure (it).

The Guzerāṭi comment explains *aniha* by (1) *a-sneha*-*rahita*, (2) *krodhādika*-*rahita*. The Dipikā has the following note: "tathā nihanayata iti *nīḡha*, na niho *nīḡha*." It also gives an alternative explanation "*krodhādibhir-*

* On killing the five, see Dhammapada, l. 294 and p. 390.

† See Thera-gāthā v. 116; Majjhima i. p. 418; Milindapañha, p. 500.

‡ Or perhaps *phutṭho* would be the more correct reading; but *phutṭho* is common in Siṅhalese MSS.

piditaḥ." But what is the source of the Jaina-prākṛit *aniha* with short instead of long *i*?

Here, again, we must have recourse to the Sanskrit *nighna*, which in Prākṛit could become, by dropping the *n*, instead of assimilating the compound consonants,* *niha* (= *nigha*), from which the negative would be formed. But we have as yet produced no Prākṛit *niha* corresponding to a Pāli *nigha* or Sanskrit *nighna*. We have, however, come across a solitary example of a noun *niha* in *Sūyagadamga-sutta* i. 5. 11, p. 291:

"Sayā jalam nāma niham mahantam
jamsi jalanto agamī akattho."

Always blazing, indeed, there is a place of torment, of vast extent, wherein there burns a fire without wood.

The Dipikā gives the following explanation: "nīhantante prāṇino yasmin niham āghāta-thānam."

There is in Marāṭhi a word *nigha*, "care," and *anighā* or *anigā*, "want of care," "neglect." This presupposes an original *nighna* (?) for *nighna*. But it seems to be a provincial term, and may be altogether unconnected with the words under discussion. In regard to *anigha*, with the meaning of "free from passion," there may, perhaps, have been some confusion between it and *an-īha*, "free from desire or exertion."

In Vyutpatti (ed. Minayeff) 901, p. 92, we find *nigha* in the sense of "sin." B. and R. cite this, and refer to *agha*; but it does not help us. The Northern Buddhist term may, after all, be a mere attempt at Sanskritising the Pāli *nigha* by one ignorant of its etymology, or he might be guided by a word like *pati-gḥa*, "anger."

In Therī-gāthā, v. 491, *nigha* occurs in the sense of "suffering."

"Sattisūlupamā kāmā rogo gando agham
nigham."

Here *nigha*, if the right reading, may be *ni + gha*, and is to be compared with the Jaina *niha*.

Jaina-prākṛit would, we believe, throw much light upon some difficulties in Pāli, had we before us a number of well-edited texts like Prof. Jacobi's *Āyāramga-sutta* or Dr. Leuman's *Aupapātika-sutta*. The old *Māhārāstri* has many forms in common with Pāli, and not a few peculiarities that are considered to belong only to Buddhistic phraseology. There are forms in Pāli that are explained by other Prākṛitisms, for instance, *vitabhi*, "the fork or branch of a tree" (Jāt. ii. 107; iii. 202), must come from Sanskrit *vitapin*, through a Prākṛit **vitabi* for *vitavi*. For this change of *v* to *bh* compare Pāli and Hindi *bhisa*, Prākṛit *bhisin* (Hem. i. 238) from Sanskrit *visa*.

We have in *Milinda-Pañha* (p. 368) *sumanta*, "sleeping," and in Jaina-prākṛit *sumina* and *suvinā* (Pāli *supina*) = Sanskrit *svayama*. This substitution of *m* for an original *p* helps us to an etymology for the Pāli *kumina*, "a fish-net." Childers cites no textual authorities for the employment of the word, and says nothing of any Sanskrit equivalent. Examples of its use may be found in Jāt. i. 427, ii. 238; Therā-gāthā v. 297; *Dipavansa* xv. 110.

There is in Sanskrit a feminine noun *kup-inī*,† "a small net for fish"; but there must have been also a neuter *kupina*, which becomes in Pāli *kumina*, and is exactly on all fours with *sumina* from *supina*.

In Jaina-prākṛit (*Sūyagadamgasutta*) we find *kumina* for the "flesh" of a slaughtered animal used for a lion-trap. This must go back to **kunipa* and be connected with Sanskrit *kunapa*, "dead body."

* This would give us *niggha* or *negha* (cf. *viggha* from *vighna*), a form that we have not come across.

† In *Sūyagadamga-sutta* we find *keyana*, "a fish-net," glossed *ketana*. We ought, perhaps, to read *kheyana* = *ksepama* (cf. Pāli *khīpa*, "a net").

A reference to Jaina-prākṛit enables us to correct a false reading in Therī-Gāthā, v. 411, p. 163:

"Koccham pasādham (v. l. pasāyam) aijjanā ca
āḍasakaṇ ca gāhivā."

The Commentary (p. 212) explains *pasādham* by "*kanha cunnādimukhavilepanam*." It gives, however, a various reading: *pasādhanam* = *pasādhamabhandam*, "an ornament" of some kind. The true reading is perhaps "Koccham pasakajjanāṇa." With *pasaka*, as here used, we may compare its employment in *Cullavagga* V. 29. 3.

The Jaina equivalent is *pāsaga*, as in the following passage from the *Sūyagadamgasutta*, i. 4. 11, p. 250:

"Sāmdāsagam ca phanīham ca
sihalaṭ-pāsuyam ca ānāhi
āḍasagam ca payacchāhi
danta-pakkhālanam pavesāhi."

The explanation of *pāsaga* is thus given by the Tikā:

"Sīhalipāsuyam ti vināsamayaman artham ūvā
mayam kankanam."

Here we see that *pāsuka* is an ornament for the hair and is in keeping with the comb, the collyrium, &c., in the Pāli gāthā quoted above.

The word *phanīha*, "a comb," in the Jaina Gāthā is an error for *phanīya* = *phanika*, Pāli *phanaka* (Coll. v. 23), or *panaka* (*Milinda*, p. 210). Compare Marāṭhi *phani*; Sinhalese *panāwa*, "a comb."

In Therā-Gāthā, v. 101, p. 15, we find the strange compound *mukha-naigali* in the sense of "greedy." It might, of course, be explained as "having a mouth like a plough," "large-mouthed"; but the true reading seems to be *mukha-maṅgalī* "devoted to the mouth," "fond of eating."

"Itivā gihitvam anavositatto mukha-naigali
odariko kusito."

Mahāvārāho va nīcāpa-puttho punappunam
gabbham upeti mandoti."

(See also vv. 17 and 784).

In *Sūyagadamgasutta* i. 17. 25, p. 346, we find *mukha-maṅgalīya*, i.e., *mukha maṅgalika* in the sense of "given to the mouth," "fond of dainties":

"Nikkhamma dīne parabhojanamūni
muhamamgali udarānugiddhe
Nīcāra-giddhe va mahāvārāhe
uddāra eha ghātāni eva."

The Tikā's explanation differs from ours—"Mukhamamgali bhavati mukhena maṅgalāni prasamsāvākyāni idhīcāstadrīcā-tvam ity evam."

Childers makes no mention of *maṅgalika*, but it occurs frequently in the Jātaka book in the term *deratā-maṅgalika* "devoted to festivities in honour of tree-sprites." In the *Milinda-panha* we find *koṭūhala-maṅgalika* "fond of excitement."

The use of *nīcāra* in the Jaina text for *nīcāpa* is worth noting. (See *Dhammapada* verse and *Majjhima-Nikāya*, i., pp. 151-160, where we find *nīcāpika* and *nīcāpati*, as well as *nīcāpam*. Cf. *nīcāpukabhajana* *Mahāvastu*, p. 25, l. 2.)

The Jaina texts have some curious readings arising out of an attempt to restore an older lection, especially where the letter *h* represents the weakening, or *y* the loss, of a consonant. Thus the Pāli *bimbhāna* answers to Jaina *bimbhoyana*; Pāli *parissaya* "danger" (= *parisraya*, compare *apassaya*, *upassaya*, *nissaya* from the root *cri*), appears in Jaina-prākṛit as *parīśaha* and *parīśaha*, and is explained by the Commentators by its so-called Sanskrit

* The Jaina form is *pasādham*.

† The text has *sihali*; but compare Pāli *sihala*, "soft," "loose."

equivalent *parīśaha* as if from the root *śah* with *pari*. There is, however, no "quotable" authority for such a word as *parīśaha* in the sense of "risk," "danger"; while *parissaya* is not uncommon in Pāli (see Jāt. ii. 405).

Hemacandra uses *parīśaha*, but only in a sense peculiar to the Jains.

Another good instance of a wrong re-setting of a well-known term is the Jaina *purisādāniya*, "the people's favourite," "he who is to be chosen among men because of his preferable Karma." Cf. *purisādāniyā* *purisānam ādāniyā ācāryaniyā mahato pi mahāyāmsah* (Com. to *Sūyagad* i. 9. 34, p. 394). But the older form was *purisāyāniya* (see *Āyār*. i. 4. 492, p. 20), representing an original *purisāyāniya*, "a distinguished person," "a person of noble birth"; a term applied to Buddha and to Arāhats, *ājāniya*, is the equivalent of the Sanskrit *ājñeya*. It would seem that in the redaction of the Jaina canon the origin of *ājāniya* was forgotten, and it was explained not by *ājāniya* but by *ādāniya*.

Prof. Jacobi has already pointed out how the Pāli *Seniya* has been wrongly turned into *Črenika* by the Jains. We have come across two or three verses in a Jaina text which bear a close resemblance to some Pāli Gāthās. The latter seems to have better readings, but both may have been borrowed from a common source:

"Sannī jahā pamsugumhiyā
vidhūniya dhamsayai sitam rayam
evam daviovaṇavānam
kammam khavai tapassī māhane":

Just as a bird covered with dust shakes off and gets rid of the dust clinging (to its wings), so the brahman ascetic striving for final beatitude gets rid of (his) karma. (*Sūyagad*. i. 2. 6, p. 113). The Pāli corresponding passage occurs in *Samyutta-Nikāya* ix. 1., pt. i., p. 197:

"Sakuno (v. l. sakuni) yathā pamsugumhito *
vidhūnam pātayati sitam rajam
evam bhikkhu padhānavā satimā
vidhūnam pātayati sitam rajam":

Just as a bird covered with dust shakes off and gets rid of the clinging dust so does the mendicant (bhikkhu) energetic and thoughtful shake off, and get rid of, the (defiling) dust (of human passion) clinging (to him).

For *pātayati* in the sense of *dhamsati*, *apana-yeti* there is a various reading, *sātayati*, "to get rid of." Compare *sātetā*, "a destroyer," *Majjhima-Nikāya*, i., p. 220.

From the metre, &c., we should be inclined to say that the Jaina verse is a "re-setting" of the Pāli Gāthā.

In *Milinda-panha*, p. 371, there is a quotation from *Samyutta-Nikāya* i. 2. 7.

"Kummo va angāni sake kapāle
Samo laham bhikkhu mano-vitakke."
amissito aññam ahetthayāno
parinibbuto na upavadeyya kañāti."

A similar Jaina verse occurs in *Sūyagadamgasutta* i. 8. 13, p. 364.

"Yathā kumme sa-amgāni sae dehe samāhare
evam pavāim medhāvī ajjhappena samāhare."

As the tortoise guards its own limbs within its own body, even so should the sage restrain (the impulses of) sin within himself.

Here there is no doubt about the superiority of the Pāli over the Jaina version. The metaphor of the tortoise is very common in Jaina texts. (See *Kalpa-sūtra*, Jin., p. 118):

"His senses were well protected like those of a tortoise."

"He remains with his hands and feet drawn well together like a tortoise" (*Ov*. vi., p. 30).

* The printed text has—*kundito* wi h the various readings—*kunthito*, *kunditā*. In *Petavattha* ii. 3. 5, pp. 15, 70, we find *pamsu-kutthitā* (!) explained in Commentary by *ugunthitā* (= *ogunthitā*).

There is a passage in Pāli ridiculing those who taught that religious merit could be got by "bathing" or "water-sprinkling." If, as some say, final beatitude is obtained by contact with water, then frogs, tortoises, &c., would first attain to bliss. This heretical notion appears also in a Jaina text:

"Udagena je siddhim udāharamti
sāyam ca pāyam udagam phussamā
udagassa phāsena siyāya siddhi
sijjhamso pānā bahave dagamsi."
Macchā ya kummā ya sirivā ya
maggū ya utthā daga-rakkhasā ya
atthānam eyam kusulā vadanti
udagena je siddhim udāharamti
"Udagam jai kamma-malam harejjā
evam suham iccāmittam evam
amdhān va neyāram anussarittā
pānāni cevam vinīhamti manāā"

(Sūyagadamgasutta i. 7. 14-16, pp. 337-339.)

"Yo ca vuddho vā daharo vā pāpakammam
pakubbati

Udakābhiseccanā nāma pāpakammā panuvecati
Saggam nāna gamissanti sabbe munda-
kaccapā
Nāga sumsumārā ca ye c'āñhe udakecarā
Saccānā nadiyo te pāpam pubbekatam caheyyum
Paññam p'innā caheyyum tena tvam paribā-
hiro assa."

(Therī-gāthā 240-243, p. 146; see Samyutta vii.
2. 11, pt. i., p. 182.)

The Pāli *suddhi* is better than *siddhi*. *Maggu* = *madgu*, "a water-crow," looks like a substitute for Pāli *manduka*, "frogs." *Utthā* in the Jain text evidently puzzled the Commentators, who Sanskritised it as *ushtrā*, and explained it by *jala-cara-viṣeṣāh*. But Sanskrit *ushtra* (Pāli *uttha*) is a camel, and not an aquatic creature. The original text may have had *uddha* for Sanskrit *udra*, Pāli *udda*, "an otter." We sometimes find aspiration of *d* through a following *r*; compare Jaina-prākṛit *amādhā-yamāna* = *amādhriyamāna* (Spec. der Nāyādham-makahā, § 69). The water-demons *dagarak-khasā* (= *jalamāmsāh*) seem to be a substitute for the Pāli *sumsumārā*.

R. MORRIS.

SCIENCE NOTES.

DR. ARCHIBALD GEIKIE, Director-General of the Geological Survey, has been nominated by the council of the British Association as president of the meeting to be held next year at Edinburgh.

THE first conversazione of the Royal Society will be held at Burlington House, on Wednesday, May 6.

MESSRS. MACMILLAN will publish immediately, in the Nature series, a third volume of Sir William Thomson's *Popular Lectures and Addresses*, containing his papers treating of scientific subjects connected with navigation, such as the tides, astronomical navigation, dead reckoning, pilotage, &c. At the same time will be issued a new and revised edition of the first volume, dealing with the constitution of Matter.

MESSRS. G. P. PUTNAM'S SONS will issue next week Prof. C. J. Holder's *Life of Charles Darwin*, which is intended more particularly for young readers.

THREE courses of two lectures each are to be delivered in the museum of the gardens of the Royal Botanic Society, in Regent's Park, on Fridays at 4 p.m. The lecturers are—Prof. Marshall Ward, upon "Parasitic Plants, Native and Exotic," beginning on May 1; Mr. W. Carruthers, upon "The Story of Plant-Life on the Globe," on May 15 and 22; and Prof. C. Stewart, upon "Certain Relationships between

Plants and Animals," on May 29 and June 5. The lectures are free to all visitors in the gardens.

THE *Proceedings* of the London Mathematical Society contain an obituary notice of the late Dr. A. J. Ellis, signed R. T., with special reference to his work in mathematics. A list is given of most of his published books and papers in mathematics; and it is stated that he has left a large quantity of MS., consisting (apparently) partly of translations from Martin Ohm, of Berlin, and partly of developments of his own theory of Stigmatics.

PHILOLOGY NOTES.

THE Clarendon Press have issued this week the work upon which Mr. Robinson Ellis has been so long engaged, *Notes Manilianae*; sive Dissertationes in Astronomica Manilii. It is bound with special elegance, and has the following graceful dedication:

"Iacobo Iosepho Sylvestro mathematico et poetae egregio Cantabrigiensis Americano Oxoniensi haec studia in Manilium a cognomine Sylvestro Pontifice Romano ante DCCCC annos ex tenebris revocatum ac rescriptum dedico consecroque."

Meanwhile, it must be ranked among the coincidences of literature that a German scholar, Dr. M. Bechert, should have chosen the same week to publish (Leipzig: Hinrichs) a treatise entitled *De M. Manilio astronomicorum poeta*.

THE forthcoming number of the *Journal* of the Royal Asiatic Society will contain papers by Mr. W. W. Rockhill on "Tibet," by Dr. Hirschfeld on "The Jewish Arabic Dialect of the Maghreb," and by Prof. Peterson, of Bombay, on "Pāṇini."

THE famous tenth-century MS. of Demosthenes (Σ) in the Bibliothèque Nationale, Paris (MS. grec 2934), is being reproduced in heliotype by MM. Berthand, with M. Henri Omont as editor. The facsimile, consisting of two folio volumes of the exact size of the original (1066 pages), will cost 600 francs, and may be ordered from Ernest Leroux, 28 Rue Bonaparte, Paris. The names of subscribers will be published.

WE have received the first number (A—Atepatus) of the *Alt-Celtischer Sprachschatz*, by that indefatigable scholar Dr. Alfred Holder. (Leipzig: Teubner; London: Nutt.) As many of our readers are aware, the book is intended to be an exhaustive collection of the existing documentary materials for the study of the ancient Celtic language, whether found in Greek or Latin authors, in inscriptions, or in coins. If we may judge from the part before us, the execution of the work will more than satisfy the high expectations that have been formed from the specimen pages accompanying the prospectus. The proper names, and the comparatively few other Old Celtic words that have been preserved, are registered in their alphabetical place, accompanied by quotations of the passages in which they occur. In addition to this, every recognisable etymological element, even if it be only a thematic suffix, is the subject of a separate article, containing a list of the words in which it is found, together with philological elucidations drawn from the modern Celtic and other Indo-European tongues. It will give some notion of the completeness of the work to say that in the article on the suffix *-āco-* more than five pages (the size is large octavo) are occupied with a bare list of the names containing this suffix. The article "Allobroges" contains four pages of quotations from Greek and Latin authors; and it ends, like all the other articles on ethnic names, with a list of the names of persons who are mentioned as belonging to the people in question. It is needless to

insist on the enormous value of such a complete collection of linguistic material. Dr. Holder states that the preparation for his work has occupied sixteen years. If the whole book maintains the high level of the first part, the result would be well worth this large expenditure of time, even had Dr. Holder produced no other valuable work during the interval. There are one or two points in the method of the book which we do not quite understand; probably they will be explained in the preface. It is, for instance, not clear to us what is meant to be inferred when a local name is given merely with its modern equivalent, without citation of any authority. Now and then, though very rarely, we miss information that we should have expected to find, e.g. under *Ariconium*, the English Erchenefeld, Archenfield, might have been mentioned. The typography seems marvellously correct, but it is not "humanly possible" that misprints can be avoided altogether. We notice "Aunl" for Alun (76, 47), "Candelee" for Candebec (49, 28), "Herfordshire" for Hertfordshire (231, 52). One or two of the abbreviations used are not explained in the prefixed list. "Ci," we suppose, means *conjecit*, and "fig." *figulus*.

MEETINGS OF SOCIETIES.

ASIATIC.—(Monday, April 20.)

SIR FREDERIC GOLDSMID in the chair.—Count Goblet d'Aviella, the Hibbert lecturer for this year, and Mr. E. K. Corbet, of Cairo, were elected members.—Surgeon Major Oldham read a paper on "Serpent Worship in India." He began with the enquiry: Who were the Nagas over whom, according to the Rajatarangini, Nila reigned when Kashmir was raised above the waters? In the Puranas, the Nagas are generally described as supernatural beings or actual serpents, and are consigned to subterranean regions. But in earlier writings they are mentioned as a people, and as ruling in the valley of the Indus and the neighbouring country, with Patala and other cities as their capitals. The author identifies the Nagas with the Takhas, a Rajput tribe occupying the mountainous country to the eastward of Kashmir. These people have remained under more or less independent chiefs of their own race until comparatively recent times. They have saved their temples and their idols from Mahomedan iconoclasts, and their religion from the orthodox Brahman. Here the serpent gods are still worshipped, with their ancient rites, not as dangerous reptiles nor as symbols, but as the deified rulers of a once-powerful people. The serpent gods Sesha, Vasubi, Takshaka, and others, are represented in human form, but with the hoods of five, seven, or nine Nagas or cobras expanded over their heads, as shown in the illustrations to Fergusson's *Tree and Serpent Worship*. Tradition asserts that these Naga chiefs were rulers of all the country round and of a great part of India. A yearly pilgrimage still takes place to a mountain lake called the Kailas Kund, which is held sacred as having afforded a retreat to Vasubi when surprised by his enemy Gauda. The Takhas are a remnant of a powerful Rajput tribe, who once ruled the Indus valley and nearly the whole of the Punjab, and who sent out colonies to the coasts of India, Ceylon, and the Indo-Chinese peninsula and islands. The author observed that the legend of the churning of the ocean by the serpent Vasubi refers to the commerce carried on by that chief or his people with distant lands. He then went on to show that the Nagas were Asuras, that the Asuras were of the same race as the Suras or Devas, and that, consequently, the Nagas were an Aryan tribe. One result which the author arrives at is that the Buddhist and Jaina religions arose among the Naga people, and that Buddha himself was probably of Naga race. Hence the close connexion between the serpent and Buddhism, which has given rise to so much speculation. Surgeon Major Oldham sums up the results of his enquiries thus: (1) That the Nagas were a sun-worshipping, Sanskrit-speaking people, whose totem was the *naga*, or hooded serpent. (2) That they became known as

Nagas from the emblem of their tribe, with which, in process of time, they became confounded. (3) That they can be traced back to the earliest period of Indian history and formed a portion of the great Solar race. (4) That they, with other divisions of this race, at first occupied the north and west of India, but afterwards spread towards the east and south. (5) That some of these tribes, and among them the Nagas, retaining their ancient customs, and not readily admitting the ascendancy of the Brahmans, were stigmatised as Asuras. (6) That among a portion of the descendants of this people Naga-worship in its primitive form still survives, and that it consists in the adoration, as Devas or demigods, of the ancient chieftains of the tribe. (7) That the connexion between the serpent and the Buddhist and Jaina faiths can be thus explained. (8) That in all Asiatic countries it was only the Naga, or hooded serpent, which was held sacred.

FINE ART.

THE FRENCH SALONS.

I.

Paris: April 28, 1891.

THE French artistic world is in an uproar, owing to the severity that has been shown this year by the juries of the two leading art associations—La Société des Artistes Français (old Salon) and La Société Nationale des Beaux-Arts (new Salon)—towards their brethren of the brush and the chisel. The first-named society, which had hitherto been accused of being too liberal in its admissions, has displayed this year a marked tendency in the opposite direction, for, out of the three thousand and odd pictures sent in, only 1733 have been accepted. On the other hand, the rival society, founded last year by Meissonnier, has been still more rigorous in its selection, for only 260 out of 2400 have been admitted. The five thousand *refusés* have raised a loud cry of indignation against the two juries. Indignation meetings have been held, protests have been circulated and signed, and it has been decided to open a "Grand Salon of the Refused." But where? It is proposed that the huge machinery gallery of the Exhibition of 1889, which is still standing, should be converted into an art-hall of welcome, which would be open to all comers, free from the tyranny of juries and hanging committees, and where every exhibitor will be on the line.

The exhibition of the Society of French Artists, the original Salon of the Champs Elysées, opens on May 1; but, thanks to the private view granted to the press, I am able to forward the following somewhat hurried impressions of a first visit. It is to be noted that 182 out of the 1100 exhibitors are foreigners; of these fifty-six are Americans and thirty-one British, the rest are Spaniards, Italians, Russians, Swiss, Swedes, and even a few are German. With few exceptions, these foreign exhibits are not above the common average of good studio work, and the influence of French teaching is only too apparent.

Probably the most striking feature of this year's Salon is the number of pictures of unusually large dimensions. On entering the Salon Carré we find that almost an entire panel is occupied by M. J. Paul Lauren's "La route d'acier," an episode of the visit of Louis XVI. to the Hotel de Ville two days after the taking of the Bastille. The king is being presented with a tricolor favour to adorn his coat; while a double row of courtiers have drawn their swords, holding them upwards, point to point, so as to form a sort of archway of steel under which the king may pass as he ascends the steps. The grouping, the picturesque surroundings, the historical accuracy of almost every detail of the scene, contribute to make this historic picture one of the best of the year. Of almost equally large dimensions is M. Michelena's "Penthesilea," leading her Amazons in a furious

charge to battle and death—a highly sensational picture. M. H. Martin's "Chacun sa chimère," a procession of nude figures, allegorical personifications of every form of deception that humanity follows in search of happiness, is a strange conception. M. Guay's "Death of the Oak" is also treated on a large scale. In the midst of a beautiful sylvan landscape lies the fallen trunk of an oak tree, recently felled by the woodman's axe. It is dawn; the nymphs of the forest are lamenting the death of the noble tree, and bidding farewell to the "nests of love which peopled its branches." The meaning of this picture is rather vague, but the general effect is charming. The same may be said of "The Singing Class," by Mr. Walter Gay, an American artist, who has most happily depicted two nuns instructing a village choir. This thoroughly artistic composition belongs to what might be termed the "pleasant Impressionist" school. The giant of the collection is M. Rochegrosse's "Fall of Babylon," which covers about eight square metres of canvas. The wild orgies of the night are over in the vast banquetting-hall of the palace. On all sides lie overturned tables and couches; the floor is strewn with vessels of gold and silver, fruit, flowers, and the remnants of the feast, while nude, or half-clad in light oriental vestments, favourites and slaves are plunged in drunken sleep; torches, incense-burners, and coloured lamps cast a lurid light on the scene. Through the wide open gates of the palace, in the dawning light of day, the Persian invaders are seen rushing in to plunder and massacre. High above, on the platform to which leads a monumental marble staircase, stands the king, who realises at last the meaning of the mystic writing on the wall and the certainty of coming death. There is a vast amount of work, of research, and talent in this as in all M. Rochegrosse's pictures, and also a desire on the part of the artist to give as much "local colouring" as possible to this resurrection of the barbaric splendour of Babylon; but the effect of sensual sensationalism is too marked to be pleasing. The same may be said of "The Death of Sardanapalus," by M. Chalon, in which we see the Assyrian monarch seated on a throne erected on a funeral pyre of seven stories, surrounded by his harem and treasures, awaiting death, while the flames bursting out on every side add to the horror of this theatrical apotheosis. M. Renouff's view of the "Bridge of Brooklyn" is worthy, so far as dimensions go, of its great original. M. Chigot's "Lost at Sea," a boat containing two sailors and a boy dying of thirst amid a boundless ocean, is a fine specimen of marine painting. M. Rouffet's "La fin de l'Epopée," a spirited rendering of the last charge of the three thousand cuirassiers at Waterloo, closes the list of the most notable of the gallery pictures.

Fortunately, the Salon walls are not entirely covered with scenes of slaughter and horror, or by bevy of nude nymphs and fauns disporting themselves in outrageously green landscapes. Although many of the best artists of the day have gone over to the rival exhibition in the Champs de Mars, there remains a phalanx of painters and sculptors of fame sufficient to maintain the renown of the Champs Elysées exhibition. Of these I will speak in next week's article; but before closing this brief summary I cannot postpone mentioning a few well-known names. M. Français has sent two exquisite landscapes, one of which, "Une source—le soir," is a beautifully finished specimen of this great artist's best work; M. M. Isenbart, Japy, Guillemet, and other well-known *paysagistes* are to be seen here at their best. M. Bompard's two Algerian scenes are full of repose, sunshine, and local colour. M. Gérôme contributes "A Corner of Cairo," a

vista of endless minarets and terraces which is superior to his second exhibit, "Lion on the watch," in which this talented artist displays his want of anatomical study. As compared with this, M. J. Swan's "Maternity," a lioness and cubs, is admirable in the lifelike appearance of the animals; in fact, it is one of the best studies of animal life in the exhibition. M. de Villefroy's "Cows drinking at a Spring" is worthy of this celebrated *animalier*; while his "Party of Aragonese going to the Fair" is full of movement and gay colouring.

CECIL NICHOLSON.

MENPES'S PICTURES OF INDIA.

MR. MORTIMER MENPES has been to India, Burma, and Cashmere, and has done for us in respect of those places very much what he did in Japan. The walls of Messrs. Dowdswell's room are covered with dainty frames of gold and bronze and silver, modifications or developments of the Whistler frame; and these contain charming bits of Indian life and colour, which, while showing whose pupil he is, and illustrating the influence of photography upon modern painting, testify no less to the individual gifts of Mr. Menpes as a colourist and a draughtsman. He chooses to be a "little master;" but his mastery is certain, and it is doubtful whether any of his subjects would give greater pleasure if treated on a larger scale. There is always a certain pleasure in minute work—the pleasure we get from a jewel painted by Van Eyck, or etched by Jules Jacquemart—and this pleasure is greatly increased when, as in the case of these artists and Mr. Menpes, the minuteness is not attended by a loss of breadth. Mr. Menpes's hand is sure and his eyes are keen, but the microscopic detail of such pictures as "A Child of Nature, Burma" (51), and "When Labour is Done" (52), tell of other than mechanical qualities; for he gives us colour, tone, texture, and expression, as well as exact draughtsmanship. But this child among the large red pots with the bamboo balcony, and these little figures taking a quiet smoke, are only two out of many remarkable little pictures of the same kind from which it is hard to select the best. As in Japan, the interest of the artist seems to have been much engaged by the children; and there is nothing better than the minute study called "A Voice from the Darkness" (12), in which we see a slender girl in a rich red garment turning toward a sort of cave of an inner chamber, where is seen, or rather half-seen, the source of the sound. Here, again, the painting of details like the pots and the flowers is of the most dexterous. Near to this is a broader study, or rather a less finished one, of two children on a bench called "Two of a Kind, Peshawur" (16). But if I were to call attention to all the delightful little peeps into Indian child-life I should have no room to say anything else. Most of these are interiors, or rather semi-interiors, sheds or shaded places before caves or shops; but there is at least one child-scene in the open air which should not pass unmentioned. This is "Waiting for the Race," a delightful group of eager faces, gay costumes, and bright umbrellas, between pale blue sky and pale green grass. Viewing these pictures as veracious records of India, I am disappointed a little at the colour of the sky: it has not the full deep tone of even an Italian sky, but has something of the slaty hue much affected by other modern painters, especially in France. As regards Mr. Menpes's selection of material for his pictures, it may be said generally that he has shown the same kind of discrimination as on former occasions. They are generally street scenes, with brightly dressed figures set out upon backgrounds of shop, or temple, or masses of buildings, mostly

in sunlight and with little sky; and the effect of the sunlight throwing violet shadows is very brilliant without being dazzling. Some of the scenes swim in light, the air seems tremulous with colour, the shadows movable if not moving. To get this quality of colour trembling in the light and mysterious in the shade is no common achievement—one indeed apparently unsought by most artists, whose paint is as dead as a paving-stone. It adds not only to beauty but to sentiment, as may be seen in such pictures as "Lonely Cashmere" (30), "In an Idle Street, Jeypore" (37), or "The Hours are Empty of Labour, Cashmere" (38). I shall not attempt to exhaust even the artistic variety of the show—the charming and fresh arrangements of colour, as in the "Butcher's Shop" with its green awning (72); the picturesque confusion of forms in the scenes on the river at Benares, with their boats and poles and stages and devout figures; the delicate and complicated drawing of architectural masses, the trees sometimes with thin gold leaves melting into a morning sky (118), sometimes flocking a red wall with a trembling network of shadow (101), the dancing girls with their apparently impossible attitudes and rich red dresses (92)—nor will I do more than just draw the attention of the reader to the dexterous pencil drawings and dry points, and "diamond points" on ivory. I will only say with regard to Mr. Menpes's claim to the invention of the latter means of artistic expression that etching on ivory (if not with a diamond point) is by no means a novelty, and is used to-day with beautiful effect for the decoration of furniture. On the whole, Mr. Menpes may be warmly congratulated on an exhibition which shows a development of his true artistic gifts, and will enable many to realise what India is like more fully than any artist perhaps before.

COSMO MONKHOUSE.

NOTES ON ART AND ARCHAEOLOGY.

THE exhibitions to open next week, besides the Royal Academy, include a collection of pictures by M. G. Loppé, entitled "The Alps in Summer and Winter," at the Fine Art Society's; and two military pictures, of the Crimean War, by Mr. Robert Gibb, at Mr. Groom's Gallery in Pall Mall.

ILL-HEALTH is, we are sorry to say, reported, on good authority, to be at the bottom of Mr. Seymour Haden's determination to sell his collection of prints and drawings. Among the drawings are several Rembrandt landscapes, selected for reproduction in the latest of the volumes of fac-similes of Rembrandt issued in England by Deprez and Gutekunst. Mr. Haden's position as a Rembrandt connoisseur is well known. His collection of etchings by this master—or, at least, some part of it—has already been exhibited at the Royal Society of Painter-Etchers. In addition to the Rembrandts, it will be found, we suspect, that the collection is very rich in the works of Wenceslaus, Hollar, and Claude; nor will the minor Dutch masters be unrepresented. With regard to Hollar, a *mot* of Mr. Haden's—which occurs in his little book *About Etching*—may appropriately be cited. "People often ask me," he says, "what I can see in Hollar. I answer, 'Not quite, but almost, everything.'" Though the Seymour Haden collection consists, as might have been supposed probable, principally of etchings, it includes a few specimens by the great original line-engravers, of whom Albert Dürer, Martin Schöngauer, and Lukas van Leyden are, of course, the chief.

THE much-talked of "Cartoons of Raphael" have arrived in this country, and are now to be seen at No. 4, Cockspur-street. It is claimed

for them that they are the original designs for the Vatican tapestries, concerning which Vasari writes: "Perehe Raffaello fece in propria forma e grandezza tutti di sua mano i cartoni coloriti." They are on loose, unprepared canvas, painted in vegetable colours, of which only six are used, two more (scarlet and dark brown) having been added by a restorer. In three cases—"The Miraculous Draught," the "Healing of the Lame Man," and "Paul at Lystra"—right and left are reversed, as compared with the tapestry and the cartoons at South Kensington. It is suggested that this was done by Raphael's pupils, Francesco Penni and Giovanni Udini, when they prepared the latter for the weavers of Arras. The history of these cartoons is as follows. They were brought from Rome to Russia in the beginning of the eighteenth century by a Polish noble, from whose heir they ultimately passed to the family of their present owner. After lying for a hundred years neglected in an outhouse, they were discovered and identified only a few months ago.

MR. BOWES, of Liverpool, will shortly issue a pamphlet, entitled *A Vindication of the Decorated Pottery of Japan*, in which reference is made to a circular recently issued by Prof. Morse on the subject of decorated and undecorated wares.

MESSRS. CASSELL & Co. will publish the first part of *Royal Academy Pictures, 1891*, next week, and Parts 2 and 3 before the end of May.

THE room at the Fine Art Society lately occupied with Mr. Alfred Parson's garden pictures is now filled with another series not very dissimilar in subject by Mrs. Allingham, whose charm is so well known that it seems scarcely necessary to repeat again the praise so often accorded to her lanes and cottages and flowery gardens. A newer claimant to favour here is Mr. A. Wallace Rimington, the merit of whose large etchings of Nuremberg and Giotto's tower at Florence met on their publication due recognition in the ACADEMY. The fifteen drawings and sketches from Italy now on exhibition show that Mr. Rimington is a colourist of unusual subtlety and refinement. His "Doorway to the Doge's Palace, Venice" is a noble drawing of much force as well as delicacy. "In Santa Croce" and "Assisi, Fifth Century Door of Cathedral," though smaller, are equally fine in quality. Among the landscapes there is a beautiful view of Perugia.

MUSIC.

MUSIC OF THE WEEK.

MEYERBEER'S "Le Prophète" was given at Covent Garden on Monday evening. There are flashes of genius in this work, but as in all the composer's operas the music is unequal. With regard to the performance the first two acts passed off tamely; Mme. Richard was flat in the "Benediction" song, M. M. J. de Reszke and Mme. Richard were very fine in the "Cathedral" scene. In the passage in which the former induces his mother to say he is not her son, he revealed, as an actor, power of a very high order. The three Anabaptists, with M. E. de Reszke as the Zacharie, sang well. The scenery and the staging, with the exception of a mishap at the opening of the last act, were effective.

Señor Albeniz gave another concert at St. James's Hall on Friday afternoon, April 24. The programme included Beethoven's A major Sonata for pianoforte and 'cello. Señor Albeniz played Mendelssohn's "Variations Sérieuses" and some light pieces of his own. This pianist may not always give satisfaction in his readings of the great masters, but his delicate touch and brilliant technique are universally acknowledged. Mme. Valda and

Mr. Ben Davies were the vocalists. Indulgence was claimed for the latter, but he sang "Waft Her, Angels," exceedingly well.

MESSRS. W. Hess and Hugo Becker gave their last violin and 'cello recital on Saturday afternoon. Mr. Max Pauer was the pianist, and he took part in Brahms's pianoforte Trio in C minor, and performed, besides, two short solos. He was heard to good advantage, and in the Trio proved a genuine concertante player. Mr. H. Becker gave some solos, in which he showed off his magnificent instrument and skilful technique. Mr. Hess played solos, and Miss L. Lehmann was the vocalist.

On the same afternoon the Crystal Palace season ended with Mr. Manns's benefit concert. The programme contained for the most part familiar pieces. Mme. Schumann's pupil, Miss Adelina de Lara, was the pianist; but she appears to have played under difficulty through the breaking of a hammer soon after she commenced Rubinstein's Concerto in D minor. M. Ysayé was the violinist. In this brief mention of the closing concert we would bear testimony to Mr. Manns's earnestness and energy throughout the series. Fashions come and go, but the excellent orchestral performances at the Palace are still admired and enjoyed.

Master Jean Gerardy gave another 'cello recital at St. James's Hall. There is no need to repeat our praise of this clever boy, but we should like to ask why he confines himself to music of a light or showy kind? It is true that the great composers favoured the violin; but there are the six great Suites of Bach for 'cello solo, only some of which have been played at the Popular Concerts, and that many years ago. Again, Master Gerardy might make himself heard in one of Beethoven's Sonatas for piano and 'cello. Mr. Eugene Holliday, a young pianist and pupil of Rubinstein, made his *début*. He has clever fingers, but his reading of a Ballade and two Etudes was cold, and at times hard. We shall have another opportunity of judging him at his recital next week. Mme. Stone-Barton, the vocalist, sang some light songs; her high notes are somewhat shrill, but she manages her voice with skill.

M. Ysayé gave an orchestral concert at St. James's Hall on Tuesday afternoon, and played Beethoven's violin Concerto, the work in which he made his *début* at the Philharmonic two seasons ago. His reading then of the music was somewhat extravagant. This time he was more in accordance with the composer's intentions. His tone is rich and sympathetic, his execution wonderfully fine; but he does not reveal the full power and grandeur of the music. His conception of the work is thoughtful and interesting, but not purely classical. He played a Cadenza of his own, of immense difficulty, and with great success. He was heard afterwards in some "Variations Symphoniques," by Dr. Joachim; the music is of a virtuosic order, and it was interpreted with the utmost skill, vigour, and brilliancy. He gave besides some short pieces, for which he received enthusiastic applause. M. Ysayé is a great artist, and his command of his instrument marvellous. The programme included Wagner's "Siegfried Idyll," but the rendering, under Mr. Cowen's direction, was rather rough.

J. S. SHEDLOCK.

MUSIC NOTES.

MR. CURWEN has in the press a book entitled *The Boys' Voice*, which is intended as a manual for organists, choirmasters, school and college professors, the clergy, and all who have to do with the vocal training of boys. In preparing the work he has paid visits to many of the cathedrals and college chapels, and has enjoyed the co-operation of the organists, who have written letters describing their methods.

SATURDAY, MAY 9, 1891.

No. 992, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

De Quincey Memorials. Being Letters and other Records, here first published. Edited by Alexander H. Japp. In 2 vols. (Heinemann.)

DR. JAPP has produced a work which any moderately fair and sensible person will find not only interesting but satisfying. To persons who are neither fair nor sensible may be commended the pithy remark of Thomas Fuller, "He who expects what in reason he cannot expect may expect." At this time of day it is certainly not in reason to expect any really important additions to our knowledge of either De Quincey's life or character, and those who open these volumes with an implicit demand for such knowledge will meet with the disappointment which they deserve. If they make a further demand for a justification of the existence of a new book about De Quincey in which this knowledge is not to be found, no reply is needed beyond the declaration that the book justifies itself. Lovers of the English Opium Eater will rejoice to find that, unlike some literary heroes of the latter day, he does not grow less but rather more loveable at close quarters; and those who in whim or ignorance have ranged themselves among his detractors may perhaps be the wiser and the better for what may be described as an object lesson in justice and charity.

As the race of carping critics is not yet extinct, Dr. Japp might have displayed a greater measure of serpentine wisdom had he given to his book some such title as "The De Quincey Family," which would have indicated the nature of a large portion of its contents more accurately than is indicated by the title which has been chosen. But the carping critic is a person who is never at a loss for material, and the question would then have been, "What right to a place in a family record have such outsiders as Wordsworth and Coleridge, Hannah More and John Wilson?" As a matter of fact, the pages devoted to De Quincey himself, to his relatives, and to his friends, have all their own interest and value; and the only portion of the book which the present writer has found somewhat wearisome is the chapter occupied by the correspondence with Wordsworth concerning the pamphlet on the Convention of Cintra, which is a little lacking in both personal revelation and permanent literary importance. It is, however, interesting to discover that De Quincey had so much to do with the pamphlet, both in the way of suggestion and correction, that he may without exaggeration be described as Wordsworth's

collaborator; and there is much that is creditable to both in the elder writer's frank acknowledgments of his indebtedness to the friend who at the time had not reached his twenty-fourth birthday. When Wordsworth, referring to his own work, wrote a letter to De Quincey beginning with the words, "All your alterations are amendments," he paid him a compliment such as very few men indeed were honoured by receiving.

There is no portion of the book to which the epithet "charming" can be more justly applied than the chapter, happily a long one, which contains the letters of Dorothy Wordsworth, who seems to have been an indefatigable correspondent, and who—as we learn from a recent contribution made by Dr. Japp to the *Century*, but not reprinted here—continued friendly communication with De Quincey when her brother and his wife had been alienated by his marriage to the farmer's daughter, Margaret Simpson. These letters realise the ideal of familiar correspondence. They are not literary; they do not elaborate "topics," though now and then they touch them with "a flying finger"; they are simply the instinctive and unconscious revelations of a most winning personality, made through the medium of homely records of the incidents of a life in which homeliness and insignificance could never be confounded. Of course, matter of a purely literary interest is not wanting. Here, for example, is the letter in which Miss Wordsworth, immediately after the sad event, communicated to De Quincey the touching story of the calamity which befell the Green family, and which, as retold by him, is one of the most profoundly impressive of the "Autobiographic Sketches." Here, too, are various delightfully ferocious references to the misdeeds of the *Edinburgh Review*, in which the woman, the sister, and the literary partisan speak with equal emphasis. On May-day, 1809, Miss Wordsworth writes—

"This reminds me of the last *Edinburgh Review* which I saw at Mr. Wilson's. There never was such a compound of despicable falsehood, malevolence, and folly as the concluding part of the review of Burns's Poems (which was, in fact, all I thought it worth while to read, being the only part in which my brother's works are alluded to). It would be treating Mr. Jeffrey with too much respect to notice any of his criticisms; but when he makes my brother censure himself by quoting words as from his poems which are not there, I do think it is proper that he should be contradicted and put to shame. I mentioned this to my brother, and he agrees with me; not that he could do it himself, but he thinks it would be well for you or some other friend of his to do it for him—but in what way? I think a letter might be addressed to him in the *Edinburgh papers*, and in one or two of the London papers. A private letter to himself would be of no use, and of course he would not publish any condemnation of himself in his own Review, if you were to call upon him to do so. I wish you would think about it."

The *naïveté* of the supposition that Jeffrey could be "put to shame" by the most crushing exposure of his mis-representations and mis-quotations is very delicious, but not more so than the remark in another letter,

à propos of a eulogistic review of Campbell, that "there surely can be little sense in the nation, or Master Jeffrey must surely write himself into disgrace." These warlike utterances are, however, mere *obiter dicta*; the correspondence as a whole deals with the peaceful domesticities to which a true woman can always give appetising piquancy. Here and there is a little touch of humour, like the reference to Wordsworth's alleged fears of the consequences should the Cintra pamphlet prove to be libellous,— "William still continues to haunt himself with fancies about Newgate and Dorchester or some other gaol, but as his mind clings to the gloomy, Newgate is his favourite theme"; but the prominent figures in the correspondence are the smaller members of the Wordsworth family, to whom the aunt and the friend seem to have been equally devoted. In one letter is an anxious inquiry about some pictures which had been promised to Johnny and which the young gentleman is eagerly expecting; in another we find a gentle but firm protest against a larger project of generosity hinted at by De Quincey—a new carriage for Johnny and Sissy, which Miss Wordsworth having, like Mrs. John Gilpin, a frugal mind, will not hear of.

"My dear Friend, I believe that you are serious because you have said so to Johnny, but I earnestly hope that you will be prevailed upon not to buy it. We should grieve most seriously that so much money should be expended for a carriage for them, when they are completely happy and satisfied with their own, which answers every important purpose of the other. What matter if it is a little 'harder' to pull? (Johnny often says it is very hard up hill). It is the better exercise for them."

There is the true Wordsworthian stoicism here. The family evidently comprised more than one advocate of "plain living."

Dorothy Wordsworth has, however, been for years a fairly familiar figure to most of us: more of the peculiar and not necessarily despicable interest which attaches to novelty belongs to the numerous letters from De Quincey's mother, of whom previously we have known but little, though that little has been of a nature to arouse some measure of intelligent curiosity. The impression of Mrs. De Quincey, which we derive from her son's fragmentary sketch, is of a strong and finely-poised nature, possessing many of the qualities which demand admiration, but lacking in sweetness, in sympathy, in all those charms and graces of temperament which, wrong and illogical as it may seem, are more generally victorious over human affection than all the virtues of the porch or the cloister. Dr. Japp, in a paraphrase of De Quincey's estimate, seems implicitly to adopt it as his own, and on another page he explicitly sets down his personal conviction that

"there was in Mrs. De Quincey's character something of severity and restraint from spontaneous expression of any of the softer feelings and sentiments, and that she was broadly unresponsive to certain moods and feelings, ungenial and unspontaneous in her ways towards her children in only too many respects."

This indictment may, of course, be just in itself, and it may, moreover, be susceptible of external justification; but I cannot feel

that such justification is supplied by the numerous and obviously characteristic letters of Mrs. De Quincey which are made public for the first time in these volumes. In many of them, where loving and thoughtful motherliness are too manifest to be mistaken, it is vain to look for evidence of the alleged deficiencies and limitations. It must be found, if found anywhere, in the much less numerous letters which testify to a certain strain in the relations between mother and son—notably in those combatting the expressed desire of the latter to leave the school at Manchester, and spend at home the time which must elapse before he could go up to the university. Now, postponing for a moment the consideration whether there were facts which made this special case exceptional, it is obvious that, as a general rule, the widowed mother of a fatherless lad of sixteen would be perfectly right in thinking it inadvisable and possibly hazardous to remove a boy of such an age from a school of good repute, and allow him, for some two years, to follow his own devices, unchecked by any other moral or intellectual restraint than that which she could herself exercise. So far as this main issue was concerned, there is not only force but perfect fairness and no lack of motherly feeling in Mrs. De Quincey's statement of her case. She writes from Chester in the April of 1802 :

"The school must be bad indeed, and in a manner unknown to me, if it is not (with the advantage you possess) much better than wasting time in this town, where there is no access to books, and perhaps no literature either in the heads or on the shelves of the gentlemen. Of this I cannot, however, be certain; but I am well assured a year spent at home in desultory reading, without an object, is an evil of such incalculable extent, that I shall never consent to it, except to avoid something very dreadful to be escaped in no other way."

The good sense of this handling of the general question is surely unimpeachable by either sound reason, or healthy sentiment. It would have been characteristic of a rigid and unsympathetic nature to insist on the application of a general principle to every special case which seems to come within its scope; but Mrs. De Quincey shows herself not merely willing but anxious that her son should give her an opportunity of seeing the situation in question from his point of view. She continues :

"You have urged your misery, and you will urge it again; but cannot you tell me what it is? Surely misery that is real must have a name, and I solemnly pledge myself to remedy any real grievance you endure so far as I can; but to attempt the cure of evils I do not know, to accede to reasons without hearing them, and to comply with *unsettled* schemes are things neither reasonable nor practicable. If there is any friend of mine you would prefer explaining yourself to, I have nothing to say against the intervention of such a third person; indeed, without I see good reason, as in the case of Richard and Henry, for removing you, I must call upon Mr. Hall [De Quincey's other guardian] at least to let him know that the measure is not mine. If I do see sufficient cause for your leaving Mr. Lawson when I know your reasons, I shall not hesitate to remove you; more than this I cannot say."

More than this could not have been said by the most tenderly sympathetic mother who ever lived, if that mother had the good fortune to add sense to sensibility. Mrs. De Quincey is said to have been lacking in imagination; but imagination of a somewhat unusual character is shown in the third sentence of the above quotation where the writer recognises a fact which almost every father and mother ignores—that perfect unreserve between a parent and child may be so difficult to the latter as to be practically impossible, and expresses willingness that his full confidence shall be reserved for another, if only he will give it somewhere.

The truth was, De Quincey had no special confidences to give. His mother knew all that there was to be known, which was that he was rendered unhappy by want of exercise, depression, and the monotony of school life—an unfortunate condition doubtless, but not one that demanded the drastic remedy which the boy, with the natural self-confidence of clever boyhood, prescribed for himself. "We are not infallible, even the youngest of us"; and in afterlife De Quincey admitted that his mother had written wisely in the only letters which can with even a show of reason be adduced in favour of the theory that she was lacking in sympathy.

"Oh, wherefore could I not have been wiser? Wherefore did I not hear that secret whisper of monitory wisdom, that even thou wert sighing over the evil choice which I made? Wherefore was it that to thee I should so obstinately have been deaf? For my powers of long suffering were great: and the burden that oppressed me I could have borne—had I not suffered at that very time under the falsest medical advice. There is no misery which cannot be simulated by a deranged liver; and for me at that time this course existed under a double agency, viz., want of exercise in the first place; and secondly, medical counsel the most extravagantly erring that in this erring world I have ever known."

That Mrs. De Quincey adopted opinions and occasionally employed phraseology which have often been associated with intellectual inflexibility and emotional chilliness is not to be disputed; but to assume that such association must be inevitable and invariable is to be guilty of the very fault with which she is charged. And though she can sometimes be convicted of actual intolerance—as when, for example, she calls Tait's admirable periodical "a disreputable magazine"—I think that the general effect of her letters on the minds of most readers will be distinctly pleasing, and many will be disposed to think that De Quincey's intellectual inheritance from his mother was larger than Dr. Japp seems inclined to allow.

The volumes contain a variety of interesting material, which must here be left with a mere mention—notably a correspondence with Coleridge, which proves that De Quincey's rival opium devotee could be more practical for others than he ever could be for himself; a still longer correspondence with John Wilson, rendered curious by some letters in which Wilson implicitly confesses his utter incompetency for the duties of the Edinburgh professorship of moral philosophy by relying upon De Quincey to act as his "ghost"; a number of letters from Jane De Quincey, so bright and good as to

make us wish for more; and a few poems sent to De Quincey by Branwell Brontë, from whom he seems to have received some of those characteristic communications with which the Brontës were in the habit of favouring their distinguished literary contemporaries. The letters from Lord Altham and his father, the Marquess of Sligo, are of little intrinsic interest, and are admittedly inserted as an answer to Mr. Saintsbury's implied charge that in his autobiographical references to these and other persons of rank the Opium Eater was drawing the long bow. In making the charge Mr. Saintsbury certainly displayed less than his usual shrewdness, for De Quincey was hardly the kind of man who would yield to the temptation to indulge in essentially vulgar bragging; but the critic will not regret to be for the moment put in the wrong by evidence which allows his pleasure in reading the *Confessions of an English Opium Eater* to be unspoiled by suspicions of the veracity of the fascinating narrative.

JAMES ASHCROFT NOBLE.

ATHENS IN THE MIDDLE AGES.

Geschichte der Stadt Athen im Mittelalter.
Von Ferdinand Gregorovius. In 2 vols.
(Stuttgart: Cotta.)

WHEN a well-known and accomplished writer like Gregorovius undertakes to write on mediæval Greek history, a subject which greatly needs that an interest in it should be awakened in the world of letters, there is little reason for complaint if the work which he produces seems to embrace a wider field, or even to wander into other subjects, than that which he professes to cover. Still, it is the case, when so small a portion of these two large volumes relates to Athens, that the reader who expects to find in them the history of that city cannot fail to be disappointed. We could almost fancy that the name of the author's previous work, the *History of the City of Rome in the Middle Ages*—in the course of compiling which, he tells us, he conceived the idea of dealing with Athens also—had tempted him to affix a corresponding title in a case where it is hardly applicable. The present book might perhaps be more truly described (so far as any single title will represent its varied contents) as "A History of the Occupation of Greece by the Franks subsequently to the Fourth Crusade": anyhow, it is to this subject that three-fifths of the whole work are devoted.

This period is one which has been dealt with in great detail by Hertzberg in his *Geschichte Griechenlands*; but the treatment of it does not lose by its being woven into a continuous story, as it has been in the present work, from the particular point of view of the dukedom of Athens. Thus, the history of the principality of the Morea, it must be confessed, is only indirectly connected with that of Athens, and is out of place in a history of that city; but as the dukedom of Athens held an especially favourable position among the feudal states of Greece, it forms a suitable centre from which to take a survey of them, and of that in the Peloponnese in particular. The story of this epoch is composed of so many threads,

and these are often so tangled, that it requires no little skill to give it unity and continuity, and in doing this Gregorovius has succeeded. He also deserves great praise for the care and judgment with which he has studied and sifted the literature of the subject, which the labours of numerous modern investigators, especially those of Hopf, in Germany, and Sathas, in Greece, have rendered extremely copious.

How slight are the materials for a mediaeval history of Athens may be seen from the following passage of Meursius, which Gregorovius cites with approval.

“Athenae,” he says, ‘ab hoc tempore (Justiniani) annis circiter septingentis, seu deliquitum est historiae seu fortunae lassae quies, omnino nec fecere quicquam, neque passae; certe nihil literarum monumentis consignatum invenitur.’”

Consequently, only two hundred pages of the present work are devoted to the period which intervenes between Justinian and the Fourth Crusade, and a considerable portion of these is taken up with the question of the Slavonic element in Greek nationality. The truth is that, besides the fact that two empresses of Constantinople, Irene and Theophano, were Athenians by birth, and that the names of Athenian bishops occasionally occur in the records of councils of the Church, only two events are mentioned as having occurred at Athens during this interval. In the year 662 the emperor Constans, on the eve of an expedition to the West, passed the winter there; but the fact of his doing so is all that is recorded. Much as we should like to know what was the state of the public buildings, what statues and other works of art remained, whether the emperor took up his residence on the acropolis or elsewhere, absolute silence is maintained on all these points. Again, in 1018, the great conqueror Basil II., after the overthrow of the Bulgarian kingdom, visited Athens to celebrate his triumph there. What was his object in doing so, we are not told; but as he was a rude soldier, we may be sure that he was not drawn thither by antiquarian curiosity. But the feeling that his victory had secured Greece against further inroads may have made him desirous to visit what was still one of its most important cities, and it is not impossible that veneration for the heroes of Marathon and Salamis may have possessed his mind. However, all that is reported concerning what happened on the occasion is, that he worshipped at the church of the Virgin, as the Parthenon was then called, and offered handsome votive offerings there. The cause of this long neglect is not far to seek. M. Gregorovius points out that, whereas in the West the *Imperium Romanum*, which came to an end in the person of the last emperor, seemed to the citizens of Rome to spring up afresh in the Papacy, the informing spirit of Athens was its intellectual life, and no power could revive this when once its works of art had been carried off, and its philosophy had ceased to be taught. To this it must be added, that the emperors at Constantinople were too much engaged in warding off attacks from their own capital to pay attention to a provincial town. The name of Hellen had now become equivalent to “heathen,” and the inhabitants of

Greece were called Helladici. At the same time, in Athens itself, something of the old feeling of art and reverence for the past must have remained; for no buildings in Rome have been spared as the Parthenon, the Propylaea, and the Theseum have been. Many ancient shrines were adapted so as to become places of Christian worship, dedicated to saints who corresponded to certain of their heathen predecessors—either in similarity of name, as St. Demetrius to Demeter, Elias to Helios; or in their characteristic attributes, as the Virgin Mother to Athena Parthenos, or St. Nicholas, the patron saint of sailors, to Poseidon.

The cloud of forgetfulness in which Athens was so long enveloped was at length lifted by the appointment of Michael Acominatos to be archbishop of the see about the year 1175. This remarkable man, the pupil and friend of Eustathius of Thessalonica, and a scholar of no mean attainments, entered on his office full of enthusiasm for the famous city which was to be his place of residence; but he was soon disenchanted by the ignorance which he found to prevail there, and the citizens could no more understand the refined Greek of Constantinople in which he addressed them than a Greek peasant at the present day can understand the language of the Athens press. He describes the place in one of his letters as “a vale of misery”; and there can be no doubt that the absence of local industries, the oppressive taxation, and, worst of all, the prevalence of piracy, had reduced the people to a very low ebb. To Michael's praise be it said, he did everything in his power to ameliorate the condition of his flock during the thirty years that he passed among them; and when Leon Sguros, the governor of Nauplia, made himself tyrant, and endeavoured to seize Athens, the archbishop encouraged the citizens to take up arms, and successfully defended the place. When speaking of the ancient sites, he mentions that the fountain of Callirrhoe, the Areopagus, the Cerameicus, and some other places still retained their classical names; but his silence in respect of the majority of them implies that they were now forgotten.

In the course of his work our author touches on a number of vexed questions connected with mediaeval Greek history; and though he does not himself contribute anything fresh to the discussion of them, his summaries and criticisms of the views of others relating to them are valuable, and he has given useful references to the sources of information in his notes. Some of these it may be worth our while to notice. The formal closing of the philosophic schools of Athens by Justinian in 529 has been generally regarded as an established fact of history; but of late this has been vigorously contested, and the authority for it is so questionable that M. Gregorovius does not admit it. At the same time, he finds that the confiscation of the funds of the educational institutions throughout the empire by that sovereign indirectly produced the same result; though, as an intellectual power, the Platonic school of Athens had already expired shortly before this

time, after a duration of more than 800 years, in the person of Proclus. The derivation of the name “Morea” he considers to be still doubtful; and neither Fallmerayer's etymology from the Slavonic *more* “sea,” nor Hopf's, who regarded it as a metathesis for *Romea*, nor that of Sathas, who believes that it arose from the name of a town called Muria in Elis, wholly satisfies him. As regards the name Navarino, he rejects Hopf's plausible explanation that it arose from a settlement of the Navarrese Company, because it is found in a document earlier than the appearance of those adventurers; and he reverts apparently to the view which would connect it with the Avars, and, as regards the original form, would consider it rather, with Buchon, to have been Neo-Avarinon, than, with Leake, as *εἰς τὸν Ἀβάρινον*. He also notices the different opinions that have been held as to the runic inscription on the body of the marble lion, which once stood in the Piraeus, and is now in the arsenal at Venice. At one time it was thought that this had been deciphered, and it was said to have been the work of a band of Normans, commemorating their re-conquest of the port of Piraeus from the rebellious Greeks. Now, however, it is declared by good Scandinavian authorities that these runes are so much defaced as to be undecipherable; and Gregorovius suggests that they were inscribed by the Varangians in the service of Basil II. at the time of his visit.

The limits which our author has set to his work are the reign of Justinian, which marked the extinction of paganism at Athens, and the Ottoman conquest; but he has furnished his readers with a prologue and epilogue, in the form of a sketch of the early history of the decline of the city, and a summary of what is known concerning its fortunes under Turkish domination, until it once more rose to importance as the capital of the new Hellenic kingdom. As the principal causes of its decline he assigns the wholesale plundering of works of art by Roman conquerors; the spread of Christianity, which gradually, though more slowly than elsewhere, undermined the heathendom of which it was the most permanent home; the foundation of Constantinople, by which men's thoughts were withdrawn from the ancient centre of civilisation; and the inroad of the Goths under Alaric. In comparing the effects of the Frankish and the Turkish rule he decides that the latter was in the long run more favourable to the Greek race than the former, because the Franks, by being formed into a number of states, broke up the nationality of the subject race; while the Turks, by making them all slaves under a common master, restored to them their unity as a people, and thus made their regeneration as a nation possible. He concludes with a well-deserved tribute to the prosperous condition of modern Athens, and the rapidity of its restoration:

“But fifty-three years have passed since King Otho's entry; and already at the present time Athens is, what it never had been since the Roman period, a city of 100,000 inhabitants, the largest and fairest in Greece. . . . It extends in wide squares and streets, with numerous palaces of Pentelic marble, to the foot of Lycæ-

bettns, and beyond the Ilissus and Cophisus, while its port of Piræus has grown to be a second busy city."

H. F. TOZER.

Life of Arthur MacMorrrough Kavanagh. By Sarah L. Steele. (Macmillan.)

THE assimilative genius of the Irish Celt has become proverbial. Many a singular enactment of the Anglo-Irish Parliament bears witness to the fascination which Irish ways had for the English settler who was intended to reform them. To listen to Irish bards, to marry an Irish wife, to speak the Irish language, was to put his "loyalty and civility" in peril; and it was even thought necessary to restrain him from riding without stirrups, an Irish practice the attractions of which it is not easy to understand. But it might easily be shown that the assimilative force has not been exclusively exercised from the Celtic side. In the Tudor wars the overthrow of the great Celtic chieftains was largely accomplished by the aid of the smaller Celtic gentry and their dependents. If the former numbered the Geraldines on their side, the Crown had its O'Sullivans and Maguires, and it has never at any time been wholly without backing from this quarter.

This reflection cannot but occur to the mind when we read the biography of Arthur MacMorrrough Kavanagh, a Celt whose sept was once the terror of the Pale, while its late representative appears as the mainstay of the loyalist party in Ireland during the agitation of the last ten years. If the Celtic genius has assimilated Mr. Parnell, England may fairly be proud of having won for her rule the devoted attachment of such a man as Mr. Kavanagh. Whatever anyone may think of the part he took in politics, no one can fail to recognise in him a spirit of heroic temper—heroic in the deep sense which Carlyle has given to that word: a man who encountered the most crushing difficulties with a valour which nothing could daunt, and who lived and strove for noble and unselfish aims. Everyone knows the extraordinary physical privations which seemed to doom him to a life of hopeless inactivity and gloom. And now everyone may read in Mrs. Steele's well-written biography how he became a daring sportsman and traveller, an honoured member of the legislature, the beneficent ruler of a great estate, and the leader of the Irish gentry—who, indeed, showed themselves little worthy of such a leader—in their struggle against the agrarian revolution.

Among other interesting documents, the diary of his Eastern travel is given here, and it bears wonderful testimony to Mr. Kavanagh's iron will and buoyant energy. We must say, however, that a good many compendious entries, such as the following, might well have been omitted:

"1st March.—Started at sunrise to see the caves of Ellora. Inspected three or four of the best, and then, having had enough, returned to breakfast."

We could have spared a good deal of this in favour of more quotations from the *Cruise of the Eva*, a book which ought not to remain out of print.

But Mrs. Steele's work is, on the whole, well worthy of its subject, and has been written with care, insight, and sympathy. Several unpublished documents of a political nature are given in full, showing the strong intelligence and knowledge of the country which Kavanagh brought to the problem of governing Ireland on the old Liberal principles—by remedying grievances without concession to the national sentiment. At the close of his life, however, we find him agreeing with Lord Grey, Mr. Parnell, and Mr. Hurlbert, that fixity of executive tenure is one of the indispensable conditions of sound government in Ireland, if that government is to be carried on without the concession of a native Parliament—an opinion which seems to imply that the Unionist who holds it is either very hopeless of the success of his cause, or curiously sanguine as to the possibility that the British democracy will contradict, in the case of Ireland, every political tendency it has shown since it has had the opportunity of showing any.

T. W. ROLLESTON.

Poems. By V. (Mrs. Archer Clive). (Longmans.)

"Of *V. Poems* by V., we emphatically say, 'It is an Ennead, to which every Muse may have contributed her Ninth.' The stanzas printed by us in italics are, in our judgment, worthy of any one of our greatest poets in his happiest moments."

It was in these words that the *Quarterly Review* welcomed the nine poems by "V." half a century ago. There is nothing in which a critic may deceive himself more easily than in judging the verse of his contemporaries; and now that these verses reappear with additions, and after the lapse of fifty years, the words of the *Quarterly Reviewer* must seem not a little extravagant and strange. To show their extravagance it is not necessary to reproduce the stanzas in italics: it is better to put some of the Reviewer's own words into italics; to assume that he realised their meaning, and to test his judgment. "*The happiest moments*," he says, and "*of our greatest poets*." With "*our greatest poets*" in their greatest works I suppose the most enthusiastic admirer would shrink from placing "V." in competition. The Reviewer means, therefore, that her verse rivals the verse of Shakspeare in the best of his Songs and Sonnets, or the verse of Milton in the most exquisite of his early poems; that it is equal to Herrick at his best, to the felicities of Gray and Collins, to the Odes of Keats, or to "*Kubla Khan*," or to Wordsworth in "*Laodamia*" and "*The Highland Reaper*." Here are some of "*our greatest poets*"; and I have chosen, I think, some of those pieces which were conceived in their "*happiest moments*." It is to poetry of this order that the nine poems by "V." have been compared. I do not think that the stanzas in italics justify the Reviewer's praise. It would be easy for me to select an equal, or a greater, number of poor stanzas from Mrs. Clive; but I prefer to take a broader view, to say that it is not in style at all that she is distinguished. It is more unkind to provoke a comparison

like the *Quarterly Reviewer's* than to say such a comparison should never have been made; it is not to condemn a poet as bad, to say his work will not bear so tremendous an examination. I put aside the few great names which are suggested by the Reviewer's judgment: I take the whole range of English poetry, and examine it with a view to style; and I make bold to say, that in a selection, made with as fine a taste as Mr. Palgrave has shown in his "*Golden Treasury*," there would not appear a single example from the poems of Mrs. Clive.

One of her poems is introduced by these words from Byron:

"that half-way house, that rude hut, whence wise travellers drive with circum-spection
Life's sad post horses o'er the dreary frontier
Of age, and looking back to youth give one tear."

There is nothing so bad as this in Mrs. Clive herself; but a writer of the surest feeling in style would never have chosen such a painful verse to introduce a poem of her own. In the great body of her work, Mrs. Clive is too diffuse: her poetry has not the texture, the clear outline, nor the composition and arrangement of a great artist in form. And this is not atoned for by fineness of detail; there are no beautiful and happy things said by the way, nothing of that *curiosa felicitas* which relieves simplicity from baldness and elevates plain writing into the highest art. Mrs. Clive is always plain, and always clear; but she has not that incommunicable and perfect gift, which we can feel but not explain in the great masters of style.

For the matter, there is more to be said in praise of Mrs. Clive. Her poems, with Mr. Gladstone, "form a small book which has the life and soul of a great book." This criticism is much nearer to the truth than the criticism of the *Quarterly*. We find in her, everywhere, thought and genuine feeling, sometimes we find passion and almost inspiration: what we do not find is the artistic power to convert these into the finest poetry. In examining Mrs. Clive's work, the reader must be struck by the melancholy of it: not always a tender melancholy, but a melancholy which passes too frequently into forbidden or doubtful subjects. Death, loss, deprivation, are favourite themes of hers:

"Sunt lacrymae rerum, et mentem mortalia tangunt."

"The sense of tears in mortal things" is the cause, no doubt, of our highest poetry; but Mrs. Clive too often passes from the melancholy aspects of death and loss into the realms of corruption and of putrescence. There is too much of the charnel-house about her; she reveals, and revels in, too many secrets of the tomb.

"As when,—the coffin in its breast—
The grave conceals itself in flowers."

This, both in the manner and in the sentiment, is a good example of Mrs. Clive's poetry. In the manner, a fastidious ear will catch the unpleasant jingle of "*coffin in*": this insensibility to metre and to form is not uncommon with her;

"The moon at dewy midnight bright,"
"Her moonlight visage to a dawning morn."

Here are two other examples of it; and it is their frequent occurrence that makes me question the judgment of the *Quarterly Reviewer*. In the sentiment, Mrs. Clive is not content to mourn over the grave, to comfort herself with its flowers: she passes on too often to the corruption within; her visions are too often, not of spirits, but of moving and of mouldering corpses. One of her poems, "The Mother," is an address to an embryo, to what the Psalmist calls "the untimely fruit of a woman," never to be really born. Here again, I think, as well as in her style, Mrs. Clive shows a want of restraint: a want of that sure touch and instinct which the "greatest poets" always reveal to us, not only in their "happiest moments," but constantly and in the large body of their work.

Mrs. Clive's great poem is, undoubtedly, "The Valley of the Morlas," a long piece of almost fifty pages. The beginning of it exhibits her usual fault of diffuseness, of long-drawn and labouring description: not description with the happy phrases of Thomson's

"The yellow wall-flower stain'd with iron-brown";

or of Matthew Arnold's "Resignation" or "The Youth of Nature"; and still less with magic touches like his

"Merlin and Vivian stopp'd on the slope's brow,
To gaze on the light sea of leaf and bough
Which glistening plays all round them, lone and mild,
As if to itself the quiet forest smiled."

Mrs. Clive never recalls the "natural magic" of Matthew Arnold or of Wordsworth, at their best: indeed, she never attains to the pictorial, the descriptive excellence of poets like Thomson and Cowper, at their best. Her own highest excellence is reached, I think, in the middle part of "The Valley of the Morlas," where she narrates how a religion of nature grew into a formal paganism, and that again gave place to Christianity. In a note to this poem, Mrs. Clive remarks, "The last copy made before this final one is honourably marked with approbation in various places, and criticism in others, by one of the ablest pencils of the day." Both the approbation and the criticism are well deserved: the approbation, in the passages I have named.

"Frowns on the rough-hewn brow they plac'd,
And fear'd the frowns themselves had trac'd;
Wrath on the lips, their hands display'd,
And strove to soothe the wrath they made,"

she says of the pagan images; and of the Cross,

"That sign no heavy yoke imposed,
No fear enforc'd, no hope forbid;
And of the Deity disclos'd,
Not what he was, but what he did."

In these extracts, and in the whole passage from which they come, Mrs. Clive is pertinent and happy; her touch is fine and her execution good, because she has conceived firmly what she wished to say. In this poem, and in the song in *Paul Ferrol*, her best verse is to be found. *Paul Ferrol*, with all its interest and all its power, has too much of the melodrama in it; the explanation of Paul Ferrol, "why he killed his wife," has little else. Though Mrs. Clive had a great deal of sensibility

and feeling, she had not an equal sense of restraint and form. The artist's feeling and imagination were given her, but not the artist's touch or hand. In prose, this led her into melodrama; in verse, into the morbid themes which I have noticed. The finest gifts of style were not hers; she never approaches the "greatest poets" in their "happiest moments"; and, therefore, I presume to challenge the venerable opinion of her *Quarterly Reviewer*.

ARTHUR GALTON.

"UNIVERSITY EXTENSION SERIES."—*A Short History of Political Economy in England.*
By L. L. Price. (Methuen.)

THIS book is one of a series which is intended to meet the special wants of university lecturers *in partibus*; and, if it were in any sense exhaustive, it would not be fulfilling its function. A course of lectures may be made a concurrent commentary on the several chapters of the book; but the book itself is meant to be always "in need of its father to help it," and should leave in the reader a desire for the commentator.

Mr. Price has tried very skilfully to avoid the besetting sin of such handbooks, namely the sin of saying either too much or too little, or committing both faults alternately. He tells us perhaps more than was absolutely necessary about the private life and bodily infirmities of eminent economists; but on the whole the parts of the book are well proportioned. The life and works of the most important English economical writers, "from Adam Smith to Arnold Toynbee," are graphically described in less than 200 pages. In one or two of the chief instances, Mr. Price, after giving biographical facts, historical surroundings, and general doctrines, selects for us a characteristic example of his author's reasoning and dwells on it at some length, not forgetting to point out where later criticism has rectified or refuted it. In the case of Adam Smith it is division of labour; in the case of Ricardo, rent; in the case of John Mill it is value that forms the example. These little analyses give a much better taste of an author's quality than the summary presentation of conclusions without reasonings, so common in "Primers." It must be said, however, that such a passage, for instance, as that upon Mill's theory of value shows the uselessness of the self-donating ordinance by which Mr. Price confines himself to departed authors. In saying that without Prof. Marshall's *Principles* and Prof. Sidgwick's *Political Economy* this part of the book could hardly have been written, we are only agreeing with Mr. Price himself. The subject has become so wide since Mill's time that a chapter to contain the supplementary criticisms would perhaps have been desirable. It is hardly fair, we must add, to represent Mill as claiming finality for his own account of the theory of value. The most natural interpretation of his words (quoted p. 98) is rather that he had inherited from his predecessors "a complete theory," which left him and everybody else nothing to do but "solve by anticipation the chief perplexities which occur in applying it." Less important slips are the assertion (on Toynbee's authority) that there is only

one allusion to the cotton manufacture in the *Wealth of Nations*—there being at least two (IV., vii., and IV. viii.)—and the attribution of the expression "marginal utility" to Prof. Marshall instead of Mr. Wicksteed.

Mr. Price modestly disclaims all pretensions to originality; but the latter part of his book goes over ground that has hardly been traversed before. The account of Cliffe Leslie, Bagehot, Cairnes, and Jevons brings out the relation of these authors to each other and their predecessors much more fully than was possible, for example, in Mr. Ingram's general History of Political Economy. In the concluding chapter (on Social Reform), which introduces us to questions of our own day, Mr. Price states the views of Fawcett and Toynbee, as typical representatives of what may be regarded as the two extremes of economical opinion within the Liberal party. Though here as elsewhere he is careful to commit himself as little as possible, it is clear that on the whole he sides with Toynbee in desiring "not a paternal but a fraternal government"—in "accepting the principle of private property, repudiating confiscation and violence," and making only a "reluctant admission of the necessity for State action" (p. 196). Since Toynbee, did not live to give any contribution to economic theory, the prominence given to him may be regarded as in some measure due to the close personal associations that existed between Toynbee and large numbers of men now engaged in the extension of university teaching, as well as to the fact that he practically sacrificed his life in a kindred cause.

J. BONAR.

NEW NOVELS.

Kinsfolk. By Mary Deane. In 3 vols. (Hurst & Blackett.)

An American Duchess. By W. Fraser Rae. In 3 vols. (Bentley.)

A Romantic Rigmorole. By Charles T. C. James. (Ward & Downey.)

Madeline Power. By Arthur W. Marchmont. (Oliphant, Anderson, & Ferrier.)

The School of Art. By Isabel Snow. (Fisher Unwin.)

Coo-ee: Tales of Australian Life. By Australian Ladies. (Griffith, Farran & Co.)

Los Cerritos. By Gertrude Franklin Atherton. (Heinemann.)

Thornleigh House. By W. Edward Chadwick. (Sutton, Drowley & Co.)

READERS who want a novel that can be galloped through in a few hours had better be warned off *Kinsfolk*. It is not a book for them. But readers who prefer a novel that can neither be lightly read nor lightly laid aside—a tale which does not depend for its interest on any of the stock resources of fiction, but draws with the truth of art upon the complex truth of life—may be advised to try *Kinsfolk*. It is distinctly a book for them. The chief fault of most tales in three volumes is that they are too long. The thin material in them is wearily spun out to make up the desired

number of pages. But Miss Deane must have found it difficult to compress her elaborate plot into the customary limits. She has accomplished the task with a skill that compels admiration, but the result is that every page must be scrupulously read. If one were disposed to indicate the lines of the story—and that ought not to be considered a critic's privilege—it would be impossible to do so. There are so many stories involved in one, so many characters with essential parts, so many scenes and interests of importance to the whole scheme of the tale, that one would not know how to begin, or where to leave off, or what to omit. It is enough to say, as to the subject of the story, that it belongs to the end of the last and the beginning of the present century, and that it has to do with the terrible events of that time, consequent on Bonaparte's usurpation, as well as with simple English interests and English life. Instead of the ordinary hero and heroine and the small cluster of subordinate figures who with them make up the *dramatis personæ* of the average tale, there are here more leading personages than could be counted on the fingers of both hands—yet scarcely one of them could be dispensed with. Napoleon himself and Josephine, with the brilliant court of the Tuileries as it was in the days of the First Consul, and the grim shadows of cruelty and conspiracy behind it, have their part, and a conspicuous one, in the moving scene; but there is so much else in it that they do not make more than an episode in the whole story. Every taste may gratify itself among the characters. Perhaps the most powerfully drawn is the beautiful Parthenope. Sirens with faces that tempt men to their destruction, and hearts capable of all manner of devilries, have often been depicted with more or less success. Miss Deane's siren is a very palpable success. Her beauty is not more wonderful than her power, and both have much to do with the shaping of people's destinies. Harden will fascinate many readers by his moral heroism and moral weakness, qualities which gain much from his striking personality. The story of his remorse is most ably told. Anaple is one of those lovable English women, bred in all gentleness, who are found equal to any stress and strain when the crises come that try what is in them. Germaine is such another woman, with just the difference which French blood might be expected to produce. Amar shows what can be done with a sound English stock which has received the polish of a true French refinement. But I must not attempt even a summary of Miss Deane's characters. As a general estimate of all of them, and of the merits of this exceptionally able book, let it be said that *Kinsfolk* deserves to rank among the best works of contemporary fiction.

It would not be just to Mr. Fraser Rae to regard *An American Duchess* as a fair example of the work he is capable of. It is disappointing in an aggravated degree, for expectations are raised in the early pages of the novel which are not in any measure satisfied. The reader is entitled to suppose, when he is introduced to Lord Adullam, Mr. Birmingham, and Lord Reginald Wood-

stock, that some smart parodies of contemporary political life are in store for him; but the passages which are perhaps meant to be of that character are singularly flat and insipid. They are not nearly so entertaining as the political news to be found any day in the newspaper. The very name of the book raises expectations of another kind. One supposes that the Americanisms of manner, language, and character of the transatlantic young lady who becomes an English duchess will give a certain piquancy and freshness to a story written about her. But the Duchess of Windsor is a model of correct behaviour; and though she does sometimes, by chance, "guess" things after the manner of her country, she might pass for a model of British propriety. Captain Roker comes upon the scene at an early period of the story, as a clubman who seems to live by his wits. He has had adventures and seen the world, and the reader hopes he will give some liveliness to the tale. But the more we see of Captain Roker the more prosaic he becomes. Other characters are introduced, among them a Home Rule member of Parliament, whose name savours of fun, but the atmosphere of the story appears to reduce them all to a dead level. The duchess's husband—he and she are Marquess and Marchioness of Slough through most of the book—talks with a priggish accuracy on all occasions. Even Mr. Bayle, the duchess's father, though his American instincts are never quite overborne by his British surroundings, cannot rise above the prevailing flatness. At times he seems to be on the verge of a piece of humour, but it disappears in Johnsonian English when it should have flashed out in the vernacular of Jonathan. There is absolutely no plot in the story. One chapter has evidently suggested another; one person talks like another; one incident is as prominent as another. The exercise of reading the three volumes is like that of walking for a long time on a dead flat, and any one who has tried this last will long for some hills to climb and some valleys to dip into.

Mr. James has a lightness of touch, and a skill in picturesque description, which are very pleasing. His *Romantic Rigmorle* will while away an afternoon as agreeably as any one could wish. The "sylvan joys of Stillwater" might not seem so attractive to people who tried them for themselves as he makes them appear, but his good offices are the more to be valued for that reason. At any rate it would be well to read his account of the ways of Stillwater and its people before making the actual acquaintance of Squire Beaumont and taking rooms at the North Star. Mr. James can write with pathos as well as with humour. The story told in "Dr. Wells's Manuscript" is good enough and touching enough to have been written by Dickens.

In *Madeline Power* materials not at all new to fiction are skilfully used in the working out of a very effective and well-written story. Madeline has a step-mother, who has an eligible son. It is the step-mother's wish, and to her son's interest, that the two young people should marry. But

Madeline loves somebody else, who adores her. The lovers, however, are separated by a crafty design, and each is made to believe that the other has been false to the affection plighted between them. This gives the step-mother the opportunity she has manoeuvred for; but Madeline escapes from the toils she spreads, and supports herself bravely in London. Then some startling things happen, which the reader must discover for himself. He has but to follow the diligent investigations of old Matt Pearce, ex-detective, Madeline's friend and fellow-lodger, and he will be rewarded for his pains. It is needless to say that the course of true love runs smoothly at last.

The School of Art is a slight story, but one of more than average merit. There is a pleasant freshness about it; one has not met any of the people or heard of their little belongings before. Plain girls who are patterns of goodness are not unfamiliar; but Emmeline Harris was something more than this. While her virtues were all intensely practical, she had a genius for art. Her goodness won her the affections of dear old Mr. Stone, who made her rich, and the signs of her genius first attracted the man she married. The story is full of human nature in various shades and sorts, and is told with not a little skill.

A cluster of Australian stories by Australian ladies is something novel; but the novelty has a charm of its own, for the short tales in the volume called *Coo-ee* are exceptionally smart. "The Tragedy in a Studio," by Mrs. Patchett Martin, who edits the volume, is a graphic sketch, full of local colour. The heroine of the story comes to England, and it is in an English studio that the final scene occurs; but the strong air of the antipodes seems to give some of its vigour to the *dénouement*. "The Victims of Circe" is perhaps more distinctly an Australian story, though the types of Circe are pretty much the same all the world over. In this instance the wiles and wantonness of the creature are exceedingly well depicted; her victims—those of them at least with whom the reader feels most sympathy—do not come to much harm. Mrs. Campbell Praed, who, as we are reminded, is an old Australian, contributes a fanciful piece about the "Bunyip," which seems to occupy the same place in Australian lore that the sea-serpent holds in the legends of old-world mariners.

Los Cerritos is strongly suggestive of Mr. Bret Harte, as any story of ranch life in California could hardly fail to be. But it would be foolish to quarrel with a fresh, bright, interesting story because somebody else might have written it, and written it with perhaps a little more freshness and brightness. A heroine born in primitive surroundings, who has a primitive appreciation of Nature, and is very beautiful to boot, makes an admirable central figure for a tale. She does not belong to civilisation, but she is unsophisticated. On the scene of which she is the central figure comes a pronounced representative of civilisation, a San Franciscan capitalist, who knows nothing as yet of her wild West, as she knows nothing of his cultivated city life. The extremes

meet, and adapt themselves to each other, as extremes generally do. There is a pleasant air of romance about the story, though some of its charm may possibly be the effect of distance.

There is neither romance nor charm about *Thornleigh House*, though it, too, may be true to life—the dull and dreary life it describes. But why it should be thought well to reproduce life of this sort, otherwise than in the local parish magazine, one cannot understand. The affairs of the village club, and the gossip and match-making of a small circle in a small neighbourhood, may be matters of considerable interest to a few people, but they are wearisome when they occupy nearly three hundred pages of small print.

GEORGE COTTERELL.

CURRENT LITERATURE.

Graven in the Rock. By Samuel Kinns. (Cassell.) For this stately volume a large circulation may be confidently predicted. It is a popular work, profusely illustrated, wholly un-critical, and of that pseudo-scientific class which nowadays finds so many readers. Dr. Kinns's object is to confirm the historical and scientific accuracy of the Bible "by reference to the Assyrian and Egyptian monuments in the British Museum and elsewhere." The book is dedicated by permission to the Lord Chancellor, and contains an imposing list of subscribers, comprising dukes, earls, fifteen bishops, and similar notabilities, whose names are printed in capitals; those of lesser note being relegated to smaller type. The class of readers for whom the book is adapted is indicated by the courage with which the author sets forth on the title-page his qualifications for the task he has attempted. He is not only a "Member of the Biblical Archaeological Society" (*sic*), but also a "Fellow of Zion College," and possessed of the degree of Ph.D., whether from the university of Weissnichtwo or elsewhere we are left to conjecture. The book is not one for serious review, but a few gems may be selected. Darwinism and the whole modern doctrine of evolution are denounced in no measured terms. "The advent of each species has been a separate act of creation." The Garden of Eden "extended for several miles, and was shut in by an impenetrable fence." Adam and Eve employed themselves in "singing impromptu songs in the glades of that delightful garden." Col. O'Kelly's parrot, which died in 1802, spoke so intelligently that there was no reason why Eve should be surprised when she was "accosted by a beautiful serpent, which, doubtless, had often attracted her attention by its graceful motions and glittering scales." It is, however, greatly to be regretted that Cain made "an improper reply" when asked where his brother was. When Seth was born the population of the world probably amounted to 22,220 souls, which would leave 20,000 to "avenge the death of Abel" if we strike out 2200 for "any casualty" that may have occurred. "Noah would doubtless preserve with great care" the prophecies of Enoch. The book of Enoch, as we have it, is, however, a forgery, with the exception of the passage quoted by St. Jude, "which was inserted to give an apparent authenticity" to the spurious work. There is no real difficulty about "the longevity of the antediluvian" patriarchs, because the Rev. F. Paynter has in his garden an oak tree not less than 800 years old; while the author, when on a visit to Lord Shaftesbury, found yew trees growing in the park which were quite two thousand years old; and, since Isaiah says "as the days of a tree are the days

of my people," we may expect on the arrival of the millennium a return to the longevity of Methuselah; but how two thousand years could be comprised in a single millennium we are not informed. Possibly there may be some mistake about the age of Lord Shaftesbury's yews. At the time of the deluge the population of the earth amounted to "at least two millions." The palaeolithic people of Western Europe could not then have been in existence, since "every human being was destroyed," though the deluge did not extend to Europe, the waters of the Mediterranean being "in all probability tilted over the land by an earthquake" in an easterly direction. All existing nations are descended from Noah. Dr. Kinns ignores all modern criticism as to the dates of the books of the Old Testament. The objections to the Mosaic authorship of the Pentateuch are "untenable," and there is "no doubt" that the whole of the book of Daniel was written by Daniel. Dr. Kinns tells us that he has "amalgamated his own thoughts and discoveries with those of eminent Egyptologists"; and he has also "amalgamated" the irresponsible chatter of various persons who happened to sit near him while he was pursuing his studies in the reading-room of the British Museum. "Thus," he moralises, "we help one another to collect and distribute interesting information." He seems to have consulted Lempriere's Classical Dictionary, which is "a generally excellent work," though occasionally "incorrect." He has also made use of the works of the late Dr. Kitto and similar authorities, which have led him to the conclusion that "the mythologies of the Egyptians, Assyrians, Greeks, Romans, and Hindus, were all based upon perversions of the original story of Redemption." It is noteworthy that the first edition of this silly and pretentious work, consisting of a thousand copies, was exhausted in a fortnight, and that a second edition is announced for immediate publication.

Sketches from a Nile Steamer. By H. M. and N. Tirard. (Kegan Paul & Co.) Our author's experiences were confined to the Nile voyage on one of Cook's excursion boats, and Mrs. Tirard tells us in her preface that it is for such tourists that her book is intended. She has skilfully chosen her audience. There is a large class of travellers who find "Murray" too abstruse, and prefer a guidebook sprinkled with descriptions of crocodiles, sunsets, and donkey-boys, and bedewed with gushes of admiration conveyed in dubious English. And it is for the benefit of such tourists, who will doubtless appreciate the forthought, that words like "backsheesh," "cartouche," "sheikh," and "hieroglyphics," are translated in footnotes. Mrs. Tirard tells us that the illustrations may serve to prove that "sketching is quite possible" from a steamer in motion. And it must be confessed that the hasty and unfinished appearance of her sketches is precisely what might be expected under the circumstances. Although the date of the tour is not given, it appears from internal evidence that it took place three or four years ago; the descriptions of some of the Theban temples are, therefore, misleading, owing to the progress of recent excavation. Unseen sights, however, are not left undescribed. On p. 90 our author extracts from her guidebook an account of certain sculptures, though, as she ingeniously states, "they are entirely covered up with rubbish." The note on p. 242, concerning the recent discovery of mummies at Deyr-el-Bahari, reproduces, with all its errors, the telegraphic report which appeared at the time in the daily papers; M. Grébaud actually figuring as M. "Grévant." The concluding chapter is the best in the book. It gives a graphic account of Cairo and the neighbourhood; while the numerous plans of temples are correctly reproduced from

the usual sources, and will be useful to those who do not possess the original works.

Alone Through Syria. By Helen E. Miller. (Kegan Paul & Co.) This is a book of a different type to the preceding. It is conscientiously written, though somewhat goody in tone, which will not render it less popular with the average Philistine reader; while some of the experiences it describes are novel and even amusing. The first part of the volume deals with the beaten track of the Nile trip; but the interest begins when Miss Miller relates her adventures in Syria, where, unprovided with a tent, she was accompanied only by a native servant, and had to trust for nightly shelter to local hospitality. When missionary stations were unavailable, she was forced to sleep in the houses of native families upon a rug spread on the floor, in rooms bedless and windowless. It was hardly necessary for Miss Miller to inform us that she views "ecclesiastical matters from the standpoint of a Churchwoman"; scraps of hymns or texts, applicable or inapplicable, are persistently dragged in; while it was needless to designate so constantly the Copts as "heretics," and religions other than her own as "false." On p. 274 there is a mysterious paragraph concerning the workers at the British Syrian Mission at Tyre, who "deplored to me the activity of the Roman Church there, from which, and from the Greek Church also, it seemed that their few converts had been made"! Apparently, the ladies of the Mission would rather see the natives Moslems than Roman Catholics. And it would seem as if the perversion of members of other Christian churches is the aim and object of our missionary societies. Miss Miller must be congratulated on her pluck and the tenacity of purpose with which she carried out her plans in face of all difficulties.

NOTES AND NEWS.

MR. WHITLEY STOKES, who was already a *correspondant*, has now been elected one of the eight *associés étrangers* of the Académie des Inscriptions—an honour which, we believe, he shares among Englishmen only with Sir Henry Rawlinson.

MR. SAMUEL RAWSON GARDINER has consented to take the chair at the annual Wykehamist dinner, which will be held in London in June. Mr. Gardiner entered Commons in 1841, during the early years of Dr. Moberly's rule; and among his contemporaries were the present Lord Justice Lopes, Bishop Randall, Admiral Sir Anthony Hoskins, the Rev. H. Furneaux, the Rev. H. F. Tozer, and Colonel Mallison.

MR. GEORGE RUSSELL'S memoir of Mr. Gladstone, in the series of "Prime Ministers of the Queen," will not be published until the second week in July, in order to take advantage of the American copyright act. Among books which have been postponed to the autumn we may mention Sir Edwin Arnold's descriptive account of his tour in America and Japan, and Archdeacon Farrar's novel dealing with the early Christians.

LADY ELIZABETH CUST is printing at the Cliswick Press, in a limited edition for private circulation, a handsome quarto volume, to be entitled *Some Account of the Stuarts of Aubigny*. This history of the eleven Scottish Seigneurs of Aubigny in France of the name of Stuart begins with an account of the martial exploits of Sir John Stuart, of Darnley (the ancestor of the Stuarts of Lenox), to whom Charles VII. of France granted the Seigneurie of Aubigny in 1422, as a reward for his services against the English; and it ends with the life of Charles Stuart, the last Seigneur of Aubigny

and Duke of Lenox and Richmond, of the Stuart line, who died in 1672. The Queen, who is descended from the first Seigneur of Aubigny, through the marriage of Mary Queen of Scots with Henry Stuart, Lord Darnley, has accepted the dedication of the work, in which a pedigree will be found showing the relationship of the Stuarts of Lenox and Aubigny to the royal house of Stuart. Another pedigree will exhibit the many English and Scottish noble families who are descended from the daughters of the two Esme Stuarts, the first and third Dukes of Lenox, who were also the sixth and seventh Seigneurs of Aubigny, giving also their descent from the historic families of Visconti of Milan, and della Scala of Verona.

MESSRS. SWAN SONNENSCHNEIN & Co. will shortly add to their "Social Science Series" a volume entitled *The Destitute Alien in England*. The work will be a symposium from the hands of fourteen writers, who share the conviction that the time has now arrived for preventing the free importation of destitution and vice into England. The Earl of Dunraven, Lady Dorothy Nevill, Mr. W. A. MacArthur, and a prominent civil servant are among the contributors. The book will be edited by Mr. Arnold White, who prefixes a general statement of the case.

Appropos of the Royal Naval Exhibition. Messrs. Cassell & Co. will publish next week Southey's *Life of Nelson* as a volume of their "National Library," and also an octavo edition of the same work with eight full-page plates. They are also about to issue *In a Conning Tower*; or How I took H.M.S. *Majestic* into Action, a story of modern ironclad warfare by Mr. H. O. Arnold Forster, with original illustrations by Mr. W. H. Overend.

ANOTHER idea born of the Naval Exhibition is Mr. John Ashton's compilation, *Real Sailor Songs*, the dedication of which has been accepted by the Duke of Edinburgh. The work will appear almost at once in sumptuous form from the Leadenhall Press, and will be full of quaint illustrations.

THE following are some of the more important articles in the seventh volume of *Chambers's Encyclopædia*, which will be published in June:—"Isle of Man," by the Rev. Tom Brown; "Marlowe" and "Marston," by Mr. A. H. Bullen; "F. D. Maurice," by Judge Hughes; "Mecca" and "Medina," by Mr. Stanley Lane-Poole; "Meteorology," by Dr. Buchan; "Milton," by Dr. Richard Garnett; "Mimicry," by Mr. E. B. Poulton; "Molière," by Mr. G. Saintsbury; "Money" and "National Debt," by Prof. J. S. Nicholson; "John Morley," by Sir Edward Grey; "Mountains," by Prof. James Geikie; "Mythology," by Mr. F. B. Jevons; "Names" and "Palaeography," by Canon Isaac Taylor; "Negroes," by Dr. D. G. Brinton; "Nelson," by Prof. J. K. Laughton; "Newman," by R. H. Hutton; "Nihilism," by Prince Kropotkin; "Numismatics," by Dr. Barelay V. Head; "Ogam," by Prof. Rhys; "Orchard," "Peach," and "Pear," by Mr. R. D. Blackmore; "Oxford," by the Rev. Andrew Clark; "Painting," by Mr. P. G. Hamerton; "Palestine," by Mr. Walter Besant and Prof. Hull; "Parliament," by Mr. T. Raleigh; "Father Parsons," by Mr. T. G. Law; "St. Patrick," by Prof. G. T. Stokes; and "St. Paul," by Archdeacon Farrar.

MESSRS. HENRY & Co. have at press *The Bachelors' Club*, a collection of bizarre humour and topical literary satire, by Mr. Zangwill, illustrated by Mr. George Hutchinson. The book will be published simultaneously in England and America at a popular price. Messrs. Brentano are the American publishers.

MR. THOMAS ST. E. HAKE, author of "In Letters of Gold," has a novel in the press,

entitled *Within Sound of the Weir*. Messrs. Cassell & Co. are the publishers.

A book entitled *What God hath Wrought* is now in the press, giving a detailed account of the recent mission tour of the Rev. G. C. Grubb through Ceylon, South India, Australia, New Zealand, and Cape Colony. Messrs. E. Marlborough & Co. will be the publishers.

MESSRS. WILLIAM ANDREWS & Co., of Hull, will publish at once *My Christ and other Poems*, by the Rev. Elvet Lewis, author of "The Sweet Singers of Wales."

MESSRS. DIGBY & LONG have in the press a fifth edition of Mr. Percy Russell's *Author's Manual*, with prefatory remarks by Mr. W. E. Gladstone.

MR. FREDERICK WEDMORE'S short story in the new number of *The Fortnightly Review* is, perhaps, the first purely "literary piece" that he has chosen to publish since *Pastorals of France*.

THE forthcoming number of the *Religious Review of Reviews* will contain articles on "Nonconformity in England," by the Rev. Dr. Bradford; "An Eternity of Idleness," by the Rev. Dr. Clifford; a sermon by Archdeacon Farrar; and a portrait of the late Dr. Pressensé.

MR. JOHN FROWDE, chief librarian of the Barrow-in-Furness Public Library, and formerly of Liverpool, has been appointed to fill the position of chief librarian to the Public Library at Bermondsey.

THE meeting of the Sette of Odd Volumes on Friday, May 1, was of exceptional interest, owing to the fact that Mr. Charles Plumtre Johnson made a communication of his discovery in a defunct magazine, *The Britannia*, of an hitherto unrecorded contribution by Thackeray, entitled "Reading a Poem," a *jeu d'esprit* of the Yellowplush period, satirising the noble poetasters of the day. Mr. Johnson read a long extract, and offered a limited reprint, in the format of the Sette's opuscula, for the acceptance of the brethren. The meeting was the first under the newly elected president, Mr. Charles Haité, the well-known black and white artist. Among the guests present were Mr. R. D. Blackmore, Mr. Alma Tadema, Mr. Edwin Long, Mr. Henry Moore, Mr. Onslow Ford, Mr. Norman Maccoll, Mr. Alfred East, Mr. Clement Shorter, Mr. T. C. Venables, Mr. Charles Holme, Mr. G. E. Fletcher, Mr. Richmond Ritchie, Dr. George Johnson, Prof. Sylvanus Thompson, Prof. Crookes, Mr. William Carruthers, and Mr. Fred Villiers.

ON Monday next, and the three following days, Messrs. Sotheby will be engaged in selling a portion of the library of Lord Brabourne, who has apparently resolved to disperse the almost unrivalled collection of county histories and other topographical works which he has been acquiring during the past few years. Many of them are large-paper copies, handsomely bound. There are also included in the sale a large number of letters addressed to Sir J. Banks and Sir E. Knatchbull, and nine holograph letters of Jane Austen, whose correspondence (it may be remembered) Lord Brabourne edited in 1884. These letters seem to be addressed to Miss Cassandra Austen, Lord Brabourne's great-aunt.

MR. W. E. HENLEY'S *Book of Verses* (David Nutt) has just attained the distinction of a third edition, in handsome paper and binding. For the encouragement of young poets, it may be noted that the first edition appeared in June, 1888, and the second edition in April, 1889; and that each of these consisted of one thousand copies. The third is a reprint of the second, which contained a few poems not to be found in the first.

A BERLIN paper publishes the following epigrammatic *éloge*, which Prof. Buchheim sent to the late Count von Moltke on the occasion of his ninetieth birthday:

"Durch Worte nicht, durch Thaten nur,
Hast du den höchsten Ruhm errungen;
Und weil du nie viel Worten hold,
Sei dir dies kurze Lob gesungen."

UNIVERSITY JOTTINGS.

THE Earl of Derby has been appointed by the Crown to be chancellor of London University, in the room of the late Lord Granville.

DR. ALFRED BARRY, sometime Bishop of Sydney, has been appointed by the heads of houses at Oxford to deliver the Bampton lectures for next year. Dr. Barry, who was educated at Trinity College, Cambridge, received the honorary degree of D.C.L. from Oxford at the commemoration of 1870, when the Marquis of Salisbury inaugurated his chancellorship.

PROF. P. VINOGRADOFF, of Moscow, has been appointed to deliver six lectures on the Ilchester foundation at Oxford, upon "Slavophilism and Western Ideas in Russian Culture." The first lecture will be given at the Taylor Institution on Thursday, May 21.

DR. PEILE, master of Christ's College, has resigned the readership in comparative philology at Cambridge, to which he was appointed on the creation of the office in 1884. The Dixie professorship of ecclesiastical history at Cambridge is also vacant, owing to the promotion of Dr. Mandell Creighton to the see of Peterborough. This chair was founded in the same year.

THE vacancy in the office of registry at Cambridge, caused by the death of Dr. Luard, must, in accordance with statutory provisions, be filled up on Wednesday next, May 13, when the senate will elect one of two members nominated by council on the previous day. Mr. C. E. Grant, of King's, who has been assistant-registrary since 1883, and Mr. H. M. Taylor, of Trinity, have already issued their addresses as candidates.

MR. JAMES BRYCE, regius professor of civil law at Oxford, was to deliver a public lecture to-day (Saturday) upon "The Nature of Sovereignty."

THE Physical Society of London propose to hold their usual fortnightly meeting to-day (Saturday) at Cambridge.

WADHAM COLLEGE, Oxford, has lent to the Royal Naval Exhibition the portrait of Blake that hangs in its hall, and also the two gold medals struck to commemorate Blake's victory at Santa Cruz, which are among the finest specimens of Simon's work.

THE Hon. Auberon Herbert has issued a fly-leaf inviting adhesions to a scheme

"for offering to those undergraduates who dislike reading with a view to examinations as an end in themselves an examination (or school) by which a degree of high character should be given at the universities without competition of any kind, and with the least possible disturbance of study pursued for its own sake."

It is proposed to have a public breakfast on Tuesday, May 19, either in London or Oxford, for the purpose of forwarding this scheme and receiving suggestions concerning it.

THE office of visitor to the Slade school of fine art, recently instituted by the council of University College, London, has been accepted by Mr. E. J. Poynter. Prof. J. H. Middleton, of Cambridge, has undertaken to give three lectures at University College on May 27 and 29 and June 1 at 4 p.m. upon "The Development of Art, historically treated."

DON RAFAEL ALTAMIRA, the author of the *Historia de la Propiedad Comunal*, has in preparation a volume on the teaching of history. It will give a descriptive account of the methods pursued by the chief professors of history in Europe and America, including Great Britain. The palm for excellence seems to be awarded to the French professors, and after them to those of Germany and of the United States. The work may be expected next month.

VERSE.

PRAISE OF THANATOS.

THANATOS, thy praise I sing,
Thou immortal, youthful king!
Glorious offerings I will bring;
For, men say, thou hast no shrine,
And I find thou art divine
As no other god: thy rage
Doth preserve the Golden Age.
What we blame is thy delay—
Cut the flowers ere they decay!

Come, we would not derogate,
Age and nipping pains we hate;
Take us at our best estate!
While the head burns with the crown,
In the battle, strike us down!
At the bride-feast do not think
From thy summons we should shrink;
We would give our latest kiss
To a life still warm with bliss.

Come, and take us to the train
Of dead maidens on the plain
Where white lilies have no stain;
Take us to the youths that thou
Lov'st to choose, of fervid brow,
Unto whom thy dreaded name
Hath been simply known as Fame:
With these unpolluted things
Be our endless revellings!

MICHAEL FIELD.

OBITUARY.

DR. H. R. LUARD.

WE regret to record the death of the Rev. Dr. Henry Richards Luard, senior fellow of Trinity, vicar of Great St. Mary's, and registry of the university since 1862. He died at his residence, No. 4, St. Peter's-terrace, Cambridge, on Friday, May 1, in the sixty-sixth year of his age. From the nature of his office, no man was better known throughout the university; and none was more universally esteemed, alike for his devotion to duty and for the courtesy of his manners. He kept the records of the university, both past and present, in admirable order, and proved by his own example that antiquarian learning is no disqualification for the conduct of practical affairs.

His first literary work was, we believe, a memoir of Porson, contributed to the volume of *Cambridge Essays*, published in 1857. Later, he returned to the same subject, and edited the *Correspondence of Porson* (1867). At about this time, also, he compiled a catalogue of the theological MSS. in the university library. In 1872 he brought out a catalogue of Cambridge graduates since the beginning of the century, of which a second edition appeared in 1884. Almost the only book that he published in the regular way was a short treatise on *The Relations between England and Rome during the Earlier Portion of the Reign of Henry III.* (Cambridge, 1877).

But Dr. Luard's fame as an historian will always be maintained by his numerous and learned contributions to the series of *Chronicles and Memorials of England* during the Middle Ages, published under the direction of the Master of the Rolls. In the very first year that this series was started (1858), his name appears as the editor of three Lives of Edward

the Confessor, one in Norman French and two in Latin. In the next year (1859), this was followed by an edition of the *Chronicle of Bartholomew de Cotton*, a Norwich monk, whose history is particularly valuable for the latter years of the thirteenth century. In 1861 he edited the *Letters of Grosseteste*, bishop of Lincoln in the reign of Henry III., and pointed out in his Introduction the light thrown on the ecclesiastical and social condition of England at that time. Between 1864 and 1869 appeared the five volumes (including an Index and Glossary) of his *Annales Monastici*, which contain the ten most important chronicles compiled in religious houses in England during the thirteenth century—a period which Dr. Luard had now made especially his own. Next (1872-1884) came his edition in seven volumes (including *Additamenta* and *Index*) of the *Chronica Majora* of Matthew Paris, of which the portion preceding the Norman Conquest had never before been published. And only last year (1890) appeared the third and concluding volume of his last work, the *Flores Historiarum*, collected by Matthew of Westminster. To have made such important contributions to the accurate knowledge of early English history would have been much for a mere student; but with Dr. Luard it was only the *requies oblectamentumque* of his daily work at Cambridge.

NEXT week we hope to print a notice of Thomas Hare, the famous author of the minority scheme of representation, who died on May 6 at the great age of 85.

MAGAZINES AND REVIEWS.

IN the *Expositor* for May Prof. Ramsay retells the story of Glycerius the Deacon, who, according to Archdeacon Farrar, about 373-374 A.D., "left the town [Vesna] by night with a band of girls and some youths, and scandalised the country by wandering about with them in a disorderly manner, dancing and singing hymns, amid the jeers of the coarse rustics." Prof. Ramsay gives translations of the two letters from Basil of Caesarea and Gregory Nazianzen, and a letter from Basil to Glycerius, and shows how even the evidence of Basil (who is opposed to Glycerius) reveals various details inconsistent with the received version of the story. No one who realises the significance of dancing in the old popular cults will be inclined to accept our Church historian's view without protest: and Prof. Ramsay gives ample ground for supposing that Glycerius did not give in his adhesion to a naïve ceremony of early Cappadocian Christianity, which Basil, as the advocate of the Catholic system, was determined to stamp out. Prof. Sanday gives his fourth paper on the Synoptic question, with a survey of recent hypotheses (Abbott, Wright, Resch, Marshall). Prof. Marshall, in his new paper on the Aramaic Gospel, examines the linguistic evidence by which Resch supports his theory that there was a primitive evangelic document written, not in Aramaic, but in Hebrew. Prof. Massie re-examines the "Barachias" question (Matt. xxiii. 35), à propos of a passage in an address by Dr. Martineau; Prof. Cheyne touches on the possibility of "psalms of Solomon"; and a first instalment is given of the characteristic theological correspondence between Delitzsch and his friend Hofmann.

THE *Jewish Quarterly Review* for April contains a sketch of Judaism in France at the present day by Rabbis S. Debré; a long study on Jewish ethical wills by I. Abrahams; and the conclusion of his sketch of Bacharach by Prof. Kaufmann, who also contributes a paper on three centuries of the genealogy of the most eminent Anglo-Jewish family before 1290.

Mr. Abrahams writes a critical notice of Streane's translation of the Talmudic treatise *Chagigah*, and Dr. Neubauer reviews of Blau's *Massoretic Investigations*, Epstein's *Eldad ha-Dani*, and Röhrich's *Bibliotheca Geographica Palaestinae*. Dr. Kohn justifies his reading *Sifre Himeros* ("books of pleasure") for *Sifre Himeros* in the Talmud, and gives some other Talmudic notes.

THE *Theologisch Tijdschrift* contains articles on recent criticisms of the Epistle to the Galatians, by Dr. Meyboom; on Cerinthus in the Apocalypse by Dr. Völter; and on the report in Josephus touching the cause and the date of the execution of John the Baptist, compared with the narratives of the Synoptics; also reviews and notices of books by various writers, including Prof. van Bell and Prof. Kuenen. Among the books noticed are Taylor on the Text of Micah, Hoffmann's *Hiob*, Dillmann's *Textkritisches zum Buche Hiob*, and Renan's *Histoire d'Israel*, Part iii.

THE SOCIETY OF HISTORICAL THEOLOGY.

THE reconstitution of the old Taylerian Society (founded in London in 1874) as the Society of Historical Theology will, it is hoped, render the appliances of theological study in Oxford slightly more complete. The old name was thought by some Oxford friends to commit the society to the critical or theological views of the late J. J. Tayler more than was desirable. It seemed important, therefore, to remove even the shadow of a suspicion of theological partiality by reorganizing the society under a new name. This was effected at a meeting held in Oriel College common room on Tuesday, May 5. The object of the society is the furtherance of theological study, partly by meetings for reading and discussion of papers, partly by the performance of some common piece of work in some branch of theological research. It is hoped that members of very various shades of opinion may be attracted towards this society, the first president of which is Prof. Cheyne, and the second, elected in anticipation for the next year, will be Dr. Fairbairn. Though the name of the society emphasizes the predominantly historical (and therefore critical) nature of its object, it is expressly understood that the philosophical basis of theology is, equally with the historical progress of religious thought, a fit subject for the researches of its members. A solid piece of work in Biblical criticism has already been taken in hand, but the increased interest in philosophy in Oxford is a guarantee that the philosophy of religion will not be neglected. The membership of the society is not confined to Oxford; like the old Taylerian, it seeks to provide a centre for the friends of theology scattered in many places. The hon. sec. is Mr. J. E. Carpenter, 109, Banbury-road, Oxford.

CORRESPONDENCE.

CHAUCER'S "COMPLEYNT OF VENUS"—A PROPOSED EMENDATION.

Stanhoe Grange, Norfolk: April 27, 1891.

In the first stanza of the second Ballade of the so-called "Compleynt of Venus," Chaucer has literally followed Granson's original "word by word," as he calls it, save in one line, where the French:

"Plaindre en dormant et songier a la dance"

is rendered (according to the printed editions):

"Pleye (*var*, Pley) in sleping, and dremen at the daunce."

Chaucer may have written *pleye* with the object of adding point to the line; but, seeing how closely he has kept to the original in the rest of the stanza, it is probable that the real reading is *pleyne* (in MS. *pleje*)=*plaindre*. A comparison of Chaucer's version with the original will show how close is the correspondence between the two:

"Certes, amours, c'est chose convenable
 Que voz grans biens vous faciez comparer:
 Vieillier ou lit et jeuner a la table,
 Rire plourant et en plaingnant chanter,
 Baissier les yeux quant on doit regarder,
 Souvent changier couleur et contenance,
 Plaindre en dormant et songier a la dance,
 Tout a rebours de ce qu'on vult trouver."

"Now certes, Love, hit is right covenable
 That men ful dere bye the noble thing,
 As wake a-bedde, and fasten at the table,
 Weping to laughe, and singe in compleyning,
 And down to caste visage and loking,
 Often to chaungen heve and contenance,
 Pleye (Pleyne?) in sleping, and dremen at the daunce,
 Al the revers of any glad feling."

Here the translation is as faithful as possible,

but in many passages Chaucer has evidently found it impracticable

"to folowe word by word the curiositee
 Of Graunson,"

and he has in consequence here and there quite changed Granson's meaning.

We owe the identification, quite recently, of the original Ballades of Oton de Granson to M. A. Piaget, who has printed them in *Romania* (Tom. xix. pp. 411-416).

It may be worth while to point out that it is now evident that the title, "Compleynt of Venus," applied to Chaucer's poem, is a misnomer. Shirley appears to be responsible for this title. He supposed "that Graunson made this last balade for Venus, resembled to my lady of York; answering the compleynt of Mars"; in which case, says Prof. Skeat (*Chaucer's Minor Poems*, p. 393), Granson must have read Chaucer's "Compleynt of Mars," and attempted a reply to it, which Chaucer, by request, Englished soon afterwards.

Granson's three Ballades, however—there is no evidence that he ever wrote a "Complainte de Venus"—were, as M. Piaget shows, written in his youth (he was born about 1340), i.e., in all probability before the "Compleynt of Mars," to which Prof. Skeat (p. lx.) assigns the date 1374; so that Shirley's theory is, to say the least of it, hazardous, if not altogether untenable. For the same reason it is impossible now to accept the conjectural date, 1393, assigned by Prof. Skeat to Granson's composition, though he is probably right in his supposition that Chaucer's translation of it was made in or about that year.

PAGET TOYNBEE.

SIR THOMAS MORE'S TREATMENT OF HERETICS.

Record Office: May 4, 1891.

The question proposed to me by Mr. Watkiss Lloyd is really not very difficult to answer. Suppose that, instead of a Lord Chancellor of England, it were the case of a respectable game-keeper who was compelled for some reason or other to give up his employment. Suppose that such a one were to say to a friend, "You may write upon my tombstone that I served my master faithfully for many years to his entire satisfaction, and that all honest men about me held me in good esteem; but that I was a very troublesome man to thieves, to murderers, and above all to poachers." Here you have precisely the same "ascending scale" that you find in the epitaph More wrote for himself; but it surely would not imply that even a gamekeeper considered that poaching (especially poaching from mere thoughtlessness or ignorance of the law—was quite as bad a thing as robbery or murder. It would only mean that the gamekeeper's duties brought him into direct collision with poachers, but that occasionally he had to deal with some of the most desperate characters, as indeed poaching, a wrong thing in itself, was very apt to lead on to worse things.

So also Sir Thomas More, as Chancellor, had but little to do with the ordinary administration of the criminal law; but we know that he sat on Commissions for the suppression of heresy and heretical books. And I presume that as a leading member of the Privy Council he must have had heretics sometimes brought before him in the Star Chamber. In fact Erasmus extols his clemency in that, having the power of putting men to death for heresy, he strove only to cure their mental condition and prevent the spread of the evil. For it was difficult to deny that, judged by its fruits, heresy was a very real evil in those days. In Germany it had given rise to a Peasants' War, and shortly after More's resignation of the Chancellorship it gave birth to a formidable

insurrection of Anabaptists at Münster. In England it was publishing scurrilous pamphlets full of the most shameful falsehoods and irreverence. It was no more a mere theological evil than Mormonism. More hated it with all his soul, and did his utmost to suppress it, but by means strictly humane as well as legal.

No doubt More considered erroneous theology to be the fountain-head whence social evil flowed; and though I do not accept all his theology myself. I know not that he was wrong. But a heretic, it should be remembered, is not one who holds wrong opinions—we all do that, more or less in the course of life; he is one who arrogantly asserts, in the face of authority, that he is right, when he is not competent, either in learning or in judgment, to discuss the matter. Thought was as free in the Middle Ages as it is at the present day; but if a fresh thinker saw any new light upon old questions he was expected to dispute the point in the schools with competent theologians, and not pour a flood of sophistries into the minds of admiring congregations, while claiming absolute irresponsibility for the position he took up. Of course, *nous avons changé tout cela*; the old system has passed away, for good and evil. It was breaking down even in Sir Thomas More's day. Yet if it had been fairly administered by men of his spirit, the resort to faggots abandoned, and the independence of the spiritual head at Rome upheld by the common consent of the secular princes, a united Church throughout Europe might possibly have reformed itself and defined (somewhat differently from what the Council of Trent did) the doctrines that were really essential to Christianity, leaving a large freedom of opinion on those that were not. As it is, we are left to the operation of those laws by which one poison is sure to counteract another in the long run.

JAMES GAIRDNER.

CYRIL TOURNEUR.

Merton, S.W.: May 2, 1891.

Some interesting facts concerning Cyril Tourneur, the dramatist, are to be found in the petition of his widow Mary to the Council of War praying allowance for her husband's service. It is dated April 16, 1632.

Tourneur, having settled means under the States of Holland of £60 per annum, was chosen by Edward, Viscount Wimbledon, to "go upon the Cadiz action as secretary to the Council of War and of the Marshal's Court, and received £10 as imprest on both places." He executed both places from August 2, 1625, to September 26 following, when "Mr. Glanville was sent by his Majesty as Secretary of the Council of War, which was the only place for credit, and wherein his pay would have come to £400." Tourneur went the voyage, notwithstanding, as secretary to the Marshal's Court, and on his return died in Ireland on February 28, 1626, leaving his widow destitute. Annexed to the petition is the certificate of Lord Wimbledon. Tourneur would thus appear to have been a military man who had seen service in the Low Countries. (Consult Calendar of State Papers, Domestic Series, 1631-33, pp. 309, 430; 1628-29, p. 511; 1629-31, pp. 486, 529).

GORDON GOODWIN.

THE ETYMOLOGY OF "FANE."

Barton-on-Humber: April 23, 1891.

It is amusing to read in Richardson (*Dict. Eng. Lang.* 1836), "Lat. *Fanum*, a temple, from the Gk. *Naos*, by transposition *avor*, and prefixing the Digma *Favor*." I venture, however, to think that the usual etymology,

apparently based on the view of Livy (x. 37, cf. Servius, *ad Aen.* i. 446), is really quite as far from the truth. Prof. Skeat (*Etymol. Dict.* in voc. "Fane") says, "Lat. *fanum*, a temple; supposed to be derived from *fari*, to speak, in the sense 'to dedicate.'" The Imperial Dictionary (1882) agrees with this view; but Mr. Wharton (*Elyma Latina* in voc.) gives "*fānum* temple: 'sacred' = **fās-nūm* fr. *fās*."

But, as various Etruscologists have long asserted, and as was also stated in antiquity, the Lat. *fanum* is derived from the Etruscan *fanu*; and the meaning "temple" is altogether secondary. Fabretti (*Glos. Ital.* in voc. "Fanu") defines the word as "*proprie locus Diis sacer*"; and quotes Orioli that it was impossible to doubt that the Etruscans used it "in senso di sepolcro." The Inscr. Fab. No. 2279 reads:

et fanu sacce lantn pumpris,

which Mr. Sayce renders:

"This (is) the-sepulchre & (e = *que*)-place-of-cremation-of-the-freedman, &c."

So in Inscr. No. 1915 we find *et fanu lantn*. But I do not think that *fanu* means "sepulchre," because (1) there are other Etruscan terms for "grave," "tomb," "vault," &c.; and (2) forms in other dialects are not forthcoming; while, on the other hand, when we find the correct meaning of an Etruscan word, it does not stand alone. I would connect the Etruscan *fanu* with the Magyar root *ven* (cf. Turkic *war*, *ur*, = Mandchu *fari*, = Magyar *cer*. Schott. So English *funerane*), "senex"; Finnic *vanha*, "antiquus," *vainaja*, "defunctus," "beatius post mortem"; Esthonian *vana*, "old," &c.; and read: "This is the ancient place, &c." i.e., the old abode of ancestral spirits. The "*Fanum Voltumnæ*," the place of the annual assemblage of the Etruscan nation, "was not a temple, but has been identified with the vast cemetery now called Castel d'Asso" (Taylor, *Etruscan Researches*, 326). The Etruscan temple-tomb—the sepulchre was, in fact, the shrine of the Manes" (Dennis, *Cities and Cemeteries of Etruria*, ii. 451, n. 8)—and an ancestral cult are, of course, thoroughly Turanian.

ROBERT BROWN, JUN.

THE LONDON LITHUANIAN BIBLE.

London: May 4, 1891.

In his letter on the London Lithuanian Bible (ACADEMY, April 18, 1891), Mr. Morfill says:

"The fullest account of it is given by Joher. . . who states that he saw an imperfect copy preserved at Wilno, which only extended as far as Psalm lx. This copy has not been discovered as yet."

This is not correct. A fragment of this Bible in precisely the same condition as that described by Joher, and most likely the very copy he saw, has been found, and is now in the library of the Roman Catholic Ecclesiastical Academy in St. Petersburg. See *Ob etnograficheskoi poyezdky po Litve i Zhmudi lyetom 1887 goda*. "Ethnographical travels in Lithuania and Samogitia during the Summer of 1887," by E. A. Volter (St. Petersburg, 1887, p. 60.)

Mr. Morfill continues:

"On examining. . . a little work, entitled *Oratio Dominica*, &c. (London: 1700), I was agreeably surprised to find a version of the Lord's Prayer in Lithuanian on p. 41 [it should be p. 43], with a reference at the side, 'Conf. Bibl. Lituan., Lond., 1660.' It appears that the compiler of the book had access to this Bible, which must have existed in his time in a form at least as complete as to include the Gospels, whereas Joher's copy only extended to the Psalms."

Upon examining p. 43 of the *Oratio Dominica* I find that there are two references given thus: "Auctor. Wilk. n. 35," and immediately under it "Conf. Bibl. Lituan., Lond., 1660." The

versions of the Lord's Prayer in Lithuanian in Bishop Wilkins's book and in the *Oratio Dominica* are identical. Surely if the compiler of the *Oratio Dominica* (B. Mottus, according to Brunet) had seen this Bible and copied the Lord's Prayer from it, common sense would have compelled him to place a reference to the original in a prominent position, and that to a copy from it afterwards. But he has not done so, because he did not see the Lithuanian Bible, as I shall presently show.

Upon reference to *Dzieje Kościółów Wyznania Helweckiego w Litwie* "History of Churches of the Helvetian Confession in Lithuania," by J. Łukaszewicz (Posen, 1843, Tom. 2, p. 264) it will be found that the order for the printing of the New Testament, together with orders for the printing of various parts of the Old Testament, were issued by the Protestant Synod held at Wilno in 1663 to their "Delegatus." That person left Lithuania in the same year and returned in 1664, the attempt to print a Lithuanian Bible in London having collapsed. How could then the compiler of the *Oratio Dominica* have seen a copy of this Bible dated 1660 "in a form at least as complete as to include the Gospels," when the order for the printing of the New Testament belonging to it was not given till 1663?

The question now is from whom had the compiler of the *Oratio Dominica* copied his version of the Lord's Prayer in Lithuanian and the reference by the side of it? He did so, I think, from *Oratio Orationum*, edited by T. Ludekenius (Berolini, 1680.) On p. 56 of that book there is a version of the Lord's Prayer in Lithuanian identical with that in the *Oratio Dominica* with the same references: "Auctor Wilk. n. 35. Conf. Bibl. Lituan., Lond., 1660."

JOHN T. NAAKE.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, May 10, 7.30 p.m. Ethical: "Plato's Republic," by Mr. J. M. Macdonald.
 MONDAY, May 11, 8.30 p.m. Geographical: "The Benue and its Northern Tributary, the Kibbe," by Major C. M. Macdonald. Illustrated by the Oxy-hydrogen lantern.
 TUESDAY, May 12, 3 p.m. Royal Institution: "Bacteria, their Nature and Functions," III., by Dr. E. E. Klein.
 8 p.m. Society of Arts: "Glass-Painting," by Mr. H. Arthur Kennedy.
 8 p.m. Civil Engineers: Discussion, "Railway-Train Lighting," by Mr. W. Langdon.
 8 p.m. Colonial Institute: "Inter-British Trade," by Mr. C. E. Howard Vincent.
 8.30 p.m. Anthropological: "The Origin and Sacred Character of certain Forms of Ornament in the South-east Pacific," by Mr. C. H. Reed.
 WEDNESDAY, May 13, 4 p.m. Mrs. Jopling's Art School: "The Poets as Painters, VI, Byron, Shelley, Keats," by Miss Elsa D'Esteer Keeling.
 8 p.m. Society of Arts: "Fast and Fugitive Dyes," by Prof. J. J. Hummel.
 THURSDAY, May 14, 3 p.m. Royal Institution: "Recent Spectroscopic Investigations," VI., by Prof. Dewar.
 3 p.m. Society for Preserving Memorials of the Dead: Annual Meeting.
 8 p.m. Society of Arts: "The Growing Uses of Tussur Silk in European Textile Manufactures," by Mr. Thomas Wardle.
 8 p.m. Mathematical: "Functions determined from their Discontinuities and Boundary Conditions," and "A Certain Riemann Surface," by Prof. W. Burnside; "The Disturbance produced by an Element of a Plane Wave of Sound or Light," by Mr. A. B. Basset; "Relations between the Divisions of the First n Numbers," by Dr. Glaisher; "Wave Motion in a Heavy Heterogeneous Liquid," by Mr. A. E. H. Love.
 8 p.m. Electrical Engineers.
 8.30 p.m. Antiquaries.
 8.30 p.m. Historical: "The Old Irish Church," by Prof. Julius von Pfungk-Hartung.
 FRIDAY, May 15, 4 p.m. Botanic: "The Story of Plant-Life on the Globe," I., by Mr. W. Currethors.
 8 p.m. Philological: "Inscribed Vases," by Mr. Talfourd Ely.
 9 p.m. Royal Institution: "Crystallisation," by Prof. O. D. Liveing.
 SATURDAY, May 16, 3 p.m. Royal Institution: "The Artificial Production of Gold," II., by Mr. H. G. Harris.

SCIENCE.

The Future of Science: Ideas of 1848. By Ernest Renan. Translation. (Chapman & Hall.)

SOME years ago a series of amusing letters appeared in *Punch* purporting to be addressed to mature and grey-headed statesmen by their own alter ego's of some thirty years before. The point of interest and of humour in each case was the transformation which "the whirligig of time" had effected in the course of its revolutions. It was only occasionally that the youth turned out to be the natural or lineal sire of the old man. New circumstances, associations, and aspirations had induced so many deviations from the promised track that they were equivalent to new and often startling departures. Similarly, in *The Future of Science*, we have the young Renan of 1848 in the midst of the varied revolutionary tumult which then agitated his country and which found a sympathetic reflex in his own ardent feelings and aspirations, addressing prospectively the old Renan of 1890—in other words, we have him comparing the new-born ideas and hopes which then animated him with the realised conclusions to which he now finds they have given birth. This retrospect of a great man's career—his Pilgrim's Progress—has in general more than a personal interest. A cynical religionist might perhaps remark that in Renan's case the pilgrim retraces his steps to the City of Destruction whence he took his departure; but the philosopher and critic will regard with more tolerant interest this remarkable manifestation of a youth whose mature age has been crowned with so much merited celebrity.

In truth, this retrospective interest of Renan's career deserves more than passing attention. A Chinese proverb tells us that "he is a great man who never loses his child's heart"; and whatever other claims to renown be denied him, Renan may, at any rate, lay claim to this much of greatness. His *Souvenirs d'Enfance et de Jeunesse*—a work whose personal and autobiographical interest closely connects it with his present *Future of Science*—revealed in his own naïve and charming manner the intense fascination which his early associations continue to exercise on his later years. His birthplace with its old monastery and its quaintly picturesque streets, his Breton mother with her simple yet pious and thoughtful culture, his sister Henrietta, the delightful scenery of the Breton coast, are memories to which he looks back with unabated reverence and interest. But just what these reminiscences are to his ordinary life, that his early training, his struggles with and gradual emancipation from the thralldom of Romanism, his insight into and resolute grasp of the perennial facts of nature and humanity, his fervent aspirations for science and for man as contained in this volume, are to his mental life. It would seem that, in order to reproduce in all its vivid colouring this picture of the Renan of 1848, the author had only to go to his drawer and therefrom extract a MS. of some 400 pages of octavo and pica type. Here, therefore, we have, not the doubtful records of a past whose memories are beginning to fade, but the actual contemporaneous scrip-

tograph, if the word be allowed, of his then life, the mental and spiritual throes which attended his conversion from Romanism, the intoxication of his newly-acquired ideas of freedom, the ferment of a convergent if not quite homogeneous crowd of new opinions, sentiments, and hopes, not only in theology, but in science and philosophy as well.

Probably the feature of all others which would strike the reader of *The Future of Science* is the evidence it affords of the continuity of Renan's mental life. So far back as 1818, in the seething ferment of that "revolutionary epoch," he not only foresaw his own future, but was able to form a fairly accurate prognosis of the general direction and outcome of that *Sturm und Drang*. To few men has such a prophetic insight into their mental evolution been granted. Renan then mapped out his life, and has been able to follow and fill up its outline. He formed plans, and has been able to realise them. He laid hold of truths which still remain to him corroborated by the thought and lapse of years. He formed hopes, and has been able either to transmute them into realities or to foresee that they are bound to be so transmuted. Renan's vision of truth, like Wordsworth's vision of the rainbow, joins his youth to his old age with the self-same links of sympathy and kinship. He might have taken as the motto of his book—

"The child is father of the man,
And I would wish my days to be
Bound each to each by natural piety."

The complacency with which the distinguished author surveys this record of his early views and aspirations is apparent on nearly every page. Thus he not only apologises for its unsmooth style, in which the long involved sentences seem to struggle with each other in order to gain articulate expression, but he even deprecates in comparison with it the incisive epigrammatic brilliancy in which he has since attained so indisputable a mastery. He thinks it probable that

"A day may come when the critics will maintain that the *Revue des Deux Mondes* and the *Journal des Débats* spoil me, inasmuch that they taught me to write—that is, constantly to condense and prune my ideas."

Whether this be probable or no, few thoughtful readers of the best French prose will fail to appreciate the truth of the following remark:

"The clearness and tact exacted by the French, which I am bound to confess compel me to say only part of what one thinks, and are damaging to depth of thought, seemed to me a tyranny. The French only care to express what is clear, whereas it happens that the most important processes, those that relate to transformations of life, are not clear; one only perceives them in a kind of half light."

More generally, Renan's complacent regard of his original starting-point is expressed in the following terms:

"Consequently, I was right at the outset of my intellectual career firmly to believe in Science, and to make it the object of my life. If I had to begin again, I should do exactly as I have done, and during the little time that remains to me I shall go on as I began."

The foregoing observations will of them-

selves suggest that *The Future of Science* has a two-fold interest of unequal scope and validity—viz.: (1) personal or historical, (2) general or speculative. I am bound to say that, in my judgment, the former largely preponderates over the latter. In its way the book is Renan's *Apologia pro Vita sua*—his intellectual and spiritual autobiography. As such, its interest exceeds that of any other of his published works, even if it does not surpass all the rest put together. Fascinating in the highest degree is this self-portraiture of a genuine truth seeker—probably the most remarkable in this nineteenth century—who, urged by the *saera fames* of knowledge, explored in early life all the main avenues of Science, who by the sheer force of his own individuality and sense of truth broke away from his earlier creed, but who, relinquishing a faith untenable to his intellect, found himself unable to surrender all its graceful, picturesque, and sentimental associations. It is this fondly retrospective Lot's-wife attitude that lends such a singular and tender charm to this book. The enthusiasm of most converts for their new faith has long passed into a proverb. Not content with abandoning it, they must attest their sincerity by insulting it. They not only put out of existence the foe that was once their friend, but they abuse and mutilate the corpse. They are not satisfied with burying it, but they must perform a *pas seul* on its grave. Nothing can be more opposed to this petty lack of magnanimity than Renan's attitude. Though he has forsaken Romanism, he still looks back with passionate yearning to the faith which only the imperious sense of truth compelled him to surrender. The old shrine, the old creed, still retain a place in his affections, though he is no longer a worshipper at the shrine or a believer in the creed. Few regrets over a vanished illusion have ever been written more exquisitely pathetic than the last sentences of this book:—

"O God of my youth! I have long hoped to return to thee with colours flying and in the pride of reason, and perhaps I shall return humble and vanquished like a feeble woman. Formerly, thou didst listen to me. Some day I hoped to see thy face, for I heard thee answer my voice. And I have seen thy temple crumble away stone by stone, the sanctuary has no longer an echo, and instead of an altar ornamented with lights and flowers, I have seen rise before me an altar of brass against which prayer, severe, unadorned, without images, without tabernacle, blood-stained by fatality, shatters itself. Is it my fault? Is it thine? Ah, how willingly I would beat my breast if I could hope to hear that beloved voice which formerly made me tremble. But no, there is only inflexible nature: when I search thy fatherly eye I find only the orbit of the Infinite, empty and baseless; when I search thy celestial brow, I dash myself against a vault of brass which coldly sends me back my love. Farewell, then, O God of my youth. Perhaps thou wilt be the God of my death-bed. Farewell, although thou hast deceived me, I love thee still."

These touching sentences may be taken as indicating both the tone of his work and the object of its author. Renan represents himself as a truth-seeker—who has demonstrated his sincerity by being also a truth-

confessor. But he is not satisfied with this statement of his position in general terms, he sets before us in detail his method. This embraces two aptitudes or tendencies to which he gives the names of—(1) free inquiry, (2) ideality.

M. Renan is the most renowned example in our day of what the ancient Greeks termed a Skeptic—i.e., a man who had a natural distrust of dogma or finality in speculative subjects of all kinds. He confesses that he loves inquiry, intellectual investigation, for its own sake, and wholly irrespective of what its issues might be; indeed, not being very solicitous whether any results were even possible. The outcome of this intellectual habit in the case of the Greeks was *ἀραξαία*. Indeed, the great leaders of the successive schools of Greek skepticism were never tired of recommending free inquiry as a prescription in order to acquire absolute mental tranquillity. It seems important to note that Renan has found the old prescription efficacious in his own case. The following passage has not only a special significance in reference to himself, but has a further implication for those perverted thinkers of our time who maintain that some system of infallible dogma is an absolute prerequisite of mental restfulness and spiritual serenity. This is how Renan begins chap. xvii. (*Trans.* p. 299; original ed., p. 318):

"Would to God that I may have succeeded in making clear to a few lofty minds that there is, in the pure cultivation of human faculties and of the divine objects which they attain, a religion as genial, as rich in delights, as the most venerable forms of worship. I have tasted in my childhood and early youth the purest joys of the believer, and I say from the bottom of my heart that these joys are nothing by comparison with what I have felt in the pure contemplation of the Beautiful and the passionate search after Truth. I desire for all my brethren who have remained orthodox a peace to be compared with that in which I live since my struggle is over, and since the appeased storm has left me in the midst of this great Pacific Ocean—a sea without wind or storm, upon which one has no star but reason, no compass but one's own heart."

But if free inquiry be Renan's philosophic method, it is limited, qualified, coloured by the condition of its exercise; or, taking himself as an illustration, by that fundamental idiosyncrasy, both of his intellect and feelings, which he calls Ideality. The influence of this tendency over Renan's life and works constitutes their most remarkable characteristic. It forms the atmosphere, warm, misty, vague, and variously iridescent, in which he delights to contemplate all truth, scientific as well as theological. It gives the clue at once to his theological speculations and to his critical conclusions. It would be wrong to say—after the well-known epigram—that he resorts to his imagination for his facts; but it would not be wrong, it would be the merest justice, to charge him with setting all his most cherished truths in an imaginative or sentimental framework. Indeed, one might go a step further, and say that all historical truth acquires, in Renan's estimation, an increase of verisimilitude by its capability of

picturesque presentation, and a corresponding decrease of probability by its inherent crudeness, harshness, or nakedness. It is from this subjective, aesthetic standpoint that he regards the dogmas and saints of Romanism, depriving them of their traditional halo of truth and sanctity, but reinvesting many of them in the warm nebulous corona of his own artistic culture and reverential piety. This is especially the secret of his filial regard for the religious surroundings of his childhood. To his sympathetic temperament and acutely domestic feelings the Romanism of his native Brittany presented itself—like the light through a stained-glass window—in a variety of pleasing diversified hues. The simple placid piety of his Breton neighbours, their ancient picturesque weather-beaten churches, the quaintness and prettiness, from a purely aesthetic standpoint, of their religious services, their holiday observances, and even their superstitions, appealed both to his artistic culture and to his tender many-sided catholicism of feeling. Nor is this sympathetic attitude restricted to the popular religionism of Renan's personal experience; it is extended to all forms of genuine devotion, however strange they may seem. Thus it is startling to find him defending the Indian *satti*, and stigmatising its suppression by the English as a strange mistake. He tells us on this subject:—

"In those sublime and picturesque exaggerations of human nature there is a foolhardiness, a spontaneousness, which the healthy and regular exercise of reason, do what it will, will never equal, and which the poet and the artist will always prefer."

In these days of hyper-aesthetic culture, we may perhaps expect a monograph on the "sublimity" and "picturesqueness" of self-immolation beneath the wheels of Juggernaut's car.

I have already alluded to the value of this work as attesting the continuity of Renan's mental evolution. The most interesting illustration of this is his forecast and plan of his great work on the Origins of Christianity, which he was destined to complete some thirty-five years later. This is how the enterprise presented itself to him in 1848:—I have no space for the whole quotation, which the reader may find on pp. 262-3 of the translation, and pp. 279, 280 of the original.

"People think that the subject [the origin of Christianity] is exhausted when they have mentioned the fusion of Judaism, Platonism, and Orientalism, without having any notion what Orientalism is, without their being able to say how Jesus and the Apostles came by any traditions of Plato. Because as yet no one has dreamed of looking for the origins of Christianity where they really exist, in the Deutero-Canonical Books, in the Apocryphal writings of Jewish origin, in the Mishna, in the *Pirke Aret*, in the works of the Judæo-Christians, &c. . . . As for me, if ever I undertook that great work, I should begin by an exact catalogue of the sources. . . . then I should devote a volume to the criticism of those sources," &c., &c.

I have dwelt so much on the personal aspect of this volume that I have no space left for its general significance. How far the future of science will be altogether a

progress on the lines marked out by Renan in 1848 seems to me questionable. It is a future which demands for its realisation a considerable and successful diffusion of Renanesque culture, with its rare combination of generally incompatible qualities. Indeed, he is himself not sanguine of any wide dissemination of that union of philosophy and religion of which he is himself so powerful and charming an advocate. That in some of the directions marked out by him in 1848 there has been an advance since that time we must, I think, concede, though this is probably not so much the case among ourselves as in France; but the fulfilment in any general sense of this prophecy of science must be pronounced hopelessly Utopian.

M. Renan is too much a master of literary form and style not to be aware of the defects of this production, and too ingenuous not to admit them. At the same time I think it right to say that he has considerably underestimated them, as well as their prejudicial effect on his readers. The book is in fact chaotic, without plan, arrangement, or methodical sequence. It is, no doubt, divided into chapters, but there is no reason why the chapter headings and contents might not be exchanged indefinitely. It is also marred by repetitions, inconsistencies, and other similar products of immature and unrevised literary fervour. At the same time, it abounds with interesting self-revelations, generous enthusiasm, and keen philosophical insight into the conditions and destinies of much of our current thought. It is however, a book which I recommend my readers to peruse, if possible, in the original. The translation is not creditable to the translators, or even to the publishers' reader. It abounds with misconceptions of the author's meaning, as well as with an extreme and unpardonable carelessness, extending even to punctuation. It is true, Renan's style is more difficult and involved in this than in any other of his published prose writings; but that is but an inadequate excuse for an unsatisfactory rendering of a most interesting, valuable, and opportune work.

JOHN OWEN.

CORRESPONDENCE.

A BUDDHIST AND JAINA GĀTHĀ.

Dedham School, Essex: May 2, 1891.

In *Jātaka*-book iv., p. 383, v. 9, we find the following stanza:

"(Girim nakkena khaṇasi ayo dantena khādasi
jātaṇḍam padahasi yo isim paribhāsati."

"The rock with nail thou diggest, the iron with
teeth thou eatest,
The fire (to put out) thou strivest who a sage
revilest."

The commentator, not understanding "*jātaṇḍam padahasi*" = "the fire (to put out) thou strivest," paraphrases it by "*aggim gilitum vāyamasi*" = "the fire thou strivest to swallow." But, as "nail" and "tooth" are mentioned in the first line of the gāthā, we naturally expect "foot" in the line following.

The verb *padahati* does not take an accusative in Pāli; *niddahasi*, "to extinguish," with *pādena*, "understood," would seem at first sight more appropriate. *Pradhā* does not occur in Sanskrit nor in Jaina-prākṛit in the sense of to "strive"; in the latter dialect *apadhāna*,

"exertion," is equivalent to the Pāli *padhāna*. Some MSS. for *dantena* read the plural *dantehi*; perhaps the original verse had *nakhehi*, *dantehi*, and *pādehi*, instead of *nakkena*, &c.

In the Jaina *Uttarādhyayana* xii. 26, p. 365, we find a parallel passage that seems to throw some light upon the reading *padahasi* in the Pāli gāthā:

"Girim nakhehim khaṇaha ayan dantehi khāyaha
jāyaveyam pādehim hanaha je bhikkhum avaman-
naha."

Here we see that, while the metre of the second line of the *Jātaka* verse is tolerably correct, that of the Jaina is faulty, having two syllables more than are required. If we write the short form of the instrumental plural *pāde* for *pādehi* (for which there is very good authority) and *hatha* for *hanatha*, we shall get in the following Pāli version a better reading in the second line:

"Girim nakhehi khaṇatha ayan dantehi khādatha
jātaṇḍam pāde hatha yo bhikkhum avaman-
natha."

In the Jaina verse *bhikkhum* and *avamannaha* replace Pāli *isim* and *paribhāsati*. The verb *paribhāsi* is not used in Sanskrit nor in Jaina-prākṛit in the sense of *apadhāsi* or *avaman*.

Taking a hint from the Pāli rendering of the Jaina verse, we may proceed to restore the true reading of the *Jātaka* verse by removing *padahasi* from the text, and substituting *pāde hasi* or *pāde hasi*, the equivalent of *pāde hatha*, "with feet thou extinguishest." The Sanskrit *hamsi* would become, in Pāli, *hasi* (cf. *sandāsa*, Sanskrit *saṇḍarāga*) or *hasi* (cf. *dasana*, Sanskrit *daśana* and *āsasati* for *āsaṇṣati*).^{*} As the phrase *pāde hasi* comes nearest to the faulty *padahasi*, we would, therefore, read:

"(Girim nakhehi khaṇasi ayo dantehi khādasi
jātaṇḍam pāde hasi yo isim paribhāsati."

There is not a very great difference in form between *pāde hasi* and *padahasi*; the former, however, gives us a line that can be both translated and construed.

R. MORRIS.

SCIENCE NOTES.

THE following fifteen candidates have been selected by the council of the Royal Society, to be recommended for election on June 4:—Mr. W. Anderson, Prof. F. O. Bower, Sir J. Conroy, Prof. D. J. Cunningham, Mr. G. M. Dawson, Mr. E. B. Elliott, Prof. P. F. Frankland, Mr. P. C. Gilchrist, Dr. W. D. Halliburton, Mr. O. Heaviside, Mr. J. E. Marr, Mr. L. Mond, Mr. W. N. Shaw, Prof. S. P. Thompson, and Capt. T. H. Tizard.

IN commemoration of the centenary of the birth of Michael Faraday, September 22, 1791, the following have been elected honorary members of the Royal Institution:—Prof. Edmond Becquerel (of Paris), Prof. Marcelin Berthelot (of Paris), Prof. Alfred Cornu (of Paris), Prof. E. Mascart (of Paris), Prof. Louis Pasteur (of Paris), Prof. Robert Wilhelm Bunsen (of Heidelberg), Prof. H. L. F. von Helmholtz (of Berlin), Prof. August Wilhelm Hofmann (of Berlin), Prof. Rudolph Virchow (of Berlin), Prof. Josiah Parsons Cooke (of Cambridge, U.S.), Prof. James Dwight Dana (of Newhaven, U.S.), Prof. J. Willard (of Newhaven, U.S.), Prof. Simon Newcomb (of Washington, U.S.), Prof. S. Cannizzaro (of Rome), Prof. P. Tacchini (of Rome), Prof. Julius Thomsen (of Copenhagen), Prof. Tobias Robert Thalen (of Upsal), Prof. Demetri Mendeleef (of St. Petersburg), Prof. Jean C. G. de Marignac (of Geneva), Prof. J. D. Van

* The stem *ha* for *han* occurs in *abhihassati* = *abhihanissati* in Jāt. iv., p. 92. We also find *hanasi* for *hamsi*, together with *hanasi* (Jāt. iii., p. 199) = *hanam*, on account of the metre.

der Waals (of Amsterdam), Prof. Jean Servais Stas (of Brussels).

THE Whitsuntide excursion of the Geologists' Association will be to Northampton, under the direction of Mr. Beeby Thompson and Mr. Walter D. Crick. The local museum contains the fine geological collection of the late Marquis of Northampton, and also part of the collection of Samuel Sharp; and in the churchyard of St. Peter's lie the remains of William Smith, "the father of British geology."

A COURSE of six lectures will be delivered in the lecture room in the gardens of the Zoological Society, Regent's Park, on Thursdays at 5 p.m., beginning on May 28, by Mr. F. E. Beddard, prospector to the society, upon "The Animals living in the Gardens."

A VALUABLE bequest has been made to the Department of Science and Art by the late Miss Marshall, of Kensington. In addition to a large number of scientific books and instruments which are left for the use of students, a sum of £1000 is bequeathed for the founding of scholarships, or for application in any other way that may be considered best for the advancement of biological science.

DR. HANS REUSCH, director of the Norwegian Geological Society, has reprinted from the Year-book of the Society (Christiania: Aschehoug) a paper entitled "Glacial Striae and Boulder-clay in the Varangerfjord (Finmark), of a Date much older than the Ice-Age." The paper is written in Norse, but a summary of the contents is appended in English.

DR. A. BLANCHET, a well-known botanist, has just published (Bayonne: Lasserre) a *Catalogue des Plantes Vasculaires du Sud-Ouest de la France*. This little work, though not exhaustive, supplies a want greatly felt, and will be of much assistance to all tourists between Bordeaux and the Hautes Pyrénées.

Familiar Objects of Everyday Life: a Hand-book of Lessons in Elementary Science. By J. Hassell. (Blackie.) This little book has been prepared to assist teachers in bringing the claims of science as a class-subject before the scholars of elementary schools. Such teaching is encouraged by the Education Codes of 1890-91, and cannot but prove useful, not only directly, but perhaps still more by stimulating the faculties of the mind. Hard-worked schoolmasters find it difficult to provide elementary science teaching. Mr. Hassell, already known favourably as a purveyor of information on this subject, supplies them here with admirable object-lessons of a character to keep children's minds interested. These lessons, he warns his readers, are not to be regarded as single instructions so much as parts of a course which may contain six or even more chapters. It is encouraging, also, to be assured that they are mostly expansions of lessons actually given by the author to young children. Still, as in all teaching, they need discretion on the part of the teachers; and then children are enabled by these chapters to follow any of the various "courses" in elementary science set down in schedule ii., or in the supplement to schedule ii., which appears in the Code of 1891. General information is first given on common objects. These are supplemented by separate courses on the ordinary birds of everyday life, on plants, mechanics, natural history, agriculture, chemistry, and even more recondite sciences, such as magnetism and electricity. The book is fully illustrated, and may be cordially recommended not merely to schools, but also to children who are educated at home. It is extremely practical, and though full, is yet terse, which is the peculiar virtue of such manuals. The lessons on photography and chemistry are particularly good. It might be well in a future edition to omit such directions

as "tell the children" so-and-so, or "ask the children" this and that. Immense pains have been evidently taken with the book, which deserves success and will succeed.

PHILOLOGY NOTES.

THE Archduke Rainer's collection of Egyptian papyri—including more than 1000 pieces in ten languages, and covering an unbroken period of 2700 years of history—will shortly be arranged as a permanent exhibition in six rooms of the Industrial Art Museum at Vienna. An explanatory catalogue is being printed, under the superintendence of Prof. Karabacek, who has done so much towards the deciphering of these papyri.

THE forthcoming number of the *Babylonian and Oriental Record* will contain the following articles:—"Vocalic Harmony in Lycian," by Mr. W. Arkwright; "The Antiquity of the Chinese Sacred Books," by Prof. C. de Hartz; "From Ancient Chaldea and Elam to Early China," an historical culture-loan, by Prof. Terrien de Lacouperie; and a bibliography of the late George Bertin.

THE second volume of *Harvard Studies in Classical Philology* (London: Edward Arnold) affords an interesting example of the current tendency of these studies in America. Out of nine articles, not one has to do with textual criticism, still less with that form of textual criticism, namely, conjectural emendation, which is still so popular at Oxford and Cambridge and Dublin. Not one has to do with linguistics, or the science of comparative philology. Four deal directly with grammatical constructions in Greek or Latin authors, with the help of copious examples; and most of the others likewise treat their subjects according to the same statistical method. In this respect American scholars have bettered the example set by their German instructors, by applying to the classics an organon borrowed from the quantitative sciences. Suffice it to mention that Mr. J. R. Wheeler here classifies under seventeen headings, arranged in a tabular statement, the combinations of the verbs *παραδέναι* and *κέρειν*, as found in the earlier Greek writers; while Mr. Morris H. Morgan examines, with the help of another table, the usage of Andocides with regard to (1) the infinitive with impersonal verbs, (2) the infinitive with *μέλλω*, and (3) the moods in indirect discourse. Of more general interest is a similar investigation, by Mr. Frederic D. Allen, into the vexed question whether the praenomen *Gaius* was two syllables or three. After considering all the evidence to be obtained from the poets, from inscriptions, and from Greek transliteration, he comes to the following conclusions:

"(1) That the name designated by the Romans by the letter C was originally *Gaius*: (2) that this form at Rome had passed into *Gaius* by 190 B.C., though it survived longer in some of the provinces of Italy: (3) that for some reason, not assignable at present, the customary pronunciation (of the educated classes at least) remained *Gaius* (trisyllabic) at any rate until the end of the first century of our era, and probably still longer."

Two other papers deserve mention. Under the heading "Quaestiones Petronianae," Mr. H. W. Hale discusses (in Latin), to the extent of forty pages, two questions: (1) at what time are Encolpius and the other personages in the Satires supposed to have lived? and (2) at what city was the banquet of Trimalchio held? To the former question he answers pretty confidently "circa A.U.C. 740" to the latter "Puteoli." Finally, Mr. J. W. White, in view of the architectural theory of Dr. Dörpfeld—that the "stage" had no existence in the time of the great dramatists—examines the internal

evidence afforded by the comedies of Aristophanes, with the object of proving that they could not have been performed on the stage described by Vitruvius. Hereafter he promises to deduce the same result from an examination of the tragedians.

THE *Mémoires de la Société de Linguistique de Paris* (tome vii., fasc. 3) contain an elaborate paper by Dr. Raoul de la Grasserie, entitled "Des Recherches récentes de la linguistique relatives aux langues de l'extrême orient, principalement d'après les travaux du Prof. Terrien de Lacouperie." The author, in clear and forcible language, explains, with the necessary amount of evidence, the important discoveries of our contributor on (1) the primitive monosyllabism of Chinese and other so-called monosyllabic languages; (2) the origin of tones; (3) the origin of the Chinese writing; (4) the action of hybridity in the formation of present Chinese; and (5) the psychical importance of the rule of position, which is the main feature of the isolating languages.

MEETINGS OF SOCIETIES.

ZOOLOGICAL.—(Anniversary Meeting, Wednesday, April 29.)

PROF. FLOWER, president, in the chair.—The principal business was the reading of the sixty-second annual report. According to this document, the fellows numbered 3046 on the 1st of January, 1891, as compared with 3075 at the corresponding date in 1890. The income of the society for the year 1890 amounted to £25,059, being more than a thousand pounds less than that of 1889, which was increased by abnormal causes, but more than a thousand pounds more than that of 1888. A comparison of the last two years, however, showed a serious loss of nearly £500 on the garden receipts, which was attributed to the bad weather of last summer. The expenditure for the year was £23,312, to which must be added a sum of £230 spent in finishing the repairs of the monkey house. The flourishing state of the society's finances had enabled the council not only to pay off £1000 of the mortgage debt on the society's house, thus reducing that debt to £5000, but also to buy £1000 in Consols as the nucleus of a new reserve fund. The report also announced that the death-rate of the gardens showed an improvement upon the previous year, the most important losses being a male thylacine, purchased in 1884, a grizzly bear, an Australian cassowary, and a common crane, which was bred in the gardens in 1863 and died on December 12, 1890. Among the important additions to the menagerie in the course of the year were a male gray hyppocollis, a pair of hartebeest antelopes, of which there have been no specimens in the gardens for ten years, two Batrix antelopes, a young wild bull from Chartley-park, a young waterbuck antelope from the Somali coast, a young bee-eater, a young horned screamer, a young Speke's antelope, and a young "fossa" (*Cryptoprocta ferox*) from Madagascar. Many of these have reached Europe alive for the first time. The proceedings closed with an interesting ceremony, in the shape of the presentation of the society's silver medal to representatives of Mrs. Edmondston, of Bunness-house, Shetland Isles, and Mr. R. T. Scott, of Melby, Shetland Isles, in recognition of services rendered by the late Dr. Edmondston and Dr. Scott in preserving the great skua at two out of three British breeding stations. The report, in explaining this novel practice, called attention to the extermination of species in various parts of the world, and particularly in British colonies, and showed that the great skua had narrowly escaped extinction, having been reduced to three pairs in 1831, to one pair a few years later, and having risen, under the care of Dr. Scott and Dr. Edmondston, to as many as thirty pairs at one time.

ROYAL SOCIETY OF LITERATURE.—(Anniversary Meeting, Wednesday, April 29.)

THE report of the council having been read, the president delivered his address, after which the following officers were elected for the year ensuing:

president: Sir Patrick de Colquhoun; vice-presidents: the Duke of Devonshire, Sir Henry Rawlinson, Sir Charles Nicholson, Sir Collingwood Dickson, Sir Charles T. Newton, Mr. Joseph Haynes, Mr. W. Knighton, Lord Halsbury, the Master of St. John's College, Cambridge, and the Duke of Northumberland. Council: Mr. Percy W. Ames, Mr. Arthur Benson, Mr. John W. Bone, Mr. E. W. Brabrook, Mr. C. H. E. Carmichael, Mr. George Cawston, Mr. William H. Garrett, Col. Joseph Hartley, Major Alfred Heales, Mr. J. Henniker Heaton, Mr. R. Burbank Holt, Mr. R. A. Douglas-Lithgow, Dr. John Hayball Paul, Dr. J. S. Phené, Mr. Herbert J. Reid, and Dr. G. A. Tucker. Treasurer: Mr. Joseph Haynes. Auditors: Mr. Israel Abrahams and Baron de Worms. Librarian: Mr. Herbert J. Reid. Foreign secretary: Mr. C. H. E. Carmichael. Secretary: Mr. Percy W. Ames.

FINE ART.

THE ROYAL ACADEMY.

I.

THE summer exhibition of 1891 at Burlington House will be chiefly remembered as the year in which the hanging committee, vigorously waving the academic birch over the heads of the foreign and British painters professing *plein air* principles, has sternly relegated to the skies—or rather the ceiling—those among them whose minor degree of popularity renders taboo a pretty safe thing. It will also be remembered as the year of Mr. J. S. Sargent's "La Carmencita," Mr. Orchardson's "Portrait of Walter Gilbey, Esq.," Mr. Luke Fildes's "The Doctor," Mr. Alma Tadema's "Earthly Paradise," and Mr. Brock's "Genius of Poetry" (an old friend, however, now metamorphosed from plaster into marble); other works of interest being Mr. J. W. Waterhouse's "Ulysses and the Sirens," Mr. Arthur Hacker's "Christ and Magdalen," and Mr. George Hitchcock's "La Maternité"—this last a typical instance of cruel and deliberate skying, for which no valid excuse can possibly be found.

It has evidently been Sir Frederick Leighton's chief endeavour to make his "Perseus and Andromeda" as unlike any previous representation of this favourite academic subject as might well be. The bride of Perseus that is to be is bound nude to the rock; as usual, but she is entirely overshadowed by the vast wings and body of a golden-scaled dragon vomiting forth flame and fury, but already more than half quelled by the all-penetrating arrow shot by Perseus, who appears high in the clouds mounted on the steed Pegasus. This beast has a suspiciously Augustus-Harris-like aspect, and suggests rather the cumbrous Fafner of the Nibelungen trilogy than the classic monster of the old myth. It is somewhat strange to find the President giving to the Argive hero the winged horse and the arrows which are the special properties of Bellerophon, slayer of the Chimæra, instead of being content to leave to him his own proper attributes—the winged sandals and the helmet, which Perseus, after having accomplished his deeds of daring, presented to Hermes. Both this and the President's other contribution—"The Return of Persephone"—show the same pallid, bloodless forms daintily fashioned, the same flying draperies with intricate crumpled folds, to which we are by this time so well accustomed. In the latter work there is a striking absence, not only of the generalised breadth and the vigour which such a subject demands, but also of that element of life and emotion which the Greeks themselves, if they chastened and restrained, yet never failed adequately to suggest.

The dramatic element is what is lacking in Mr. J. W. Waterhouse's very curious and highly wrought "Ulysses and the Sirens," a work which has evidently been to the painter a

labour of love. Borne on the sapphire-hued, sparkling Mediterranean, appears in a narrow rock-guarded cleft the bark of Odysseus, well manned by his mariners, who, with their ears guarded against the unearthly thrill of the Sirens' song, busily ply the oar. The Wanderer himself is bound erect to the central mast; and all around hover, flying close to the ship and singing, the Sirens. To them the painter has chosen to give the lovely faces and the rich flowing tresses of women, but the bodies, the wings and claws of strong birds of prey; thus making of them Harpies strong in attack and prepared to take the offensive, rather than Sirens proper according to the Homeric version, luring the unwary to their rock by the magic of their irresistible song. There is much exquisite work in this canvas, and especially in the delicate open-air modelling of the heads of the feathered temptresses, which are based, however, too entirely on one fair (manifestly English) model. The great weakness of the conception is the Ulysses, so calm and self-possessed that he surely requires no bonds to save him from the magic spells woven around him. The same artist's "Flora" is a delightful little study with much of the technical charm of an Alma-Tadema, yet with a greater vitality, and a certain human quality which is not often attained by the Anglo-Dutch master.

Mr. Tadema's chief contribution—other than the strange portrait of the Right Honourable A. J. Balfour, M.P., to which we shall refer later on—is "The Earthly Paradise," with the quotation, from Mr. Swinburne, "All the heavens of heavens in one little child." In the sumptuous marble-lined bath-room of a Roman villa lies, on a wondrous couch inlaid with precious materials and covered with a rich woven fabric, a beautiful naked child, with whom his mother, kneeling at the side of the couch, plays. She is of the ruddy-haired type beloved of this master, and wears a filmy inner garment of indigo-blue, with a necklace of gold and amethysts, while at her feet lie garments of pale greenish blue, and on the couch and floor are strewn purple anemones. The lighting of the chamber in all its recesses is admirable; the colour-harmonies, composed out of the elements just indicated, are alike strong, subtle, and novel; and the splendid accessories are more sparingly introduced than usual—less suggestive of a selection made among the Pompeian treasures of the National Museum of Naples. Yet somehow the artist's object is not fully accomplished. Not only are the lines of the group formed by the figures of the mother and child far from happy, but the invisible bond of love which should here make them one and undivided is hardly suggested. We never lose the sense that we are in the presence of two beautiful models, not over well placed; and thus the high task which the artist has set himself—as his quotation reveals—remains more than half unachieved.

It seems unnecessary to say much about Mr. Solomon J. Solomon's "Judgment of Paris," a large and flimsy presentment of the well-worn theme, which is of decorative aspect in virtue of light, delicate tints deftly harmonised, but does not even pretend to give an adequate version of the subject. We see no special reason either for the existence of Mr. Margetson's huge "Pygmalion," which, notwithstanding certain merits of draughtsmanship and composition, neither gladdens the eye nor adds anything to the beautiful old legend. Mr. E. J. Poynter has not been able to contribute anything this summer, save a version, on a very small scale and with certain variations, of his elaborate "King Solomon and the Queen of Sheba," privately exhibited on a previous occasion. An absentee whom we especially regret, as one of the subtlest colourists, one of the greatest decorators among contemporary

artists, is Mr. Albert Moore. It may be that he is tired out by the persistent failure of the Forty Immortals to recognise the position which he holds *quand même* in English art; but we hope not.

It was a happy notion of Mr. Briton Rivière's to paraphrase, as he has done in his curious triptych, "A Mighty Hunter before the Lord," the great Assyrian reliefs at the British Museum, showing warrior-monarchs victoriously hunting the lion of the desert. The central panel—or rather canvas—presents the royal hunter, as, swiftly driven by his charioteer across the parched desert overhung with clouds of sand, he spears the king of beasts, who in despairing fury attacks the car from behind. In the wings of the triptych are displayed, under the starlit skies of an eastern night, the slain lions mourned over by their mates. We could well imagine a greater passion, a greater power and certainty of realisation in the central composition; while in the groups of the wings Mr. Briton Rivière sins, as so many English animal-painters have sinned before him, by giving to his beasts a pathos too human, and a play of facial expression proper to mankind alone.

Mr. Arthur Hacker's "Christ and Magdalen" commands attention and respect in virtue of the beautiful lines in which his group of the repentant sinner kneeling in adoration at the feet of the Saviour is cast. The painter has evidently been disquieted by the naturalistic and modern view of sacred art taken by Herr Fritz von Uhde; yet he has endeavoured to strike out a new line for himself midway between the *actualité* of the Saxon artist and his own natural leanings towards ponderated and classical composition. He makes, however, the capital mistake—one, too, into which his German antitypes have not fallen—of imagining the Christ himself as a suffering mortal of mean physique and unimpressive presence. The drawing of the Magdalen's up-turned face has great beauty, its expression great intensity; but the passion it reveals is rather that of earthly love than of devout worship. Altogether, apart from technicalities, we fail to find in this very clever performance the true ring of sincerity, which to-day alone gives a *raison d'être* to such a subject.

Inspired also by German art—but by that, not of the nineteenth, but of the fifteenth or sixteenth century—is Mrs. Marianne Stokes's "Hail, Mary!" a novel [and interesting version of that most favoured of sacred themes, the Annunciation. This artist shows the Virgin as a mediæval figure, which might have stepped out of a triptych by Zeitblom or some cognate painter of Ulm or Augsburg. She listens with head bent and an air of deep contemplation to the archangel Gabriel, who stands, not this time in front of, but behind her, holding his wand of lilies and whispering into her ear the words of promise. Here, again, we have rather a clever performance, thought out with a view to novelty, than a work properly coming within the category of sacred art.

Mr. Frank Dicksee gives proof of a noticeable step in advance in his two important canvases, "The Mountain of the Winds" and "The Crisis." The former is an ambitious allegorical composition, showing, in lieu of the classical "Cave of the Winds," a mighty cloud-capped mountain, on the summit of which the Winds take breath before they sally forth to dominate the earth. Zephyr, a beautiful youth, pours rose leaves into the lap of the sweet South Wind—here depicted as a fair half-nude woman—while the North is wrapped in darkness and mystery, and the East Wind appropriately appears as a male figure of cruel and venomous aspect, drawing forth a murderous blade of keenest steel. Mr. Dicksee has nowhere else

so unmistakably shown the quality of imagination as in this happily conceived figure. The colouring has the key, and the light, bright tints requisite to give the work the character of a monumental decoration, yet it errs in the direction of flatness and want of brilliancy; for the painter is not a born, but only an educated colourist. "The Crisis" is a death-bed or sick-bed scene, in which appear only two figures—those of a young woman worn by sickness to the verge of the grave, and of a grey-haired yet vigorous man, whose strongly marked features under their enforced calmness betray the workings of deep emotion. The pathos, though obvious, is real enough; while the drawing of the two heads shows unerring precision and mastery, and the *blafard*, almost monochromatic, scheme of colour is here well in its place.

It is not a little unfortunate for Mr. Dicksee that this painting should quite accidentally have appeared simultaneously with Mr. Luke Fildes's important canvas, now to be described. This is "The Doctor," a work which, notwithstanding its lugubrious subject, will certainly command the sympathies of the general public in a higher degree than any picture of the year. The scene is a cottage chamber, homely but not squalid, in the centre of which, stretched on two chairs and supported by pillows, is the pallid and motionless form of a sick child. It is silently watched, under the light of a lamp cast full on its face, by the doctor, a staid, sympathetic personage, whose features display an anxious gravity in which lurks still—as it seems to us—a ray of hope. In the background appear the parents, he erect and watchful, yet near to despair, while she silently weeps, bowing her head on her arms. Dimly lighting these figures, the dawn struggles, as yet feebly, through a window at the side, contrasting strongly with the yellow light of the lamp. Traces of a hand conscious of technical mastery, yet guided by a sure and restraining taste, are everywhere shown in the execution. Nothing could be better than the concentration of tragic interest on the central group, the quite unexaggerated pathos of the doctor's face, the emphasising everywhere rather of the mental rather than the physical suffering. Only in the figures of the sorrowing parents—quiet as these are—does the painter for a moment verge upon melodrama, and leave the path of absolute simplicity and truth. It is quite possible to hold that such a subject does not, in the obviousness of its pathos, belong to a high category of art; but it would be difficult even for the most captious to find fault with the fashion in which it has here been presented.

Mr. Orchardson this year reveals, certainly, no new side of his talent, whether as a painter or a keen student of human nature, in "An Enigma"; but he has, nevertheless, produced a work of great excellence, not unworthy to take its place with previous performances of the same class. We are in it again introduced to one of those apartments, half in the Adams half in the Empire style, which the Scotch master is seemingly never tired of depicting, no doubt because the technical difficulties presented afford him endless opportunities for the display of a consummate, well-controlled skill. On a sofa are seated a pair of genuine Orchardsonian lovers, who are shown at a moment of indefinable misunderstanding and *énervement*, noted with an extraordinary subtlety in the management of facial expression. This rare and characteristically English quality in modern art has been displayed by no one in so supreme a degree as by Hogarth in his less caricatural moods, and after him by Sir David Wilkie; and to these masters Mr. Orchardson shows himself in this particular a worthy successor. We must again—at the risk of re-

peating ourselves—take exception to the monotony of his scheme of colour, both in this piece of *genre* and in his admirable portraits. Not that we wish to deny to him the possession of great skill in the management of the mustard-like, russet and golden tones which he so much affects; but surely to see persistently in humanity and nature only colour-harmonies of this tawny and artificial kind is deliberately to tinge one's spectacles in a purely arbitrary fashion. We cannot refrain from mentioning here, although out of its proper place, the same painter's masterly portrait of "Walter Gilbey, Esq.," in which this well-known authority on the breeding of horses is presented with an inimitable truth and a sly humour which it would be hard, indeed, to surpass. The pose has all the ease and none of the occasional ungainliness of nature, while the very essence of a droll and sympathetic personality is grasped, as it were, by intuition, and placed with perfect simplicity before the beholder.

CLAUDE PHILLIPS.

THE FRENCH SALONS.

II.

If the show of portraits at the Champs Elysées is below the average, this is not to be attributed solely to the fact that several of the best portrait-painters have gone over to the Champs de Mars, but rather to a falling off in the performance of those who remain. M. Bonnat has sent the full-length portrait of a lady, in a rich white satin dress, all bedizened and bejewelled, standing out against this artist's favourite dark-brown background. But the lady, as well as her dress and attitude, is stiff and formal; the painting is hard; the whole thing is utterly wanting in life and movement. The same may be said of M. Bonnat's second exhibit, "Young Samson struggling with the Lion," which is singularly coarse and uninteresting. M. Chartran's portrait of Mlle. Brandès is the gem of the Salon portraits. It is not only a highly-finished piece of work, but a clever study of one of the most mobile and changeful of faces; the deep and, at times, sphinx-like look of the well-known *comédienne* has been rendered with great ability and delicacy of touch. Notable alike for the character shown in the features, and for the natural effect produced by the accessories, are M. Cormon's portrait of M. Gérôme in a grey jacket and trousers, standing, palette in hand, before the modelling table, and giving the last touch of tinting to a Tanagra statuette; the likeness of M. Falguière, by M. Calbet, who shows us the celebrated sculptor at work; and M. Lemenuier's portrait of his master, M. Detaille, perched on the last step of a ladder, the floor below strewn with arms and military accoutrements. Excellent also as an equestrian picture is "Mr. G. Smith," by Mr. J. Guthrie. M. Aman Jean exhibits two portraits in the impressionist style, which by simplicity of treatment and mellow harmony of grey tints are interesting to the artistic eye. Chaplin is represented by his last work—the portrait of a lady of very attractive appearance, painted with exquisite taste and delicacy of colouring, and that particular *fleur* which was the distinctive feature of the late master's Cytherean portraits. M. Benjamin-Constant, Lefebvre, Munkacsy, Collin, and other fashionable "portraitists" have sent their customary contributions of pretty girls and *décolletés* matrons—more or less truthful likenesses, painted to pay and to please, but only moderately interesting as works of art.

Among the *genre* pictures M. Jules Breton's "Pardon de Kergoat" ranks by itself. On the left is depicted the old church of Kergoat; the procession of pilgrims winds its way under

an avenue of trees, headed by a group of long-haired, wild-looking old Bretons, each bearing a lighted taper; they are followed by a band of girls in picturesque red-cloth dresses, richly embroidered; others in white and blue follow; then parties of men and women carrying banners, crosses, caskets of holy relics, and, on a large wooden tray, the image in carved wood of a patron saint. The procession gradually disappears in the distance, amid a flutter of white caps, silk banners, and the flickering flames of candles, while, in the foreground, the hideous cripples common throughout Brittany crawl about begging for alms. The *ensemble* of this picture is so good, the technical details so perfect, and the colouring so brilliant, that it is worthy to be placed alongside the same painter's delightful "Procession dans les Blés," now at the Luxembourg; but I suppose it will go to America some day or the other. Mr. Edwin Weeks, the American who has painted so many pleasing illustrations of Indian scenery and bazaar life, has, for once, forsaken the luminous atmosphere of the East for the grey sky and arid landscape in which he has set three Arragonese beggars, all tattered and torn, emaciated, but picturesque after a fashion. Yet I prefer Mr. Weeks's picture last year, "The Golden Temple of Amritsar."

There appears to be a growing tendency among young artists nowadays towards scenes of sorrow, pain, and death. To this class belong M. Jameson's "Viatique," M. Geoffroy's "Asile de Nuit," M. Pearce's "Civil Funeral," and, more particularly, "The Shadow of Death," by a young American artist, Mr. Morley Fletcher. In a room, darkened by heavy tapestry curtains, a young man and woman lie on a divan, dressed in very modern attire; both, of equally unattractive appearance, are gazing apparently into space. Are they suffering from dyspepsia? Are they victims of the morphia habit? Where is the shadow of death? Such are the questions of the unsophisticated visitor as he gazes at this decidedly clever but unsatisfactory picture. And it is with a sigh of relief that he turns to Mr. Ridgeway Knight's pretty idyll "The Shepherd's Friends"—a young shepherd talking to two pretty French peasant girls in a landscape radiant with sunshine; or to M. Wagrez's "Proclamation of an Edict—Venice, Fifteenth Century," an interesting historical reminiscence on canvas. Those who are not tired of a clever artist's constant repetition of certain characters and scenes will chuckle over M. Vibert's highly-finished picture of a party of cardinals who have scarcely finished enjoying a most *recherché* dinner; coffee has just been brought in, and the *chef* has been called from the kitchen to receive due commendation for the talent he has displayed. The Monseigneurs are a jovial lot, and toast the disciple of Vatel, who stands up, white cap in hand, sleek and smiling, fully aware that he is a great artist, but modest withal. I have nothing to say for or against M. Bongueureau's impeccable nymphs and cupids, nor of M. Jenner's exquisite ivory-toned torsos, nor of M. Desgoffe's *bibélots*, nor of M. de Pennes' dogs and *tutti-quanti*; for these exhibits are, and ever will be, as accomplished as they are uninteresting. But, before leaving the picture gallery, I would call the particular attention of the "chosen few" to No. 3070 in the architecture room, which consists of nine plans and drawings of the Temple of Baion at Angkor, drawn by M. Delaporte, restorations made from the plans of Lieutenant Delaporte, of the French navy.

Several beautiful specimens of the sculptor's art are to be seen in the garden of the Palais d'Industrie. M. Falguière's "Diane," the fourth reproduction of the same figure, is lovely. M. Carlés' "Eternelle Poème" is a life-size nude female figure of admirable proportions.

The same artist also exhibits a charming bust of Mlle. Deutz. The late M. Chapu's marble statue of the Princess of Wales (done to order for M. Jacobsen) is unworthy of the sculptor's reputation. The likeness is not good, and, in its *ensemble*, the statue is wanting in the grace and dignity which distinguish the Princess: it is *très bourgeois*. A fine piece of voluptuous realistic work is M. Sinding's (Norwegian) group, "Homme et Femme."

CECIL NICHOLSON.

THE BOLCKOW SALE.

EVERY month we read of some forthcoming auction at Christies' as certain to be the sale of the season. Whether or not it is to be considered so, depends, of course, upon the point of view. With one person the amount of money that changes hands on the occasion is the gauge of the importance of sale; with another the question is rather whether his favourite masters or his favourite department of art will or will not be amply represented. *Chacun à son goût*. To the plain man there seems no doubt, however, that the Bolckow sale—chiefly of modern pictures—held last Saturday must prove the event of the sale season. The drawings were of a popular and meritorious kind, but were not, speaking generally, of extraordinary importance. It was otherwise with the oil paintings, several of which had, on the dispersal of previous collections—from which the late Mr. Bolckow had acquired them—fetched prices that had become a matter of history. Most people have in remembrance a portrait of Rosa Bonheur, with a favourite animal introduced therein: the animal, of course, by Mlle. Bonheur herself, and the portrait by Edouard Dubufe. It was engraved about a score of years ago by Samuel Cousins. On Saturday it sold for 1250 guineas. A very fine and famous Troyon—a Troyon not easy to surpass—fetched the immense sum of 4700 guineas; while a Meissonier of great character, which had never before come under the hammer—Mr. Bolckow having bought it direct from the studio—fetched 6450 guineas. This was "The Sign Painter." Among English pictures, a canvas by Mr. Erskine Nicol sold for what seemed to us—notwithstanding its unquestionable cleverness—the decidedly substantial sum of 1200 guineas. This was "The China Merchant"—a work of fully twenty years ago. A masterpiece of moderate size by the late Thomas Webster sold for 1150 guineas. This was "Roast Pig." The celebrated Linnell, from the Mendel collection, called "The Hillside Farm," realised 2000 guineas; and another canvas that was in the same collection, "The Grapo Seller of Seville," from the hand of John Phillip—whose brush, to quote the ornate utterance of Lord Beaconsfield, was "steeped in the splendour of Andalusian skies"—realised 2300 guineas. The surely extravagant sum of 4120 guineas was bestowed upon the most celebrated of the Landseers; an "Interior of St. Peter's at Rome," by David Roberts, fetched 1400 guineas; and a Collins, which very likely it would have been fitting that the nation should possess, "The Minnow Catchers," fetched 1500 guineas. But the very greatest price has yet to be chronicled. Before Hogarth's "Gate of Calais" fetched 2450 guineas, and just after Müller's "Chess Players at Cairo" had been knocked down, properly enough, for about a thousand less than it fetched on the last occasion it was seen at auction—a decrease, be it noted, of only five and twenty per cent., after all (not counting interest of money)—there was offered a very famous and exquisite Turner, "Walton Bridges," which Mr. Bolckow had of Mr. Gillott, and Mr. Gillott of the painter. Before it was sold, Mr. Woods, who was, of course, in the rostrum, addressed the assemblage to the

effect that this work should by rights be in possession of the nation. But the nation is exceptionally rich in the works of our greatest landscape painter, and it could hardly have afforded to pay 7000 guineas for this confessedly most lovely thing. Seven thousand guineas—the highest price yet paid for a Turner, if we remember rightly—was, however, a sum which it seemed good to somebody to offer; nor do we opine for a moment that the money was ill spent. With the disappearance from the scene of this admirable masterpiece the interest of the sale subsided and soon came to nought.

NOTES ON ART AND ARCHAEOLOGY.

MR. W. HOLMAN HUNT'S "May Morning on Magdalen Tower" will be on view next week in the Gainsborough Gallery; and also Mr. Rudolf Blind's picture of "The World's Desire," at Mr. W. J. Stacey's—both in Old Bond-street.

WE may also mention that a fresh collection of paintings by British and foreign artists has been arranged in the picture gallery of the Crystal Palace; and that a second exhibition of art brass-work, blades, &c., will be held through next week at Armourers' Hall, Coleman-street, E.C.

THE ninth annual meeting of the Society for Preserving Memorials of the Dead will be held in the parish room at Fulham on Thursday next, May 14, at 3 p.m., when the president, Mr. W. Tipping, will deliver his address. At 4 p.m. the members will assemble in Fulham Church to hear a paper from Dr. T. J. Woodhouse on "The Monuments in the Church and Churchyard," where almost every Bishop of London since the seventeenth century lies buried; and afterwards a visit will be paid to Fulham Palace.

AT the next meeting of the Royal Society of Antiquaries of Ireland, to be held at Kilkenny (the original home of the society), on Monday, May 18, the following will be proposed by the council for election as honorary members, in consideration of their services in the advancement of archaeological science:—Prof. John Rhys, president-elect of the Cambrian Archaeological Association; Dr. Robert Munro, secretary of the Society of Antiquaries of Scotland; Prof. Sven Söderberg, director of the Museum of Antiquities, Lund; Prof. Luigi Pigorini, director of the Museo Kircheriano, Rome; Sir John Lubbock; Dr. Hoffman, professor of ethnology, Smithsonian Institute; M. D'Arbois de Jubainville; Mr. John J. Gilbert; Miss Margaret Stokes.

THE Grolier Club in New York has of late been exceedingly active in holding exhibitions of the kind which are hardly likely to appeal to the dealer. It has recently held an exhibition of "artistic posters." The fact speaks volumes for the progress of art in America. In England such a show would not be possible; for, in regard to the "artistic poster," it has been said truly "the thing itself does not exist."

THE new number of the interesting artistic quarterly called *English Etchings* (Sampson Low) is worth notice beyond a doubt. A tasteful etching by Dr. Evershed, and a very daintily and freely-sketched landscape by Mr. W. Holmes May, are to be commended; and there is a quiet etching of singular power by Mr. William Strang, called "The Tragedy of a Night." It will be recognised as the plate of which, under the name of "Drowned," an impression was exhibited, and much remarked, at the Painter-Etchers. The plate is accompanied in *English Etchings* by a page or so of text, very tragic in

intention and conception, but a little exaggerated in style, and therefore less impressive than the etching. As it is written without much command of the literary art, it may very likely be the work of some pictorial artist—possibly even Mr. Strang himself. The magazine contains likewise a plain-sailing and direct criticism on the annual exhibition of that society which is most likely to have special interest for the contributors and readers of *English Etchings*.

THE STAGE.

THAT Mr. Wilson Barrett's season at the New Olympic should end prematurely, this very night, is an event which no one could have expected, and which all must deplore. "The Acrobat" has not been a success in London; we shall still venture to prophesy for it a success in the provinces. In town, no doubt, Mr. Barrett would have had a better chance had he played, as his last card for the present season, one other novelty. What the Olympic wanted was a new piece that should be in itself a hit. It had everything but a piece. Thoroughly renovated and improved, no one can say that it is not a rich and handsome playhouse. Its stage has been filled by an excellent company. Mr. George Barrett is as attractive as ever; Miss Winifred Emery has been an acquisition; Miss Lillie Belmore has shown herself more than before a bright and inspiring comedian. As for Mr. Wilson Barrett himself, he has never acted more earnestly, more energetically, or with better judgment than this year. But the very stars in their courses have fought against him, and ill-luck has followed upon ill-luck. So well, however, does Mr. Wilson Barrett deserve of the theatrical profession and of the general public, which has benefited by his many years of intelligent and generous management, that we cannot doubt but that, after the completion of the tours now in prospect, he will again be visible in London.

MR. LAWRENCE KELLIE gave a miscellaneous entertainment at the Steinway Hall on Tuesday, which was well attended and interesting. Much of it consisted of the singing, by Mr. Kellie himself, of some well-known and some quite new songs of his own composition. As a singer, it may be said of him that his enunciation is of the utmost distinctness and his delivery very expressive. He is, indeed, as a vocalist, not without style. Were it our business to criticise music in this column, we might have a word to say in his favour as a composer; but, as it is, we must confine ourselves to praising the taste which he displays in selecting the words for the exercise of his own art. Most composers deal with pure rubbish—violent in sentiment but idiotic in phrase and thought. Mr. Kellie, on the contrary, has a penchant for literature. He presses Shelley and Tennyson into his service. We liked, distinctly, his quite new setting of

"Sunset and evening star
And one clear call for me."

For the present this exists only in manuscript. It will doubtless be published. Miss Adrienne Dairrolles, the skilled young French comedian, was to have recited on Tuesday; but Mr. Kellie found himself under the necessity of reading to the audience a telegram that announced the sudden ulceration of that young lady's throat, a visitation, probably, of the influenza microbe. Mr. Frederick Upton took Miss Adrienne Dairrolles' place, and told two stories in a very dry and telling fashion. He was a great success. And so, of course, was Mr. Haydon Coffin, in whose voice there is the Ninth Concerto of Spohr. Mr. Beerbohm Tree is going to recite on the next occasion.

MUSIC.

MUSIC OF THE WEEK.

MR. AUGUSTUS HARRIS gave Boito's "Mefistofele" at Covent Garden on Saturday evening; and the oftener one hears this interesting opera, the more one regrets that the composer has not yet produced the long-promised "Nerone." Boito's conception of Goethe's poem is deeper than that of Gounod; but the public cannot serve two masters, and for the moment the French composer has a firm hold. It may always be so, for "Mefistofele," in spite of its originality and many excellent qualities, has dramatic faults. The performance, with Mme. Albani as Margherita, M. E. de Reszke as "Mefistofele," and M. Montariol as "Faust," was, on the whole, one of considerable excellence. Mr. Randegger conducted. "Carmen" was given on the following Monday, with Mlle. Zeli de Lussan in the title-role. Her conception of the part is good, but she did not play with her usual vivacity. Altogether the performance was below high-water mark.

The singing of "Che farò" by Mlle. Giulia Ravogli and the performance of Schumann's D minor Symphony, under Mr. Cowen, were the two most interesting features of the fourth Philharmonic concert last Thursday week. The former was marked by skill and pathos; and the acceptance of the encore, if not praiseworthy, was quite pardonable in the concert room. Mlle. Sofia Ravogli sang "Piano, piano" from "Freischütz," and her conception of the song was better than the quality of her voice. M. Emile Sauret played Raff's second violin Concerto, and one could only regret that such excellent playing should be thrown away on so uninteresting a work. The sisters Ravogli sang a duet from Pacini's opera "Saffo" with good ensemble if not perfect intonation.

Mr. and Mrs. Henschel gave their first vocal recital on Friday, May 1. In consequence of growing success, they have moved from Princes' to St. James's Hall. The success is not difficult to explain: the programmes are well selected, and the performances all that can be desired. There is much to enjoy, but nothing that calls for detailed notice. Mr. and Mrs. Henschel need no praise; but the artistic efforts of two such accomplished artists deserve record.

Mr. Eugene Holliday gave his pianoforte recital at Princes' Hall on Saturday afternoon. He repeated Chopin's Ballade in F, in which

we still thought him a cold player. But in the same master's B flat minor Prelude and B minor Scherzo he warmed up, and the effect produced was decidedly good. Mr. Holliday is a pupil of Rubinstein's, and has caught much of his master's manner; but does he think and feel for himself? He is young, and it is difficult to answer that question. If he has resources in himself, he will succeed, for he has exceedingly well-trained fingers. His performance of Beethoven's Sonata in B flat (Op. 106) gave proof of this, but the choice of such a work was scarcely commendable: in the hands of the greatest pianists it is not all pure gold. Mr. Holliday's rendering of the "Etudes Symphoniques" of Schumann was unequal: some of it was brilliant and good, but some hard and exaggerated.

Miss Margaret Wild gave a pianoforte recital on Monday afternoon. The two important works in the programme were Beethoven's Sonata in C (Op. 53) and Brahms's Sonata in F minor (Op. 5). The latter work is now attracting the attention of pianists, and it well repays study. Miss Wild's reading of the Beethoven was earnest, but she gave one the impression of having worked too much at it. She has good fingers, also in one or two places her technique was at fault. She yet played short pieces by Chopin, Rubinstein, &c.

Herr Waldemar played Beethoven's violin Concerto at the first of his two orchestral concerts at St. James's Hall on Tuesday afternoon. He has much improved since we last heard him; he plays with more refinement, and his reading of the work was pure and intelligent. His performance of three movements from Bach's Suite in E was correct, but lacked fire. The orchestra was under Signor Randegger's direction. Mme. Nordica was announced, but unable to appear, so there was no vocal music.

Mr. Ernest Kiver gave his seventh annual concert at Princes' Hall on Tuesday evening. The programme included Brahms's pianoforte Sonata in F sharp minor (Op. 2), one of those early works of the composer which caused Schumann to prophesy good concerning him. It has power and imagination; the writing is unequal, and reminiscences are not wanting, but the music is interesting in itself and full of promise. Mr. Kiver gave a conscientious reading of the Sonata, which is by no means easy to play. The concert commenced with a new pianoforte trio by Miss Ellicott. The music is light and melodious; but the influence of

Mendelssohn is perceptible throughout, and indeed becomes greater with each succeeding movement. Another English work was Mr. E. Prout's pianoforte Quartet in F (Op. 18). Mme. C. Samuelli was the vocalist.

Master Jean Gerardy gave his last cello recital at St. James's Hall on Wednesday afternoon. He took part with M. Ysaye and Herr B. Schönberger in part of Rubinstein's B flat Trio, and acquitted himself well. Mlle. Irma Sethe, a pupil of M. Ysaye, performed the first movement of Mendelssohn's Violin Concerto. She has good technique, plays with wonderful energy, and has copied most of her master's mannerisms. She was much applauded. Miss Marie Bremer sang two songs, one by Schumann, the other by Kjerulf, with taste, intelligence, and remarkably clear enunciation. Mr. Schönberger played solos.

We were able to hear only a little of Mr. E. Haddock's first concert at the Steinway Hall on the same afternoon. In a light violin solo by L. E. Bach, and in a clever Suite for piano and violin by the little-known Russian composer, Cesar Cui, he proved himself a skilful executant and an accomplished artist. We shall hope to hear him again at his second concert, May 27.

A fine performance of Sullivan's "Golden Legend" at the Albert Hall on Wednesday evening deserves mention, however brief. The vocalists—Mme. Nordica, Mme. Belle Cole, and Messrs. Ben Davies and Henschel—all sang well, and Mr. Barnby's choir, as usual, greatly distinguished itself. As conductor, Mr. Barnby deserves high praise for the determined manner in which he opposed the public demand for a repetition of "O Gladsome Light." A little more firmness of this kind, and the public would soon give up asking. There was a large audience.

LITERATURE.

Sir Robert Peel in Early Life, as Irish Secretary and as Secretary of State (1788-1827), from his Private Correspondence. Edited by Charles Stuart Parker. (John Murray.)

To the recently published monographs by Mr. Justin McCarthy and Mr. Thursfield we have now to add the first volume of what is to be, or more correctly speaking, of what is to furnish the materials for, a full and authoritative Life of Sir Robert Peel. The volume, which so far as the title-page is concerned is complete in itself, terminates with the death of Canning in 1827, and consequently does not directly touch upon either of those two burning topics—the Catholic Emancipation Act of 1829, and the Repeal of the Corn Laws in 1846—with which the name of Peel is inseparably connected. Nevertheless, even with this limitation, it is a volume of first-rate importance—as, indeed, must every scrap of information be which serves to throw fresh light on Peel's character as a statesman and the motives which led to his "conversion" on these two critical occasions. A few of the more important documents here printed have, it is proper to remark, already appeared in the Lives of Canning and Eldon, the Croker Papers and elsewhere; but Mr. Parker, rightly judging that to omit them would impair the usefulness of the book, has reprinted them along with the mass of new matter placed at his disposal by the trustees of Peel's papers—Viscount Hardinge and the present Speaker of the House of Commons—and other contributors. For the sake, however, of the biographer and historian (not to mention the reviewer), I would venture to suggest to Mr. Parker that it would conduce greatly to lighten their labours if in the forthcoming volumes some hint, either by means of an asterisk or a short note, were to be given as to what papers have already been printed. For the rest, with the exception of one or two unimportant misprints, Mr. Parker has performed his duties as editor in a perfectly efficient manner, and with a strict regard to Peel's own injunction—

"that no honourable confidence shall be betrayed, no private feelings unnecessarily wounded, and no public interests injuriously affected in consequence of premature or indiscreet publication."

So far, indeed, from causing pain to persons of the most sensitive nature, the present volume can, I imagine, only furnish unalloyed satisfaction to the admirers of one who in his day was certainly the most central and commanding figure in English political life.

In July, 1812, when he was only twenty-four years of age, Peel became Chief Secretary for Ireland. He had already for two years filled the post of Under-Secretary for War and the Colonies, and was recognised on both sides of the House as a rising politician; but, except for the fact that he happened to represent Cashel in parliament, he was totally ignorant of both Ireland and Irish politics. It was therefore all the more deplorable, considering the prominent part which Irish politics were to play in his career, that he should at this comparatively early age have been forced, as it were, into a sphere for which he was at that time wholly unqualified, and that a bias should thus have been given to his views, from which the natural ingenuousness of his mind, had he been allowed to develop himself freely, would in all probability have saved him. In saying this, I do not wish to be understood as suggesting that his opposition to the Catholic claims was not perfectly sincere. His position in this respect was neither absurd nor illogical; and it must be remembered that, when he did eventually yield on the subject, he yielded rather to the logic of events than to the arguments of the advocates of Catholic Emancipation. "For my part," he wrote in 1815, after the conclusion of the war had relieved the government from all fear of danger from abroad,

"I have formed a sincere and strong conviction that no arrangement will be (as some suppose) completely satisfactory to the Catholics which (having removed every distinction and disqualification on account of religious opinion from all classes of the inhabitants of Ireland) shall continue to maintain a separate Church establishment for the religion of one-fifth of the population."

This position he never abandoned; but there is ample evidence in the present volume to show that, while he regarded Catholic Emancipation as an evil fraught with danger to the connexion between the two countries, he was at the same time prepared to meet it as a necessary evil, and, if need was, to sacrifice his opinion to the pressure of circumstances. He has been charged by competent authority with lack of political foresight, but I do not think the charge finds any support in the present volume. It is true that, even after the elections in Waterford and Louth in 1826, he was not quite certain that a reaction against the influence of the priests would not restore the balance in favour of the landlords; but he was by no means blind to the paramount significance of those elections. He would, he declared, have been glad to believe that Catholic Emancipation would satisfy the aspirations of the Irish; but having no hope in that direction, he set himself resolutely to consider what securities could be obtained against Catholic ascendancy.

"The greater the prospect of the success of the Catholic question," he wrote to Mr. Leslie Foster in November, 1826, "the more important it is that all its bearings should be thoroughly understood. When I see it inevitable, I shall (taking good care to free my motives from all suspicion) try to make the best terms for the future security of the Protestant. How can this be done if we close our eyes to actual or possible dangers?"

Was not this exactly the position he took up in 1829? He refused, it is true, in 1827, after the fatal illness of Lord Liverpool, to hold office under Canning, and his refusal was grounded entirely on the antagonism between them on the Catholic question; but his keen sensitiveness as to the probable misinterpretation of his motives no doubt also weighed something in the balance.

"I do not choose," he wrote to his brother, "to see new lights on the Catholic question precisely at that conjuncture when the Duke of York has been laid in his grave and Lord Liverpool is struck dumb by the palsy. Would any man, woman, or child, believe that, after nineteen years' stubborn unbelief, I was converted, at that very moment that Mr. Canning was made Prime Minister, out of pure conscience and the force of truth?"

Peel, as I have said, became Chief Secretary for Ireland in 1812. His first experiences were not calculated to impress him favourably with the duties of his new position, or with the class of persons to whose support he had chiefly to look. Ireland he found on his arrival on the eve of a general election; and, as the channel through which the patronage of the government flowed, he was soon overwhelmed with requests and petitions of all sorts, from a tide-waiter's place up to a peerage, as the price open and avowed of political support in the forthcoming contest. It was a dirty piece of business, but it was afterwards a source of satisfaction to him that he had endeavoured to keep his hands as clean as possible by refusing to gratify any private wish of his own by the smallest appointment. The elections over to the entire satisfaction of his own party, and the Catholic question, owing to the division among the Catholics themselves on the subject of the veto, shortly afterwards comfortably shelved for a season at least, Peel settled down to his work of administration. In this connexion the importance of the press was too great to be overlooked. The case of John Magee, the proprietor of the *Dublin Evening Post*, is well known and needs no comment; but in these contests Peel soon found, as he wrote to Croker, that it was much "easier to silence an enemy's battery than to establish one of your own." Every year government was accustomed, under cover of a proclamation fund, to spend £10,000 in subsidising friendly newspapers; but this was not sufficient for Peel. He had already tried his hand in light political contributions to the *Courier*, and shortly after his arrival in Dublin he had expressed to Lord Liverpool his hopes of putting the Irish papers on a "better footing." In this respect, however, he was not entirely successful; and the zeal of these inspired publications sometimes so far outran their discretion—as in the case of the *Dublin Journal*, which had inserted a gross forgery professing to be a protest of the Catholics against the Bill for their relief—as to elicit an angry rebuke from him for the inconvenience they caused him. Notwithstanding the excitement incidental to the agitation for Catholic Emancipation, the state of Ireland in 1814 was one of comparative tranquillity. Isolated acts of violence, due mainly to causes of a more or less permanent character, there no doubt were; and these

were, of course, magnified by alarmist magistrates and others into symptoms of a new rebellion. But Peel, while not altogether misled by the reports that reached him, was strongly impressed with the necessity of providing some more effectual method of repressing local disturbances than was afforded by the effete system of county constabulary in force. His Police Bill—a measure which, though not without its vicious side, as revealed at a later period by the reforms of Drummoud, has probably done more than any other single Act for the cause of good government in Ireland—passed easily and almost without opposition through Parliament. But in Ireland the measure was denounced as wholly inadequate to the emergency; and Peel was forced, partly against his own will, and to the surprise of his colleagues, to revive the Insurrection Act which had expired in 1810. In order to secure its safe passage, a bogus conspiracy case was concocted by some subordinate government official; and, though the fraud was happily discovered in time, it gave Peel a much-needed lesson as to the value of official evidence. Still, while it is impossible to deny that the sobriquet of "Orange Peel" which attached itself to his name was not, so far as the general tone at any rate of his administration was concerned, altogether unmerited, one cannot help feeling that Peel, as he stands revealed in his private correspondence, was not simply as he was described—the spokesman of an intolerant faction; and that, despite his prejudices on the main question of the day, he did try to pursue an honest and impartial line of conduct. His attitude, of course, brought him into violent collision with O'Connell; but it speaks well for the sincerity of his motives that a resolution expressing the highest approbation of his administration, "with the single exception of his vote on the subject of Catholic Emancipation," could have been passed at a full meeting of the inhabitants of Carriack-on-Suir. Of his quarrel with O'Connell the less said the better. The documents connected with it fill several pages of the present volume; but the only one I have been able to read with any satisfaction is a letter to Peel from his brother-in-law, William Cockburn, afterwards Dean of York, imploring him not to let "such calamitous results be produced by the mere balance of a straw or the nice explanation of a word."

Already in 1815 Peel had expressed his earnest wish to be relieved of the Irish Secretaryship; and it was with an undisguised sense of relief that he quitted Ireland in the summer of 1818. His attitude on the question of Queen Caroline's treatment, co-operating with other causes, leading him to decline the post of President of the Board of Control with a seat in the Cabinet, he remained out of office till the resignation by Lord Sidmouth of the Home Secretaryship in December 1821 rendered it possible for Lord Liverpool to make him a more attractive offer, which he at once accepted. Meantime, however, he had not been idle, having in 1819 been appointed Chairman of the Currency Committee, whose report embodied in the Act which bears his name

represents Peel's first great financial achievement. What slight weight he attached to the vote he had given in 1811 against Horner's proposal for the resumption of cash payments appears clearly from the following passage in a letter to his old tutor, Dr. Lloyd:

"I conceive my chief, perhaps my only, qualification for the office for which I have been selected by the Committee is that I have not prejudged the question, am committed to no opinion upon it, and shall be, therefore, at least disinterested in the result of our investigation."

The Report of the Bullion Committee of 1810 he found, as might have been expected, incontrovertible; but he was not so easily satisfied as to the expediency of returning to a system abandoned twenty-one years previously:

"*Revocare gradum, hic labor, hoc opus est.* . . . I believe the demonstration of the Bullion Report to be complete, still there are facts apparently at variance with their theory. If the demonstration is complete, this can only be so apparently. They are like the triangles that I used to bring to Bridge, and declare that the angles of those particular triangles amounted to more than two right angles. The answer in each case is the same. There is some error in the fact and in the triangle, not in the proof, which was as applicable to that fact and to that triangle as to any other."

In connexion with the monetary crisis in 1825-6, and the proposal, favoured by Mr. Baring, to establish a bimetallic standard, Mr. Parker prints some interesting correspondence between Peel and the Duke of Wellington, to which, however, I can here only refer the reader interested in such matters. Peel's laudable efforts to reform the criminal code on the lines laid down by Romilly and Mackintosh threw a lustre over his tenure of the Home Office, and gained for him a well-deserved popularity. Among those who hastened to offer him their congratulations on that occasion not the least notable was the Rev. Sydney Smith, who to his congratulations ventured to add some friendly advice on the subject of secondary punishments.

"I hope," he wrote, "you will consider the effects of Botany Bay as a punishment. A sentence of transportation to Botany Bay translated into common sense is this: 'Because you have committed this offence, the sentence of the Court is that you shall no longer be burdened with the support of your wife and family. You shall be immediately removed from a very bad climate and a country overburdened with people to one of the finest regions of the earth, where the demand for human labour is every hour increasing, and where it is highly probable you may ultimately regain your character and improve your future. The Court have been induced to pass this sentence upon you in consequence of the many aggravating circumstances of your case, and they hope your fate will be a warning to others.'"

R. DUNLOP.

The Poets and the Poetry of the Century.
Edited by Alfred H. Miles. Vols. 1 and 6.
(Hutchinson.)

AFTER saying that we opened these volumes with rather high expectations, we are unfortunately obliged to add that we have

closed them with feelings of considerable disappointment.

In his Preface Mr. Miles very truly says: "A work of this kind should be so impeccable that a student may turn to it for quotations as fearlessly as he turns to the original text. Otherwise half its value is lost." And he informs us that "no pains have been spared to render the text absolutely accurate." An editor who thus expressly claims for his work the distinction of being textually "impeccable" is a courageous man, but Mr. Miles has been hardly less rash than courageous. From some cause—apparently imperfect correction of the press—errors of a most regrettable kind have crept into his book. For example, in his selection from Blake he prints the last two lines of the "Introduction" to the "Songs of Innocence" thus:

"And I wrote my happy songs
Every child my joy to hear."

The last *my* should be *may*, and of course the error—a very obvious one—quite destroys the sense. A more ludicrous mistake disfigures a sonnet of Wordsworth's, in which Mr. Miles makes the poet allude to the English Channel as "a *pan* of waters." Of course it should be *span*. Then we have such slips as "Jeffery" for "Jeffrey," and, in a poem by Lord De Tabley, "roseness" for "rosiness," while on one page occur such spellings as "antient" and "relicks," although there is not elsewhere any disclosure of an intention to reproduce obsolete or eccentric orthography as a feature of the book. In a blank verse poem of Lord De Tabley's we find the following line:

"My dream was glory and their delight:"

but as we have not at hand the means of referring to the original source, we can only venture to express a strong suspicion that something here has gone wrong, as also in another ostensible line of blank verse which reads as follows:

"I'm sent among damsels at the board."

With regard to these two instances, however, we speak under correction, for the reason just given. But if we happen (appearances notwithstanding) to be wrong in this case, and Mr. Miles right, he has only himself to blame for our inclination to trust our own unverified suspicions when aroused by such palpable and indisputable errors as elsewhere appear.

Since writing the above, we have been looking at random here and there in Mr. Miles's two volumes, and have noted the following mistakes in the selection from Crabbe: "mortal" for "mortals," "tongue" for "tone," "show" for "shown," "noble" for "nobly," "illuminated" for "illumed," and "free" for "flee"; in the selection from Hogg, "mountain" for "fountain"; in the selection from Mr. Robert Buchanan, "rape" for "reap." These are all pure errors of transcription, about which no sort of doubt can exist. It may be thought by some readers that we have devoted undue attention to matters of this kind; but the unusual pretensions to an absolutely "impeccable" text which Mr. Miles has put forward must plead our excuse. If, for his own future use, he desires to have chapter

and verse for the various items in our partial list of inaccuracies, he has only to signify his wish.

He tells us that in all cases where he has adopted readings other than those which were last approved by the poets themselves, the final versions will be found in his notes. Yet in printing, without any annotation, Hogg's song, "When the kye comes hame," he adopts, throughout, the reading, "When the kye *come* hame," which is certainly more grammatical—and, to our mind, we must say, preferable intrinsically—but is also certainly *not* the rendering last sanctioned by Hogg, if it ever had his sanction at all. The Ettrick Shepherd himself says:

"In the title and chorus of this favourite song I choose rather to violate a rule in grammar than a favourite Scottish phrase so common that, when it is altered into the proper way, every shepherd and shepherd's sweetheart account it nonsense. I was once singing it at a wedding with great glee the latter way ("When the kye came home") when a tailor, scratching his head, said it was a terrible affectit way that! I stood corrected, and have never sung it so again."

In the very important matter of punctuation, Mr. Miles's errors are simply innumerable. To record them all would occupy more space than we can afford, and would not be very lively reading either; but we have no right to make so serious a charge without bringing substantial and detailed proof of its correctness, so we shall confine ourselves to producing evidence under this head from a single section of Mr. Miles's book—the anthology from Wordsworth. The following is a stanza of "Expostulation and Reply"—

"One morning thus, by Esthwaite lake,
When life was sweet, I knew not why,
To me my good friend Matthew spake,
And thus I made reply:"

Mr. Miles, in printing this stanza, distorts the meaning by omitting the comma at the end of the second line; and in the following stanza from the same poem Mr. Miles similarly clouds the sense by substituting a comma for a semicolon at the end of the second line.

"Nor less I deem that there are Powers
Which of themselves our minds impress;
That we can feed this mind of ours
In a wise passiveness."

In "The Sparrow's Nest" are the following lines:

"The Sparrow's dwelling, which, hard by
My father's house, in wet or dry, &c."

Mr. Miles introduces confusion by placing a comma after "hard by." In the well-known "She was a Phantom of Delight," the couplet,

"But all things else about her drawn
From May-time and the cheerful Dawn,"

is ruined, in Mr. Miles's book, by a semicolon after "drawn." From the end of the first line of the fourteenth stanza of "Resolution and Independence" a comma is omitted, with injurious results, though the case is not so bad as the previous ones. In the sonnet, "Is it a reed that's shaken by the wind," a comma and a colon are omitted, at the end of lines 8 and 11 respectively, with disastrous effect in each instance. In the "Westminster Bridge" sonnet, at the end of line 8, a comma has

been substituted for a period, also with painful consequences; and in the noble sonnet, "After-thought," which concludes the Duddon series, the magnificent lines, "Enough, if something from our hands have power

To live, and act, and serve the future hour;" are printed with a comma after "power," which, although extraneous and slightly obstructive, is the least positively harmful of all the above-noted errors.

It is proper, and perhaps necessary, to remark here that this is no case of an editor having, with more or less show of reason, made his choice from a variety of punctuations discoverable in different editions of the poet's works. It is, indeed, just possible—we do not affirm the contrary—that one or two of these bad punctuations may occur in some edition of Wordsworth's writings. We greatly doubt it, however; and even if they do so occur, they are clearly blunders of the most detrimental kind, such as no capable editor of Wordsworth has reproduced, and which unquestionably were not permitted to disfigure any reprint issued under the poet's own supervision. Indeed, we feel morally certain that they are, one and all, neither more nor less than slips due to careless transcription; and they certainly constitute an irredeemable blot for which no possible excuse can be made. We cannot go on filling columns with a list of these minute though irritating inaccuracies; but—we say it with a full sense of the responsibility attaching to a statement which we nevertheless have not leisure circumstantially to illustrate—other parts of the book appear to be sown no less thickly with errors than the part to which attention has just been paid. And, of the two volumes under review, those portions which we have had any opportunity of testing at all bear a small proportion to the whole.

It is a relief to turn to other features of Mr. Miles's work. He himself contributes the prefaces to his selections from Blake, Crabbe, Rogers, Wordsworth, Bloomfield, and Scott; and he writes almost invariably well. We think he over-estimates Bloomfield (of whose "Farmer's Boy," by-the-way, we learn that "some twenty-six thousand copies are said to have been sold in less than three years"), and we are unable to share very enthusiastically his admiration of the line—

"The splendid raiment of the spring peeps forth."

We have a stupid "Philistine" prejudice in favour of words used properly, and "raiment" can no more "peep" than it can botanise. But, as has been said, Mr. Miles usually writes very well; and he has the merit of appreciating just those kinds of excellence which are most apt in our day to be undervalued. His account of Crabbe, for instance, could hardly be bettered; and he says very truly that

"Crabbe was the first to give the lie to the false ideals of rustic happiness and virtue that pervaded the poetry of his predecessors; the first with iconoclastic hand to destroy the images of rural felicity and peace which had for so long deluded the ignorant and mocked the poor."

We fancy Coleridge may have had Crabbe in his mind when, in the "Ode to Georgiana

Duchess of Devonshire"—which, by the way, is somewhat regrettably absent from Mr. Miles's book—he alludes to poets of the opposite class, who

"in verse and music dress
Tales of rustic happiness.
Pernicious tales! insidious strains!
That steel the rich man's breast,
And mock the let unblest,
The sordid vices and the abject pains,
Which evermore must be
The doom of ignorance and penury!"

Mr. Miles very justly observes that,

"Crabbe was fortunate enough to gain the approval of both schools of contemporary criticism. His adoption of the old forms gained for him the friendship of the one, and his infusion of the new spirit excited for him the sympathy of the other."

Mr. Miles's selection from Crabbe seems to be everything that could be desired, which is more than we can say of the selection from Coleridge. For this latter Mr. Horace G. Groser apparently shares with the editor-in-chief his responsibility. The quantity of verse belonging to a very high class is, it will be generally admitted, not large in Coleridge; and there is no reason why a work on such a scale as Mr. Miles's should not have contained every really splendid thing that Coleridge wrote in verse, exclusive of drama. Yet it does not contain "The Garden of Boccaccio"; and while we may be wrong in thinking that "The Visit of the Gods" should have been given, we feel no fear of contradiction in saying that room should certainly have been found for "A Tombless Epitaph," in which occurs Coleridge's noblest passage of blank verse. What makes the omission of these fine pieces all the worse is the fact that some of Coleridge's comparative failures are included. We may here remark, incidentally, that we notice in "Christabel" a paragraph improperly broken into two. On a cursory examination, the selection from Wordsworth seems very well made. At all events, there is nothing in it which we could wish away; but we have not looked through it with a special view to determining its relative adequacy on the score of comprehensiveness. In the instances where Mr. Miles has adopted an early reading and relegated the later one to an appendix, he has on the whole decided wisely, but not, we think, always so. Take, for example, this stanza:

"Often as thy inward ear
Catches such rebounds, beware—
Listen, ponder, hold them dear:
For of God—of God they are."

Wordsworth afterwards altered the first two lines to

"Such rebounds our inward ear
Catches sometimes from afar,"

and to us this seems finer, though Mr. Miles has preferred the earlier version. We are, however, treading in the region of opinion here; and we do not affect to lay any stress upon our own view.

In vol. vi., published with vol. i., we are among our contemporaries, the selections ranging "from William Morris to Robert Buchanan." This sounds oddly to our ears—somewhat as if one should call the roll of English statesmen "from Disraeli to Gladstone"; but it appears

Mr. Morris was born in 1834 and Mr. Buchanan in 1841; and these two poets, with others born in the interval between those dates, yield the material of Mr. Miles's sixth volume. Mr. Addington Symonds writes in a wholly admirable manner about Mr. Roden Noel, and Mr. Cosmo Monkhouse pens a graceful estimate of the poetry of Mr. Richard Garnett. The editor himself writes with just appreciation of the delicate excellence which we associate with the name of Mr. Austin Dobson, and pays a well-deserved tribute to the great poetic ability of Lord De Tabley. Both here and elsewhere, however, in these "appreciations," we are irritated by an irrelevant trick of quoting laudatory notices from the periodical press of the day—the *Saturday Review*, the *Athenæum*, &c. The public, outside the little ring of professed litterateurs, feel slightly amused by the spectacle of reviewers taking each other so solemnly. Mr. Walter Whyte contributes a preface to a very scanty selection from the work of Mr. Alfred Austin, and, oddly enough, ascribes to the lyrical pieces of that vigorous poet an Elizabethan flavour which is about as foreign to them as it could be. Another poet who is not too largely represented is Mr. Herman Charles Merivale. Mr. J. Ashcroft Noble writes restrainedly and sympathetically about David Gray and Mr. R. Buchanan; while Mr. Arthur Symonds shows us that his fervid admiration of Mr. Swinburne does not betray him into idolatry.

With regard to one or two other prefatory notices in this volume we wish Mr. Miles had seen fit to exercise a little editorial supervision. The criticism of Mr. Wilfrid Blunt's poetry is diversified by allusions, in the most singular taste, to that gentleman's personal appearance—his "extraordinary good looks," as the critic, over whom in pure mercy the aegis of anonymity shall be thrown in these columns, expresses it. A sentence in another article by the same hand contains, among other curiosities, a stranded nominative case which waits inconsolably for the verb that never comes. In a living poet's work, we are told, "one feels the great handling of the chisel, but one's eye cannot rest satisfied with the mounting sweep of the unspent curve." A certain poem is described as "gentle cousin" to a certain other, and we learn that "each will doubtless felicitate the other on the relationship." We hear of music "sonorous with conviction," and metres which have the "vowelled turbulence of a deep strongly-flowing stream."

In the forthcoming instalments of this work it is to be hoped that Mr. Miles will avoid the repetition of such blemishes as detract so seriously from the value of the two volumes which lie before us.

WILLIAM WATSON.

Black America: a Study of the Ex-Slave and his Late Master. By W. Laird Clowes. (Cassell.)

As the Special Commissioner of *The Times*, Mr. Clowes visited the United States last year to study and report upon the latest phase of "the nigger question." This report—which was contained in a series of

letters to the journal named—is here reprinted with additions. It is a careful and impartial estimate of the situation. We may not acquiesce in all Mr. Clowes's conclusions, but manifestly they have been well and carefully weighed. His judgments are the judgments of a judge, and not of an advocate usurping the judge's seat. Mr. Clowes had no preconceived notions on the subject, or, at any rate, did not permit them to bias him. He looked the facts fairly in the face and allowed them to carry their own lesson. He has conversed, he says, without prejudice, "with whites and with blacks, with Republicans and with Democrats, with men who are in office and with men who are anxious to find themselves there;" and he has not consciously closed his ears "to any argument from any quarter." The result is a valuable contribution to this pressing question.

The position, briefly stated, is this:—As a result of the Civil War, negroes were formally recognised by Amendment XV. of the Constitution of the States as citizens. At the same time, in the districts where negroes were most numerous, the whites were subjected to certain disabilities on account of the part they had taken in the Rebellion. They thus found themselves in the unenviable position of being in subjection to the persons who had lately been their slaves. Had the latter been judicious, and capable of governing, the position would have been serious enough; but in the nature of things they were as unfitted as they well could be for their new responsibilities. Goods and chattels, with neither rights nor responsibilities, cannot be turned into men all at once, even by an Act of Congress. It is not clear that the new citizens were any worse than the old ones—any more greedy or less scrupulous; but the old ones had learned by experience that even men in office must restrain themselves. The newly enfranchised negroes had had no experience. They were like Dick Bultitude in *Vice Versa*, who, when the Garudâ stone had transformed him into a respectable city merchant, made toffee with his errand boy. His father's amusements may have been quite as trivial, but they were more seemly and, generally, less inconvenient. To add to the troubles of the negroes, the carpet-baggers made their appearance—rascals from the North who saw a chance of plunder. They posed as the negroes' friends, secured the chief offices of the Southern States, and dipped their hands freely into the treasury. The Government at Washington, not for the first time and not for the last, proved its incapacity to secure even a moderate degree of justice and order.

Mr. Clowes gives many instances of this misgovernment; and although the testimony is for the most part that of Democrats or Secessionists, it may be taken to prove at least a very great abuse of power on the part of the newly-made rulers. One of the worst cases was that of Franklin J. Moses, jun., Governor of South Carolina in 1872. He was reputed to spend 30,000 dollars to 40,000 dollars a year, with a salary of 3,500 dollars; and the taxation for State expenses rose to 2,000,000 dollars, against 400,000

dollars formerly required. "The total amount of the stationery bill of the House for the twenty years preceding 1861 averaged 400 dollars (£80) per annum," but for one year during the governorship of Moses it was £3200. After he fell from power this man developed into a common criminal, and was ultimately arrested for stealing overcoats from the hall of a house.

The ignorance of the negro, more than his cupidity, was responsible for this and much other scandalous misgovernment. He was the victim of such men as Moses. Not that he was himself admirable, being deficient in good principle and good policy alike. But while the rascally white man showed in his rascality what his developed nature amounted to, in the negro, with all his errors, were certain undeveloped possibilities of good. In 1864, and for many years after, the real nature of the negro could not be known. His qualities as a slave had been fully ascertained; his qualities in a condition of freedom were yet to be discovered. That he blundered so badly at first was not surprising and was no ground for any final condemnation.

Nevertheless his blunders, whatever the cause, were intolerable. They justified some kind of rebellion against the constituted authority, and such a rebellion—known as the "reconstruction" of the South—did take place. In a few years the rule of the negroes had been overturned, and the white men, if not legally, still none the less actually, were in power again. It does not seem, however, that they, with all the advantages of civilisation, had even yet learned wisdom. As the negroes had ruled in their blundering way for their own advantage, so now the whites, when their turn came—instead of showing what honourable government was and, accepting the changed conditions, trying to make the best of them—resumed their old tyranny. They were more judicious, no doubt; but not one whit more virtuous or, in the long run, more wise. The negroes might be crushed for a time; in the good old times of slavery they had been crushed, and, again, when "reconstruction" came, they seemed to collapse. But this could not always be so. The spirit of liberty had entered in and must grow more and more. Had the whites only seen it, they might have ruled so wisely that all future trouble would be averted. They did not see it. They were blinded, not only by lust of power, but still more by hatred of the race they had so long oppressed. To hate a man thoroughly you should have done him an injury; and surely the whites had done the negroes mortal injury. White-rule, as described by Mr. Clowes, is quite as disgraceful as the black-rule it had superseded. Every evil device for overriding the law, from falsifying voting papers and making voters drunk to the use of revolvers, was resorted to. There was no secret about the devices, because there was no sense of shame. "There is no conceivable scoundrelism," writes Mr. Clowes, "that is not, or has not, been practised in the South to neutralise the negro vote" (p. 85). The result was that the white minority in all the States not only gained the ascendancy, but left the black popula-

tion unrepresented and worse than uncared for.

This could not last for ever. The negroes by degrees began to realise their rights and to feel their strength. The best of them were conscious of the defects under which they laboured—defects of education and of a sense of moral responsibility. It may be true that the negro can never develop as far as the white man, that at his highest he is comparatively childish. The testimony on the point is contradictory. Perhaps here, as elsewhere, it is true that we cannot tell what the negro is capable of until he tries. Assuredly, in the quarter of a century which has elapsed since he had any chance of progress at all, he has moved forward wonderfully. And, be his highest reach what it may, it is higher than the reach of the lower order of white men. The tyranny of ignorant negroes succeeded the slave tyranny of the whites, and was in turn succeeded by the white tyranny, which still obtains. But since the downfall of negro rule in the South, the mental and moral condition of the negro has greatly changed; and when the day of reckoning comes—as come it must—the Southern white will have to render his account to a race very different from that which he reckoned with before. The present crisis is due to the blundering of the Southern white. He has neglected his opportunity.

The idea of the Southern white, says Mr. Clowes, seems to be that, though danger is ahead, it is too far ahead for him to trouble himself much about it. "I do not fear the negro," he says in effect, "I do not believe in his power of organisation; and, if he were to rise, we could crush him into resignation." So he will not mend his ways; and his unbelief will continue until the day when the negro, wearied of oppression, shall arise and prove his power. What he endured when he was a slave he will not always endure now that he is, or has the chance of being, a free man.

Of course "remedies" have been proposed. "Education" is one; but education, even in this country, has not ennobled the lower sections of society. It gives the capable a chance; to the incapable it is useless, and to the ill-disposed it is a weapon for mischief. It is too late to withdraw from the negro the nominal equality the law has given him, else it might be hoped that the white man, having reduced him to a state of dependence, might treat him more tolerantly; but, if it were practicable, this would be no true remedy. Intermarriage and the consequent unification of the races seems to be impossible for some centuries to come at least; and the problem will not wait for a solution until then. According to Mr. Clowes, the ideal solution is the abolition of the negro by sending him to Africa. That the race which has laboured for so many generations on American soil should be sent from what is now its native land to foreign parts, seems hardly just. But just or unjust, such a solution is not likely to be effected. For one thing, the numbers to be removed are too great. It is more possible that the negroes might be induced gradually to concentrate themselves in some portion of the States; but neither this nor

any other peaceable method is likely to be put into operation, for the reason given to Mr. Clowes by "one of the most distinguished of living American statesmen":—

"If my country should ever come to incurable disaster," he said, "it will be, I am convinced, because it is the incurable habit of my countrymen to cherish the belief that they are so much the special care of Providence that it would be superfluous on their part to take even simple and ordinary precautions for their own protection."

For this reason Mr. Clowes himself is not hopeful that his "ideal" or any other "remedy" will be adopted.

And it is idle to expect that white and negro will dwell peacefully side by side, each respecting the rights of the other, without attempting to intermingle. The race-hatred is too intense ever to be rooted out of the white Americans. The stories told by Mr. Clowes are of precisely the same order as those commonly told in the last days of slavery. The lowest type of white holds himself, and is held by other whites, to be immeasurably superior to the highest specimen of a negro. Mr. Clowes writes:—

"Throughout the South the social position of the man in whose veins negro blood courses is unalterably fixed from birth. The child may grow to be wise, to be wealthy, to be entrusted even with the responsibilities of office, but he always bears with him the visible marks of his origin, and those marks condemn him to remain for ever at the bottom of the social ladder. To incur this condemnation he need not be by any means black. A quarter, an eighth, nay, a sixteenth of African blood is sufficient to deprive him of all chances of social equality with the white man. For the being with the hated taint there is positively no social mercy. A white man may be ignorant, vicious, and poor. For him, in spite of all, the door is ever kept open. But the black, or coloured man, no matter what his personal merits may be, is ruthlessly shut out. The white absolutely declines to associate with him on equal terms. A line has been drawn, and he who, from either side, crosses that line has to pay the penalty. If it be the negro who dares to cross, cruelty and violence chase him promptly back again, or kill him for his temerity. If it be the white, ostracism is the recognised penalty" (p. 87).

Even supposing all negroes could be banished from America, the question would still remain how to dispose of the Southern whites. Their disregard of law is developing. Italians are the latest victims of their murderous instincts. And the government at Washington can give no satisfactory assurances to the Italian government simply because in the South it is helpless against the prevailing and too long permitted and even encouraged lawlessness. Mr. Clowes asserts that

"if the racial crimes and outrages which are of daily occurrence in the Southern States were taking place in a semi-civilised part of Europe," and were "only half as well advertised as the events in Bulgaria were," "the public sentiment of Europe would be aroused, and reform secured even at the cost of war."

Such public sentiment, as to the negro at least, does not exist even in the North, where "Sambo" may indeed be a man, and as

such despised, but is certainly not recognised as a brother. The truth is, the long-continued slave-system, based as it was on a total disregard of human obligations and rights, has resulted in an arrested moral growth; and the roots of the present trouble lie not so much in negro inferiority as in this defect in the moral sentiment of the white population of the South.

Before the Civil War, Theodore Parker predicted that slavery "would go down in blood." Plenty of remedies were proposed in those days for the peaceful solution of that problem. One was not unlike the present "ideal" remedy advocated by Mr. Clowes and others. But a peaceful settlement was impossible then, as it is impossible now. How far short of a true settlement the Civil War was, we know. Not war, not even the American constitution, with or without Amendment XV., could liberate the negro. He is not free even yet. He has not in him the true spirit of freedom, or without him the requisite social conditions. But, although war and law could not make him free, they did him this service, that they opened up the way, so that he could seek liberty for himself. He is seeking it, and with more ability than might have been expected. His sense of freedom is growing; and by-and-by, when he feels his power, that fool's dream of the Southern whites—that they can afford to despise him and are able always to crush him—will be rudely broken, and the new tyranny, like the old, will go down in blood. That will not be a remedy. No remedy but time and what it brings is possible. But it will be a step onward.

WALTER LEWIN.

MEDIEVAL TREATISES ON ENGLISH HUSBANDRY.

Walter of Henley's Husbandry, together with an anonymous *Husbandry*, *Seneschaucie*, and *Robert Grosseteste's Rules*. Translations &c., by Elizabeth Lamond. Introduction by W. Cunningham, D.D. (Longmans.)

It is not always recognised how closely the land and its cultivation were bound up with the development of early institutions, with the possibilities of the progress of society, and of the social condition of those who, under the much abused feudal system, drew their livelihood from it.

A most important contribution to these studies in England is the issue by the Royal Historical Society of the four treatises which, from about the thirteenth to the sixteenth centuries, formed the chief written guidance on husbandry available to our forefathers.

"The general subject" of these tracts, says Dr. Cunningham, "is the management of estates; and in the management of an estate the successful working of the home-farm—under the superintendence of a bailiff, and by means of the services of the villans, with the assistance of hired labourers—was the chief element of success. They deal primarily with bailiff-farming . . . as it was organised in the thirteenth century;" containing "practical hints set forth by practical men to assist others in the management of their affairs."

The chief of these tracts, that by Walter

of Henley, treats of tillage, the care of animals, and other rural operations, and how the lord, himself supervising all, may thriftily manage his estate. The directions for obtaining an "extent" or survey of the property, for choosing servants and oversight of workers, are suggestive of something else besides husbandry—a connexion recognised by Sir A. Fitzherbert's printer, three centuries later, who, seeing how well the "Boke of Surveying" "agreeth with the argument of the other small boke, as court baron, court hundred, and chartuary," printed them all together.

The second tract deals with "the way in which a man ought to direct bailiffs and provosts about rendering the account of a manor," entering into details of the cost of carts, seed, and payment of labourers, of the return from produce, the dairy and live stock, large and small. Not many MSS. of this are known; but of these few one is at Paris, incorporated with Walter's treatise, the contents of the two having been rearranged. This compound work was printed by Lacour in 1856 as one composition, under the title of "Traité inédit d'économie rurale."

The Seneschauce (our third tract) describes the duties and functions of the various manorial officers, the steward, bailiff, &c., including the lord himself, down to the waggoner and the dairy-maid. This tract, together with a larger proportion of Walter's, furnished much material to the compiler of Fleta for parts of chaps. lxxi.-lxxxviii. of his second book, showing of how much authority and value were these practical guides, whose date is thus indicated as not later than Edward I.

The Rules were made to help a great lady "to guard and govern her lands and house." They teach little of husbandry, but more of the management of produce and the rule of a household. They are full of social and domestic details; and it is with a curious sensation that we sit behind the old-world curtain and watch the ordering of the servants, the seating of the guests, the courtesy of the table, the stately behaviour of the mistress. Like the later Anglo-French "Manière de Langage" of the fourteenth century, published by M. Paul Meyer, all these treatises, but particularly the Rules, shed a reflex light of a most fascinating hue upon our early social life.

The most important, however, and the most permanently in use was Walter of Henley's work, of which the editors have examined and compared twenty-one MSS. (six of which are at Cambridge), besides indicating others. The text is printed from the Luffield MS. in the university library at Cambridge, as presenting the closest approach to the original form. A translation on which Miss Lamond has expended much loving care, renders all these tracts accessible to the many students for whom the old Anglo-French of the originals is a stumbling-block, while Dr. Cunningham prefixes a useful sketch of the economy of an estate in the thirteenth century.

One interesting sign of the vitality of the old English speech in the midst of the contemporary French, only glanced at by the editors, may be pointed out here,

viz., the quotation of proverbs in English. One of these,

"Wo that strechet forberre þan his wytel [whittle] wyle reche
In þe straue his fet he mot streeche,"

occurs in Walter's prologue, where a couple of French proverbs also come in. In one of the chapters of Fleta, which draws upon Walter of Henley (lib. ii. cap. 72), we find "*quod Anglice dicitur, Ofte treste lokes maketh treuue hynnen*"; and all may be compared with several similar English utterances quoted by Nicole Bozon in his *Contes* a few years later.

LUCY TOULMIN SMITH.

NEW NOVELS.

There and Back. By George Macdonald. In 3 vols. (Kegan Paul & Co.)

Bell Barry. By Richard Ashe King. In 2 vols. (Chatto & Windus.)

The Laird o' Cockpen. By "Rita." In 3 vols. (White.)

Maisie Warden. By J. D. Hutcheson. (Alexander Gardner.)

The Weird of Deadly Hollow. By Bertram Mitford. (Sutton, Drowley & Co.)

A Little Irish Girl, &c. By Mrs. Hungerford. (Henry.)

The Cobbler of Cornikeranium. By Rev. A. N. Malan. (Sampson Low.)

The Children of the Fire Mountain. By T. B. Clegg. (Biggs.)

Always in the Way. By Thomas Jeans. (Trischler.)

THERE is such a strong family resemblance between Mr. George Macdonald's novels—at least those later novels which are compounds of piety, mystical theology, passion, strong speech, and strong action—that when an addition is made to the family, the only criticism that need be passed consists in saying if it is a credit or not. Granting, then, that Mr. Macdonald has a right to place his ideals of conduct and righteousness before his readers in the form of men and women who are always thinking aloud, even at the risk of occasionally boring them, it should be said at once that *There and Back* is one of the best books its author has recently published. There are strong incidents and strong characters in it, but not too many of them. Sir Wilton L'Estrange, the testy, selfish, sensual baronet, and Mrs. Wylder, the Australian wife of the squire, who has never disciplined her nature, takes morphia at home, and reads French novels in church, make a good pair; while Richard, the baronet blacksmithson, and Barbara, Mrs. Wylder's loveable daughter, make another. Lady Ann, the baronet's last wife, in spite of her limited intellectual horizon, is an excellent because natural sketch; and even the clergyman—Wingfold the rector—who, as the impersonation of the awful power of goodness is bound to figure in any work of Mr. Macdonald's—is not too much in evidence. Then the folks with whom Richard, Barbara, and Wingfold are naturally brought into association, and whom they influence—of course for good—are such as might be found in

ordinary life or ordinary fiction. In short, Mr. Macdonald has not published a more generally readable or enjoyable story than *There and Back*; and, although there are in it many passages full of religiosity and "philosophy" which are eminently skipable, they are so dotted over three volumes that the skipping of them is an easy matter.

Bell Barry is a provoking book. There is a great deal of farcical and almost Handy-Andyish Irish cleverness in it; but this almost spoils the plot, which is in reality serious nearly to tragedy. By himself, Bell Barry's father, the teetotal lecturer, supplies a good deal of fun, in spite of his being, or because he is, "a mere picture or shadow of a man—like all pedants—or rather a wooden figure, carved by other hands, with as much animation, mobility, and naturalness as the figure-head of a collier." He affords mirth to his audience and, through his very Hibernian servant, to the readers of this book, while he supplies Dick, the volatile Irish journalist and the moving spirit of the story, with any number of excuses for mischievous tricks. Occasionally, however, this sort of comedy jars with the main plot, which deals with the discovery of the murderer of Stewart Rivers's unworthy wife—a discovery that is as remarkable a piece of detective business as has figured in recent fiction. But, in spite of this, little fault can be found with *Bell Barry*, which is, in point of ability, very far superior to the average novel in which the average Irishman plays his pranks. The ultra-feminine reader, perhaps, will not see much in Stewart Rivers to recommend him to Bell Barry; but Bell herself is an admirable embodiment of courageous womanliness, as she shows in the scenes on board ship, where, on account of what looks like an elopement, she is the target for the slings and arrows of an enraged and uncharitable Mrs. Grundy.

In *The Laird o' Cockpen* the writer who styles herself "Rita" is good enough to take a tour in Scotland and even to express her horror of a Scotch Sunday. But while she has taken "*The Laird o' Cockpen*" for the title of her story, its spirit is the spirit of "*Auld Robin Gray*." It is true that the laird whom the half-Scotch half-English heroine marries, and even learns ultimately to love, is not quite so old as the successful rival of "Young Jamie;" but he makes up by social stiffness for any deficiency in years, and is a sufficient contrast to the vivacious Douglas Hay. If the reproduction of the "*Auld Robin Gray*" story were all the work that "Rita" had set for herself in her new book, it would hardly have been worth giving up three volumes to. But she makes Hay not only in love with the sensitive, impressionable heroine Athole, but also entangled by a siren, Dora Dunleith—the familiar "vision in pale amber silk, clinging in soft folds to the lissom slender figure"—and she brings on the scene and into the centre of the plot Huel Penryth, a strong Cornishman, whose life the siren has wrecked. She has thus abundance of material out of which to make a good story, and it may be allowed that she does make the most of it. The return of the laird from the dead after—very fortunately

—Athole, as a widow, has rejected Douglas Hay, and so earned an encomium from Huel Penryth, is the only altogether commonplace incident in the best story that "Rita" has yet written. Scotch and English manners and religion are contrasted rather too often.

As a modern Scotch story, with a considerable amount of modern Scotch dialect in it, *Maisie Warden* undoubtedly deserves more than a word of cordial praise. Some of Maisie's characteristics seem English rather than Scotch; but on the whole she makes a fair present-day Mysie Happer, while her father, the miller, is a good specimen of the crusty Scotch father. It must be allowed, however, that there is not an adequate equivalent to Sir Piercie Shafton. Stephen Wingate who, for a time, seems likely to take the part, proves finally quite unequal to it. He shows himself indeed to be, in the English school-boy slang—of which, by-the-way, there is a considerable amount in this book—"an out-and-outcad," whose seems quite willing to get another person accused of murder, if not positively to commit murder himself. Stephen's rival, Alan Maitland, will hardly seem to lovers of love-stories to be quite spirited enough for such a girl as Maisie Warden to accept as a sweetheart; and probably Barbour, the miller's own favourite for the hand of his daughter, will be generally regarded as the superior of both Wingate and Maitland in all genuine manly qualities. The incidents of the story, although they are undoubtedly of the "stock" kind, are very well managed. Altogether, the writer of *Maisie Warden*, when he has mastered the art of condensation, will make a more than average novelist.

The Weird of Deadly Hollow is simply a supper of human horrors, served up with no literary sauce to speak of. Still, a big feed, even if only fit for a savage, is a big feed; and Mr. Bertram Mitford certainly provides it. Beginning with a wild domestic quarrel, which ends in what has all the appearance of a murder close to Earl's Court, he proceeds to South Africa and the gorges of the Rooi Ruggens Bergen; and there he excels the writers of all penny dreadfuls and of all shilling shockers. Not to speak of the Niekirk fratricide and its attendant tragedies, which are thrown in as it were gratis, he makes his hero commit bigamy, unintentionally it is true, but not the less really. Then the second wife is murdered under circumstances of almost unmentionable atrocity by a Bushman, and the Bushman is literally roasted to death by the infuriated husband. The first wife turns up, expressly to prove the bigamy, of course; and in the last page even she is seen contemplating being murdered a second time. It is only fair to Mr. Mitford to say that he has considerable powers of graphic description, though even in this department of art he is too much of an impressionist.

Mrs. Hungerford is seen at her simplest—one had almost said at her silliest—but not quite at her best, in the little volume of stories of which "A Little Irish Girl" is the longest. She requires more elbow room than is here allowed to do justice to the feminine flutterings, flirtations, and vacilla-

tions in which she revels. No doubt the "adventures" which give an excuse for some of the short stories that appear here are agreeably comic—such as "The Wrong Turning," in which a too typical young gentleman of the period by a natural mistake finds himself, and in his agitation leaves his watch, in the bedroom of a far too typical young lady. The end is one characteristic of Mrs. Hungerford. "'Was' (plucking nervously at the bottom of the coat)—'was I looking *very* dreadful?' 'Oh! darling heart! *How* could you look that?' cries he, straining her to his breast." A somewhat similar adventure, styled "Sans-culotte," is not quite so successfully managed. It suggests somehow that the scoundrel in it should either have attempted nothing at all, or have attempted a great deal more by way of injury to a rival than he actually accomplishes. All things considered, "A Little Irish Girl" is the brightest and best because most truly Irish of this collection; and that in spite of the fact that the provoking heroine does not know her own mind for forty minutes together, and acts in such a way as would have disgusted a man looking out for a fair amount of balance of judgment in the girl he contemplated making his wife. Still, Mrs. Hungerford never fails to be prettily piquant alike in style and in incident, and this volume will probably be enjoyed quite as much as anything she has ever written.

Mr. Malan communicates to the public in his preface the interesting information that he writes the stories which have secured him a considerable reading constituency among boys almost entirely between nine and eleven p.m. Evidently, however, inspiration is a variable quantity with him as it is with most other writers, for in *The Cobbler of Cornikeranium* he is certainly not up to his usual mark. It is too preposterously improbable, this story of the discovery by means of a dream of a treasure which enables Cobbler Joe Grabber to set up in business as a farmer, and also to relieve the embarrassments of an impecunious, though pious and philanthropic, clergyman. Then county society—consisting of the usual elements, the squire, the doctor, the vicar, and the captain—is rather roughly sketched. Finally, the incident of Joe's capture of the brush has too slight a connection with the general plot. Yet *The Cobbler of Cornikeranium* is a cheery, wholesome book, that might well be put in the hands of a boy. The love-making between Joe and the farmer's daughter is very pretty of its kind. But there is far too little of it.

There is an air of special knowledge about *The Children of the Fire Mountain*; its author is evidently familiar with the South Seas, and with the infamies of the thinly-disguised slave trade there. It is not notable, however, for originality of plot. Rufus Morgan—or rather the pseudo-Rufus—is a commonplace scoundrel of the familiar buccaneer type; and the adventures of the children of the fire mountain, although sensational enough in their way, are such as might be manufactured by any Australian imitator of Mr. Rider Haggard. This book is good for

rendering a short railway journey tolerable. That is all that can be said for it.

Always in the Way is in effect the autobiography of a good-natured little man, who is in the habit of "getting in the way" whithersoever he goes, but who also has a knack of getting out of all his scrapes, and who, after proving a good genius to a brother—that, however, deserves such treatment—is finally settled in a village in the Bavarian Tyrol. There, indeed, he seems to be at last safe from all tormentors. This book is simply a bit of good, kindly fooling. Poor little Rummin's adventures in Scotland are especially well told.

WILLIAM WALLACE.

RECENT THEOLOGY.

A Commentary on St. Paul's Epistles to the Ephesians, Philippians, Colossians, and to Philemon. By Joseph Agar Beet. (Hodder & Stoughton.) To those who are acquainted with Mr. Beet's previous works, it will be enough to say that the present volume, on the third group of St. Paul's Epistles, is marked by the same high qualities of accurate scholarship and exegetical skill as distinguished those excellent commentaries. Mr. Beet writes expressly for two classes of readers—"for students of the Greek Testament and for intelligent readers of the English Bible"; and it is no doubt for the sake of the latter that he supplies a literal translation, which, however, will be fully appreciated only by the former. As his chief helpers he takes, "as before, Meyer and Hofmann among German, and Ellicott and Lightfoot among English commentators," but without sacrificing to any of them the independence of his own judgment. As an example of his ability as an expositor, we may refer particularly to his interpretation of the critical passage, Phil. ii. 6. In the introductory sections and in special notes and dissertations, Mr. Beet supplies all needful matter for the intelligent study of the Epistles of the imprisonment; but why does he persist in speaking of Paul's prison and of the damp walls of his dungeon, seeing that Paul, though in bonds, was nevertheless, according to the Acts, permitted to live in his own hired house? Of the Epistles before us, Mr. Beet considers that that to the Philippians, evidently written from Rome, was the earliest, and consequently that the others must have been written from Rome also. Their genuineness, he thinks, may be accepted "without a shadow of a doubt," on the ground "of their universal and confident reception throughout the Roman Empire, by friends and enemies, in the latter part of the second century, of their deep and broad and minute agreement with the thought and phraseology of Paul, and of their matchless, independent worth"—the errors at Colossae and the Gnosticism attacked in the Epistle being no obstacle. Mr. Beet does not supply an exhaustive discussion of this subject, which could not be looked for in a work of this compass; but his treatment of it is able and fair-minded, and his conclusion will meet the approval of the majority of Biblical students in this country. It may be pointed out to him, however, that, though Cerinthus was a contemporary of the apostle John (in his old age), it would not follow that his influence was abroad so early as the time of Paul.

Geschichte des Neutestamentlichen Kanons. Von Theodor Zahn. Zweiter Band: Urkunden und Belege zum ersten und dritten Band. Erste Hälfte.—Zweite Hälfte; I. Abtheilung. (Leipzig: Deichert.) In these two volumes, or

rather parts of one volume, the student has placed before him a rich fund of materials for the history of the New Testament canon; the first treats of the most important lists of the New Testament writings and other kindred matters; the second deals with Marcion's gospel and "Apostolicum," Tatian, Aphraates in comparison with the Peshito, spurious letters of Paul (the Epistle to the Laodiceans, &c.), and ends with the commencement of a section on the Apocryphal Gospels. More than one hundred pages are devoted to the Muratorian Canon, which Prof. Zahn has made the subject of a more minute and elaborate criticism than any previous writer. He supplies both an emended Latin text and a re-translation into Greek; but some of his conjectures, especially his attempt to foist in 1 Peter, and at the same time get rid of Peter's Apocalypse, are of questionable value. It is improbable, he argues, that the writer should have omitted Peter; but the same remark applies to James, and was he likely, after having disposed of the Epistles, to bring in 1 Peter as the very last of the authentic books in connexion with the Apocalypse of John? The inclusion of the Revelation of Peter as the last of the New Testament books in the *Catalogus Claromontanus* shows how little this emendation is warranted. The conjecture (adapted from Tregelles) of *ἐνδὲ φίλων* after the mention of the Wisdom of Solomon, as the original which the writer erroneously translated *ab amicis*, as though he had read *ἐνδὲ φίλων*, is ingenious and plausible. As to the date and origin of the Canon, Prof. Zahn dissents from the usual judgment of critics. In the precision with which Pius is described as sitting on the cathedral chair of the church of the city of Rome, he sees rather evidence of a non-Roman, though still admitting a distinctly Western origin; and in the relation of the writer to Montanism a proof of a much later date than that generally assumed as implied in *superrime*, probably about 210. But perhaps Zahn's most important service to Biblical scholarship in the present instalment of his work is the attempted restoration of Marcion's text, so far as it varies from Tischendorf's *Editio VIII. critica major* (1869-1872). We cannot here go into details, but Prof. Zahn seems to have ground for his contention that previous restorers have erred from not giving Tertullian credit for being at least as good a Grecian as themselves: for example, in Luke xiv. 21, where Tertullian particularly emphasises *motus* as Marcion's reading for *ὀργισθῆναι*. His own restoration, with ample commentary supplying all the original authorities, will certainly be welcomed as an invaluable boon by Biblical students.

The Epistle to the Hebrews. With Notes. By C. J. Vaughan. (Macmillan.) The Epistle to the Hebrews has certainly received a great deal of attention of late, and it is indeed a remarkable coincidence that within the last seven years no less than four commentaries on this Epistle should have come from Cambridge, all by ex-fellows of the same college (Trinity) and former masters in the same school (Harrow). The Dean of Llandaff's little book, as he himself calls it, will not indeed compare in completeness any more than in bulk with Dr. Westcott's elaborate work published before his elevation to the episcopate; but it will not on that account be unwelcome to the student. For one thing, it contains no introduction, except so far as the short preface supplies the place of one. Here, indeed, Dr. Vaughan finds space to intimate his views on some of the leading questions proper to *Einführung*; and his remark on the impossibility of the Paul of the Romans and the Ephesians changing into the Paul of the Hebrews and then changing back again into the Paul of the Pastoral Epistles, makes an effective point. Dr. Vaughan does not pretend

to say who wrote the Hebrews; and, while admitting the suggestion of Apollos to be "a plausible guess," he considers the silence of antiquity to be unfavourable, if not fatal, to it. His notes on the text are particularly full on the phraseology of the Epistle, with ample illustrations from the Septuagint and the New Testament. In the *locus vexatus*, ix. 4, he adopts the explanation of *ἐξουσία* usual with orthodox commentators, to which, however, there appears the decisive objection that it leaves the enumeration of the contents of the holy place as incomplete as before, with the added difficulty that the writer knew better. Dr. Vaughan's work, which is the result of thirty years' practical experience in preparing students for ordination, may be confidently taken as well adapted to the requirements of the young candidate for orders.

NOTES AND NEWS.

HENRIK IBSEN will, in all probability, visit England within the next few days, attracted, it is said, by the glowing accounts which have reached him of the acting of his last work "Hedda Gabler" at the Vaudeville.

PROF. SAYCE—if it be not premature again to style him so—hopes to be back in England by about the beginning of June. After coming down the Nile in his newly-bought dahabiah *Istar*, he made a short archaeological excursion in the Delta, and proposed to leave Alexandria on May 20.

THE annual Wykehamist dinner—at which, as we stated last week, Mr. S. R. Gardiner is to take the chair—will be held on Wednesday, June 17, at the Criterion. Among the stewards are Prof. S. R. Driver, of Oxford; and Mr. G. E. Buckle, editor of the *Times*. Old Wykehamists will be interested to know that, besides Mr. Holgate's Register of Commoners from 1836 to 1890, a collection of "Notions" has just been brought out by Mr. R. G. K. Wrench, who has spared no pains in tracing the etymology and dialectal usage of the words. Both of these books may be obtained from Mr. J. Wells, bookseller to Winchester College.

MRS. ALEXANDER IRELAND'S Memoir of Mrs. Carlyle is delayed, like so many other books of popular interest, until the American Copyright Act comes into force, in July.

MESSRS. MACMILLAN & Co. will shortly publish *Studies of the Gods in Greece at Certain Sanctuaries Recently Excavated*, by Mr. Louis Dyer, formerly assistant-professor in Harvard University. The book represents a course of lectures delivered by Mr. Dyer at the Lowell Institute, Boston, U.S.A.; but the material has undergone very thorough revision, and notes and appendixes have been added on special points. After an introductory chapter on Greek religion in general, Mr. Dyer deals successively with Demeter at Eleusis and Cnidus, Dionysus in Thrace and old Attica, Dionysus at Athens, The Gods at Eleusis, Aesculapius at Epidaurus and Athens, Aphrodite at Paphos, and Apollo at Delos.

MR. JOHN MURRAY announces a new book of travels by Mrs. Bishop (Miss Isabella Bird), entitled *Winter's Journeys in Persia and Kurdistan*, with a Summer in the Upper Karun Regions, and a Visit to the Rayah Nestorians. It will be illustrated with a map.

MESSRS. WILLIAM BLACKWOOD & SONS have in the press *The Earlier Religion of Israel*, being the Baird Lecture for 1888-89, by Dr. James Robertson, professor of oriental languages in the university of Glasgow.

MESSRS. JAMES R. OSGOOD, McILVAINE & Co., of Albemarle-street, will be the English publishers of Mr. George Kennan's articles, reprinted from the *Century* with the original

illustrations, on "Siberia and the Russian Exile System."

THERE has been more delay than was anticipated in the preparation of the *Guide Book to Books*, owing to the peculiar difficulties of compiling a work of this nature; but it is now ready, and will be published by Mr. Henry Frowde in the course of two or three weeks. The number of books arranged alphabetically by subjects is about six thousand, which have been carefully selected by more than a hundred specialists, under the editorship of Mr. E. B. Sargant and Mr. Bernhard Whishaw. In addition to the titles of books, there are also given the prices, and in many cases brief descriptive notes.

MESSRS. LONGMANS have in the press a History of England for Pupil-Teachers, by Mr. Osmund Airy, inspector of schools for Birmingham, and editor of the Lauderdale papers for the Camden Society.

The Mission of Christianity: a Modern Religious Enquiry, by Mr. Frank Ballard, is announced for immediate publication by Mr. Elliot Stock.

MR. HEINEMANN will publish next week a popular edition of Mr. Sidney Whitman's *Imperial Germany*, which brought the author complimentary letters not only from such authorities as Prof. Goldwin-Smith and Prof. Blackie, but also from Prince Bismarck and Count Moltke. The new edition is dedicated to Prince Bismarck.

MR. RICHARD JACKSON, of Leeds, will publish early in June an Historical Guide to Yorkshire, by Mr. William Wheeler, with more than 200 illustrations from the pencil of Mr. J. Ayton Symington. There will also be a large-paper edition, bound in two volumes.

THE next volume of the Camelot series will be *Shorter Stories of Dickens*, with an introduction by Mr. Frank T. Marzials.

MR. WILLIAM HEINEMANN is to-day publishing a shilling edition of Mr. Buchanan's *The Moment After*, which relates the curious experiences of Maurizio Modena in the few moments during which he was suspended upon the gallows, before the rope broke and saved his life.

ANOTHER copy of the original edition of Browning's *Pauline* has just turned up, making eight copies now known to be extant. It is an uncut copy, some of the leaves being unopened, and is in the possession of Miss Millard of Teddington.

DR. A. C. MACKENZIE, principal of the Royal Academy of Music, will, on Thursday next, May 21, begin a course of four lectures at the Royal Institution on "The Orchestra considered in connexion with the Development of the Overture"; and Mr. A. H. Church, professor of chemistry in the Royal Academy of Arts, will, on Saturday, May 30, begin a course of three lectures on "The Scientific Study of Decorative Colour."

THE first annual meeting of the trustees after the passing of the recent Shakspeare Trust Act was held at the Town Hall, Stratford-upon-Avon, on May 5, Mr. C. E. Flower in the chair. The accounts for the year ending March 31 last showed that the receipts for the admission of visitors to the birthplace, the museum, and New Place reached the total of £857 15s., while the income from funded property amounted to £71 0s. 6d., which, with a £1 rent and £3 3s. fees for photographing the birthplace, brought the entire income to £932 18s. 6d. The annual expenditure for salaries, wages, and pension was £366, and the rates, taxes, repairs, fuel and other expenses being added, the whole disbursements came to £596 17s. 9d., leaving a very satisfactory balance. The number of people

who visited the birthplace during the year is estimated to be 22,017, which, as compared with the year ending in 1881, when the total was only 12,300, shows an ever-increasing interest in the memory of the poet.

WE are glad to see that Mr. Elliot Stock has received sufficient encouragement to issue a fourth volume of *Book-Prices Current*, which, as readers of the ACADEMY know, has now found a French imitator in M. Gausseron. It is needless to point out how the value of this work, to both librarians and bibliophiles, is greatly enhanced by being extended over a series. It happens that 1890 was not conspicuous for the quality of the collections dispersed. Undoubtedly the most notable sale was that of "a portion of the library" of Mr. Thomas Gaisford, whose 2218 books realised £9183. This high average of nearly four guineas each was caused by the presence of the four folios and several of the quartos of Shakspeare, and some of the rarest of Blake's illustrations. In quantity, the first place must be given to the library of the late Sir Edward Sullivan, some time Lord Chancellor of Ireland, whose 6919 books sold at an average of £1 11s. 7d. But, as the editor, wearily remarks—

"the majority of sales were made up of lots which have been noted over and over again—which never were of great interest at any time, nor hardly worthy of fresh consideration now."

We must not conclude this brief notice without testifying, from not a little experience, to the extreme accuracy with which the index is compiled. We have never found it at fault.

WE are permitted to quote the quatrain which the Poet Laureate has prefixed to the edition of the fourteenth-century poem, *Pearl*, which has just been brought out by Mr. I. Gollancz:

"We lost you—for how long a time—
True Pearl of our poetic prime!
We found you, and you gleam re-set
In Britain's lyric coronet."

THE Rev. Dr. Kinns has written to us protesting against the general tone of the review of his book, *Graven in the Rock*, which appeared in the ACADEMY of last week. In particular, he states that he received the diploma of Ph.D. some thirty years ago from the University of Jena.

FORTHCOMING MAGAZINES.

THE *National Review*, published since its foundation in 1883 by Messrs. W. H. Allen & Co., has been transferred to Mr. Edward Arnold, who will issue the June number at 18, Warwick-square, Paternoster-row.

THE June number of *Harper's Magazine*—the first to be published by Messrs. James R. Osgood, McIlvaine & Co.—will contain the opening chapters of Mr. du Maurier's first essay in fiction, "Peter Ibbotson," illustrated by the author; and also the first of a series of historical and descriptive articles on London by Mr. Walter Besant.

PAPERS of note in the June *Century* will be "Play and Work in the Alps," by Mr. and Mrs. Pennell, with illustrations by the former; and the continuation of "At the Court of the Czar," by Mr. George Dallas, of whom a portrait will appear as frontispiece.

THE novel to be published in the June number of *Lippincott's Magazine* will be "Gold of Praise," by Mr. George Parsons Lathrop.

A NEW serial story by Mr. J. E. Muddock, entitled "For Sweet Love's Sake," will be begun in *Tinsley's Magazine* for June; Mr. Hugh Clements will resume his "Weather Forecasts," in a series of six articles; and a

new feature will be Monthly Notes on Indoor and Outdoor Games.

MESSRS. GEORGE PHILIP & SON will issue, on June 15, the first number of the *Blue Peter*, a new illustrated monthly journal, devoted to ocean travel, price 3d.

THE following, which we quote from the *New York Critic* of May 2, is instructive as showing the character which the publication of "literature" in newspapers is assuming in the United States. Not one of the authors whose names are thus advertised can strictly be considered an American:

"To-morrow's publications in the newspapers of the McClure syndicate will include a paper by Prof. James Bryce on the international questions involved in the New Orleans lynching, Lord Wolsley's article on Gen. Sherman, and essays or fiction by Mr. Gladstone, Sir Morell Mackenzie, Miss Ellen Terry, Messrs. Stevenson, Haggard, Conan Doyle, and Marion Crawford."

UNIVERSITY JOTTINGS.

MR. JOHN WILLIS CLARK, formerly fellow of Trinity, has been elected to succeed the late Dr. Luard in the office of registry at Cambridge, by a majority of 362 votes to 184 given to his competitor, Mr. C. E. Grant. Mr. Clark is best known as the editor—or rather joint-author—of Willis's *Architectural History of the University and Colleges of Cambridge*; and has at present in the press the Book of Observances of the Augustinian House of Barnwell, from MS. Harl. 3601 in the British Museum. The success of the long series of Greek plays at Cambridge has also been largely due to his energetic services as secretary to the committee from the first.

THE hebdomadal council at Oxford has appointed a committee to consider the drafting of a statute for the creation of a new degree of Doctor of Letters; and it is further suggested that the committee should take into consideration the institution of a parallel degree in science.

ANOTHER proposal that is gaining support at Oxford is the establishment of a new final honour school in English language and literature.

THE University of Cambridge has conferred the honorary degree of LL.D. upon Dr. W. C. Doane, Bishop of Albany, New York; and also the honorary degree of M.A. upon Mr. J. Y. Buchanan, university lecturer in geography.

THE office of high steward at Cambridge is rendered vacant by the death of the Earl of Powis, who was elected in 1863, in succession to Lord Lyndhurst. The election, which is vested in the members of the Senate, has been fixed for Tuesday, May 26. The names of the Earl of Derby and Lord Rayleigh are mentioned as probable candidates.

PROF. CHEYNE—whose recent indisposition was caused by nothing worse than an attack of influenza—was to deliver on May 13 and May 20 his two postponed public lectures upon "Critical Problems of the Second Part of Isaiah."

DR. CHARLES WALDSTEIN will deliver a public lecture at Cambridge, on Friday, May 29, upon "The newly discovered Tomb of Aristotle (?)," illustrated with lantern slides from photographs.

UNDER the auspices of the teachers' training syndicate, a course of six lectures is now being delivered at Cambridge by Prof. S. S. Laurie, of Edinburgh, on "Moral Education and Discipline." Single lectures will be given, later in the term, by Mr. J. G. Fitch, on "The Life and Work of Lancaster"; and by Mr. H. J. Mackinder, on "The Teaching of Geography."

THE Clerk Maxwell Scholarship, at Cambridge, for research in experimental physics, has been awarded to Mr. W. Cassie, of Trinity.

THE delegates of the common university fund at Oxford have nominated Mr. E. A. Minchin, of Keble, to be the first holder of the scholarship attached to the occupancy of a table at Dorn's marine laboratory at Naples.

THE candidates selected for membership of the Royal Society include an unusual number of men holding academic offices—the professor of botany at Glasgow, the professor of anatomy at Dublin, the lecturers in physics and in geology at Cambridge, the lecturer in physics and geology at Keble College, the mathematical lecturer at Queen's College, Oxford, and the assistant professor in physiology at University College, London.

MANSFIELD COLLEGE, Oxford, has received a legacy of £3000, under the will of the late P. S. Macliver, of Bristol. The preacher in the chapel next Sunday will be Prof. Flint, of Edinburgh.

At the meeting of the Convocation of the University of London on Tuesday last, May 12, the draft supplemental charter—proposed with the aim of reconciling the existing system of examinations with the views of those who desire a teaching university in London—was rejected by the decisive majority of 461 votes to 197. The speakers adverse to the scheme included Mr. Boupas, Mr. R. H. Hutton, and Mrs. Scharlieb; those on the other side were Lord Herschell, Sir Richard Quain, and Dr. Pye Smith.

ORIGINAL VERSE.

EXPERIENCE.

In the sunny years of youth,
When we battled for the truth,
Daring danger, toil, and wrath,
Hope was flashing o'er our path.

When our eager youth at last
Into manhood's prime had past,
Still we dreamed that we were strong
To loose the world from sin and wrong.

Now the evening shadows play
On our strength's declining day;
Hope is dead, and well know we,
What has been must ever be.

A. H. S.

OBITUARY.

THOMAS HARE.

ON May 6 Thomas Hare passed away at the age of eighty-five.

When only twenty-one Mr. Hare wrote a pamphlet in support of the relaxation of the navigation laws, which, having been seen in MS. by Mr. Huskisson, was published by that statesman's desire; and in this he may be said to have struck one of the keynotes of his life, the opposition to all regulations interfering with the free activity of the individual, which was afterwards to be combined with the advocacy of all organisations that might give greater scope for such activity. He was first, however, to become known at the bar, to which he was called in 1833 by the Society of the Inner Temple, of which he was ultimately elected a bencher. Here, as reporter in the court successively presided over by Vice-Chancellors Wigram, Turner and Wood, he issued eleven volumes which hold their place among the most valued authorities on chancery law, both for the deserved reputation of those judges and for the convincing lucidity with which Mr. Hare condensed their oral judgments. In 1853, on the establishment of the Charity Commission, Mr. Hare left the

bar with the post of an inspector of charities, to which that of assistant commissioner was added much later. As an inspector in the early days of the Commission, he had to inquire into the charities throughout a large part of England, more especially into those of London, his reports on which were long afterwards printed in a collected form as vol. iii. of the Report of the Royal City Charities Commission, 1880.

In this occupation Mr. Hare's thoughts were led to one of the two subjects which engrossed his interest for more than thirty years. The one now referred to is the great results which might be effected for the good of the community, and especially of the working classes both in town and country, by a proper use of charity property, combined with improved local government, and, in the case of great cities, with a systematic organisation of their material structure. His ideas on this subject were the outcome of deep sympathy with the less fortunate, and of a vivid imagination delighting in pictures of general advancement. What London might become if such a character was common may be seen in *Usque ad Coelum*, a little tract full of great thoughts which he published in 1862, and which made an impression on some of the most earnest minds in the generation then rising. And there is no doubt that Mr. Hare is one of the chief of those to whom the great improvement is due which, within the last forty years, has taken place in the application of public endowments to the needs of modern England.

The other subject by which Mr. Hare is and will be most widely known is that of proportional representation. The limited and cumulative votes had been already proposed as means of avoiding the disfranchisement of local minorities, when Mr. Hare, in a pamphlet entitled *The Machinery of Representation* (1857), proposed the system of the quotient, or of the single transferable vote, not only as a more effectual means of accomplishing that object, but especially with the view of setting the voter free from all avoidable restraint in the choice of a candidate for whom to vote, and thus drawing out in the fullest manner whatever capacity for political thought might exist in the electorate. Indeed, so much did the subject present itself to him in this light that latterly he preferred the name "personal representation," as better indicating the close tie which he desired to see established between the thinking voter and the member in whom that voter should feel that he had obtained his truest political expression. The pamphlet was enlarged into the treatise on *The Election of Representatives, Parliamentary and Municipal*, commonly known as "Hare on Representation," which reached its fourth edition in 1873.

It is well known how warmly J. S. Mill hailed the invention of the single transferable vote, together with the ingenious machinery which Mr. Hare joined with it from the first, in order to reconcile the extension of the voter's choice to all candidates throughout the country with the continued existence of constituencies distinct for certain purposes. We may mention that, besides his published commendations, Mr. Mill said in a private letter that Mr. Hare had "raised up the cloud of gloom and uncertainty which hung over the futurity of representative government, and therefore of civilisation." At this time there was in the air, among thinkers of many countries, a revolt against hampering the majority in a nation with the condition of winning only through a sufficient number of local majorities, a condition which is often destructive of its very victory. In 1835, though the fact was unknown to Mr. Hare—and indeed in England—Mr. Andrae, the minister of Denmark, had also invented the system of the quotient, and procured its application, in the election of the

upper house, to single constituencies returning several members each. The enthusiasm and authority of Mr. Hare and Mr. Mill came as a great reinforcement to this movement. Students of scientific politics recognised the value of the single transferable vote in emancipating the elector far more completely than the limited or cumulative vote, at the same time that it protects him from the waste of voting power which often accompanies the latter. But the applications of political thought, having to follow the pace of the many and not that of the few, are usually a little behindhand; and the immediate result of the attention drawn to proportional representation was the adoption of either the limited or the cumulative vote in many countries for various purposes, notably of the latter in the State of Illinois for the election of the house of representatives, in the State of Pennsylvania for that of municipal bodies, and in England for that of School Boards, all which instances date from 1870. Now at last the system of the quotient has distinctly gained the upper hand in the schemes which are proposed for adoption, not indeed in the full measure of Mr. Hare's ideas, but chiefly in that of the *liste libre*, in which the transfer of the votes not required for the election of the first-named candidates is regulated by a grouping of the candidates, which however the electors are free to form for themselves. It seems probable that the impending revision of the Belgian constitution will find room for this system in some part of the national institutions.

Concurrently with the performance of his official duties, from which he retired a few years since, Mr. Hare was actively engaged in furthering his ideas, both philanthropic and on the subject of representation, and he was a familiar figure at gatherings with which those objects could be connected. In Transactions, especially those of the National Association for the Promotion of Social Science, and in pamphlets he contributed largely to the minor literature of his favourite subjects. Everywhere his marked ability and originality, his modest and winning manner, and, latterly, his venerable appearance, surrounded him with respect and affection. And his memory will live as that of a man who strove, and not without success, to leave the world considerably better than he found it.

J. WESTLAKE.

SOPHIA POOLE.

SOPHIA POOLE, who died last Wednesday week (May 6) at the great age of eighty-seven, deserves a record as a wise and unselfish helper of three generations of scholars.

She was the constant companion of her brother, Edward William Lane, the great orientalist, for forty years, until his death in 1876, and has since been the devoted friend of his widow. Her elder son, Edward Stanley Poole, to whose early training by his mother his after success was largely due, entered the Civil Service, and proved singularly efficient as chief clerk of the Department of Science and Art. Though his career was closed by his early death in 1867, he left evidence of his knowledge of Arabic art, while his surviving colleagues do not forget his justice and kindness. The younger son, Reginald Stuart Poole, Keeper of Coins in the British Museum, is equally indebted to his mother for his training; and his archaeological work is a proof of a directing influence to which he owed the power of heavy and sustained labour. On Stanley Poole's early death, his two sons passed under their grandmother's care. Both have distinguished themselves: the elder, Stanley Lane-Poole, by a brilliant literary career, springing from oriental studies, but carried on in wider fields; the younger, Reginald Lane-Poole, of

Balliol College, mainly by mediæval learning of the highest order. In all these cases Lane's example must not be forgotten; but his leisure was small, and the larger share of early instruction came from his sister. While Mrs. Poole powerfully aided her near kin, she also formed and maintained friendships never broken but by death. Her literary work was not voluminous; but *The Englishwoman in Egypt* has survived as a true and simple picture of the women of the East as she saw them during her stay at Cairo from 1842 to 1849. To her family she has left the example of firm resolution, entire unselfishness, the love of learning, and a lifelong piety as simple as it was strong.

MAGAZINES AND REVIEWS.

THE *Antiquary* has much improved of late, and the present number is a particularly good one. Mr. G. W. Thorpe's article, entitled "New Light on the Execution of Charles I.," is interesting as showing what a mine of historical information yet lies among the Civil War tracts in our great libraries. Mr. John Wright continues his "Out in the Forty-Five." There is, perhaps, little that is new therein; but it brings before the reader those old days when for the last time the dream of divine right was a force in politics in a far more life-like manner than the popular books from which we are wont to gather what we know of the last rising in favour of the Stuart line. Miss Margaret Stokes contributes an excellent paper on the impression of the hand of Saint Columbanus reported to exist at Bobbio in the Apennines. The article contains much illustrative matter which will be of service to folklore students. Impressions of the hands and feet of persons reputed to have been holy exist nearly all over the world. There is an anonymous article on George Cruikshank which will repay the reader, but seems rather out of place in a journal devoted to archaeology. Mr. R. le Schœn contributes a useful paper on the Brighton Museum.

THE SHAKSPEARE QUARTO FACSIMILE SERIES.

THE completion of this important series is certainly worthy of being recorded. Among recent aids to the Shakspeare student prominent rank has been assigned to it by Prof. Dowden. The merit of projecting the series is due to Dr. Furnivall, under whose general superintendence it has been carried on to completion. Eleven years have elapsed since the issue of the facsimiles of the 1603 and 1604 Quartos of *Hamlet*, both of which were edited by Dr. Furnivall himself. And now the whole series, numbering forty-three issues, has been placed in the hands of the student at the price of some thirteen pounds, a price very moderate indeed, when compared with the costly productions of Mr. Ashbee, and rendered possible only by the mechanical process of photo-lithography.

The concluding volume, which Mr. Quaritch is just issuing to subscribers, is *The True Tragedy*, photographed by Mr. C. Praetorius from the unique copy of the 1595 edition in the Bodleian Library. It is preceded by an Introduction written by Mr. T. Tyler. The chief interest of *The True Tragedy* results from its being the basis of the Third Part of Shakspeare's "Henry VI." Miss Jane Lee, in her well-known paper in the New Shakspeare Society's *Transactions* (1875-76), of which Mr. Tyler gives an abridgment, argued that Shakspeare took no part in the composition of *The True Tragedy*. Mr. Tyler, on the other hand, maintains that, though Shakspeare was not one of the original authors, the play has come to us in a form more

or less modified by him. According to Mr. Tyler, the line "Oh Tygers hart wrapt in a womans hide," which Greene, in the *Groatsworth of Wit*, parodied by the change of "womans" into "Players," was written by Shakspeare, who, acting under instructions, had undertaken to make certain changes and modifications in the play—a proceeding which drew upon him the wrath of Greene and caused the latter to describe Shakspeare as a "Johannes-fac-totum," or "Jack-of-all-trades." From a comparison of Greene's *Groatsworth* with Chettle's *Kind Harts Dreame*, Mr. Tyler makes some new suggestions with respect to the relations between Shakspeare and Marlowe.

That there should be some inequalities in the execution both of the texts and the introductions was inevitable; but, nevertheless, the series reflects much credit on Dr. Furnivall, on Messrs. Griggs and Praetorius, the photolithographers, and on Mr. Quaritch, who has furnished the funds which have rendered the completion of the undertaking possible.

CORRESPONDENCE.

THE LITHUANIAN BIBLE OF 1660.

Oxford: May 7, 1891.

That the so-called Chylinsky Bible contained also the Gospels is evident from Adelung's *Mithridates* (II., p. 709), where he, or the late Prof. Vater, says that the Lord's Prayer which they give from an old altar at Vilno did not contain the doxology, which is therefore supplied by them from the 1660 London Bible; it is as follows: *Nes tawo ira Karalijste, ir Galijbe, ir Sslowe, ant Amsjin. Amen.*

However, the date of 1660 seems more than doubtful. In the first instance, W. Crowe in his *Elenchus Scriptorum*, &c. (1672, p. 22), does not mention any date. He says: "Bibl. S. Lingua Lithuanica a Samuele Boguslao Chylinski, Lithuanico, trad. nescio an edita." On the margin, "Obiit hic in Anglia, 1668." On the other hand, the following entries in Kennet's *Register and Chronicle Ecclesiastical and Civil* (vol. i., London, 1727)—pointed out to me by my friends Mr. F. Madan and the Rev. W. D. Macray—do not admit 1660 as the date of the issue of Chylinski's translation. We read on folio 697 as follows:

"Whitehall, May 21, 1662. In Council, upon hearing the Business between the Delegate of Lithuania and Chibnisky, who hath begun a Translation of the Bible in the Lithuanian language: It was ordered that Chibnisky should speedily send over a copy of all that he hath printed (being to the End of the *Psalms*) and all that part he hath written fair, to be viewed and corrected by the Churches, and so be returned to be printed. Also that the said Chibnisky should speedily transcribe the rest, and so from Time to Time send it over to the Churches to be corrected by them, and to do it within five or six Months at the farthest, and to have four Pounds the Month for his Entertainment in the mean Time: and Mr. Fenn the Treasurer of Lithuania, to pay six Pounds to Mr. Nathaniel Adams, at the desire of the Delegate."

Again, on p. 707 we find the following:

"Friday, June 6, *Whitehall*, Council-Board. Upon the several Petitions of Samuel Rogislaus Chylinsky, the Translator of the Lithuanian Bible, and Evan Tyler Printer of the same: Ordered, that the Treasurers appointed for the Lithuanian Collection to pay to Evan Tyler, Printer of the said Bible, 76*l.* 1*s.* 4*d.*"

Consequently, the Lithuanian Bible was printed at Edinburgh, where Tyler worked and was in 1662 not printed further than the *Psalms*.

Dr. O. von Gebhardt, of the Royal Berlin Library, drew my attention to Wislocki's *Przewodnik Bibliograficzny* (1886–8, p. 159), where it is stated that the so-called Chylinski Bible exists in the library of the Marienstifts-Gymnasium at Stettin. The book has no title-page; on the fly-leaf, however, the following MS. note is to be found written by a former owner, Andreas Müller:

"Biblia Lithuanica | Copta quidem . . . | Londini 166. | sed | preveniente morte Autoris Samuel |

Bohuslai Chylinski a. 1688 [1668] non absoluta . . . Andreae Mulleri Greiffenaghii 1684."

This Bible consists of 383 ff. (but ff. 337–368 are missing), and extends to Job, chap. 6. In his *Oratio Dominica*, edited posthumously by Sebastian Gottfried Stark in 1703 (Berlin, 4to, p. 56), Müller has also the reference on the margin as follows: "Auctor. Wilk. n. 35. Conf. Bibl. Lituan. Lond. 1660," evidently copied from Ludeken, who seems to be the originator of the date 1660, which was probably copied by Le Long, and thus became a *fait accompli*.

Therefore, the Bible which Jöcher saw at Vilno and that of Stettin are both incomplete, and have not the New Testament. It is to be hoped that the copy which Adelung-Vater had at their disposal will turn up at Halle in the Waisenhaus Library. The compiler of the *Oratio Dominica*, B. Motte (London, 1700) (ACADEMY, No. 989, p. 370), evidently never saw the Lithuanian Bible of London, 1660, which does not exist, and took his date only from hearsay, for the prospectus of the book appeared in 1659. An autograph letter of Chylinsky written in Latin, dated February 7, 1659, addressed to Prof. Henry Wilkinson at the University of Oxford, in which he asks for some help, exists in MS. Tanner, 51 (fol. 40) in the Bodleian Library.

From this Tanner MS. I hope soon to give further information respecting the attempted completion of the work.

A. NEUBAUER.

P.S.—Mr. Naaké's interesting letter confirms my statement, but Adelung's doxology still remains a riddle.

SIR THOMAS MORE'S TREATMENT OF HERETICS.

London: May 11, 1891.

My best acknowledgments are due to Mr. James Gairdner for the very prompt tender of his assistance to get Sir Thomas More and myself

"Powers
Eternal; such names mingled!"

out of our difficulties.

I fear that Mr. Gairdner's gamekeeper would be taken seriously, as I take More, and perhaps be as little surprised as offended—considering what comparative sentences for interference with game and mankind—the feathered creation and the two-legged animals differentiated by absence of feathers—he may have greeted approvingly from the bench at quarter sessions.

Shakspeare in his play of "Henry VIII." shows More as Chancellor quite ready to fall in with a plot for the committal of Cranmer to the Tower and its natural consequences. The original second title of the play was "All is true"; and having found it in other respects the only trustworthy history of the reign, I cannot consent to do injustice to the poet out of tenderness even to a character, in many respects so admirable, as More. How far More, who admittedly "hated heresy with all his soul," was likely in doing "his utmost to suppress it" to restrict himself "to means strictly humane" has to be considered; and it is here I find myself bewildered, in conjunction with words of his own, to this effect:

"As soon as Tewkesbury heard that, he went from it again by-and-by, and that so far that finally he would not agree that before the day of doom there were either any saint in heaven or soul in purgatory or in hell either. Nor the right faith in the Sacrament would he not confess in nowise. For which things, and divers other horrible heresies, he was delivered at last unto secular hands and burned; as there was never wretch, I ween, better worthy."—*Sir Thomas More's Works*, p. 348, ed. 1557.

W. WATKISS LLOYD.

THE ANNEXED BOOK OF COMMON PRAYER.

Brighton: May 6, 1891.

In the ACADEMY of March 7 (p. 231) there is a paragraph on the publication, by the Queen's printers, of a facsimile of the original or "Annexed Book" of Common Prayer by a photographic process. As I am the only living man that can speak of this interesting book from nearly forty years intimate acquaintance with it, I trust you will permit me to correct two or three errors and misstatements that appear in your account and that have been perpetuated in other papers likely to mislead the public.

I deny that it has ever been lost or missing in the strict sense of the words. We have it recorded as perfectly safe in the early part of this century, as proved by a starred note in Ruffhead's folio edition of the Statutes (published, I think, in the year 1819 or 1820), occurring at the bottom of the page on which the Act of Uniformity (13 and 14 Car. II.) is set out. I saw it for the first time in 1841; it was shown to me by my superior officer, and he spoke of it as being quite familiar to him for some years previously. From 1844 to 1849 I saw it on at least eight or ten occasions. After that it was missing for nearly two years (and was eventually discovered and restored to light by myself), from being dropped over and wedged at the back of a high wooden press in the Jewel Tower about the year 1851 or 1852. I was about to restore it and join it to the Act as it originally had been; but I was directed to hand it to the Clerk of the Parliaments, who, after retaining it for some years, returned it to me in 1863. In 1864 the Acts were moved from the Jewel Tower to the Victoria Tower, under my personal direction and superintendence, when I again tied the Book and Act together and placed them in numerical order; No. 4, I believe, among the Acts of 13 and 14 Car. II. This arrangement only lasted a few months, when the Clerk of the Parliaments—in direct opposition to the Chief Clerk's strongly expressed opinion and wishes—ordered it to be handed to the Librarian, and in his custody it still remains.

In expressing my opinion I am sure it will be supported by all of those most competent to judge rightly; it is that the "Annexed Book" and the Act should at once be restored to their original positions, in which no doubt they were when the Act received the Royal Assent, and thus in future all chance of it being lost a second time will be avoided.

A RETIRED CIVIL SERVANT.

Our correspondent's name, which he has privately communicated to us, is sufficient evidence of his good faith. We may, however, remark that the statement in the ACADEMY was carefully worded: "it was at one time thought that the Book was lost." In the Preface of the publishers to the facsimile it is stated that

"The Annexed Book had been supposed to have been lost since the year 1819; it was, however, discovered in 1867. It had been preserved among the originals of the Acts of Parliament, which included the Act of Uniformity itself, but had been detached from the Act. When the Book was found it was placed, and has since remained, in the custody of the Librarian of the House of Lords."

In a preliminary Prospectus, issued by the publishers, the vicissitudes of the Book are thus given, "chiefly taken from James Parker's *Introduction to the Revisions of the Book of Common Prayer*."

"Some time after the year 1819 it appears to have been detached from the Act by a clergyman, who, for greater convenience of collation or perusal, cut the strings which bound the two together. For many years afterwards it seems to have been kept in the same press as the Act of Uniformity, but in

a different compartment of the press. In about the year 1840 or 1841, a gentleman applied to inspect the book, with the object of ascertaining the exact terms of the Fifth of November Service; and on search being made by the official having charge of Acts under the Clerk of the Parliaments, it was reported that the Book was not to be found. In 1867 the late Dean Stanley was anxious to ascertain for himself the truth of the statement which he had heard for many years, viz., that the book was lost, and that, therefore, although the Sealed Books which were copied from it had sufficient legal authority given to them by the Act, yet the authentic original was no longer accessible. It appeared, however, that the Book had remained in the Jewel Tower until 1864, when, during the removal of the Acts, it was, with other volumes of MSS., minutes, &c., handed over to the Chief Clerk, who locked it up in a closet in his room in the Palace of Westminster, and since that time it has been most jealously guarded."

ED. ACADEMY.

DARWIN'S WORKS IN AMERICA.

New York: May 1, 1891.

In the ACADEMY of April 4, under the heading of "Current Literature," we notice the following sentence: "It was otherwise with Darwin, not one of whose works, we believe, has ever been reprinted in America." You will pardon us if we express some surprise at this statement, inasmuch as we have been the authorised American publishers of Darwin's works since 1860. We have published, we believe, all his works; and we are happy to say that from every point of view the results have been gratifying to the author and to ourselves.

D. APPLETON & Co.

We are surprised to find the warmth of feeling that has been aroused in the United States by our innocent expression of what seems to be an erroneous belief. Even the usually courteous *Nation* (April 23) brands it as "the most amazing piece of literary *news* [sic] that we remember since"—never mind what.

The simple truth is we wrote from recollection of a letter (in the *Times*) affirming that Darwin's *Origin of Species* had never been reprinted in the United States, and that all the American editions of that work had been issued from English plates. So far as we know, that allegation was not traversed at the time; nor has any of our censors expressly denied it now. Its truth would be consistent with what Messrs. Appleton write. But we are quite willing to admit that we were wrong, and more particularly wrong in extending our belief (without any justification) to all of Darwin's works. Nothing was further from our intention than to cast any imputation upon Darwin's authorised American publishers; nor can we yet see how our words (quoted above) are capable of conveying any such imputation.

On turning to the article "Darwinism" in the *Encyclopædia Americana* (vol. ii., no date, but copyrighted in 1884) we find it stated that "numerous American editions [of *The Origin of Species*] had appeared before 1870"; while the references in that article are always made to "Am. ed.," which we assume to be that of Messrs. Appleton. Unfortunately, we are unable to compare the pages cited with the earlier English editions; they do not agree with the sixth and final edition (1872). In his Preface to that edition Darwin wrote: "The second American edition was from the English second, with a few of the additions given in the third." It would seem, therefore, that this, in part at least, must have been set up afresh in the United States.

ED. ACADEMY.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, May 17, 7.30 p.m. Ethical: "Liberty and Legislation," by Mr. B. Bosanquet.
TUESDAY, May 19, 3 p.m. Royal Institution: "Four Periods of Stage History, I., Betterton," by Mr. W. Archer.
WEDNESDAY, May 20, 8 p.m. Microscopical: "Illuminating Apparatus," by Mr. E. M. Nelson; "A New Cysticercus and the Taenia produced from it," by Mr. T. B. Rossiter.
THURSDAY, May 21, 3 p.m. Royal Institution: "The Orchestra considered in connexion with the Development of the Overture," I., by Dr. A. C. Mackenzie.
8 p.m. Chemical.
8 p.m. Electrical Engineers.
FRIDAY, May 22, 4 p.m. Botanic: "The Story of Plant-Life on the Globe," II., by Mr. W. Carruthers.
9 p.m. Royal Institution: "The Molecular Process in Magnetic Induction," by Prof. J. A. Ewing.
SATURDAY, May 23, 8 p.m. Royal Institution: "The Artificial Production of Cold," III., by Mr. H. G. Harris.
3.45 p.m. Botanic: Fortnightly General Meeting.

SCIENCE.

The Nemean Odes of Pindar. With Introduction and Commentary by J. B. Bury. (Macmillan.)

It is a little surprising to hear, on unimpeachable authority, that there has been only one complete English commentary—that of Dr. Fennell—on Pindar since Donaldson's edition. Mr. Bury, intending apparently (see Pref., p. vi.) a complete edition, has begun upon the comparatively unfamiliar Nemean; thence he intends to pass on to the Isthmians, and finally, if life and opportunity allow, to revert to the Olympian and Pythian Odes. In this great task—for the greatness of a task lies in its difficulty rather than in its length—he has "great allies": to wit, a strong enthusiasm for his original, considerable ingenuity in emendation, and a remarkably vigorous and poetical style in translation. Enthusiasm, ingenuity, and style—when combined with a considerable reputation for scholarship—form a good outfit, even if some of the defects of these high qualities are present. To us Mr. Bury appears at times too dogmatic: somewhat onesided in his estimate of Pindar's genius as exclusively bright, exultant, ever youthful; somewhat too much inclined to invent new horizons for words, to find clues and cues almost such as Mr. Donnelly might think into Shakspeare, to translate every other paragraph for the joy of being able to do it well. None the less, he has written a most enjoyable and interesting commentary, and nearly succeeds in giving to the Nemean Odes the sort of glory which common opinion has denied to them, in comparison with the Olympians and the Pythians.

Of the first point—Mr. Bury's estimate of the gladness of Pindar's genius—the following extract, full of florid eloquence, from the Introduction (pp. xxxi.-ii.), may serve as an illustration:—

"Pindar might be described as the poet of the 'pride of life.' He consorted continually with the great of the earth, he moved among the strong and the beautiful, where none was 'sick or sorry,' he derived his inspiration from success, being himself too intellectually successful in realising his desire of perfection. Kingdom and victory, nobility and wealth, strength and comely limbs, ἀγλαία and εὐφροσύνη, inherit his palaces of music. The impression left on the mind, after reading the Odes of Victory, is that 'Lo, the kings of the earth are gathered and gone by together.' . . . A divinity crowned with flowers is a happy image for the spirit which presided over 'the delightful things in Hellas,' and illuminated Pindar's imagina-

tion. By the shores of the midland sea, not yet 'dolorous,' were raised, under a really benignant breath, palaces of music, shining afar, and statues of ivory and gold. Haggard forlorn faces, wizened forms did not haunt the soul, nor were there any yearnings to heavenward, Grace, which maketh the ways of men soft, being arbitress then with undivided right, and 'crowned with flowers' in those bright pagan borders. The spirit of man, bland but without effeminacy, dwelling, as it were, in a strong and beautiful body, had no thought of the faintness of old age, no foreboding of a day when it should leave the broken shell, naked, stark, pallid—as the Roman Emperor conceived the soul sundered from the body—and be swept along dreary ways into wild places and 'devious coverts of dismay.' . . . Pindar may well interest us as the most characteristic poet of that fortunate spirit."

This is not, we venture to say, the view of Pindar that any one would take from reading him, who was not strongly predisposed to take it. There is, of course, "pride of life," there are "kings of the earth," in abundance, in Pindar: but no sadness? no sorrow? no thought of the faintness of old age? Passage after passage rises to the mind to protest against Mr. Bury's estimate, which is as true, or as little true, as it would be of Sophocles or Aeschylus. We need not go back to the Olympians or the Pythians for an illustration; here, in the XIth Nemean, is proof enough (p. 222)—

ἐὶ δὲ τις ἄλβιν ἔχω μορφῇ παραμύεται ἄλλων,
ἐν τ' ἀέθλοισιν ἀριτεῖαν ἐπέδειξεν βίαν.
Θατὰ μεμνᾶσθω περιστάλλων μέλη
καὶ τελευτὰν ἀπάντων γυν' ἐκφροσόμενος.

Is there no skull at the Pindaric banquet there? Mr. Bury sees enthusiastically, but partially: he "averts his ken from half of human fate"; but Pindar does not.

On the second point—Mr. Bury's determination to find cue-words and undetected guides in the text—it would be necessary to quote many pages of his Introduction, many passages from his Commentary. There is no denying the extreme ingenuity with which he works out his theories; the difficulty in accepting them is partly that one can with difficulty believe Pindar to have been so methodical in thought as the theories imply. "He elaborated," says Mr. Bury, "his poems to such a point that every phrase was calculated, and no word was admitted that did not 'tell' in the total effect." Of this proposition Mr. Bury is peremptorily certain; yet it is one where not only does certainty walk in a vain shadow, but the general judgment, we imagine, of those who have read Pindar will be against him. But, as a specimen of Mr. Bury's turn for emendation, nothing will do better than his dealing with *Ol.* vi., l. 83 (Introd. p. xvii.). The famous

δόξαν ἔχω τιν' ἐπὶ γλώσσᾳ ἀκόντας λιγυρᾶς,

in the context in which it occurs certainly presents very harsh features. Now see how imaginatively Mr. Bury clears it all up.

"A little consideration will show what word originally held the place usurped by ἀκόντας. From ἔχω ἐπὶ γλώσσᾳ it is evident that the writer had in his mind the proverbial *βοῦς ἐπὶ γλώσσᾳ*, signifying silence; and as his meaning clearly is 'I cannot be silent touching Metopa,' we must infer that for the ox of muteness he substituted a singing creature, a bird. And to be

really suitable to the context, to harmonise with the presence of the sea and the rivers, the voice of a sea bird was required. 'On my tongue I have (not an ox but) a certain fancy of a vocal seabird,' &c. And this, I believe, was what Pindar wrote:

δόξαν ἔχω τιν' ἐπὶ γλώσσᾳ ἁλκόντας λιγυρᾶς

The seabird that he chose was a kingfisher. And the idea is more than a mere metaphor; for the seabird, as it were, flies seaward and draws the minstrel after it to the 'deep thundering' ocean from the waters of Metopa and the Stymphalian lake, in Arcadia, thus symbolising the passage from Stymphalus to Syracuse, from home to home (οἴκοθεν οἴκαδε). Nor is the imagery mixed; for not the bird, but the imagination thereof, is said to be ἐπὶ γλώσσᾳ."

It is very ingenious; but most of us will refuse to hear the voice of the charmer, and will adopt the simpler view of Prof. Jebb, here courageously appended in a note. Similar ingenuity is constantly exhibited, e.g. in the conjecture (*Nem.* i. 66) of πῶσειν, Aeolic for πῶσειν, instead of δόσειν; in *Nem.* iii. l. 82, that κραγέται, besides its proper meaning, suggests also the rapacious birds of Akragas, which still appear on its coins: again, in the last line of *Nem.* i. (where the best MSS. read δόμον), the conjecture of Bergk, σταθμόν, is defended as being a felicitous final suggestion or reproduction of the opening words—ἀμπνευμα σεμνόν being echoed by σεμνόν σταθμόν. But this seems fanciful in the highest degree. If δόμον really produced any difficulty, these guesses might be worth considering; but the sole objection to δόμον being the occurrence of δόμασι in the previous line, it is hard to see why MS. authority should yield to ingenious theories of echoes. Again, in *Nem.* iii., ll. 18 and 53 are dealt with on the same principle, and a fantastical over-meaning given to Νεμέα. More, perhaps, may be said for the conjecture οἶνας, ventured by Mr. Bury in *Nem.* viii., l. 40. But, on the whole, we should say that Mr. Bury is better at making a plausible conjecture than at justifying it or proving its necessity; as an example see his note on *Nem.* x., l. 84, αἶρος.

Notwithstanding these defects, Mr. Bury has written a fascinating commentary; and his versions, as we have said, are always spirited and often excellent, though perhaps more numerous than is necessary. His quotations are not always quite accurate; e.g., in the note on ἀγλαόκολλον (*Nem.* iii., l. 56, p. 56), the citation from Mr. Swinburne is incorrect, for "bosom" read "breast"; and the punctuation (p. 69) of the version given of *Nem.* iv., ll. 13-22, seems defective.

E. D. A. MORSHEAD.

CORRESPONDENCE.

SOME NOTES ON GODEFROY'S OLD-FRENCH DICTIONARY.

II.

Stanhoe Grange, Norfolk.

N.B.—The dagger (†) indicates that the word, word-form, or phrase, is not in Godefroy's Dictionary. (See ACADEMY, April 11, p. 350.)

† Calketrappe, kalk., *sf.* Caltrop, snare (mod. chaussetrappe):

"Auxint le maufee par ses cauticles nous meue de peeché en peeché, tant qe il nous eît en sa calke-

trappe enuombré e des cordez de nos pecchez demeyne enlacez."

Contes Moral. de Nicole Bozon (ed. Toulmin Smith et P. Meyer), p. 185.

"Quaunt le venour est aperceü de un cief gras e fort . . . espye on soñ haunt seït a soñ recet, on le cief se soleit reposer, e la va mettre prive-ment un kalketrappe, e la coevere."

Ibid., p. 182.

"Nostre Seignur . . . quant le deable nous ad guilee en sa kalketrappe menee, si nous voloms a lui erier e de sa merci lui prier, de la corde nous delivre."—*Ibid.*, p. 186.

† Camaille, *sm.* Camel, old form of chameau: "Vous oscowez les wibetez e transglutez le camaille."—*Ibid.*, p. 34.

Campevole, *sf.* Bell; add † Campervole: "Nous mettrons un campevole entour son col . . . e par ceo seroms de sa venue garniz."

Ibid., p. 145.

† Carfouke, Quarf., *sm.* Cross-roads, the English "Carfax" (see *New Eng. Dict.*, *s.v.*), Mod. Fr. *carrefour*:

"Deus compaignoñs estoient jadis, le un fol, l'autre sage, taif qe vyndrent un jour al carfouke de une veie. . . . Ces deus compaignoñs soñt cors e alme; le quarfouke de la veie si est frankes arbitrement a prendre bien od mal."

Ibid., pp. 51, 52.

Carmesin. Add † Quermesin (Arab. *karnesi*), *sm.* crimson dye, crimson cloth:

"En Baudas se labouront de moult de façons de draps de soie et a or; ce sont nasich et nac et quermesin et de mains autres draps de moult belle façon."

Le Livre de Marco Polo (ed. M. G. Pauthier), chap. xxiv.

Cester, *vn.* To stumble; add example from *Nicole Bozon*, p. 151:

"Jeo vy un homme porter furnage près de un fontaigne, e le homme cesta, e un furnage lui eschapa e chey en la fontaigne."

1. Chacier, *va.* To drive away; add † Chaisier:

"Hai me vos ke tant vos travaillez
C'aie marit, et de ci me chaisiez."

Alfanz. Rom. und Pust. (ed. Bartsch), p. 12.

Chienaille, *sf.* Rabble, low people; add † Kenaille:

"Por ce est fols qui ne s'i garde,
Quant il sent que mort le travaille,
Qui trop se fie en la kenaille
Del suen garder."

Guillaume le Maréchal (printed by P. Meyer in *Romania*, Tom. xi., p. 66).

† Chiton, *sm.* ? Paul Meyer suggests that this word is derived from English *chit*, with the sense of young animal. It perhaps is intended to represent the English *kitten*, the Anglo-Norman text in which it occurs being full of similar words borrowed from the English:

"De ceux qu'avés nomee ne ay qe feare tant ne quant, qar le beof est trop hurtañt e le chival trop regiwañt e le leverer trop rechinañt, mès jeo moy preñt al sienget e al chiton e al cheveret." Auxint font les grauntz seignours . . . touz se apuent ja al chiton, as foux qe suent lur folie e lur volentee, e al seengeot qe lur fet bien rire de vanité, e al cheverot qe soñt aliez a eux par parentee."

Contes Moral. de Nicole Bozon (ed. Toulmin Smith et P. Meyer), pp. 78, 79.

Commande, *sf.* Command, power; add † Commendie:

"Bien eüst lors sa besongne fornée,
Tote la terre fust en sa commendie."

Aymery de Narbonne (ed. Louis Demaison), vv. 107, 108.

Commant, *sm.* Command, will; add phrase † venir a commant a (impers.), "to be the will, the pleasure of":

"Diex," dist il, "Sire, vrais peres omnipotent . . . Seor mon oncle, se toi vient a commant." *Aliseans* (ed. Guessard et Montaiglon), vv. 425, 428.

† Condemmer, *va.* In special sense, to bind, confine:

"Super lis piez ne pod ester,
Que toz los al li condemnets."

Vie de St. Leger, st. xxviii.

† *Contrempris*, sm. Offensive ally, confederate:
"Molt volt savoir

E molt volt en escrit avoir
Cels qui eurent ses contrempris
Et qu'en eüst les nous apris."

Guillaume le Maréchal (in Romania, Tom. xi, p. 65).

† 3. *Copel*, *cupel*, sm. Top; the sense in quotation below seems to be "scalp," if *corune* here mean "tonsure"; perhaps the latter refers to the archbishop's mitre, in which case the meaning would be simply "the top of the mitre":

"Enz el chief de l'espee grant colp li vait duner,
Si que de la corune le cupel enporta,
E la hure abati e granrent entama."

Garnier de Pont Sainte Maxence: Vie de St. Thomas (ed. Hippeau), vv. 5495-7.

Corn, *cor*, sm. Add expression *cor del escu*, meaning corner (?) or boss (?) of shield:

"Li valles au cor del escu (*var.* au pié del escu)
Le prent."

Perceval le Gallois (ed. Potvin), vv. 1425-6.

2. *Coroneor*. Add † *Coronner*:

"Et voluns qe si nul homme soit trové occys . . .
qe hom face le Coronner hastivement venir."

Britton, English Laws (ed. Nichols), § 4.

† *Cout*, sm. Whetstone:

"Mynieres de albastre, mynieres de marbre noir
et blanc, mynieres de couz (*var.* couetz) de
raseurs."

Debat des Heraults d'Armes de France et d'Angleterre (ed. Pannier), p. 36.

Cruel, adj. Add † *Cruyer*:

"Li tres cruyeres pousseures fut subitement muez
en tres feaule picheor. . . En ses mains furent
atroveies les lettres de sa tres cruyer legacion."

Quatre Livres des Rois, avec Choix de Sermons de Saint Bernard (ed. Le Roux de Lincy), pp. 554-555.

† *Culcheür*. In the phrase *ure culcheür*, bedtime:
"Mes aneis que venist dreit ure culcheür (*var.* ure
de c.),

Li vint tele novele dunt il out grant honur."

Chronique de Jordan Fantosme (ed. Francisque-Michel), vv. 1954-5.

In the *Roman de Brut* a similar phrase occurs, which is printed by Le Roux de Lincy as under:

"A nuit, fait-il, à celc ore

Que l'on apele *celce ore*" (vv. 385-6).

It would probably be more correct to print *ore* . . . *coleore*, the phrase being apparently identical with the *ure culcheür* of *Fantosme*. The awkward rime *ore-ore* (both times in the same sense) would in this way be obviated.

PAGET TOYNBEE.

SCIENCE NOTES.

THE Philosophical Society of Berlin offers a prize of 1000 marks (£50) for the best essay on the relation of philosophy to the empirical science of nature. The essays may be written in German, French, English, or Latin, and must be sent in before April 1, 1893.

THE late M. Cabours has bequeathed to the Académie des Sciences, of which he was himself a member, the sum of 100,000 francs (£4000) for the following purpose:

"I desire that the interest of this sum may be distributed every year by way of encouragement among young men who have made themselves known by some interesting works, and more particularly by chemical researches. I express further the formal desire that this choice should fall, so far as possible, on men without fortune not having salaried offices, and who, from the want of a sufficient situation, would find themselves without the possibility of following up their researches. These pecuniary encouragements ought to be given during several years to the same young men, if the Commission thinks that their productions have a value which permits such a favour. Nevertheless, in order that the largest number of young workers may participate in the legacy, I desire that the encouragements may

cease when those who have enjoyed them obtain sufficiently remunerative positions."

Our Canine Companions in Health and Disease. By J. Woodroffe Hill. (Sonnenschein.) Had Mr. Hill not indulged in a preliminary chapter on dogs in general, in which a tendency for fine writing has proved his bane, this excellent book might have been unreservedly commended. But what shall be said of such sentences as "those individuals who scoff at devotion, but too often hypercriticise it for outward show"; or of "reasoning actions being reflex, automatic, emotional, or spontaneous"? Much more in the same vein might be quoted, but it is pleasanter to pass over the first twenty pages. Then it may be affirmed that no lover of dogs ought to be without the book. Dogs' diseases and the drugs which form the remedies are alphabetically and lucidly treated; and a second part of the book deals with a subject on which little is known save by experts, viz., the exact list of good points which each kind of dog should possess, and the number of marks assigned to each at dog-shows. All this is concisely and carefully handled, together with a useful appendix on dog-law. The author pours contempt upon the use of the muzzle. Of whatever description this may be, he deems it "an instrument of torture, and its application is only excusable under the most exceptional circumstances." The practice of giving dogs arsenic to get them into condition he absolutely condemns. By an amusing Americanism, he speaks of dogs, and not their teeth, as "canines."

MEETINGS OF SOCIETIES.

ARISTOTELIAN SOCIETY.—(Monday, May 4.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—A paper was read by the Rev. H. Rashdall on "The Principle of Authority in its relation to Ethics." The paper started with a criticism of Rational Utilitarianism as expounded in Prof. Sidgwick's *Methods of Ethics*. Accepting his three axioms of Prudence, Rational Benevolence, and Equity, the reader dissented from his hedonistic interpretation of Ultimate Good. Even on Prof. Sidgwick's own premisses Benevolence ought to be included in the conception of the Good which it is right to promote for others; but there are other elements must be recognised in the supreme *εὐδαιμονία* if Utilitarianism is to be reconciled with the parts of our moral conscientiousness, e.g., Truth and Purity. This modification of the utilitarian criterion involves practically the admission of intuitions though not as to the morality of particular arts, but as to the value of ultimate ends. But these intuitions are not equally strong in all persons, and in some are very weak or even non-existent. The average man takes them on authority, though more or less confirmed by his own weaker moral intuitions, and few men, even the *φρόνιμοι*, are wholly independent of the judgment of other *φρόνιμοι*. The authority, however, must be accepted on moral grounds. The man concludes that the judgments of those whose general moral principles and character commend themselves to his moral consciousness are likely to be right even where his own intuitions are weak or defective. This admission supplies a basis for the ascription to Jesus Christ of moral authority which to those who admit his sinlessness or perfection must amount to moral infallibility—an admission which by itself approximates to the admission of a divine sonship. It also supplies a basis for the recognition of an authority, though not an infallible authority, in the Church. The value of this authority in ethical matters is much higher than in pure theology. An ideal Church would be an organ for the expression of the highest ethical conscientiousness. No Church has ever been more than an approximation to this ideal, but, with all reserves, actual Churches have assisted to give expression to this diffused Christian conscientiousness by which the received moral code has been largely determined.—The paper was followed by a discussion.

NEW SHAKSPEARE.—(Friday, May 8.)

DR. F. J. FURNIVALL in the chair.—A paper on "The Character of Hamlet," by Mr. Dorchester, professor of English literature and of political economy at Boston University, U.S.A., was read by Mr. R. G. Moulton. While Shakspeare was at his greatest in delineation of character, and of character which belonged to our common humanity, in some of his dramas, the characters, like a wreath of flowers, divided our interest; in others, as in "Lear" and "Hamlet," the interest centres in one overpowering character. A careful analysis of Hamlet's character was therefore a first necessity to the understanding of the play. The first element which went to the making of his character was heredity. The powerful nature of his father had to be considered, as well as his being of Teutonic race, with its exaltations, carousals, corresponding fits of depression, and generally melancholic temperament. It loves generalisation and speculation. So Hamlet is always for the essentials; Laertes, his contrast, is satisfied with appearances. Laertes had had no intellectual training; Hamlet has to transmute every feeling into thought; he cannot rest satisfied in the feeling alone, like Romeo. Disinclined to action, he remains the student and amateur. This is interesting, because we know Shakspeare to have thought little of reflection unless translated into action; he found his type of the perfect man according to Gervinus, in the man of action, Henry V. Hamlet, on the other hand, was like Amiel, and the source of disturbance in his nature was over-reflection, and the want of the instant radiation of thought into action. While the ordinary view considered Hamlet's plain duty to be the avenging of his father, and his failing to do so an evasion of his duty, Prof. Dorchester considered that it was his high conscience, loftier than that of his fellows, which resisted the murderous suggestions of the ghost, and, steadfast in opposition, combatted his lower carnal nature and its cry for blood. Next, we had to consider the circumstances of his life; the influence of a great sorrow, the absence of even the solace of constant employment. Then, the strong carnal nature of the man, with his will and intellect in opposition to it. What was it that held his lower nature in check, and restrained the impulse for vengeance? He was no coward. It was his intellect, and conscience, and moral sensibility, which could not view the killing of Claudius in the light of a duty. Even when he eventually kills him, it is in a moment of exasperation. There is little of Hamlet in that last scene of slaughter; he is more like Laertes when first hearing of his father's death. In his speech to Horatio, Hamlet reveals his ideal of character, and this throws light upon his own. Fortinbras the strong man, saviour of Denmark, fitly closes the play.—In the discussion which followed, the chairman felt bound to differ with Prof. Dorchester in his view of what Hamlet's duty was in the play. It was not, he held, Hamlet's carnal sense that called to him to kill Claudius, but his sense of what was just and right. And the question was, was the power that restrained him doing this, his intellect, or the weakness of his nature? Or was his intellect made an excuse for weakness of will? Hamlet shirked his duty constantly. To murder, as such, he had no objection. He sent his companions to death without remorse, when he found they were treacherous to him, and the death of Polonius was taken as a light matter. His intellect only served to furnish excuses for not carrying out a task he disliked.—Dr. Bierfreund objected to the theory that there was anything especially German about Hamlet; this was only an instance of the appropriation of that race who had already assigned to themselves Shakspeare and Thorwaldsen. England only could produce the type, because only in England could men afford to be idle. Other members who followed mostly agreed with the chairman in his view.—Mr. Moulton, replying for Prof. Dorchester, whose points he agreed with throughout, thought there had been a confusion between what was Hamlet's duty and what Hamlet thought to be his duty. In moments of passion, we often think that what it urges us to is our plain duty. The point of the paper was, that Hamlet's passion suggested revenge, his moral nature checked it. It was especially noticeable that it is only up to the point of the play scene that Hamlet hesitates; from that

moment, once his suspicions are confirmed, his duty is perfectly clear, and he never hesitated again. But from that moment circumstances conspire to thwart and hinder him.

FINE ART.

THE ROYAL ACADEMY.

II.

It is strange that Mr. Calderon, having, with a certain amount of audacity, chosen for the subject of a large canvas "St. Elizabeth of Hungary's Great Act of Renunciation," should have treated it with a meanness and a timidity which almost render prurient what might have been powerfully dramatic. The royal saint kneels here, as naked as her mother Eve, on the stone steps of the altar, and, in the presence of her confessor and of certain monks and nuns, renounces all the pomps and vanities of this world. But the gentle queen is little more than a feebly-drawn lay figure, wanting in distinctiveness alike of form and of expression; while nowhere is the dramatic situation at all adequately expressed. Such a theme demands, indeed, the lurid romanticism, the Hugoesque contrasts, in which a Jean-Paul Laurens revels. Moreover, it would appear that Mr. Calderon's conception of the scene rests upon a misapprehension, and that Hungary's queen by no means played the Lady Godiva, but merely, while performing her act of renunciation, put off her outer and more splendid garments, and with them the insignia of royalty.

It is painful to be compelled to note the very notable decadence betrayed by the work of the veteran Sir John Gilbert, who, when his medium is water-colour, still shows a measure of the old skill and of the peculiar conventional romanticism which he has inherited from Cattermole. His large "Don Quixote discourses upon Arms and Letters" is a complete failure, lacking from a technical point of view both certainty of execution, colour, and relief, and making up for these defects by no genuine humour.

We can find nothing new to say about Mr. Gow's "After Langside: Queen Mary's Farewell to Scotland," one of this painter's usual anecdotic, rather than truly and passionately romantic performances, remarkable for skill of draughtsmanship, in the French rather than the English mode, but for no pictorial strength or unity of impression.

Mr. Val. Prinsep has in his page from Byzantine history, "The Emperor Theophilus chooses his Wife, A.D. 829," done unusually well, getting rid of a good deal of that leatheriness and opacity which usually disfigures his flesh-painting, and producing an *ensemble* of considerable brilliancy of aspect, if otherwise of no great significance. The costumes of these richly-clad damsels assembled in a splendid hall adorned with Byzantine gold mosaics, in order that the youthful emperor may among them make his choice of a consort, do not strike us as specially accurate from an archaeological point of view; but at any rate their draperies make, with the gorgeous vestments of the Porphyrogenitus, brilliant and pleasing harmonies.

Mr. Hubert Herkomer's huge piece of *genre* "On Strike" is the melodramatic and almost transpontine rendering of an episode suggested by the late revolts of the trades unionists. A hulking workman of threatening aspect fronts the spectator, unmoved by the mute entreaty of the wife who clasps him from behind, while the white faces of starveling children peep out from the half gloom of a doorway. The sentiment is of the class we have often had occasion to note in dealing with Mr. Herkomer's paraphrases of popular life; that is, studied, we

should say, from the theatre, with a view to obvious effect, rather than direct from nature, with a view to truth. The modelling, too, with a superficial appearance of breadth, is of an unsatisfactory emptiness too characteristic of this popular painter, which makes itself still more disagreeably apparent in his numerous portraits.

Though among the many visitors to the Academy hot controversy will no doubt rage with respect to Mr. J. S. Sargent's "La Carmencita," and some may pronounce it as unlovely as others will find it entrancingly interesting, there can be little doubt that to the painter and the true amateur it will assert itself as emphatically the picture of the year, leaving its deep impress on the memory as surely nothing else does. It is a simple yet passionate presentment of a black-haired, audacious Spanish dancer, wearing a splendid national costume of yellow satin, with a charmingly-arranged scarf of the same colour, and a flower of pale primrose in her raven-hued locks. The handsome face frankly exhibits the white and red of the theatre; the lips have that painted scarlet so attractive to the modern French poets; the lean arm and hand—for one only is seen—is full of life; and the little Andalusian feet, though in perfect repose, literally bite the ground. The execution, if slight, has the masterly breadth obtained by a long study of Velasquez, in imitation of whom the sloping floor is depicted as a grey space without defined limits. "La Carmencita" is undoubtedly a creation sprung from the artificial soil of the expiring century, a veritable "Fleur du Mal," such as would have delighted Baudelaire himself; but it would be impossible to give more spontaneous or more passionate expression to a conception which, in its mingled strangeness and naturalistic truth, expresses the very poetry of modern realism. It may be convenient to mention here Mr. Sargent's other contribution, a "Portrait of Mrs. M.," which, if necessarily more ordinary than the preceding fantasy in portraiture, has much piquancy and elegance, marred to a certain extent, however, by the painty quality of the flesh in the neck and arms. Hard by hangs—not overwell hung—Mr. Fantin-Latour's sober yet delightful portrait, "Sonia, Daughter of General Yanovski," which, we fancy, is the same that was last year exhibited at the Salon. It is merely the representation of a young lady, posing simply, in ordinary walking-costume; but it exhales a perfume of innocence and true *ingénuité* such as modern French art but seldom affords.

The Newlyn school, in this a fellow-sufferer with the foreign artists, has legitimate cause of complaint against the hanging committee. Mr. Frank Brangwyn's large canvas "Assistance" is so effectually skied that it would be unsafe to give a definite opinion as to its merits; while in not very much better plight is Mr. W. H. Y. Titcomb's "Old Sea Dogs," an admirably truthful and sympathetic presentment of three old fishermen enjoying in the open air their *otium cum dignitate*. This is painted in the light, decorative key of grey-blue, which is now the rule in French but as yet the exception in English, art. It has not been possible to deal so unceremoniously with the most popular members of the school, Mr. Stanhope Forbes and Mr. Frank Bramley. The former has "Soldiers and Sailors—the Salvation Army, 1891," showing on the quay of a fishing-town (perhaps Newlyn) a company of Salvationists massed together in a close group, and in all *naïveté* and reverence lifting up their voices and playing their uncouth instruments under the free dome of heaven. All composition has been wilfully abjured, and the colouring is too heavy and black in its grey-ness; but some of the types of these haggard and unlovely "Salvation Lasses" are unsur-

passable in simple pathos, in truth of expression and movement. Very similar in technique is Mr. Frank Bramley's "Of such is the Kingdom of Heaven," showing on a stone quay or pier, skirting the sea, a sad procession of white-clad mourners and singers, some chanting hymns, others carrying the flower-strewn coffin of a little child. Here again simplicity is sought for by an avoidance of all artificiality of composition, and a commendable reticence is observed in the suggestion of the pathetic side of the subject. Somehow, however, Mr. Bramley appears to have failed to get at the root of his subject, perhaps because by an avoidance of this same artificial, or rather artistic, composition, he has lost the power of sufficiently emphasising his main motive. The open air effect, the atmospheric envelopment of the figures, is admirably given, though at the expense of all charm and variety of colour. The painters of this school are, as we think, unfairly blamed for choosing to employ French technical methods in the expression of purely English subjects. We would rather quarrel with them for the unduly photographic aspect which they give to their works—conceiving them almost as scenes which should be actually noted by the aid of the camera, and then built up and elaborated on that basis. Their favourite grey tonality is not so much that of their French antitypes—for it lacks the brilliancy and the occasional sparkle which marks the work of the best of these—as a darker, sadder, and heavier open-air tonality of their own, attributable, perhaps, to the atmospheric conditions of our climate, but none the less dispiriting and unpictorial.

Mr. George Hitchcock's "La Maternité," to the unfair ostracism of which we have already passingly referred, is not a new work, but one which has already secured a high reputation at the Salon, and then, if we mistake not, at the Universal Exhibition of 1889, and which has since been seen in London as the central ornament of an exhibition of the American artist's works, brought together at Messrs. Goupil's in Bond-street. It shows in a barren but pictorially beautiful and suggestive landscape—the predominant elements of which are pale grey sand and rank grey-green herbage—a French peasant woman advancing slowly, willingly bearing the burden of one child of tender years, as she shows the way to another. This simple motive is treated with admirable technical skill, the beautiful and quite natural group formed by the figures fitting perfectly into the sad landscape, and forming, as it were, an integral, an inevitable, part of it. The artist has perfectly achieved what he has attempted, both in the way of pathetic suggestion and of pictorial impression. Why, then, if this excellent work was accepted at all, was there not accorded to it a decent place, instead of making of it a Pelion superimposed on Ossa, in the main gallery? Some two years ago Mr. Hitchcock's "Tulip-culture," a brilliant and sensational performance, not equal in artistic merit to "La Maternité," appeared at the Royal Academy in a place of honour, and was there appreciated at its full value.

Military subjects, unless they be of the anecdotic or the obviously pathetic order, like those contributed in former years by Lady Butler (Miss Elizabeth Thompson), are greeted in England with but faint approval compared to the passionate interest which they excite on the other side of the Channel. Mr. Vereker M. Hamilton's large canvas, "The Attack on the Peiwar Kotal," shows considerable novelty of treatment and an unusual attention to atmospheric effect; moreover, it has abundance of martial energy—dramatic, if not absolutely convincing. Mr. Ernest Croft's "The Morning of Waterloo: Napoleon's

Headquarters" is a frigid and anecdotic conception of the familiar type, true enough, no doubt, in all the details of the uniforms and of the mean *milieu* where the scene passes, but trivial and uninspiring, especially in the watery, feeble rendering of the Emperor himself as he appears at the dawn of the day which is to decide his fate. After Gros, after David and Ingres, after Meissonier, it is well to let the Napoleonic legend alone, unless it be more worthily handled than in the present instance.

Portraiture is year after year encroaching upon *genre* and landscape, until it has obtained far more than its fair share of space in the exhibition. And the portraits shown are too often those of estimable old gentlemen who may have deserved well of their constituency, their county council, or their parish, but whose respectable features, how palpiating soever be the interest which they may inspire in those who are acquainted with their merits, leave cold the outside and uninstructed public. When Mr. Orchardson, or a painter of like eminence and charm, is charged with the execution of the regulation "presentation portrait," the result may, as in the masterly "Walter Gilbey, Esq.," be delightful; but otherwise a dead level of dispiriting dullness and general boredom is the not easily to be avoided result. Mr. Orchardson's own "Sir Andrew Barclay Walker, Bart.," is only less fine than the portrait just now mentioned, and is especially remarkable for the beauty and artistic treatment of the not unduly prominent accessories.

Mr. Watts's sole contribution to the exhibition, "The Lady Katherine Thynne," is no doubt here and there weak in modelling; but it is, for all that, better than most recent performances of the master. None but he could have given, quite as he has given it, this type of gracious and characteristically English womanhood.

It is distressing to find Sir J. E. Millais' portraits so deficient in elegance and artistry of arrangement, so cold and purely external in conception, as they are on the present occasion; for, in truth, they are not redeemed by that energy and distinctiveness of characterisation which goes far to make up for all other deficiencies. The "Mrs. Edward Gibbs" says nothing to us, though it may not be open to any special reproach, so far as technique goes; the "Grace" is a pretty but unmeaning and not a little painty portrait-study, in which the best passage is the powdered dark hair of the fresh young model who poses in a riding habit of the last century. Best is the "Mrs. Chamberlain," marred though it undoubtedly is by the failure completely to harmonise the component elements of the picture, and especially by the ugly, uninviting brownish background. In some degree, at any rate, the freshness and ingenuous grace of the sitter is conveyed, while many portions of the canvas, such as the lady's mauve dress and the porcelain tea-set treated *à la Chardin*, show the firm hand of the master. Here, however, as in many other recent portraits from the same hand, there is a curious impersonality about the presentment, a curiously cold detachment from the individuality which the painter is seeking to characterise; and this, more than any merely technical shortcomings, disconcerts the beholder. Such was not always Sir J. E. Millais' attitude as a portrait painter, as the admirers of his finest performances of this class are well aware.

CLAUDE PHILLIPS.

THE FRENCH SALONS.

III.

THE New Salon, that of the Société Nationale des Beaux-Arts, is in many respects superior to the old Salon at the Champs Elysées. The number of exhibits has been limited to 951 pictures and 101 pieces of sculpture. Instead of a suite of small and indifferently lighted rooms, we have four long galleries admirably lighted, in which there are no dark corners. There are only two rows of pictures on the walls, and plenty of space between them; and the works of each exhibitor are grouped together in such a way as to produce as harmonious an effect as possible. The hall downstairs has been converted into a pretty garden, in which the works of sculpture are seen at their best. A novelty in this year's exhibition is the section of original works of decorative art, specially instituted for the benefit of art craftsmen, who will henceforth have the opportunity of displaying, under the most favourable circumstances, specimens of their skill as jewellers, silversmiths, enamellers, and also as workers in decorative iron and woodwork. This interesting innovation is likely to be attended with more really useful results than have hitherto been attained at the annual Exhibition of the Fine Arts applied to Industry, which does about as much for the development of artistic taste among the artisan class as the annual gingerbread fair. The foreign contributors are even more numerous than at the Champs Elysées; for out of the two hundred names in the catalogue, there are over ninety Americans, Belgians, English, Danes, Swiss, Swedes, Germans, and Russians. This increase in the number of foreign exhibitors is worthy of notice, as a proof of the spread of international art culture; and it must be noted that these exhibitors are not all pupils of celebrated Frenchmen, but, especially in the case of the Norwegians, Spaniards, and Swedes, home-bred and home-educated artists.

The most striking feature of the present exhibition is the interesting show of portraits. Conspicuous among them, and most painful to behold, is the portrait of M. Alphonse Daudet by M. Cassière. Poor Daudet, broken down with illness and suffering, is represented reclining on a couch, his little daughter beside him. The young poet—of whom it was said when he first came up to Paris that he was *beau comme un jeune dieu*, and that when he shook his fair locks they gleamed like the rays of his native Provençal sun—is no more; but in his stead we have the shadow of his former self, the face half-paralysed and deeply-furrowed by anxiety and pain, the body reduced almost to a skeleton, the sunken eyes like two black spots in which no trace remains of the bright, laughing glance of former days. Alas, the portrait is only too cruelly true; and the dull grey, misty atmosphere in which M. Cassière delights to envelop his figures only adds to the sad impression this picture leaves on the spectator. How different is M. Courtois' portrait of Mme. Gautreau, the Parisian professional beauty. Her classical profile, the exquisite curve and bend of her neck, the splendid modelling of her shoulders, arms, and bust, have been admirably rendered. Mme. Gautreau has little or no complexion; she is as white as marble; her dress is white also, and the rich auburn colour of her hair serves to enhance the effect of this symphony in white. Though a wonderful piece of artistic work, this portrait is wanting in life and expression; but this is no fault of the painter's. M. Courtois has also sent a delightfully natural portrait of M. Von Stetten, taken as he stood in his free and easy *atelier* attire. M. Von Stetten, who is a young German artist of great promise, himself sends four exhibits; two clever studies, a brilliant piece of colouring, "The Flower Girl," and "Evening

at Fiesole." The master-portraitist, M. Carolus-Duran is represented by nine portraits, among which are a splendid full-length of a young American lady, and a good likeness of Gounod; M. Duran also contributes, as usual, a nude study, which this year is entitled "Danae," and gives the measure of the technical ability of this brilliant colourist. - M. Ducez's full length portrait of Monseigneur Filon, Cardinal-Archbishop of Lyons, is also a fine painting; the same may be said of the Countess de M—, by M. Gervex, and of Mr. Sargent's portrait of a little boy. M. Raffaelli has portrayed with great ability the general appearance of Mr. Dannat, the American painter; and M. Ary Renan has done his best to produce a good likeness of his father, the Oriental scholar. M. Roll, who is now one of the leading masters of the *plein air* school, contributes several portraits, among which is a lifelike "Amiral Krantz" in full uniform, with a face like the rising sun; his study of two nude female figures, *vuës de dos*, lying in a meadow, is a fine piece of work. When compared with this, Mr. Whistler's "Lady in Black" (arrangement in black, No 7) comes as darkness after light; the same artist has also contributed a small "Harmony in Green and Opal," which would very likely pass unnoticed were it not for the signature. Messieurs Blanche, Boldini, and other well-known portraitists are well represented; and before ending this rapid enumeration, I must not forget to mention an admirable portrait of M. Spuller by M. Anders Zorn, who has sent several other exhibits, including a beer-tavern at Stockholm, and a ball scene.

M. Puvis de Chavannes, president of the society, contributes three panels. The first, "Summer," is a large composition—a lovely landscape, through which flows a river where nymphs are bathing, while others are reclining in the sunshine, a fisherman is throwing his net, in the background peasants are gathering in hay; the general impression is that of the charm and repose of nature in its sublime simplicity. This panel is intended to be placed in one of the reception rooms of the Hôtel de Ville. The other two are decorative panels for the Museum at Rouen. Mr. Besnard has sent eight cartoons to be executed in stained glass, for the new School of Pharmacy. These are very novel in effect, wonderfully brilliant in colour, quite out of the common, and interesting, like everything Mr. Besnard does.

I must postpone until next week any further account of the contents of the galleries of the Champs de Mars Exhibition, which opens to the public on May 15.

CECIL NICHOLSON.

CORRESPONDENCE.

THE MUTILATION OF MONUMENTS IN ANCIENT EGYPT.

Farahoot, Egypt: April 30, 1891.

THE ACADEMY of April 18 is just to hand, and I have been looking over Mr. Petrie's letter on his work at Medum. I cannot help but wish that the "official spy" who watched Mr. Petrie—as that job has been completed—could be sent to look after an affair of which I am going to tell you.

This last winter was the third season that certain very popular blocks of wood inscribed with the cartouche of Seti I. have been on sale in the antiquity shops of Ekhnim and Luxor. They all come from Abydos. They are wooden keys taken from the niches cut to receive them at the point in the walls of a temple where two large stones come together. Anyone who has ever visited the Temple of Seti I., at Abydos knows that these blocks of wood are not lying round there loose.

The fact of the matter is, that the large stones are in some cases thrown off the wall, and in other cases the walls are quarried into, in order that these wooden blocks may be secured. Such is the story told me of the way in which the pieces are secured by a dealer, who also says that the pieces bring a good price, but that he is rather timid about selling them lest he get into trouble.

It is not long since we were given the report of how the temple at Abydos had been so shut in by a wall that only persons having tickets of admission can enter. However successful the Antiquity Administration may have been in closing the temple against sight-seers unprovided with tickets, it is evident that mutilators are still permitted to carry on their depredations almost, if not altogether, undisturbed.

It does seem that while officials are so abundant that one can be placed to watch over a man who has long and undisputedly been known as an honest worker in the interests of science, one might also be spared to overlook the work of these destroyers, and see that they do no quarrying and do not tumble the stones entirely off the wall, but that, after removing the stone sufficiently to get possession of the wooden key, they be required at least to return the stone to its position.

CHAUNCEY MURCH.

NOTES ON ART AND ARCHAEOLOGY.

MR. A. S. MURRAY, keeper of Greek and Roman Sculpture in the British Museum, is engaged on a handbook of Greek Archaeology, which will treat in detail, and with many illustrations, of sculpture, vases, bronzes, gems, terra-cottas, and mural paintings.

WE are very glad to be informed that Mr. Dunthorne is organising, for the middle of June, an exhibition wholly above the customary shows in artistic value and interest. This is a display of the collected work of Mr. Alphonse Legros—not so much of his oil paintings, as to the importance of which, in his general *œuvre*, opinions may differ, but rather of his masterly etchings, drawings in black and white, and silver-points. In all these things Mr. Legros's position is such as admits of no manner of doubt among the real connoisseurs of art. Though the artist has so long resided in our midst, he was himself a partaker in the movement some thirty years ago, for the revival of etching in France. He was one of the pioneers; and in France the pioneers—Bracquemond, Jacquemart, Legros, Meryon—have neither been surpassed nor equalled by the men who have followed in their track. Then again, leaving out of the question Mr. Legros's part in the revival of Etching, he claims attention by the splendid austerity of his work with the pencil and the silver-point. Silver-point—a medium now often absurdly misapplied by the beginner, in whose hands so delicate a weapon must needs be a weapon of offence—is exactly the medium for the exhibition of the accomplished learning and the severe genius of Mr. Legros.

THE only exhibition to open next week that we need mention is that of the painting of "The Judgment of Paris," known as the Duarte Rubens, which will be on view at the gallery of Messrs. Charles Robertson & Co., in Piccadilly.

NOTWITHSTANDING the fact that a much larger edition of *Royal Academy Pictures, 1891*, had been prepared than any previous year, the entire issue of Part I was exhausted on the day of publication.

THE Kurtz Sale, which took place on Saturday and Monday, at Christie's, showed, as regards the oil paintings, how easy it is to possess very little art by the expenditure of a

great deal of money. Dull Landseers were by no means the least desirable part of a collection generally disappointing. The pictures, speaking broadly, must, as purchases, have been ill-advised—perhaps even more ill-advised than is habitually the case when the buyer is concerned with contemporary work which, when painted by an R.A. or an A.R.A. and exhibited at the Academy, in heavy gilt frames, is wont to attain, very temporarily, a wholly artificial value. These things are hardly investments for the commercial, and hardly delights for the cultivated.

We quote the following from the *Oxford Magazine* :—

"Prof. Ramsay and Mr. Hogarth propose to visit Eastern Cappadocia again this year. Prof. Ramsay will start very shortly, and make a preliminary tour in Cilicia, in the hope of clearing up certain doubtful points with regard to the discoveries of the expedition of last year and of Mr. Theodore Bent. Mr. Hogarth (who will probably be accompanied by Mr. Munro) will go out to Tarsus as soon as the Oxford term is over, and there join Prof. Ramsay; and the party will cross the Taurus and make for the Euphrates. Their plan is to explore the Kurd country north of Malatia, and follow the river up as far as Nicopolis, whence they will either turn westwards to the rock-cities of Boghaz-Keui and Eyuk, or go northwards into Pontus. In any case they hope to come out on the Black Sea. Two very different problems await solution in this country: the character of the early race which is responsible for the Hittite sculptures and inscriptions; and the scheme of the Roman frontier defences. It is hoped that the expedition of this year may make discoveries which will elucidate both problems, if they manage to avoid troubles with the Kurds and the ever-present fever.

THE Cyprus Exploration Fund is about to issue an appeal for subscriptions, in order to continue the work of excavation begun last year on the site of Salamis.

THE December number of the *American Journal of Archaeology* (London: Kegan Paul & Co.) is chiefly notable for the "Summary of Recent Discoveries and Investigations," which alone fills nearly one hundred pages, special attention having been given to Egypt and Asia Minor. This is a fresh sign of the growing devotion to oriental studies in the United States, of which mention has frequently been made in the ACADEMY. There are only two original papers, and only one plate. Mr. A. S. Murray, of the British Museum, describing a vase of the Mykenai type, in the museum of the Historical Society of New York, which had come from Upper Egypt, takes the opportunity to discuss the general relations of this early class of pottery and the other objects found with it. His conclusion is that, while the latter are the work of Phœnicians, the pottery itself and also the engraved gems and the designs in gold may be credited to the Greek or semi-Greek populations of Asia Minor and the islands. Finally, he throws out a suggestion of Celtic influence, in the latest period. Dr. Charles Waldstein contributes a report upon the excavations at Plataia, conducted in the spring of 1890 by the American School at Athens. The chief object of these excavations was topographical—to make a careful survey of the walls and of the battlefield. One unexpected result was to ascertain the existence of no less than twelve Byzantine and Frankish churches scattered over the site. There was also found a second slab of the famous edict of Diocletian, in Greek, containing the prices of textiles. This will be edited by Prof. Mommsen.

Chinese Currency. By J. Edkins, D.D. (Shanghai: Kelly and Walsh; London: Kegan Paul & Co.) The new points made in these essays are that paper currency began in China before rather than after the printing of books.

The use of seals entered China 2100 years ago. Their convenience in printing led to superstitious charms being multiplied for wide circulation. Commercial paper in the form of bills of exchange naming sums payable on demand came next. Book-printing followed in the tenth century, A.D. Copper coins and paper currency ruled in the commercial world of China till the Ming dynasty, when silver from America was first exchanged for silk and porcelain, and afterwards for tea. Paper currency had become depreciated to an intolerable extent, and silver took its place. The revenue, to a very large extent, is even now collected in silver, instead of in copper cash and in grain. The result is that, within a period of 800 years, copper coins have been depreciated to a fifth part of their original value. China has quite recently adopted a tentative silver currency in dollars, and a mint has been established at Canton.

THE STAGE.

AT the Vaudeville Theatre Mr. Thorne has revived "Confusion," to sustain, doubtless, that reputation of his house as the home of the light-hearted drama, which the most recent of his productions must have somewhat imperilled. The cast is good, and the performance and the piece are received with laughter and delight. Detailed criticism of this not unwelcome revival is, however, quite unnecessary.

ANOTHER revival, and it is again at the Olympic. Instead of being closed for several months, as we had feared, this theatre, under Mr. Wilson Barrett's direction, re-opens to-day. "The Silver King" will be played, and its performance is likely to be continued until the end of the season. Mr. Wilson Barrett, it is hardly necessary to say, resumes his part of Wilfrid Denver—possibly the only "Wilfrid" who remains in great repute just now; and the faithful service of the antique world will be illustrated, or excelled, by the sympathetic performance of Mr. George Barrett as Jaikes.

MISS WINIFRED EMERY goes to the Shaftsbury Theatre, and so do Mr. Cyril Maud, Mr. Lewis Waller, and Miss Annie Hughes—indeed, a very strong cast has been engaged for the opening drama under the new management.

THE performance of an English version of Ibsen's "Lady from the Sea," at Terry's Theatre, on Monday afternoon, is spoken of with something approaching to ridicule by the most qualified critics. We confess we were not present at the function. We had no ardent wish to be. Those who were present must be contented with our heartfelt sympathy. There are many happier ways of spending a spring afternoon than that of either worshipping or scoffing in the temple of the faddist.

THE last nights of "Lady Bountiful"—which has not proved one of Mr. Hare's most marked successes—are announced at the Garrick, where shortly will be witnessed a revival of the ever-welcome "Pair of Spectacles."

WE are threatened with not one but several pieces which will be pure pantomime—which will not contain one single spoken word. That is what we pay for having enjoyed "L'Enfant Prodigue" at the Prince of Wales's. People do not seem to distinguish between the real cause of its success and the mere accident which accompanied it. It is not because not a word is spoken on the stage that "L'Enfant Prodigue" has succeeded—it is not because the only writing in connexion with the piece is the writing of the *scénario*, or of the book of exits and entrances and directions as to stage action.

What has succeeded at the Prince of Wales's is the acting of Mlle. Jane May and her colleagues. They are one and all exceedingly clever people, and such masters of pantomime that they have been enabled to give interest to and to endow with humour and pathos a piece of which the performance is deprived of the charm of literature and the charm of the human voice. But would the ordinary comedian be able to do this? Would anyone of less flexibility and less infinity of resource than these comedians of France be able to do it? We think not. And in any case it is lamentably easy to have a superfluity of drama without literature. Nay, indeed, there are those who say that even now our drama, though by no means without words, is well nigh without literature.

By the omission of a line last week, we were made to express the opinion that the voice of Mr. Hayden Coffin was like an adagio of Spohr's. We intended no such simile; and had the line been in its place, the reader would have gathered only that which he was meant to—viz., that Mr. Hayden Coffin's voice had music in it (which he knew already), and that Miss Marianne Eissler played upon the violin a certain well-reputed piece of music by Spohr.

MUSIC.

RECENT CONCERTS.

ON Monday afternoon there were two pianoforte recitals—one at St. James's, the other at Prince's Hall. At the latter was Mme. Burmeister-Peterson, who was recently heard at the Crystal Palace. In a pianoforte transcription of a Bach Toccata and Fugue, she displayed strong fingers, excellent technique, and, besides, feeling and intelligence. But why play Bach's organ works on the pianoforte? However good the performance, the proper effect cannot be produced. The lady's interpretation of Beethoven's Sonata in A flat (Op. 26) was singularly unequal. The Scherzo and Finale were well rendered; but the opening Andante with variations was taken at funeral pace, and the "Funeral March" was hard in tone and jerky. If we may judge Mme. Peterson as an interpreter of Chopin from her performance of the Ballade in G minor, then our verdict must be an unfavourable one: there was, at times, too much sentiment; at others, not enough.

We heard, of course, only the latter part of Mr. Borwick's programme at St. James's Hall. Chopin and Grieg are not the composers which suit him best. The C sharp Scherzo by the former, and the Ballade in variation form by the latter, were given with great skill and in a conscientious manner. If there was not all the charm and poetry one could wish, it would be unfair to make this a subject for reproach. Mr. Borwick may find these things added to him in time; the foundation is thoroughly good. He concluded his programme with Liszt's "Don Juan" Fantasia. The playing was exceedingly fine, and the enormous difficulties were overcome in a brave and spirited manner. But we would appeal to Mr. Borwick as a young and accomplished artist, as a pianist who has the means worthily to interpret the works of the great masters, and ask him if he thinks he is rendering good service to art by performing a mere show piece, and one, moreover, which even great pianists like Menter and Rubinstein have failed to make acceptable. Why should not Mr. Borwick try to avoid music in which technique is an end rather than a means to an end? He cannot do better than follow the example of his revered teacher.

M. Ysayë gave his second violin recital at St. James's Hall on Tuesday afternoon. Raff's Sonata in E minor for violin and pianoforte

(Op. 73) is a work full of excellent workmanship, but there are moments when the mode in which the thought is expressed seems of greater value than the thought itself. We like the Andante movement the best, though even that is spun out. The performance by Messrs. Ysayë and Schönberger was marked by great taste and skill. M. Ysayë won, however, his highest triumph in Bach's Prelude and Fugue in G minor, three movements from the same master's Suite in B minor and the Prelude in E. The tone was pure and the execution perfect. The applause was enthusiastic. The programme further included Beethoven's Sonata in C minor for violin and pianoforte, which was well rendered.

The Bach Choir gave an interesting concert at Prince's Hall the same afternoon, but commencing at five o'clock. The programme included three 8-part Motets by Brahms (Op. 109), which were only published at the beginning of last year. They are remarkable for vigour, learning, and effective contrasts. No. 3, "Wo ist ein so herrlich Volk," was the one which appeared to us the most striking. They are not easy to sing, and fair if not full justice was rendered to them by the choir. They were followed by Palestrina's short 4-part Motet "Adornamus te," an admirable specimen of religious music. This Motet has been erroneously ascribed in modern reprints to Anerio, Pitoni, and other composers. Bach's grand Motet, "Singet dem Herrn," was sung with much vigour and intelligence. It is a long and trying piece for the voices. Besides these some standard English madrigals of the sixteenth and seventeenth centuries, and Morley's Ballet, "You that went to my pipe's sound," were given with much effect. Miss Adelina de Lara contributed some pianoforte solos. Beethoven's Variations in C minor lacked finish, and the Schumann Romance in F sharp major lacked charm, but Brahms's Scherzo in E flat minor was successfully rendered. Dr. Villiers Stanford conducted the choral music with his accustomed ability.

Herr Waldemar Meyer gave his second orchestral concert on Wednesday afternoon. Brahms's Violin Concerto may not be through-

out an inspired work, but the music is dignified and full of noble effort. Moreover, it is a work which grows upon one at each fresh hearing. Herr Meyer gave an earnest reading of the music. He also performed a Ries Suite with much skill. Mrs. Moore-Lawson sang a graceful Aria from Mozart's early opera, "Il re pastore" (with Violin Obbligato by Mr. G. H. Betjemann), and some effective songs by Ries and Hubert. She has a good and well-trained voice. The orchestra was under the careful direction of Mr. Henschel. Mr. C. E. Stephens also conducted the Finale of his Symphony recently produced at a Philharmonic Concert. J. S. SHEDLOCK.

MUSIC NOTES.

IN addition to the works already announced for performance at the Handel Festival next month, the programme on the Selection Day will include a "Gloria" for double chorus and double orchestra. It was composed in 1707, when Handel was twenty-three years of age. The original autograph MS. signed "G. F. Hendel, 1707, 13 Gulio, Romae," belonged to Mr. Kerslake, of Bristol, but was burnt in the fire which destroyed his library at Clifton in February, 1860. A copy, now in the possession of Mr. W. H. Cummings, has been obtained from the Colonna Library in Rome. Mr. W. S. Rockstro, in his Catalogue of Handel's works mentions a "Gloria" as "disputed."

OLIPHANT, ANDERSON, & FERRIER'S LIST.

NEW LIBRARY EDITION OF "RUTHERFORD'S LETTERS."

This day, large 8vo, price 10s. 6d., with Illustrations and Facsimile Letter.

THE LETTERS OF SAMUEL RUTHERFORD,

WITH A SKETCH OF HIS LIFE, NOTICES OF HIS CORRESPONDENCE, GLOSSARY AND LIST OF HIS WORKS.

Edited by Rev. A. A. BONAR, D.D., Author of "Memoir of R. M. McCheyne."

NEW NOVELS IN ONE VOLUME.

BY MRS. J. H. NEEDELL.

Crown 8vo, 6s., cloth extra.

UNEQUALLY YOKED: MADELINE POWER: a Novel

A NOVEL.

By Mrs. J. H. NEEDELL,

Author of "Noel Chetwynd's Fall," &c.

"Exceedingly well written, full of humour, interest, and pathos."—*Lady*.

"In many respects a powerful novel."

Glasgow Herald.

"The young wife is drawn with true sympathy and insight, and the charm of this figure coupled with the pleasant style in which the story is written make the work as readable and enjoyable as any that has come from its author's pen."—*Scotsman*.

Paper boards, 2s.; cloth, 2s. 6d., with Frontispiece.

AMONG THE HEATHER.

By A. C. HERTFORD, Author of "Love Conquers All," &c.

BY THE AUTHOR OF "ISA."

Crown 8vo, 5s., cloth extra.

MADELINE POWER: a Novel

By ARTHUR W. MARCHMONT, Author of "In a Novel."

"The story is very pleasingly told."—*Scotsman*.

"A very interesting story."—*Aberdeen Free Press*.

BY ANNIE S. SWAN.

Crown 8vo, gilt top, 6s.

MAITLAND of LAURESTON:

a Family History. By ANNIE S. SWAN.

"This is a good story in every respect."—*Times*.

BY THE SAME AUTHOR.

NEW EDITION, crown 8vo, gilt top, 6s.

SHEILA.

"The whole story is charming."—*Academy*.

SATURDAY, MAY 23, 1891.

No. 994, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Oxford Movement, 1833-1845. By the late Very Rev. R. W. Church. (Macmillan.)

THE late dean of St. Paul's had earned an esoteric reputation as a sort of guileless Ahitophel, even higher than the public distinction which he gained by one memorable act of courage,* and by the tantalising books, full of glimpses of unexplored horizons, which were all that he had strength to give us. His latest, and in some ways his ripest, work is tantalising too. He expressly disclaims any idea of giving a theory of the movement or of its place in history: his aim, he says,

"was simply to preserve a contemporary memorial of what seems to have been a true and noble effort that passed before my eyes, a short scene of religious earnestness and aspiration, with all that was in it of self-devotion, affectionateness, and high and refined and varied character, displayed under circumstances which are scarcely intelligible to men of the present time."

And they are left scarcely intelligible still. There can be very few left with either the right or the opportunity to judge whether Newman really misconstrued his mysterious individuality: whether it was really given to him to make others feel more than he habitually felt himself. The same question suggests itself as to Wesley, who, with more practical organising power, less spiritual and speculative insight, less—much less—affectionate sensitiveness, presents the same combination of a keen conscience, a clear mind, and a cool temperament. The question will probably remain unanswered, as Dean Church has left it untouched. He fully confirms Newman's older account of his receptivity, and how much he was influenced by those he led. He tells us that he would have been a more effective leader, a far more formidable opponent, without his touching anxiety about the opinions and the feelings of his friends. One phrase is very significant. "If he had had the hardness of heart of the proselytiser—" Was F. W. Faber so hard-hearted, who, as soon as he went himself, set to work to convert his parish? Something of the same eagerness would have spared Newman and others very much in the dreary years between Tract XC and the Essay on Development. Were these years a wasting sickness, or a refining fire, or both? Any way, the tender, pathetic respect for the faith of others, the care to keep them back rather than draw them on, prolonged the

pain. Most readers of the *Apologia* are under the impression that the pain was inevitable, that he had started on the road to Rome as soon as Froude's influence succeeded Whateley's, and that if he was not unfaithful he had to go on to the end. Dean Church dwells upon the possibility that, if only Ward had been less importunate and the heads of houses less inquisitorial, Newman might have been spared leaving those who loved him and those whom he loved for strangers from whom he hoped nothing: that he might have grown old among friends for whom he had done much instead of among aliens for whom, with all his gifts, he was to do but little. Certainly it does seem as if, after he lost Froude, Newman was very liable to be perplexed by opposition, to watch for omens, to be at the mercy of accidents.

In fact, the book makes us ask whether the Oxford Movement itself was not a sort of gigantic accident, both in the ordinary and the Aristotelian sense. Dean Church never knew R. H. Froude personally, but his careful and luminous study of him puts his historical significance in quite a new light. He compares him to Pascal, who wrote some classical pamphlets and some imperishable fragments. Froude, who wrote nothing worth reading,

"stretched out his long length on Newman's sofa, broke in upon one of Palmer's judicious harangues about bishops and archdeacons and suchlike with the ejaculation, 'I don't see why we should disguise from ourselves that our object is to dictate to the clergy of this country, and I for one do not want anyone else to get on the box.'"

After all, Froude effected more than Pascal. He was the first to see through all the hereditary compromises from which the *élite* of the English clergy have been trying for two * generations to cut themselves loose. Pascal provided French Protestants with a basis for their belief, and French men of the world with a good case for despising Jesuits. Koble converted Froude, and Froude influenced Newman. Indeed, there would have been no Tractarianism without Froude. There would have been an ecclesiastical reaction and a religious revival without the Tracts; and the Tracts themselves, as Dean Church tells us, derived their real importance from the sermons of the Vicar of St. Mary's. Oddly enough the originators of the movement, the two Kebles (Tom was quite as important as John) and their most intimate disciple, Isaac Williams, were startled and not exactly edified by the great speculative propaganda that had been started, and, above all, by the fact that Newman actually looked for visible results. The "Bisley school"

"would have been quite content with preaching simple, homely sermons on the obvious but hard duties of daily life, and not seeing much come of them; with finding a slow abatement of the self-indulgent habits of university life, with keeping Fridays, with less wine in common-room."

Nevertheless, it was the fate of Williams (who started the Plain Sermons, to provide the movement with ballast) to compromise

it with his tract on Reserve, as Keble did by his tract on Patristic Mysticism.

The light thrown upon the relation between Froude, Newman, and the Kebles is probably the most important single contribution which the Dean makes to history. The sketch of Marriott, who with considerable speculative power deliberately chose to be the disciple, and, in a sense, the servant, first of Newman and then of Pusey, is also interesting, though the quaint outlines of a lovable figure have been given more picturesquely by Dean Burgon. There is a vivid picture of the Oxford of sixty years ago—so provincial, and so much more powerful than the cosmopolitan Oxford of our day; a miniature *πῶλις*, with its hebdomadal oligarchy, who lived apart in a sort of state, simply enough by the standard of the outside world, but, as members of common-room thought, luxuriously.

Dean Church is very severe upon the heads of houses. He is quite impartial; he condemns their treatment of Hampden as well as their censure of Tract XC. He brings out more clearly than has been done hitherto the exact character of Hampden's inconsistent orthodoxy, and proves that Newman did not calumniate him. He distinguishes clearly between acts of repression against an individual which, though invividiously, may fairly be called persecution, and the incidental disadvantages which may fall on individuals under the terms of a permanent settlement; but, with all his desire to be fair, he says, "The note of failure is on this mode of repression."

What were the poor heads of houses to do? They were the appointed guardians of a traditional system which commended itself to common sense and was not constructed to meet speculative criticism. Hampden was more learned in a perverse way than most of them; the Tractarians were abler and better. Was that a reason why they were to desert their post or to fold their hands and watch? The wisdom of Gamaliel may earn the curse of Meroz. At first, it seemed as if even Conservatives might make allowances for the Tracts. Arnold and Whateley lost their balance in the presence of the menacing coalition of Dissenters and Whigs as completely as Keble. But the danger was over as soon as the majority in favour of letting the Church alone had asserted itself: the danger was over, the authorities were free. Were they to let the traditional orthodoxy be sapped by the endless developments of a revolutionary theory, started to prepare for disestablishment and disendowment, and lately remodelled to meet the scruples of those who thought Tridentine Romanism a better working system than Caroline Anglicanism? The battle in which the Bishop and the Hebdomadal Board were defeated by Newman and Pusey was not unlike the battle in which St. Callistus put down Tertullian and St. Hippolytus. It is true there is no appeal from the verdicts of history, but we need not take the responsibility of indorsing them. Dean Church gives some very valuable and pregnant hints on the question what right the movement had to survive the loss of its leader. He thinks that in the Lectures of 1836 the whole case against Rome was not stated.

* Characteristically, in the present work all the credit is given to his colleague, Mr. Guillemand.

* The third is making new compromises of its own.

"Rome has not such a clean record of history, it has not such a clean account of what is done and permitted in its dominions under an authority supposed to be irresistible, that it can claim to be the one pure and perfect Church entitled to judge and correct and govern all other Churches."

No doubt the mediæval and also the Tridentine papacy asserted and even held more power than it could use; the same is true of the undivided hierarchy of the fourth and fifth centuries. The appeal to the past fails too. But this does not affect Dean Church, who always looked forward, who never committed himself to the *γενναίον ψεύδος*, on which "Anglo-Catholicism" has thriven these fifty years, that the Church of England holds and teaches all that the undivided Church hold and taught, and that the witness of the undivided Church is clear. His favourite among the second generation is clearly J. B. Mozley, who laid the axe to the root of the tree. When all had been said, when all that history has proved, or may prove, had been faced, no doubt it was true that

"the English Church was, after all, as well worth living in and fighting for as any other; it was not only in England that light and dark in teaching and in life were largely intermingled, and that the mixture had to be allowed for."

The temper whose last word is *Σπαρτὰν ἔλαχες* is a very high one, but it is far from the peremptory exclusiveness of the *Lyra Apostolica*. Nothing of the original movement survives in a writer like Dean Church, beyond austere aspirations and a respect for history.

G. A. SIMCOX.

The Life of John Ericsson. By Colonel W. C. Church. In 2 vols. (Sampson Low.)

THE subject of this work was a shining light of our wonderful age of material invention. In the case of Ericsson, as in that of Brunel, audacity and genius sometimes failed to secure the success accorded to patient thought, and originality was more marked than caution and judgment. But Ericsson accomplished great things for mankind. He effected a revolution in naval construction; he enriched the whole domain of engineering science; his experiments and calculations may be precursors of vast improvements in the estate of humanity. These volumes are an elaborate review of the life and achievements of this master of his art; and though somewhat marred by extravagant eulogy—Mr. Church thinks that Ericsson was never in the wrong—they form an excellent and well-arranged biography. The author is well fitted to deal with his theme; his industry and research are praiseworthy; he has collected materials from numberless sources; and his style is simple, but terse and lucid. We have seldom read a more agreeable book.

John Ericsson was born in 1803 of mingled Swedish and Scotch descent. His childhood was passed in his native Vermland; and the lakes, the mountains, and the woods of that region seem to have attracted his attention, from his earliest years, to the marvellous play of the forces of nature, from which he drew inspiration in his life

of invention. While quite a boy he gave remarkable proof of the mechanical skill which made him famous; he made models of a pump and a sawmill, which were the wonders of his rustic home; and he showed extraordinary proficiency in sketching and mapping. He was an overseer, when in his later teens, of the Gota Canal, an important work, and still one of the best in Europe; and the ideas that led to some of his triumphs and discoveries were formed in this youthful period. He served in the army not without profit; his talents for topography were reported to Bernadotte, by this time raised to the throne of Sweden, and by the advice of the old Napoleonic soldier he went off to England to seek honour and fortune. Ericsson settled in London in 1826, and was long a partner of the late Mr. Braithwaite, the head of a firm of repute for the manufacture of machines. The age of steam had, for some time, opened, and the capacity of Ericsson was soon displayed in his skill in applying this tremendous force. The germs of some of his best inventions belong to this time; and he made many improvements in steam machinery, which economised fuel to a large extent, an object he kept in view through life. One of his first achievements in London was a steam fire engine, of power before unknown; but he hardly became conspicuous before 1829, when he competed for the prize for the best locomotive for the new Liverpool and Manchester Railway, then deemed a portentous birth of time. There can be no doubt that Ericsson's "Novelty" was a better engine than Stevenson's "Rocket": it attained a much higher rate of speed, and had the immense advantage of artificial draught, a mechanical discovery of extreme value; but it was hastily constructed, and the boiler burst; and Stevenson's care and caution prevailed. The superiority of the design of the "Novelty" is, however, attested in the record of *The Times*; and Ericsson's "steam-blast" was, in fact, a mechanical appliance without which the modern locomotive would be impossible. The next achievement of the now rising engineer forms one of his principal titles to fame. The invention of the screw, as a propeller for ships, in the place of the paddle, has been claimed by mechanicians of several countries; but Ericsson certainly was the first who turned this great instrument to practical account, and perceived how navigation, and, more especially, the construction of naval force, would be affected by it. Having fitted a steamboat with the new device, he offered the screw to the Admiralty in 1837; but, with the obstinacy of professional routine, always of great strength in the naval service, the Board rejected the strange contrivance as utterly worthless, and, indeed, foolish. Ericsson betook himself in disgust to the United States, and often declared that this was the worst of the many exhibitions of official blindness of which he had experience in a long life.

The *Stockton*, prepared for Ericsson's screw, was the first vessel of the kind to cross the Atlantic; but she made the voyage under sail only. The device was obviously adapted to inland waters; and before long a flotilla of screw steamers

appeared on the lakes and rivers of the West. Yet Ericsson found the Naval Department at Washington quite as difficult to move as that which now holds its state at Whitehall; and it was not until 1841 that the notion of applying the screw to men-of-war was even entertained in the United States' Navy. The *Princeton*, built from Ericsson's plans, was launched in the spring of 1842. This remarkable vessel became the precursor of the screw steam fleets of the maritime powers; but it was not until many years afterwards that this method of propulsion was frankly recognised, though it might have been supposed that the enormous advantage possessed by the screw in armed naval construction would have been obvious from the first moment. The *Princeton* had more speed than most war steamers; her motive power was hardly exposed to an enemy; her machinery occupied but scanty space; her consumption of fuel was comparatively small; and her superiority, therefore, over ships trusting to the paddle, and intended to fight, was palpably manifest. Ericsson is entitled to the honour of the grand invention. By 1858—a revolution in itself—the screw had completely replaced sails and paddles as the principal force for moving men-of-war of the larger classes; and no one who beheld the sight can forget how in 1855 the French *Napoléon* forced her way, by the aid of this mighty instrument, up the Bosphorus against a strong wind and current, and no ship under canvas attempted to follow. Genius, however, especially if it aspires high, cannot in all instances command success; and the next experiment made by Ericsson in applying a new force to locomotion at sea failed, though it contained a fruitful principle, destined, hereafter, perhaps, to become most precious. While still quite a youth he had been struck by the extraordinary expansive power of heat; he persuaded himself, as he grew in years, that he could make this agency supplant steam; and he resolved, after his success with the *Princeton*, to design a "caloric ship," the engines of which would be moved by hot air in a state of combustion. For two reasons this "new fire ship" failed: the machinery was too large and complex; and the heat below the deck was too fierce to be borne; and possibly this is one of the instances in which Ericsson was too eager and sanguine. Still, caloric engines, on a small scale, have been turned to account for many purposes; and good judges have thought that a caloric ship is a possibility, at least, of the future. It is a most important point that, in constructions of the kind, the economy of fuel is very large.

Ericsson's next construction certainly was the crown of his triumphs in the art of mechanics. Sixty years ago wooden ships of war were condemned, in the judgment of men of science, by the Paixhans shell, a most destructive missile, which, it was foretold, would turn them into "mere shambles." Yet—such is the power of tradition and habit—these magnificent structures, with their clouds of sails—the noblest spectacle ever seen on the ocean—continued to be built for many years; and their efficiency was not really doubted until they had to contend with the forts of

Sebastopol. Iron floating batteries, of French construction, did excellent service in the Crimean war; and—the cry “Keep out shells” having become decisive—this experience led to the ironclad warship, the first specimens of which were *La Gloire* and *The Warrior*. As every one knows, these vessels were a compromise between the old sailing ship and an iron battery meant to keep the sea; and to this day they remain the essential type of most of the armoured ships of modern navies, which retain a comparatively high seaboard, and fight their guns on the broadside principle. Ericsson, with the intuitive glance of genius, thought this mode of construction utterly wrong; and he embodied conceptions completely different in the warship, which was his greatest invention. He had noticed in youth how a low raft could float with safety on the most stormy lake, and could be steered from a hut rising from the deck; and science had taught him the enormous force of a few great guns throwing weighty projectiles. The famous *Monitor*, with her low line of freeboard, her pilot-house, and her ingenious turret, containing huge cannon, and made to revolve, so that they could fire in every direction, was the creation that grew out of these ideas; and the duel at Hampton Roads in March 1862, which astounded, and perhaps alarmed, Europe, proved the extraordinary power of the new ship of war under conditions favourable to her fighting qualities. The invention of Ericsson caused at once a revolution in naval construction. Every maritime state set to work at “Monitors,” and added these craft to its existing navy; and the colossal turret-ships of the present day are simply “Monitors” enlarged and improved. The experience of war alone, perhaps, can prove if vessels of this description will fulfil all the requirements that are expected from them. The fate of the *Captain*, although unjustly, may have created prejudices in this respect; and the large majority of the ships of war of Europe are still built with a high freeboard, and carry their guns in the old broadside fashion. Ericsson, however, was never shaken in his faith. He held through life that the “Monitor” was the true type of the modern warship; and he insisted that the navies of England, of France, and of Italy, were largely constructed on false principles.

We have no space to examine, in detail, other inventions of this great engineer. The genius of Ericsson inclined to the mechanism of war; he had the Swedish dislike of Russia; and he was jealous of the supremacy of England on the sea. He designed fleets of gunboats for Sweden and Spain, which proved, when tried, of the greatest use; he turned his attention to torpedo warfare, and he maintained that this discovery might be made destructive to the huge ironclads of England and France, and might equalise the conditions of power at sea, giving weak nations extraordinary strength. He invented and improved many kinds of weapons and appliances for artillery at sea; and he addressed himself for years to one of his chief objects, the saving of fuel in the use of steam. Many of the inventions of the last thirty years for making ordnance

and small arms more effective, for giving the steam engine increased force, and for reducing its consumption of coal, are due to this most remarkable man. Indeed, Ericsson, as he said himself, had a claim to more patents than any other inventor. He devoted himself towards the close of his life to one of his favourite speculations, the power of hot air; and he made curious investigations on the heat of the sun, and in the uses it might possess in mechanics. He died in 1889, at the age of eighty-six, on the anniversary of the great fight of the *Monitor*; and his remains were fitly transferred to Sweden, his adopted country having first mourned his death, and acknowledged his many and splendid services. Ericsson was certainly one of the greatest masters of mechanics in an age of mechanical genius.

WILLIAM O'CONNOR MORRIS.

News from Nowhere. By William Morris. (Reeves & Turner.)

Not long past, there was published a book, of an ugliness so gross and a vulgarity so pestilent, that it deserved the bonfire and the hangman, the fate of no worse books in a bygone age. The book has been bought by tens of thousands, and by hundreds of thousands, in England and America; clubs and societies have been called after its author's name. That book is *Looking Backward*. It purported to give us an insight into the perfected society of the future; and what we saw was a nightmare spectacle of machinery dominating the world. Yet, despite the ugly and the vulgar features of Mr. Bellamy's dream, it was easy to sympathise with his intention: that modern society is far from perfect, that competition can be most cruel, that our conditions of life are restless and mean, few will deny. Whether the preaching of Socialism or of Communism be a happier solution of our difficulties, than a strong faith in the virtues of patience, of courage, and of time, is another question. We are all agreed, that the existing state of the world is not over pleasant.

But among all the Utopian or ideal pictures of a reformed world, drawn for our contemplation by enthusiasts, this book by Mr. William Morris has a singular charm. It cannot, indeed, rank with the great schemes of Plato, More, and Bacon: it has far less perfection of workmanship, less completeness of design, less dignity of tone. But these “Chapters from a Utopian Romance” do not pretend to completeness; they aim at one thing only, the description of an “Epoch of Rest.” Life to-day is restless, busy, and troubled; full of sordid cares, and wasted by laborious trifles: we hurry and scramble round the world, pushing and hindering one another, losing all the peace and joy of life. Mr. Morris here shows us, what sort of life he would like to live, what is his conception of the *mens sana in corpore sano*. And from that point of view we will dwell upon the book, with only one remark about the preliminary politics, or the historical origin, of the happy state which it depicts. Mr. Morris draws a vivid, and upon the whole, a convincing sketch of the social revolution in its last stages of open conflict,

and a no less vivid sketch of its ultimate outcome; he does not tell us the details, nor even sketch outlines, of the most important period, the period of transition. He gives us a dim notion, just a vague glimpse; but so far as his book be meant for more than a beautiful dream, it is here that he is weak. No man, however inclined to fight side by side with Mr. Morris, could risk the terrors and the horrors of civil war, unless he had a greater certainty than this book could give him, that all the misery and the bloodshed would end in peace and happiness; not in some English version of the French Republic, or even of the American Commonwealth.

But we are not bound to take *News from Nowhere* as a socialist guide book: let us consider it as a vision of the Promised Land. The two chief tenets of this new faith are these: pleasure in work is the secret of art and of content; delight in physical life upon earth is the natural state of man. Whatever interferes with that pleasure, and with that delight, is wrong; work that cannot be done with pleasure, ideas that fill men with despair and gloom, stand self-condemned. We must have no grinding and tyrannous machines of labour; no poisonous and blighting influences of thought. If your factory life makes of you a sickly shadow, or a sullen brute; if your subtil introspection turns you into a barren dreamer, or a moping pessimist: then, says Mr. Morris, and surely we all say so too, then away with those manufactures and with those metaphysics! Life has become endlessly complicated by all sorts of interests and of wants, that do not make life happier; we must simplify ourselves, and return to “the primal sanities” of nature. That fine phrase of Mr. Whitman describes the spirit of this book: we are sophisticated, let us go home to the early “primal” sources of simplicity and joy; we are perplexed, let us go back to the sources of “sanity” and strength. Upon the relations of art and work, no one is any longer doubtful, where the truth lies. Although little advance be made towards the perfect conditions of beautiful workmanship, in theory we are all agreed. But the second point is less firmly recognised. What Browning called “the mere joy of the living” becomes less valued every day. Nowadays people seem to pride themselves upon having headaches of body and soul; to relish the sensitiveness of their nerves, their delicate and diseased condition. Effeminate persons give us sonnets upon nature, full of fantastic sentiments, and of refined phrases; but a twenty miles' walk or a sleep under the stars would be to them a painfully athletic pleasure. Nor have they that loving and personal regard for the very earth itself, which Mr. Morris so rightly prizes: that sense for the motherhood of the earth, which makes a man love the smell of the fields after rain, or the look of running water. These things, to the modern poet, are so much material for rhyme and metaphor: “rain” and “pain,” “stream” and “dream.” We have fallen in love with a way of torturing nature into complicity with our vague emotions: we

should do well to gain the Homeric simplicity and grandeur of mind, the Lucretian sense of majesty and power, the Virgilian sense of rapture and of glory, in the presence of the natural earth. Mr. Morris, from his earliest poems up to this book, has always shown this rightness of mind, this healthy delight in physical existence, because the world is so exhilarating and so lovely. Man has been distinguished from the other animals in many ways; not the least distinction is this: that man alone takes a double pleasure in his life upon earth, a pleasure of the mind and of the senses.

Mr. Morris, in his account of the reformed world, reminds us of many various authors. Much of his homely affection for the seasonable works of agriculture recalls those "homespun Georgics," as Southey called them, of Tusser, redolent of the farm and field, full of honest country mirth and manners. Then, again, many phrases in the old man's description of this new Arcady remind us of Athenian writers and ideas: "We live amongst beauty without any fear of becoming effeminate, we have plenty to do, and on the whole enjoy doing it. What more can we ask of life?" It is like Pericles' great speech: Athens, he said, is very admirable, φιλοκαλοῦμεν γὰρ μετ' εὐτελείας καὶ φιλοσοφοῦμεν ἄνεν μαλακίας. Only we cannot help having a general impression that Mr. Morris's Utopia or Arcadia, for all its beauty and its energy, would be a little stupid. Perhaps, in his laudable dislike of everything affected or merely academic, Mr. Morris represents his ideal folk as underrating slightly the very joy and pleasure of books and learning. Upon the whole, his conception of man, as he should be, has much in common with Aristotle's: not, of course, in the practical ideas of citizenship and of politics, but in the moral ideas of man's character and business. "A long life of virtuous activity, according to your own nature, and as developed by exercise." Mr. Morris would accept that definition of a good life. But it includes the full development of all the faculties; one faculty cannot do duty for another. One man is good at harvest, and another over painting, and a third in literature; now Mr. Morris at times is inclined to say, that if you are serviceable in the fields, it will do instead of improving your mind with books. It is merely an excess of zeal, in defence of despised and neglected employments, that so makes Mr. Morris unjust to those which have been exalted with exaggeration. There are too many books in the world; we judge too much by a literary standard; we ignore the culture of mind and body in other ways; but good books remain the best things in the world, after the hills and the fields.

The picture of London, embowered in orchards and set with gardens, is very inviting; but there is one thing which in conscience we cannot pass by. Mr. Morris classes together as "silly old buildings" and as "poorish buildings" St. Paul's and the British Museum; and he speaks of St. Martin's-in-the-Fields and of the National Gallery in one breath as "an ugly church" and a "nondescript ugly cupolaed building." That any man, and far more that Mr.

Morris, should couple together the splendid works of Wren and of Gibbs with the absurd productions of such as Wilkins, is deplorable. There are many men—and I am not ashamed to be one—who, while enjoying and reverencing to the full the medieval masterpieces, would give up a dozen other cathedral churches, could that save St. Paul's from destruction. It is bad enough to have Wren's design spoiled by such an abomination as the present reredos; but that is removeable. The attack of Mr. Morris will remain. Is it that Vitruvian design in architecture is to him very much what "frigid classicality" is in literature? Let me quote the wise words of Mr. Selwyn Image:

"Do not go demanding everywhere your own idols. In many shrines learn to worship the Divinity, which is revealed entirely at none. For sensitiveness, for flexibility, for an inexhaustible capacity of appreciation, send up your perpetual prayers."

But there is so much beauty, so much strength, so much sanity in this short book, that our chief thoughts of it must be thoughts of gratitude. Its readers will turn, again and again, to these virile and pleasant pages, and especially to those which tell of England's natural beauty, of the sylvan Thames, and of the Oxfordshire meadows. Like that other Oxford poet, who loved "the shy Thames shore," Mr. Morris consoles and heartens us. We see, our eyes clear of city smoke,

"Bathed in the sacred dew of morn,
The wide aerial landscape spread—
The world which was ere I was born,
The world which lasts when I am dead;
Which never was the friend of one,
Nor promised love it could not give,
But lit for all its generous sun,
And lived itself, and made us live."

LIONEL JOHNSON.

The Book of Record: a Diary Written by Patrick, First Earl of Strathmore, and other Documents relating to Glamis Castle, 1684-1689. Edited by A. H. Millar. (Edinburgh: University Press.)

THE above volume is the latest issued by the Scottish History Society, which was founded under the presidency of Lord Rosebery, some four years ago, for the discovery and printing of hitherto unpublished documents illustrating the civil, religious, and social history of Scotland, and in exceptional cases for the translation of printed works of a like nature that have not hitherto appeared in an English version. The names of Prof. Masson and Mr. T. Graves Law, the chairman and honorary secretary of the society, and those of the well-known historians and specialists who appear on its committee, are sufficient to indicate that its management is distinguished by knowledge and judgment; and this is proved by the interest of the eight volumes that have been already published, the only translation among them being the Rev. Canon Murdoch's English version of "The Grameid" of James Philip. The ninth volume, the "Glamis Papers," now issued, is not the least interesting of the series.

It consists of "The Book of Record," or diary, with autobiographical interpolation, of Patrick, First Earl of Strathmore, edited from the MS. now at Glamis, and supplemented by unpublished contracts and accounts connected with that restoration of the castle to which the diary mainly relates. It details, in a manner curiously intimate, the struggles of an impoverished young Scottish nobleman to better the fortunes of his family: struggles which, involving hourly self-denial and the exactest care and frugality, issued in his reducing the burdens upon his estates by more than one-half, and raising from their ruins his patrimonial seats of Castle Lyon and Glamis Castle.

Patrick Lyon, third earl of Kinghorn, created Earl of Strathmore in 1677, was the only son of John, second earl, and Lady Elizabeth, daughter of the first earl of Panmure. His father, a facile, easy-going man, had gradually entangled himself in various troubles, political and monetary; and when he died, in 1646, his four-years-old heir was left with an involved and impoverished patrimony. His curators appear to have been careless or worse; his mother made a second marriage, and her husband, the Earl of Linlithgow, proved a most rapacious relative. So, in this youth's case, the customary result of a long "well-nursed minority" did not ensue; and when, in the Restoration year, he left St. Andrew's University he had troubles enough before him.

Denying himself "the satisfactions which the most part of youth of that age desire, of going abroad and travelling," the lad of seventeen set himself earnestly to "the restoring of my family to some condition of living, for which I was determin'd to spare no pains or travell, after which time I did verie seldome give my curators the trouble of meeting together."

In May of that year, 1660, he took up his residence at Castle Lyon (now known by its original name of Castle Huntly) in the Carse of Gowrie. So dismantled was the place, that he was obliged to borrow a bed from Mylne, the minister of Longforgan, and to buy back from his father-in-law, "att a deere enough rate," the furniture of a single room, and certain silver spoons, "whereupon my father's and mother's names were," finding also "some old potts and pans q^{ch} were verie usefull, so within few days I gott two rowmes more dressed up as a begers cloak consists of many cluts of divers colors." Next he sent for his only sister, the devoted Elizabeth, afterwards Lady Aboyne; and her woman's hand gave some beauty to the place, stitching and arranging the "suite of arras hangings and the English cloth" that had come from London. For "so young as were both, we consulted together and partlie by our owne conclusions and partlie by advice" they "got together as much of cours furniture as in a verie mean and sober way filled all the rooms of my house."

To London he himself went in the autumn, "to kiss his Majesty's hands":

"But I bought litle or nothing that yete safe cloaths q^{ch} were necessary for me, time even verie litle of that being still in mourning for my mother. Some things I brought for my

sisters use fitt for her when her mourning was over, so that I made all my journey for two hunder pond sterlin, and had I been as moderate in all my severall journeys to that place since from q^{ch} I have brought things of great value for the furniture of my houses, I had saved many a pound and pennie, but I acknowledge a great dale of weakness in my humour that way inclining to be verie profuse upon all things of ornament for my houses as I have been upon building. Let this only serve to excuse me if in this I have exceeded that what has been bestowed upon the first or expended upon the second has been acquir'd with pains and industrie, and performed with much care and labour, and will be tokn's of my both (*being things of Long insurance*) to my posterity who I hope shall enjoy the pleasur of it whereas indeed, I have suffered the toil."

Presently, however, in August, 1662, came his marriage to Lady Helen Middleton, second daughter of the celebrated soldier of fortune of the name, then in the heyday of his short-lived power as royal representative in Scotland. The ceremony was performed in the Abbey of Holyrood-house, by Archbishop Sharp, the Commissioner's close ally at the time. Now, surely, was an occasion when the virtuoso-bridegroom might fittingly indulge his taste; so "I caused bring home a verie fin cabinet the better was not in the Kingdome in these days which I never told my wyfe of till her coming home, and upon her first coming into her own chamber I presented her with the keyes of the Cabinet."

The first eight years of their wedded life were spent at Castle Lyon, where the earl, gradually as his means permitted, carried on the building operations begun by his father, which transformed the house from "a mere place of refuge in time of trouble, with ane old scurvie battlement," into a dwelling suited to modern ways of life."

"Such houses as it formerly was," remarks the peace-loving, "gear-getting" earl, "truly are quyt out of fashione, as feuds are, which is a great happiness . . . and I wis that everie man who has such houses would reforme them, for who can delight to live in his house as in a prisone."

Next he turned his attention to "Old Glammiss," which had been improved and added to by his grandfather, the first earl, who is stated by tradition—unsupported, however, by documentary evidence—to have worked from plans furnished by Inigo Jones. In 1670 he removed with his family to his principal seat, adjoining his greatest estates, establishing himself "in that storry of the old house q^{ch} is on the top of the great staircaice for that storry was only glazed att that time": and the rest of the diary contains a detailed account of his restorations, and of the management of his estate and general affairs. It breaks off with an entry, on 15 June, 1689, of a payment to "Mr. Rankyne, Catechist in Dundee," the reason for its abrupt ending being that the writer was much occupied, just then, with—an attempted rebellion. He had engaged, along with his son and the Earls of Southesk and Callander, in a conspiracy to restore James II.: but presently he submitted himself to the dominant powers, retired to Glamis, resumed the improvement of his houses and estates, and finally died peaceably seven years later.

The various entries in the diary include much that is interesting to the student of social manners and conditions. Mr. Millar, in his careful introduction, has pointed out, in particular, the light that is thrown upon the monetary condition of Scotland at the time; how inadequate was the supply of metal coinage; to how large an extent payment in kind survived; and how commonly bonds, passing through various hands, were used as a substitute for a paper currency. The involved "tripartite compact" between Lord Strathmore, the Crown, and the town of Edinburgh, referred to at p. 90, may also be noted as a strange method of financial adjustment.

Not less interesting are the references to art that occur in connection with the restoration of Glamis, and the adornment of its newly erected walls. Whatever doubt may exist regarding the architect of the structure in the beginning of the seventeenth century, there is none as to the designer of the important additions of Lord Strathmore's time; for he tells us that he

"did not call in such as in this age were known & reput to be the best judges and contrivers, for I never bestowed neither money nor gold upon this head," but "I did upon my first resol^{on} of the chenge which I have made here make a skame and draught of my whole project, for unless men so doe they will infallibly fall into some mistake, doe that w^{ch} they will repent yinselves aftr, & be obleiged to pull their own work downe agane. Therefore necessarie it is for a man to desyne all at once (chalk is no sheers, and the desyning thereof does not impose any necessity upon the projector but that he may veie well prosect his designe by peccemals as he can . . .) . . . yet a man by this way prosecuting his designs, w^{ch} certainly is the best and easiest, needs extremely to be tempered with patience."

The walls once erected, he set to work upon their decoration. We have record of purchases from "Bailzie Brand in Edin^r," of "a cabinet for my fyne bed chamber, a very large looking glass for the drawing-roume, Table & Hands of Italian paste, very fine, & two special good glasses." Mr. Millar prints James Bristowe's contract for repairing the organ at Glamis, an instrument probably purchased by the Earl; for the editor shows good reason for believing that this may have been the organ of the Chapel Royal in Holyrood, "masterfully broken down" by the Presbyterians in 1638, which the kirk session of that parish decided, in 1643, should "be sold for a tolerable price & the money given to the poor."

The contract which the Earl entered into, in 1688, with "Mr. De Vite," or "Dewett Limner," for the execution of portraits and decorative work in the castle is printed in full. This artist was the Dutch painter, Jacob de Wet, who, with Jan Van Santvoort, the carver, is responsible for the series of royal portraits and the decorations at Holyrood Palace. The accounts for his work there, which was ended in 1686, have been printed by the late Dr. Joseph Robertson in the third volume of the Proceedings of the Society of Antiquaries of Scotland. The settlement for payment of what he did at Glamis led to a protracted law-suit: and the painter's account, with his Lordship's quaint remarks thereon, is given at page

107 of the present volume. The items include pictures of "Diana," "Europa," and "Icarus"; and the Earl notes that he had paid more than the contracted price,

"w^{ch} he choiced rather to doe then to fall short, considering lynnung a generous trade, and the Earle himself being ane encourager of artists designed no unjust thing to Mr. d'vit, and the Earle wishes w^t all his heart that Mr. d'vit had made as good and profitable acct. of his tyme ever since as he did for the short time he was w^t the Earle of Strathmore."

The reference here is to the fact that, after ending his work in the North, De Wet had embroiled himself in politics, had been seized and roughly treated by an anti-Orange mob in Edinburgh, and had been obliged to accept shelter for himself and his daughter at Glamis.

Other interesting references bearing upon art occur in Mr. Millar's notes, appended to "The Book of Record." These include an excellent brief biography of Sir William Bruce, of Balcaskie and Kinross, architect of the portion of Holyrood Palace erected by Charles II.; and by far the best account that has yet appeared of John Slezer, an account founded upon Mr. Millar's "Roll of Eminent Burgesses of Dundee," supplemented by an examination of documents in the Advocates' Library, and in the possession of Mr. C. S. Home-Drummond-Moray.

We have indicated the value of the volume as illustrating social manners and art in Scotland towards the end of the seventeenth century. But perhaps, after all, its deepest interest may be a more purely personal and individual one, an interest lying in the curiously intimate picture which the book affords of this old-world Scottish lord, who, from the humble days when he was "but a nominal Earle and in every man's apprehensione the estate irrecoverable," was gradually "out of weakness made strong"; and who, with his eye continually fixed upon "things of Long insurance," was able—simply by constant and scrupulous care for those small matters, which, disregarded, cause a man to "perish little by little"—to build up the walls of one of Scotland's stateliest castles where, now that two centuries have gone, his descendants still inhabit. J. M. GRAY.

La Fin du Paganisme. Par G. Boissier. (Paris: Hachette.)

M. GASTON BOISSIER, so agreeably known by his sketches of Cicero and his friends, his account of Roman religion earlier than the Antonines, and his *Promenades Archéologiques*, has been making a series of excursions into a period not so familiar and far less purely classical. He writes like a man who has enjoyed a change, and, with his wonted skill, he makes his readers share his pleasure. But M. Boissier's way of composing a book—the uniting of papers previously published singly—lends itself very readily to an art in which he excels, that of making a little go a long way; and our enjoyment of his limpid and well-weighted essays is at times marred by the reflection that their clever author might be doing more full and solid work. M. Boissier has gold to give, but, like the gold

which Martial received from his friend Paullus, it is gold beaten out rather thin.

The period of the later struggles of paganism and Christianity has been well, though not very recently, worked; and M. Boissier does not care to write a complete history, to give all the facts, or to make out a complete list of the causes which determined the issue of the contest. About the curious and almost unstudied phenomena which a dying religion presents, he has little to say. But he gives us taking portraits of the last pagans and of the first Christians, and a succession of bright pictures of men, of institutions, and of incidents. The attractive character of *Praetextatus*, the truth about the persecutions, the mission from the senate to Gratian to reclaim the altar of Victory, are brought vividly before us; and Symmachus helps us to live in the better pagan society of the end of the fourth century, polished, tolerant, and with no sense of coming danger from abroad.

But there is at least as full an account of the early Christians, studied not in their beliefs or practices, but in their writers. From Constantine, of the truth of whose conversion M. Boissier is more certain than some historians have been, we pass to a survey of the Fathers, whom a rough division classifies as "opportunists" or "intransigents." The judicious Augustine; Tertullian, uncompromising, but bent on spoiling the Egyptians; Minucius, the fair-minded; Jerome, the regretful scholar; and the unflinching Ambrose—all these stand out in their relation to the great questions of their day. Few questions were more important than that of the education for young Christians, and few distinguish more clearly the two veins of reasonable and of fanatical Christian feeling.

"Parmi les chrétiens qui appartenaient aux classes lettrées de l'empire, il n'en est presque aucun chez qui l'on ne retrouve l'influence des deux enseignements qu'ils avaient reçus, celui de l'école et celui de l'église."

But not all were well disposed to the former.

M. Boissier has acquitted himself very successfully on the difficult subject of the apostate emperor Julian. He does justice to his remarkable versatility of talent. He brings out the full importance of the emperor's essay on King Sun (one of our most important documents for the right understanding of the curious character of Julian), and shows how Julian was much less of a philosopher than a mystic. He goes pretty fully into the question why Julian failed in his religious enterprise, though he overlooks the decisive fact that the emperor's days were too few in the land. But Julian's attempt to reconvert the world to its old paganism was a hopeless one. Religions have their day; and the pagan religion, like the art which sprang out of it, had completed its cycle of development and decay even before Julian's time. Had he succeeded in turning men away from Christianity, his new-old State religion would have been something very different from what he looked back to. That religion, with cults considerably modified,

"avec un clergé bien organisé et surveillé

sévèrement, un enseignement moral et des dogmes, des hospices dépendant des temples et tout un système de secours charitables dans la main des prêtres, était en réalité une religion nouvelle."

FRANKLIN T. RICHARDS.

NEW NOVELS.

Kilmallie. By Henry Johnston. In 2 vols. (Ward & Downey.)

A Rainbow at Night. By M. E. Le Clerc. In 2 vols. (Hurst & Blackett.)

The Seal of Fate. By Lady Pollock and Walter Herries Pollock. (Longmans.)

Pretty Miss Smith. By Florence Warden. (Heinemann.)

The Soul of Countess Adrian. By Mrs. Campbell Praed. (Trischler.)

Save Me from my Friends. By E. F. Knight. (Longmans.)

Drifting Apart. By Katherine S. Macquoid. (Percival.)

Monsieur Judas. By Fergus Hume. (Spencer Blackett.)

PERHAPS the best, and certainly the easiest, way of indicating briefly the nature of Mr. Johnston's *Kilmallie* is to say that in theme and treatment it reminds one almost continuously of Mr. J. M. Barrie's masterpieces—*Auld Licht Idylls* and *A Window in Thrums*. This, however, is a remark which is susceptible of being misunderstood in two ways; and it is, therefore, necessary to explain that there is no intention of representing Mr. Johnston as Mr. Barrie's equal, which would be flattery, or as Mr. Barrie's imitator, which would be injustice. The writer of the *Thrums* stories is unmistakably a man of genius; the writer of *Kilmallie* cannot be so described, though he has sufficient observation, humour, and literary skill to make his book very enjoyable reading. Mere imitative work it certainly is not, for it follows on the lines of its predecessor, *Chronicles of Glenbuckie*; and, when the *Chronicles* appeared, its author, as a delineator of rural life in the Lowlands, was practically alone, with no later rivals than Galt and Dr. Alexander. The new book, like its forerunner, is not a novel of the ordinary kind, but rather a series of sketches, held together by a thin thread of continuous narrative; and its interest, like that of Mrs. Gaskell's *Cranford*, lies in the veracious, sympathetic, and humorous presentation of the characteristic features of a simple out-of-the-world community, where the play of the primitive instincts is held in check, not by the conventions of a complex urban civilisation, but by odd parochial traditions of moral and social propriety, which are really a great deal more formidable. *Kilmallie* is full of good things, so good indeed that it is difficult to say which of Mr. Johnston's sketches bears away the bell; but Wattie Dron's courtship of the severe Miss Wilson, the conversation concerning the minister's portrait, and the description of the tea-party given by the Misses Macnee, which ends with the terrible charge brought by the elder lady against a candidate for the eldership, are all delicious. Mr. Johnston evidently knows well the life of which he

writes, and he can depict it not merely with fidelity, but with grace, humour, and picturesqueness.

Readers of that pleasant book, *Mistress Beatrice Cope*, know that Miss Le Clerc is not a beginner; and, in any depreciatory sense of the word, she cannot fairly be called an amateur, for her writing, *qua* writing, is that of one who has left her prentice stage behind. There is, however, something in the construction of *A Rainbow at Night* which is not unjustly described by the word amateurish. Miss Le Clerc does not seem to have made up her mind whether she wanted to produce an elaborate sketch or a formal novel, and the natural result of her indecision is that she has fallen between two stools. As a sketch the book lacks simplicity of narrative scheme; as a novel it is deficient in the symmetry of form that is essential to imaginative satisfaction. The story has neither artistic opening nor artistic close; it breaks upon us and breaks away from us in a hap-hazard fashion. There are in the book two or three very well-drawn characters, and about the same number of good situations; but the author does not seem able to utilise them effectively for narrative purpose, and consequently, in spite of its really admirable writing, the story fails either to move or interest us. This is a defect for which merely literary virtues, howsoever respectable, are inadequate to atone.

The Seal of Fate is a romance of contemporary German life, which is graceful throughout, and not wanting in passages of sombre power. The central narrative motif of the story is the search of the young Baron Fürstenberg for the man who has done to death his dearest friend, Otto Hülfermann, and the terrible discovery that the unknown enemy upon whom he has sworn to take a terrible vengeance is the cherished brother of the girl to whom he has become betrothed. Of course this is a melodramatic scheme, but there are few things more absurd than the fashionable habit of using the epithet melodramatic as essentially a term of reproach. It signifies the kind, not the quality of art; and in *The Seal of Fate* we have that adequacy of effect which is secured when a pathetic and interesting conception is brought home to the imagination by workmanship in which there is neither prosaic flatness nor hysterical strain. The little procession of events which moves onward to the dénouement is skilfully marshalled; and though most of the few portraits are mere sketches, they are not too sketchy to have life and individuality. *The Seal of Fate* is certainly among the best of recent one-volume stories.

A very few gentle touches here and there would have transformed *Pretty Miss Smith* into a recognisable burlesque of the class of fiction of which Miss Florence Warden is herself such a famous purveyor. As, however, these touches have been withheld, it may be assumed that we are intended to take the book seriously; and this is by no means an easy task. Even the most experienced reviewer or most indefatigable novel-reader will find it difficult to recall a novel in which the characters are led through a

wilder dance of grotesque improbabilities than that through which Miss Warden leads her heroine and the other people, masculine and feminine, who figure in her bewildering story. The Miss Smith with whose fortunes and misfortunes the writer mainly concerns herself is not only very pretty, but very rich; and by the provisions of the will under which she inherits her wealth she is compelled to live in a house attached to a brewery in Battersea—surely the hardest condition ever imposed, even in fiction, on a young lady legatee. Here she is driven to the verge of madness; for her bedroom chimney, unlike any real or imaginary chimney in literature, runs up, not into the open air, but into a loft of the brewery, whence some miscreant sends live owls down into the young lady's chamber as soon as she is comfortably settled in bed. Another lady is still more unfortunate, for she is hurled into a machine and torn into small pieces; but how this comes to pass, and what is the fate of the heroine, the miscreant, and the owls are mysteries which will be revealed only to earnest students of *Pretty Miss Smith*.

The next two books deal with what is rather absurdly called "occultism"—a theme of which "the judicious" are surely becoming somewhat tired. Nor is it likely that their flagging interest will be revived by *The Soul of Countess Adrian*, though the book, in spite of many absurdities—or what seem such to the simple mind—has the "go" in which Mrs. Campbell Praed's work is seldom deficient. The title of the story is of the Hibernian-bovine order; for the peculiarity of the Countess Adrian is that she has no soul at all, in at least one sense of that rather vague word. She is, however, a superbly-beautiful human animal, with unusually well-developed sensuous instincts; and in the act of death she manages to transfer her objectionably warm temperament to her rival, who immediately exhibits a startling change of demeanour, which proves repellent rather than attractive to the gentleman most immediately interested. Things are rather uncomfortable, when suddenly an adept in the mysteries of the new Buddhism appears in his astral body, exorcises the intruding "soul," or whatever it may be called, and restores Miss Beatrice Brett to her natural propriety, so that she and Mr. Bernard London are able to live happy ever afterwards. It will be seen that the story is rather wild, but it is both readable and clever.

Save Me from my Friends is also wild; but it is not in the least clever, and is so unutterably dreary that the reading of it is indeed hard labour. The hero is a man of great learning but still greater imbecility, whose need of being saved from himself is much more pressing than his need of being saved from other people, whether the other people are friends or enemies. He spends years in constructing a system of mystical philosophy, falls in love in a very tepid sort of way, neglects his fiancée for his book, and when the fiancée flirts with somebody else and the book is rejected by the first publisher to whom it is offered, comes to the conclusion

that life is no longer worth living, and incontinently makes away with himself. This was, of course, what the newspapers call a "rash act"; but Ralph Anderson's suicide would have been, from a literary point of view, a highly commendable act if it had been committed at the beginning of the story instead of at the end of it.

The reader of *Drifting Apart* will get more than half way through the book before making the discovery that it is divided into two tales, quite unconnected with each other, and decidedly unequal in both mass and value. The title-story is a very graceful and pretty novelette, the scene of which is laid in provincial France. "Hetty's Revenge" is a much shorter and slighter tale of fishing-life on the east coast of England in the bad old days of the press-gang. The former is a pleasant and dainty little bit of work which, though slight enough, has sufficient substance to justify its appearance in book form; the latter, though a good enough story of its kind, might, without loss, have been left between the covers of the magazine where it originally appeared.

The Mystery of a Hansom Cab, though it sold by thousands, was a poor thing; *Madame Midas* was a still poorer thing; and *Monsieur Judas* is the poorest thing of all. Those who doubt the justice of this verdict must read the book—if they can. To bring forward evidence in its support would be a sinful waste of ink and paper.

JAMES ASHCROFT NOBLE.

SOME VOLUMES OF VERSE.

A Vision of Empires. By Gabriel H. Cremer. (Parker.) The author of this epic poem describes himself upon his title-page as "late scholar of Winchester and New College, Oxford." That is a designation which Mr. Cremer's present reviewer also enjoys, or rather, remembering the word *late*, regrets. Now, a Wykehamist can have no greater pleasure than the discovery in a fellow Wykehamist of another name to be added to the roll of Wykehamical authors. So that it is with the truest regret that the present writer must take exception to much which prevents *A Vision of Empires* from achieving success. It is an epic in twelve books, and of nearly ten thousand lines; its subject is the Second Advent of Christ, before whom the empires of the world pass in review, each with its dead monarchs, heroes, poets, sages, and priests, making submission. Christ proceeds in triumph from country to country. Each book tells of one great empire, spiritual or temporal, pagan or Christian, in all the grandeur of its history or the beauty of its genius, welcoming its true Master. The book closes with England. Mr. Cremer's great teachers in literature, so he tells us, and so his poem proves, are Virgil and Gibbon. There are no fitter models in the world; and Mr. Cremer has caught from them not a little of their spirit: something of Virgil's serenity and majesty, something of Gibbon's splendour and pomp. The poem is rich in classical memories, and in felicities due to a wide knowledge of art and literature. And yet the poem has much that is of questionable propriety or discretion. There are whole books which come perilously near to the grotesque, not from any lack of dignity in style, but from the author's exceeding boldness of conception. To draw the picture of Christ travelling by the railroad,

delivering orations in Christ Church hall and in Trafalgar-square, or the like, is, deplore it as we may, to risk arousing unseemly laughter in many who hold the Christian faith as firmly, with a confidence as profound, as Mr. Cremer. It is to draw aside that veil of mystery, of reverential awe, which encompasses religion, even for the most fervent. It is this effort to realise what is veritably *ἀπρόσφορον* which misled that earlier Wykehamist poet, Young, in his poem on the Last Judgment; which prevents us from welcoming Mr. Holman Hunt's great pictures. This, again, it is which fills the reader with disgust at Sir Edwin Arnold's recent book: perhaps the most terrible product of enormous incompetence of which English literature must be ashamed. But Mr. Cremer is preserved from such a disaster as that by his fine scholarship and taste; nor can we hold him blameable for a realism of faith which is not a mere sentiment, but a lofty and mastering motive. But, to leave a delicate and difficult matter, let us give a few examples of Mr. Cremer's poetical and scholarly skill. Here is the description of the arrival at Athens of the great dead Greeks:

"If men, for years divided from their home
By the wide belt of desolating sea,
Are glad when they behold the distant cliffs
Of their dear country: how much more should
these—
Wayfarers in the dim and silent land
Beyond the grave, and banished, not for years,
But through long centuries, from their native
earth—
Shout and rejoice with exultation?
Now, then, with vision rapt contemplating
Their long-lost citadel, some laughed indeed,
But some wept tears, or swooned, in sheer
delight."

And this is the picture of Pilate:

"Alone, when now mine hour of death drew nigh,
Into the desolate Helvetian wilds
I wandered; and quick climbing to the top
Of a grim mountain, known since by my name,
Quenched in the waters of a snow-fed pool
The dim flame of my miserable life.
But neither then did mine unquiet ghost
Find rest; but flitted round the gloomy hill,
Vesting the hills with sighs; until the thing
Grew scandal, and Thy priests, in zeal for Thee,
Sealing the mount, with candle, book and bell,
Exorcised me; undoing the scant grace,
Wrought by my tears and penance. 'Domine,
Agnus Dei, qui tollis Sanguine
Peccata mundi, da solatium,
Miserere mei.' Wailed the mournful throng
With answering note, as when high rocks repeat
Some long-drawn funeral lamentation—
'Miserere nostri, Jesu Domine,
Miserere peccatorum.'"

These Latin burdens, mournful or jubilant, recurring throughout the book, have much of that moving effect which they have in Dante. There are also passages, too long for quotation, which show a power recalling far off the great verses of Milton, rich and stately with sonorous names, or the great enumeration by Virgil of Italian towns and heroes. Mr. Cremer has, in such places, well studied the mighty march and intricate music of blank verse. And now and again there are lines and phrases most felicitous: "the blue light of enchanted rocks" well renders in words the magical atmosphere of Leonardo's pictures; "O splendid Roman patience!" is a perfect expression of the Roman genius in its early days. One more passage we will quote, from a Winchester prize poem, preserved by Mr. Cremer among his later poetry; it is equally simple and eloquent, and honourably patriotic. The writer has been describing Wykeham's chantry:

"He sleeps; but, haply not beyond his ken,
Springs from his dust a race of loyal men—
A race which spent its happiest boyish years,
'Mid the gray haunts, his goodness still endears.

Ah! many a branch, by Death's rude sickle
shorn,
Now waits the beaming of a brighter morn;
Ah! many a leaflet in the sheltering earth
Sleeps with the noble root, which gave it birth.
Yet doth the tree rear high his mighty head,
And fill each year the places of the dead;—
A glorious trunk, built up of faithful souls,
In whom the tide of love and life yet rolls,
Life, which to God doth consecrate each breath,
And love, which conquers fear and knows not
Death.

He sleeps: his name on steadfast basement set,
Lives unforgotten by his children yet.
His scholars still, five times each rolling year,
With praise and jubilee his fame revere;
Still stands his statue, guardian of the door,
Where on his sons the page of classic lore;
Still shines engraved the chantry where he lies
On the dear honour, which they chiefly prize."

Despite all the faults and frailties of this book,
it reminds us, in its fine scholarship and
learning, in its true poetry and art, of those
words of the Wykehamist Somerville, poet of
The Chase, when he addresses

"Wykeham's sons, who in each art excel,
And rival ancient bards in writing well."

Old and New. By W. H. Pollock. (Remington.)
This is a little collection of verses by a well-
known writer, which has no great pretension
and no great distinction: the good in it is not
very good, nor is the bad very bad. It is, in
fact, rather dull. We could wish that Mr.
Pollock had given us those admirable transla-
tions from the French, which have appeared
from time to time in the magazines. We have
here the fine version of the famous "Nights" of
Musset, but there are many still finer for which
we had been grateful. Some of his own poems
are something in the manner of Beranger:
they have that simple turn of phrase, express-
ing simple emotions in a moving way. "Es
ist eine alte Geschichte, Dochbleibt sie immer
neu," as Heine sings; skilled workmen can
always give us these pretty verses, common-
place, yet pleasurable because of their obvious
and familiar sentiment.

"The light that travels down the stream,
Or, piercing through an opening slender,
Falls through the leaves with fitful gleam—
This light my skill can catch and render."

The reader knows, by instinct and experience,
that the next stanza will be about "her eyes";
and it is, very charmingly:

"But, sweet, your eyes give out a light
That, though I strive from morn till even,
I never can reflect aright—
I paint the earth, and not High Heaven."

Again, Thackeray, Tennyson, half the great
English writers, have given us emotions of the
following sort, though Mr. Pollock has done it
pleasantly enough in his "Old Court, Trinity."
Here are three stanzas:

"I light my dusky meerschaum bowl,
And bend my head on hands supported,
While in my ears the curfew's toll
Rings clear, although the door is sported.
The eddying smoke-wreaths slowly rise,
In pleasure half, and half dejection;
I call the past before my eyes,
And give myself to recollection.

Then, through the whirling rings of smoke,
I see my old friends' well-known faces;
I hear their pleasant song and joke,
With them frequent the old loved places."

Is it hypercritical to wonder whether Mr.
Pollock really attributes mingled emotions to
the smoke of his pipe? or is it only the mis-
placed semicolon, which is responsible?

Whisper! By Frances Wynne. (Kegan Paul
& Co.) When an Irish maiden says "Whisper!"
it is generally a prelude to something
very pleasant and *vertraulich*, and Miss
Wynne's little volume of poems fully keeps the

promise of its title. In a simple way she
rhymes to us delightfully about simple things,
with an engaging air of making irrepressible
confidences. The facility and spontaneity of
the verse compel us to have recourse to that
hackneyed comparison—which, however, is so
seldom truly applicable—of the song of birds
in spring-time. It is really song, which facile
verse usually is not. There is not much passion
in it and not much thought, but it is melo-
dious and sincere, and full of the unexpected
graces which wait only on a true poetic instinct.
The longer poems, with their careless fluency,
cannot be done justice to by extracts; the
charm seems to evaporate from the single line
or the single stanza as it did from the treasures
which Emerson brought home from the sea-
beach. But this triolet, entitled "Sealed
Orders," should be enough to make the reader
wish for more:

My little violets, sweet and blue,
When you have reached the world's far end,
Go straight to—*someone* (you know *who*,
My little violets, sweet and blue!)
And tell him that I send by you—
Ah! well, he'll find out what I send,
My little violets, sweet and blue,
When you have reached the world's far end.

And there are better things in the book; in par-
ticular we may mention "A Lesson in Geo-
graphy," in which a deeper note than usual is
struck, and struck with a very sure and delicate
touch.

NOTES AND NEWS.

A COMPLETE edition of the Speeches and
Sermons of the late Archbishop Magee is now
being prepared by his son, Mr. Charles S.
Magee, and will shortly be published by Messrs.
Isbister & Co.

We hear that Mr. John Payne, the translator
of the *Arabian Nights*, is engaged upon a
metrical version of the *Divan of Hafiz*, the
whole of which has never before appeared in
English.

MR. W. D. HOWELLS has collected some of
the papers which have appeared in *Harper's
Magazine*, in the section entitled "The Editor's
Study," for publication in a little volume to be
called *Criticism and Fiction*, which will be
issued in this country by Messrs. James R.
Osgood, McIlvaine & Co. The questions of the
superiority of American to English novels, of
the evils of anonymous journalism, and of the
attitude of critics towards authors will thus be
again raised for discussion.

MR. JOHN MURRAY announces a biography
of the late Dean Burgon, with extracts from
his letters and early journals, by his old friend,
the Rev. Dr. E. M. Goulburn, some time Dean
of Norwich. It will be in two volumes,
with a portrait.

MESSRS. LONGMANS have in the press two
volumes of sermons by the late Canon Liddon,
on Old Testament and New Testament subjects.

MESSRS. METHUEN will publish shortly a
translation of Ibsen's drama, *Brand*, by Mr.
William Wilson.

THE title of Lord Desart's new novel, which
will be published by Messrs. Swan Son-
nenschein & Co. in a few weeks, is to be *A
Freak of Fate*.

A NEW novel by Lady Virginia Sandars,
author of *A Bitter Repentance*, is announced for
immediate publication by Messrs. Hurst and
Blackett.

A NEW novel by Fergus Hume, entitled
Whom God hath Joined, will be published im-
mediately, in three volumes, by Messrs. F. V.
White & Co.

MR. T. FISHER UNWIN will publish shortly
a curious book by Mr. Albert Hartshorne,
entitled *Hanging in Chains*. This barbarous
practice is dealt with historically and pictorially,
the illustrations being eleven in number from
drawings by the author. The work concludes
with an account of the Halifax gibbet.

MR. EDWARD HOWELL, of Liverpool, has in
the press two posthumous volumes by Frances
Parthenope, Lady Verney, a sister of Florence
Nightingale. One will contain five stories,
never before published, and will be illustrated
with a reproduction of a portrait by Mr. W. B.
Richmond; the other will be composed mainly
of essays on social questions, collected from the
magazines.

UNDER the title *Pleasantries from the Blue
Boar*, Mr. Elliot Stock announces for immediate
publication a companion volume to Mr. W. H.
K. Wright's "Sayings and Doings of the Blue
Fairies."

MESSRS. KEGAN PAUL, TRENCH & Co. will
publish immediately *Buried Cities and Bible
Countries*, by Mr. George St. Clair, with
numerous plans and illustrations.

THE Rev. H. N. Hutchinson has under-
taken to write for Messrs. Swan Sonnen-
schein & Co.'s "Introductory Science Text-
Books" a Manual of Physical Geology. The
new volume of the series, to appear this month,
will be Prof. R. T. Ely's *Introduction to the
Study of Political Economy*.

WE understand that the first edition of *A
Girl in the Carpathians*, by Miss Dowie, is
already exhausted.

OUR note last week about Mr. Kennan's
forthcoming book on *Siberia and the Russian
System*, to be published by Messrs. James R.
Osgood, McIlvaine & Co., was not quite
accurate. It is not a mere reprint of the famous
articles in the *Century*, but will contain a large
quantity of new matter, the preparation of
which has occupied Mr. Kennan for some
time.

M. ALFRED CADIER, pasteur, invites sub-
scriptions (3 fr. common, 6 fr. papier de
Hollande) for a forthcoming work, *Osse: Histoire de l'Eglise Reformée de la Vallée d'Aspe*. Osse is a small village which escaped
persecution in the time of the Dragonnades,
where three or four hundred Protestants have
maintained themselves from the Reformation
to the present day. The history of the Valley
presents a good example of the local autonomy
which formerly existed throughout the Pyrenees.

CANON ISAAC TAYLOR has decided, in view of
the failure of his efforts at conciliation, to with-
draw his name from both the committees of the
Congress of Orientalists.

THE first annual general meeting of the
British Record Society will be held on Friday
next, May 29, at 4 p.m., at Herald's College, in
the chambers of Mr. Athill, Richmond Herald.

THE fiftieth annual general meeting of the
members of the London Library will be held in
the reading-room on Thursday next, May 28,
at 3 p.m., with the Dean of Westminster in the
chair.

At the meeting of the Cymmrodorion Society,
on Wednesday next, May 27, Mr. F. T.
Palgrave, professor of poetry at Oxford, will
read a paper on "Henry Vaughan of Scethrog
(1622-1695): Some Notes on his Life and
Characteristics as a Poet."

MESSRS. SOTHEY will be engaged in selling,
during the last three days of next week, the
library of the late Charles Ryan, of Newport,
Monmouthshire, who had devoted himself for
nearly forty years to the collection of topo-
graphical works. Some of the lots put together
by the compiler of the catalogue will be found

to include out-of-the-way local publications, such as rarely come into the market.

A MONUMENT has been erected in Cathcart Cemetery over the grave of the late Robert W. Thom, author of *The Epochs*, *Jock o' the Knowe*, and other works. The memorial is of rough Sicilian marble, upon which is sculptured a medallion portrait of the poet, executed by Mr. D. W. Stevenson, who has been successful in producing a remarkably fine likeness. The inscription is on a sunk polished tablet, and includes a quotation from the poet's works:

"Nothing that is for itself,
Nor aught for less than regal purpose."

The ceremony of unveiling was performed by Mr. William Canton, the recently appointed assistant editor of *Good Words*, who gave expression to the belief that "had Thom been offered a crust and poetry or opulence without poetry he would not have hesitated to choose the former." Among those present were Dr. J. Stuart Nairne, Messrs. David Wingate, A. S. Boyd ("Twyn"), George Neilson, Harry Spence, and Frederick W. Wilson.

The cheap edition of the Aldine Poets, which is being published by Messrs. George Bell & Son, has now been augmented by six volumes of *Chaucer*, edited by the Rev. Dr. Richard Morris. As the only date here given is that of the preface to the first edition (1866), it may be as well to state that the present issue is a reprint of the second edition, which appeared, with some additional matter in the form of Appendices, in 1872.

The last number of the *Pauline* contains an article on Major André, suggested by two portraits of him which have lately been presented to the school. We call attention to it here because it supplies details not to be found in the *Dictionary of National Biography*, which have been derived partly from official and partly from family sources. *Inter alia*, it states that his full name was John Lewis André, and quotes the inscription written by Dean Stanley for his (desecrated) monument at New York.

FORTHCOMING MAGAZINES.

"SHALL we dissolve this year?" will be the title of an anonymous article in the June number of the *National Review*, which, from the well-known associations of the Review with the Conservative party, is likely to attract considerable attention.

THE *Expository Times* for June will have several articles of importance. Prof. Swete, of Cambridge, writes upon "Professor Graetz's Theory of the Septuagint"; Canon Cheyne contributes the first of a short series of articles upon "Possible Zoroastrian Influences on the Religion of Israel"; and Prof. H. E. Ryle gives his second paper on "The Early Narratives of Genesis." Examination papers in connection with the "Guild of Bible Study" have been set by Principal Moule, and Profs. Marcus Dods, Agar Beet, and J. T. Marshall.

DEAN BUTCHER, chaplain at Cairo, is about to publish a story in *Great Thoughts*. The subject may be guessed from the motto, which is taken from Sir Walter Scott's preface to *St. Roman's Well*:

"Gambling a vice which the devil has contrived to render all his own, since it is deprived of whatever pleads an apology for other vices, and is founded entirely on the cold-blooded calculation of the most exclusive selfishness."

The scene of the story is partly laid in Cairo.

THE June number of *The Theatre* will contain a photograph of the Church scene from Mr. Pinero's play, "Lady Bonntiful," now running at the Garrick Theatre; and also a photographic

group of "L'Enfant Prodigue," with portraits of Mdlle. Jane May, Mme. Schmidt, and M. Cortes.

UNIVERSITY JOTTINGS.

WEDNESDAY, June 17, has been fixed for the delivery of the Rede Lecture at Cambridge by Sir Alfred Lyall. The subject is "Natural Religion in India."

A MEETING will be held in the Sheldonian Theatre at Oxford, on Friday next, May 29, in support of the association for supplying medical women to India. Lady Dufferin, the founder of the association, will herself be present; and the list of others who have promised to attend is notable for the large number of names historically associated with the government of India. Among them are the Marquis of Ripon, the Earl of Northbrook, the Countess of Mayo, Viscount Hardinge, Lord Lawrence, Lord Reay, and Lord Kerry.

PROF. RHYS will deliver a public lecture at Oxford, on Tuesday next, May 26, upon "Manx Folklore and Superstitions."

To meet the growing demands of the medical school at Oxford, it is proposed to build a new laboratory for human anatomy, in connexion with the University Museum, at a cost of £7000. At the same time grants will be asked for of £2000 for the department of morphology, £1300 for ethnology and geology, and £350 for zoology.

ACCORDING to an analysis of the university accounts, published in the *Cambridge Review*, out of a total expenditure of £31,500 on different departments of learning, £21,500 is assigned to physical science, £1600 to classics, and £800 to history; while out of £17,000 devoted to building, £13,000 is the share of science.

MR. F. T. PALGRAVE, professor of poetry at Oxford, will deliver a public lecture on Thursday next, May 28.

AT the first meeting of the Society of Historical Theology, which was held in the common-room of Oriel College, Oxford, on May 5, a committee was appointed to prepare an analytic edition of the Hexateuch according to its constituent elements. Besides Prof. Cheyne's presidential address, papers were read on "The Blessing of Jacob in Genesis xlix," by the Rev. E. J. Fripp; on "The Evidence regarding the Authorship of the Fourth Gospel," by Principal Drummond; and on "Early Church Organisation, with special regard to Early Canons," by Mr. Vernon Bartlet.

THE lecture delivered last January by Prof. A. Macalister, on the opening of the new Anatomical Lecture-room at Cambridge, has been published in pamphlet form at the University Press. It gives a sketch of the history of the study of anatomy at Cambridge, from the time of Dr. Caius, who had been a fellow-lodger with Vesalius at Padua under Montanus.

MR. BRUNNER has given the sum of £10,000 to University College, Liverpool, for the endowment of a chair of economical history.

THE committee of the University Training College, Liverpool, have chosen as warden and normal master the Rev. W. H. Woodward, formerly of Christ Church, Oxford, at present vicar of St. George's, Everton.

MR. ARTHUR SIDGWICK will give a lecture at Queen's College, Harley-street, on Thursday next, May 28, at 5 p.m., upon "Primitive Greek Moral Ideas, with special reference to Homer."

THE Clothworkers' Company have given a donation of £250 to the extension fund of the Maria Grey Training College, which now amounts to £7742.

ORIGINAL VERSE.

IN OLDEN DAYS.

They ask me, will I come and see
The dear old home, where I can trace
With Memory's finger every place,
And in the garden every tree.

They say "the terraces are fine
And suit the Grecian columns well,"
It may be true, they have no spell
Of olden days, they are not mine.

"The chaplain reads the service now,"
The chapel too I should admire,—
Of old I knelt beside my sire,
He read the prayers, and I could bow

My reverent head, although he wore
On hunting days his suit of pink.
A cheerful sight it was, I think,
On grey November morns before

The mist had cleared, as with knee bent,
Right fervently he prayed, then strode
By maid and groom, and off he rode,
Pastor and hunter kindly blent.

* * * * *

They ask me, and I go at last,
The sun is shining on the mere,
The plover's cry is shrill and clear,
And Nature's welcome is not past.

For she alone with soft caress
Can heal, when e'en a friendly hand
May hurt, nor scarcely understand
What turns a home to wilderness.

B. L. T.

MAGAZINES AND REVIEWS.

THE May number of the *Livre Moderne* contains only one article outside the usual and useful chronicles of books and book matters of the day; but that one is amusing and liberally illustrated. It is the conclusion of last month's article on advertisement posters, with divers full-page examples, chiefly from Chéret, the bill-Raphael of our time. Chéret's notion of a poster was about equally far removed from the hideous moustrosities of the ordinary British hoarding, and from the namby-pamby "academies" which a few English painters of repute, who ought to have known better, have now and then botched up for the advertisers. We should rather like, by-the-by, to see Mr. Sargent's idea of an *affiche*.

The recent numbers of the *Altpreussische Monats-schrift* deal chiefly with questions of local historical interest. About the half of *Heft 5* and *6*, July-Sept., 1890, is filled by a history of the fortifications of Königsberg, in which E. Beckhern traces the growth of the stronghold on the Pregel from the thirteenth century to the present. Dr. L. Neubaur brings some supplementary notices of G. Greflinger, a Dantziger poet of the Thirty Years' War. In the concluding number of last year, Oct. to Dec. (which contains the Kant bibliography for 1889 by Dr. Reicke—a very useful summary) are found a paper by J. Sembrzycki, describing a journey of the Württemberg theologian Vergerius to Poland in 1556 in the interest of the Protestant Reformation; one by H. Bonk on local names, comparing names of the same sound within and without the province; another by A. Treichel on forms of address and other usages in workmen's gilds; and some additional notes on the three Königsberg interludes of 1644, given in the first quarterly part for 1890. On this topic the *Heft* for Jan.-Mar., 1891, contains further elucidations, as also an account of an interlude by J. Raue at Dantziger in 1648; besides which it includes, *inter alia*, the story of the misguided expedition of the partisan leader, Eric of Brunschwick, to Poland in 1563; some letters of the historian, J. von Müller, to C. Morgenstern the scholar; and a discussion of some obscure points in the geography of the Lithuanian frontier.

In the *Boletín* of the Real Academia de la Historia for April, F. Codera gives an account of the Arabic MSS. connected with Spain, preserved in the nine libraries of Constantinople which have printed catalogues. He finds there many Spanish authors, but only two or three previously unknown. There is a long article on, and two attempted explanations of, the enigmatical signature of Columbus:

.S.
S. A. S.
X M Y
: X ρ o FERENS,

thus interpreted by M. Eugène M. O. Dognée, of Liège: "Sit Sibi Antecedens Semper Christus Maria Jesus. X ρ (σρ) o ferens (Columbus)," and by Padre F. Fita (note p. 350) as embracing the three languages of the title on the Cross: "S(ignum) S(alvatoris), A(re) S(alutis) xmi (ΧΡΙΣΤΟΥ), nomen meum), Xρ(σρ) o ferens. Colón." The riddle seems hardly yet definitely resolved. The other papers are a long and very singular will of Sancho Diaz de Trujillo, Bishop of Morocco and San Telmo (1570), and a valuable report of recent finds and corrections in Arabic and Latin epigraphy.

THE BODLEIAN LIBRARY.

THE annual report of Bodley's Librarian (Mr. E. B. Nicholson) for 1890 has been published as a supplement to the *Oxford University Gazette*.

The total number of separate items, printed and MS., added to the library during the year amounts to 49,088, of which 34,886 were received under the Copyright Act, 1737 by gift or exchange, and 6825 by purchase. Of the total, 4483 came from Germany and 2822 from France, while the literary sterility of the colonies is shown by the following figures: British Asia, 683; British America, 62; British Australasia, 38; British Africa, 22. Of the items received under the Copyright Act, about one-half are periodicals; bound volumes number only 5460, compared with 2788 parts of ordnance maps and 2321 "cards."

The most interesting portion of the report is that which deals with the new MSS. Among donations the first place is deservedly given to the grand MS. of the Yasna, containing Zend text with Sanskrit translation, presented by Dastur Jamaspji Minocheherji, of Bombay, through the good offices of the Rev. Dr. L. H. Mills. The Rev. Greville J. Chester has added to his similar previous gifts fragments of an Egyptian litany to the Sun, two Coptic papyri, numerous inscribed fragments of papyri, and a Bull of Pius VI. The committee of the Egyptian Exploration Fund presented a large number of Hebrew and Arabic fragments found in Egypt, which were formed into seven volumes. One of these is an early fragment of a previously unknown treatise on the controversy respecting David, Prince of the Exile. An Aethiopic MS. of the Psalms was received from Mr. A. H. Sayce.

The total number of volumes of MSS. purchased was 178, of which 59 were British, 10 Greek, 18 Singhalese, 45 Hebrew, and 21 Samaritan. The chief purchase of the year was that of the Fairfax family papers, in twelve portfolios, consisting of portraits, pedigree notes, letters, &c., ranging from the reign of Elizabeth to the year 1800. Among the other English MSS. may be mentioned an apparently perfect copy, in Northern dialect, of William of Nassington's voluminous poem on the Pater Noster, written by John Kylynwyke about the end of the fourteenth century; and the charter and other records of the extinct Oxford Barbers Company, in their ancient chest.

Of the Greek MSS., nine are modern collations of the text of the Odyssey. The tenth is a leaf of an ancient wooden writing-tablet, closely resembling a child's slate; and enough of the wax remains on the surface to show that it was used for the same purposes. On one side is found the Greek alphabet, written above a roughly-drawn line; the other side contains, in a much worse hand, the "copy":

ΘΕΟCΟΥΔΑΝΘΡΩΠ[ΟC]ΜΗΡΟC.

This is written twice in consecutive lines; both times the child has failed to get the entire "copy" in, and has written the remaining letters at the top. The writing may be of about the second century A.D.

Of the Hebrew MSS., no fewer than thirty-eight are volumes of fragments from the ruins of an ancient synagogue at Cairo. These comprise some fragments of the Babylonian Talmud written in 1123, and thus older than any similar MS. yet known; an almost complete prayer-book according to the Egyptian rite, of which no other copy is known; many other unknown liturgical fragments; and fragments of unknown Arabic translations and commentaries, including one on Esther by the celebrated Saadyah Gaon.

The donations of printed books consist for the most part of modern privately-printed works. From Mr. Henry M. Ormerod the Bodleian has received a unique and splendid gift—his father the author's own copy of the History of Cheshire. This was one of twelve large-paper copies, with proof etchings and India proof engravings, and all the arms coloured. The author had added upwards of eight hundred illustrations (including water-colours by De Wint and Copley Fielding), and bound the three folio volumes in ten.

Old printed books acquired by purchase were mainly obtained from two donations of £100 each, given by a member of All Souls and another member of Convocation. We have only space to mention a few: *Regimen Sanitatis* (Nuremberg, undated, but of the fifteenth century, and supposed to be the editio princeps); Cicero *De Officiis*, &c., a late fifteenth or early sixteenth century quarto, with an unidentified printer's device on the title-page, and the name below GVILLAVME. BOISSON; Proclamations of Henry VIII. against English versions of the Bible (1530, but imperfect), and against "vacabundes and sturdy beggars" (1530), and of Elizabeth on coinage (*circa* 1561); a Horace (Lond. impensis Johannis Harrisoni, 1592)—an edition not mentioned in Lowndes, Ebert, or the British Museum Catalogue; Sermons by John Udall (1596); a copy of the 1673 edition of Milton's *Poems*, &c. upon *Several Occasions*, differing from the copy already in the Bodleian in giving the printer's address as "the White Lion next Chancery-lane End, in Fleet-street," instead of "the Blew Anchor next Mitre Court over against Fetter-lane in Fleet-street"—Lowndes does not give any printer's address, and states that the book has a portrait, which is not in either of the Bodleian copies; Descriptive Inventories of the various Services of Plate, &c., belonging to the Crown in the several Royal Palaces, and . . . Royal Chapels (1832)—a volume bearing William the IV.'s crown and monogram, and obviously printed only for the royal household; complete sets of *The United Irishman*, *The Irish Tribune*, and *The Irish Felon* (Dublin, 1848).

With regard to cataloguing, it is announced that last June the curators authorised Mr. Madan to undertake a summary catalogue of those MSS. of which there is at present no printed catalogue, according to a plan proposed by Mr. Andrew Clark. It is estimated that the work will occupy seven years; but the catalogue will be printed sheet by sheet, as soon as it can be got ready. Meanwhile, brief hand-lists or shelf-lists have already been com-

plied, primarily for the use of the staff, of more than 5000 MSS., many of which belong to the uncatalogued class.

The Librarian has personally commenced arranging the accumulations of inscribed fragments of papyrus, &c. Each fragment or group of fragments is placed between two sheets of glass (the edges of which are bound with cloth), so as to leave both sides visible; and the frames thus made are stored in specially constructed cabinets. The number of frames finished in 1890 was about 80. Many of the fragments are Egyptian, some Coptic, but the great majority Greek. None of the Greek are of any considerable size, and a large number can be of no literary or linguistic value; but they provide the library with a useful stock of material for palaeographical study (some of them are as old as the Ptolemaic period), and a few may be commended to the attention of scholars for the interest of their contents. For example, one fragment contains parts of twelve lines, which seem to be trochaic tetrameters, and by an unknown hand; another contains parts of twelve lines of a prose-writer who cites poetry.

With these may be mentioned two palimpsest vellum fragments. The upper writing contains parts of vv. 20-41 of Theodotion's version of Bel and the Dragon; not later than the fifth, and possibly of the fourth century. The still older writing beneath is a Christian text not yet identified, but containing a quotation from either Matt. ix. 37-8 or (less probably) Luke x. 2, or possibly a parallel to these passages. It is not a MS. of Matthew or Luke, as the ends of the following lines do not agree with either. It is written in very simple broad and low sloping uncials, with hardly any space between the lines.

CORRESPONDENCE.

EGYPT AND SYRIA IN THE TIME OF THE NINETEENTH DYNASTY.

Mansurah, Egypt: May 2, 1891.

I am rejoiced to find that Mr. Howorth has turned his attention to the ancient oriental world; the Mongols have had too much of him. But he must beware of trusting too implicitly to the official records even of Ramses the Great; it is necessary to read between the lines of that most beastful of Egyptian monarchs if we would know what exactly was his measure of success.

The famous treaty between him and the Hittite king is our best testimony to the extent and success of his wars against the Hittites, though it is probable that the Egyptian text of the treaty has been "doctored" a little to make it more acceptable to Egyptian vanity. Such as it is, however, it shows that the war between the Hittites and the Egyptians was carried on until the twenty-first year of the reign of Ramses II., and that it was far from being in favour of the Egyptian arms. Ramses was compelled to treat on equal terms with the Hittite king, who had ceased to be "vile" and had become "great"; and as the price of peace he was forced to leave the Hittites in quiet possession of Syria, to marry a Hittite princess, and to restore to their former rights the Egyptian fugitives who had fled to the Hittite court. This will answer Mr. Howorth's first question.

As regards the second, we have to depend on the most fragmentary of annals. But we learn from the inscriptions of Abn Simbel that naval battles took place at some time or other with the Phœnician fleets; while in the eighth year of the king's reign the mutilated texts of the Ramesseum inform us that various Canaanitish cities were captured and destroyed by the Egyptian troops, including Shalama, which the Tel-el-Amarna tablets now enable us to identify with Jerusalem. The southern wall of

Karnak further shows that even Askalon was sacked by the Egyptians, and therefore was no longer at this time an Egyptian fortress. From the rock-tablets at the mouth of the Dog River, north of Beyrout, we learn that in the fourth and tenth (or less probably the second) years of his reign Ramses was waging war in Syria, and in order to do so was forced to follow the coast-route. This would not have been the case had he been master of Canaan, like his predecessors of the XVIIIth Dynasty, who, accordingly, have left no memorials of themselves at the mouth of the Nahr-el-Kelb.

Mr. Howorth's third question is answered by the fact that I always distinguish between Palestine and Syria. Palestine corresponds to the Kinakhkhi or Canaan of the Tel-el-Amarna tablets, while Syria includes the land of "the Amorites" and the countries further north.

Lastly, our knowledge of the external history of Egypt from the death of Ramses to the end of the XIXth Dynasty, apart from the Libyan invasion, is confined to a few notices which belong to the earlier part of Menephtah's reign. At this time the cities of the Philistines were still garrisoned by the Egyptians, and the Phœnician cities to the north seem to have admitted the suzerainty of the Egyptian king. But, otherwise, Palestine was free from Egyptian interference. When light dawns again, we find that the tables have been turned, that Egypt has been conquered by Syrians, and that the XIXth Dynasty has been supplanted by a Syrian named Arisu. Manetho, in his version of the Exodus, transfers this event to the reign of Amenôphis or Menephtah, the son of Rhampses (Ramses II.), who, he states, was obliged to fly to Ethiopia with his little son Sethos or Seti II., while Egypt was given up for thirteen years to the combined forces of the lepers under Osarsiph and Canaanitish invaders from Jerusalem. Whatever truth there may be in this story, the Old Testament (Ezek. xvi. 2) tells us that Jerusalem was at one time in Hittite hands, and the Tel-el-Amarna tablets make it clear that this happened after the fall of the XVIIIth Dynasty.

A. H. SAYCE.

THE SHAKSPEARE QUARTO FACSIMILE SERIES.

London: May 19, 1891.

Your contributor has given me credit for too much in his account of this series.

When I started the New Shakspeare Society in 1874, I put down the reproduction of the Quartos as one of the things it was to do, but I thought of reprints rather than facsimiles. Four years later Mr. Griggs asked Mr. Trübner about facsimileing the First Folio or some of Shakspeare's plays, and Trübner told him I wanted the Quartos done, and sent him to me. Till then I knew little of facsimile work; but I gladly closed with Mr. Griggs's offer to start a Facsimile Quarto Series under my superintendence, as my friends and I had long been indignant at the high price (five guineas apiece) which Mr. Halliwell charged for the hand-copies of the Quartos that Mr. Ashbee and Mr. Price made for him. So, with the help of those friends, I got the Quartos edited gratis (save a few copies of each book given to its editor), and Mr. Griggs sold them at six shillings apiece. But as he could not get enough subscribers—the English public does not care sizenpe for the details of Shakspeare's text—he handed the series over to Mr. Quaritch, whose wider connexion enabled him to make the set nearly self-supporting. Then, when Mr. Griggs's other work increased too much, Mr. Pretorius undertook the Facsimiles; and so the series has been completed.

That it has been, is, and will be a help to all serious students of Shakspeare is certain; and

this is the end for which we have worked. I only caution all users of the book that small slips in transfer and in printing have occurred, and in the Roberts or Second Quarto of the *Midsommer Night's Dream* (in which the editor refused to conform to my plan of editing, and marking all differences in line) pages 9 and 10 were mistakenly printed from Fisher's Quarto 1. Dr. Aldis Wright found out the blunder, and Mr. Griggs issued a cancel for these pages. The first facsimile of *The Merry Wives of Windsor*, Quarto 1, was taken from a bad copy; and Mr. Griggs, at his own cost, gave all the buyers of it another facsimile from a better copy of the book. Mr. Johnson, of the United States, made a list of corrections and collations from the Museum Quartos, but I have been unable to trace him and get the list to print. To all who have helped in this series I return hearty thanks. Mr. Quaritch has consented to sell separate copies of the Quartos at 10s. 6d. each, provided that he does not break up a set for it.

F. J. FURNIVALL.

SIR THOMAS MORE'S TREATMENT OF HERETICS.

London: May 19, 1891.

I do not wish to shake Mr. Watkiss Lloyd's faith in Shakspeare as an historian, or rather as an interpreter of history, if he only use him with due discretion. But to pin one's faith in Shakspeare's accuracy as to matters of fact would be simply absurd. The play of "Henry VIII.," especially, is full of anachronisms; nevertheless, Shakspeare is not guilty of the particular anachronism of making Sir Thomas More as Chancellor take part in a plot against Cranmer as Archbishop. Sir Thomas More is, indeed, mentioned as having become Lord Chancellor in Act iii., but who was the Lord Chancellor in Act v. Shakspeare does not tell us. The incident really occurred much later in the reign than the time represented in the drama, and the Lord Chancellor of the day was probably Wriothesley. But even at the period at which Shakspeare introduces it—that of the birth of Elizabeth—More had ceased to be Lord Chancellor for more than a year.

That Mr. Lloyd has still a difficulty in reconciling the real humanity of Sir Thomas More with his no less real hatred of heresy is not altogether wonderful. It seems almost as hard for the nineteenth century to understand the sixteenth as it would have been for the sixteenth to realise such a state of matters as exists among us in the nineteenth. At present the only religion in the British Empire which is not protected from positive insult is Christianity. Parsecs, Brahmins, and Mahomedans have each their scruples respected; but you may openly assail the foundations of Christianity before the most unceritcal audience with impunity. Of course the foundations of a true religion remain unshaken in spite of this rough treatment; but the effect it has on thoughtless minds may still be open to question. To the sixteenth century heresy was a very serious evil; and rough remedies for all kinds of evils were the order of the day. Even at the beginning of the present century men were hanged for forgery and stealing. We find now that milder punishments are even more effective. But we must remember, as I said in my last, that heresy in the sixteenth century was not mere wrong opinion; it was arrogance tending to a breach of the peace. Coercion of some kind seemed to be fairly called for; and this in fact was More's own excuse for it. "It was the violent cruelty," he said, "first used by the heretics themselves against good Catholic folk that drove good princes thereto, for preservation, not of the faith only, but also of peace among the people."

JAMES GAIRDNER.

THE CITY OF PUDHU-YAVAN.

Vienna : May 16, 1891.

In the ACADEMY of April 11, Mr. Sayce gives a translation of the most important passages in the cuneiform inscription relating to the invasion of Egypt by Nebuchadnezzar in the thirty-seventh year of his reign. After the defeat of the army of Amasu, we read of "the soldiers of the city of Pudhu-Yavan . . . a distant district which is within the sea." Mr. Sayce rightly compares this Pudhu with the Biblical Phut, which is mentioned by the Prophets together with Lud among the mercenary troops of Pharaoh. Two Egyptian identifications have been proposed for the Biblical Phut. The one compares Phut with the Egyptian Punt (P-wunt), a country upon the African coast of the Red Sea, probably the tract from Suakin to Massawah (see my *Studien für Geschichte Aegyptens*); the other looks for Phut in Libya, agreeing with the old Biblical commentators. The second hypothesis alone is admissible. It is clear, then, that the Pudhu-Yavans are Libyan-Greeks; and consequently that the Greek town of Kyrene has the best claim to be the town in question. We learn from the classics the important relations of Amasis to the town of Kyrene, and also that the favourite consort of Amasis was a woman of Kyrene.

J. KRALL.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, May 24, 7.30 p.m. Ethical: "The Place of Pity in Social Work," by Miss M. S. Gilliland.
 MONDAY, May 25, 3 p.m. Llanegan: Anniversary Meeting.
 8 p.m. Aristotelian: Symposium—"Hereditas as a Factor in Knowledge," by Messrs. S. Alexander, B. Bosnaquet, and D. G. Ritchie.
 TUESDAY, May 26, 3 p.m. Royal Institution: "Four Periods of Stage History, II., Cibber," by Mr. W. Archer.
 7.45 p.m. Statistical: "The Nature and Uses of Averages," by Dr. John Venn.
 8 p.m. Civil Engineers: Annual General Meeting; Report of Council and Election of Officers.
 WEDNESDAY, May 27, 4 p.m. Mrs. Jopling's School of Art: "The Poets as Painters, VII., Landscape in Painting and Poetry, Wordsworth," by Miss Elsa D'Esteer Keeling.
 8 p.m. Geological: "Some Photographs of *Hyalonemus Lyelli* and *Tridacropora Acadanum*," by Sir J. W. Dawson; "Lower Jaws of *Proconodon*," by Mr. R. Lydekker; "Some recently exposed Sections in the Glacial Deposits at Hendon," by Dr. H. Hicks.
 8 p.m. Cymrodorion: "Henry Vaughan of Seethrog (1622-1695): Some Notes on his Life and Characteristics as a Poet," by Prof. F. T. Palgrave.
 8 p.m. Society of Literature: "The Origin of Alphabets," by Mr. W. Marsham Adams.
 THURSDAY, May 28, 3 p.m. Royal Institution: "The Orchestra considered in connexion with the Development of the Overture," II., by Dr. A. C. MacKenzie.
 4.30 p.m. Society of Arts: "The Study of Indian History," by Mr. Charles Lewis Tupper.
 5 p.m. Zoological: "The Animals Living in the Society's Gardens," I., by Mr. F. E. Beddard.
 8.30 p.m. Antiquaries.
 FRIDAY, May 29, 4 p.m. Botanic: "Certain Relationships between Plants and Animals," I., by Prof. C. Stewart.
 4 p.m. British Record Society: Annual General Meeting.
 8 p.m. Browning Society: "Browning's Dramatic Method in Narrative," by Mr. J. B. Oldham.
 9 p.m. Royal Institution: "An Astronomer's Work in a Modern Observatory," by Dr. David Gill.
 SATURDAY, May 30, 3 p.m. Royal Institution: "The Scientific Study of Decorative Colour," I., by Prof. A. H. Church.

SCIENCE.

Physical Religion. The Gifford Lectures delivered before the University of Glasgow in 1890. By F. Max Müller. (Longmans.)

In a former volume containing the Glasgow Gifford Lectures for 1888, Prof. Max Müller sketched in outline the theory of Natural Religion, which in his opinion seems to be the only true religion, and established the method by which it may be most usefully studied.

Religion, according to the learned lecturer, is a perception of the Infinite in such manifestations as are able to influence the moral

conduct of man. Now there are three distinct channels through which such a perception may be obtained. The varied phenomena of the external world—such as day and night, summer and winter, sunshine and storm—may be attributed, and by primitive men are attributed, to the operation of voluntary and intelligent agents; or the spirits of departed ancestors are supposed to survive and to exercise superhuman power—and this is also a form commonly assumed by the religious sentiment both in ancient and modern times; or, lastly, by brooding over his own personality a man may come to think of it as something universal and infinite, as something therefore which he more or less identifies with the mysterious soul and self of the universe without him. The first of these faiths is what the lecturer calls Physical Religion, and to its study the present volume is devoted.

It seems to be universally admitted that beings of superhuman power were, at an early stage of civilisation, worshipped under the names of natural objects, and clothed with the corresponding attributes. But the fact has been explained in very different ways. Not long ago philosophers were content to say that undeveloped intelligences naturally attribute a life like their own even to the phenomena of inanimate nature, especially when those phenomena are of an exceptional and startling character. The assumed tendency was described as being very prominent in children, and as displayed even by the higher animals. But the alleged fact has been vehemently disputed as contrary to all experience and analogy by Mr. Herbert Spencer, with the full concurrence of Prof. Max Müller, who however is as little disposed to accept the alternative explanation offered by the great sociologist, that the only objects ever worshipped were the spirits of departed ancestors, who in their life-time had sometimes borne such names as Sky, Sun, and Dawn—a grotesque hypothesis, which the mere recital of one or two early myths is enough to refute. It seems incomprehensible how any candid person can read the Vedic hymns addressed to the fire-god Agni (= Latin *ignis*) as cited in these lectures without admitting that they refer primarily to the phenomena of ignition, combustion, sunshine, and lightning. The author's own theory is of course that already made familiar to us through his former works. Articulate speech, according to him, first arose from the cries uttered by primitive men while working together in bands. Every joint action found its appropriate expression and verbal sign in a sound resembling the cry then uttered—the *clamor concomitans* as it is called. Hence the verbal roots to which all language may be traced back denote actions, and actions alone. But if every word embodied some human action it was impossible to talk about anything without involuntarily ascribing to it a quasi-human spirit. For instance, Agni, the Sanskrit word for fire above-mentioned, seems to be connected with the root AG, "to drive" (p. 122).

Now, without disputing what Prof. Max Müller has to tell us about the origin

of language, it seems to me that he has totally failed to explain the genesis of mythology in a truly rational manner. If primitive men were such deluded drivellers as to talk themselves into believing in the animation of inanimate objects—if merely calling fire "drive" necessarily made them think of it not merely as a charioteer but as an unnatural child who devours his parents, a destroyer, a conqueror, a priest, and any number of other characters up to that of supreme god inclusive—then surely they were fanciful enough to make the same rash generalisations from any other of the notes that went to make up the total percept of fire. For the name of a thing is only one among many marks by which we know it, and not more suggestive of life and personality than another. We are still inventing new names every year, often, if not always, expressive of activity, but without any mythological consequences ensuing. Popular etymology spells the brake of an engine "break," with evident reference to the verb so written, but nobody ever represents that useful contrivance under the features of a Tory statesman. On the other hand, poets, those of them at least who study nature as well as the dictionary, continue the process of humanising her minutest details. Why then refuse to look on primitive men as poets who were the dupes of their own imagination?

But I must beg Prof. Max Müller's pardon for talking about his primitive men as deluded drivellers. According to him, their philosophy of nature was not only true, for them, but as good as ours any day, and not only as good, but a great deal better.

"What we call Physical Religion, a naming of and believing in agents behind the great drama of nature, was inevitable, and being inevitable, was, for the time being, true" (p. 336). Theism is "a fundamental truth" . . . "because it is founded in the very nature of our mind, our reason, and our language, in a simple and ineradicable conviction that where there are acts there must be agents, and in the end one prime agent whom man may know, not indeed in his own inscrutable essence, yet in his acts, as revealed in nature" (p. 365). "From a philosophical point of view, I see little difference between this Ether [as assumed by the undulatory theory of light] and Agni, the god of fire. Both are mythological" (p. 126). "Many things in nature which we are now inclined to treat as quite natural, as a matter of course, appeared to the minds of the earliest observers in a much truer light, as by no means natural, as by no means a matter of course, but, on the contrary, as terrific, as astounding, as truly miraculous, as supernatural" (p. 335).

Apparently the attention of Prof. Max Müller has never been called to the importance of prediction as a test of truth. Not only is the hypothesis of an undulating ether framed according to the strictest analogies of experience, while Agni was fabled in direct defiance of them, not only does the ether explain all the phenomena, while Agni explains none, but the ether enabled Sir W. R. Hamilton to predict the conical refraction of light, and Maxwell to predict that electrical disturbances would prove to be propagated with the same velocity as light, while Agni and his like have ever left their worshippers a prey to imposture and illusion. It might be sup-

posed from some expressions in one of the passages above quoted that Prof. Max Müller was a believer at least in the Gospel miracles. Quite the contrary. By implication he repudiates them absolutely, with a fearlessness that must have excited the secret envy of some of his Scottish colleagues. But he reminds one of the lady who was ready to believe anything provided it was not in the Bible—even that reason and language require men to think what is almost a contradiction in terms, that the things of nature are not natural, that what enters into an unbroken chain of physical antecedents and consequents is not “a matter of course.”

The foregoing remarks have been chiefly suggested by the concluding lecture, which will probably attract more attention than any of the others. A short digression on the antiquity of the Old Testament will be read with almost equal interest. Prof. Max Müller seems inclined to “accept the results of modern Hebrew scholarship,” and indeed, rather to exaggerate their tendency by stating that, “though the Old Testament may contain very ancient traditions, they probably were not reduced to writing till the middle of the fifth century B.C.” (p. 214). Modern Hebrew scholarship would date some documents embodied in Genesis at least 400 years earlier; nor would it, I think, endorse the hardy assertion that “books in alphabetic letters existed nowhere before the seventh century B.C.” For, if so, what are we to make of the prophecies of Amos and Hosea, which, in the opinion of M. Renan, are excerpts from longer works, and anyhow are not likely to have been handed down orally for two centuries as we read them now? And, seeing that the inscription of King Mesha is in alphabetical writing, and confessedly dates from the ninth century, why should not the last prophets of the Northern Kingdom have used the same means for facilitating and perpetuating their compositions?

ALFRED W. BENN.

TWO TRANSLATIONS FROM THE GERMAN.

THE appearance of a translation from the German of Dr. Blass's volume on the *Pronunciation of Ancient Greek* by Mr. Purton, of Pembroke College, Cambridge (Cambridge: University Press), is a distinct gain to English classical scholarship. It is a work of great learning, and as it has passed through three editions in Germany, it may be regarded as a standard book on the subject. The author has drawn his evidence from inscriptions of every age and from the testimony of ancient grammarians, as well as from transcriptions from and into other languages, and has illustrated the changes which passed over the pronunciation of Greek by analogous changes in modern languages and in modern Greek itself; and he has steered a clear course through the often conflicting evidence furnished by these data, and the conclusions which other philologists have based upon them. The peculiar pronunciation, also, of letters in certain dialects has been interestingly traced, and in some of them the modern pronunciation, or something closely resembling it, is found. We rather miss a table of contents; and, notwithstanding Dr. Blass's general lucidity of statement, we should be glad of a summary of results, such as was given

in Mr. Snow's excellent paper on this subject in the *Classical Review* for July, 1890. The author is a strong opponent of the claims of modern Greek to represent the ancient pronunciation of the vowels and consonants in those cases about which any doubt exists; and this, we believe, will be the conclusion of every one who examines the matter scientifically, though it is remarkable how early, comparatively speaking, some of the consonants began to assume their present sound. But it seems strange that Dr. Blass should have passed so lightly over one branch of the subject—that relating to the accentual pronunciation—to which hardly more than three pages are devoted; and also that he should have taken it for granted that stress was not associated with pitch of the voice in the ancient accentuation, so that here too he maintains that the pronunciation of the modern Greeks is further removed than our own from the classical pronunciation. Of all attempts to recover in practice the true Greek pronunciation he takes a most hopeless view. “I am perfectly convinced,” he says, “that if an ancient Athenian were to rise from his grave and hear one of us speak Greek, on the basis of the best scientific inquiry, and with the most delicate and practised organs, he would think the pronunciation horribly barbarous.” Notwithstanding this, the question retains its interest as a subject of inquiry, and readers of this book will find that it incidentally throws light on numerous other important topics. The translator deserves all praise for the skill with which he has accomplished his task, and he has shown his judgment in simplifying, as far as possible, the method of reproducing the sounds of the Greek language.

PROF. WARR has undertaken a useful piece of work in re-editing Teuffel's *History of Roman Literature* (Bell), after the greatly-improved fifth edition of the original. Teuffel's style was not brilliant at the best, and often it became barely intelligible in Dr. Wagner's faithful but clumsy version. But the book held a place of its own, which made it indispensable to serious students; and it had been carefully kept up to date by frequent revision, so that on its own lines the “Teuffel-Schwabe” is all that can be desired. The new edition of the translation of Volume I. does not much exceed in bulk the old first volume, but the matter has been greatly increased, owing to a more compressed form of printing, especially in the very numerous references. Here we find that the new editor has very wisely given up Dr. Wagner's irritating habit of translating the titles of German periodicals and proceedings, which were of no service to those who did not read German, and presented no difficulty to those who did. It is not often that he has had occasion to correct positive errors, as when Dr. Wagner used “alleged” for “quoted”; but he has very often recast an awkward or an ambiguous sentence. Whatever favour the work has already enjoyed in England ought to be greatly increased now that it has assumed a form at once more complete and more attractive.

SCIENCE NOTES.

THE ladies' *soirée* of the Royal Society will take place on Wednesday, June 17.

THE council of the Chemical Society has presented a congratulatory address to Prof. Jean Servais Stas, author of *Recherches sur les Rapports réciproques des Poids atomiques*, on the completion of his fiftieth year of membership of the Royal Belgian Academy of Sciences, Literature, and Arts.

THE Friday evening discourse next week at the Royal Institution will be “An Astronomer's

Work in a Modern Observatory,” by Dr. David Gill, of the Cape of Good Hope.

MESSRS. WHITTAKER & Co. have in preparation a new series, to be called “Whittaker's Library of Popular Science.” The volumes are primarily intended not as school-books, but for the use of intelligent readers, whether young or old, who desire to gain some insight into a science with which they have hitherto been unacquainted. The chief aim, therefore, of the writers will be to educe theory from practical demonstration; to adopt, whenever possible, graphic and diagrammatic modes of statement; and to rely considerably upon pictorial illustration as a means of shortening or supplementing verbal description. The first volume of the series, to be published shortly, will be *Astronomy*, by Mr. G. F. Chambers, to be followed by *Light*, by Sir H. Trueman Wood. Other volumes already arranged for are *Chemistry*, by Mr. T. Bolas; *Mineralogy*, by Dr. F. H. Hatch; *Electricity and Magnetism*, by Mr. S. Bottonne; *Geology*, by Mr. A. J. Jukes-Browne; and *Botany*, by Mr. G. Massee.

A GLASS case just placed in the mammal gallery of the Natural History Museum contains a series of stuffed specimens of two of the largest and rarest species of Asiatic wild sheep, collected and presented by Mr. St. George Littledale. Three of these represent Marco Polo's sheep (*Ovis poli*) from the Pamir, and three of them the Ammon (*Ovis ammon*) of the Altai. These are said to be the first perfect specimens of *Ovis poli*, generally known only by its enormous horns, that have yet been brought to England.

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, April 25.)

JOHN TAYLOR, Esq., in the chair.—Miss Emma Phipson, in a paper on “Democracy and ‘Coriolanus,’” said that, although it had been averred that students of every occupation may find their opinions and pursuits represented in Shakspeare's plays in a more favourable light than they could picture them for themselves, yet it has not been so in reference to Shakspeare's political bias. Conservatives declare that he was “a Tory and a gentleman”; while Liberals assert that he had a feeling of contempt for his own low birth, that he was never betrayed into one generous aspiration in favour of liberty, and that he might in fact be called “a big-natured man with scarcely any conscience.” Are these accusations just? Before Shakspeare's political sympathies can be rightly judged, account must be taken of the position of the stage in his day. Elizabeth, who was gracious and condescending when fooled to the top of her bent, was lion-like in her wrath, and it was dangerous to have even a thought that could be construed into opposition to her wishes. The dramatist had to be cautious. Had Shakspeare been a political partisan, he would have been little to us but an exercise for the student of the past. Yet, in common with other dramatists, Shakspeare undoubtedly, under cover of fictitious or historical plots and characters, discussed passing events and gave his own answers to the questions of the hour. Looking upon a democracy, not as an opposition of the lower to the higher classes, but as a community where the greatest importance is attached to the individual man, yet where each individual man, while he asserts his own rights to the full, recognises that he is but a unit in the nation and holds himself therefore subservient to the common weal, we shall find in Shakspeare's plays that recognition of individual worth, apart from social position, which in modern times is called democratic. There are no instances where our interest is aroused on behalf of any king because of his position. The nobles are either good or bad, and just as the play requires. While Shakspeare had no admiration for mobs, which are much the same now as in his day, and no sympathy with thoughtless violence, yet the phrases which he applied to the commons and which grate so harshly on our ears were of such frequent use then as to have given

little or no offence. Hazlitt complains that the whole tendency of the play of "Coriolanus" is sadly aristocratic. But surely he missed its real meaning. It is more reasonable to conclude that Shakspeare did not mean the character of Coriolanus to be attractive. He is represented as a moral coward and as the personification of vanity. Between the insolent and obstinate patricians and the toiling and fickle plebeians, the dramatist, impartial as fate, stands aside and lets us draw our own conclusions. There is no ground for assuming that Shakspeare wrote "Coriolanus" with any political purpose whatever. He was particularly the poet of personal nobility and was, therefore, in the best sense a democrat. No writer who had not a democratic spirit could have so taken hold of the heart of the people who, with all their faults, have ever had a true feeling for liberty and a quick resentment of all tendencies to despotic oppression; and recognising the same in Shakspeare they have given to his works a place next to their Bible and the *Pilgrim's Progress*.—Miss Florence Herapath, in a paper on "The Two Tribunes in 'Coriolanus,'" said that in no play do we see more clearly Shakspeare's intuitive insight into the various complex problems which go to make up human life; and by his skilful representation of the virtues and vices of both patricians and plebeians we are left in doubt whether his own sympathies lay with the people or the nobles. The two professional agitators, Sicinius and Brutus, are men of widely different temperaments and capacities. In general, Sicinius is the man of intellect, Brutus is the man of action; Sicinius plans, Brutus executes; Sicinius leads, Brutus follows. But they occasionally change places; and then it appears Brutus was not a mere parasite who had slavishly followed from lack of power to originate for himself, but rather an unusually able man who, fully recognising that, in a partnership of two, one must be the ruling spirit, had manfully taken the more difficult position of subordinate and had bent his whole energies to the due fulfilment of its requirements. The two tribunes work together as true yoke-fellows. Each passing shade of feeling is instantaneously mirrored in both minds, but with a very different reflection. On all public occasions Sicinius is the chief spokesman, and for this he was specially fitted. He has the rare talent of saying the right thing in the right place; and, like Antony, he possesses the power of instilling into the minds of his hearers the thought he wishes them to think. Consummate art is displayed by both tribunes in guiding the "mutable rank-scented many" into the very path they wish them to take. They are led not by words, but by implication; not by advice, but by hint, innuendo, suggestion; so that the tribunes, while posing before the patricians as advocates of unity and moderation, may yet rank among the plebeians as self-sacrificing leaders and worthy counsellors. They are deceivers, truly; they aim at deceiving even themselves. Even in their private talks, they keep up the pretence of doing all for the good of Rome. And the citizens whom they influence are represented by Shakspeare as no despicable mob of riotous weaklings; they are rather children, short-sighted, fickle, emotional, unreasoning, impulsive, immature, incongruous, with possibilities vast. But, like children, they occasionally touch the very quick of the question, and startle their elders by transient glimpses into the everlasting heart of nature.—Mr. Walter Strachan read a poem by a member on "Shakspeare's Birthday."

RUSKIN SOCIETY.—(Friday, May 8.)

J. ELLIOTT VINEY, Esq., in the chair.—A paper was read by Mr. Arthur Bontwood on "*Ethics of the Dust*." Mr. Bontwood stated that he is disposed to place Mr. Ruskin in the very first rank of modern prose writers, but as a literary artist slightly inferior to Dr. Martineau and to him alone. He certainly ranks before Cardinal Newman, although his style lacks the perfect limpidity of the *Grammar of Assent*. The *Ethics* is a highly successful piece of dialogue writing. It entirely avoids the one great fault into which writers of dialogue more or less frequently fall—the mistake of making their characters speak, not as they naturally would in real life, but as if they were uttering the thoughts of some third person concerning themselves and their circumstances. Mr.

Ruskin's method of teaching science is altogether admirable. He does not weary and perplex one with a high-sounding terminology, and with dry definitions and propositions. He simply takes actual specimens and talks about them. For beginners this is beyond question the correct method and needs to be more widely followed. Botany in particular lends itself to this natural method of instruction. An intelligent teacher with a handful of wild flowers would be able in the course of an hour's talk to impart an astonishing amount of real information about plants and plant life. Mr. Ruskin takes a dynamic rather than a static view of nature, and endeavours to explain existing phenomena by reference to their past history. The frankness with which he admits the limitation of our knowledge of nature is worthy of notice and imitation. His view of nature is essentially artistic; in the terminology of current speculation it might be called anthropomorphic or animistic. He reads his conceptions into nature rather than finds them there. The main interest in the *Ethics* centres in the manifold references to human affairs, to morals, religion, &c. With his polemic against commercialism Mr. Bontwood heartily concurred. Man is more than a wealth-producing machine, and a nation's strength lies primarily in the strength and virtue of its people, not in its money bags. The other points touched upon were: the place of woman as the complement and not the rival and equal of man; that religion is essentially a matter of the heart; Mr. Ruskin's beautiful conception of the ideal life as measured music.—A discussion followed, in which Messrs. West, Smart, Ogilvie, and the chairman took part.

PHILOLOGICAL SOCIETY.—(Annual Meeting, Friday, May 15.)

HENRY BRADLEY, Esq., president, in the chair. After the election of officers, the passing of the treasurer's cash account, and a vote of thanks to the council of University College for the use of its rooms, Mr. Talfourd Ely read a paper on "Inscribed Vases." Besides monuments of a documentary character, various classes of works of art bear inscriptions explanatory of their purpose, or of the names, views, and positions of their authors, as statues (or, rather, their bases), bas-reliefs, gems, coins, and various objects dedicated to deities. Among them are vases, many of which bear alphabetical characters used simply as ornament. To others inscriptions have been added, being scratched on them by their owners. *Ostraka*, used for ostracism, and also for accounts, &c., are an instance of a secondary use of pottery. Alphabets found on vases have illustrated the connexion of the alphabets of Italy with that of Chalkis. Inscriptions have led to the recognition of a certain class of vases as Chalkidian, thus throwing some light on the art of Euboea. A simple form of inscription is the name of a person or animal occurring in a vase-picture. Even a seat and an altar are so ticketed in the François vase. The alphabet employed shows the place of manufacture. Signatures of artists are specially characteristic of Greek art. More than a hundred are found on vases; and the number of vases so signed is given by Klein as 424. For the most part signed vases are Attic, and belong to the end of the sixth century or the first half of the fifth. Some early signatures are metrical. After dealing with sundry inscriptions occurring on vases at Berlin and elsewhere, Mr. Ely proceeded to consider the numerous instances in which *καλός* is employed, an adjective having various shades of meaning. Such inscriptions have been considered as erotic; but this idea has of late been opposed by scholars of high repute, and there is a tendency to view them in a political light, since names of prominent persons, as Hipparchos and Miltiades, are included. Passing over the theories of Panofka and others, Mr. Ely reviewed the arguments of Otto Jahn, Studniczka, Wernicke, and Klein, giving a full analysis of Wernicke's recent treatise, *Die griechischen Vasen mit Lieblingnamen*, and referring specially to Klein's *Die griechischen Vasen mit Lieblingsschriften*. Allowing for the various meanings of *καλός*, and for the connexion in which the inscriptions in question are found, the conclusion Mr. Ely arrived at was that while some referred to the "obscure

παῖδά of the vase-painters," many expressed an honest popular enthusiasm for youths who appeared to advantage in the palaestra and the gymnasium. Others also referred to the mythological personages represented on the vase on which they were found.

FINE ART.

MR. HOLMAN HUNT'S "MAY-DAY ON MAGDALEN TOWER."

MR. HOLMAN HUNT, careful in all things, is, as we know, not least careful in the selection of his subjects. He is not as other men are, in this or in other respects: he does not think that the subject of a picture is a matter of comparative unimportance; he does not, having made his mark, go on repeating himself till we are tired. Persistent as his individuality is, few modern artists have addressed themselves to so great a variety of theme. In his pictures from the life of Christ he has treated each scene in a singularly striking and novel manner; but he has shown an equal force and freshness in his treatment of subjects from Shakspeare, Boccaccio, and old English history, while his pictures of modern life, like the "Awakened Conscience" and the "Afterglow in Egypt," or his landscapes and pastorals, have not been less unique and strong. No one can ever predict what will next engage his genius, for he always paints the unexpected. Of one thing only can we be sure, and that is that he will express some high and mystic meaning in the most realistic of forms; in this respect, as in others, he has a closer affinity to Albrecht Dürer than perhaps any other master.

In "May-day on Magdalen Tower" Mr. Holman Hunt has discovered a subject singularly suited to his idiosyncrasy both as poet and artist. In the salutation of the rising sun on May morning from the top of Magdalen Tower, a ceremony which continues a pagan custom in a Christian form, Mr. Holman Hunt has found a high and mystic idea of universal and eternal beauty and solemnity. Instead of being confined to the top of one tower in England, this service, or some service preserving its most essential element, might have its place in all nations and be a bond for men of all creeds, and even of no creed, for no man, however materialist or infidel, can deny the sun or the seasons. And this idea—so essential, so spiritual—could be embodied, is actually embodied, every year in the most realistic forms. The top of a tall tower lit with the radiance of a May morning sky, the choristers and clergy, in their white surplices, singing with their hearts and voices—the picture was there, only waiting the artist.

The artist came, and it was Mr. Holman Hunt, and I am glad it was no other than Mr. Holman Hunt; for though I miss in his work certain qualities of line, and tone, and colour, which I seek for first in that of most painters, there is no one who could realise such a scene with greater force or in so fine a spirit. Moreover, in place of those qualities which I miss, there are others almost peculiar to Mr. Holman Hunt, which are valuable in themselves, and specially in harmony with this present subject. Whatever else his colour lacks, it is always pure and vivid; and his love of iridescence and dislike of shade could never be more safely indulged than in this picture in the sky, with the first bright beams of the new sun turning even stones into rainbows and surplices into mother-of-pearl. If his drawing is not distinguished by its freedom, it is singularly complete and accurate—qualities of high importance in a picture which is an historical record, a collection of portraits, a portrait itself, we may say—a portrait of an event. But these likenesses of the President, of the late Dr. Bloxam,

of Dr. Stainer, of the choir and its master, are not ordinary portraits, for they are transfigured from without by the light of the morning, from within by the spirit of their song. The picture is no doubt open to criticism in many respects, but it may defy it, for nothing can be said which will prevent its taking its place among the most memorable pictures of the century.

COSMO MONKHOUSE.

THE FRENCH SALONS.

IV.

THE Americans, who form the majority of the foreign exhibitors at the Champs de Mars, being uninfluenced by any traditions, their work consequently bears the impress of the teaching and conventions of the French masters under whom they have studied. There are, however, exceptions; for instance, Mr. Dannat, whose portraits and scenes of Spanish life are excellent and original; there are also Mr. Harrison's "marines," and of course, and, above all, Mr. Whistler and his "harmonies." If we seek a fine sense of the lessons of nature, and a simple way of looking at men and things, we are more likely to find these qualities among the Swedish, Norwegian, and Finn painters. Edelfelt, Hagborg, Israels, Skredsvig, Zorn, all eminent representatives of the *plein air* school, and able portrayals of local scenes and characters, are to be seen at the New Salon. Among the limited number of English exhibits are two good "marines" by Mr. Henry Moore; Mr. C. James's "Laissez en garde" and Mrs. Ayrtton's "Capécure Pier" are also worthy of favourable notice. The Germans are well represented. Besides Mr. Uhde and Mr. Von Stetten, alluded to in my last notice, Mr. Kuehl, of Munich, has sent three vivid studies of light and shade, particularly "The Interior of a Church"; Mr. Arnbruster, a new-comer of promise, exhibits a picture entitled "à la Messe," which contains two excellent studies of the heads of an old Bavarian peasant-woman and her pretty daughter.

M. Beraud's "Magdalen at the Pharisee's" (the sensational picture of the Salon) is a *fin de siècle* reading of Scripture. A Parisian Pharisee has invited some bachelor friends to dinner to meet Jesus. Several of the guests are portraits of men familiar to us; for instance, here is M. Renan, recognisable though adorned by the artist with a white beard; close to him is M. Blanche, the painter, and other well-known Parisians, one and all of well-to-do appearance and dressed to perfection in tight-fitting, London-made frock coats, with flowers in their button-holes. Jesus alone is attired in white; he sits at the head of the table, while at his feet lies the prostrate form of a beautiful and repentant *demi-mondaine* imploring pardon for her sins. The guests, who have risen from table, leaving their coffee and cigars, crowd round the two leading personages, and thus is explained the title of the picture:—"And they that sat at meat with Him began to say within themselves, Who is this that forgiveth sins also?" while Jesus seems to answer, "Her sins which are many are forgiven." Religious people may object to this picture, but from the artistic point of view they will be obliged to recognise its merit. Mr. Edelfelt has treated the same subject, from the reading of a Finn legend, on a larger scale, and perhaps in a more effective manner. Jesus, poorly clad and weary, is journeying through the country when he meets Mary Magdalen in rich and picturesque attire. Abashed and repentant, she falls on her knees before him saying, "Thou art the Lord Jesus, for Thou knowest my sins."

M. Dagnan-Bouveret's "Conscripts"—a party of sturdy Franco-Comtois peasants singing

as they march down the narrow village-street, arm in arm, preceded by a boy carrying a tricolor—is a remarkable performance, executed with that research after perfection of drawing and colour which characterises all the works of this eminent painter. Nevertheless, there is a want of breadth of treatment, a want of space and air, which dwarf the *ensemble* of the picture. Artists will admire the talent displayed in the contrasts of colour between the three shades of the flag and its surroundings, and the admirable rendering of the faces of the young men; but the public will prefer the same artist's Bretonne peasant-woman exhibited last year. M. Cazin's ten landscapes are most exquisitely painted, full of sweet melancholy and repose; in "Route de Flandre" and "Minuit" this talented and refined artist has surpassed himself.

That much-abused body, the Paris Municipal Council, has been doing good work for the development of art culture, not only by the foundation of schools with a view to bringing out the latent talents of young craftsmen, but also by encouraging artists to devote their attention to the mural decoration of the public edifices of the capital. Thus, competitions have been instituted for the decoration of the halls and reception-rooms of the new Hôtel de Ville, and the district Mairies, specially of those rooms where the various civil rites are solemnized, such as marriage, declarations of birth, &c. The art of music as well as that of mural decoration is likely to become an object of municipal encouragement; for not only is a handsome prize offered by the Council every two years for a Symphony, but recently a Maire had an organ set up in the Salle de Mariage of his Mairie. At the new Salon the exhibits of decorative painting are numerous. In a previous article I alluded to M. Puvis de Chavannes' splendid cartoon for the Hôtel de Ville of Rouen. M. Besnard exhibits a series of eight cartoons, illustrating scenes of scientific research, intended for reproduction in stained glass for the decoration of the new School of Pharmacy. M. Binet's "The Sortie: an Episode of the Siege of Paris," intended for the decoration of one of the halls of the Hôtel de Ville, is a work of considerable dimensions. The scene is laid at the Porte Maillot, on a cold January morning; snow lies deep on the ground, a battalion of National Guards are leaving for the front, accompanied to the last barrier by a motley crowd of relatives, friends, and idlers, while soldiers, artillerymen, vendors of strange edibles and drinkables surround them. The episode is admirably rendered, full of movement, and correct in every detail, as I can personally vouch, having been a besieged resident and eye-witness of the events of those dire days of January, 1871. M. Chabas' "Nuptial Repast" and "La Famille," two large panels intended for the Salle de Mariage of the Mairie of Montrouge, represent the familiar out-of-doors amusements of the *petite bourgeoisie*. M. Galland, among other decorative subjects, exhibits a picture entitled "The Stone Carvers," which is one of a series of twenty-six illustrations of the old trade guilds of Paris; this is also for the Hôtel de Ville. Two well-known artists have been asked to contribute to the decoration of the ceiling of the ball-room. In M. Gervex's "La Musique," the allegorical and mythological personages occupy the centre of the ceiling; the lower part represents the stage of a theatre, the orchestra and stalls; while the sides of the picture are the private boxes. The whole is brilliantly lighted, and the general effect is as charming as it is original. M. G. Dubuffe's "La Danse," which is to decorate the interior of the cupola of the Salle des Fêtes, is also very pretty, and admirably suited to its destination. The show of sculpture at the Champs de

Mars is less good, and the exhibits are far less numerous, than at the Champs Elysées. However, the works of three sculptors are worthy of special notice. The bust of M. Puvis de Chavannes, by M. Rodin, is bold and life-like. M. Bartholomé, a new comer, has sent a funeral monument, and three figures emblematic of grief and suffering, which display an intensity of realism akin to some of the best work of M. Rodin. M. Dalon contributes several good busts and a *Projet de Fontaine*—a Bacchanalian scene, full of movement, but scarcely appropriate for its purpose. I also observed an admirable bust of a young girl by Mme. Besnard, the wife of the painter.

CECIL NICHOLSON.

OBITUARY.

THOMAS COLLIER.

ENGLISH landscape art—the practice of which he had adorned by five-and-twenty years of work—sustains a severe loss in the death of Thomas Collier, which occurred last week at his house in Hampstead Hill-gardens.

Mr. Collier was born in the year 1840, at Glossop, on the Derbyshire border, it is stated. He early addressed himself to the career of a landscape painter; and it is true, no doubt, that his method was founded upon that of David Cox, nor is it possible that he could have set up for himself a better model of delicacy of observation, and of decisive and economical hand-work. And the medium of Collier was—like that of David Cox—almost exclusively water-colour. His oil paintings were few, and, like Cox's, they were executed chiefly in his later time. But, with him, the later time was still only middle age. Collier died when he was fifty-one: David Cox at seventy-six. Had David Cox left us at the age of Collier, he would hardly have been remembered to-day, and could have been an example to no one. Collier passed through no such prolonged period of preparation for mastery. He was already a master in his early manhood. His work can hardly be divided into periods: freedom of manner, largeness of vision and touch, belonged to him almost from the first. To the quite superficial observer of his drawings it appeared that he painted only two or three subjects, and those on the same grey day. But to the real student of his work, the richness and variety of his resource is revealed. He observed and recorded differences of weather and light which escape all casual and all untrained notice; and if he was among the simplest and sturdiest he was also essentially among the most poetic recorders of the English country-side and homestead—of farm and coast and moor.

Collier's work, exhibited in France, obtained for him the decoration of a chevalier of the Legion of Honour, and here in England he was a distinguished member of the Royal Institute of Painters in Water-Colours. But it is doubtful whether the opportunities afforded to the large public for seeing his work were frequent enough to secure him that degree of actual popularity which was his due; and it is at all events certain that when the cabinet of sketches which he showed very occasionally to his friends shall come to be known more widely, he will be accorded, without cavil or questioning, a place among the masters.

F. W.

CORRESPONDENCE.

THE MUTILATION OF THE MONUMENTS OF ANCIENT EGYPT.

Luxor, Egypt: April 30, 1891.

As the names of certain members of the American Mission have been connected with the late mutilation at Beni Hassan, I wish to

put before readers of the ACADEMY a few facts in my possession regarding that affair. I had hoped that the government would make a thorough investigation, and I offered to make known to the officials the name of a native merchant who at one time had all the stolen cartouches in his shop for sale. The government never showed sufficient interest in the matter to take up this clue and follow it.

Early in October, 1889, I visited Tel-el-Amarna. Finding that my approach to one of the tombs caused persons to hurry out of it (who had been engaged in the very act of cutting inscriptions out of the wall), I hastened to inform M. Grébaut of this fact by letter. A day or so later I wrote a letter to the under secretary of the Board of Public Works, informing him of what was going on at Tel-el-Amarna, and also of the destruction that was going on in the tombs at Assiout. If anything was done by either of these officials it was not effectual; for the work of destruction went on for more than a month after my information was given.

When the Beni Hassan affair became known the people of the place were asked about it; and to cover up their own complicity in the matter they stated that no one had been up or down the river but parties in the dahabieh of the American mission. During the summer there are no tourists in Egypt, while our work continues all the year. Our boat did, during the season of the demolition of the numerous monuments in the neighbourhood of Beni Hassan, pass that place four times; once before, and three times after, the mutilation of the Khnum Hotep tomb.

My name—I having passed the place twice during the year of 1889—has been connected with the affair. Another member of our mission, who never saw the tomb till after the tourists began to visit it in the autumn of 1889 and found it in its ruined condition, has had his name dragged into the native courts in one province and his party described; his name has also been before the government in another province; and a third member of the mission has been called upon in connexion with the affair to prove his citizenship. This third member is the one whom the natives testify took some stones from the tomb, though he has never been at Beni Hassan nor nearer it than to pass the place on the R. R., which is on the opposite side of the Nile from the tomb.

My desire was that the Egyptian government should so investigate this affair as to bring the truth to light. I offered to give them the information to which I have referred. I did not wish to get the ill-will of the persons whose names I am mentioning in this letter by taking upon myself the rôle of informer and giving information which, never having been asked for, I feel would not have been made use of had it voluntarily been given.

About the middle of October, 1889, I saw in the shop of Sidrack Gras, a well-known native dealer in antiquities in Ekhnim, thirty-one stones which I now know were cut out of mural inscriptions. I was told at the time that the stones had originally been made in the shape I saw them, and as they bore no evidence of having been cut out of inscriptions, I believed the statement. Fifteen of the pieces bore cartouches. I was particularly struck by seven or eight of the cartouches, as they were of a different style and of an older date than the others. None of them were later than the XIIth Dynasty. I was told that the entire collection had come from Tel-el-Amarna. I purchased two of the older lot of cartouches. In our residence at Luxor they were placed in my study and were seen by numerous residents of the place and by dealers. I had much pleasure also in showing them to a representative of the Ghizeh museum. He did not tell me

that they had been cut out of inscriptions. On January 24, 1890, I was told by Mr. Wilbour, an American Egyptologist, that they were from the Khnum Hotep tomb. I at once informed the government of my purchase. Being in Ekhnim a month later, I went again to the dealer and got a third cartouche. I got this third cartouche two months after the government began its investigations. Between the time that I got the first two cartouches and the third, according to the story of the dealer, he had gone to Cairo and had sold to the director of the Ghizeh museum thirty-eight or thirty-nine pieces similar to those I first saw in his shop. Had the Egyptian government been zealous for the preservation of ancient monuments, why did not the director of the museum require the dealer to give information as to where he procured the stones at the time they were offered to him for purchase?

Sidrack Gras, according to his own story, went not less than three times to Tel-el-Amarna with a boat, for the special purpose of bringing stones of the above description to Ekhnim for sale. When I got the third cartouche, I saw in his shop not less than fifty pieces in addition to the thirty-one I saw first. In the morning of the day on which I got the third cartouche he told me that he still had all the remaining (Beni Hassan) cartouches which I had pointed out to him as being very interesting when I purchased the two. When I tried to secure them, he produced but one.

Had the director of the Ghizeh museum taken proper measures with the dealer at the time he purchased the thirty-eight pieces he might have secured the remaining Beni Hassan cartouches. Indeed, one of the excuses urged by the man when he failed to produce for me more than the third cartouche was, "perhaps the remainder of them were among those sold to M. Grébaut."

Sidrack Gras had in his employ one Khalil Elias, who went down to the neighbourhood of Tel-el-Amarna to drum up trade. Whether he was guilty of going from place to place and showing the people what to cut out I cannot say. On this point I have an opinion, and a thorough investigation would doubtless make evident the extent of his guilt. When he found anything to justify a journey to the place by his employer, Sidrack would go down with a boat, and the people took the things to his boat and there he made his purchases.

The people of Beni Hassan would of course not hesitate to cast suspicion on anyone who might have passed the place, providing that by so doing they could shield themselves. It may be satisfactory to the officials of the Egyptian government to have the affair accredited to foreigners whom they will say they cannot control, rather than to natives, as that would furnish another glaring illustration of the gross negligence of the officials to whose care has been entrusted the preservation of these monuments.

The result of the investigation made by the under secretary of the Board of Public Works in so far as it concerns myself was given to our Consul-General in writing, and was to the effect that he was satisfied that I had had nothing to do with the affair. I have no doubt that he would willingly have used the same expression concerning any member of our mission whose name has been mentioned in connexion with the matter.

The statements made by me concerning Sidrack Gras and the date of the stones to M. Grébaut were given to me by him repeatedly, and in the presence of competent witnesses. These facts are well known to dealers and others in Ekhnim. They are well known to the people of Beni Hassan and Tel-el-Amarna.

The truth could easily be known if the government officials were at all anxious to know

it. What can be expected of officials who would not trouble themselves to ask me where I got the cartouches when I informed them that I had purchased two? What can be expected of officials who, when I sent the three cartouches to them that they might be replaced in their positions in the tomb from which they were taken, did not trouble themselves to ask me where I got them? What can be expected of an administration, the head of which, when purchasing thirty-eight or thirty-nine pieces similar to those which were stolen from Beni Hassan, says: "We will not give you much for them because they have been cut from the walls of tombs," while he at the same time fails to ask the dealer, "Where did you get these?"

If any of your readers have heard of the name or names of any of the American missionaries in connexion with this affair, I would like to ask such to remember that it was an American missionary who informed two Egyptian officials of the destruction that was going on at Tel-el-Amarna, at a time when half the destruction might have been prevented had measures to that effect been speedily taken. The only Beni Hassan cartouches that have yet come to light have been saved to Egypt and turned over to the museum administration by an American missionary. The Government officials, after a wild-goose chase of two months, accomplished nothing; but after they had exerted themselves for that length of time, an American missionary brought a third cartouche to light. Nothing but the lack of a little official assistance at the time I got the third cartouche explains the failure to get either the entire lot or correct information as to what disposal had been made of them.

A certain amount of investigation has been made, but great care has been taken not to direct inquiries toward the proper quarter. The Egyptian officials in their investigation of this affair have been doing as an experienced child does when he plays with fire—he is very careful not to get his fingers burned.

CHAUNCEY MURCH.

NOTES ON ART AND ARCHAEOLOGY.

TOWARDS the end of next week there will be on view, at the Burlington Gallery, Old Bond-street, a series of water-colour drawings by the late Henry P. Riviere, of the Old Water-colour Society, illustrating Rome and the Campagna.

MR. JOHN MURRAY announces a fourth and revised edition of Mr. Wilfrid J. Cripps's standard work on *Old English Plate*.

THE *Graphic* of this week will give for supplement a double-page engraving, by Mr. Charles Roberts, of Sir Frederick Leighton's large picture, entitled "Captive Andromache," which attracted so much attention at the Royal Academy three years ago.

THE choice collection of old English pottery and porcelain, formed by the late William Edkins of Bristol, was to be sold at Sotheby's during the last three days of this week, together with a small collection of miscellaneous antiquities on Monday. The catalogue is illustrated with lithographs of the more curious pieces, some of which date from the middle of the seventeenth century.

IN order to explain a misconception, which arose from some words in his speech at the Royal Academy banquet, Sir Frederic Leighton has addressed a letter to *The Times*, in which he says:—

"My desire is that the National Gallery of British Art should present in worthy and characteristic examples a complete epitome of the art of our country from the days, say, of Hogarth, and be from henceforth kept continuously abreast of the times; and in speaking of the art of our

country I mean every form and phase of that art in whatever medium it may have found expression, and in so far as it is capable of being displayed in a gallery."

THE new number of the *Transactions* of the Cumberland and Westmoreland Antiquarian and Archaeological Society (vol. xi., Part 2) contains a short paper, with a full-size illustration, on what is known as the Brough Idol. This rude stone figure is said to have been discovered near Brough-under-Stainmore in 1886. It bears the inscription DEO : ARVALO SATURNO SEX COMMODUS VALER VSLM. Though Mr. Haverfield published it in his *Ephemeris Epigraphica*, he has now no hesitation in pronouncing it to be a modern forgery. Apart from the style of carving and the freshness of the surface, the character of the lettering would alone be denunciatory; and Mr. Haverfield points out that the inscription is copied from one found at Bressia (*Brixia*) in North Italy (*C.I.L.*, v. 4198), where Henzen and Mommsen both agree in giving "deo Alo" for the former reading "deo Arvalo." Who the forger was remains unknown.

THE STAGE.

"THE ANONYMOUS LETTER."

"THE Anonymous Letter," by Mr. Mark Ambient and Mr. Frank Latimer, will doubtless be repeated at the Lyric, unless it is taken, with moderate promptitude, to another play-house. I saw it at its second performance, when—after a week's interval—it had been "pulled together" a good deal, and had become effective and distinctly amusing, albeit still somewhat faulty. One of its faults, which now seems rather considerable, would shrink into insignificance were the piece but presented to the public as a "farceical comedy," and not as comedy proper. For though I gladly concede that it has such passages of wit and such marks of keen and personal observation as belong to comedy rather than to farce—and though I admit also, and gladly welcome, the presence of some serious interest—I am none the less assured that a certain absence of grip and a certain lack of reasonable motive must prevent the play as a whole from taking rank as comedy proper. The "anonymous letter" is one which is despatched presumably from motives of jealousy and revenge—the chosen vices of the vulgar—by an exceedingly vulgar woman. It is not to be doubted that such a being might well have sent such a letter. But what would have been its effect upon the recipient? The recipient is a young married woman, who a year ago—six months ago, if you will—was at a convent school. Her behaviour is that of a baby. Yet all, I am told, are not babies when they emerge into society from the convent school. The girl lacked intelligence and she lacked trustfulness. She should have disbelieved with indignation the story which she read in the letter, and with which—or with insinuations of which—her ears had before then been carefully filled. But had the course which she pursued been thus sensible and natural, this entertaining comedy could, I fear, never have been written; and so we need not perhaps be very hard upon her—she has permitted us an amusement we should not otherwise have had.

But the leading character is really that of

a burlesque actress—one Helen Grant. This lady is doubtless almost as little true as the other, if truth is to be estimated only by achieved resemblance to a particular and accepted type. But there is in her a deeper truth to human nature. Every burlesque actress is not like her. Nay, more; very few can presumably be like her. But she is possible: she is interesting: she is sympathetic. And Miss Florence West plays with most singular tact, with delicacy, with persuasiveness, this heroine of the stage dance and of the accordion-pleated skirt—this Bohemian, free without vulgarity, who is a comrade and a friend of so many, and a lover only of one. Miss West was not the lady—perhaps not even the type of lady—originally intended for this part; but, to my own taste, she is a thousand times better fitted for it than any noisy romp—than any one more obviously and immediately piquant.

Mr. Lewis Waller plays admirably the gentleman who—if his wife would but believe it—is the quite blameless husband of the little convent school-girl, and not the actress's lover. Young Mr. Credit, of the Stock Exchange, gets the hand of the more desirable woman. He is played by Mr. Eric Lewis, and we are reconciled to this disposition of Miss Grant's fate. Mr. Vernon, as Baron Goldsheim, gives a good bit of character-acting; and more broadly comic is the Sir Daniel Dollar of Mr. George Mudie. This gentleman is a philanthropist—not indisposed to act in conjunction with "Royalties," of whom as many as three attend his principal meetings—and, when the world's eyes are upon him, he is, to boot, a model prude. Miss Vane plays his wife—the sender of the anonymous letter—who with effort elbows her way into what may be mistaken for Society. She is the most fatal guide that the ingenuous Mrs. Sinclair could possibly have. Miss Leighton gives unwonted character to a Scottish maid who attends upon the actress; and Miss Annie Rose—limited in facial expression, but suggesting well enough the simplicity of the person she represents—plays Mrs. Sinclair, who, having departed upon very insufficient reasons, finally restores herself to her lord.

Though this piece is not wholly a success, and wants strength in one or two essential matters and places, it is sympathetic and entertaining; it is agreeably free both from the conventionalities of the blinded optimist and the conventionalities of the very cheap cynic.

FREDERICK WEDMORE.

MUSIC.

MUSIC OF THE WEEK.

M. MASSENET's "Manon" was performed in French at Covent Garden on Tuesday evening. Produced in Paris in 1884, this opera soon found its way to England, and was given by the Carl Rosa company first in the provinces, and afterwards in London. The story of the fickle Manon and her too constant lover, Des Grieux, is interesting, though it has neither the point nor gradation of interest of "Carmen," to which it is distantly allied. M. Massenet's music is graceful and the orchestration effective;

and, of its kind, the opera may be considered successful. The part of Manon was taken by Miss Sybil Sanderson, an American soprano, who has won fame in Paris. She has a bright voice, of high compass; but so far as one could judge, it is not strong enough for Covent Garden. Her acting is good. The chief success of the evening was achieved by M. van Dyck, the Belgian tenor. With his sonorous voice, skilful singing, and admirable acting, he carried all before him. M. Juteau, who played in an amusing manner the part of the old *roué* Guillot, comes from the Théâtre de la Monnaie, Brussels. The performance was under the direction of Signor Mancinelli.

"Les Huguenots" was given on Wednesday evening with a strong cast. Mme. Albani was the Valentina, Mlle. Giulia Ravogli the Urbano, while the male parts were allotted to the distinguished artists, MM. Lassalle, Maurel, and the two de Reszkes. Mlle. Mravina (Margherita di Valois) from the Opera House, Petersburg, made a first and highly successful appearance. She has a clear, sweet voice, and is a graceful and efficient actress. The chorus was good, the staging excellent. The house was well filled. Signor Bevilacqua conducted on this occasion.

A Sinfonia-Epitalamio, by Signor Sgambati, was the novelty at the fifth Philharmonic Concert last Thursday week. It is nearly ten years since his first Symphony was produced at the Crystal Palace; he then, and again in a second, followed classical lines, but the work under notice (No. 3) shows independence of form. The directors of the Philharmonic have made more than one unfortunate experiment in the matter of novelties; we use the word "experiment" advisedly, for we cannot believe that some compositions would have ever been selected if they had been previously heard. Sgambati's first Symphony was clever and of good promise, and the directors probably thought that the promise had to some extent been fulfilled. But such has not proved to be the case; the new work turns out to be merely a series of light movements written to entertain the royal personages assembled for the marriage of the Duke of Aosta and Princess Letitia in 1888. The music is harmless enough in itself, but out of place at a concert of a society for which serious works were expressly composed by Beethoven, Spohr, Mendelssohn, and other distinguished composers. Signor Sgambati conducted, and the performance of his work was excellent. Mr. Frederick Lamond played Brahms's second pianoforte Concerto in B flat. We wrote quite recently about the composer's violin Concerto as improving on acquaintance, but the reverse is the case with the pianoforte work. It afforded, however, an excellent opportunity for Mr. Lamond to display his technique, but he played with such earnestness that the effect was at times hard. Master Gérardy excited great enthusiasm by his performance of a Goltermann Concerto, and M. Eugène Oudin sang admirably songs by Marschner and Gounod. Mr. Cowen conducted with care.

Mr. and Mrs. Henschel gave their second vocal recital at St. James's Hall last Friday week. There was a very large attendance, and the interesting programme was much enjoyed. Mr. Henschel sang a particularly fine sacred Aria by Bach, entitled "Vergies mein nicht."

Mme. de Pachmann gave a pianoforte recital at Prince's Hall on Saturday afternoon. Her reading of Beethoven's Sonata in E flat (Op. 81a) was a good one. In Raff's "Rigandon" she displayed an exquisite touch. She also played two pieces of her own composition, including the well-written "Thème et Variations."

MUSICAL PUBLICATIONS.

Memoir of Madame Jenny Lind-Goldschmidt. By Henry Scott Holland, and W. S. Rockstro. 2 vols. (John Murray.) The authors of this book were, of course, obliged to give the name of the great artist in full, but she is universally known and spoken of merely as Jenny Lind. There have been many queens of song, but none with more magic in its sound than the name of "the Swedish Nightingale." Her life was, indeed, a romantic one. A dancer at the Opera House, Stockholm, heard her as a child of nine, and proclaimed her a genius. She entered the Theatre School, and before the age of twenty had made her *début* on the stage. The directors were pleased with her, and in 1837 offered her a fixed yearly salary of about £60, with a bonus on each appearance; two years later it was raised to nearly £80. Such was her humble beginning. But in 1841 she went to Paris to consult Signor Manuel Garcia, the most renowned *Maestro di Canto* in Europe. He heard her, and pronounced his terrible verdict—"Mademoiselle, vous n'avez plus de voix"; her voice, in fact, had been strained by over-exertion and a faulty method of production. After proper rest she took lessons from him, and for these she was deeply grateful to the end of her life. It has been stated in print that Jenny Lind sang at the Grand Opéra without success, and also that she applied for an engagement but was refused. But a letter from Jenny Lind to M. Vatel, director of the Opéra shows clearly that neither of these oft-repeated statements is true. She returned for a time to her native country, and in 1844 made her appearance in "Norma" at Berlin, delighting the public and disarming the critics. The news of her brilliant success quickly spread, and Mr. Bunn was soon on his way to Berlin in the hopes of securing Jenny Lind for his approaching season. The famous "Bunn" contract is duly described and discussed, and her biographers have little difficulty in showing that the manager's proposals were anything but handsome. The mention of the performance of "Euryanthe" at Berlin in 1845 in aid of funds for a monument to Weber, in which Jenny Lind took a part, leads to some interesting remarks respecting the libretto of that opera. It is quite true that the omission of the tableau which the composer wished to be presented to the audience during the *Largo* of the Overture is a dramatic error, and detrimental to a fine work. The unveiling of the Beethoven monument at Bonn in 1845, the royal guests at Brühl, and the old feudal fortress of Stolzenfels, the concerts and the singing of "the Lind," form the subjects of a brief but extremely interesting chapter. It was during these exciting days that Jenny Lind first met Mr. and Mrs. Grote, in whose country-house close to Burnham Beeches she afterwards spent such happy days. In the following year she made the acquaintance of Mendelssohn, and there speedily sprang up a warm friendship, which the death of the composer in the following year brought to a premature end. Some of Mendelssohn's letters are published for the first time, and his admiration of "the Lind," both as a woman and as an artist, was evidently as sincere as it was enthusiastic. These letters, and many a page about their intercourse, will be read with interest, and we will not spoil the reader's enjoyment by quotation. Mendelssohn in his published letters is silent about Schumann's music; it is, therefore, particularly pleasant to read that Jenny Lind's enthusiasm for Schumann's genius first began under Mendelssohn's guidance. The letters from Lumley to Mendelssohn concerning the "Tempest" opera show how earnest the composer was in his desire for a good book. The "Tempest"

was to be written for Jenny Lind to appear in as Miranda at Her Majesty's Theatre in 1847, and this must have been a strong inducement to carry out the scheme; but Mendelssohn, after long correspondence, rejected Scribe's libretto, as his "artistic conscience rebelled against the changes which the French librettist proposed to introduce in the construction of a drama consecrated by the genius of Shakspeare." In 1847 Jenny Lind met the Schumanns at Vienna, and Mme. Schumann has kindly furnished extracts from her diary. Jenny Lind so charmed her that she writes: "I could have hugged her all the time." Again in 1850 Mme. Schumann has much to say about the songstress. She writes: "I need scarcely mention that Robert is equally charmed with her; for a composer it is a special delight to hear his songs rendered as coming from the depths of his own heart." Schumann's songs always gave her delight, and her biographers tell how; as she lay on her deathbed at Malvern, the last notes she ever sang were the first bars of "An den Sonnenschein." The arrival of Jenny Lind in London on April 16, 1847, caused wonderful excitement. Mrs. Grote and Mendelssohn walked up and down the western side of Belgrave-square "eagerly watching for the appearance of the party." At last they were "rewarded by the sight of two four-wheeled cabs, heavily laden with luggage." Jenny Lind had at length

arrived in the city in which she was destined to win triumphs more brilliant than those attained by any other singer of the period. Those triumphs are fully described, and we must leave our readers to peruse them at leisure. Jenny Lind had a wonderful voice; and with her high notes, marvellous shakes, and extraordinary cadenzas, brought down the house every time she appeared; but it was her high ideal as an artist, and her constant endeavour to perfect that ideal, that fascinated such men as Lindblad, Anderson, Thorwaldsen, the Schumanns, and Mendelssohn. And, while admiring her gifts, it was her simplicity of manner, her sweet, unselfish nature that so endeared her to the friends which she never failed to make wherever she went—the "simplicity of a child, and the goodness of an angel," as the late Dean (then Mr.) Stanley wrote in a letter from Norwich in 1847. When her fame was at its zenith, Jenny Lind withdrew from the stage. Those who wish thoroughly to understand why she took this step have only to read attentively the chapter entitled "How did Jenny Lind come to leave the Stage"? This is a brief account of a well-written and attractive book, but it is long enough to call attention to it; its title will prove its best recommendation. It is dedicated to the Queen, one of Jenny Lind's greatest admirers. J. S. SHEDLOCK.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186, Strand.

Copies of the ACADEMY can be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. EASON & SON, 40, Sackville-street; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"RULERS OF INDIA."—*Viscount Hardinge.*
By his Son and Private Secretary in India, Charles Viscount Hardinge.
(Oxford: Clarendon Press.)

It is matter for surprise that no biography of such a distinguished man as the first Viscount Hardinge should ere this have been published. He was a hero of the Peninsular War, he represented the English staff at the headquarters of the Prussian army during the campaign of Waterloo, he was a Cabinet Minister, Governor-General of India from 1844 to 1848, and Commander-in-Chief of the army at the time of the Crimean War; and yet his eldest son, who, as his private secretary in India, possesses unrivalled opportunities for learning his views and studying his actions, has compressed his biography into a volume of 196 small octavo pages.

In these days of long and elaborate Lives of minor personages, which are read only by long-suffering reviewers and personal acquaintances, it is a novelty to be able to complain that a biography is not longer. Yet that is the first criticism to be passed on the present Lord Hardinge's Life of his father. All students of military history, or of Indian history, would gladly have welcomed a larger book, especially if it had contained a collection of the Governor-General's letters from India, of which only a few specimens are given. But the student's loss is the gain of the general public. Such works as Bosworth Smith's Life of Lord Lawrence, Major W. Broadfoot's memoir of his brother, or the biography of Sir Charles Macgregor, require a great deal of enthusiasm and some previous knowledge before they can be enjoyed; while the present volume can be read at a sitting, and will be appreciated by those who dislike Indian history as much as the average member of the House of Commons dislikes questions of Indian finance. It must not be thought that the book is too short. It contains a full account of everything of importance in Lord Hardinge's military and political career; it is arranged, as was to be expected in a volume of the "Rulers of India" series, so as to bring into special prominence his government of India; and it gives a lifelike and striking picture of the man, which might have been obscured by the publication of the mass of his correspondence.

It is hardly necessary here to say much of Hardinge's career as a staff officer during the Peninsular War. Napier gave him due credit for being the author of the decisive movement which won the day at Albuera,

the most hardly contested of all the battles in the Peninsula. The anonymous author of the strictures on Napier's History, who was certainly Lord Beresford himself, endeavoured after a fashion to deprive Hardinge of his meed of praise; but the great military historian triumphantly refuted his critic, and the modest notes written by Hardinge himself in 1830, and now reprinted (p. 22), fully confirm the view which Napier took. Nor is it necessary to do more than mention Hardinge's parliamentary career, which lasted from 1820 to 1844, or his tenure of office as Secretary at War from 1828 to 1830, and again from 1841 to 1844, and as Chief Secretary to the Lord Lieutenant of Ireland in 1830 and 1834-35. These were but episodes in a useful life; Hardinge's place in history depends upon his government of India, and the relation of his government to the first Sikh War.

It has been said that this little book is particularly well arranged; and the sense of historical perspective, which its author evidently possesses, is nowhere better shown than by the fact that he devotes 83 pages out of 196 to the Sikh War. On the policy which led to the war and the necessity for subduing the army of the Khālsa, posterity has given its verdict of approbation; and subsequent events during the Mutiny proved that, if the Punjab had not been conquered, the rule of the English in India might have ended, or only been restored with the greatest difficulty. But as to the conduct of the war a controversy has long existed; and the time has now arrived when it can be discussed without party feeling, and when some definite conclusion ought to be reached. Nothing is more creditable to the author of the volume under review than the moderate tone he has taken in discussing the campaign on the Sutlej in 1845-46. He gives a fair and temperate view of the behaviour of his father, and abstains from abusing that gallant old soldier, Sir Hugh Gough, with the virulence which disgraced the newspapers of the period, and which still shows itself in modern popular works on Indian military history, written by those who ought to know better. The disastrous victory of Ferozshāh, followed by that terrible night spent on the field of battle, made an indelible impression upon the minds of all who were present. Old soldiers of the Peninsular War have said that the horror of those hours exceeded everything in their previous experience. The need for finding a scapegoat being now past, it is right at last to endeavour to apportion the responsibility for the events which have given rise to so much discussion.

Lord Hardinge tells (p. 90) how his father overruled Sir Hugh Gough's wish to attack the Sikh position on the morning of the 21st December, 1845; he describes the interview between the Governor-General and the Commander-in-Chief, and how Sir Henry Hardinge exercised his supreme powers and forbade his subordinate to fight until Littler came up. He praises his father's "firmness and decision," and not unnaturally asserts that he saved the English army from defeat by his conduct. Perhaps Sir Henry Hardinge did save the English army. But his son cannot be

ignorant of the fact that many persons, especially those attached to Sir Hugh Gough's personal staff, held a different view, and that they declared at the time, and have said since, that if the attack had been made in the morning, as the Commander-in-Chief wished, the battle would have been over before darkness fell, and the perils of the night under arms in the Sikh camp would have been avoided. Lord Hardinge says (p. 91),

"It is almost impossible to realise what would have been the result of an attack without the substantial reinforcement of 5000 men and twenty-four guns, in addition to the strength of the Ambāla force."

He implies that the result must have been disaster; but it is open to question whether an attack in full light of day with a smaller force would not have been more successful than an attack at nightfall, even with the assistance of Littler's reinforcement. Lord Hardinge has put the case for his father fairly; but it would be impossible to notice his book, of which the description of the battle of Ferozshāh is the crucial feature, without mentioning the existence of the controversy on the question. At the crowning victory of Sobraon the two old Peninsular soldiers acted in entire harmony; and it is pleasing to be able to record of both Hardinge and Gough that their differences of opinion caused no permanent estrangement. Before leaving this question, a passage from a letter of Sir Charles Napier may be quoted, if only as an excuse for having dwelt so long upon it here:

"Here I must note," he writes from India in 1850, "that there are two versions of the campaign on the Sutlege. Hardinge says that but for him the battle of Ferozshāh (*sic*) would have been fought with 6,000 instead of 16,000 men, for Gough wanted to leave 4,000 at Ludiana and fight before Littler came up from Ferozepoor. Colonel Grant, Gough's son-in-law, tells me that but for Hardinge's counter-ordering Gough's orders we should have had an immense force at Moodkee, and that our deficiency there was Hardinge's fault. Time will clear up these things but there was great blundering somewhere." (*Life and Opinions of Sir Charles James Napier*, by Sir William F. P. Napier, vol. iv., p. 205.)

The government of Lord Hardinge depends for its importance in history upon the campaign on the Sutlej. For the rest he ruled wisely, and no word of censure has ever been breathed against him. His later life was full of honour and of honours. He was created a viscount for his success in directing the Sikh war. He succeeded the Duke of Wellington as Commander-in-Chief of the army; and it is the highest testimony alike to his character and to his conduct that at the time of the Crimean war, when the administration of the army was most hotly assailed and the Duke of Newcastle had to bend before a storm of anger and abuse, Lord Hardinge was admitted to be comparatively free from blame even by the organs of party opposition. In 1855 he was made a Field-Marshal, and in the following year he died; and it is not without interest to notice that his old comrade, Lord Gough, attended his funeral. His character is best summed up in a few words which the Duke of Wellington said of him when he accepted

the Irish Secretaryship: "Hardinge will do; he always understands what he undertakes, and undertakes nothing but what he understands."

Before concluding, one or two misprints should be noticed for correction in a subsequent edition. General Ferguson's name is twice given as "Farquharson" on p. 16; General Acland and Nightingale are misspelt "Ackland" and "Nightingale" on p. 15—both excusable mistakes, as they are frequently so spelt in contemporary newspapers; and surely the "*French General, Avitable*," mentioned as a former officer in the Sikh army, should be the *Italian General, Avitabile*.

Of all the volumes of the "Rulers of India" series this is, in one respect, the most remarkable. Several of them are good; two, at least, are admirably written; but it is not possible that the son and sometime private secretary of any other Governor-General will write his father's Life. What would we not give for biographies of Clive, or Wellesley, or Hastings, written by such an authority? We cannot have them; but we may be thankful that the first Lord Hardinge's son has lived long enough to show how interesting they would have been, and to Sir W. W. Hunter for adding this volume to his series.

H. MORSE STEPHENS.

Sospiri di Roma. By William Sharp.
(Roma: Printed for the Author.)*

IN Mr. William Sharp's earlier volume, *Earth's Voices*, I remember some very notable descriptive poetry; but except for a book of ballads which I have not seen, I believe he has of late turned his attention more exclusively to prose. In this charming little booklet, however, which comes to us from Rome, he has unmistakably bound about his brow the authentic poet's bay. It is, perhaps, chiefly remarkable for successful achievement of verbal harmonies in irregular measures. But it shows also a fine and delicate eye for colour. For these sketches lightly thrown upon the canvas, these brief flights as of a bird who sings as he dips swiftly and airily from tree to tree, the metrical forms chosen seem especially appropriate. They have an unemphatic, evanescent grace, that wins because it does not too obtrusively insist upon its own brilliance and ingenuity. Such irregular measures have perhaps not often been successful. They failed usually with Cowley, though he did not disdain the help of rhyme; often they failed with Southey, and with Shelley in "Queen Mab"; sometimes with Matthew Arnold. Yet Arnold has given us no more fascinating lines than those commencing, "Haply the river of time," nor Coleridge than his irregular verse to a cataract commencing, "Unperishing youth." Most musical of all language are the Hebrew Psalms in our authorised English version. When irregular measures do achieve a triumph, they leave upon us the priceless impression of spontaneity and sincerity—those qualities

without which no lyrical poetry can be first-rate, and which constitute the supremacy of lyrics like those of Burns, Heine, Tennyson, De Musset, Blake, and some Elizabethans, so perfect in their simplicity, suggestiveness, self-restraint, whether the result be obtained by nature, or by that consummate art which hides itself, and to which all artifice, all mannerisms, are foreign. But of course there may be, alas! a too facile and fatuous, a thin and poor spontaneity, which is simply insignificant.

The melody of the *Prelude* and "*L'ultimo Sospiro*" seems to me exquisite; but I confess that Mr. Sharp fails to satisfy my own ear in isolated cases. For instance, in his "*Dream of Ardea*," he has the lines:

"Not of the days when
The fierce trumpeting
Of the ancient elephants
Made the wild horses
Snort in new terror."

In the second line, too much weight seems to be thrown on "the." I should have expected the *e* of "trumpeting" to be long, or else an additional syllable in the first clause; so further on we have "where the fierce Rutuli." Mr. Sharp, indeed, may urge that such transitions pertain to the very genius of this kind of composition. Now, certainly there may be prose poetry; but in this book we have verse, in which there must be prevailing cadences; here they are iambic, anapaestic, dactylic; therefore, the sudden interposition of a cadence inharmonious with those jars and throws one off the metals; but, of course, it all depends on whether the transition be harmonious or not. It may be so. Thus in "*The Colosseum*," the line where nearly all are long syllables

"Black, rugged, tempest-torn, vast,"

falls most effectively into the whole rhythmic volume of verbal music. And much depends on the reading, which in these instances should be rapid, and unemphasised, so that the clauses may flow easily into one another. But minute criticism of metrical form is often apt to seem impertinent—as the mere obtruded idiosyncrasy of a metrist—if one has reason to believe that the poet knows the technique of his art at all, and understands his own business, because so much in English verse depends on accentuation, as well as on the function fulfilled by the detail criticised in the general organic structure of the whole poem. In these irregular measures, which certainly have their place in our poetry, Mr. Edward Carpenter has shown himself more proficient than the master, Walt Whitman, whom he follows.

Many of these *Sospiri* have the unforeseen charm of drifting mist, Protean cloud, foam blown from waves. One scarcely knows which of them to choose for quotation, so many are beautiful. "*The White Peacock*" is lovely, with a line in it—

"Foldeth his soft white wings in the sunlight,"

which reminds me pleasantly of a favorite line of mine in Lord Lytton's *Serbski Pesme*:

"Closing behind her the long golden gallery."

Very delicately tinted the piece is, very subtle in its similitudes. But "*The Mandolin*" is, perhaps, the most beautiful poem of all, to be compared even with Whitman's

"*Song out of the Sea.*" It contains passages like this:

"Where the grey moths slowly,
Slowly, slowly, like faint dreams
In the wildering woods of sleep,"

and relates to unseen lovers in a moonlit wood of olive, ilex, and laurel, where the nightingale sings, while the tinkle of a mandolin accompanies a low sound of kisses and murmured rapture. "*The Fountain of the Acqua Paola*" seems to me admirable for rhythms adapted to the subject-matter, where brief lines bear us onward with smooth impetus into the broad current of longer, and then are narrowed again into a sonorous tumult of lines more brief. And these verses have a truly martial clang, a tramp as of hosts victorious.

"Here the Etrurian
Banner waved proudly,
Lordly and glorious,
Sovereign ever
From sea to sea;
Here the proud hosts
Laughed when the battle-cry
Rang through the highways,
And when from the towers
Of Veii the mighty
The herald clarions
Sent a wild blast
On the wind of the morning,
A tumult of summons
To the flashing swords
And the merciless rain
Of spears gleaming white
As hail on the hillsides."

But the historical allusions in the book are slight; it is chiefly of Nature on the Campagna, or the ruins within and around Rome, that the poet sings—"The Wind at Fidenae," for example, with passing reminiscences of peoples passed away—Etrurian, Sabine, Roman, but

"Sweet with the same young breath o' the world
Bloweth the wind."

"*Sorgendo la Luna*," while more dubious as regards verbal music, well realises the vague, ghostly beauties of moonlight, and of a fountain playing in it. "*The Fallen Goddess*," on a statue of Venus placed in a church as Our Lady of Sorrows, is frankly pagan, and hostile to the Christian idea; indeed the author seems quite uninfluenced by the deepest thought distinctive of our later epoch. But very delicately does he sing of "*The Scirocco's Breath*," in June; with an exquisite colour-sense of "*Spuma del Mare*" (on the Latin coast), of "*Clouds*," "*Red Poppies*," "*Thistledown*," the latter in lines that have a vague, wandering waffure like that of the down itself; while "*The Bather*," "*The Swimmer of Nemi*," "*The Naked Rider*," "*Fior di Memoria*" (which is in the metre of "*Hiawatha*"), are brilliant and admirable pictures of human beauty, set in the midst of a concordant environment of landscape. I will conclude by quoting "*The Swimmer of Nemi*."

"White through the azure,
The purple blueness
Of Nemi's waters
The swimmer goeth.
Ivory white, or wan white as roses,
Yellowed and tanned by the suns of the Orient,
His strong limbs sever the violet hollows;
A shimmer of white fantastic motions
Wavering deep through the lake as he swimmeth;
Like gorse in the sunlight the gold of his yellow hair,

* To be obtained from Miss M. B. Sharp, 2, Coltbridge Terrace, Edinburgh.

Yellow with sunshine and bright as with dew-drops,
 Spray of the waters flung back as he tosseth
 His head in the sunlight in the midst of his
 laughter;
 Red o'er his body, blossom-white mid the blue-
 ness,
 And trailing behind him in glory of scarlet,
 A branch of the red-berried ash of the mountains.
 White as a moonbeam
 Drifting athwart
 The purple twilight
 The swimmer goeth—
 Joyously laughing,
 With o'er his shoulders,
 Agleam in the sunshine,
 The trailing branch
 With the scarlet berries.
 Green are the leaves and scarlet the berries,
 White are the limbs of the swimmer beyond them,
 Blue the deep heart of the still, brooding lakelet,
 Pale-blue the hills in the haze of September,
 The high Alban hills in their silence and beauty,
 Purple the depths of the windless heaven,
 Curved like a flower o'er the waters of Nemi."

RODEN NOEL.

Forty Years in a Moorland Parish. By the
 Rev. J. C. Atkinson, D.C.L. (Macmillan.)

THE general reader—who will find much to interest and entertain him in this book, whatever his tastes may be—may be pardoned if he has to plead ignorance of the parish about which its incumbent has so much to say. Five-and-forty years ago its remoteness gave point to the remark, "Danby was not found out when they sent Bonaparte to St. Helena." But now the Cleveland Hills, amid which Danby lies, attract tourists from Whitby and Scarborough; there is a railway station in the place, and Dr. Atkinson himself is responsible for making the name of his moorland parish known to the outer world. No one, however, regrets more than he does the disappearance, one by one, of those peculiarities of speech, often full of raciness, which the isolation of the district tended to preserve. The schoolmaster and the inspector of schools began the ruin of the vernacular; the railway will complete it. Words, phrases, and idioms which were in common use when Dr. Atkinson first settled in his moorland home are now obsolete, and even unintelligible to the middle-aged. They occupy a place only in the Cleveland Glossary, which, with other useful works, we owe to our author's industry and power of observation.

Perhaps we have less cause to regret the change that he chronicles in the customs and habits of the dalesmen. In the smaller farm-houses and cottages a condition of things prevailed half a century ago which was equally opposed to decency and to health. Primitive man survived with a vengeance. The commingling of sexes—married and unmarried—within the restricted limits of a two-roomed hovel could scarcely have been paralleled outside Whitechapel and Bethnal Green. It is true these dwellings had a history of their own, which is not without interest; and Dr. Atkinson ingeniously traces many of them back to the inclosure of lands which began at the close of the fifteenth century, and to the sale of allotments in 1656. The state of the church corresponded with that of the houses—on the principle of "like parson, like people"—and Dr. Atkin-

son's first introduction to the sacred building in which he had to minister confirmed the description given to him that Danby would afford "a fine field for work to anyone so inclined." In these days, when, in the opinion of some persons, decency has been carried too far, it may be well to show what indecency means.

"Although I had seen many an uncared-for church and many a shabby altar, I thought I had reached the farthest extreme now. The altar-table was not only rickety, and with one leg shorter than the other, and besides that, mean and worm-eaten; but it was covered with what it would have been a severe and sarcastic libel to call a piece of green baize; for it was in rags, and of any or almost every colour save the original green. And even that was not all! It was covered thickly over with stale crumbs. It seemed impossible not to crave some explanation of this; and the answer to my inquiry was as nearly as possible in the following terms:—'Why, it is the Sunday-school teachers. They must get their meat somewhere, and they gets it here.' . . . And everything was in hateful harmony with what I have thus described. There lay the dirty, shabby surplice, flung negligently over the altar-railing, itself paintless and broken, and the vestment with half its length trailing on the dirty, unswept floor. The pulpit inside was reeking with accumulated dust and scraps of torn paper. The font was an elongated, attenuated reproduction of a double egg-cup, or hour-glass without the sustaining framework; and in it was a paltry slop-basin, lined with dust, and an end or two of tallow-candle beside it."

Obviously the charge of such a church and parish would be no sinecure to a conscientious man, full of zeal. "*Spartam nactus es, hanc exorna*," must have been the episcopal advice given to him when admitted to it, and the injunction was well carried out. Forty years and more have been spent in Danby by Dr. Atkinson happily and usefully, and have provided him with materials for an extremely interesting volume.

We think that in the arrangement of his materials he might have followed a better plan; but, as the headlines are descriptive and there is a fairly good index, there is really no difficulty in getting at the varied contents of the book. Those who are fond of folk-lore will meet with an abundant supply of good stories—humorous as well as gruesome,—while the student of history, or rather of its byways, will be more than satisfied. Dr. Atkinson is strong as an antiquary. He is no mere Dryasdust, but a man of common sense, not disposed to accept any theories without personal investigation. He has examined—indeed, has dug with his own hands—many a tumulus, and found, at any rate, thorough enjoyment in the labour, and, further, has managed to inspire with like enthusiasm the navvies who worked with him.

"Speaking generally," he says, "a blank day was a thing we hardly knew. And this is a remarkable fact. For in the grave-hill researches I have personally conducted—in several cases begun and carried through with my own unassisted labour—with about two exceptions the mounds we examined had been previously tampered with and opened."

But whether the work had been done casually by road-menders, or more syste-

matically by treasure-seekers, there was nearly always something left—perhaps a "pankin" (as the cinerary urn was locally called), or some implement of more or less value and interest. Dr. Atkinson is far too cautious to assign anything like definite dates to these barrows with which the moorland abounds, but he is quite convinced that the groups of pits which are known as "British villages" have not the remotest connection with our ancient predecessors in this island. A systematic and scientific investigation of them has yet to be made; but his belief is that they were shallow shafts sunk for the purpose of obtaining iron ore, and near them will generally be found sites of furnaces and slag-heaps to confirm this theory.

A considerable section of Dr. Atkinson's book—and not the least entertaining—is devoted to the natural history of the Cleveland moors. The severe weather which is there experienced gives an observant naturalist rare chances. We doubt whether anyone—even in the past winter—ever found at his dining-room window, day after day, a couple of snipes waiting to be fed, or could number among his garden visitors such shy birds as cornercrakes or landrails. But, like old words and customs, birds that once frequented the moorlands now avoid them—prescient of the fate that is likely to overtake them there. The stock-dove has become almost extinct, black game entirely so. The kingfisher is rarely seen, and even the dipper or water-ousel is being exterminated by the idle fellows who mistake destruction for sport. Harder to get rid of are the witches and wise men. In spite of schools, belief in their power still prevails, but the distinction between the two is carefully maintained. The witch is malevolent; but the wise man is not credited with commerce with T'au'd 'un', and is willing—for a consideration—to do his neighbour a good turn.

Dr. Atkinson is likely in future to have many visitors who will tax his good nature and consume his time, but they will be the guests of summer. After reading his narrative, they will not care to run the risk of being lost in the snow or caught in a moorland fog.

CHARLES J. ROBINSON.

THREE BOOKS ON DICKENS.

Charles Dickens by Pen and Pencil; including Anecdotes and Reminiscences collected from his Friends and Contemporaries. By Frederic G. Kitton. (Frank T. Sabin & John F. Dexter.)

The Childhood and Youth of Charles Dickens. With Retrospective Notes and Elucidations from his Books and Letters. By Robert Langton. (Hutchinson.)

The History of Pickwick: an Account of its Characters, Localities, Allusions, and Illustrations. With a Bibliography. By Percy Fitzgerald. (Chapman & Hall.)

It is more than twenty years since Dickens died, it is more than half a century since *Pickwick* was published; and yet here, testifying to the ever-fresh interest in the man and the book, are three elaborate works, dealing respectively with his por-

traits, whether of the pencil or the pen, with his childhood and youth, and with the history of his first great novel. *Solitur ambulando*—the question of the durability of his fame, so often and so hotly debated, seems in process of settling itself.

Of the three works in question, the first, which has been in course of publication for some two years, is distinctly the most valuable. It consists of thirteen parts, with five parts as a supplement, and contains—to quote the prospectus—"A general outline of the life of Dickens, forming a necessary framework to an extensive series of pen portraits . . . drawn from authentic sources, supplemented by recollections and anecdotes expressly written for this work by some of his friends and contemporaries; a catalogue of the portraits of Dickens, with a particular account of the most important"; a great number of "illustrations comprising upwards of fifty portraits of Charles Dickens, representing him at various periods ranging from his eighteenth to his fifty-eighth year," and very many "other illustrations relating to him and his works."

Here is a feast, indeed, for the true Dickens lover. Much, no doubt, of what Mr. Kitton supplies in these sumptuous pages—I am speaking now specially of the literary portion of the book—was obtainable already by the erudite. Many of the descriptions here quoted of the man, of his appearance, of his bearing, had been published before. Even so, however, they gain greatly by juxtaposition. Each completes the other, leaving on the mind a larger, fuller, more living impression than when taken singly. Nor has Mr. Kitton by any means contented himself with quoting what was already in print. He has appealed to those who knew Dickens at the various periods of his career, for notes and reminiscences. Thus Forster had said that "we owe" "our only trustworthily glimpse" of Dickens, in his capacity as an attorney's clerk, to the solicitor in whose office he had served, Mr. Blackmore. But Mr. Kitton has discovered a fellow clerk, Mr. George Lear, who, as is but natural, gives us glimpses far more vivid and striking—who tells us, among other things, how "Dickens took great interest" in the old woman who kept the chambers,

"and would mimic her manner of speech, her ways, her excuses, &c., to the very life. He could imitate, in a manner which I have never heard equalled, the low population of the streets of London in all their varieties. . . . He could also excel in mimicking the popular singers of that day, whether comic or pathetic; as to his acting, he could give us Shakspeare by the ten minutes, and imitate all the leading actors of that time."

Miss Dickens, too, has listened to Mr. Kitton's persuasive voice, and favoured him with some excellent notes. Does not the following story make a pleasant little picture?

"There was a penny caricature printed, but by whom I can't say, which greatly delighted him. He writes about it, the letter being dated July 8, 1861: 'I hope you have seen a large-headed photo, with little legs, representing the undersigned, pen in hand, tapping his forehead to knock an idea out. It has just sprung up so abundantly in all the shops, that

I am ashamed to go about town looking in at the picture-windows, which is my delight. It seems to me extraordinarily ludicrous, and much more like than the grave figure done in earnest. It made me laugh, when I first came upon it, until I shook again in open, sunlit Piccadilly.' He returned to Gad's Hill, bringing this with him, and telling us that he had been so amused with it, and so fascinated by it, thinking it 'so irresistibly funny,' that he stood looking at it, roaring with laughter, until he became conscious of a large and sympathetic audience, laughing so heartily with him, that he had to beat a hasty retreat."

His favourite flower, Miss Dickens tells us, was the scarlet geranium; and this, too, is pleasantly characteristic of the man, who, with some of his first earnings as a reporter—so John Payne Collier records—"had bought a new hat, and a very handsome blue cloak with black velvet facings, the corner of which he threw over his shoulder à l'Espagnole." "For a middle-aged man," says Mr. Locker, speaking of an after time, "Dickens was a smart dresser—he liked bright colours. He once told Charles Knight that he had the fondness of a savage for finery."

As to the many portraits reproduced in Mr. Kitton's book, all have interest, but none leaves on the mind an impression of being the portrait. Miss Dickens prefers Maclise's well-known side-face taken with the side-faces of Mrs. Dickens and her sister, Miss Hogarth; and such a preference is easy to understand. It springs from the same feeling which makes Miss Dickens say that she can never think of her father as being old. For Maclise's portrait is beautiful with a beauty almost akin to that of childhood. It shows a face like a fair white page, on which life has as yet written no story. And so, too, there is scant difficulty in accounting for the fact that Miss Dickens views with some distaste Mr. Frith's portrait in the Forster collection at the South Kensington Museum. "I have heard Dickens described by those who knew him," says Mr. Edmund Yates, "as aggressive, imperious, and intolerant; and I can comprehend the accusation"; and these are just the characteristics that Mr. Frith has reproduced in attitude and face. They are hardly the characteristics which a proud and loving daughter would recognise with most pleasure. But the truth is that Dickens lived at a time when English portrait art was at a low ebb. Portraits showing real grip of character, a great artist's power of insight and revelation, are rare at all times, and were rare indeed in the period between 1837 and 1870.

Mr. Langton's *Childhood and Youth of Charles Dickens* is not really a new book. The first edition, now before me, was published in 1883, and does not differ very materially from that just issued. Gleaning assiduously after Forster, M. Langton has been able to collect many stray biographical ears, to pick up many facts of more or less relevance. He has fixed dates and localities, explained—in some cases conclusively, in some at least plausibly—whence Dickens derived the names of the men and women who people his imaginary world, and some of their characteristics. Perhaps, if one may hint a fault, it is that Mr. Langton's

feelings of wonder are so easily excited. The smallest coincidence, nay the most ordinary occurrence, the most seemingly trivial reflection, throws him into notes of exclamation. Never, I think, was writer so prodigal of the signs of amazement. Further, it is a great question how far the world is really advantaged by knowing who were the individuals that suggested this or that character to a great novelist. Like other artists, the novelist idealises even when using the living model; and the finished product, not the model, is all with which we are greatly concerned. But carpings such as these ought not to take the place of recognition of the real work done by Mr. Langton in elucidating the obscure points in Dickens's early history. Here lies the value of his book.

And in what consists the merit of Mr. Percy Fitzgerald's *History of Pickwick*? Scarcely in the arrangement. Doubtless the student, preparing to face Calverley's famous examination paper, would find the volume useful; but he would be a student of unusually placid temperament if he did not, now and again, "utter a word profane" at the want of order and method with which his text-book has been compiled. And if the student saw cause to grumble, the general reader too might, not unjustly, utter an occasional word of complaint on points of style and criticism. But, after all, *Pickwick* is *Pickwick*, and its story will bear much telling and re-telling. Mr. Fitzgerald has a great deal to say on the origin of the book, the illustrations, the various editions, and other matters cognate and collateral—and *Pickwick* is a theme almost inexhaustibly interesting.

"I don't think my father ever had a single morbid thought," says his daughter; and may not this be the secret of Dickens's lasting popularity? For, after all, the *fin de siècle*, with its diseases and affectations of disease, is, as one may hope, but a passing phase. A new century will soon be upon us; and even in this, which is so old, healthiness of thought and feeling still keep their charm.

FRANK T. MARZIALS.

Declarations and Letters on the Vatican Decrees, 1869-1887. By Dr. Döllinger. (Edinburgh: T. & T. Clark.)

In this volume of 178 pages, there are twenty-seven documents and an appendix. The longer and the more important of them are three papers, written by Dr. Döllinger in 1869 and early in 1870, about the general question of Infallibility, and about the extraordinary procedure of the Vatican Council; and two letters, written in 1871 and in 1887 to two archbishops of Munich, in which Dr. Döllinger states and re-states the historical perplexities that were provoked or revived in him by the Vatican decrees. The remainder of the volume is occupied with official correspondence about Dr. Döllinger's excommunication, and with overtures that were made to him by several friends. There are some answers to the incessant reports that he had submitted;

and there are two exuberant invocations to his piety or his fears, addressed to him by "A Lady of High Rank." They show more evidence of her fervour than of her intelligence; they are more creditable to her zeal than to her tact.

Intelligence and tact are too often absent from theological encounters:

"Satire or sense, alas, can Sporus feel."

But there are those who assert that the Pope's Infallibility means little more than our own constitutional phrase, "the King can do no wrong"; by partisans of this kind, the Pope is described as the living representative of the law of nations, as the mouthpiece of the general conscience. Yet the English constitution was almost shattered by James II., who managed to do a great deal of wrong; and the papal authority has been misused by cunning diplomatists like Clement VII., by fond parents like Paul III. or Alexander VI., by practical men-at-arms like Julius II., by ghostly warriors like Paul IV., or Boniface VIII., or Hildebrand. Though fallible, these men were dangerous enough; infallible as well as audacious, there would have been no limit to their pretensions. But so carefully are the latent powers of Infallibility fenced about, so rigorously are they guarded, that the Infallible Pope himself, though he walks *per ignes suppositos cineri doloso*, is almost insured against any sudden emission or any violent access of his omniscience. He is in peril, rather, from the fallible instruments upon which he must rely; or from the average understanding of the universal Church, to which alone he can address himself infallibly.

Dr. Döllinger, however, does not trouble himself with particular instances, or with theoretical objections. Even the more vigorous upholders of Infallibility minimise it in their official declarations; but in the face of history, of tradition, and of theology, it is inconceivable, to Dr. Döllinger, that the Popes should be infallible at all. His objections are precise and practical; they are derived from a knowledge of history at once minute and wide; they are directed by a long training in theology; they are urged by a mind which is at the same time acute and moderate. No opinion, says Dr. Döllinger, may be raised to the certain honours of a dogma, unless it be proved to fulfil the three conditions, and to show the three marks, of being genuine: viz., "universality, antiquity, and general consent." In addition to these marks or notes, the opinion must be contained implicitly in existing articles of faith. It must form part of the "*depositum fidei*," of "the faith once delivered to the saints;" it must not be a novel truth; it must not be contrary to existing truths. If St. Paul had believed that St. Peter was infallible, it might be easier to believe the infallibility of Pius IX. It was once an existing truth, that Councils were superior to Popes; it is now an existing truth, that Popes are superior to Councils. "*Non est mendacium*," we can only repeat with Saint Augustine, "*sed mysterium*"; and we certainly hold this contradiction to be sufficiently mysterious. Dr. Döllinger is less reverent, and he ventures to explore the mystery. The doctrine of Infallibility,

he says, is not ancient nor universal; because it only appeared late in the Western Church, and was then supported by documents which are now universally admitted to be forged. The forger, however, is not absolved, but applauded; he is *splendide mendax, in omne ævum nobilis*; and from the most credible documents, from the most creditable proceeding, more profit could not be derived, nor a more serious argument deduced. In the Eastern Church, the doctrine was never known at all; and by none of the Fathers are those texts upon which the Ultramontanes now rely so interpreted as to justify the dogma of Infallibility. The doctrine, therefore, is not universal, and it is not ancient. It was resisted, also, says Dr. Döllinger, by many Churches and by many teachers of theology; neither the Germans, nor the French, nor the English were favourable to it: that is, it commended itself to the Italian theologians, and to some professors who were more "Italianate" than their masters. Based originally upon forgeries, it won the approbation of St. Thomas, and thus passed into the text-books of theology, but only as an opinion authorised and probable, not as a belief to be enforced; and it was rejected by the Council of Trent, in the sixteenth century. The doctrine was, however, patronised by the Jesuits; in the Latin countries, and wherever their influence was supreme, it became dangerous to question it. Thus propagated, from being merely probable it became almost certain; it was popularised by the writings of St. Alphonso Liguori, and at length the Church was prepared for its discussion and definition. But the whole procedure of the Vatican Council, as Dr. Döllinger remarks, was entirely novel: its business was arranged for it beforehand; the bishops had no power to introduce questions freely; their discussions were hardly free; and the dogma was accepted at last, not by unanimous consent, but by the vote of a majority, as in the profane assemblies of modern times. In every one of these particulars the Vatican Council, says Dr. Döllinger, differed from the old and authoritative councils of the Church.

So far, as it would seem to an outside observer, Dr. Döllinger's facts and reasonings are unassailable; and to one who does not believe in an infallible Church they must always be unassailable. Dr. Döllinger, however, appears to hold that the Church was infallible up to 1870; but after that time, after the time it disagreed with himself, it became fallible and erring, the victim of tyranny and fraud. Dr. Döllinger would argue that the question of Infallibility is an historical question, and that he, rather than the Roman Church, is the infallible expounder of history. There is a famous saying of Cardinal Manning's, that "the Church triumphs over history": that is, the Church may contradict herself, and the faithful may ignore her inconsistency; and it is only in some such way that the historical difficulties in the question of Papal Infallibility can be met. To one who meets it as Dr. Döllinger does, as a lawyer would meet a question of evidence, the answer must be adverse to the Vatican

decrees. It is an old puzzle in the schools to say, "You believe in the Bible because the Church tells you it is inspired, but you believe in the Church because the Bible testifies to its divine mission"; and thus the theological inquirer eddies round the vicious circle and finds no end, "in wandering mazes lost." The circle has been intersected, the maze has been more entangled, by the Vatican decrees. As Dr. Döllinger well says, he spent a long life in maintaining the infallibility of the Church, the fallibility of Popes, the inferiority of Popes to Councils; and he had with him all the Fathers, all the Councils, and theologians of such weight as Bossuet and Fénelon; yet he is called upon in his old age to renounce his former teaching, to pronounce it erroneous; that is, to condemn not only himself, but the unswerving tradition and the infallible utterances of the mediæval and of the early Church. Perhaps this was rather more than Cardinal Newman ever contemplated when he composed his essay upon "Development." In Dr. Döllinger's opinion the widest theory of development cannot embrace facts which are the contradictories of one another; such facts can only be accepted by an act of intellectual suicide, by that complete *sacrificio dell' intelletto* which is recommended by the Jesuits. No doubt, if the human race had been unprovided with reason and with conscience, an infallible Pontiff would have been almost a necessity; but, being reasonable and responsible, he may be an encumbrance to us, especially if his utterances clash with known truths or with the former decisions and opinions of the infallible instrument. Unless we are prepared to abdicate our faculties, to deny our very nature, and to make the *sacrificio dell' intelletto*, there cannot be a greater fallacy than that which is current now, that there is no mean nor resting-place between Rome and Agnosticism. The affairs of the universe are not managed in this absolute and autocratic way: it is in the mathematics alone that we have this naked and brutal certainty; and the whole tradition of Christianity, from St. Paul downwards, assures us that we are not destined to have a certain vision in this world, that we must be content with probabilities, that we can only see things vaguely as in a glass. "*L'Eglise garde le silence*," i was once observed; and a wicked writer added, "she did well, since she had nothing else to nurse." What else there was we may see by the case of Spain, where the *sacrificio dell' intelletto* was made by the state, and where the infallible Church had a fair chance to develop its logical consequences. The Church may have triumphed over history for a time; but time has brought its revenge, and it may be argued plausibly that history is triumphing over the Church, not in Spain alone, but in all the Latin countries. In the New World, where healthier councils prevail, where the Roman Church has a fair field and no favour, where she is not embarrassed by her own unfortunate traditions, she does not indeed triumph over history, but she will appear triumphant in history, triumphant over barbarity, and ignorance, and misery.

ARTHUR GALTON.

NEW NOVELS.

An Old Maid's Love. By Maarten Maartens. In 3 vols. (Bentley.)

A Lady of My Own. By Helen Prothero Lewis. In 3 vols. (Hurst & Blackett.)

Steven Vigil. By Daniel Dormer. In 2 vols. (Chapman & Hall.)

Was She His Wife? From the German of W. Heimbürg. By Helen Wolff. (Eden, Remington, & Co.)

Dazzled. By Houghton Townley. (Trischler.)

Dagmar. By Helen Shipton. (A. H. Innes & Co.)

Ednor Whitlock. By Hugh MacColl. (Chatto & Windus.)

Forbidden by Law. By Barry Cottingham. (Trischler.)

M. MAARTENS writes vigorously in *An Old Maid's Love*, and with life-like fidelity to nature. It is a Dutch story of the sacrifices which a kindly-hearted but rigidly Puritanic woman, Suzanna Varelkamp, makes to reclaim her adopted nephew, Arnout Oostrum, to the paths of virtue. Oostrum belonged to the class of young men of whom it was enigmatically remarked that "there is always harm in a man in whom you can see so much good." As drawn, he is a fine, manly, straightforward fellow; and no wonder that his little sweetheart, Dorothy, idolised him. But alas! there appears upon the scene a handsome, brilliant French-woman, who becomes an inmate of the same house through having sprained her foot. She is something so completely novel in Oostrum's experience, and is so beautiful and so full of *esprit*, that she lures the youth completely into her toils and elopes with him. Then it is that the "old maid," Suzanna, proves her love. Torn to the heart by her boy's sin, she resolves that he must marry the partner of his fall; but to her horror she discovers that the French viscountess has a husband living. Nothing daunted, she yields up her entire fortune to compel the husband to sue for a divorce so that the guilty ones may marry. How matters are disposed of at the end we shall not reveal, but we may say at once that the story is very clever and very original. Though the author is a Hollander, he writes with perfect command of the English language. He has an epigrammatic way of describing character. Suzanna, for example, is a woman "who loved her God and her store-cupboard"; but she did not "love her neighbour over much," nor yet "herself to any excess of unrighteousness, knowing with a perfervid knowledge that she was altogether abominable and corrupt." Old Baas Vroom is an amusing creation. He will not give up smoking "because he has read in his Bible how the people praised the Lord with their pipes"; and pursuing further the same original methods of exegesis, he declines to give up drinking because he has been exhorted to "test the spirits." There is an old lady who makes a most remarkable will, and whose daily life is a protest against "the God-forgetting luxury of our times." Then there are two notaries, one of whom draws the other's

attention to a very beautiful girl, but the latter severely replies, "I never notice such things in business hours, nor should you." Mynheer van Donselaar is very vehement against artistic tastes of all kinds. "Every artist is a liar—as he must be, for art is lies—but every liar is by no means an artist. It takes a good deal to become a thoroughly artistic liar." Poor Suzanna is like many others whose zeal is in excess of knowledge. "You are one of God's fanatics," Pastor Jacob said to her, "but you do the devil's work." This novel is strong both in humour and in pathos.

While there is no special appropriateness in the title of Miss Prothero Lewis's novel, *A Lady of My Own*, the story itself is not without its merits. Matthew Moore, the Liberal politician, who defeats old Admiral Shipley, his Conservative opponent, is a terrible specimen of boorishness and cruelty. He has hurried his wife, a delicate, sensitive creature, into her grave; and he pursues a similar course with their daughter, Hyacinth, who has inherited all her mother's fine qualities and high poetic temperament. He even goes the length of striking her, and this indignity causes her to leave her home and place herself out of his power. By a strange coincidence, the son and daughter of the victorious candidate fall in love with the daughter and the son of the defeated one. Much of the narrative is occupied with the record of their attachments, their trials, and disappointments; and it must be said that a considerable number of the latter fall to their share. One very original incident in the story is the delivery of a speech by the young scapegrace Shipley in favour of his father, but given in the dress and voice of the orator's maiden aunt. Altogether, the election produces a good deal of fun, mixed with no little heart-burning. Persis Shipley marries Sir Rupert Mountstevens, in response to her father's dying request; but she is called upon to go through much anguish and suffering with her unworthy husband. The death of Persis in the midst of a frightful thunderstorm breaks him down completely, but ultimately makes a better man of him. As for old Moore, he obtains more than he deserved, namely, the forgiveness of his daughter. After long and weary wanderings she is discovered by Leverton Shipley, and the two are happily married. The author may be congratulated upon having written a novel that is in some parts really striking.

Without being in any way noticeable from the literary point of view, *Steven Vigil* is a good, wholesome story. Steven himself is a much-tried being, who loses his saintly mother early, while his very unsaintly father lives on to plague by his villainies his son in particular and the world in general. He is a most ingenious rascal, turning up in various guises, and completely defying Scotland Yard and all its works. A sad picture is given of schoolboy life at Grindem House, a kind of second Do-the-Boys Hall, from which the hero, driven desperate by cruelty, at length manages to make his escape. The one bright episode in his subsequent career is his meeting

with Mary Demaine, the daughter of an atheistical professor. Mary is quite different from her father, being as spiritually minded as she is beautiful in person. A selfish baronet, Sir Hector Danger, runs the villain of the story pretty close in wickedness.

The little story, *Was She His Wife?* which Miss Wolff has translated from the German, is very pathetic in its main incidents. It illustrates the never ceasing sacrifice which is undertaken by one portion of the race for the happiness and comfort of the other. In this instance the sufferers are the mother and sister of a volatile and worthless lieutenant, who is not worthy of a tithe of the love and devotion showered upon him.

Dazzled is a most extraordinary sketch, which it were unkind to examine too closely. A doctor, who has neglected a lucrative practice in a desirable neighbourhood to pursue a chimera, relates his experiences. The idea which absorbs him is the power to unravel the mysteries of blindness, and to be able to give some man who has been born blind his sight. But for the attainment of his object he has to commit a crime, and to bring down upon himself that everlasting darkness which he dispels from the vision of another. The idea is a singular one, and it is morbidly worked out. In intent he commits the crime, though he is saved from the actual guilt of murder.

Dagmar is a brightly-written novel, dealing with the steadfast love of a very high-minded and beautiful girl for one who at first sight seems scarcely worthy of her. Maurice Caryl returns to England after a long sojourn abroad, and for some time he successfully personates a dead friend, Maurice Claughton, entering upon his estates, and being received as the real heir. He falls deeply in love with Dagmar Tyndal; and feeling that he is not worthy of her affection while he is posing before the world as an impostor, his better nature prevails, and he unburdens himself of his secret.

Readers of Mr. MacColl's previous story, *Mr. Stranger's Sealed Packet*, will not need to be told that he is a writer possessing a distinct individuality of his own. Whatever merits or defects his stories may reveal, they are certainly original. In his new venture, Mr. MacColl shows us a youth of great promise who passes through the dark and gloomy throes of scepticism, to emerge finally into the clear atmosphere of faith beyond. Some of the discussions on evolution and theology may seem just a little tedious, but they are ably conducted. There is a thread of romance running through the narrative which invests it with sufficient interest for those persons who do not care for polemics.

The havoc that can be wrought by a wicked woman finds its thousandth exemplification in *Forbidden by Law*. The story is written with some power, and the wrongs of Jack Darnley must elicit a sympathetic feeling in the breast of the reader.

G. BARNETT SMITH.

RECENT THEOLOGY.

Messianic Prophecies in Historical Succession. By Franz Delitzsch. Translated by S. J. Curtiss. (Edinburgh: T. & T. Clark.) Should the heavy task undertaken by the authors of *Lux Mundi* some day be touched by members of the Evangelical school in the National Church, they may justify themselves by the authority of Franz Delitzsch. The "boundless negations" and "unspiritual profanity" of the newer criticism have reduced Biblical science to chaos, according to this faithful champion of doctrinal orthodoxy. And yet he has the comforting assurance that "this crisis will become a lever [?] for progressive knowledge," and calls upon students to "recognise the elements of truth which are in the chaos and to gather them out." The spirit of this volume, which is its author's parting gift, is far better than the execution. There must be a connexion between the Old Testament and the New, but we question whether Delitzsch has found it. He was, perhaps, too imaginative. But even those who hold this opinion will gratefully acknowledge the manifold stimulus and instruction which these pages afford. Everything that Delitzsch wrote is scholarly. We would particularly mention the discussion of Gen. iii. 15, xlix. 10, and Isa. vii. 13-17; also the argument (p. 88) for the Davidic descent of Jesus Christ. That Delitzsch makes large concessions to criticism need hardly be said. He also admits, in a qualified sense of the words, both legends and myths. Why should not others of his school follow him, and improve upon his work?

Messianic Prophecy: its Origin, Historical Growth, and relation to New Testament Fulfilment. By Edward Riehm. Second edition. Translated by Lewis A. Muirhead. With an Introduction by A. B. Davidson. (Edinburgh: T. & T. Clark.) The late Prof. Riehm was a *Vermittlungstheolog* of the best sort—devout, learned, and judicious. We can warmly recommend the present work, which has the author's latest corrections. Dr. Davidson speaks half regretfully of the long discussion of Hengstenberg's and König's views on prophetic inspiration. But seeing that König has lately been mentioned, perhaps in ignorance, as in some sense a pattern for Old Testament scholars in the English Church, it may be as well for the student to be told what sort of supernaturalism König draws from the interpretation of the Old Testament. With all its imperfections, the book remains the best introduction to the subject for orthodox readers. The translator has done his work well. He has wisely broken up some of the awkward sentences of the original, but has not tampered with the sense.

"THE CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES."—*The Book of Psalms, with Introduction and Notes.* Vol. I. By A. F. Kirkpatrick. (Cambridge: University Press.) The present volume comprises the first of the five books into which the Psalter is divided. From a purely literary point of view it deserves high, though not the highest, commendation. Great care has been taken in the selection of the matter, and the reader can nowhere be in doubt as to the meaning of the author. In the case of a book like the Psalter, the literature relative to which would fill a small library, and which, by its frequent difficulty, justifies a variety of opinion, this is no unmeaning praise. Philologically, too, the book is quite as good as we have a right to ask in the Cambridge School and College Bible. A freer attitude towards the Massoretic text has, indeed, now and then been permitted by the editor of the series; but respect for the Authorized Version, and for those who believe in it, cannot but restrain even bolder critics

than Prof. Kirkpatrick from often touching the received text. The only text-critical note we have found (on Ps. xxxvii. 28) justifies the hope that Prof. Kirkpatrick may some day contribute to the critical study of the Septuagint in the manner so ably exemplified by Baethgen. Exegetically, the author limits himself to the surface or grammatical meaning, without touching the important questions of Biblical theology which arise out of the Psalms. For "schools," this was perhaps (but by no means certainly) wise; for "colleges," the omission is somewhat to be regretted. It is when we come to the higher criticism that we have more serious objections to offer. It may be legitimately asked whether the Psalter does or does not contain pre-Exilic psalms; it can hardly at this time of day be assumed on critical grounds that any of the psalms, in their present form, are of Davidic authorship. Would it not have been better to put aside the question of age and authorship altogether, except when there was almost complete unanimity among living or very recent critics; or, at any rate, to say only that a particular psalm is "probably pre-Exilic," not that it is Davidic, or even that it is of the Davidic age? Prof. Kirkpatrick has, however, avoided all disparaging language towards less conservative scholars; and we can well understand the "pietas" which binds him to a revered teacher of strongly conservative leanings—the present Bishop of Durham.

The Massoretic Text and the Ancient Versions of the Book of Micah. By John Taylor. (Williams and Norgate.) The name of the author of this useful essay on the text of Micah is almost a new one; we may hope soon to meet with it again. Methodical text-criticism is one of the best exercises of a young scholar, and the difficulty of the text of the short Book of Micah justifies a fresh attempt to estimate the possibility of correcting it by the help of the ancient versions. True, Koorda and Ryssel have done good work in this field already; but Koorda is too bold, while Ryssel's instructive book may be embarrassing to some readers from the comprehensiveness of its contents. It is no injustice to Dr. Taylor to remark that, probable as his proposed corrections of the text may often be, it is by his method and his collection of facts that he has chiefly earned the gratitude of English students. Nor must we omit to mention that he has laboured under the disadvantage of working at a distance from large libraries.

Hib. Nach F. G. E. Hoffmann. (Kiel: Haeseler.) A small book on a great subject, limited to the sifted personal results of a competent scholar, is heartily to be welcomed. Prof. Hoffmann is well known both for his Syriac learning and for his sometimes startling emendations of the text of the Old Testament. One may not always agree with the latter, but must acknowledge that none but a scholar and a keen critic could have offered them. In thirty pages the author sets forth his view of the plan of the original poem, and the growth of scepticism in the mind of the sufferer, of the supplementary speeches of Elihu, and of passages interpolated (as we are told) by a weak-minded zealot. Then follows a new translation, with brief footnotes justifying the many novelties of reading and rendering. So far as we have been able to form an opinion, it is not an altogether favourable one. There is much ingenuity, but still more audacity. Take this instance: "When the slanderer (*ὁ διάβολος*) goeth about, thou shalt be hidden; thou hast nought to fear when a demon cometh" (v. 21). And this: "But ye are such as stick together lies; patchers of idols (*Götzenflicker*) are ye altogether" (xii. 3), with the gloss: "The God whom ye imagine is (but) an idol." But the freshness of the transla-

tion is in a high degree stimulative, and grains of gold will reward a careful search.

Index to Dr. Pusey's Commentary on the Minor Prophets. (Walter Smith and Innes.) A useful but not perfect work. Dr. Pusey's commentary is called "explanatory and practical." It seems to us that the practical element is unduly prominent in this index, which often reads like a sermon. The solid learning hidden away in the small-print notes (not to speak of the introductions) receives no attention whatever. There is no heading "Hebrew language."

Franz Delitzsch: a Memorial Sketch. By Samuel Ives Curtiss. (Edinburgh: T. & T. Clark.) This latest memorial sketch of the great Hebraist is valuable for its disclosures on his early life. It will serve to satisfy curiosity till the definitive biography by Herr Faber, lately a missionary to the Jews and now a country pastor, has appeared. The photographic portrait is disappointing; better ones certainly exist.

SOME BOOKS ON THE COLONIES.

History of South Africa, 1795-1834. By George McCall Theal. (Sonnenschein.) Mr. McCall Theal's new volume of his History of South Africa begins with the surrender of Cape Colony to the British force in 1795, and ends with the first year of the governorship of Sir Benjamin D'Urban. This is a period in many ways more interesting than the preceding ones about which Mr. Theal has written, but not so recent that he runs any risk of wounding the feelings of persons now living, or of entering on interminable controversies. Mr. Theal, as before, writes with great candour and fairness. He gives, on the whole, high characters of the governors sent out to the Cape, whose appointments reflect credit on the successive ministers who selected them. Perhaps he is a trifle hard on Lord Macartney, who may have been arbitrary; but was he more so than most colonial governors a hundred years ago? And it must not be forgotten that it was during his tenure of office that torture was finally abolished. Lord Charles Somerset first established an asylum for lepers; and slavery was extinguished under Sir Benjamin D'Urban, December 1, 1834. The author's remarks on the effects of the abolition of slavery both on the whites and blacks are well worth reading. While admitting that slavery could not have been allowed to continue, he considers that the methods adopted to put an end to it caused widespread misery amongst the white inhabitants of the Cape; they amounted, in fact, to the confiscation of something like two millions' worth of property in a small and poor community. That the abolition benefited the blacks he states to be doubtful. But it can hardly be a matter of doubt that the negro slaves at the Cape, as elsewhere, were totally unfitted for the sudden gift of complete freedom; and their descendants now are as unthrifty, as careless of the future, and as ready to rely on the benevolence of the whites in cases of emergency as were their fathers fifty-five years ago. We must repeat what we have said before—that Mr. Theal's work is on too large a scale, and out of proportion to the interest of his subject. But this is less felt in the present volume, and everyone must admire his industry and accuracy. He provides a good index and some very clear maps.

A Colonial Tramp. Travels and Adventures in Australia and New Guinea. By Hume Nisbet. In 2 vols. (Ward & Downey.) Mr. Nisbet is wanting neither in ability nor power of observation; and if he was less diffuse, less given to smart writing, and less prejudiced, he might produce an interesting and readable book. His extraordinary dislike, not to say

hatred, of England and all her institutions is unaccountable, and must tend to make his readers distrustful of the praises he lavishes on the Australian colonies. He describes England as "that little paddock of meagre, starved-out soil." We might ask him if he has ever compared the average number of bushels of wheat grown per acre in England and in Australia; if he would do so he would find that *meagre* and *starved-out* were epithets hardly applicable to the country he vilifies. Again, he has decided that *asylums for the destitute* are the fruits of our *iniquitous game laws*. Yet he finds these asylums in Australia, where there are no game laws. But this does not shake his decision as to the origin of asylums; nor does he seem to be aware that game laws exist in democratic republics, such as France and Switzerland, as well as in some of the colonies. One traveller he meets has brought out from England his "insular prejudices"; another has gone over the colonies "with a proper pair of John Bull's specially-manufactured British smoke-tinted spectacles over his eyes." Are there not prejudices besides insular ones, and other specially-manufactured spectacles besides John Bull's? Mr. Nisbet goes out of his way to run down English institutions. He tells us a sad story of a young Australian who, having gained honours at Oxford, was lost on his return voyage; but he spoils the story by talking of "owl-like Oxford and poll-parrot prizes." It is a pity he does not allude to the end of the Australian strikes in a glowing passage on an eight hours' demonstration at Melbourne; and that he has not read the last work on Nelson before writing as he does of that hero. Mr. Nisbet's figures and measurements are somewhat suspicious. Can it be true that rabbits in Australia are three times the size of our wild rabbits, and that gum trees planted in 1851 are now 150 feet high? We are startled in the first volume by reading that Western Australia is eighty times larger than Great Britain; at the end of the second volume this is set right, and that colony is reduced to "about eight times the size of Great Britain and Ireland." The best part of Mr. Nisbet's work is undoubtedly that about New Guinea. This is his method, "I have not taken the reader through the country exactly as I travelled along it myself, preferring to scamper over it quickly, as I like to go over picture galleries, and then return more slowly, lingering over the bits which strike me most." He is much taken with the natives and their beauty, and finds opportunities of contrasting them with our own race, much to the disadvantage of ourselves. What he tells us of their funeral customs is too horrible and revolting to bear quotation. Towards their cannibalism he is very lenient. In spite of the immense superiority of Australia to England, our author has the candour to write: "I do not want to tempt any poor man to go out to Sydney thinking to make his fortune there, for, candidly, I don't think he will, any more than he might in London." Mr. Nisbet is an artist, and his two volumes are profusely illustrated, and some of the cuts are very pretty. The work has neither index nor map.

Vicissitudes of Bush Life in Australia and New Zealand. By Dugald Ferguson. (Sonnen-schein.) Though this work is cast in the form of a novel, we presume that it is founded on the experiences of the author and of others besides himself. We add "of others," as it is highly improbable that any single individual could have gone through so many adventures and rescued so many men and women from such exceedingly critical situations as Duncan Farquharson, the hero. The book abounds with the exciting elements of Australian romance; and we have a young lady, possessed of every

charm, who is determined to fall in love with a bushranger, handsome, brave, and chivalrous:

"For my part," she says, "if ever I do marry anyone, it will be some dashing bushranger, with whom I can roam through the bush and live in some romantic cave like Maid Marion with Robin Hood."

The handsome bushranger turns up at the right—or, rather, for the young lady's happiness, the wrong—moment; brave, certainly, but hardly chivalrous. His schemes, his escapes, and his villainies fill a large part of the book; but we must leave them to the reader to unravel. The hero does not succeed in Australia, for he leaves it as poor as he entered it in 1850. Hethen goes to New Zealand, where most of the other characters of the story turn up, and where the *dénouement* takes place. The villains are punished and the virtuous rewarded in the most melodramatic fashion. We do not doubt that many will read these "Vicissitudes" with pleasure, though most will wish that the conversations had been a little curtailed.

Tahiti: the Garden of the Pacific. By Dora Hort. (Fisher Unwin.) We have searched Mrs. Hort's book in vain from beginning to end in the hope of discovering an answer to the question: when was she in Tahiti? Not a trace of a date is to be found. In one place she writes:

"Is it a dream, and not a reality, that far-off time when I wandered with Margaret through shady avenues, between groves of fragrant trees, by limpid streams and flowing rivers in the sunny island of Tahiti? It all occurred so long ago."

One of the last things she mentions is the visit of Prince Alfred to Tahiti; now, as the Prince was created Duke of Edinburgh in 1866, it is clear that the author must have left the island before that year at the latest. We cannot think that a visit to Tahiti, made more than twenty-five years ago, warrants the publication of a thick volume of 350 pages. Mrs. Hort is lively enough, but we have too much of her pets and too many descriptions of commonplace people; indeed, nothing is too insignificant to be made use of in the process of "padding." Most of what she says respecting the tyranny and corruption of the French official system is probably true. She thus sums up the system: "In fact, nothing succeeded at Tahiti unless through such questionable agencies as bribery and corruption." This system must justly be condemned; but we cannot but think she is too severe, if not too ill-natured, in her remarks on the individuals connected with the Government.

NOTES AND NEWS.

WE understand that Sir Charles Dilke and Mr. Spenser Wilkinson, the author of two well-known volumes on *Citizen Soldiers* and *The Brain of an Army*, are preparing in collaboration a popular work upon National and Imperial Defence. Account will be taken of the military and naval needs of the empire, and of the extent and cost of the resources which exist to meet them, while suggestions will be made for greater efficiency and economy. Messrs. Macmillan & Co. will be the publishers.

MR. G. A. AITKEN, the biographer of Steele, has written a full life of Dr. John Arbuthnot, to be accompanied by a selection from his miscellaneous works. The volume, which will be published in the autumn by the delegates of the Clarendon Press, is the first serious attempt to give to Arbuthnot his proper position among the wits of the eighteenth century. It will be furnished with a detailed bibliography and index.

UNDER the title of *Life's Handicap*, Messrs Macmillan will publish shortly a collection of Mr. Rudyard Kipling's short stories which appeared from time to time in *Macmillan's Magazine*. Included among them will be "The Man who was," and "The Courtship of Dinah Shadd."

MR. COLVIN's edition of the *Letters of Keats*, which was announced by Messrs. Macmillan & Co. some time ago, will be published in the course of June.

MR. JOHN MURRAY has in the press a new volume of his series of *Student's Histories*, dealing with the history of the Roman empire from its establishment by Augustus to the occasion of Commodus in 180. In fact, it covers the period from the point at which Dean Liddell's History left off to the point at which Gibbon begins.

FURTHER selections from the posthumous writings of the Rev. Aubrey L. Moore are promised by Messrs. Percival, who will shortly publish a volume consisting of Ordination addresses, and sermons preached before the University of Oxford chiefly bearing on *The Message of the Gospel*. In the autumn the same firm will issue a selection from the sermons preached by Mr. Moore as Whitehall Preacher, 1888 and 1889.

THE next volume of the "Adventure Series" will be *The Travels of Ferdinand Mendez Pinto*, annotated by Prof. Arminius Vambéry.

THE Christian Theosophical Society will publish shortly, through Mr. Elliot Stock, a volume entitled *Things to Come*; or, *Essays towards the Appreciation of the Christian Idea*.

MESSRS. GAY & BIRD announce the following works as nearly ready:—*Cy Ross*, a novel, by Mellen Cole; *Japanese Girls and Women*, by A. M. Bacon; *Zadoc Pine and Other Tales*, by H. C. Bunner; *Liberty in Literature*, by Col. Ingersoll, being a testimonial to Walt Whitman, with a new portrait; and a new edition of Loomis's *Index Guide to the Art Galleries of Europe*.

MESSRS. MACMILLAN announce a re-issue of the "Golden Treasury Series," to be published in monthly volumes at the net price of half-a-crown. The order of publication will not be precisely identical with that of the original issue; but the two first volumes will be Mr. F. T. Palgrave's *Golden Treasury of Songs and Lyrics*, and Mr. Coventry Patmore's *Children's Garland from the Best Poets*.

"THE National Monument for Mazzini" is the title of an essay, by Dr. Karl Blind, which will appear in a forthcoming number of *Murray's Magazine*. It will contain personal recollections, based upon intimate friendship and co-operation for fourteen years, about the character, daily life, peculiar views, and activity of the ex-triumvir of the Roman Republic; and many little-known facts will be stated in regard to the part Mazzini played in decisive movements for the independence and unity of Italy. The personality of Garibaldi is also touched upon, with whom the writer was equally connected by friendship down to his death.

THE following are some of the volumes which the Chetham Society have in hand for early publication: the third part of Mr. W. A. Shaw's *Minutes of the Manchester Presbyterian Classis*, 1646-1661, containing biographical notices of all the ministers mentioned, and much original unprinted matter; the second part of the late Canon Raines's *Fellows of the Collegiate Church of Manchester*, dealing with the eighteenth and nineteenth centuries, edited by Dr. F. Renaud; the *Chartulary of the Priory of Lancaster*, edited by Mr. W. O. Roper; and

a History of St. Michael's-on-Wyre, by Lieut.-Col. H. Fishwick. The accounts of the treasurer for the past year show a balance in hand of £334. The hon. secretary of the society is Mr. C. W. Sutton, Free Reference Library, King-street, Manchester.

THE first edition of Dr. J. C. Atkinson's volume of reminiscences and researches in the parish of Danby in Cleveland, which was published only last month by Messrs. Macmillan & Co., and is reviewed in the present number of the ACADEMY, is already exhausted; a new edition will be ready in the course of next week.

WE are asked to contradict the statement that the series of articles on the Waterloo campaign, which Col. F. Maurice has been contributing to the *United Service Magazine*, will shortly be issued in book-form.

MR. G. BARNETT SMITH, a veteran journalist and man of letters, who is perhaps best known by his biographies of John Bright and Mr. Gladstone, has received a pension of £80 on the Civil List. Mr. Barnett Smith has of late been compelled, by the state of his health, to leave London and take up his residence at Bourne-mouth.

MR. P. H. WICKSTEED will deliver a course of four lectures on "Ibsen" at the Chelsea Town Hall, beginning on Tuesday, June 9.

DR. H. FRANK HEATH has been appointed to the lectureship of English language and literature in the Crystal Palace School of art, science, and literature (ladies' division), in succession to the Rev. H. Russell Wakefield, who retires on account of impaired health.

ON Wednesday next, June 3, Messrs. Sotheby will sell the autograph MSS. of Wilkie Collins's plays, together with the copyright and fees accruing therefrom. Appended to the same catalogue are a number of autograph letters, chiefly of literary interest, including the original agreement between Dickens and Bentley for the copyright of *Barnaby Rudge*. The price, apparently, was £2,000, with an additional £1,000 if the sale exceeded ten thousand copies, and a final sum of £1,000 more if the sale exceeded fifteen thousand.

MESSRS. SOTHEY also be engaged in selling, during the whole of next week, the library of the late James Anderson Rose, of Wandsworth Common. The collection consists mainly of the choice books that have been published during the present century, including large-paper copies and the publications of clubs and societies. We may specially mention a series of Ruskin's works, *The Germ*, and first editions of Bewick.

AN American Catholic Historical Society has just been established at Philadelphia. It would be premature to speculate as to its efficiency until we have seen some of its publications; but we believe that it has the support not only of archbishops and bishops, but also of many of the leading Roman Catholic writers of America. It has already acquired the nucleus of a good library.

WE have to record the death of Mr. George Alfred Henry Dean, senior partner in the publishing firm of Messrs. Dean & Son, Fleet-street. He died at Southsea on May 13, in the seventieth year of his age.

UNIVERSITY JOTTINGS.

LORD WALSLINGHAM has been elected without opposition to the office of High Steward at Cambridge, in the room of the late Earl of Powis. Lord Walsingham was formerly known at Cambridge as a cricketer, and now as a prominent member of the syndicate on agricultural education. In the scientific world his name ranks high among those who have both

advanced and popularised the study of natural history.

THE Rev. Dr. Percival, head master of Rugby, has been elected to an honorary fellowship at Trinity College, Oxford, of which college he was for some time president.

IN congregation at Cambridge on Thursday next, June 4, the following grace will be proposed:

"That a syndicate be appointed to consider whether it be expedient to allow alternatives, and, if so, what alternatives, for Greek in the Previous Examination, either to all students or to any classes of students other than those already exempted."

We believe that the only class of students at present exempted from taking up Greek are natives of India.

ON Tuesday next, June 2, a statute will be promulgated in Congregation at Oxford for the establishment of a day training college for teachers. It provides that persons who are under training to become teachers in elementary schools may matriculate and take the usual academical course; and, at the same time, it purports to make no fresh demand upon the funds of the university.

THE Smith's prizes at Cambridge have been awarded as follows:—to Mr. F. W. Dyson, of Trinity, for his essay entitled "The Potential of Ellipsoids of Variable Densities and also of the Anchor Ring in External Space"; and to Mr. H. M. Macdonald, of Clare, for his essay entitled "The Self-induction of two Parallel Currents."

THE REV. W. EUSTACE DANIEL has been re-elected Grinfield Lecturer on the Septuagint at Oxford for a further term of two years.

MR. J. N. KEYNES, university lecturer in moral science, has been appointed chief secretary for local examinations, and Mr. Arthur Berry has been appointed chief secretary for local lectures, both of which offices have hitherto been filled by Prof. G. F. Browne, now Canon of St. Paul's.

THE following are the numbers of candidates for honours in the several final schools at Oxford: literae humaniores, 142; modern history, 126; theology, 65; law, 64; natural science, 33; mathematics, 25; oriental languages, 2.

AN amended list has been issued of the statues which Mr. S. Sanders has offered to place in the niches on the exterior of the Divinity School, at Cambridge. They are to be nine in number: Archbishops Cranmer and Parker, Bishops Fisher, Andrewes Pearson, and Lightfoot, and also Erasmus, Whichcote, and John Lightfoot.

PROF. G. J. ROMANES, who is at present residing at Oxford, will deliver a lecture at the meeting of the Ashmolean Society next Monday.

AT the annual general meeting of the Cambridge Antiquarian Society, held on Wednesday, May 27, the retiring president, Prof. T. McK. Hughes, was to deliver an address.

DR. C. WALDSTEIN will give a lecture on "The Tomb of Aristotle(?)" at Oxford on Wednesday next, June 3, with Prof. Pelham in the chair.

MR. GEORGE WILKINS, who graduated in 1880, and is known for a book on *The Growth of the Homeric Poems* (1885), has been elected, on a competitive examination, to the vacant fellowship at Trinity College, Dublin.

A CATALOGUE has been printed (Durham: Culdeleugh) of the books bequeathed to the University of Durham by the late Bishop Lightfoot. It extends to ninety-two octavo pages.

TRANSLATION.

LA GRANDE OURSE.

La Grande Ourse, archipel de l'Océan sans bords,
Scintillait bien avant qu'elle fût regardée,
Bien avant qu'il errât des pâtres en Chaldée,
Et que l'âme anxieuse eût habité les corps;

D'innombrables vivants contemplant depuis lors
Sa lointaine lueur aveuglément dardée;
Indifférente aux yeux qui l'auront obsédée,
La Grande Ourse luira sur le dernier des morts.

Tu n'as pas l'air chrétien, le croyant s'en étonne,
O figure fatale, exacte et monotone,
Pareille à sept clous d'or plantés dans un drap noir.

Ta précise lenteur et ta froide lumière
Déconcertent la foi : c'est toi qui la première
M'as fait examiner mes prières du soir.

SULLY PRUDHOMME (*Les Épreuves*).

THE GREAT BEAR.

A group of islands in a shoreless sea,
Floats the Great Bear that sparkled overhead
Ere shepherds trod the pastures of Chaldea,
Or anxious souls these bodies tenanted.

Since then unnumbered hosts have lived to see
Its distant light upon them blindly shed;
Indifferent still, the Great Bear vacantly
Will shine upon the last of all the dead.

Thou hast no Christian mien; the faithful fear
Thy fatal sign, monotonous, severe,
Seven golden nails studding a sable pall.

Thy measured movement and thy chilling light
Confound all faith: 'twas thou who first of all
Caused me to analyse my prayers at night.

CORRESPONDENCE.

A HYMN FROM HARLEIAN 7653.

Freshwater Bay, I.W.: May 21, 1891.

Harleian 7653 is a MS. in the British Museum written by an Irish scribe in the eighth or ninth century. On the recto of fo. 7 there is a copy (hitherto supposed to be unique) of a Latin hymn which, as it contains one of the earliest mentions of St. Patrick, was printed in the Rolls edition of the Tripartite Life (p. cxv.). But the Harleian copy of this hymn is illegible in four places. It is also incomplete at the end. I have lately found another copy which, though wanting the beginning, seems complete at the end, and is legible throughout. This copy is in the Lebar Brecc (p. 148 of the facsimile, col. 2, ll. 44-55), where it is said to have been sung continually by the Blessed Virgin Mary, with the Book of Ezekiel in her hand. It runs as follows:

"Rogo patrem perfiliū .r. spiritum sanctum .r. patriarchas .i. uil. .r. omnes apostolos .r. sanctos angelos .r. iohannem hauptistam .r. nouam ecclesiam .r. enoc .r. eliam .r. prophetas perfectos .r. martyres electos .r. iustum patricium .r. sanctam ciriciū .r. mundi saluatorem .r. meam redemptorem ut animam meam saluare digneris in exitu de corpore . te debeat cordis mei exintimo non relinquo in inferno animam meam peshnam sed ut sit secum in saeculo sempiterno ingandia ut audiam angelorum uocem deum laudantium, etc."

With the help of this copy we may now edit the hymn, putting in parenthesis words and letters illegible in the Harleian MS., and bracketing words omitted therein.

"In pace Christi dormiam
ut nullum malum uideam
a malis uisionibus
in noctibus nocentibus,
sed uisionem uideam
diuinam ac propheticam.

"Rogo Patrem et Filium,
rogo [et] Spiritum sanctum,
rogo nouam ecclesiam,
rogo Enoc et Eliam,
rogo patriarchas (septem),
rogo Baptistam Iohannem.

"Rogo et ho(nos) (a)ngel(os),
rogo et omnes apostol(os),
rogo prophetas perfectos,
(rogo) martyres electos,
rogo (iustum) Patricium,
rogo sanctum (Cirici)um.

"Rogo mundi Saluatorem),
rogo nostrum Redemptorem,
animam meam saluare*
in exitu de corpore.

"Te deprecor ut debeat
cordis mei ex intimo†
ne relinquo‡ in inferno
animam meam [peshnam],

"Sed esse[t] tecum in caelo
in sempiterno gaudio,
[ut audiam angelorum
uocem Deum laudantium].

The phrase, *in noctibus nocentibus* (l. 4) seems to refer to a popular etymology of *noct*. The mention of *seven* patriarchs (l. 11) is curious. Noticeable also is the eminence ascribed to the martyr Cyricius (l. 18) = Cyricus, Cyriacus,

* Here H. adds *digne* . . = *digneris* LB.

† Ex intimo corde mei, H.

‡ derelinquo, H.

the Ciric of the Calendar of Oengus, prol. 137, whence Mael [Ci]rigg, Petrie's *Christian Inscriptions in the Irish Language*, i. 45. The Welsh form of the name is Curig.

Perhaps some readers of the ACADEMY may be able to refer to a third copy of this hymn, and thus empower me to correct the *uideam* of l. 2, which can hardly be right, as the word reoccurs in l. 5, and to supply a line to rhyme with *animam meam peshnam* (l. 26).

WHITLEY STOKES.

THE LITHUANIAN BIBLE OF 1660.

Oxford: May 23, 1891.

The following facts may be gleaned from the Tanner MSS. in the Bodleian Library.

1. The Synod of Vilna appoints on 6 July, 1680, Nicolaus Minwid to collect money in order to continue the printing of the Lithuanian Bible and to finish it (Tanner No. 37, fol. 62).

2. The appeal of Minwid, dated 2 November 1681, is signed by Tillotson, Dean of Canterbury and others (Tanner, No. 36, fol. 161). This is followed by a recommendation of the Archbishop of Canterbury and the Bishop of London (fol. 162), dated 5 November, 1681 where mention is made of a collection for the same purpose twenty years previously [*i.e.*, 1661, in the time of Chilinsky]. A receipt for £100, advanced by the Archbishop of Canterbury, is among the letters (fol. 167 and 168), dated 10 November, 1681. Minwid appoints the merchant Theodor Jacobson as his agent (fol. 176), on 18 November, 1681.

3. Minwid having been suspected of mismanagement, he wrote a vindicatory letter, dated 22 January, 1684 (Tanner No. 34, fol. 243). This is followed by a document (fol. 245) by the Archbishop [?], wherein it is stated that in the first collection made twenty years before, no profit accrued to the delegates, except £37 from the sale, to the elders of the Flemish Church in London, of the paper which had been provided! It is added that the errors were so great in the first impression, which had been interrupted by the death of the delegate, that it was sent back to Lithuania (fol. 245).

4. Minwid mentions in a letter to Archbishop Sancroft, dated 28 July, 1684, the name of a certain Johannes Krainsky, who had been a delegate more than twenty years earlier (Tanner, No. 32, fol. 87).

5. Finally, in another letter to the Archbishop, dated Birsis, October, 1685, Minwid writes the following:—

"Eo igitur nomine, millenis vicibus meis te, Pater Eminentissime, compello, atque ut tandem effectui opus sacrosanctum versionis Bibliorum in Linguam Lithuanicam daretur, rogo" (Tanner, No. 31, fol. 213).

Thus, at the end of 1685 the Lithuanian Bible was not accomplished; the sheets printed in 1661 and 1662 had been sent to Lithuania, no doubt without a title-page, and the fragments preserved at St. Petersburg and at Stettin come from these sheets. Bishop Wilkins got his *Oratio dominica*, most likely, from Chilinsky, either orally or in manuscript, and the others copied Wilkins; but the riddle of the Doxology taken from the London Bible, 1660 (see ACADEMY, No. 933, col. 469), still remains unexplained.

A. NEUBAUER.

"THE GREEK MSS. IN THE VATICAN."

Tübingen: May 12, 1891.

It is only to-day that my attention has been called to the ACADEMY of January 24, in which Prof. Sanday, under the above heading, reviews M. Pierre Batiffol's book, *La Vaticane de Paul III. à Paul IV.*

May I be allowed to correct a strange error—if it has not been pointed out already—about the most famous Greek manuscript in the Vatican, the Codex B of the Greek Bible, since there is danger that this error may obtain wider circulation. Prof. Sanday writes:

"The earliest reference to this is in 1533. He [Batiffol] can find no mention of it in the catalogues before that date; and he is himself of opinion that it was brought to Rome by Cardinal Bessarion," &c.

It is true M. Batiffol says so on p. 82:

"On a dit qu'il figurait dans les anciens catalogues de la Bibliothèque du Vatican: c'est une erreur, je l'ai vainement cherché dans l'inventaire de Nicolas V., dans celui de Léon X. et dans celui de Paul III."

But M. Batiffol is wrong.

In view of his very definite statement, which is directly opposed to the general belief—compare for instance Swete, *The Old Testament in Greek* (p. xvii.): "The chief glory of the Vatican library was one of its earliest acquisitions, appearing in the catalogue of 1475"—I made inquiries about the matter in Rome, and was directed to Vercellone's *Dissertationi Accademiche di Vario Argomento*, p. 116. From what he there writes it follows, without any possibility of doubt, that already in the very first Inventarium, drawn up by Platina in 1475, Codex B is described among the Greek books *nel primo banco* as the "*Biblia in tribus columnis ex membrana*." I trust that by this reference the question will be definitively set at rest.

I may venture to mention another question about this codex—as to the number of leaves wanting in it. Prof. Swete, in the passage referred to, states (in 1887): "The first twenty leaves of the original codex have been torn away." Now already in 1881 there had been published by Fabiani & Cozza on p. 28 of their edition: *Laterculi exhibentes vetustissimae pagellarum notationis vestigia cum recentiori collata* (see *Theol. Lit. Zeitung* 1882). Here we find, for instance, on the present pages:

338 P¹¹ = 180 [= 360 pages]342 P¹¹B = 182 [= 364, &c.]344 P¹¹R = 183, and so on.

From this it would seem to follow that only 22 pages (= 11 leaves) are wanting. But the modern numeration includes 20 new leaves, added to the codex in later times; the only possible conclusion, therefore, is that 31 leaves of the original codex have been lost. This has been pointed out already by Gregory (but not with sufficient clearness) in his *New Testament* (p. 450), who further says: "E quibus foliis octo praefationem continuisse fasciculorum ratio suadet." An easy reckoning can show how many leaves in the handwriting of B would be occupied by Genesis i.-xlvi., 28 (the present beginning).

Yet one more error may be corrected, apparently copied by Batiffol from the *Septuaginta-Studies* of the undersigned: André d'Asola was not *le gendre* of Aldus Manutius, the famous printer of Venice, but his father-in-law.

E. NESTLE.

EGYPT AND SYRIA IN THE TIME OF THE NINETEENTH DYNASTY.

The Athenaeum Club: May 23, 1891.

I am obliged to my friend Mr. Sayce for his letter. He has taught me much of what I know of the earlier history of the East, and his views are always fresh and inspiring; but I cannot think that he has at all met my arguments.

I wrote to point out that his statement that Rameses II. had been engaged in continual

wars during his whole life was not supported by the evidence available to us, which clearly limits his wars to the first ten years of his life, while the latter fifty were devoted to works of peace, and were entirely free from wars.

Mr. Sayce admits that the direct evidence supports my contention; but he reminds me to the treaty with the Hittites for evidence (1) that the war between the Hittites and the Egyptians was carried on until the twenty-first year of Rameses II.; (2) that the war was far from being in favour of the Egyptian arms; (3) that Rameses was compelled to treat on equal terms with the Hittite king; (4) that as the price of peace he was forced to leave the Hittites in quiet possession of Syria, to marry a Hittite princess, and to restore to their former rights the Egyptian fugitives who had fled to the Hittite court.

Of all this I can find nothing whatever in the treaty, which is very accessible in Brugsch's translation. There is not a word in it about its having put an end to any existing war. On the contrary, it is expressly stated that the occasion of Khita-sir sending his envoy to propose a treaty was that he had murdered and succeeded his brother Mau-than-er as king of the Hittites.

Again, far from the treaty being any new departure which involved some fresh humiliation or some alteration of the relative status of the two empires, we are expressly told in it that Khita-sir "would observe the just treaty which existed in the times of Sapa-li-li, the great king of Khita (who was Khita-sir's grandfather), and likewise the just treaty which existed in the times of Mau-than-er, the great king of Khita" (i.e., of his brother); and so far as we know the terms of the new treaty were precisely those of the old ones. It is further remarkable that Rameses is specially apostrophised in it as "one who places his boundary marks where it pleases him in all lands."

There is not a word in the treaty about Syria or about leaving the Hittites in quiet possession of Syria, nor enacting that Rameses should marry a daughter of the Hittite king; and as to the arrangement about fugitives it was a mutual arrangement, such as is embodied in almost every convention known to me between Eastern potentates. Rameses II., no doubt, married a Hittite princess; but this was a perfectly natural match, and involved no surrender of Egyptian prestige.

I am therefore compelled to maintain to the letter my previous contention, that there is no available evidence that Rameses II. had any wars on his hands after his tenth year, or that the Hittites, whose glory had in my view passed away at this time, recovered their dominance in Syria, south of Kadesh, during his reign.

In regard to the Egyptian domination over Syria and Palestine, it was, so far as we know, qualified by occasional rebellion, and this not only in the time of Rameses II., but as the Tel el Amarna tablets tell us, in the days of the more powerful rulers of the XVIIIth Dynasty; but I do not know of any evidence of such an outbreak during the reign of Rameses II. after his tenth year.

Mr. Sayce admits that during the reign of Menepthah the maritime towns of Syria and Palestine were subject to the Egyptians. "But otherwise," he says, "Palestine was free from Egyptian interference." I should like to ask upon what evidence this statement is based; for I know of none, and it is a question of very considerable importance when we are discussing the date of the Exodus.

Let me, in conclusion, raise another issue. I stated in my former letter that the evidence goes to show that the conquest of Palestine by the Hebrews could not have taken place at least during the domination of the XIXth Dynasty. As a matter of fact, it seems to me impossible

to explain it by any theory unless we put it after the reign of Rameses III. of the XXth Dynasty. Apart from the evidence of Egyptian domination in Palestine during his reign, we have the crucial difficulty of the Philistines. If one thing is more clear than another from the books of Joshua and Judges, the Philistines were a dominating influence in Palestine when the Hebrews entered it. This seems to me to fix most irrevocably the Hebrew invasion after the Philistine invasion. I am not aware that we have any evidence that the Philistines were in Palestine before the reign of Rameses III. This is a matter, however, upon which Mr. Sayce is more competent to speak than most of us. It was not my purpose in writing to enter into a barren polemic with him, for no amount of difference of opinion can alter or affect the obligations that I like other people are under to him for his brilliant discoveries and suggestions. I had in view a real difficulty attending a very important matter indeed in human history, namely—the fixing of the date of the Hebrew settlement in Palestine. This, I believe, has been very much antedated, and a discussion of the problem will not unworthily occupy your columns.

HENRY H. HOWORTH.

THE LEGEND OF ETAN-GILGAMOS AND HIS KINDRED IN FOLKLORE.

Leipzig: May 14, 1891.

The letters in the ACADEMY in regard to the eagle of Etan-Gilgamos and his kindred in folklore have furnished a surprising mass of material for comparison.

Since giving the translation of the Etana legend I have joined two more small fragments of the legend which relate that Etana went to the eagle and repeated his request for the birth-plant. Thus we learn that Samas referred him to the eagle for help. The word *biltu*, which is used for food or produce, may here mean the fruit of the body (Dr. Rudolf Zehnpfund, in the *Allgemeine Zeitung*, March 3, 1891), and we may translate line 6 of Etana's prayer for a son:

Bring the child to birth and grant me a son.

The fragment referred to above begins with a speech of Etana to the eagle, after which comes the following conversation:

The eagle opened his mouth and spoke to Etana: "For what have you come? [tell me, I pray] you." Etana opened his mouth and spoke to the eagle: "My friend, give me the plant which assists bearing, Shew me the plant which assists bearing. Bring the child to birth and grant me a son."

Compare this with the Mandaean myth of the birth of Rustem, the son of Sal, among the legends referred to by Dr. Kohler in the ACADEMY of March 21 (Petermann's *Reisen im Orient*, II., p. 106):

"When the time came for Sal's wife to be delivered, the child was so large that she could not bring it to birth, and she was near to death. Sal then remembered the feather which the eagle had given him, telling him to throw it into the fire when he needed assistance. Sal does this and Simurg appears, and gives his wife an opiate by which she is rendered insensible. Her body is then cut open and the child removed, after which the bird lays his wings upon the wound and heals it."

The healing power of the eagle appears in other oriental legends. The eagle is the wise bird, the healer, and the enemy of serpents; and all of these characteristics appear in the eagle of the Etana legend.

The king of the Garudas, referred to by Dr. Richard Morris (ACADEMY, April 4), who lives far to the north of the ocean, and who divides the sea by flapping his wings, in order

that he may eat the dragons, belongs apparently to the class of mythological animals, birds, bulls, &c., which arise from the personification of clouds, winds, and the forces of nature. We find such a personified wind in the Babylonian legend of Adapa and the Southwind-bird.

The text is published in Winckler's *Thontafelfund aus Tell el-Amarna* (II., p. 166). My friend Dr. Carl Lehmann called my attention to the tablet and gave me some valuable suggestions as to its contents. Dr. Bezold informs me that the tablet was noted by the Director of the Berlin Museum, Dr. Ermann, in the *Sitzbericht d. Kgl. Preuss. Acad. d. Wiss.* (xxiii., p. 585), and has also been mentioned in the *Zeitschrift für Assy.* (iii., p. 380). My teacher, Prof. Friedrich Delitzsch, has given me very kind assistance, and I am indebted to his rich stores of Assyrian learning for the meaning of some of the difficult passages. The text as published is quite perfect. A few corrections, however, I owe to the kindness of Dr. Ludwig Abel.

A piece is broken off from one end of the tablet, so that both beginning and end of the legend are wanting. The story begins in the middle of the account of the trouble which led to Adapa's breaking the wings of the Southwind:

"The Southwind [blew fiercely. It buried him beneath the waves].

Into the home of the fishes it let him sink, down.

'O! Southwind, all of your blowings have gone over me (?)

I will break your wings.' As he spoke with his mouth,

So were the wings of the Southwind broken. For seven days

The Southwind did not blow over the land. Anu Inquires of his Messenger the god Ila-abrat:

'Why has the Southwind not blown over the land for seven days?'

His Messenger Ila-abrat answers him, 'My lord, Adapa, the son of Ea, has broken the wings of the

Southwind.' When Ea heard of these words He cried 'Help!' Full of wrath (?) he seated himself (?) upon his throne."

The following six lines are badly mutilated. They contain the beginning of an address of Ea to Adapa, in which he instructs his son how to behave when he is summoned before Anu to give an account of his deed. Ea tells him to dress himself in mourning, and when he arrives at the gates of heaven the gods Tammuz and Izzida

" 'Will stand there, will see you, will speak to your heart,

'For whom *kā emāta* Adapa, for whom do you

Wear a mourning garment? Is one of their gods dead (destroyed) in our land?'

'I likewise am troubled (about this). Who is their god that is destroyed

In the land?' Tammuz and Izzida will look at each other kindly;

They will lament, (but) they will speak friendly words

To Anu. They will make (show) Anu's face bright

Towards you. When you stand before Anu,

Food of death they will furnish you, Do not eat it. Water of death they will furnish you,

Do not drink it. A garment they will furnish you,

Clothe yourself with it. Oil they will furnish you, anoint yourself.

Do not neglect the command which I have given you. Keep in

Meaning the word which I have commanded you.' The Messenger

Of Anu came. 'Adapa has broken the wings

Of the Southwind, bring him before me.'

..... he let him lie (?). He mounted up to heaven.

As he (Adapa) came up to heaven and approached the gate of Anu, Tammuz and Izzida were standing in the gate of Anu.

They saw Adapa, they cried 'Help!' 'Sir, for whom *kū emūta*, Adapa? For whom do you wear a mourning garment? Is their god destroyed in the land?' 'I wear a Mourning garment: who is their god, that is destroyed in the land?'

Tammuz and Izzida looked at each other kindly, They made lamentation. 'Adapa, betake yourself to Anu.'

Anu saw him (as he came) inside and said to him,

'Come! Adapa, why have you broken the wings of the

Southwind?' Adapa answered Anu, 'My lord, I was catching a fish for the house of my master in the sea. The sea was as smooth as glass (?) (Suddenly) the Southwind blew fiercely. It buried me beneath the waves.

Into the home of the fishes I sank down. In the wrath of my heart

To prevent his returning'

Two lines are mutilated. Adapa undoubtedly explains that he broke the wings of the Southwind, and offers some excuse; for in the next line Anu's wrath is appeased. Anu then inquired why Ea has made so much trouble, or something to that effect, and the story continues:

"He set for him a banquetting dish, and made it ready.

'We! why should we mourn? Let them bring for him

Food of life, let him eat.' Food of life They brought for him. He did not eat. Water of life

They brought for him. He did not drink. A garment

They brought for him. He put it on. Oil They brought for him. He anointed himself.

Anu saw him and lamented over him.

'Come! Adapa, why did you not eat and drink So that you do not live?' 'Ea, my master,

Commanded me, Do not eat, do not drink? to his land.'

The hero Ada(tu)pa is unknown outside of this legend. He is a demi-god; for although he is the son of Ea, his name is written with the determinative of a man.

"It seems that Adapa was out fishing for the family, when the Southwind came up and overwhelmed him with the waves. In anger he broke its wings, and as the Southwind does not any longer blow over the land, Anu, the god of heaven who has the winds in his service, inquired of his messenger, the god Ila-abrat [O God, though art strong (?)], for the reason. Ila-abrat replied that Adapa had broken the wings of the Southwind, which news made Anu very angry. Ea perceives at once that it will go hard with his son, and contrives a plan by which he may appease the angry god. He directs his son to clothe himself with mourning, and thus secure the sympathy of Anu. Ea also relies on his friends Tammuz and Izzida, who are watchers at the gate of heaven, to speak a good word for his son. He further tells Adapa that when he is brought before Anu food and drink, a garment, and oil will be given him. The two latter he may use, but must not touch the food and drink, as they will bring death. When Adapa arrives at Anu's gate, everything comes to pass as his father had predicted. When Anu inquires why he has broken the wings of the Southwind, he explains the matter as best he can."

Unfortunately the end of his speech is mutilated, and we do not know what excuse he offered. It had the desired effect, however, and Anu gives up his wrath completely. He orders a banquet to be spread for Adapa, and furnishes him with food and water of life. Adapa, however, remembers the injunction of his father, and refuses to partake. Thereupon Anu laments over him. Why has he not eaten? He has missed his chance of becoming immortal.

The Southwind appears in the inscriptions as one of the messengers of the god Anu. With the other winds it stands at the side of the great storm-god Ramman. It was the most dreaded of all the winds by the Babylonians, as it swept up from the sea and caused those terrible tidal waves which more than once devastated the southern portion of the valley of the Euphrates. This Southwind bird is closely connected with other gods of the Babylonian mythology. The Stormcloud was personified as the bird Zu, who in the legend (*Chal. Gen.*, p. 103, ff) robs the morning sun of his insignia. The translation in *Chal. Gen.* fails to bring out the meaning of the legend. A son of Zu is the raincloud bull (iv. R., 23, 1), which is described as a great bull—a mighty bull—which treads the shining pastures, makes the fields rejoice, and sends down showers upon the earth. There is here a large field for comparison with Vedic mythology, in which winds and clouds are also represented as bulls and cows.

Tammuz and Izzida are both gods of the under-world, and their appearance here as watchers at the gate of Anu is remarkable, though not without parallel in the Babylonian myths. The Babylonian astrologers gave many of their gods, even those which belonged to the under-world, seats in the heavenly bodies. Tammuz is the well-known youthful spouse of Istar, who gave his name to the month June-July; Izzida is the god of the following month, July-August (*Del. Ges. Baby. u. Assy.*, p. 69).

The recurrence of the incidents and ideas of this and the Etana legend in so many different forms, among so many different peoples, shows how much the story-tellers of later nations have been indebted to the Babylonians for the myths and legends with which they embellished their literature and glorified their heroes.

The tablet before us is also exceedingly interesting from another point of view. It was found at Tell el-Amarna in Egypt, and is dotted over with red ink marks, made apparently by the Egyptian scribes, who puzzled themselves over its contents. In style it differs strikingly from the other legends. The stereotyped formulas for introducing the speakers are lacking, and the parallelism is much less carefully carried out. How it came to be among the letters of the Babylonian kings, and what interest the Egyptians felt in such Babylonian tales, are questions which further study of the Tell el-Amarna tablets may enable us to answer.

EDWARD T. HARPER.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, May 31, 7.30 p.m. Ethical: "The Religious Basis of Social Reform," by Mr. J. H. Muirhead.

MONDAY, June 1, 5 p.m. Royal Institution: General Monthly Meeting.

TUESDAY, June 2, 3 p.m. Royal Institution: "Four Periods of Stage History, III., Arrick," by Mr. W. Archer.

8 p.m. Biblical Archaeology: "The Targum of the Passover and Pentecost Lessons," by Dr. M. Gaster.

8.30 p.m. Zoological: "The Land- and Freshwater Shells of Prank," by Dr. O. F. von Moellendorff; "The Derivation and Distribution of the Insectivora of the New World," by Dr. G. E. Dobson.

9 p.m. Royal Institution: "The Discovery of the Tomb of Aristotle (?)," by Dr. C. Waldstein.

WEDNESDAY, June 3, 8 p.m. Elizabethan: "Marlowe's 'Doctor Faustus,'" by Mr. W. H. Cowham.

THURSDAY, June 4, 3 p.m. Royal Institution: "The Orchestra considered in connexion with the Development of the Overture," III., by Dr. A. C. Mackenzie.

4 p.m. Archaeological Institute: "Mortars," by Mr. Edward Peacock; "Symbolic Animals in English Art and Literature," by Mr. J. L. André; and "Thirteenth Century Glass in Bradford Peverell Church, Dorset," by the Rev. W. Miles Barnes.

5 p.m. Zoological: "The Animals Living in the Society's Gardens," II., by Mr. F. E. Beddard.

8 p.m. Linnean: "The Diseases of the Coco-nut (*Cocos nucifera*, L.), by Mr. M. Creese Potter; "Some Arctic Comatulæ," by Dr. P. Herbert Carpenter; "Some Ctenoids from the Neighbourhood of Madeira," by Dr. P. Herbert Carpenter.

8 p.m. Chemical: "The Molecular Refraction and Dispersion of various Substances in Solution," by Dr.

J. H. Gladstone; "The Nature of Solutions as elucidated by a Study of the Densities, Heat of Dissolution, and Freezing Points of Solutions of Calcium Chloride," and "A Reply to Recent Criticisms of the Conclusions drawn from a Study of various Properties of Sulphuric Acid Solutions," by Mr. S. N. Pickering; "Volatile Platinum Compounds," by Mr. W. Pullinger.

8.30 p.m. Antiquaries.

FRIDAY, June 5, 4 p.m. Botanic: "Certain Relationships between Plants and Animals," II., by Prof. C. Stewart.

8 p.m. Philological: "Miscellaneous English Etymologies," by Prof. Skeat.

8 p.m. Geologists' Association: "Some Hill Gravels North of the Thames," and "The Geology of Nettleden Hill, near Henley," by Messrs. H. W. Monckton and R. S. Herries; "The Geology of Devises, with remarks on the grouping of Cretaceous Deposits," by Mr. A. J. Jukes-Browne.

9 p.m. Royal Institution: "The Implications of Science," by Prof. St. George Mivart.

SATURDAY, June 6, 3 p.m. Royal Institution: "The Scientific Study of Decorative Colour," II., by Prof. A. H. Church.

SCIENCE.

IWAN MUELLER'S HANDBUCH DER KLASSISCHEN ALFERTUMS-WISSENSCHAFT.

Das Bühnengeschehen der Griechen und Römer. Von Dr. G. Oehmichen.

Geschichte der Römischen Literatur. Von Martin Schanz. Erster Teil: Die römische Literatur in der Zeit der Republik. (München: Beck.)

THE different volumes of Dr. Müller's "Handbook to the Study of Classical Antiquity" have been, from time to time, duly noticed in the ACADEMY. The series has now reached a considerable size, the two treatises now before us being numbered respectively fourteenth and fifteenth "Halbband." The *Handbuch* is therefore, like most German *Handbücher*, the very reverse of an English handbook. It is not a thing you could take in your hand, you would have to be clever to get it even into your arms; and its true function is to take you by the hand and guide you about in encyclopaedia fashion. The present *Handbuch* shows its nationality further by the method of its appearance. It comes out in parts called half-volumes; but the order of the parts is quite different from that of the completed series, and the "half-volumes" have no relation to the "volumes" of the prospectus. Thus the "half-volume" containing Dr. Oehmichen's treatise on the ancient theatre is one-third of the "volume" devoted also to ancient science, mythology, and religion; and while it is the fourteenth "half-volume," it belongs to the fifth "volume." This, however, is natural enough in a German publication, and we mention it only to enlighten any of our readers who may chance to be puzzled.

Neither of the two treatises before us will be quite so useful to classical students as most of their predecessors. The Greek theatre has been adequately treated by several writers—K. F. Hermann, A. Müller, Mr. Haigh, and others—and Dr. Oehmichen does not seem to get much beyond his authorities, though he covers more ground perhaps than any one of them singly. He has, however, overlooked some; at least, we can find no mention of Mr. Haigh's book, and no allusion whatever to Dr. Dörpfeld, or to his views about the *Logeion*. This latter omission is surprising, for the controversy has been carried on both in England and in Germany, equally in the columns of the *Classical Review* and of the *Berliner Philologische Wochenschrift*, as wit-

ness Dr. Dörpfeld's review of Mr. Haigh's *Attic Theatre*. There are, however, one or two omissions of this kind in the book, and some other details open to criticism. Thus, Dr. Oehmichen appears to think that the theatre of Epidauros dates from the fifth century B.C. At any rate, he will leave this impression on his readers; whereas the evidence for such antiquity is, in the case in question, extremely weak. Another defect in the book, at least from an English point of view, is the comparative absence of illustrations. There is, however, much good matter put shortly and in collected shape.

Prof. Schanz's *History of Roman Literature* is a far more considerable piece of work. It is intended, ultimately, to cover the whole range of Latin down to the legislation of Justinian, and will therefore stop with Cassiodorus, Jordanis, and Priscian. We confess that we slightly prefer the plan of Teuffel, who notices the relics of Latin literature which survive even into the eighth century; for Justinian's reign is, after all, one of those arbitrary dates like the famous A.D. 476, which has so often provoked Mr. Freeman's ire. At the same time, there is practically little of importance after Justinian. Teuffel himself gives but a few pages to the seventh and eighth centuries; and, in actual use, the reader will not be likely to find serious omissions at the end of Dr. Schanz's work. The method adopted is not unlike that of Teuffel; but there is more large print and considerably less small print; the bibliography, too, is much shorter. The book is, therefore, not so great a mine of facts, but is far more readable. The style is sober, but clear; the learning quite adequate. A few English editions and treatises are omitted, which one would have expected to find mentioned, e.g., Sandys' *Orator*, and Nettleship's *Satura*; but, for the most part, English scholars receive a fair share of attention and of praise—more, probably, than their colleagues in France. In this respect the book far surpasses the companion volume on Greek literature by Christ, which ignores English scholarship. The feature of the book is, however, its literary criticism, which in some ways approaches more nearly to the criticism of modern literature than is usual in classical treatises. Heine, Wieland, Lessing are quoted; occasionally extracts from Roman literature are inserted, though this is done to a comparatively small extent, and an effort is visible to avoid that form of criticism which consists in merely stating an opinion, and to approximate to that which gives reasons for the opinion. In one point we fully concur with Dr. Schanz against the majority of German criticisms. He entirely rejects the view, first put forward by Landgraf, and since adopted enthusiastically by Wölfflin, that Asinius Pollio edited the papers of Caesar and Hirtius, and composed the *Bellum Africanum*. Dr. Schanz observes—as it seems to us, most truly—that the three letters of Pollio preserved in Cicero's Correspondence show great stylistic ability, while the *Bellum Africanum* shows none. A man who uses *interim* sixty-eight times to carry on his narrative is "ein stilistischer Stümper," a literary bungler, of

a very different class from the Pollio either of the letters or of history. And the whole argument for the authorship of the *Bellum Africanum* rests on a supposed similarity in style between it and the three letters alluded to above. Surely the distinguished Latinists who connect the two works have forgotten their literary instincts—if, indeed, they have not forgotten their sense of humour in arguing literary conclusions from three short epistles. It is pleasant to find that there are German scholars who have not bowed the knee to this latest unlitary heresy.

F. HAVERFIELD.

TWO BOOKS ON MODERN LANGUAGES.

A Practical Spanish Manual: containing Grammar, Exercises, Reading Lessons, &c. By W. F. Harvey. (Williams & Norgate.) In our notice (ACADEMY, May 17, 1890) of the author's *Simplified Grammar of the Spanish Language*, in Trübner's series, we attributed the many mistakes in it to haste and carelessness. The errors there noted have, indeed, been corrected in the present manual, but so large a number of fresh blunders have been committed as to make it impossible any longer to assign these faults to haste and carelessness alone. Mr. Harvey here shows himself utterly incompetent, and that it is sheer presumption on his part to have undertaken to write any grammar whatever of the Spanish language. This is a serious accusation. To prove it fully would require some two or three columns of the ACADEMY to contain the list of errors that we have noted. Except in some of the paradigms and in mere copying work, there are few pages of the book which do not contribute to the list. We can mark here only so many as we think will be more than sufficient to justify our condemnation of the work. The character of the blunders is most extraordinary. Not only are the rules given often wrong, or stated in a wrong manner, but they are frequently utterly in contradiction with the examples under them, or with other rules and examples given in subsequent pages. To begin with "The Article," p. 8, § 1-1. "Formerly *el=la* was used before feminine nouns beginning with a vowel, but its use is now restricted to nouns of two syllables beginning with *a* or *ha*, as *el alma*, *el hábla*." Are *el águila* and *el ánima*, then, dissyllables? "*Lo* is only used before abstract nouns." Cervantes, then, was wrong when he wrote: "*Lo primero que hizo*," and such phrases as "*lo mismo*," "*lo suyo*," &c., are not Spanish? Later (p. 11, § 19), we read: "*Lo*, the neuter article, is used before adjectives to convert them into abstract nouns," "*Lo* is often employed with *que* and *cual* before verbs," &c. How is a beginner to reconcile statements like these? In fact, *lo* is used before substantives, adjectives, pronouns, participles, and adverbs. P. 9, § 15 (4): "[The definite article is employed] after the verb *tener*, if particular qualities are predicated of an organic body, as *tiene los cabellos negros*"; but can we not say: *tiene ojos de linco*? P. 14, § 22 (7): "Nouns in *u* are masculine, as *espíritu*, *tribú*." Unfortunately, *tribú* is feminine. P. 18, § 30: "By the use of the preposition *á*, a sentence may be expressed in five different ways." It should be *six*. Mr. Harvey omits, "*Á Abel mato Cain*." P. 22, § 37 (4), is a perfect nest of blunders. "The post-position of the adjective. (1) In the cases of certain adjectives which take a non-literal and figurative sense when they follow the noun," as here given, the examples (a) (b) (d) contradict the rule; in (c) (e) they are transposed, and wrongly translated. Yet the rule is again referred to in

§ 38 (3). "The adjective precedes the noun (3) when the adjective is employed in its literal, as opposed to its metaphorical sense; cf. § 37." It is almost a pity that Mr. Harvey did not add "*cf. also* (§ 15) *tiene los cabellos negros*." Where, too, did he find, § 37, (5), *Gregorio primo* for *primero*? P. 35, § 53 (3), *dos*, two, and *doce*, twelve, are both translated *two*! P. 36, § 53 (8), "The first day of a month is expressed by the ordinal, but for the rest cardinal numerals are alone employed." Are not then *segundo* and *tercero* thus used? P. 38, § 57, "The reflective pronoun. Nominative . . . *si*!" P. 38, § 58, "the pronoun in the indirect must always precede that in the direct objective case." In that case the examples in § 61, "*me os rinde*, 'I surrender myself to you'; '*te me han entregado*, 'they have delivered thee to me,'" must be wrong. P. 42, § 62 (7), "*quise traerlos*" is translated, "I wished you to bring him"! P. 45, § 67, *ese* and *este* are both translated "this"; in the examples, § 70, *ese* is rightly translated "that." Imagine the puzzle of a beginner! P. 49, § 74 (3), "*sendos*, 'each of two.'" Here Mr. Harvey has been perhaps misled by Velazquez' Spanish-English Dictionary, but the reference to the Latin *singuli* ought to have kept him right. It is "one each," or "each with one." P. 51, § 78, *dejar* is given among verbs "without a preposition," on p. 73 among those "with a preposition," with no explanation of the reason, or the difference of meaning in either case. P. 59, *me sustento* is rendered "maintaining myself." P. 63, all the compound tenses of the subjunctive of *haber* are omitted. Why? because it has none, or to puzzle beginners? P. 64, § 94 (3), *la niece es blanco*! P. 102, § 140, *á pesar de*, "by dint of"! We have passed over numerous mistranslations, constant misconceptions, suspicious misprints (?), which are very frequent, besides graver faults; but we think that our readers have enough before them to prove that the severest censure is warranted. Should English publishers and authors continue to put forth grammars like these of Mr. Harvey, foreigners will soon be able to retaliate on our comments on "English as She is Spoke" with the proverb "They who live in glass houses should not throw stones."

MR. H. SWAN'S little volume, *Travellers' Colloquial French* (Nutt), which has, we learn, reached a third edition, is better worth notice than most books written with a similar purpose. The phrases given, unlike those of dialogue-books, generally represent what Frenchmen really do say in everyday life, not what grammarians think they ought to say. A very considerable amount of useful information about French usages, modes of travelling, and the like, is incidentally furnished. The most conspicuous feature of the book, however, is the bold attempt which has been made to convey some notion of French pronunciation to Englishmen who have no knowledge of any language but their own. The dialogues are accompanied by a transcription into a phonetic spelling based on English analogies. This kind of thing has often been attempted without success; but Mr. Swan has some scientific knowledge of phonetics, and the explanation given in the introduction and the footnotes will enable the reader to correct in some degree the natural tendency to identify French sounds too absolutely with their nearest equivalents in English. Of course, Mr. Swan's phonetic notation looks grotesque enough, and in some points might be improved in correctness without loss of popular intelligibility. Still, we may venture to say that an Englishman who pronounces a French sentence according to the instructions contained in this book will, at all events, be understood, however oddly his rendering of the words may sound in native ears.

CORRESPONDENCE.

SOME NOTES ON GODEFROY'S OLD-FRENCH DICTIONARY.

III.

Stanhoe Grange, Norfolk.

N.B.—The dagger (†) indicates that the word, word-form, or phrase, is not in Godefroy's Dictionary. (See ACADEMY, April 11, p. 350, and May 16, p. 469.)

† *Damascus*, *v.* *Domesche*, below.

† *Danesin*, *adj.* Danish (?):

"Prouinchal, toulousain, gascoing et limousin, Estoient tout rengie es mareis danesin Moult pres dune cite que firent sarrazin."
Thomas de Baillol: Battle stopped by a cup of wine (printed in Ward's *Catalogue of Romances in MSS. Dept. of Brit. Mus.*, p. 882).

† *Daunter*, *va.* (Mod. *dompter*), to subdue, tame (see quotation *sr.* *Domesche*).

† *Daunyer*, *dauner*, *va.* To court, woo:

"Auxint jadyes d'un damescile qe out mys tote sa entente de amer chastee, tant qe vynt une deabliesse qe fust lowe par un clerk qe la out long tens daunye (var. *daunce*)."

Contes Moral. de N. Bozon, p. 169.

† *Debaier*, *vn.* To bark:

"Li chen . . .
Si ullent e crient e braient
Autresi cum il firent her;
Es meistes n'out ke curucer:
Mut halloent, crient e huent,
Lur chens debaient (var. *debatent*) e deruent."
Vie de Saint Gile (ed. Paris et Bos), vv. 1738-42.

Debate. Add neut. sense: to beat about (of hounds at fault):

"Lur chens debatent (var. *debaient*) et deruent."
(See quotation *s.r.* *Debaier*, above.)

† *Defet*, *pp.* as *adj.* *V.* *Desfaire*, below.

† *Dehonestement*, *adv.* *V.* 2 *Deshonestement*, below.

† *Deschartillier*, *va.* To ruin, destroy? (another form of *descarteler*?):

"La semence est faille, toute est deschartillie."
De Conflictu Corporis et Animae (printed in Wright's *Latin Poems of Walter Mapes*, p. 325).

Desclore. Add active sense † to hatch:

"Les gelyne pontrent, covcrent e desclostrent."
Contes Moral. de N. Bozon, p. 187.

† *Desseverance*, *V.* *Desseverance*, below.

† *Defait*, *pp.* as *adj.* Undone, worn out; add † *defet*:

"Je su viels, e ne me pus ayder, tant su defet."
Hist. de Foules Fitz Warin (ed. Moland et D'Héricault), p. 61.

2. *Deshonestement*, *adv.* Dishonourably, indecently; add † *dehonestement*:

"Les Sarrazins . . . se lavent moult dehonestement et devant les gens."

Saint Voyage de Jerusalem (ed. Bonnardot et Longnon), p. 60.

† *Desirer*, *v.* *impers.* To be wanting, lacking:

"Nule chose ne desierte a moi" (i.e., I lack nothing).

Libri Psalmorum Versio Antiqua Gallica (ed. Francisque Michel), *Psalmus* xxii. 1.

† *Desornemès*, *adv.* Never any more;

"Touz serroms de un acord, e nul ne fra grevance a autre desornemès."

Contes Moral. de N. Bozon, p. 84.

Despenscor, *sn.* Steward; add † *despenser*:

"Le despenser et le deye, qe oierent la noyse, alumerent pur vere quei ceo poeit estre."

Ibid., p. 185.

† *Dessavore*, *adj.* Tasteless:

"L'ewe par sey est liquour dessavoree (var. *mes-savoree*)."

Ibid., p. 163.

Desseverance, *sf.* Separation; add † *desseverance*:

"La male desseverance nus fait aver pesance."
De Conflictu Corporis et Animae (printed in Wright's *Latin Poems of Walter Mapes*, p. 333).

Destrer *va.*—To support on the right, escort: add example:

"Tantost fut mise la dicte banniere sur vng

destrier blanc couuert dun drap dor et le destroient trois barons montez sur trois blancs destriers."

Hist. du Chev. Paris et de la belle Vienne (Paris, 1835) p. xiii. *verso*.

1 *Desvier*, *-voier*. Add refl. sense; *se desvoier* *contre*, to rage against? (the Ital. version has *divisarsi contro a S.*):

"Lors commencent les errors des hereges qui se desvoierent contre Silvestre."

Li Livres dou Tresor, par Brunetto Latini (ed. Chabaille), p. 82.

Devaler, *vn.* Add example of use as *subs.*, descent, slope:

"Nostre emperere a un pui devaler . . .
Pars devers destre se prist a regarder."

Aymery de Narbonne (ed. L. Demaison), vv. 157-9.

† *Deye*, *sf.* Farm-servant, dairy-maid (see quotation *s.r.* *Despenscor*, above).

† *Deyerye*, *sf.* Dairy:

"Le chat . . . lui mena en le deyerye; si lui fist flater de let tant com il poeit."

Contes Moral. de N. Bozon, p. 184.

† *Dobbour*, *V.* *Doubcor*, below.

† *Docter*, *V.* *Doter*, below.

† *Doggetz*, *adj.* "Dogged," obstinate, violent:

"Auxint est ore en siecle entre prelatz e baillifs. Il esparnunt les pussantz e les doggetz (var. *dogez*), e defoulent les simples gentz."

Contes Moral. de N. Bozon, p. 11.

Domesche, *adj.* Add † *damasche* and example of *damasche*, tame, domesticated (of animals):

"Les uns bestes ont de nature de estre damasches, com aiguel, les autres de estre sauvagez, cum cerf e bisse. E cels qe sont sauvagez peout l'em daunter, e cels qe sont damaschez de nature l'em peot tant soffrir a volenté qe els devendront sauvagez."

Contes Moral. de Nicole Bozon (ed. Toulmin Smith et P. Meyer), p. 25.

Doter, *va.* To endow; add † *docter*:

"Por essaucier le non Jhesu Crist docta il Sainte Eglise et li dona toutes les emperiaus dignitez."

Li Livres dou Tresor, par Brunetto Latini (ed. Chabaille), p. 82.

Doubcor, *sm.* Cobbler, mender of clothes, add † *dobbour*:

"Lors fra Dieux, com fet le dobbour de veux dras qi tourne le geron a la peitrine, et ceo qe fust amont tourne vers val."

Contes Moral. de N. Bozon, p. 39.

† *Dreitreux* † *V.* *Droiturel*, below.

† *Dreitus* † *V.* *Droiturel*, below.

Droiturel, *adj.* Upright; add † *dreitreux*, † *dreitus*:

"Lui poverez dreitreux (var. *dreiturel*) esterront al jour de jugement encontre richez cruels, e les acouperont de lur travaillez e de la durece qe ount fet en tere."

Ibid., p. 39.

"Le lou est sagesse corteys e dreitus en ses fetz."

Ibid., p. 77.

Durable, *adj.* Add sense, eternal, everlasting:

"Alez en fu durable [printed *darable*] ensemble od le diable."

"Ne purum pas murir, estuverat nus sufrir.
Liu qui est durable ensemble od le diable."

De Conflictu Corporis et Animae (printed in Wright's *Latin Poems of Walter Mapes*, pp. 330-1).

† *Durablement*, *adv.* Eternally, for ever:

"El enfermel turment serum durablement."

Ibid., p. 333.

Durer. Add act. sense † to endure, stand:

"Atant survyndrent tantz chevalers, esquiers, borgeys, serjantz, e pueple sanz noubre, qe Fouke aparquist bien qu'il ne poeit durer la batayle."

Hist. de Foules Fitz Warin (ed. Moland et D'Héricault), p. 60.

PAGET TOYNBEE.

SCIENCE NOTES.

DR. EDWARD WESTERMARCK'S treatise on *Human Marriage*, which is nearly ready for publication, puts forward views which are in some respects diametrically opposed to those advanced by such eminent writers as Darwin, Herbert Spencer, Tylor, and Lubbock. But

Mr. A. R. Wallace, who introduces the book with a short Preface, states his conviction that Dr. Westermarck's conclusions, based upon careful investigation of facts and supported by acute reasoning, will be found worthy of the gravest consideration, and must be taken into account in all future discussions of the subject. Messrs. Macmillan and Co. are the publishers.

THE general programme for the Cardiff meeting of the British Association has now been arranged. The first meeting will be held on Wednesday, August 19, at 8 p.m., when Sir Frederick Abel will resign the chair, and Dr. William Huggins, president-elect, will assume the presidency and deliver an address. On Thursday evening, August 20, there will be a soirée; on Friday evening, August 21, a discourse on "Some Difficulties in the Life of Aquatic Insects," by Prof. L. C. Miall; on Monday evening, August 24, a discourse by Prof. T. E. Thorpe; and on Tuesday evening, August 25, a soirée. On Wednesday, August 26, the concluding general meeting will be held at 2.30 p.m.

THE arrangements for the International Congress of Hygiene and Demography are nearly complete, and the programme, corrected up to May 1, has been issued in the form of a pamphlet. It has been definitely fixed that the opening meeting, at which the Prince of Wales is to preside, shall be held on Monday, August 10, at 3.30 p.m. The sections (of which there are ten) will meet on the four following days from 10 a.m. to 2 p.m. The six medical and scientific sections will meet in the rooms of the Royal and other learned Societies at Burlington House. The University of London will give the use of its large theatre to the section for the hygiene of infancy and childhood, and two examination halls to the sections for architecture and engineering. The division of demography will meet in the theatre of the School of Mines, Jermyn-street. Much attention is being given to the necessary social preparations; and there is already a long list of proposed entertainments and excursions.

SIR RICHARD QUAIN has been elected president of the General Medical Council, in the room of the late Prof. John Marshall.

MESSRS. A. & C. BLACK have practically anticipated one of the proposed changes in the law of copyright by the readiness with which they have always consented to the republication, in separate form, of the more important articles in the *Encyclopaedia Britannica*. Notable instances were the prompt reprint of Wellhausen's "Israel" and Ingram's History of Political Economy—not to mention Mr. J. G. Frazer's expanded study of Totemism. In physical science, they have already issued this year Prof. Ray Lankester's zoological articles. And now we have on our table *Mammalia*, by W. H. Flower and Richard Lydekker, which is shortly to be followed by Prof. Alfred Newton's *Birds*. The present volume is by no means a mere reprint. Its full title is "An Introduction to the Study of Mammals Living and Extinct"; and it consists "largely" of the articles contributed to the *Encyclopaedia* by Prof. Flower and one or two others, re-arranged and revised throughout by Mr. Lydekker, who has naturally paid special attention to the extinct forms. From his position, formerly at the College of Surgeons, and now as head both of the natural history department of the British Museum and of the Zoological Society, Prof. Flower is entitled to speak with the highest authority. And it may be safely affirmed that this handsome volume, which abounds with excellent woodcuts, will long hold rank as the standard book of reference in the most interesting branch of natural history. There has been nothing resembling it—alike so exhaustive and so popular—since the time of Buffon.

MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, May 4.)

PROF. T. Mc K. Hughes, president, in the chair.—After cordial expressions of regret for the loss sustained by the society in the death of the Rev. S. S. Lewis, who had been secretary for nearly twenty years, Mr. S. J. Hickson exhibited and described several "sakit" canoes. In the course of his paper he said:—"These canoes came from a house in the Karaton Kampong in the Nanusa islands. They were suspended to a beam in the roof of the central hall of the house, and occupying the middle place of the row there was a triangular cage containing a small wooden figure. I found great difficulty in coming to terms with the natives for their purchase, as they evidently were anxious to keep them and to divert my attention to this worthless model of a Spanish whaler. However, in the end I succeeded in purchasing the complete set of canoes, god-cage, and Spanish whalers for a sufficient quantity of white sheeting—the only useful trade-article except tobacco in these islands. From inquiries I made of German missionaries in these islands and of the raja of the island through a Malay interpreter and from a trader who constantly visited these islands, I learned that these canoes are called Sakit canoes, and that their function is primarily that of a prevention against disease. In order that I may be able to explain the manner in which these canoes act in this way, I must call your attention to some of the prevalent ideas of the Malay races concerning spirits and sickness. Most of the Malays, and among them the Malays of the northern peninsula of Celebes, believe in the existence of a large number of free wandering spirits, both good and evil. There are spirits in the trees, spirits in the rocks, spirits of the rivers and the waterfalls, besides spirits of the houses and familiar spirits. To these spirits the people erect altars on which they place betel, tobacco, food and wine. They are particularly careful not to offend them, for fear the evil spirits should visit them with sickness and the good ones cease to pour out their blessings upon them. The altars are of various kinds; sometimes they are little houses, sometimes little cages, sometimes simple smooth stones or rocks. In some cases, as for example, among the Tondanese, little ladders of string ornamented with coco-nut leaves are made to facilitate the descent of the spirits from the neighbouring trees to the altar. It seems to me to be very probable that these canoes should be regarded as altars of this nature. They are resting places for the evil spirits, and they are placed in the native houses to prevent the Sakits from becoming angry and attacking the inmates. In many of the Malay islands sickness is supposed to be due to the temporary absence of the patient's spirit, and the occupation of the body by the Sakit. Thus in the Minahassa district of North Celebes the cure of disease is brought about by the calling back of the spirit. A feast is given called Manemph; and the priests go out in the forest, or wherever they believe the spirit has gone, and call for it, or whistle for it, as one would for a dog. When there is evidence that the spirit is present, it is caught in a cloth, and the cloth is opened over the head of the patient. In Polang Mongondou, where the customs of the people resemble more closely those of the people of Sangir than do those of the Minahassers, the following ceremony takes place: After a song between the priests and the people present, two priestesses dance round the rooms. They hold in their hands coloured cloths, which they flap about hither and thither. Some cloths are tied on to the end of a spear, and a little wooden doll is placed on the end of it. This is held up by one of the priestesses; and then when they think the soul is there, that is to say, has settled on the figure, another priestess approaches it on tip-toe and catches it in a coloured cloth. When this is done she approaches the patient, wraps his head in the cloth, and stands for some moments with a very earnest, anxious expression, holding her hand on the patient's head. If this ceremony does not succeed, then it is supposed that the patient's spirit has been called away for good by his forefathers, and he is left to die. Variations of the Sakit canoe myth occur in other parts of the Archipelago. Among the Dyaks, according to

Hardeland, goats, chickens, pigeons, and miniature houses and boats are offered to the angry spirits that hover round a woman during her pregnancy; these are carried to the river and sunk by earth and stones. Similarly, among the Alfours of Halmahera there are evil invisible spirits called Jins that sometimes like to go for a row on the sea. So the people make miniature canoes for them, fill them with food, and set them afloat. Baessler mentions that in cases of illness in the Wettar islands the relations of the patient make a small canoe, called a pomall prau, which they push off into the sea, believing that in that manner they will drive the sickness away. The same author figures a model of a prau from these islands, but does not mention any use that it is put to. It is not probable, it seems to me, that these models are made either for sale or for amusement, and it may be that they are of the same nature as those I have described from Sangir. In Buru sicknesses are due to male and female Suwanggi, angry spirits that live on the tops of the mountains, in dense forests or in the crowns of trees, as well as to the manes of the forefathers whose spirits are not yet at rest at Waicli, or whose graves have been disturbed. In cases of epidemic, such as small-pox and the like, they make a prau, six metres long and half a metre broad, with the necessary oars, sails, and anchors, and place in front and behind a Netherlands flag. The edge of the prau is ornamented with young coco-nut leaves, and in the prau itself is placed a mat covered by a piece of white linen. Further, the prau is furnished with a roast chicken, a head of a deer and of a pig, a cuscus (?) all roasted, cooked fish, seven hen and seven Megapodius eggs, a plate of cooked rice, a plate with cooked corn, various fruits and vegetables, a dish of sago, a bamboo with sagowee wine, a bamboo with water, a cup of coco-nut oil, and lastly a dish with sirih leaves, betel nut, and tobacco. Then for a whole day and night the people beat their drums, gongs, and jump about for the purpose of driving the spirit into the prau. On the following morning ten strong young men are chosen, who with rattans bind to the mast of the prau a living cock, and then in another prau they tow it far out to sea. When they are far away from land they let it loose, and one of them shouts: "Grandfather small-pox go away, go away for good, go and seek another land; we have prepared you food for your journey, we have now no more to give you." When the prau has returned to the shore, the men, women, and children all go down to bathe together in the sea in order that the sickness may not return. In Amboyna we find also that in certain cases of sickness a small prau is made, in which a plate and dish are placed, with ten pieces of silver in them, a piece of white linen, a number of burning candles, and a white cock. Before it is cast adrift, the body of the sick person must be pecked by the white cock that the *Sawano*—i.e., spirit of sickness—may be driven out. Similarly, in Ceram a small prau, 1½ metres in length, is made and loaded with victuals, and other necessities of life, and cast adrift as soon as the spirit of sickness has been allured into it. Similar ceremonies are found in the Gorong archipelago. In the Watubela islands the prau that is made under similar circumstances is 2½ metres in length. In the Aru archipelago the prau is 2 metres long, and provided with wooden dolls, silver rings, plates with betel nuts and accessories, arak, and tobacco. In the Babar archipelago it is 3 metres long and 1 metre broad; in Wettar, 5 metres long by ½ broad. Similar ceremonies are described from Timor Laut and the Leti group. Before leaving this subject, I must call attention to the very simple coloured patterns on these canoes. From collections in museums it might be supposed that the Malays are very artistic: this is perhaps due to the fact that collectors frequently will only obtain implements and the like that are ornamented with curious coloured designs and figures, and leave behind all the spears, shields, and the like that are not so ornamented; the result being that an unfair proportion of ornamented things appear in the cabinets of the museum. I am inclined to believe that the Malays are not artistic, and that the few ornamental designs of their own are very poor and primitive. The best-known islands of the archipelago are Sumatra and Java; and there we find most wonderful carvings on the ruined temples of

Burra Budda and elsewhere, besides ornaments with complicated patterns in the people's costumes, in their houses, their dolls, and the like. But this is not Malay art. It is the art that was brought by the Buddhist priests in the third century, according to Fa-hi-en, the Chinese pilgrim from Further India. Nor should we judge of Malay art from the specimens obtained in Timor, Aru, Timor Laut, and Ceram, for in these islands there is undoubtedly a very great influence from the mixture of the race with the Papuans. In Celebes, South Borneo, and the Moluccas, there is very little art; and this is due, I believe, to the fact that there has been very little Buddhist influence, and very little Papuan influence. The chief character of Malay art, if it can be so called, is the absence of any good curves. Nearly all their own designs are angular, and those that they have copied from other races have a tendency to become angular. An instance of this is the figure on flying-fish floats, copied probably from the bird design of the Solomon islanders. Spears, shields, blow-pipes, canoes, agricultural implements, bowls, and other implements, besides the houses and cloths of the people, are frequently, if not usually, unornamented, in striking contrast to similar things among the Papuans. Nothing could be more impressive than the contrast in this respect between a Malay and a Papuan village.

ELIZABETHAN SOCIETY.—(Wednesday, May 6.)

FREDERICK ROGERS, Esq., in the chair.—Mr. James Ernest Baker read a paper on "Cyril Tournour." In the course of his remarks, Mr. Baker observed that Cyril Tournour held a peculiarly unique and important position among the greater Elizabethan playwrights. The lives of most of his contemporaries are enveloped with the mist of obscurity, but in Tournour's case the mist is particularly dense. The few scraps of information that have descended to us are very meagre and scanty. We possess neither the date of his birth nor that of his death. His name is not to be found in Henslowe's Diary, neither is it mentioned in the list of poets given by Edmund Hawes in his continuation of Stowe's *Annals*. A couplet by an unknown author (quoted by Wiustanley) leads us to infer that he failed to obtain more than a passing attention in his day:

"His fame unto that pitch so only rais'd
As not to be despis'd nor too much prais'd."

It is scarcely possible that we are in possession of the whole of Tournour's work. In 1600 Valentino Sims, the well-known publisher on Adling Hill, published his poem "The Transformed Metamorphosis," dedicated to Sir Christopher Heydon, to whom Tournour wished "aeternal fruition of all felicitie." It is a singularly fantastic and grotesque piece of writing, and only worth reading as a poetical curiosity of the Elizabethan age. This was followed in 1609 by "A Funerall Poeme upon the Death of the Most Worthie and True Sovldier, Sir Francis Vere, Knight; Capitaine of Portsmouth, &c., L. Governour of his Maiesties Cautionarie Towne of Briell in Holland, &c.": and in 1613 by "A Griefe on the Death of Prince Henrie, expressed in a Broken Elegie, according to the nature of such a Sorrow." Tournour's elegy was published in quarto with two other poems—a "Monumental Columne" in hercics by John Webster, and a "Funerall Elegie," in ottava rima, by Thomas Heywood. "The Revenger's Tragedy" was entered in the Stationer's Books on October 7, 1607, and published during the same year. In the theatrical lists of the eighteenth century it has also been called "The Loyal Brother." "The Atheist's Tragedy; or, The Honest Man's Revenge," was printed in 1611. Though "The Atheist's Tragedy" was printed four years after "The Revenger's Tragedy," there can be little doubt that it was written at a much earlier period of Tournour's career. The title of another play—"The Nobleman"—has also come down to us. Warburton was in possession of the MS., which was probably appropriated for culinary purposes by his wretched kitchen wench. The "Atheist's Tragedy" is well worth reading, but it is not a "priceless treasure" like the "Revenger's Tragedy." There is nothing specially great or attractive about it; nothing to

sufficiently distinguish it from the so-called "tragedy of blood" species of our drama. In the first place the plot, or rather series of dramatic events, is crude and highly improbable; in the second the dramatist fails completely to put any life or action into his characters. They are mere shadows, wooden dolls, pulled with strings by a careless and uncertain hand. Charlemont and Castabella are the only personages capable of arresting our attention. We are interested in these two young lovers. We have a sort of sympathy for them in their many severe trials and temptations. But D'Amville never fails to arouse both our indignation and our disgust. He belongs to the morally sick. A more unnatural monster it would be difficult to conceive; certainly his like is not to be matched in any of the plays of Tournour's fellow playwrights. Tournour, like Webster, to whom he bears a certain resemblance, had a strange humour for introducing ghosts, skulls, murders, and other grim horrors into his work. They are brought in with all the apparatus of thunder and lightning; but it is certainly questionable whether they provoke the dramatic and sensational effect intended. Tournour had "horrible imaginings," but "their terrors want dignity, their frightments are without decorum." In "The Revenger's Tragedy" Tournour is seen at his best. Again, the plot is extravagant, crude, unreal, the analysis of the *dramatis personae* occasionally defective; but there is such an unmistakable display of real imaginative power, poetic worth, such a keen insight into the complex workings of the human heart, a "splendour of despair," glorious outburst of inspired rhetoric, that it would be very difficult to point out a similar piece of work in the whole range of Elizabethan dramatic literature, always excepting the very best of Shakspeare and Webster. Vendin, the hero of the play, who has all the melancholy of a Hamlet, is a remarkable yet curious production. All the things he held dearest in life had been brutally stolen from him; his father, his mistress, his friend's wife. He was left brooding over his sorrows, in possession of one aim, one uncontrollable desire, that of revenge, revenge for all the evil that had befallen him. This he contrives to obtain, but only by wading through the turbid sea of blood and lust, and to be delivered up in the end to death by the friend he dearly loved, Antonio. Tournour was a profound student of human life. Possessed of a morbid and melancholy mind, he lightly passed over its pleasures and joys, and found food for continual study and reflection in the vices and sorrows of humanity. Taking us into the life of sixteenth-century Italy in his "Revenger's Tragedy," he paints in a bold and vigorous manner some terrible tale of lust and crime. It is an awful spectacle that we witness; not, surely, without its own special value and instruction. It is no conventional world we move in, no ordinary phase of life that we come into contact with, no presentment of that which is merely ideal, purely imaginative and speculative in its tendency. It is to be seriously regretted that Tournour lacked the critical faculty, the artistic instinct. He possessed no knowledge of the necessity of light and shade, form and colour, in his work; of the great value of carefully contrasting his characters. The strange diversities of his plays never coalesce so as to form a beautiful and harmonious whole. There is no grouping of his *dramatis personae*; no careful analysis of motive; no dexterous evolution of plots; no legitimate striving for a satisfactory and dramatic dénouement; and obviously, he has no realisation in the slightest degree of how his work could be improved by a discreet use of the language of suggestion. Yet, with all its many defects, its want of perfection, there is something very specially distinct, characteristic, about "The Revenger's Tragedy;" it is real, sure, certain, the production of a poetic and imaginative mind, conveying a vivid and lasting impression. Tournour is always conscious that a profanation of the faculties of the human body will entail a just and enduring punishment, that a righteous retribution will inevitably ensue; and severe, emphatic is his utterance on the result of misdoing. Sometimes he accentuates too loudly the note of vice and sin; and we could wish to hear a piece of music with the chords of human love and sympathy more harmoniously modulated, not too substantial, too clearly defined,

but capable of creating such beautiful thoughts as flow into the brain when dreamily listening to a fugue by Bach, or one of Mozart's melodies. But it is a masterly presentment of life in its worst aspects that Tournour gives us, "unhallowed by anything but its own energies." His versification is terse and vigorous, flexible and passionate, and melodiously sweet. It is apparent that Shakspeare exercised a potent influence upon him—that he was highly susceptible to his methods. Yet he was no servile imitator: he succeeded in creating a method of his own, kindled by the fire of a sombre philosophy and vivified by the heat of a daring and unbridled imagination. His dialogue in "The Revenger's Tragedy" exhibits real dramatic strength, full of happy and exquisite conceits, penetrated with the noblest poetry, strangely beautiful, throbbing with impassioned thought. Cyril Tournour produced only one masterpiece; on this his reputation mainly rests. It may be a matter of regret that more of his mature work has failed to descend to us, but, as Mr. Oscar Wilde once said, "It is only the Philistine who seeks to estimate a personality by the vulgar test of production."

HISTORICAL SOCIETY.—(Thursday, May 14.)

HYDE CLARKE, Esq., vice-president, in the chair.—The secretary read a paper by Prof. Julius von Pfugk Harttung upon "The Old Irish on the Continent," in which the extent of Irish influences upon the religion and learning of the Franks was traced with much research in archaeological and palaeographic remains.—A discussion followed.

FINE ART.

"BIBLIOTHÈQUE INTERNATIONALE DE L'ART."

—*Les Correspondants de Michel Ange.* I. Sebastiano del Piombo. Edited by G. Milanesi, with French translation by Dr. A. Le Pileur. (Paris: Librairie de l'Art.)

THE series of which this is the first volume is intended to form a counterpart to the *Lettere di Michel Angelo*, published by Milanesi in 1875. Artists' letters have always been popular with readers. Lovers of art are brought, in the presence of an artist's works, into so intimate a contact with the personality of the artist himself that he ceases to be a stranger to them. Thus his letters become those of a friend. They display the action of a mind which we already understand. The trifles they record become invested with surprising interest. Even the details of business and bargain that may enter into them do not repel us, as under other circumstances they would.

With the letters of Michelangelo himself this is specially true. So commanding a genius, so largo a personality, impresses itself on whatever it produces. His very handwriting is a manifestation of power. Sebastiano del Piombo was no such phenomenon. He did, indeed, acting under the influence of his betters, paint a few fine pictures; but the man lurking behind them, in so far as that is not Michelangelo himself, is no great creature. His letters, also, chiefly interest us in so far as we catch glimpses of Michelangelo himself in them. They throw light upon important passages in his career, and incidentally they bring other noteworthy men upon the scene. They convey a dimly-lit picture of a world in which genius existed and great things were accomplished.

The edition under review is well printed in the form with which the Librairie de l'Art has rendered all students of art history

thankfully familiar. It is preceded by an interesting and valuable introduction, which explains with sufficient accuracy, and without pedantic elaboration, the circumstances under which the letters were written. The Italian text occupies the verso of each page, and the readable and yet accurate French translation is printed on the opposite rectos. The reader's facilities would have been increased by a few more foot-notes, and by a visible division of the letters into groups, for the letters do not by any means form a continuous series.

All the letters are sent from Sebastiano at Rome to Michelangelo at Florence. The first group consists of nine, written during the year 1520. These refer mainly to the rivalry between Sebastiano and the pupils of Raphael for the decoration of the Hall of Constantine in the Vatican. The first discusses the valuation of the "Raising of Lazarus," which is now in the National Gallery. The second announces Raphael's death, and plunges at once into the floods of intrigue which were thereby let loose at the court of Leo X. Sebastiano demanded Michelangelo's support, and received it in the form of a well-known letter to Cardinal Bibbiena. In one of these letters occurs the famous statement about Michelangelo, that "he made all men afraid, even Popes." The mixture of wonder, dread, and admiration which the great Florentine caused in his shallow Venetian friend clearly appears in the tone of his letters.

An isolated letter of the year 1521 is not of much importance. This is followed by a silence of nearly four years. The eleventh and twelfth letters were both written in April, 1525. Both refer to works by Sebastiano; and from the second we gather that the "Christ at the Column," in the church of the Osservanza at Viterbo, was not a copy (as usually supposed) of the picture in St. Pietro in Montorio, though the one picture was made like the other.

The correspondence ceases from this point till February, 1531. The sack of Rome and siege and capture of Florence occurred in the interval, a most unpropitious time for artists. The thirteenth letter refers to the misfortunes endured by Sebastiano and to the injuries done to Michelangelo's Roman studio. In eighteen letters, which followed one another in rapid succession between February, 1531, and August, 1532, the main subject discussed is the endless question of the tomb of Julius II. They are depressing letters to read, and their contents have long ago found their way into all Lives of the great and unfortunate Michelangelo. The remaining five letters, written in July and August, 1533, refer chiefly to the completion of the Medici monuments at Florence.

It is to be hoped that we shall soon possess, published in this delightful form, all the letters extant which were written to Michelangelo. Even if we learn no new facts from them they cannot fail to be delightful reading. The recipient of a letter is always present in the letter itself, and helps to determine its form and character. No modern biography can take the place of contemporary records (such as these letters), which carry us at once back

into the day when the great artist lived, and bring us into immediate contact with the men who knew him and with their estimate of him.

W. M. CONWAY.

NOTES ON ART AND ARCHAEOLOGY.

THE most important exhibition to open next week will be that of a representative collection of oil-paintings by early English artists, at the Dowdeswell Galleries in New Bond-street, of which mention has already been made in the ACADEMY.

MESSRS. CASSELL & Co.'s ninth annual black-and-white exhibition will be opened on Thursday, June 4, at the Memorial Hall, Farringdon-street. The exhibition will contain original drawings by J. MacWhirter, Alfred East, John Fulleylove, W. Simpson, C. W. Wyllie, E. T. Compton, M. I. Dicksee, M. L. Gow, Gordon Browne, Joseph Clark, M. E. Edwards, W. Hatherell, E. Blair Leighton, Bernard Partridge, H. M. Paget, P. Tarrant, Dorothy Tennant, H. Gillard Glindoni, W. Rainey, Fannie Moody, Herbert Railton, the late Alice Havers, and many others. It will include, in addition, the series of drawings made by Mr. Walter Paget for Cassell's new fine art edition of *Robinson Crusoe*.

MESSRS. PARROT ET CIE., of Paris, are reproducing in chromolithography about sixty of the finest specimens of Wedgwood's artistic pottery now to be found in English collections. The plates will be accompanied by an English text, written by Mr. Rathbone, who is well known as an authority upon the subject. The work will be issued in eight parts, to appear at intervals between December, 1891, and December, 1892. Mr. Quaritch is the publisher.

THE Religious Tract Society has opened a department for the sale of electrotypes of the numerous engravings that have appeared in the *Leisure Hour*, *Sunday at Home*, *Boys' Own Paper*, *Girls' Own Paper*, and its many other publications. Hitherto these cuts have been strictly reserved for use in the society's own publications, but now they are offered for general sale at the usual rates. Upwards of 50,000 blocks, many of them finely engraved, are thus placed at the disposal of publishers and authors.

At an extra evening meeting at the Royal Institution, on Tuesday, June 2, at 9 p.m., Dr. Charles Waldstein will give a discourse on "The Discovery of the Tomb of Aristotle?"

THE third and concluding part of *Royal Academy Pictures, 1891*, will be published on Thursday next, by Messrs. Cassell & Co.; and on the same date will be issued the complete volume, comprising the three parts.

THE sixteenth annual exhibition of paintings on china by lady amateurs and artists is now on view at Messrs. Howell & James's art galleries in Regent-street.

THE purchases this year by the trustees of the Chantrey fund have been Mr. Calderon's picture of "St. Elizabeth of Hungary's Great Act of Renunciation," and Mr. Bates's statue of "Pandora."

MR. WILLIAM AGNEW has presented to the Foundling Hospital a large picture by Francesco Mola, representing a shepherd-boy piping to his flock, which was formerly at Hamilton Palace.

THE jury of the Paris Salon have awarded a second medal, in the department of painting, to Mr. Chevallier Taylor. It is stated that a similar honour has not been gained by an Englishman for fifteen years.

APPLICATIONS are invited for the position of director of the National Gallery of Victoria. The salary is £600, with a studio rent free, where the director may practise his profession as artist.

ALL works in painting, sculpture, &c., in competition for the British Institution scholarships, must be delivered at South Kensington on Wednesday, July 15, or Thursday, July 16.

Die Attischen Grabchriften. Chronologisch geordnet, erläutert, und mit Uebersetzungen begleitet von H. Gutschier. (Leoben: Selbstverlag des Verfassers.) Immense trouble has been taken with the subject-matter of this pamphlet. Dr. Gutschier has sorted the tomb-inscriptions of Attica into four periods—the archaic, those of the fifth century, those of the fourth and third centuries, and those of the Roman period. He has translated them and he has explained them, doing much toward putting each of them in its proper light. His account will be a welcome companion to all who possess the *Corpus Inscriptionum Atticarum* or Kaibel's *Epigrammata Græca*. But, unfortunately, without these books the reader has no means of effectively controlling what Dr. Gutschier has to say. For while he has translated from the Greek into German, he has not thought fit to print the Greek originals. This is very awkward, or more than awkward. We are left to learn Greek feelings and ideas through the medium of German iambs or elegiacs. Surely a small selection of pieces, with German versions, but with the Greek too, would have been more valuable to students. The translations are painstaking copies of the Greek metres, and, so far as our patience has gone in comparing them with the originals, we have found them accurate.

THE STAGE.

STAGE NOTES.

MR. CECIL NICHOLSON writes from Paris:—

"Grisélidis, a mystery in verse in three acts, by MM. Armand Silvestre and Eugène Morand, recently played for the first time at the Comédie Française, embodies an old and well-known legend presented to the public in all its primitive simplicity, with archaic surroundings, pre-Raphaelite scenery, old-fashioned yet sweet melodies, and dresses such as we see in the illuminated pages of an old missal. As the charming Mlle. Ludwig tells us in the prologue:

"C'est n'est pas une tragédie
Bien qu'il soit permis d'y pleurer;
Bien qu'on y doive rire, à tout considérer,
Ce n'est pas une comédie.

Non! c'est un conte en l'air faite pour les bonnes gens,
Sans parti pris, au caprice indulgents.
Et qui, dans cet âge morose,
Loin des chiffres et de la prose,
Eproutent le désir d'aller sous les bois vers,
Suivre à la musique des vers,
Le vol d'un papillon et l'âme de la rose."

The Marquis Saluce leaves his loving and faithful wife and their little son Loys, to go to the wars. During his absence the devil, aided by his wife, tempts and tries to mislead Grisélidis; but, true to her vow of fidelity and obedience, the blameless wife baffles all his wiles, and when her lord returns he finds her as pure and humble as when she won his love as a simple shepherdess. Nothing can be more exquisitely chaste than Mme. Bartet's rendering of the character of Grisélidis; M. Sylvain as the Marquis seems to have stepped on to the stage from some old piece of tapestry, so wonderful is his appearance, gait, and acting. The weak point of the play is the Devil and his wife, Fiamina; even M. Coquelin cadet has not been able to make anything out of this poorly conceived character, *il ne vaut pas le diable!*

MUSIC.

MUSIC OF THE WEEK.

WE scarcely did justice to M. van Dyck last week. It is true that he was praised, but perhaps the fact that he is a singer and actor of the highest rank was not stated with sufficient prominence. A second performance of M. Massenet's "Manon" on Friday evening at Covent Garden resulted in another brilliant success for the Belgian artist. Miss Sanderson, if not satisfactory, was heard to better advantage.

"Die Meistersinger" was given on Saturday evening. June brings many changes in the operatic as well as in the ordinary world. A few years ago an impassable gulf was supposed to divide Wagner's early operas from his later works; but Mr. Augustus Harris has persevered for several seasons with the composer's comic opera, and the public have found out that though complex it is perfectly comprehensible. It may indeed be said to have become popular. It is the old tale of the Beethoven works over again; the later ones in which the master revealed the fulness of his genius were slowly received into favour. The cast for "Die Meistersinger" was a strong one. Mme. Albani as Eva, M. J. de Reske as Walther and M. Lasalle as Sachs, were at their best. M. Isnardon, when he first undertook the difficult part of Beckmesser, proved himself a capable artist, but he tried to be funny; now he acts with becoming seriousness, and is therefore all the more amusing. Signor Mancinelli, as conductor, displayed plenty of energy, but a little more discretion at times would have been to the advantage of Wagner's wonderful score.

"Horatius," a Ballad for men's voices and orchestra, composed by the Rev. Dr. J. H. Mee, was produced on Friday week at Queen's College, Oxford, by the Eglefield Society, which deserves much credit for the encouragement it has always given to new works. Macaulay's stirring lines lend themselves well to music, and the composer has set them to strains which display both strength and charm. Dr. Mee has agreeably mixed the old and the new: there are broad diatonic phrases, but in many places piquant chromatic harmonies in the accompaniment come with pleasing and, at times, with startling effect. The "Etruscan Master" section is bold and vigorous, and the change of key, tempo, and character of the music for the "Panic at Rome" is effective. Later on the vigorous "Horatius" theme attracts attention, and the tender Lento which soon follows is essentially pleasing. The "Keeping of the Bridge" section, with its busy accompaniment, cannot fairly be judged from a vocal score. The Epilogue concludes with a plain delivery of the "Horatius" theme. There are many telling passages for the voices, and indeed the whole of the vocal writing shows a practised hand. Dr. Mee conducted the work, which was well rendered, both by the singers and by an orchestra reinforced from London.

Señor Albeniz gave another of his concerts at St. James's Hall last Thursday week. The programme opened with Rubinstein's piano and violin Sonata in G, a work which contains some attractive material but dry developments. It was exceedingly well rendered by MM. Kruse and Albeniz; the refined style and neat execution of the former deserves special mention. The concert-giver played a Sonata in G flat of his own. The music is pleasing and showy; but the composer would find forms less severe than that of the Sonata more suitable to his light, dainty style of writing. Mr. Plunket Green was the vocalist.

Miss Rose Lynton, at her violin recital at Prince's Hall on Saturday afternoon, played Bach's Chaconne in D minor with considerable skill and taste. She could not do full justice to this great work, but she deserves praise for her earnestness and courage.

Herr Poznanski and Miss Eva Lonsdale gave the first of a series of matinées at the Steinway Hall on Monday afternoon. They are to be devoted to the works of Beethoven, Schumann, Brahms, Grieg, and Rubinstein; and at each a sketch of the composer's life, together with analytical remarks, forms a novel and useful feature. The first concert was fairly successful.

The nineteenth series of the Richter concerts commenced last Monday evening at St. James's Hall, when the eminent conductor was received with the usual enthusiasm. The programme included no novelties, but familiar excerpts from Wagner and Beethoven's Seventh Symphony are still apparently as attractive as ever. A fine Concerto in G for strings, by Bach, had not been heard here for ten years. The first and second movements are separated by a pause and two chords *adagio*. Herr Richter has interpolated a lovely slow movement from a Bach Sonata, which has been arranged for strings by Herr J. Hellmesberger. The effect is good, and as the interpolation is properly acknowledged, purists cannot reasonably grumble. The performances were excellent, especially that of the "Parsifal" Prelude. There was a good house.

Mr. E. Haddock gave his second concert at the Steinway Hall on Wednesday afternoon. Bach's fine Sonata in A for pianoforte and violin was brightly and effectively rendered by Miss J. Douste and the concert-giver. Mr. Haddock was also heard to advantage in some Veracini and Bazzini solos; his technique is excellent, and his readings are artistic. Miss F. Hipwell was the vocalist, and she deserves praise for her admirable selection of songs.

The Westminster Orchestral Society gave their closing concert of the season on Wednesday evening, when the programme included two novelties, both English. The first was a "Festal" Overture by Mr. C. S. Macpherson, the talented conductor of the Society; it is a clever and genial work, but the character of the music scarcely bore out the title "festal." Mr. E. Prout's "Suite de Ballet," written expressly for the Society, is of an extremely light though pleasing kind. The composer has already shown what he can do in a more serious style, and there is no reason why he should not be gay as well as grave. Both composers conducted their works, and were recalled. Mr. Alfred Hollins, the blind pianist, gave a clever performance of Beethoven's C minor Concerto, and Miss Alice Gomez sang with skill and great success a fine song of Gluck's from "Semiramis." Mr. Macpherson may be congratulated on the marked improvement in the orchestral playing.

J. S. SHEDLOCK.

LITERATURE.

The History of Sicily from the Earliest Times. By E. A. Freeman. Vols. I. and II. (Oxford: Clarendon Press.)

(First Notice.)

MR. FREEMAN must be congratulated on his choice of the finest theme as yet unappropriated by any historian of the first rank. The subject is worthy of a large canvas, and a large canvas has been taken, these two bulky volumes only bringing us down to the fall of Ducetius in 450 B.C., before Athenian invention had begun. The history of twenty-three centuries, for which far ampler materials exist, has still to be recorded. Hereafter Mr. Freeman will have to describe the siege of Syracuse, the second Carthaginian invasion, the deeds of Dionysius, Timoleon, and Agathocles, the invasion of Pyrrhus, the First Punic War, the Roman conquest, the administration and impeachment of Verres, the Vandal invasion, the exploits of Belisarius, the dominion of the Arabs, the romantic story of the Norman squires of Hauteville, the rule of the Hohenstaufens, of the Angevins, of the Spaniards, and of the Bourbons. All these periods are reserved for future volumes, which every student of history must hope the author will be able to complete.

Sicily possesses a strange fascination for all who have ever visited her shores. To say nothing of the unique scenery, in no other land have we in such narrow limits so much topographic history and ethnology. The inland cliffs are burrowed with the caves which were the homes, and afterwards the tombs, of the earliest races, the stalagmitic floors sometimes paved with the bones of the wild horses which formed their food. At Eryx we come upon the mighty megalithic ramparts of the Phœnicians. At Selinunto and Girgenti we gaze with wonder and admiration on the ruins of Doric temples more numerous, more massive in construction, more vast in scale, than are to be found even in the Hellenic fatherland. At Syracuse we stand in a temple originally dedicated to the Virgin goddess of Athens, within whose walls we may still hear the invocation—"Ave, Maria, Regina coeli"—addressed to another Virgin; hard by is the great altar on which Hieron sacrificed his hecatombs; a little further we come upon the most perfect ancient theatre which exists—a theatre which witnessed the first performances of tragedies of Aeschylus and comedies of Epicharmus, and where we may decipher the names of King Hieron and Queen Philistis engraved on their respective

seats—seats from which we may look out upon the Great Harbour spread at our feet, where in a last brief desperate struggle the brilliant empire of Athens rushed to ruin; or we may turn our eyes to the scene of a tragedy more pitiful than any ever told by Grecian dramatist, and peer into the deep limestone quarry on the left, the prison and the grave where the noblest sons of Athens perished in hopeless misery, truly the most terrible landscape in the world—the final scene in "the masterpiece of the greatest of all historians, told as no other tale was ever told." Or, passing to the right, and descending into the foss at Euryalus, we may examine the only extant specimen of a Greek fortress, designed probably by Archimedes himself, with saltports and underground corridors for infantry and cavalry, with the rows of perforated stones to which the horses were tethered.

Nor can we tread without emotion the soil trodden by so many illustrious men. In Sicily the most splendid odes of Pindar were composed. To Sicily Aeschylus, after repeated visits, retired in his old age, and here he died. From internal evidence we may well believe that Thucydides, and possibly Herodotus, may have visited the scenes which they have described. Diodorus Siculus, as his name implies, was a Sicilian. Simonides, Epicharmus, Empedocles, Archimedes, Moschus, Bion, Theocritus, and Edrisi were Sicilians either by birth or by residence. To Sicily Cicero came to get up his case against Verres; at Syracuse St. Paul spent three days on his way to Rome. Hero, too, Pyrrhus landed, and here Belisarius fought.

In the centre of the island we climb the steep hill of Enna—*Enna inexpugnabilis*—the camp of refuge of so many races, which no hostile army has ever stormed, which held out for two years against the Romans, and for two years against the Saracens, and where in the dim dawn of history the lovely myth of Demeter and Persephone was localised by nameless bards. At Palermo we climb the loftier limestone crag which dominates the town, on whose summit Hamilear Barca for three years defied the whole power of Rome. Below, in vast panorama, there lies stretched one of the finest cities, one of the loveliest bays, and the most beautiful Vega in the world, well named "The Golden Shell," a terrestrial paradiso, with its semi-tropical vegetation of palm, olive, orange, lemon, cactus, aloe, almond, and fig; the air scented with the sweet perfume of the nespole; every uncultivated nook covered with dwarf palmetto, straggling cork trees, waving squills, the vivid green and yellow of the tree-spurge, the pink flowers of the oleander, or the glossy foliage of arbutus, carob, laurustinus, lentisk and myrtle, over which clamber the long straggling vines of the sarsaparilla. Dotted over the Vega we see Moorish villas, the castle of the Norman kings towering aloft, and beside it the campanile of the Duomo reared by an English archbishop, Walter of the Mill, within whose walls is the porphyry sarcophagus in which, clad in sumptuous robes embroidered with Cufic legends, sleeps Frederick, the lord of Rome, the wonder of

the world, surrounded by tombs of mighty emperors and kings.

Even more beautiful, as some have thought, than the Conca d'Or is Taormina, perched on its lofty crag above the sea, where, from the highest seats in the Greek theatre, the eye rests, two thousand feet below, on the deserted site of Naxos, where the Greek first set his foot on Sicilian soil. Southward we trace as far as Syracuse the steep cliffs and the shore indented with deep bays; eastward lies the long, faint blue line of the Calabrian coast; northward is the narrow rent of the Messenian Strait; while to the west, obscured from time to time by flying scuds of cloud, towers overhead the huge bulk of Etna, with a long thin streamer of white smoke flowing down the wind from the topmost peak of its snow-clad pyramid.

Beautiful as is the land of Sicily, it is even more attractive as an historical land. Nowhere else in such small space is so much history written on the map. Sicily has ever been the meeting place of the nations, the battlefield of East and West, of the men of the three continents between which it lies. It has been occupied in turn by Iberians, Phœnicians, Greeks, Romans, Vandals, Arabs, Normans, Frenchmen, Spaniards, Englishmen, and Italians.

It is manifest that such a subject is eminently suited to Mr. Freeman's powers. In no other land is that "unity of history" for which he has constantly contended so well exemplified. There is no historical hiatus, there is no line which can be drawn between the ancient and the modern history of the island. The contest between Phœnician and Greek merges into the succeeding contests between Carthaginian and Roman, between Roman and Moor, Moor and Norman. The field is so narrow as to admit of exhaustive treatment, and yet so wide as to be in touch with universal history.

The book is written in the fulness of the author's powers; he has never written a book so good, a better he will never write. It has, moreover, been written, as all histories should be written, largely on the scene of the events which are to be described. It exhibits minute acquaintance with topographic detail, abundant local colour, and exhaustive knowledge both of the original authorities and of the modern commentators. The style is clear and forcible; while, compared with the earlier volumes of *The Norman Conquest*, the author is less immersed in entangling details, which are judiciously reserved for appendices of ample bulk. If there is a fault in this direction, it lies in the introduction of needless historical parallels, such as those between the Phœnicians and the Moors, Roger and Pyrrhus, or between the Norman conquests of England and of Sicily—parallels which no doubt are tempting, but are frequently misleading and always inexact.

Mr. Freeman, it need not be said, is familiar with his books, and shows a good critical judgment in estimating the value of his authorities and in deciding between conflicting accounts of the same event. But he is evidently more at home with the topographic and literary evidence than with certain subsidiary sources of information,

which he had no occasion to use in his previous works. Thus, when he has to deal with numismatics, epigraphy, and prehistoric archaeology, or with any of the physical sciences, such as geology, ethnology, or anthropology, his touch is that of an amateur rather than of a master.

It is needful to be familiar with the ground in order to appreciate the excellence of his vivid topographic descriptions. The picture, for instance, of the walls of Agragans and of the long line of temples ranged upon the southern crag, of the wilderness of huge drums from the fallen temples at Selinunto, of the absolutely perfect temple at Segesta, from which not one stone has fallen, of the cliff at Eryx, of the hill of Enna, of the hill fort at Solunto, of Syracuse—at one time the greatest of European cities, but now retreating into the small coast islet which was first occupied by the Corinthian colonists—above all, the description of the topographic changes at Palermo, where the ancient city lay extended, like the modern city of Valetta, between two long creeks or harbours now built over with streets or occupied by busy markets—all these descriptions are admirable, forming the best of guide-books for the Sicilian traveller.

There is, moreover, that abundance of local colour which comes from thorough familiarity with the island. We are bidden, for instance, to note the absence of isolated cottages or country houses, and the continuous occupation of lofty defensible hill sites; or are shown the painted carts, "bright with scenes from history and legend of all ages and all lands," more especially, it may be added, from the romantic story of the family of that Norman squire whose descendants became princes in all lands.

It would be paying a poor compliment to Mr. Freeman to devote the whole of this article to unqualified eulogy—an easy task that may be left to those who undertake to review his work without reading it. It will be more respectful to discuss those points as to which it is possible to differ from his conclusions, and to enumerate a few small matters that seem to have escaped his notice.

The first half of the first volume is devoted to the earliest inhabitants—Sicans, Sicels, and Elymians, who were in possession of the island on the arrival of the Phœnician and Greek colonists. Mr. Freeman is doubtless right in considering that the Scicans represent the oldest element in the population, belonging probably to that pre-Aryan Iberian race of which he thinks "the Basques are the only unmixed survivors remaining." Here it may be observed that this doctrine is not now so generally accepted as it was a few years ago. The Iberians are no longer identified with the Basques; the highest authorities, Van Eys and Vinson, being of opinion that Basque was not the language of the Iberians, while Broca has proved that the Basques are by no means an "unmixed" race, the French and Spanish Basques differing considerably in type—even in the case of the Spanish Basques the Iberian blood is far from being pure. Moreover, the names of the Sican towns in Sicily do not resemble any names of the well-known Basque class.

As for the Sicels, Mr. Freeman maintains not only that they formed the vanguard of Aryan settlement, but that they were near kinsfolk of the Romans. He holds that the Sicel was "an undeveloped Latin." It is quite possible that the Sicels may have been Aryan in speech, but the anthropological evidence is not in favour of the theory that they were Aryans by race. The Sicel skull resembles that of the Faliscans and other Aryanised tribes of central and southern Italy. That they were "undeveloped Latins" it is impossible, without further evidence, to admit. The Sicels do not resemble the Romans in character. They were a feeble folk, readily submitting to foreign domination, without enterprise, desire for conquest, or political genius. The Roman made laws and roads, the Sicel made neither. Moreover, the characteristic Latin skull, broad and powerful, which is seen in the busts of the Julian and Flavian emperors, bears not the slightest resemblance to the long, narrow, feeble skull from Sicel graves; and it is now conspicuously absent from that part of Sicily (the region around and to the east of Enna) where, if anywhere, the Sicel race may have remained tolerably pure. But, apart from the race question, the argument that the Sicel language was closely akin to Latin is extremely feeble. Mr. Freeman relies on the name of the river Gela, which he thinks must be explained as the "cold" or "gelid" river. But this is not conclusive. We find the Geloni, a Scythic people, on the Dnieper, and the Gelæ on the shores of the Caspian beyond the Caucasus. Moreover, in the addenda to his first volume, Mr. Freeman, with his usual candour, notes that he has come across a river Gela in Caria, nearly opposite Rhodes, whence came the founders of the Sicilian colony of Gela. This fact at once disposes of the argument that the name of the Sicilian Gela is necessarily Latin. If this name be given up, very little remains. The names of the chief Sicel towns—Enna, Hybla, Inessa, Herbessus, Echella, Herbita, Assorus, Engyum, and Motyca—are not found in Latium, and do not seem to be of the Latin type. Nor do the Sicel deities—Hadranus, Acis, and Hybla—appear in the primitive Latin pantheon. Besides these names we have two undoubted Sicel words—*zanelon*, a reaping-hook, and *cottabos*, the name of a Sicilian game. As Mr. Freeman does not pretend that these words are Latin, it is difficult to understand the grounds of his very positive assertion: "The language of the Sicels, I do not hesitate to say, was Latin, or something which did not differ more widely from Latin than one dialect of Greek differed from another" (I. 488).

The only real support for this contention is the fact that *nummus*, *litra*, and *uncia*, metric terms used by the Sicel Greek, are undoubtedly Italic and not Hellenic. On this fact is based the argument that these metric words must have been obtained by the Greek colonists from the Sicels, who must have emigrated not long before from Latium, bringing with them their Latin speech. Mr. Freeman places the migration of this Latin tribe to Sicily in the eleventh century

B.C. But, as I have shown elsewhere, it was only in the eleventh century that an Umbrian tribe, driven from the valley of the Po by the Etruscan invaders, took refuge south of the Tiber in the broad Latian plain from which they derived the name by which they were thereafter known. Very possibly the Sicel migration was ultimately due to this pressure from the north. But the Sicels would not be themselves Latins, but a primitive *stirps*, probably Iberic by race, but possibly Aryanised in speech, who were pressed forward into Sicily by Oscans or Faliscans.

But apart from this theory, which seems best to accord with the known facts, even if we were to suppose with Mr. Freeman that the Sicels were really Latins, who prior to their migration to Sicily in the eleventh century had been settled in Latium for a prolonged period, it is in the highest degree improbable that, three centuries before money was first coined in Lydia, they should have brought with them three technical numismatic terms which, after the introduction of coinage, became identical in meaning in Sicily and in Latium. This seems quite incredible, more especially as there are other far simpler explanations of the facts. If the three words are genuine Sicel words adopted from the Sicels by the Greeks, they may have been transmitted from Sicily to central Italy after the introduction of coinage into Sicily, some five centuries later than the date assigned to the Sicel migration. If, on the other hand, they are, as seems most probable, genuine Italic words—Oscan possibly, or Volscian—they may easily have been introduced into Sicily from Cumæ in Campania. This seems the more possible, since Thucydides informs us that Zancle, one of the earliest Greek colonies in Sicily, was partly founded by emigrants from Cumæ; and there are reasons for believing that there was a lively commercial intercourse between Cumæ and Zancle. Moreover, the earliest of Sicilian coins are those ascribed to Zancle and the adjacent colonies, Naxos and Himera; and their weight-standards are the same as those of the earliest coins of Cumæ. If the weight-standards passed, the names may have passed by the same channel. Knowing how readily the names of measures, weights, and coins can be transmitted, it seems needless to make the improbable assumption of a Sicel migration from Latium to Sicily in order to account for the identity of these coin names. Mexican dollars are current throughout the East; the word dollar is merely the German *Thaler*; and, therefore, on Mr. Freeman's own principles it might be argued that the Aztecs were a Teutonic people who, with their Thalers, had emigrated from Germany to Mexico some three centuries before Cortez and his Spaniards arrived in the New World.

Mr. Freeman is probably wise in giving up as insoluble the question of the race affinities of the Elymians. It may, however, be noted that both Thucydides and Dionysius, practically our only authorities, claim them as Asiatics, and Strabo places Elymaeans in Asia. The Phœnician Eryx is reputed to have been originally an Elymian city, and the Elymians are always

found on terms of neighbourly friendship and alliance with the Phœnicians. They also used the Phœnician alphabet, as is shown by the fact that the legends on the early coins of Segesta, the chief Elymian city, are in the Phœnician character.

ISAAC TAYLOR.

The Coming Terror, and other Essays and Letters. By Robert Buchanan. (Heinemann.)

To reprint newspaper letters in a volume forms a bad precedent. For already too much journalism gets itself enclosed in cloth bindings; and, if the contents of even the correspondence columns are, henceforth, to flood the book-market, what is to become of the bewildered reader? All letters are not as clever as Mr. Buchanan's; yet, even in his case, considering the importance of the subjects he discusses, a more deliberate and finished statement would have been acceptable. In this volume, in addition to the letters, are two or three essays from magazines, a quantity of "Flotsam and Jetsam," and no less than eight separate sets of "Final Words." Nevertheless, the collection is not a mere miscellany. It has a common object, namely, to exhibit and denounce the various phases of "the coming terror."

What this coming terror is we may gather, in the main, from the dialogue between Alienatus, a provincial, and Urbanus, a cockney, with which the book opens. Sundry problems of the hour are here brought under review; and we are given to understand that things are in a terribly bad way already, and rapidly tending from bad to worse. The coming terror, we are told, will, at least temporarily, be the "submergence of individual freedom and activity under the waves of political and social anarchy," by which is meant the confused and confusing legislation of these socialistic times. Among the things to be dreaded are the political tyranny of majorities, one form of which is what is termed beneficent legislation; espionage in all the affairs of life; trades unionism; the new socialism, "organising to suppress free action in all matters of contract and personal activity"; the new journalism; the new ethics, "scientific, saturnine, yet Puritanical"; the new priesthood of science; the new jurisprudence, "practically confounding the empirical laws of expedience with the absolute laws of ethics." While rejecting the New Socialism, Mr. Buchanan claims to be a Socialist. The true Socialist is, he says, "a man eager for the common good, but one who believes that good can only be attained by such complete freedom in life, morality, and religion as is compatible with the general growth and welfare." He insists strenuously that the terms Socialism and Individualism, so far from being contrary terms, as most people suppose, are in reality "two facets of the same proposition." It may be so; everything depends on your definitions. But, now that the term Socialism has become so generally identified with what Mr. Buchanan calls the New Socialism, the attempt to reclaim it is fraught with confusion. The dis-

cussion with Prof. Huxley on the question, "Are men born free and equal?" was quite spoiled by Mr. Buchanan's untimely insistence on his definition of Socialism. Instead of reaching any satisfactory conclusion whether men are naturally free and equal or the reverse, the argument degenerated into a wrangle whether Mr. Herbert Spencer was or was not a Socialist. Prof. Huxley cannot be blamed for declining to think that he was.

In Mr. Buchanan's opinion, Mr. Spencer's is "the sanest and clearest intellect known to us at present on this planet"; and he is, for the most part, an ardent disciple, on social questions at least, of the great philosopher. But, as he is careful to explain, he does not follow Mr. Spencer with his eyes shut, and takes leave to differ from him here and there. According to Mr. Buchanan, Socialism "contends that it is not want of energy, but want of opportunity that pauperises men and destroys individuality." No doubt something of the same kind might be said of Individualism; but as soon as the question is asked how the opportunity is to be secured, the parting of the ways is marked and final. Socialism would try to create artificial opportunities by legislative and other action, while Individualism is concerned only to remove obstructions and give men and women free scope to work out their own redemption in their own way. At least, this distinction applies to the New Socialism—the only thing usually known as Socialism nowadays. The Socialism of a former generation did, no doubt, come nearer to what Mr. Buchanan understands by "true" or "higher" Socialism. From about the year 1835, Robert Owen and his followers were designated Socialists. Later came the Christian Socialism associated with the names of F. D. Maurice and Charles Kingsley. To-day witnesses the third phase of over-ripeness and decline. The first Socialism was commercial, the second was religious, the third is political. The first proclaimed self-help—the great self-help movement, known as co-operation, came out of it; the second proclaimed human redemption; while the battle cry of the third is state-control.

The primary function of Socialism in this third or modern phase, not less than in its preceding phases, was that of protest against undue luxury, greed, and the careless indifference of the well-to-do classes to the sufferings of the poor. As such, it was timely and useful. It served to awaken men and women to truths about themselves which it was good for them to realise. Luxury, like a moral leprosy, was eating away the souls of members of the richer classes; to warn the sufferers was merciful. Greed and carelessness created a needless burden of misery; it was well that those upon whose shoulders the burden was laid should be told that their consent ought first to have been obtained. But this much-needed "criticism of life" was misguided, and became impetuous. The sufferers were taught to demand, not what was good for them but the very luxury which had been poison to their fellow-creatures; and to insist, not simply on a just and proper freedom from unnecessary burdens, but on

a transfer, to gratify mere malice, of the burdens to shoulders that had hitherto been free. The want of brotherly goodwill on the part of the rich for the poor was not remedied, but, instead, an attempt was made to counteract it by creating ill-feeling on the part of the poor for the rich. So now, the temporary triumph of the classes hitherto down-trodden discovers in them all the worst faults against which the original protest was made. There is an undoubted present tyranny, and, Mr. Buchanan thinks, a coming terror. Radicalism, as the present reviewer wrote many years ago, is the philosophy of roots. A Radical is defined by Mr. Buchanan as one who reforms at the root and not the branches." Modern Socialism is not radical. It sees the evil, fails to apprehend the cause, and, mistaking the mode of treatment, proceeds to lop the branches and threatens to cut the trunk; but, as it never once examines the root, after all the pruning the old diseased fruit reappears in a new position. We have described the present as the declining phase of socialism; even as we write it is wasting itself in visions and dreams of an impossible future, in relating "News from Nowhere," and the like.

The emphatic protest "against over-legislation in matters literary," which Mr. Buchanan entitled "On Descending into Hell," was written in connexion with the prosecution and imprisonment of Mr. Henry Vizetelly for publishing English translations of Zola's works. It took the form of a letter to Mr. Henry Matthews, the Home Secretary, and was an appeal for the liberation of the unlucky publisher. As a specimen of the author's power of vigorous criticism and invective, the article is excellent; and it exposes the weakness of the position taken by those who advocate the suppression—not the extinction—of vice. The moral of the prosecution is, he says,

"Leave the drains alone; let the world wag, even if typhoid fever should flourish. Moral number two, very acceptable to the average insular intelligence: conceal from all clean people, especially young people, the fact that there is any sewerage at all" (pp. 104-5).

As to Zola himself and his "pornography," Mr. Buchanan says:

"I have always been Puritan enough to think pornography a nuisance. It is one thing, however, to dislike the obtrusion of things unsavoury and abominable, and quite another to regard any allusion to them as positively criminal. A description even of pigsties, moreover, may sometimes be made tolerable by the cunning of a great artist; and this same M. Zola, though a dullard *au fond*, for the simple reason that he regards pigsties as the only foreground for his lurid moral landscapes, appears to be so much better than myself, in so much that he loves truth more and fears consequences less, that I have again and again taken off my hat to him in open day. His zeal may be mistaken, but it is self-evident; his information may be horrible, but it is certainly given in good faith; and an honest man being the rarest of phenomena in all literature, this man has my sympathy, though my instinct is to get as far away from him as possible" (p. 105).

The protest and appeal did not serve the ostensible end. Mr. Henry Matthews was not moved by it to grant Mr. Vizetelly relief;

and, it must be confessed that, with all its excellencies, it was not well designed to secure any such result. It recalls to mind the German advocate who, being appointed to defend a Socialist in the days when Socialists were considered criminals, took the opportunity of expounding his own extreme doctrines, in language which he would not have dared to use on any other occasion. The trial ended, he sought the friends of the prisoner, and announced, "A glorious triumph." "Is he acquitted then?" asked the friends. "Oh, no!" was the reply; "he is to be executed; but I have declared our great principles in open day."

Another letter, quite as vigorous, on "Is Chivalry still possible?" brought Mr. Buchanan into collision with Mrs. Lynn Linton, who roundly accused him of "talking sentimental bunkum with splendid literary power." His "splendid literary power" was, of course, rivalled by hers; so, too, was his "bunkum"; but while his was "sentimental," hers was cynical; his the weakness of an enthusiast, hers the defect of a sneering, virtue-doubting woman-hater. Mr. Buchanan's plea in this case was for the "outcast" women of society. Perhaps he did not take sufficient account of the fact that in most instances the only kind of love of which these women were victims was self-love. But as self-love is not exclusively a woman's vice, if it be at the root of the evil there is no justice in measuring out severer punishment to one sex than to the other. In truth, however, as Mr. Buchanan perceives, and Mrs. Lynn Linton does not care to perceive, it is no moral enthusiasm which makes society thrust out these women sinners. But there is the pretence to be maintained that our marriage system is monogamous and not founded on polygamy and polyandry, and to this end a show of righteous anger at those who too obviously break the pretence is useful. In this way these women are, in a certain sense, as Mr. Buchanan says, the "martyrs" of society. At least they are the scapegoats; and along with them, of late years, from time to time, go certain public men who blunder in their private lives. Respectability is thin ice covering a sea of corruption, which is useful but must be ignored. Anyone who falls and, breaking the ice, gets besmirched, had better be thrust under out of the way lest unpleasant truths become known and other ills befall. Mr. Buchanan's main contention is simply that "a man has no right to set up for a woman any personal standard of thought or conduct by which he is unable or unwilling to measure himself;" and, Mrs. Lynn Linton notwithstanding, there is not much "bunkum" in that.

There are many literary judgments scattered through the volume; and it goes without the saying that they are stated with freedom and vigour. As usual, contemporary writers and writing suffer the most. In "The Modern Young Man as Critic" and "Imperial Cockneydom"—both remarkably clever essays—Mr. Buchanan is at his sauciest. He is no respecter of persons; and though probably mistaken when he says he has no idols, he is a truly energetic breaker of other people's images. No man is safe from his hammer—not even Goethe.

Mr. Henry James is a "superfine young man" and Mr. George Moore a literary "Arry." Matthew Arnold was "spiteful" and "jejune"; Mr. Walter Pater's essays are also "jejune"; Mr. Andrew Lang is "the chirpy prophet" of nepotism; Zola is "a man deformed"; Mr. Henry Labouchere is "the Paul Pry of journalism." Strange that such an epithet-flinger should dislike Carlyle, and even censure him for flinging epithets! From a humourist like Mr. Buchanan a truer estimate of that supremo humourist was surely to be expected.

Other points of kinship exist between Mr. Buchanan and Carlyle. If ever a man was a "provincial" in Mr. Buchanan's sense, it was "St. Thomas of Chelsea"; and what is more, in the midst of "Cockneydom" he continued a "provincial" to the end of his days. Even Carlyle was hardly severer on the present time, or more regretful of the good old days behind, than is Mr. Buchanan. True, Carlyle was not an optimist, and Mr. Buchanan is. We have his own statement that he writes "as a pure optimist and sentimentalist" (p. 175); but, for an optimist, it must be admitted he takes an uncommonly gloomy view of life and letters. The change around him is, he thinks, "only a lurid and hideous nightmare," not a reality. But ordinary optimists do not have such dreadful dreams; and if he is satisfied it is a dream, why does he fight so strenuously against it? In the days of his youth the young man

"was feather-headed but earnest; impulsive and uninstructed, but sympathetic and occasionally studious. . . . A great thought, even a fine phrase, stirred him like a trumpet. . . . But now, with the passing of one brief generation, the world has changed; the youth who was a poet and a dreamer has departed, and the modern young man has arisen to take his place" (p. 146).

A sad falling-off indeed from his earnest if feather-headed predecessor, for the modern young man is

"a saturnine young man, a young man who has never dreamed a dream or been a child, a young man whose days have been shadowed by the upas tree of modern pessimism, and who is born to the heritage of flash cynicism and cheap science, of literature which is less literature than cynicism run to seed" (p. 146).

Allowance, however, must be made for the different points of view of the seer. It was with the half-inward gaze of youth that he saw the young man of his own youth; and he is regarding the young man of to-day with the wider, more critical, and more experienced observation which comes when youth is past. Probably that young man of the past was no more than the somewhat idealised portrait of himself as he was or aimed to be. Young men do not study other young men with any considerable amount of critical discernment. The world as they know it is the world as they see it in their conscious selves.

Again, discussing chivalry, Mr. Buchanan suspects it is extinct. At any rate he is sure that

"it is fast becoming forgotten; that the old faith in the purity of womanhood which once made men heroic, is being fast exchanged for an utter disbelief in all feminine ideals what-

soever, and that women in their turn, in their certainty of the contempt of men, are spiritually deteriorating" (p. 186).

The whole outlook is appalling:

"Nothing certainly can be more terrible than the existing condition of things, both social and political" (p. 97).

It is well Mr. Buchanan tells us he is an optimist, for he would be sadly misunderstood.

The book, as a whole, is stimulating. If Mr. Buchanan were less impetuous, he would be a great critic. As it is, carried away by his emotion—sometimes, possibly, by a desire to be brilliant—he overstates, occasionally repenting and retracting; more frequently, in another mood, contradicting himself. He sees both sides of a subject, but at different times. But sturdy independence is as characteristic of him as it was of Carlyle. Errors of judgment there may be, and errors of taste there are; but the thought he speaks is, at least, his own thought and never an echo. He has convictions and the courage to declare them. If he does not convince, he compels attention and excites thought. Of his literary estimates he says, "they have one poor merit; they are, at least, my own." This merit his social and political as well as his literary estimates assuredly have; and it is not a poor one, but, on the contrary, the supreme merit of all.

WALTER LEWIN.

A Girl in the Carpathians. By Menie Muriel Dowie. (Philip.)

THAT Austria consists of a patchwork of races is a political truism. But few English readers know how each several patch has been added to the imperial coverlet of the House of Hapsburg. Galicia was nibbled from Poland little more than a hundred years ago (in 1772). Its eastern end flanks Bukovina, and contains a population scarcely less mixed than that of its Moldavian neighbour.

This little known corner of Europe is the subject of Miss Dowie's book. The year of her visit is not given, but we believe it to have been 1890. The political information is rather scrappy, but what there is of it is fresh and to the point. Evidently Miss Dowie regards politics as uninteresting, and indeed out of place in describing a happy country, where the peasants own their land and where persons of the landlord class are not to be found. "Oppressions, rack-renting, and evictions were unknown evils, of that I was assured; and beyond this, I felt that a political condition is not a bad one if you hear nothing of it."

The fortunate peasant proprietors of Galicia principally belong to the Ruthenian, the Pole, and the Huzul nationalities. "The Huzul," says Franzos (p. 3), "is a hybrid, uniting the Slavonic blood of the Ruthen with the Mongolian blood of the Uzen, his speech bewraying the former, while his name testifies to the latter." The Huzuls are said to be the only known riding mountaineers, save a certain tribe of the Caucasus. The breed of horses used

by them is also said to resemble those of their Caucasian cognates.

"Keeping all this in mind," writes Leopold von Lacher Masoch, the Hungarian novelist (p. 193), "it may be held with some show of reason that at the great wandering of the earth's peoples, when the Slavs were in the van, the Huzuls were easily driven across the plains and penned in the Karpathians, while their neighbours of the plains were split up, broken, and intermixed with the Germanic races, and later with Huns, Hungarians, Tartars, Mongolians and Turks. Thus the Huzuls, safe in their Karpathian fastnesses, preserve their character, the Slav, or, if you will admit it, the Caucasian character, free, pure, and marked to this day."

"No falcon can live caged," so runs the proverb, "no Huzul in bondage." Miss Dowie was not much thrown with this wild and warlike people, but consorted more with the Ruthenian of the plain and the Pole, whose ancestors conquered and colonised the country. However, beauty and picturesqueness are the creation of the eye and the mind; and a traveller so richly endowed as Miss Dowie would write an attractive account of her travels wherever her Dan and Beersheba were situated.

The charm of the book is undeniable. The style and the matter are alike sparkling and bright. The reader who can begin *A Girl in the Karpathians* and can close it before he has finished its 300 pages must either be very dull or very preoccupied. The language, like that of the Heathen Chinese, is "free," and cannot be described as a "well of English undefiled;" but you never miss the meaning, nor are you wearied by repetition or verbosity. Patriotism makes us glad that so clever a book was written by a compatriot; but were it not for her frequent references to Scotland, the authoress might pass for a Yankee. "I give the end of this authoritative paragraph purely for its own sake; to me," says Miss Dowie (after quoting Franzos), "the terms employed seem a size or so too large." Miss Dowie is, we feel sure, nothing if not sincere. We will not therefore flatter her. The flaw in this lively and readable book is a certain cheap cynicism or flippancy of tone. Franzos is generally admitted to be one of the two great living authors of South Germany. The son of a doctor in a little Galician town, the Barnow of his stories, Franzos is *par excellence* the humorist of Galicia. Yet Miss Dowie in writing of the country refers to its greatest man of letters only in slighting terms.

The Ruthenian peasant appears to be a pagan in everything except his oaths. We are told that "upon the immorality, the blind, unrepentant, wholesale immorality of the peasants, the priests of the United Greek Church exercise no check." There appears to be no such thing as a moral standard in any Ruthenian village. They are, however, neither illogical nor hypocritical. "What do the men think when they see the young women drunk?" asked Miss Dowie. "How should they mind?" was the answer. "Are they not drunk too?" No wonder that, after the scene in the public-house to which the peasants adjourned from their church, Miss Dowie retired to a pine wood with "qualms of wrong-headed Western disgust."

She did not remain there very long, and the following paragraph is too characteristic not to quote.

"That Sunday afternoon I ended only with a half-cross, half-amused feeling that, hang it, there the people were, and one might as well take an interest in them and not sheer off at the first evidences of a depressing lack of sanity; colossal seriousness and lone prayerful depression would be of slight avail; I might as well be cheerful, so down I went from my mountain with a vague notion that having recourse to mountains when the worries of this world become overwhelming is a very old game, and some one whose name I have forgotten used to play at it—right away back there in the Old Testament" (p. 105).

The peasant who is happy with his own or his neighbour's wife is what the Austrian statesman has made him. Miss Dowie is far too close an observer not to trace the evil to its source—compulsory service in the army.

"Barrack life—I know nothing of it in this country—is almost the most wretched that there is. The six daily kreutzers of the common private are not sufficient to provide him with wholesome distractions—and the long hours of guard are filled only by a vague hatred of the life he is leading, and a longing for even five minutes of anything else. Very rarely does he come back to his hills with a third of the health he took away; and any disease he brings back is quickly spread in a place where a young man home from his soldiering has the attraction of so much novelty in a place where morality, as we like to dream of it, is not even a name" (p. 96).

Galicia is the "promised land" of the Jew. As he steps across the Russian frontier, he enters a country of which he is practically the master. Franzos lingers lovingly on the intense conservatism of the Polish Hebrews. Miss Dowie describes them with no affection, but without prejudice. There is no persecution of the Jews, as the peasantry do not resent their supremacy. The Jew is practical, enterprising; the Ruthenian has the negatives of these qualities. The consequence is that the trade of the country is almost exclusively in the hands of Jews. But this is no hardship with the Ruthenian; he neither cares for wealth, nor for what it brings. Miss Dowie tells an incident that happened during her stay in Mikuliczyn. A man who wanted his house roofed went to a peasant, whose trade was wood-slate dressing and setting, and attempted to extract an estimate and press a contract upon him. The peasant would not accept a contract and would not give an estimate, so the man had recourse to a Jew. "Leave it to me," said the Jew, as he went to the hut of the very peasant who had refused the offer of the job. Having extracted all necessary information, the Jew made his calculation, saw his employer, gave him an estimate, entered into a contract, set his peasant to work at a small daily wage, and secured for himself a handsome profit. Does the peasant resent such treatment? According to Miss Dowie—certainly not. Her description of her encounter with the Jewess will reveal a new trait in the foreign Hebrew to most English readers. At a half-way house where Miss Dowie stopped to eat some food, she took a plate from the

shelf to place her "sheep's cheese" upon. The fury of her hostess when she returned and saw her guest using her plate was curious to read of. The "indescribably dirty" Jewess considered the Scotch lady "unclean." It gradually dawned on our authoress that she was a Christian, and therefore, in a technical sense, indubitably unclean. She accordingly bought the plate and slipped it into her sack. The loss of her property, which had been purchased at its owner's valuation, was again too much for the innkeeper, who upbraided her guest both as a Christian and a robber. The treatment she received from the Ruthenian peasants and the Polish gentlemen with whom she stayed was very different.

Miss Dowie's book is proof, if proof were wanting, that an accurate and picturesque account of a people can be written by one ignorant of their language. In a country not five thousand miles away from Galicia, the Queen of England was some years ago represented by a very able diplomatist, who reckoned among his many accomplishments a knowledge of the native language. Although the press of the country was an open book to him, the people of the country remained an unsolved mystery. He did not like them; he misread their characters, their aspirations, and their hopes. Happily for all concerned, this very able and amiable man (for he was both) got the promotion which he deserved. He was followed by a gentleman who, though unable to read their newspapers, liked the common folk, and sympathised with them in their hopes and aspirations. He therefore knew the country and its inhabitants a thousandfold better than his more learned but less sympathetic predecessor. As with diplomatists, so with travellers. The key to a good book of travel is sympathy with the people among whom you travel. Miss Dowie has struck this note in every page of her book. We have referred to the cynicism which crops up now and again; but in truth this cynicism is not more than word-deep. Miss Dowie describes with profound insight the poor ignorant peasantry. She has far too much humour to be a severe judge. Even her verbal cynicism disappears when she enters Cracow:

"Suddenly a choir of trumpets breaks out into a chorale from the big church tower; the melancholy of it I never shall forget—the very melody seemed so old and tired, so worn and sweet and patient, like Cracow. Those trumpet notes have mourned in that tower for hundreds of years. It is the Hymn of Timeless Sorrow that they play, and the key to which they are attuned is Cracow's long despair. Hush! that is her voice, the old town's voice, high and sad—she is speaking to you."

The map is in itself a valuable lesson in history, showing as it does the widest extent of Poland prior to its dismemberment. The illustrations are pretty, and the drawing by M. Fletcher on p. 134 is charming. Miss Dowie, in her closing sentence, remarks that she does not flatter herself that her readers would bid her "write often." We have far too good an opinion of Miss Dowie to wish her such a fate; but we do hope that this book will not be her last.

J. G. COTTON MINCHIN.

An Old Shropshire Oak. Vols. III. and IV. By the late J. W. Warter. Edited by R. Garnett. (Kegan Paul & Co.)

ALTHOUGH it is five years since the first two volumes of Mr. Warter's delightful book were published, their readers' appetites have only grown more eager for the further instalment which Dr. Garnett has now found time to edit, and which completes the work. Inasmuch as the author in his survey of English history has reached in the last two centuries events and a literature of greater interest to most men, these volumes are proportionally more valuable. The plan of the work was described in a review of the former volumes (*ACADEMY*, March 13, 1886); and "my Talking Friend," the great oak of the Rea Valley, still addresses his hearers with something of the majesty, if not the oracular character, of the Dodonacan oaks. Mr. Warter was born in this valley; and he tells us "for the love he bore to the old homestead he has thrown these pages together, as a relaxation under pressing parochial work, so beguiling care and trouble and heavy, heavy bereavements."

These two volumes comprise a good deal of local history, tacked on to a slender thread of the national history during the last century and a half. The author is discursive—sometimes didactic, at others full of anecdote and literary reminiscences. Every page abounds in quotations, mostly poetical. There are eight in one page taken at random. He loves the classics, and is a well-read and entertaining companion, "shaking out scraps from memory," to use his own words, in a manner that reminds the reader of that other curious, yet fascinating, book of his, *The Last of the Old Squires*. Enthusiastic in his devotion to Shrewsbury School and the memory of Dr. Butler, Mr. Warter was an excellent type of the sound scholarship taught in the old days in the famous school: a proof that, in spite of new systems and new-fangled theories, no education can be compared for depth and reflective earnestness with the old-fashioned grammar school scheme—a careful and thorough training in Greek and Latin. Moreover, he was in a high degree kindly and sympathetic. His mind fastened upon any change, either in the inmates or the rustic life of his native valley. Association in so well-stored a memory promptly called up similar events or characters, and then fashioned the mosaic in which they have been set in verse or prose. The book consists therefore of a series of historical pictures, connected either with the land in general or Shropshire in particular, set off with much literary grace and many citations from contemporary writers.

It is obvious that in carrying out a plan of this kind more attention may be paid to the general history than to the local reminiscences. If the former be the case, the book must enter into competition with other and standard historical works. The effect of these volumes is somewhat marred by the constant citation of Luttrell's Diary, or Clarendon's Memoirs, or Walpole's Correspondence. Thirty pages, too, on the old miracle-plays and moralities appear somewhat out of place, while the *Annual*

Register is easily accessible. On the other hand, the scraps of village history and politics, the great floods and storms which devastated the valley of the Rea, the experiments on fruit culture made by Mr. Knight, of Downton—such humble chronicles as these interest all who know Shropshire, and enable the author to speak with that *mitis sapientia* which so eminently distinguished him. The discursive character of the book thus contributes to its charm. Wherever it opens it is sure to display carefully-chosen verses. Every successive topic is handled by a ripe scholar, and a large choice of unfamiliar subjects is gathered together for the delight of the casual reader. Sketches of literary men are introduced; and the whole four volumes of the complete work form a gratifying monument of one who did good work, both literary and otherwise, in his day.

Among Shrewsbury celebrities here treated is bluff Admiral Benbow, and several particulars of him from personal inquiry and tradition contradict those given in the *Dictionary of National Biography*. The Welsh cloths which used to be brought on pony-back to that town are still famous at Newtown and other places. Mr. Warter never writes so pleasantly as when he calls to mind some scrap of local history. The history of the Reformation, as it proceeded in Shropshire, is carefully drawn out. It is probably correct to affirm that its progress was slow in a district so far withdrawn from the metropolis. The memorials of the Civil War in Shropshire are also diligently gathered up in a chapter well worth perusal. To give an example of the book's richness it is only needful to open a volume at random. These *sortes querevæ* lead the inquirer to a chapter on George III.'s reign, and treat successively of yew and willow trees, Sir S. Romilly's Bill for the amendment of the criminal law, the Roman Catholic question, Lucretius, catchingsalmon, the battles of Castalla and Vittoria, a great potato year, the origin of the Ranters, the price of wheat, Dr. Johnson and Lord Hill, another Shropshire hero. It would be vain to recount the apt quotations which garnish these topics, and it must suffice to say that a similar profusion characterises both volumes.

Thoughtful men, and especially the clergy of the present day, who with one avocation and another have scarcely "leisure to be good" left them, will rejoice to make the acquaintance of one who was so earnest and charitable, so wise and so well-read, as John Wood Warter.

M. G. WATKINS.

NEW NOVELS.

In the Heart of the Storm. By Maxwell Gray. In 3 vols. (Kegan Paul & Co.)

My Face is my Fortune. By F. C. Philips and Percy Fendall. In 2 vols. (White.)

Bertha's Earl. By Lady Lindsay. In 3 vols. (Bentley.)

Pen. By the author of "Tip-cat." (Innes.)

Highflieger Hall. By Sir R. H. Roberts, Bart. (Spencer Blackett.)

Tinkletop's Crime. By George R. Sims. (Chatto and Windus.)

The Mystery of No. 13. By Helen Mathers. (White.)

THE faculty of the author of "The Silence of Dean Maitland" should, we think, be somewhat definitely posed and measured for critical readers in *In the Heart of the Storm*. It is a pretty faculty, but a very long way from being consummate; and though it is rash to prophesy, we do not think it ever will be. The forte of Maxwell Gray is situation, and situation is much more a dramatic than a romantic necessity. You can, like Mrs. Tulliver's children, "do with an extry bit" of situation in a novel, but you can also do without it. Without plot, which is frequently confused with situation, you can do but ill; without character and dialogue not at all; without description hardly. Now Maxwell Gray's situations are strongish; but the *signalement* of the rest, so far as this book is concerned, must be "plot weak, dialogue so-so, characters nowhere, description florid rather than good." Even the central situation is too improbable to be really forcible. Why Philip Randal's relations—after not merely offering to acknowledge him, but thinking of resorting to legal proceedings to get hold of him—should have left him in total ignorance of his identity is never fully explained, and, indeed, is not explicable. The character of his cousin, Claude Medway, and the relations of this latter with Philip's foster-sister and, in a way, betrothed, Jessie Meade, are also muddled and drawn with uncertain hand. Clare Lonsdale, a sort of Rosa Dartle in higher life, is melodramatic and unreal; and the mere writing of the book, though always intending greatly, and sometimes effective in a fashion, fails at the chief pinches, and is open to the vulgar description of being often mere "jaw." There is a passage on waltzing which has been wanted in novels these forty years, and which gave immense opportunities; but it is *manqué*. The one thing which the book unquestionably has is pathos; and even that is of a rather dubious kind, and assisted by unnecessary butcherings at the end.

We like *My Face is my Fortune* better than anything we have yet seen from the firm of Philips and Fendall. It is not a great book, in any sense; but it is a vigorous and readable sketch, which attempts the use of no methods of which the workman is not master, and does what it means to do and as it means to do it. Dora Gratwick is a beautiful English girl, with no father, a harsh stepmother, and an independent temperament. She runs away from such homo as she has, joins a circus, "keeps straight," and becomes "La belle Kouma," a delight of Paris fairs, and the object of the hopeless adoration of a Bohemian musician. A conditional engagement to him is broken off (Dora keeping within her nominal rights in doing so) by the arrival of a handsome young Englishman of fortune, who falls in love with La belle Kouma, jilts his own betrothed, and marries her. That her past is discovered and exaggerated by the amiable gossips of English country society may be guessed;

as also that she is no more the woman to stand slighting by her husband than she was the girl to stand bullying by her step-mother. But we need not tell the end. The book sets up no high standard of any kind; and Dora, though (as we have said) irreproachable in what is commonly called morality, is rather heartless, very unforgiving, and not too delicate. But it keeps close to certain sides of nature, without being in the least offensive in its presentation of them.

Lady Lindsay's title is rather irritating; her beginning is decidedly reassuring; the upshot of her book compounded of interest and disappointment. Bertha Millings, an artist not of low birth but of no position, pretty, and twenty-five, marries Lord Delachaine, fifty-seven, blue blood, decidedly old-fashioned even for fifty-seven, maiden sister of aspidish temperament and manners. None of the consequences which all French and some English novelists would assume follow; but an unkind world, much assisted by the aspidish sister, Bertha's own imprudence, and the want of balance of a certain Dr. Jackson, sets to work and very nearly wrecks the happiness of the household. If it is saved it is chiefly due to an *espigle* Duchess of Baynham, called by her god-fathers and godmothers Mary, who sets things to-rights again. Lady Lindsay, with that appetite for shrouds which is inborn in the female mind, kills Mary's husband (a novelist should think twice before unnecessary dukicide) for no earthly reason; and the part of Dr. Jackson is awkward. For it is a much graver crime to kiss a lady who, you know, does not want to be kissed, and who has come to see you professionally and in grievous trouble, than to do various things which a wise legislature now punishes. Also the book is much too long, and there are some quite otiose characters, such as a dreadful Mr. Eldon, a little like one of Mr. George Meredith's men who are created for the purpose of being quoted. These defects of art and a certain unreality of pathos excepted, the book is decidedly better than the usual run of circulating library novels, and a considerable improvement on Lady Lindsay's literary work, so far as we have hitherto been able to acquaint ourselves with it.

Pen is a slight and pleasant book which might have been pleasanter still if it had been even slighter; for the middle interest in it is not quite strong enough to knit together the beginning and the end, and the author talks about her characters a good deal more than sufficiently. A never-dowry artist, Louis Brand, has married a girl of good family, which family disowns her. Her mortal illness brings about a reconciliation for the sake of the children; but the father, sobered by his wife's death, and possessing bad blood if not honest pride, will not let them go to their aunt at first. Afterwards, when he relapses and finds his good resolutions naught, he sends them. In the interim, a good friend of his, a certain "Sandy," has fallen in love with Pen, the eldest daughter, still a mere child, and has proposed to marry her, so as to make a home for her little sister. Brand's change of mind

tears them asunder, only (as the reader feels sure enough) to reunite them at last. It is pretty enough, if a little slim.

Sir Randal Roberts has written a good old-fashioned sporting novel, with illustrations by Miss Bowers, and everything handsome about it. The lines of this kind of composition are somewhat conventional, and good seldom comes of quitting them. Sir Randal has not quitted them, and has "found himself well of it." A rich parvenu who wishes to transform himself into a country gentleman, with a vulgar but amiable wife, and a son whose education is better than his breeding, a wicked earl, a good bookmaker (the bookmaker is not always good, but he is here), a person of doubtful status, who lives by his wits and is not good at all, a hard-riding but high-minded Lady Constance, a mysterious French lady's-maid, some hunting and some accidents—these are more or less essentials, and Sir Randal has handled them very fairly. His most original figure is a certain Martin Climax, whose secret the reader may find out.

There is not, we believe, much general doubt that Mr. George R. Sims is a clever person, and there is no doubt at all that there are very many persons (possibly clever, possibly not) who like his plays and his tales. To these persons *Tinkletop's Crime*, a volume of short stories, makes a very fair appeal. This form of speech will announce to the most guileless reader that the appeal which it makes to ourselves is not very strong, or has had no very strong effect. That is possibly our fault. We have nothing much to say against these tales, though their taste does not seem to us perfect nor their wit consummate; but we have read many things worse even in these respects.

The present writer not being a novelist, it would be improper to say *omnes eodem cogimur*; but by a simple transposition to the third person the proposition will express the fact that all novelists seem to find it necessary, sooner or later, to write a shilling shocker. The author of "Comin' Thro' the Rye" has written hers, and the opening situation certainly deserves a hand. It must be decidedly shocking to come down to a room in which your wife has insisted on sleeping alone, and to find her kneeling by the side of another gentleman's dead body. If anyone wants more than that for a shilling, we think him unreasonable.

GEORGE SAINTSBURY.

FOUR BOOKS OF VERSE.

Poems, Ballads, and Bucolics. By H. D. Rawnsley. (Macmillan.) Those critics who object to modern poetry on the ground that it has nothing to do with contemporary life ought to be satisfied with Mr. Rawnsley's choice of subjects. They are all drawn from the immediate past and present. Other poets may get their inspiration and their material from old myths and doubtful legends; he obtains his from the events of yesterday and today. He is almost too modern, in fact; for some of his ballads are simply paraphrases of remarkable events culled from the newspaper. The newspaper account is scrupulously given by way of introduction or footnote, as though the

reader were invited to compare the prose text with the poetic rendering. It is a very admirable thing, no doubt, to sing of heroic acts done in our own day. Some of them are, perhaps, as worthy to be sung about as the siege of Troy. But one does not expect a poet, like a politician on the stump, to be diligently on the look-out for topics; and it is a little startling to find the last brave rescue done into verse for us while the incident itself is still fresh. It must be admitted, however, that Mr. Rawnsley has a true touch as a ballad-writer. The brave deeds he records do not suffer from the transmutation of the prose story into stirring rhyme. He is equally happy—or so we imagine—in his Lincolnshire poems. The humour and pathos in them are very marked, and we take the accuracy of the dialect for granted. Perhaps the least successful poem in the volume is the "Welcome to Stanley." Here it is evident that the writer's liking for the latest topic has played him false. One feels that much too high a note is struck, and that an undue importance is given to names and circumstances which a too near point of view threw altogether out of perspective. After all, it is distance that lends ennoblement, and just estimates of men and things cannot often be formed on the spot. The best and most imaginative of these poems is "The Poet's Home-Going"—suggested by a sentence in a letter written from Asolo by Browning, shortly before his death: "I shall soon depart from Venice on my way homeward." These two opening stanzas fairly indicate the high character of the whole poem:

"His heart was where the summer ever shines,
He saw the English swallow eastward come,
And still among the olives and the vines,
Or underneath the dark sun-scented pines
Of Asolo, he hummed his latest lines,
And bade his white-winged songs go flying home.
"Then when the red sails round by Lido came
To rest, and vacant now the gondolier
Beneath the Lion and those masts aflame
Lounged, bickering o'er his boy's piazza-game,
One darker boat came quaywards, called his name,
And straight toward the sunset seemed to steer."

From Dawn to Sunset. By George Barlow. (Sonnenschein.) Mr. Barlow's power of producing fluent and readable verse is remarkable. Here is a volume of five hundred closely printed pages, containing upwards of three hundred and twenty distinct poems, on all conceivable and inconceivable subjects. The making of such a book might almost occupy a man's lifetime, but the volume is apparently the product of little more than a year's poetic activity. It seems only the other day, indeed, that a previous volume of Mr. Barlow's issued from the press—a work of the dimensions of this, and the contents of which were of the same universal character. Where there is such a redundancy of quantity one naturally has some misgiving about the quality. It is clear that Mr. Barlow cannot be one of those poets who "add and alter many times," nor can he have had much experience of those "poetic pains" which, according to Wordsworth, "only poets know." His Muse is so glib that all manner of measures flow from her at the merest suggestion. But a garrulous Muse is as bad as a garrulous talker. Your gossip is fluency itself. He will talk by the hour, or by the week; but the long-suffering listener's amazement at his power of words does not bewilder him into mistaking words for thoughts. We have turned over page after page of this volume, and find on every one the same marvellous facility of utterance. The lines and stanzas are turned out as readily, and with as much rapid precision of form, as might be expected if all the poems were mechanical.

The writer does not stop to think. His voluble Muse is all the time pouring forth words, words. This sonnet—addressed “To the Unknowable God”—is a fair example of Mr. Barlow's style:

“O God within the awful voiceless void,—
 God of the terrible and viewless night,
 God also of the burning midday light,—
 God, by whose hand the countless stars are
 buoyed,
 And all the golden sunrise-clouds deployed,
 And all the ridges of the sea made bright,
 And the far snow-fields limitlessly white,—
 God whom the green woods worship, overjoyed:
 “We cannot reach thee. Yet can prayer make
 head
 Against the glittering tide of stars and suns,
 And reach thy gracious central throne at once?
 Can our lone cry surmount the hill-tops red
 With fiery sunset? Can we find thee, Lord,—
 Or are our groans towards careless heights
 outpoured?”

It may be that the present critic is case-hardened, but to him these graphic adjectives and substantives stand for so many adjectives and substantives, and nothing more. Yet he knows that a single line of Wordsworth, or Tennyson, or Browning, might set him thinking for a week.

Love's Vintage. By W. St. Clair Baddeley. (Sampson Low.) If Mr. St. Clair Baddeley would drop certain conceits of manner, which in other days would have been called cockneyisms—archaisms that are long out of date; if, moreover, he could persuade himself that inversions and superfluous accents are no more admissible in poetry than in prose—he might produce some respectable verse. He has an exuberant fancy, and a happy gift of expression. Sometimes, however, his fancy is too exuberant, as in the following sonnet, “To Byron”:

“True Poet—since they cannot filch thy fires,
 They feign to scorn the thunders of thy
 verse—
 Then vex with puny rage their pigmy lyres,
 And fancy for the dim thy fame the worse!
 Thy myrtle yet is fresher than their bays;
 Thy winged wit outlives their level lines;
 And greener are the glories of thy lays—
 As greener Newstead oaks than Putney pines.
 O for one golden arrow from thy bow
 To startle the lean wolves that soil thy springs,
 And scare them up into their hills of snow
 Where famine waits them with impatient wings!
 Then should the troubles of thy slumber cease,
 Dead shepherd, and thy pastures be at peace!”

Here we have a poet who is possessed of fires and thunders, and is crowned with myrtle, and carries a bow and golden arrows; whose wit is “winged,” and to whom belong certain springs; yet who turns out at last to be a dead shepherd. Here, too, are certain nameless people who scorn the poet. They must be dabbles in verse themselves, for they wear bay (“bays” in the sonnet, where rhyme is indispensable), and carry lyres, though pigmy ones. But these people at last turn out to be lean wolves. Altogether the metamorphosis rather puzzles us.

Idle Hours. By W. De Witt Wallace. (Putnam.) Mr. De Witt Wallace is another gentleman with an exuberant fancy. In his “idle hours” he seems to have tried how many incongruities he could bring together, and how eccentrically he could put them into rhyme. Here is a specimen of the result—the eight lines form a complete poem, which is called “The Good Man's Death”:

“As dauntless as a lion,
 Submissive as a lamb,
 As cheerful as the sunshine,
 Composed as evening's calm;
 As joyous as the skylark,
 As up to heaven it flies—
 'Tis thus the good man passes
 From this world to the skies.”

It is well that the good man's passage—dauntless, submissive, composed, cheerful, and joyous as it was—cost the poet and his readers no more than eight lines. This wholesome brevity inclines us to forgive the otherwise insufferable attempt to rhyme “calm” with “lamb.” One more example of Mr. De Witt Wallace's quality should suffice. He compliments a poetic friend (in a sonnet) upon the “harp” with which “Nature” has endowed him, and bids him

“Be bold to strike the chords when impulse knocks!
 Each string's a hair plucked from a Muse's locks.”

It is no wonder that the Muse of Mr. De Witt's “idle hours” should have done so little for him. A poet who tears the Muse's hair instead of his own could not expect to escape her frowns.

NOTES AND NEWS.

THE attempt to silence Prof. Max Müller as Gifford Lecturer at Glasgow has failed. When the charge of heresy, brought against him in the Glasgow Presbytery, had been thrown out by seventeen to five votes, an appeal was made by the defeated party to the General Assembly at Edinburgh. There, however, the appeal was simply dismissed. The attack was aimed not only at the Lecturer, whose two volumes of lectures are published, but also against the Senate of the University of Glasgow and its Principal, Dr. Caird. The Professor will now continue his lectures next term. The course which he delivered this year is in the press, and will appear in the autumn under the title of *Anthropological Religion*.

WE understand that Prof. Cheyne's Bampton Lectures for 1889 will be published by Messrs. Kegan Paul, Trench, Trübner & Co., in the course of next week. The full title of the volume is “The Origin and Religious Contents of the Psalter, in the Light of Old Testament Criticism and the History of Religions.”

MR. ANDREW LANG has in preparation a volume of Angling Sketches, which will be illustrated by Mr. W. S. Burn-Murdoch.

MR. JOHN MURRAY announces two new volumes in his well-known series of English Handbooks; one dealing with the three adjoining counties of Herts, Bedford, and Hunts, the other with Warwickshire. There is also in preparation a Handbook of India, in a single volume, which will devote special attention to the hill stations.

MESSRS. CHAPMAN & HALL have nearly ready for issue an English translation of the third volume of M. Renan's *History of the People of Israel*, covering the period from Hezekiah to the return from the Exile.

MISS BEATRICE POTTER's book on *The Co-operative Movement in Great Britain*, will appear in Messrs. Swan Sonnenschein and Co.'s “Social Science Series” next week. It deals with the relations which ought to exist between trades unions and co-operative societies and the State.

THE Leadenhall Press, having just issued to subscribers Mr. W. J. Lofthouse's *London City*, now announces a companion volume dealing with the residential belt of London, to be entitled—not very accurately—*London City Suburbs*. As before, the illustrations will be from original drawings (about 300 in number), made by Mr. William Luker, Junior, and reproduced in Paris by a photographic process; while the letterpress on this occasion will be written by Mr. Percy Fitzgerald.

TWO new books on the Far Northwest are announced: *Bear-Hunting in the White Mountains*; or Alaska and British Columbia

revisited, by Mr. H. W. Seton-Karr; and *With Sack and Stock in Alaska*, by Mr. George Broke, of the Alpine Club.

MESSRS. PERCIVAL & Co. have in the press, among their educational works, an edition of *Macaulay's Lays of Ancient Rome*, with maps, notes, and an explanatory index of geographical names, by Mr. H. T. Rhoades, of Rugby.

Personal Reminiscences of Laurence Oliphant, by Mr. Louis Leisching, will be published next week in pamphlet form by Messrs. Marshall Brothers. Mr. Leisching's name is mentioned several times in Mrs. Oliphant's biography. He was a very intimate friend of Mr. Laurence Oliphant, and has put together a great deal of interesting matter which does not appear in the larger book.

A NEW story by Mr. James Payn, entitled *A Modern Dick Whittington*, will appear as a serial in the newspapers supplied by Messrs. Tiltson & Son, of Bolton.

A NOVEL by Mr. Wolcott Balestier has been accepted for serial publication in one of the American magazines. It will ultimately be published here in book form by Mr. Heinemann, and in New York by Mr. Lovell.

MESSRS. EDEN, REMINGTON & Co. are about to publish, in a single volume with illustrations, an Australian novel entitled *Strong as Death*, by Mr. Francis Adams, which recently appeared as the alternating serial with one of Mr. G. Boldrewood's novels in a Sydney newspaper.

The Story of the Imitatio Christi, by Mr. Leonard A. Wheatley, will be the next volume of the “Book Lover's Library,” to be published during the present month by Mr. Elliot Stock.

THE second edition of Mr. Zangwill's whimsical book, *The Bachelors' Club*, is in the press, the first edition of 2000 having been exhausted on the day of publication.

A NEW journal of a special character is about to be founded in San Francisco. One of its projectors, an Oxford graduate who has been for some years a journalist in the States, has conceived the idea that Americans do not know the actual feeling of Englishmen towards their country because many of the existing American newspapers misrepresent it. He will, therefore, seek in his new enterprise to tell Americans what Englishmen really think about them. He will also try to show Englishmen what is the actual opinion of educated Americans respecting English institutions. In his view, American feeling towards England is not fairly expressed by much of the existing American press.

AMONG the contents of the *Religious Review of Reviews* for June (which will commence the second volume) will be: A character sketch of the Bishop of Ripon, with portrait; the first of a series of illustrated articles on “Notable Churches”; “The Theology of To-day,” by Rev. Dr. Reynolds; “Sunday Amusements in America,” with the opinions of six archbishops and sixteen bishops; and “Napoleon's Views of Religion,” by M. H.-A. Taine.

THE German Emperor has conferred the high distinction known as the *Ordre pour le Mérite* upon Sir Austin Henry Layard.

MONDAY, June 15, at 11 a.m. has been fixed by Lady Burton for the date of the funeral of her husband's remains, at St. Mary Magdalene Church, Mortlake.

THE next monthly meeting of the Library Association will be held on Monday next, June 8, at the Deptford Library and Club at 8.15 p.m., when a paper will be read by the hon. secretary and librarian, Mr. G. R. Humphery, on “Literary Associations of Deptford.”

WE quote the following from the *Opinione* of May 28:—

"Una importante scoperta è stata testè comunicata dal prof. Monaci all'Accademia dei Lincei: Un Codice della Divina Commedia, posseduto dalla Biblioteca Nazionale di Milano, coll'arme primitiva della famiglia Alighieri. Se il Codice fu composto per la famiglia di Dante, non v'ha dubbio che esso ci conserva il testo originale del Poema."

An *Approved Treatise of Hawks and Hawking*, by Edmund Bert (1619), has just been reprinted, with an introduction by Mr. J. E. Harting. It is the rarest of English books on falconry, and no copy has come into the market for nearly twenty years. The reprint is as nearly a facsimile as it is possible to make it without the aid of photography; and a hundred copies only have been issued, through Mr. Quaritch.

MESSRS. MACMILLAN have issued this week the fifth volume of the collected edition of Mr. Alfred Austin's poetical works, containing the Narrative Poems. It is dedicated to Sir John Everett Millais, in a letter of some length, dated from the neighbourhood of Florence. The edition will be completed by one more volume, of Lyrical Poems.

UNIVERSITY JOTTINGS.

DR. JOHN PELLE, Master of Christ's College, has been elected vice-chancellor at Cambridge for the academical year beginning on October 1, in succession to Dr. Montagu Butler.

THE following is a list of those upon whom it will be proposed to confer the honorary degree of D.C.L. at Oxford, on the occasion of the Eneocenia, June 17. The Duc d'Aumale, Lord Halsbury, Mr. A. J. Balfour, Prof. Jebb, Mr. Briton Riviere, and Sir Donald M. Stewart. Lord Halsbury is already a graduate of Merton College; and Mr. Briton Riviere is the son of a former respected resident in Oxford.

THE list at Cambridge is both longer and more varied, for it comprises honorary degrees in four several faculties. Doctors of Law—Lord Walsingham (who will be inaugurated on the same occasion as high steward of the university); the Marquis of Dufferin and Ava; and Sir Alfred Lyall (the Rede Lecturer for the present year). Doctors in Letters—Prof. Rudolf von Gneist, of Berlin; M. Hippolyte Taine (whose Christian name has been erroneously given as Henri); and Mr. W. E. H. Lecky. Doctors in Science—Sir Archibald Geikie; Prof. Karl Weierstrass, of Berlin; Dr. Elias Metschnikoff, of the Pasteur Institute; and Prof. W. H. Flower. Doctor of Music—Antonin Dvorák.

IN Convocation at Oxford next Tuesday, it will be proposed to confer the honorary degree of M.A. upon Dr. Joseph Wright, who was recently appointed deputy-professor of comparative philology, in succession to Mr. Sayce.

THE general board of studies at Cambridge has approved the name of Mr. W. M. Hicks, of St. John's College, for the degree of Doctor in Science.

THE decrees sanctioning a grant of £7000 for the construction of a new laboratory for human anatomy at Oxford, together with smaller grants for morphology and other scientific departments, were approved in Convocation on Tuesday by the decisive majority of 193 votes to 46. As the total of resident voters does not much exceed one hundred, it is evident that an equal number must have travelled to Oxford for the special purpose of voting—in favour of the decrees.

THE Rev. Dr. William Cunningham has been elected to a fellowship at Trinity College, Cambridge.

MR. W. R. MORFILL, reader in Russian at Oxford, was to deliver a public lecture on

Friday of this week, upon "The Golden Age of Polish Literature."

THE Rev. P. H. Wicksteed's lectures on "Henrik Ibsen," to be delivered at the Chelsea Town Hall in connexion with the London Society for the Extension of University Teaching, will be devoted mainly to the consideration of those works of Ibsen which have not been translated into English, namely, the Poems and Metrical Dramas.

MR. GEORGE HOLT has given £10,000 for the endowment of a chair of physiology at University College, Liverpool.

A COMMITTEE has been appointed by the council of Trinity College, Dublin, on the proposal of Prof. Edward Dowden, to consider the question of introducing a scheme of university extension lectures in Ireland.

ORIGINAL VERSE.

NEPENTHE.

(To a Theosophist.)

THERE is a fount, whence sleep and death benign
Have subtly streamed, o'er East and West dis-
spread.

Who tastes that effluence, wants nor earthly
bread

Of knowledge, nor bold faith, that lifts as wine

The spirit's vision. Fairer fruit was thine,

God of the worlds thou hast half lightened:

Fairer thy promise, who would'st raise the

dead

By miracles of logic, nouns divine!

For yours are charmed draughts; ye pour therein

Nepenthe, and with that enchanted cup

Sweeter than Helen gave her anxious guest,

The soul, on airy lore and phantoms thin

From life imperishable wafted up,

Sinks in a deathful paradise of rest.

GEORGE C. W. WARR.

MAGAZINES AND REVIEWS.

THE *Expositor* for June is a strong number, containing, among other articles, Mr. Gwilliam's on the question whether the quotation in 1 Cor. ii. 9 is derived from "the apostolic liturgy," which "was the prototype of every extant liturgical form." The question is answered in the negative. Also the continuation of Prof. Sanday's survey of new hypotheses on the Synoptic Gospels (with special reference to Resch and Bousset); and Prof. J. T. Marshall's further statement of possible and probable indications that our Synoptic Gospels are based upon a primitive Gospel in Aramaic.

THE Notes of the Month, which have now for some time become a distinguishing feature of *The Antiquary*, go on improving. We know no other place where the current archaeological news is chronicled in a manner at once so concise and useful. The foreign notes are more especially valuable. Mr. F. Ellis continues his "Notes on Archaeology in Provincial Museums." Things are better than they were, but our smaller cities and towns are in too many cases far behind the Continental cities with which they may be fitly compared. Till recently it was but too common to find stuffed birds, flint implements, relics of the Civil War, and weapons from savage lands all jumbled together in one uncatalogued mass. The confusion has been somewhat lessened now, but there is still very much to be done ere many of our local museums reach a fair state of excellence. Mr. Ellis's present paper is devoted to the Bristol Museum. Its zoological and geological collections are, we believe, very fine, but there is a great lack of objects of historic interest. Mr. Ellis has divided them into classes. We gather that the remains from caves are well worthy of study. Mr. John Wright

continues his "Out in the Forty-five," which will, when finished, form an interesting narrative that must be considered by the historians of the future. Mr. R. C. Hope has further information to give about Holy Wells; this time his notes are limited to Yorkshire. Mr. Peacock has contributed a paper on "The Lights of a Mediaeval Church." Among other things, he prints the will of a Lincolnshire worthy of the earlier part of the sixteenth century, in which upwards of twenty lights are mentioned as burning at the same period in one parish church. From Mr. George Neilson comes a learned paper on the Antonine Wall, which, though short, must have been a work of great labour.

THE AMERICAN COPYRIGHT ACT.

MR. GEORGE HAVEN PUTNAM—to whom, as secretary of the American Publishers' Copyright League, English authors owe as much as to any other single man for the passing of the recent Act through Congress—has opportunely issued, as one of his firm's useful series of "Questions of the Day," a volume entitled *The Question of Copyright* (New York and London: G. P. Putnam's Sons), which, though written for the American public, may be commended to all those in this country—whether publishers, printers, or authors—who are naturally anxious about the results of the American statute that will come into effect on July 1.

The book contains: first, a brief sketch of the history of the struggle for international copyright in the United States, from the time when Henry Clay presented to Congress a petition of British authors, in 1837, down to the dramatic scene, in the early morning of March 4th, 1891, when, after an all-night sitting of the Senate, and within an hour of the close of the session of Congress, the last dilatory motion was rejected by 29 votes to 21; secondly, the text of the Act in question, which is entitled, "An Act to amend Title Sixty, Chapter Three, of the Revised Statutes of the United States," together with an analysis of its provisions; thirdly, a summary of the copyright laws at present in force in the chief countries of the world; fourthly, a series of ably written papers, by several hands, on the recognition of the right of literary property; fifthly, the text of the Berne Convention of 1887, and the English Order in Council thereupon; and, finally, the report of the English Copyright Commission of 1878, together with Sir James Stephen's digest of the existing law, and a summary of the still-born bill recently introduced into the House of Lords by Lord Monkswell on behalf of the Society of Authors.

Section 13 of the American statute, which extends the benefit of copyright to foreign authors, runs as follows:—

"That this act shall only apply to a citizen or subject of a foreign state or nation when such foreign state or nation permits to the citizens of the United States of America the benefit of copyright on substantially the same basis as its own citizens; or when such foreign state or nation is a party to an international agreement which provides for reciprocity in the granting of copyright, by the terms of which agreement the United States of America may, at its pleasure, become a party to such an agreement. The existence of either of the conditions aforesaid shall be determined by the President of the United States by proclamation made from time to time as the purposes of this Act may require."

Concerning the language and grammar of this section we say nothing, remembering the achievements of our own parliamentary draftsmen. The purport seems to be that the benefits of the Act can accrue to foreign authors only after the President has satisfied himself that the state to which such authors belong already extends reciprocity to American authors, either

by domestic legislation or by international agreement.

Now, the important matter for us is—how far can England fulfil either of these conditions? As to the first, it is, we think, quite arguable that England already “permits to citizens of the United States of America the benefit of copyright on substantially the same basis as [to] its own citizens.” Provided that he be temporarily resident anywhere within Her Majesty’s dominions, an American author stands on precisely the same footing as an English author; and it may fairly be urged that the compulsion to cross the Canadian frontier, which the American is supposed to labour under, implies no greater hardship than the necessity to have his book twice printed, which this very Act imposes on the Englishman. We say “supposed to labour under,” because the legal point is far from clear; and the practice of English publishers has always been to respect the copyright of an American author, wherever resident, if only his book be first published in this country.

Nevertheless, it must be granted that the President of the United States can hardly be expected to proclaim the existence of a right which our own highest authority (Sir James Stephen) describes as “probable, but not certain.” There is no time for a declaratory Act, even if there were not manifest objections to such a procedure. Nor do we think that an Order in Council under our own International Copyright Acts is any better suited to meet the exigencies of the case. On the one hand, it would give the Americans too much; for such an Order in Council can only operate as a recognition of copyright already existing in a foreign country, and so American authors would no longer be required to publish (much less to print) in England. On the other hand, it would cause much complication, by introducing a new form of copyright, in addition to that under the Berne Convention and that which American authors can already claim under our domestic legislation.

So far, we have dealt only with the first condition of reciprocity specified in the American Act; and our conclusion is that nothing can be done except to trust to the generosity of the President. It remains to consider whether advantage can be taken of the second condition; and there, we venture to affirm, our ground is much stronger.

This second condition manifestly has reference to the Berne Convention, to which England is, of course, a party. The United States, indeed, are not a party to the Berne Convention; nor is it easy to see how they could become so, so long as they maintain the requirement of contemporaneous domestic manufacture. But this condition does not require that they should be a party to the agreement, but only that there should be nothing in the terms of the agreement to prevent their becoming a party thereto at their pleasure. Now, the eighteenth article of the Berne Convention expressly provides that:—

“Countries which have not become parties to the present Convention, and which grant by their domestic law the protection of rights secured by this Convention, shall be admitted to accede thereto on request to that effect.”

We submit, therefore, with some confidence, that our case, if weak under the first condition, is irrefragable under the second; and that we may reasonably expect to read, before July 1, a proclamation by the President of the United States, determining that England

“is a party to an international agreement which provides for reciprocity in the granting of copyright, by the terms of which agreement the United States of America may, at its pleasure, become a party to such agreement.”

CORRESPONDENCE.

A NEW FRAGMENT OF THE BODLEIAN GENESIS.
Cambridge: June 1, 1891.

While engaged last week in examining the fragments of Greek MSS. purchased in 1876 for the University Library from Tischendorf's representatives, I came upon a leaf of vellum bearing two columns of late sloping uncials on one side, and two of cursive writing on the other. The uncial and cursive hands together yielded a

continuous text of Gen. xlii. 18—xliii. 13. I was at once struck by the resemblance of the uncial hand to that of Codex E (Lagarde); and when the next day I returned in the company of the Rev. H. A. Redpath, of Oxford, Mr. Redpath pointed out that the fragment was in fact a missing leaf of that MS. The last page of the Bodleian Genesis breaks off in the middle of αὐτοῖς, its second column ending with AT; the Cambridge fragment proceeds ΤΟΙCΤΗΗΜΕΡΑΤΗΤΡΗΤΗ, κ.τ.λ. The uncial characters of the fragment answer precisely to those of Tischendorf's facsimile (*Mon. Sac. inedit.* n. c. ii.), and the width of the column corresponds. The Cambridge leaf measures 12½ x 10½ inches; and these, as the librarian of the Bodleian is kind enough to inform me, are the measurements of the Oxford book. Each column, both of uncial and of cursive, contains forty lines; the uncial hand has written from sixteen to twenty-one letters in a line, usually eighteen or nineteen. These particulars, again, agree generally with Tischendorf's description.

It is clear from the *Monumenta* that the Cambridge leaf had been detached from the Codex before it was sold to the Bodleian. I will not speculate on the reasons which led Tischendorf either to ignore or to overlook its connexion with the Oxford MS. Its recovery reveals the curious fact that the scribe of E left his task unfinished. Did the second scribe complete it? and, if so, where are the remaining five or six leaves? From the list of variants below, it will be seen that both E and e (the cursive text) yield interesting variants; one or two of the readings of e seem to be unique. I may just add that the recovery of E in Gen. xlii. 18-30 is peculiarly welcome. F is wanting from 22 to 28, and D from 23 to the same verse; so that for the intermediate verses we have hitherto had no important uncial witness but A.

The following are the results yielded by a collation of the fragment with the text of A, as edited in the Cambridge manual Septuagint (vol. i., 1887).

Gen. xlii. 18. ποιησατε ποιησεται E | (ζησοθε) σωζεσθε E | τον θεον γαρ τον γαρ θεον E. 19. ει | η | απαγαγετε | αγορασατε E | αγορασων E* (=μον E). 20. καταγαγετε | αγαγετε E. 21. ειπεν | ειπαν E | αμαρτιας E | υπερειδωμεν E | η θλιψις | η πασα E. 22. Ρουβειν E | αδικησται E | εκζητει E. 23. ερμηνευ E. 27. δεσμων E* (=μον E). 29. συμβεβηκота συμβατα E. 30. In την γην desinit E. 31. υιοι | η | 32. ημων 1^o | ποτε ο | ο | 33. γρασομαι | αδελφον | εαν τον αδ. υμων αν εφερεται και | ενα | ε | υμων | ο | 34. om αλλ οτι ειρηνηκοι εστε E | εμπορευσθαι E. 35. ιδου | ιδοντες E. 36. ληψισθε | λειψσθε E | εγενοντο E. 37. Ρουβειν E. 38. αν | εαν | πορευσθε E | κατοξεται E | το γηνas μου E. xliii. 1. om πολιν E | om μικρα E. 2. ανθρωπος | ο κυριος της γης E | οφασθαι E. 2-4. om κατεβη προς με . . . ο νεωτερος E. 5. μοι | με | τι | οτι E. 6. αυτου | ταυτην E | om η ηδειμεν . . . υμων E. 7. πορευσασθε E. 8. ηρικτας E | προς 2^o | εις E. 9. ει | μη | ει δε μη E | δεis E. 10. αγγελιος E | ριτηνης E | τερεβινθον E | καρια E. 11. om αποστρεψατε με υμων E | αγνωστω E. 13. om και 1^o E | in τον ενα και desinit E.

H. B. SWETE.

HARLEIAN MS. 7653.

Bardwell Rectory, Bury St. Edmunds: June 1, 1891.

I can neither explain the “patriarchas septem,” nor invent an additional line to rhyme with “pessimam;” but I should like to add a few words about St. Ciriacus.

The prominence given to that Saint in being singled out along with St. Patrick for invocation in the Latin hymn, as transcribed by Mr. Whitley Stokes from the above MS., is an additional proof of the pre-eminence of the

boy-martyr in the hagiology of the Celtic Church. He was put to death, together with his mother, Julitta, in the Diocletian persecution, A.D. 303. Celtic churches were frequently dedicated to such martyrs, when they were not dedicated to the living founders of the churches themselves. Gildas mentions how, when the Diocletian persecution had passed away, British churches which had been destroyed were rebuilt and dedicated to the numerous martyrs whom that persecution had produced (*Mon. Hist. Brit.*, p. 9). St. Ciricius (Cyric) stands out conspicuously among these martyrs. The chapel at Tintagel in Cornwall, the churches at Cowley Bridge in Devon and at Capel Curig in Wales, are examples which may be adduced. Others are given in the *Journal of the Archaeological Association*, vol. xxiii., p. 421. He is commemorated in the Kalendar of the Drummond (Irish) Missal, as well as in the Kalendar of Oengus, as pointed out by Mr. Whitley Stokes.

Not the most curious but the most important fact connected with this Harleian MS. is this, that it contains, on fol. 6 ab, what is, perhaps, the earliest extant MS. text of the *Te Deum*. That text runs as follows:

1. Te deum laudamus.
2. Te eternum patrem omnis terra veneratur.
3. Tibi omnes angeli, tibi celi et terra et universę potestates,
4. Tibi cherubin et seraphim in cessabili uoce proclamant,
5. Sanctus, sanctus, sanctus dominus deus sabaoth.
6. Pleni sunt celi et terra gloria tua; osanna in ex celsis.
7. Te gloriosus apostolorum chorus,
8. Te prophetarum laudabilis numerus,
9. Te martyrum candidatus exercitus,
10. Te per orbem terrarum sancta confitetur clesia,
11. Patrem in mense maiestatis,
12. Venerandum tuum uerum unigenitum filium,
13. Sanctum quoque paracletum spiritum.
14. Tu rex glorie christe.
15. Tu patri sempiternus es filius.
16. Tu ad liberandum mundum suscepisti hominem, non ab ornati uirginis utero.
17. Tu deuicta morte aculeo aperuisti regna celorum.
18. Tu ad dexteram sedis in gloria patris,
19. Ecce uenturus.
20. Te ergo, quesumus, nobis tuis famulis subueni, quos pretiosa sanguine redemisti
21. Eternam fac cum sanctis in gloriam intrare.

I am responsible for the capital letters, the punctuation, and the division into verses in the above transcript. There are several strange readings in this text, those in verses 6 and 21 being not only unique but very remarkable.

It is also to be noticed that this copy of the hymn ends with the 21st verse, indicating probably the conclusion of the original composition, the remaining eight verses, mainly culled from the Psalms of David, having been tacked on afterwards.

Those who are interested in this subject should consult an excellent article on the "*Te Deum*" in the *Church Quarterly* for April, 1884, No. xxxv.; but the existence of this early Irish version was unknown to the writer. It is hoped shortly to edit the whole MS. (not a long one) for the Henry Bradshaw Society.

F. E. WARREN.

THE THEOSOPHICAL SOCIETY, 1783-1788.

169, Grove-lane, S.E.: June 2, 1891.

From the end of the year 1783, to the beginning of the year 1788 there existed a society entitled "*The Theosophical Society*, instituted for the purpose of promoting the Heavenly Doctrines of the New Jerusalem, by translating, printing, and publishing the Theological Writings of the Honourable Emanuel Sweden-

borg." Its meetings were held chiefly at chambers in New Court, Middle Temple, London. In 1787 some of its members initiated action, which resulted in the establishment of an organisation still existing as "*The New Jerusalem Church*." Among these members was Robert Hindmarsh, in whose volume, *Rise and Progress of the New Jerusalem Church*, edited by the Rev. E. Madeley, London, 1861 (pp. 14 to 67), the career of the Theosophical Society is sketched. From this authority I learn (pp. 23, 66) that "the books belonging to the Society were ultimately deposited in the house of Mr. Joshua Jones Prichard, a learned Proctor, of Paul Baker's [? Paul Bakehouse] Court, Doctors' Commons"; also that "among these were the eight quarto volumes of the '*Arcana Coelestia*,' in Latin, and some other books, all left as a legacy to the Society by the late Rev. Thomas Hartley, translator of the first editions of the treatise '*On Heaven and Hell*,' and the treatise '*On Influx*.'" I desire to discover where these "books" now are, and I shall welcome any assistance to my quest proffered by readers of the ACADEMY.

CHARLES HIGHAM.

APPOINTMENTS FOR NEXT WEEK.

- SUNDAY, June 7, 7.30 p.m. Ethical: "Moral Order and Individual Destiny," by Mr. W. J. Japp.
- MONDAY, June 8, 8 p.m. Aristotelian: "The Philosophy of Rosmini," by Mr. Arthur Bontwood.
- 8.15 p.m. Library Association: "Literary Associations of Deptford," by Mr. G. R. Humphrey.
- TUESDAY, June 9, 8 p.m. Royal Institution: "Four Periods of Stage History, IV., Kemble," by Mr. W. Archer.
- 8 p.m. Colonial Institute: "Metabeleland and Mashonaland," with Lime-light Illustrations, by the Rev. Frank H. Surridge.
- 8.30 p.m. Anthropological: "Curious Words and Customs connected with Royalty and Chieftainship among the Hova and other Malagasy Tribes" and "Decorative Carving on Wood, especially in the Burial Memorials of the Betsileo Malagasy," with illustrative Rubbings, by the Rev. J. Sibree.
- WEDNESDAY, June 10, 8 p.m. Geological: "Some Recent Excavations in the Wellington College District," by the Rev. A. Irving; and "Some Post-Tertiary Deposits on the South Coast of England," by Mr. Alfred Bell.
- 8.30 p.m. Society for Protection of Ancient Buildings: Annual Meeting; a Paper by Mr. W. B. Richmond.
- THURSDAY, June 11, 3 p.m. Royal Institution: "The Orchestra considered in connexion with the Development of the Overture," IV., by Dr. A. C. Mackenzie.
- 5 p.m. Zoological: "The Animals Living in the Society's Gardens," III., by Mr. F. E. Beldard.
- 8 p.m. Mathematical: "An Application of the Method of Images to the Conduction of Heat," by Mr. O. H. Bryan; "Systems of Spherical Harmonics," by Mr. E. W. Hobson; "The Aberration of Optical Pencils," by Dr. Larmor; "Certain Properties of Symmetric, Skew Symmetric, and Orthogonal Matrices," by Dr. H. Faber; "The Motion of a Liquid Ellipsoid under its own Attraction," by Prof. M. J. H. Hill; "A Property of the Circumference," by Mr. R. Tucker.
- 8.30 p.m. Antiquaries.
- FRIDAY, June 12, 5 p.m. Physical: "Alternate Current and Potential Difference Analogies in the Methods of Measuring Power," by Prof. W. E. Ayrton and Dr. W. E. Sumner; "A Clock for Pointing out the Direction of the Earth's Orbital Motion in the Ether," and "Some Experiments with Leyden Jars," by Prof. O. Lodge; "The Construction of Non-Inductive Resistances," by Prof. W. E. Ayrton and Mr. Mathew.
- 8 p.m. New Shakers: "The Stage Directions of the Quartos," by Mr. W. Poel.
- 9 p.m. Royal Institution: "The Rate of Explosion in Cases," by Prof. Harold Dixon.
- SATURDAY, June 13, 3 p.m. Royal Institution: "The Scientific Study of Decorative Colour," III., by Prof. A. H. Church.

SCIENCE.

TWO BOOKS ON TEUTONIC PHILOLOGY.

THE second series of Prof. Skeat's *Principles of English Etymology* (Oxford: Clarendon Press) is even more interesting than the first, which was noticed in the ACADEMY of December 24, 1887. No one else could have done the work so well, because no one else has so conscientiously analysed all the words treated of. Especially valuable is the careful distinction between the different periods at which we have borrowed from French—the "Old French" period before 1350, the "Middle French" up to 1660, and the "Late French" from Dryden

downward; and especially practical the account of the pronunciation of Italian (pp. 302 sq.), Spanish (pp. 327 sq.), and Portuguese (pp. 343 sq.), an account which for intelligibility it would be difficult to parallel elsewhere. We are glad to find (p. 271) that Prof. Skeat has now given up the antiquated view that the alphabet of the Ursprache had but three short vowels, and that he regrets to have followed that system in his Dictionary. It is a pity, however, that he still thinks (p. 383) that we can "know precisely what is meant by a given suffix, such as the Aryan *-mo*"; and that he says "of course [!] derived words were at first due to mere composition, i.e., to combinations of words already existing": which is the Agglutination theory in its baldest form. But the weakest part of the book is the attack on the ordinary English pronunciation of Latin (p. 134) and Greek (p. 360).

"Is it moral," the professor asks, "to insist that school boys shall continue to be trained and taught to pronounce Latin with the modern English sounds? And is it consistent with even common fairness to stigmatise the sounding of *ā* as (*aa*) by the stupid appellation of 'the new pronunciation'?"

Such questions are really absurd. The "new" pronunciation is so called because it is new, because our fathers and grandfathers were quite content to pronounce *fāma* as "*fehma*"; and if "morality" comes in at all, the ordinary pronunciation, which never pretended to be right, is at any rate more honest than the new, which professes to be perfect, and yet in a word like *requirō* puts the chief stress on the second syllable, though the vocalism shows that the Romans put it on the first. It is important for the phonetician, and interesting to the scholar, to know (if we ever can know: Prof. Skeat is a very sanguine man) how the Romans pronounced their words; but it does not follow that there is any use in attempting to imitate them. And this is just the point which Prof. Skeat overlooks. The boy who says "*fāma*" will probably have the better conceit of himself, which is doubtless a great advantage; but he need not be a better Latin scholar than the boy who says "*fehma*." Prof. Skeat's remarks on the pronunciation of Greek, if they were taken seriously, would be positively mischievous; he wishes us to put the "principal stress" on the oxytone vowel, and so make *ἐὺρωπος* a dactyl, as the modern Greeks do. But he must surely know that even the modern Greeks, though by giving up the proper stress-accent they have corrupted their language past redemption, in reciting Homer put the stress just where we do, "*anthrōpos*" and "*edōntes*." The professor is very angry with his teachers because they never gave him "the slightest hint as to what the accents meant," and he now "suspects" that they did not know themselves (p. 14); so it is well they did not pretend to know. He can hardly be unaware that the classical world has long disputed what the Greek accents do mean, and only in modern times decided against the modern Greeks themselves, that they mean pitch and not stress. In English, as in every language, there is a pitch-accent as well as a stress-accent; but in English the pitch-accent is always given unconsciously, and to attempt to fix it on any particular syllable is almost impossible for us. We may teach our pupils what the Greek accents probably mean, but if we make an English boy give the pitch-accent he is pretty certain to neglect the far more important stress-accent. The professor must have forgotten his own ideas when he objects (p. 351) to the English pronunciation of *antigropelos* and "*euphony*," because here we do not put the stress on the long vowel of *ἄγλος* and *εὐφωμία*. It is to be regretted that Prof. Skeat has lent himself (pp. 184, 268) to the pedantry which forbids the use of *j* in Latin words, while

admitting the use of *u*. The classical Latin alphabet had no more a symbol *U* than a symbol *J*; and if he wishes to be consistent, he must write *ivo*, *irs*, *sves*, *sus*. But *juvo*, *jus*, *suns*, *sus* are more intelligible. Prof. Skeat should mark long vowels as long, at least in Latin; in many cases it is only by knowing the Latin quantities that we can understand the Romance forms. In "L. cau-ere" (p. 279) it is difficult to recognise *carere*. He should also avoid too much repetition; he gives the etymology of "coy," "dodo," "dolmen," "fives," "gist," "yam," twice over in each case. Some minor points may be noticed in order. P. 125 (and 202, 227) the *l* of "falcon" is always pronounced; p. 190, note 2, *palpebra* is in Caper, Keil's *Grammatici Latini*, 7, 110; p. 235 *repansare* is not "coined from *παῖσις*," at least directly, but from *pausa*; p. 265, sec. 189, there seem some misprints in the quotation; p. 272 the final syllable of "fathom" and (before a vowel) "butter" is not a sonant *m* or *r*, English has only sonant final *n*'s and *l*'s, "even," "able"; p. 275 (and 276) *moned* is not "allied to *mens*," as *socius* to *sequi*, in *mens* the *en* is a sonant; p. 279 the connexion of *tonā* and *στῆνω* is very doubtful; p. 310 Italian *brusco* is from Pliny's *bræscum*, not from *ruscum*, and *graspo* owes its *y* to *grappola*; p. 335 *παράκλησις* does not happen to exist, though *παράκλησις* does; p. 384 Brugmann nowhere says "*margō* short for '*margōn*,'" but makes both forms, the actual and the possible, of equal antiquity (*Grundriss* vol. 3, p. 526); p. 391 *δαγος* is not "contracted" to *δαλας*, but the *y* assimilated to the *-α*; p. 424 "Mohametan" seems to stand for Mahometan; p. 466 there is no "vocalic *l*" in *στολή*, nor does *ἐστλῆν* = *ἐστλῆν*, but *ἐστλῆν* with a sonant *l*. But all these are mere flaws in a very excellent book.

An *Etymological Dictionary of the German Language*. By Friedrich Kluge. Translated from the fourth German edition by John Francis Davis. (Bell.) Prof. Kluge's German Etymological Dictionary is a valuable work, but we really see no good reason why it should be translated into English. The translation, we regret to say, is so bad as to be a positive injury to the author's reputation. It is quite possible that the translator (who is a Doctor of Literature of the London University) may possess a sound knowledge of ordinary literary German; but he clearly knows very little of the special idiom of German philological works, and he has not sufficient familiarity with the subject to save him from frequently writing down what is absolute nonsense. One great difficulty which besets translators of German books on philology is that many of the technical terms used have no recognised English equivalents. In such cases Dr. Davis's renderings are nearly always peculiarly infelicitous. *Neubildung* becomes "recent formation," and *lautliche Uebertragung* "phonetic rendering." It is just conceivable that Dr. Davis has not misunderstood these German words, but at all events his English readers will not attach anything like the right meanings to the expressions by which he has represented them. *Undeutung*, which means "perversion" or "interpretative corruption" (i.e., a change in the form of a word due to a false notion of its etymology) Dr. Davis usually renders by "corruption," which in most cases deprives Kluge's remarks of all their point; sometimes, however, he substitutes "modification in sense," or "change in meaning," which is altogether wrong. Of the innumerable blunders that we have noted only a few specimens need be mentioned. Under *Achse* the translation says that "with the root *ag*, to drive, some have connected Lat. *ago*, Gr. *ἀγῶ*." Nobody ever doubted that the Lat. and Gr. words belong to the root *ag*; what Kluge says is that some have connected the Indo-Germanic **akso-* with this root. *Armut* is not "a derivative of the

Goth. adj. **armōþs*"; Kluge's statement is that it is a derivative of the adj. *arm*, and that its Gothic form would be **armōþs*. The O.H.G. *arzinōn* was not "formed into *arzdāt*," as the translator says; the statement is a misrendering of *zu arzdāt gebildet*, which means just the contrary. The translator interprets *beschuppen* as "to scale, deceive"; he has not perceived that *beschuppen* "to scale," and *beschuppen* "to deceive," are two unconnected words; Kluge notices only the latter. Under *Eimer* the English reader is mystified by being told that O.H.G. *amprī* and A.S. *embren* are "formed from O.H.G. *sumbirīn*." Under *Lenz* the translator says "this West Teut. word was probably the term for spring, and Tacitus in the *Germania* seems to have a dim idea that it was used by the Teutons." The author's statement is that the word which survives in German as *Lenz* was probably that which Tacitus had in his mind when he said that the Germans had a word for spring. Under *Belt* Kluge states that the word in its geographical sense means "girdle of the land" (*Landgürtel*); the translator makes this into "zone of land," though he has previously glossed *Belt* as "straits." The abbreviations are often wrongly expanded; under *hchr*, for instance, "N." standing for "nominative" is rendered by "neu." (i.e. neuter). The colon (:), which Kluge, like other German philologists, uses to denote a relation of some sort between two forms, is not adopted for this purpose in the translation. To this there could be no objection, if the periphrastic expansions employed were correct; but this is frequently not the case—for instance, under *laufen* Kluge's "*hlūp* : *hlōp*" is rendered "*hlūp*, by gradation *hlōp*," though the relation between the forms is not that of "gradation" or ablaut at all. It is a great pity that Dr. Davis should have spent so much time and labour on a task for which he was so imperfectly qualified.

SOME GERMAN BOOKS ON ANCIENT GREEK.

Hat Aristoteles die Schrift vom Staate der Athener geschrieben? Ihr Ursprung und Ihr Wert für die ältere Athenische Geschichte. Von F. Cauer. (Stuttgart: Göschel.) Herr Cauer is quite sure that the new treatise on the *Ἀθηναίων πολιτεία* is that which was cited in antiquity as Aristotle's, but he is equally sure that it is not by that philosopher. For this opinion—an opinion which Mr. Newman and other English critics have expressed more guardedly—he gives many reasons. To begin with, it is understood that Aristotle collected "constitutions" only as a foundation of facts for his political theories, but the treatise before us cannot have had so limited an object. It is clearly meant for a wide public. It is very carefully written, Isokratian in style, and more polished and regular than the admitted writings of Aristotle. (It is, perhaps, a little premature to say this with a text in such a state.) Again, it contradicts the *Politics*, not merely *Pol.* 2, 12, which chapter has been doubted, although Herr Cauer seems to believe in its genuineness, but other parts too; and there is a distinct difference of political view expressed. There are, of course, many good things in the treatise, Herr Cauer has drawn out an interesting list of additions which it makes to our knowledge, and points to examples in it of shrewdness and of sound criticism. But he finds it sadly unequal. The second part is no doubt more valuable than the first, but on the whole the treatise is not intelligent enough to be from Aristotle's pen. The writer has used poor materials as well as good, and has not always judged them soundly. He omits much that we should like to know, and, indeed, much that, on his own plan, he ought to tell. He should, for instance, have settled for us the old

difficulty, when and how did the Athenians return after the fall of the Four Hundred to their full democracy? The treatise omits certain facts about Athens (some of great value) which were known to the author of the *Politics*. It imputes too much to personal agencies, and makes far less of general causes or the working of general laws than the *Politics* does. (In fact, the author writes as if he knew no other constitutional history than that of Athens.) There is too much anecdote. He contradicts himself also, as when he mentions six thousand paid jurymen in the time of Aristides (c. 24), for in c. 27 he tells us that Perikles introduced the payment of jurymen. Tenants in arrears (c. 2), and debtors (c. 12) whom Plutarch so carefully distinguished, this writer confuses. He must be downright wrong about retaining Themistokles in Athens so late as 462-1, for inferences from other and well-established dates make that impossible, and about Aristides bringing the country people into Athens, for that contradicts Thucydides 2. 14. (There are many other points on which readers must choose between their Thucydides and their "Aristotle.") Yet after all, the writer of the treatise must have been under Aristotle's influence. Some of his statements and some of his language show this. Moreover, parts of the work are much above the rest. We had better (Herr Cauer thinks, taking a hint from Usener) suppose that this and other "constitutions" were written in the Peripatetic school by pupils whom Aristotle selected, to whom he lent books, and to whom he gave hints. But the pupils were not, or at least this pupil was not, up to the work. And so we are left to wonder why Aristotle entrusted so much to a pupil who was not quite fit for the task, or to one whose political views did not perfectly agree with his own, and to feel that a work composed in this way has not the authority of a treatise by Aristotle. We have not had space to take all Herr Cauer's points, but we hope we have done justice to the main positions of a clever and suggestive little essay.

Studien zur griechischen Mythologie. Von G. Goerres. Zweite Folge. (Berlin, Calvary; London: Nutt.) The present volume adds three papers to Herr Goerres' previous series. It contains: (1) "Antikritik und Weiteres über den Odysseusmythos," chiefly controversial; (2) "Danaiiden und Gorgonen," a minute study of the subject, rambling, however, from Danaos to Cain and Abel; (3) "System der griechischen Mythologie." This is the most ambitious, and at the same time the most sketchy, of Herr Goerres' essays. It is intended, if we apprehend him rightly, to protect his "Näherrecht," to patent under his name certain ideas and suggestions which he may one day fully work out, and also to guard by its brevity against such a pecuniary loss as W. Mannhardt's lengthier *Wald- und Feldkulte* is understood to have caused. A part at least of his conclusions may be translated, as follows, from his own summary:—

"The preceding investigations have made it probable that the bewildering swarm of Greek deities may be reduced to a few heads. To reduce likewise the myths about them to their simple original form, we need only remember that the Greek pantheon was developed from a union of many different local cults; that this union was brought about by theocratic, political, and historical influences, and completed by the activity of poets and mythographers; that the myths and names of gods belong to different times as well as to different places; and that very different names have been given within the same cult to different manifestations of the same deity, while the names have also often been bodied out into independent mythical persons. But the origin of Greek myths and cults is not to be looked for on Greek soil, but in 'Maeonia'—i.e., Mysia and Troas, Phrygia

and Caria. . . . Even beyond this, beyond Taurus and Zagrus, may Greek myths with cults answering to them be traced, as far as Babylon and Assyria, till they disappear in the districts of Pontus and South Caucasus. No sharp distinction is possible between "Mæonian" and "Semitic" myths and cults; they are so interwoven and show so much resemblance that a close kinship of the races too must be assumed. The Semitic, and no less the Egyptian, cults and myths point, like the Mæonian, beyond Babylon to the lands south of Caucasus and Caspian, and these lands must be regarded as the source of all Indo-Germanic myths and cults. These arose, in outline, in ancient agricultural states under priestly government; and accordingly the myths and the religion of Indo-Germans, Semites, and Egyptians are at bottom all agricultural."

Dunkle Wörter. Von J. M. Stowasser. (Wien: Tempsky.) This little pamphlet of thirty-two pages contains notes on some eighty Latin words of which the derivations or forms are doubtful. The new etymologies suggested are in all cases ingenious, and in some cases probably right; certainly the Latin scholar and the philologist will alike do well not to ignore the little treatise. A few specimens will show the writer's strength and weakness. *Novicius*, which ought, if derived from *novus*, to have a short instead of a long *i*, is explained as "neu auf dem Hofe," i.e., "*novicius*," according to a legal definition *novicia mancipia sunt quae anno nondum servierint*. *Amoenus* is made out to be *ad-moenus*—that is, "suburban," and hence, in a general sense, "pleasant"—shades of Rosherville! *Parricidium* is connected with *parrus*, supposed to mean "open," so that the whole word would denote "open murder." *Violare* is separated from *vis* and joined on to *viola*, as "to stain," for which sense Herr Stowasser quotes Vergil's familiar *sanguine violaverit ostro si quis ebur*, and similarly *ferro violavimus agros*, "we have reddened the fields with blood." Other words are supplied with Greek origins. *Caeremonia*, for instance, becomes a hybrid, "die *χαίρε-Πflicht*"; *funditare* (*verba funditas* in Plautus, and the like) is referred to *σφενδαρή* through *funda* for **sfunda*, "a sling"; *triumphus* is explained from a Greek **τρίμφος* (*δμήφης*), and *fetialis*, from a Greek **φήτεια*, "embassy," a word presumed by the common noun *προφήτεια*. Some of these etymologies are obviously very hazardous; others, if not conclusive, seem very nearly so. That suggested for *violare* is peculiarly attractive, because Vergil so frequently uses words in their literal senses, *recens* with the meaning "wet," *lactus* with the meaning "fruitful," and so forth.

Die griechischen Dialekte. Von Otto Hoffmann. I. Der süd-achäische Dialekt. (Göttingen: Vandenhoeck u. Ruprecht.) Dr. Hoffmann is known to philologists as author of a somewhat inadequate treatise on the "Indo-Germanic Present," and as opponent of Dr. Meister in a controversy about the Greek dialects—which controversy, in certain of its features, much resembles other German controversies. The present work seems to be in some measure a continuation of this dispute. It is marked out in the preface as a distinct contrast to Dr. Meister's volume on the Arcadian and Cyprian dialects, and, though written before that volume was published, appears to have been issued because the author was dissatisfied with Dr. Meister's work. The present writer holds no brief for Dr. Meister, but it must be confessed that it is difficult to see the need of two separate treatises on the Accidence and Syntax of the Greek dialects. Dr. Meister is but human; there are one or two points in which the newer writer may possibly be nearer the truth. But the former work is certainly good, and criticisms on it would be most conveniently lodged in a pamphlet, or in anything except a wholly parallel treatise. The basis of Dr. Hoffmann's

views is partly shown by his title. His "South-Achæan" denotes only Arcadian and Cyprian; but he accepts the theory that *Αιολεῖς* and *Ἀχαιοί* are etymologically the same word, the latter being *Ἀχ-αίω-* and the former *Αἰω-*, and hence he proceeds to identify Aeolid and Achæan. Accordingly, the scheme of Greek dialects is somewhat altered; Ionic and Doric remain as they did, but Aeolic extends its sway over part of the Peloponnese and Cyprus. In order to avoid confusion with the Aeolic of the Asiatic coast, Dr. Hoffmann does not call this Aeolic, but Achæan, and his Achæan falls in Southern and Northern divisions. We cannot say that this theory seems to us proven. It is plausible; but, till it is proved or disproved, its place is—we submit—in a journal, not in an elaborate work.

THE AMERICAN ORIENTAL SOCIETY.

We quote the following from the New York Nation:

"Boston: May 16, 1891.

"The American Oriental Society held its spring meeting in Boston and Cambridge during the past two days. This is the last of the half-yearly meetings which have been held since the year 1848, the society having decided to hold one meeting a year of longer duration during the Easter week. The General Court of Massachusetts has just passed a bill authorizing the society 'to hold its meetings in any State or Territory of the United States and in the District of Columbia; provided, however, that the said society shall meet within this Commonwealth at least once in three years.' The society is thus enabled to accommodate itself to the rapid growth of the study of Oriental languages in all our great universities, and to meet in rotation at the different centres of Oriental learning. It was also resolved to abolish the classical section of the society, the American Philological Association doing all the work in this line of research.

"The following officers were elected for the ensuing year: President, the Rev. Dr. William Hayes Ward, of the Independent; Vice-Presidents, President Daniel C. Gilman, Johns Hopkins, Prof. J. Henry Thayer, Harvard, Prof. Isaac H. Hall, Metropolitan Museum of Art; Recording Secretary, Prof. David G. Lyon, Harvard; Corresponding Secretary, Prof. Charles R. Lanman, Harvard; Directors, Prof. Paul Haupt, Johns Hopkins; Prof. R. J. H. Gottheil, Columbia College; Prof. M. Bloomfield, Johns Hopkins; Prof. John Phelps Taylor, Andover Theological Seminary; Prof. Edward W. Hopkins, Bryn Mawr College; Prof. A. L. Frothingham, Princeton College; and Mr. Talcott Williams, of the Philadelphia Press.

"Prof. David G. Lyon, the curator, escorted the members through the new Semitic Museum of Harvard University, which has lately been established through the generosity of Mr. Jacob H. Schiff, of New York. The museum consists chiefly of casts of the principal Assyrian and Babylonian monuments in the British Museum and the Louvre. There are, however, a number of original Babylonian contract-tablets and seals, Arabic, Hebrew, and Syriac MSS., and some Arabic coins. The announcement was made, through Provost Pepper, that the important collection of Babylonian and Assyrian antiquities in the museum of the University of Pennsylvania would be open for the use of scholars from July 1, 1891.

"Nearly forty papers were presented, and it was gratifying to note that a number of them came from the younger members of the society, as it evidences the growing interest shown in these lines of study. Six papers were presented by men from the graduate department of Yale, four of them being students of Dr. Robert F. Harper. Mr. Lester Bradner (Yale) discussed 'The Order of the Sentence in the Assyrian Historical Inscriptions,' Mr. Carl J. Elofson (Yale) 'The Position of the Adjective in Assyrian,' and Mr. Charles F. Kent 'Annexion in Assyrian.' Mr. James H. Breasted (Yale), in a paper on 'The Order of Words in the Hebrew Portions of Daniel,' showed by the decay of syntax the probable late date of the book of

Daniel. By the comparison of the syntax in this book with that in three others, he arranges their position in time as follows: Ezekiel, Malachi, Ecclesiastes, and Daniel—a conclusion which is verified by other considerations. Prof. Nestle of Tübingen sent a note on verse 31 of Psalm lxviii. Dr. Robert F. Harper (Yale) discussed 'Some Syntactical Points in the Esar-haddon Inscriptions,' and Prof. William R. Harper (Yale), 'Some of the Imperfects in the Deutero-Isaiah.' Mr. George N. Newman (Yale), in a paper on 'Contraction in Arabic,' laid down the rule that 'all change occasioned by the presence of weak letters is brought about directly by the vowels; and the nature of the resulting change is subject directly to the nature of the vowels present.'

"Mr. James R. Jewett (Brown) presented a collection of 'Arabic Proverbs and Proverbial Phrases,' collected, translated, and annotated. Mr. George A. Reissner (Harvard), in a paper entitled 'Comparison of Assyrian, Hebrew, and Phœnician Proper Names,' showed how the same general forms are found in the proper names of these languages, and upon what general principles these names are built up. Prof. George A. Barton (Bryn Mawr) discussed Esar-haddon's account of the restoration of Ishtar's Temple at Erech. President Charles W. Benton presented the Arabic text and translation of the preface of the 'Book of the Meeting of the Two Seas,' by Nasif el Yaziji.

"Prof. Isaac H. Hall (Metropolitan Museum) gave a 'Tentative Biography of the Syriac Publications in the Neighbourhood of Oroomiah.' Prof. Hall also presented photographs of a bronze statuette recently acquired by the Metropolitan Museum of Art. It was found at Pictralgina, near Benevento. It represents Hercules after a Greco-Phœnician concept; he is in the attitude of attack, and has on the lion's skin, and carries the bow. It has been proved to date not five years from the year 330 B.C. by coins belonging to the Phœnician dynasty of Cition, and by Phœnician inscriptions in the Metropolitan and British Museums. Prof. R. J. H. Gottheil (Columbia) read a paper on 'An Unknown Syriac Grammarian,' and a note on the Alhambra vase in the possession of Mr. Charles A. Dana, which turns out to have been made within the last twenty-five years.

"Dr. Herbert C. Tolman (Yale) discussed 'The Syntax of the Old Persian Inscriptions'; Prof. A. V. W. Jackson (Columbia) spoke on the native place of Zoroaster. His origin is disputed, one tradition placing it in Media, the other in Bactria. The 'Bundahish' says that on the river Darya was the home of Zaradusht. Two passages in the 'Avesta' embody the same tradition. We have, probably, to think of the river Darya in Atropatene. He was probably cast out of his own country, so that his activity was in the East; hence the double tradition. Prof. W. D. Whitney sent a paper on 'The Perfect and Imperfect in the Brahmanas.' The two tenses seem to be mainly equivalent in signification; they are freely mingled, though the general preference for the imperfect is greatly marked; the increased use of the perfect is, at times, a sign of a later date. Prof. Edward W. Hopkins (Bryn Mawr) spoke of 'The Development of the Vedic Yama from an Earthly King of the Blessed to a Lord of Hell.' This process was the result of the Indra-cult. Indra became the chief god, and Yama was put down: then, all that was left for him was to be lord over the dead.

"Mr. Lyander Dickerman spoke of the tablet discovered by Mr. Wilbur near Phylæ, which alludes to the seven years of famine in Egypt. It seems to belong to the Ptolemaic era, and the material to be taken from the Septuagint. Dr. Samuel A. Binion described the Abbott collection of Egyptian antiquities now in the New York Historical Society's rooms, and Dr. F. Wendel the Egyptian antiquities in the Peabody Museum at Cambridge. Prof. Charles R. Lanman (Harvard) called attention to 'Jars with Distinctive Marks of Sex.' Such jars are mentioned in the Hindu burial service: Schliemann found them during his excavations; and they have turned up in China, Japan, and Ecuador. Some of the South American specimens were shown and explained by Prof. Putnam, the curator of the Peabody Museum.

"The society adjourned to meet at Easter, 1892.

"R. J. H. G."

OBITUARY.

PROF. P. M. DUNCAN, F.R.S.

By the death of this genial professor, who had long held the chair of geology in King's College, London, a well-known figure disappears from the scientific circles of the metropolis.

Enthusiastic as a student of natural science, Dr. Duncan many years ago forsook the practice of medicine, and devoted his energies to the pursuit of geology, palaeontology, and zoology. As a teacher he was eminently popular. Fluent and lucid in speech, gifted with a soft voice and a commanding presence, pleasing and familiar in his style, Dr. Duncan was a scientific lecturer of the rarest type. His favourite studies pertained to fossil corals, and in this department he made a distinctive mark. As a working palaeontologist he was judicious, sagacious, and painstaking. It is true he lacked the advantage of extended travel, which is a matter of the first importance to the philosophic naturalist; but, for all that, he possessed a breadth of view which lifted him above the level of the species-maker, and frequently led him, while studying his fossils, to discuss some of the great problems of ancient physical geography. His familiarity with the fossil corals of the British strata enabled him to supplement, for the Palaeontographical Society, the classical work of Milne-Edwards and Haime. To the *Palaeontologia Indica* he contributed a valuable monograph on the Fossil Corals and Alcyonaria of Sind; and, in conjunction with Mr. Percy Sladen, other works on Fossil Echinoids from India.

With Indian geology Prof. Duncan became closely connected by his position as lecturer in the Engineering College at Coopers' Hill; and it was with the view of assisting his students there that he prepared his *Abstract of the Geology of India*. After the death of Sir Charles Lyell, Prof. Duncan revised the useful manual well known as Lyell's *Student's Elements of Geology*. With the Geological Society of London Prof. Duncan's relations had been of a most intimate character. For seven years he acted as one of its honorary secretaries; in 1876 and 1877 he filled the presidential chair; and in 1881 he received the highest honour which the society can bestow—the award of the Wollaston medal. Of the Linnean Society he was also an honoured member, being, at the time of his death, one of its vice-presidents. It was this society that published, in 1884, his important work entitled *Revision of the Families and Genera of the Sclerodermie Zootharia*. As a popular writer on zoology he was widely known by his contributions to Cassell's *Natural History*, a work of which he was also editor.

For some time past Prof. Duncan's scientific and literary activity had been waning; and on last Friday week, May 29, he was released by the kindly touch of death from a painful and protracted illness. He was in his sixty-seventh year. On Monday morning his remains were laid to rest at Chiswick, in the presence of a small circle of naturalists, assembled to pay their final tribute of respect to a gifted fellow-worker and a valued and warm-hearted friend.

F. W. R.

SCIENCE NOTES.

DR. ARCHIBALD GEIKIE, director-general of the geological survey, was among those on whom the honour of knighthood was conferred, on the occasion of the Queen's birthday.

THE gold medal of the Linnean Society has this year been awarded to Dr. Edouard Bornet, of Paris, for his researches in botany. His earliest publications relate to the structure and life-history of Fungi and Lichens; but his name

is best known for the important researches, in which, with his friend M. Thuret, he has been for some years engaged, on the life histories of Algae, and for his valuable contributions on this subject in the *Etudes Phycologiques* and the *Notes Algologiques*, with their beautiful illustrations.

At the annual general meeting of the Institution of Civil Engineers, held on May 26, Mr. George Berkley was elected president, in succession to Sir John Coode. The total number of members of all classes (including students) is now 6,064. The receipts for the year were £24,274; the investments are valued at £50,000, beside freeholds that have cost £40,000, and trust-funds amounting to more than £20,000.

ON Saturday week, June 13, the Geologists' Association will make a joint excursion, with the Hampshire Field Club, to Selborne, walking from Alton, and visiting Gilbert White's house, The Wakes, by permission of General Parr. The directors of the excursion are Mr. P. L. Selater and Mr. W. Whitaker.

School Diet. By Clement Dukes, M.D. (Percival.) Dr. Dukes's writings upon school hygiene have added fresh lustre even to Rugby. In this modest treatise of less than 200 well-printed pages, he has not merely laid down the principles upon which school diet ought to be regulated—these may be found in any text-book—he has also minutely applied those principles to the daily needs of growing boys and girls at work and at play. Here at least, if nowhere else, bewildered housemasters will find systematic information upon the quantity and quality of food required for different meals, upon the proper times and best arrangements for meals, and upon many other matters of difficulty and importance for them to know. Determined to leave no excuse for improper, insufficient, or monotonous meals—for, as he somewhat sententiously observes, “monotony of diet generates monotony of character”—the author has actually drawn up separate menus for the breakfasts and dinners of a whole month. The work is an excellent one, full of common sense and of special knowledge, based upon a wide experience of the ignorances and necessities of boys and their caterers, and may be confidently recommended as a practical manual of diet for schools.

PHILOLOGY NOTES.

MESSRS. LUZAC & Co., of Great Russell-street, will publish in the course of the present month an English edition of Prof. Carl Capeller's *Sanskrit-Wörterbuch* (1888), which possesses the merit of being the cheapest and most concise dictionary of Sanskrit in existence. Based upon the larger and smaller Petersburg dictionaries, it is meant to furnish a vocabulary to Böhtlingk's *Chrestomathy*, to the seventy hymns of the Rigveda translated by Geldner and Kaegi, to the twelve hymns edited by Windisch, and to the parts of the Satapatha-brāhmaṇa edited by Weber, besides Nala and the dramas of Kālidāsa. It also professes to contain a complete list of roots and primitive words in Sanskrit; and it marks the accent in authenticated cases, the method followed being that first introduced by L. von Schroeder in his *Maitrāyaṇī Samhitā*—the acute being indicated by a vertical stroke above, and the circumflex by a curve below, the accented syllable.

It is probably the circumstance that Sir James Redhouse's complete Turkish-English Dictionary was printed in Constantinople, which has deprived the English world of an opportunity to know more about one of the greatest lexicographical triumphs of our time. The book was finished last year, after some fifteen years' incessant labour on the part

of the author, and is in itself equivalent to the work of a lifetime. The American Mission Press at Constantinople deserves much credit for the excellence of the typography, and the mode in which the pages have been made to combine clearness and legibility with the utmost copiousness of matter. There are 2224 pages printed in double columns, comprising about 70,000 separate articles; and yet the bulk of the book is not unmanageable, as it is bound in a single thickish imperial octavo volume. It may be regarded either as a Turkish, or as an Arabic or Persian Dictionary, all the usual and necessary words of the two subsidiary languages being comprised in the alphabet. The scholar who possesses this latest work of Sir James Redhouse will have no need of Meninski, Richardson, Bianchi, or Zenker; and the price of the book is as moderate as its learning is stupendous. It would be difficult to find a parallel to this extraordinary achievement of patient erudition, except in the monumental work of Littré. Mr. Quaritch is the London agent from whom the book may be procured.

PROF. HEINRICH AUGUST SCHOETENSACK, distinguished by his researches in both Teutonic and Romance languages, recently died at Stendal, in Germany, at the age of eighty. Among his earlier works may be mentioned *The Thracians; the Forefathers of the Goths*, which contains a brief collection of passages from classical authors in support of the Germanic kinship of the Thracians. His last works were: *Etymologische Untersuchungen auf dem Gebiete der französischen Sprache* (1883); and *Französisch Etymologisches Wörterbuch* (1890). In the latter a large number of words whose Germanic origin would not easily be suspected, are shown to be connected with the linguistic stock of the Goths.

MEETINGS OF SOCIETIES.

RUSKIN SOCIETY.—(Friday, May 22.)

THE REV. J. P. FAUNTROYE in the chair.—Mr. George Thomson, of Woodhouse Mills, Huddersfield, read a paper on “Industrial Partnership and its Ruskinism.” Mr. Thomson said that he had been engaged for many years in one of the most important of our home industries—the production of woollen and worsted cloths. This had become so complicated and degraded by the contest for cheapness and profit that it was impossible for any one to give more than a passing thought outside the production of things that would not only sell, but yield a profit. There were two false principles at work. The first was that business was becoming so terribly difficult to carry on without losing self-respect, that we must make all the profit we could. The second was a principle for which the people themselves were sadly to blame, because they said we must buy as cheaply as possible; the result of which was the various forms of adulteration and the grinding down of the wages of labour. For the last four or five years he had been engaged in the work of applying the principles of profit-sharing to the particular industry in which he was engaged. There were three true principles on which to work. The first was the principle of fraternity, by which the selfish interest in the individual was subordinated to the common good. The second and third principles were those of the making of honest goods and the equitable division of profits. In their own case the works were managed by a committee elected by the shareholders or members, many of these being workers in the mills. The work of the committee gave the members a more intelligent interest in business than that of mere wage-paid servants. The application of the second principle of only producing honest goods had been carried out in its strict entirety. With reference to the application of the third principle, that of the equitable division of the fruits of labour, there was a dividend upon the capital of 5 per cent., and no participation in the profits. This was a

first charge upon the profits of the concern. They devoted not less than 10 per cent. to a reserve fund until that fund should amount to 10 per cent. of the capital. Five-ninths of the remainder were distributed, according to their wages, among the persons who had been employed in the work not less than six months. The remaining four-ninths were applied as was thought most advantageous towards furthering the business. They had not yet got into that position when they could give much attention to the formation of a benevolent scheme; but at present, if any of their people were ill, they received a portion of their wages, though no particular period was fixed. A large portion of the business is conducted on strictly cash principles. The amount of goods sold since the commencement has been £106,450, upon which £26,292 in wages have been paid. The profits for last year were so far satisfactory that, after writing off a loss for 1889 and paying interest and dividend at the rate of 5 per cent. upon capital, a balance of £144 was left to be divided.—A discussion followed, in which Messrs. Southey, West, Viney, Smart, and the chairman took part.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, May 27.)

W. KNIGHTON, Esq., vice-president, in the chair.—The chairman opened the meeting by a feeling allusion to the loss the society had sustained in the sudden death of its late president, Sir Patrick Colquhoun, whom he described as a man of profound and accurate learning, of genial and sympathetic manners, and of a most extensive knowledge of human nature. The great legal work of Sir Patrick, his *Summary of Roman Civil Law*, his valuable contributions to the society's Transactions, and the honours conferred upon him by the King of Greece, the Sultan of Turkey, the King of Saxony, and our own Sovereign and universities, were also mentioned, but particularly Sir Patrick's devotion to the society, of which he had been fellow for nearly half a century.—Mr. Adams then read a paper on "The Origin of Alphabets." Mr. Adams maintains that Central Africa was the cradle of our race, and that thence the human family radiated, through Egypt, northward to Phœnicia and the shores of the Black Sea, eastward to Mesopotamia, India, and China, and westward to Greece and the shores of the Mediterranean. Egypt was then the only country possessing a rational system of literary symbols—the hieratic or priestly character—which, as Champollion had shown, was a cypher founded on natural and domestic objects, and these were the foundation of hieroglyphs. They were carried off by emigrants, wholly or partially, and became the origin of the various alphabets. Numerous examples were given by Mr. Adams to prove this, taken from classical Greek, Phœnician, Hebrew, Arabic, Babylonian, Chinese, Sanskrit, Basque, and Runic alphabets. The paper concluded with an attempt to trace back our system of numbers and musical notation to the hieroglyphs of ancient Egypt, from which Mr. Adams maintains they are derived.

FINE ART.

THE ROYAL ACADEMY.

III.

It is impossible to congratulate Mr. Hubert Herkomer on the series of portraits which, according to his wont, he exhibits this year. They are all marked by that muddiness, that want of frankness and of brilliancy of colour, to which the Anglo-Bavarian painter has of late too much accustomed us, and are distinguished, too, rather by a superficial affectation of breadth than by a really searching vigour of modelling. Unredeemed by any charm of colour or composition is the large full-length "Sir Sydney Waterlow, Bart."; while somewhat better are "The Dean of Christ Church, Oxford," the conception of which is characterised by a certain dignity, and "Colonel Kitchenier, R.E.," which latter is, however, spoilt by a palpably sham and conventional oriental background.

This year the New Gallery shows Mr. J. J. Shannon's ability as a suave and accomplished delineator of feminine charms to greater advantage than does the Royal Academy. He satisfies by the thoroughness of his technique and his easy accomplishment of the not very complex tasks which he sets himself; but he would exercise a higher fascination could he get rid of the leatheriness of texture which in his canvases almost invariably mars the flesh of his female sitters. The "Mrs. George Coats" here is a solid and satisfactory performance, presenting itself with something of the strength of impression which marks the work of the painter's master and prototype, M. Carolus-Duran.

Ruggedness, manly vigour, and an essentially English style are just now the main characteristics of that able and convinced portrait-painter, Mr. William Carter, whose execution, unfortunately, with all its breadth, has still in it an element of muddle and uncertainty. Very sympathetic is, nevertheless, his large full-length "The Earl of Winchelsea and Nottingham," and still more so "The Rev. Fredk. Pretymann, B.D.," in the absolute simplicity of which lurks an element of the truest pathos.

Little remains to be said to-day of the earnest and severe portraiture of Mr. Oulless, who maintains, on the whole, the high standard which he has created for himself, but with it his besetting mannerisms of dryness and too apparent labour of execution. In the three-quarter length showing Col. J. W. Malcolm, M.P., in the uniform of a Scotch volunteer regiment, a manifest effort has been made to assume a freer, franker style of execution, such as distinguished the late Frank Holl; but this effort has hardly had very successful results, seeing that the canvas is marked rather by coarseness and a blurred execution, than by real breadth. The "Mrs. G. W. Pope" proves once more that the portraiture of ladies, even of mature years, is not within Mr. Oulless's means, but "The Lord Edward Spencer Churchill" is a good specimen of his most successful manner.

A remarkable *début* in London is made by a young American artist of great promise, Mrs. Mariette Cotton, who has evidently acquired from her master, M. Carolus-Duran, many of the secrets of his powerful palette, and with them his felicity in the simple and direct presentation of a subject. In the half-length in oils, "F. T. Martin, Esq.," as in the pastel, "Mrs. Mahlon Sands," the youthful portrait-painter reveals exceptional technical accomplishments. Her standpoint is as yet very naturally ultra-French; and, after the fashion of many of her most accomplished fellow-countrymen, she too strongly tinges with this acquired colour the personality of her sitters. But if she can retain the technical mastery thus early achieved in the French atelier, while more fully developing her own artistic individuality, she will be able to accomplish great things.

Except Mr. Sargent's "La Carmencita," nothing at the Royal Academy has the quality of intense vitality in the same degree as Mr. E. J. Gregory's portrait, "Elvira, Daughter of Mrs. T. W. Todd," a work of rare power, but unfortunately marked by a coarseness of fibre and an aggressive rather than expressive realism, such as too often militate against the success of this gifted artist. The little "Portrait of a Gentleman," by M. Jan Van Beers, is a solid and comparatively unsensational presentment of a not very interesting individuality, showing searching draughtsmanship, a too enamel-like execution in the flesh, and a very superficial and commonplace view of humanity.

In the department of landscape, the elder, the more prosaic and obvious school, whose productions have taken so deep a root in the

affections of the average Briton, that they will long occupy an imposing position and command a market, would seem for the moment to have regained the upper hand, and to have crushed down the few more independent and poetic Nature-worshippers of the younger generation. Thus positions of honour are taken up by Mr. Frederick Goodall's, in its way imposing, scenic prospect, "The Isles of Loch Lomond"; by Mr. Peter Graham's "Morning Mists" and "Evening," which are not easily distinguishable from a hundred predecessors; by Mr. H. W. B. Davis's highly and capably wrought cattle-pieces, with their settings of river, moor, and mountain; by Mr. Vicat Cole's diploma work, "Autumn Morning"; by Mr. Leader's finely designed and carefully-wrought, but harsh, metallic, and toneless landscapes—the grandiose "Manchester Ship Canal: Works in Progress at Eastham," and the sunset scene "Solitude."

In contrast with these performances, in which many a well-established formula, many an accepted conventionality, is expressed with varying skill, but with that assurance which arises from constant repetition, stand out some few—too few—works by artists of less-assured position, but in closer contact with Nature, and thus more favoured confidants of her secrets.

Mr. Adrian Stokes's "Through the Morning Mists," showing in early morning a herd of cattle wandering through moist herbage, in a watery meadow adjoining the lofty outskirts of a wood, has passages of great beauty, and is altogether individual in its view of a not unfamiliar subject. Especially admirable are the groups of cattle half-enveloped in grey mist; but much less successful is the immediate foreground.

Another of our landscape painters who cannot approach Nature without emotion is Mr. Alfred East, whose "Reedy Mere and Sunlit Hills," notwithstanding a certain flimsiness of execution, has great tenderness and beauty, especially in the prospect of distant snow-capped hills dyed a ruddy gold by the setting sun.

Mr. David Murray is the ablest of those younger landscape painters who steer a middle course between the two schools we have attempted to differentiate. He shows a great felicity in the choice of subjects homely yet beautiful, and in their elaboration from an effective, yet not an unduly, scenic point of view. Paintiness is, alas! Mr. Murray's bane; we cannot escape from paint in his light summer skies, in his finely-drawn clumps of trees, in his mangolds, or his gorse. This most unfortunate of defects in a landscape painter seriously detracts from our enjoyment of such well-considered works as the painter's "Gorse" and "Mangolds," both of them happily and originally conceived and otherwise cleverly carried out.

"Matonby Marsh: an October Night," by Mr. T. Hope McLachlan, is distinguished by a happy and novel rendering of the mother-of-pearl or opal tints in moonlit clouds, of which masses are shown driving across a wind-blown evening sky. The execution is, however, in other respects, far from perfect, the dimly-seen earth being here far less well-rendered than the heavens, which are the real motive of the picture.

As an example of pathetic landscape—inspired, it may be, by the now extinct great French school of the last generation—we would point to Mr. Robert B. Nisbet's water-colour "A Yorkshire Moor"—an absolutely simple theme rendered with penetrating truth, in its essence rather than its detail.

For once that veteran and deservedly-popular painter, Mr. J. C. Hook, falls below his usual standard of excellence, showing signs of a decadence which we hope may not prove to be permanent. The best of this year's performances by the artist is a sea-coast subject of

the somewhat too familiar type, with sportsmen shooting wild fowl, called "Hit, but not Bagged." The Dutch scene, "Willing Help-mates: Fishing Station on the Maas," is much wanting in Mr. Hook's usual mastery of execution, especially by contrast with last year's admirable performance of the same type. In the artist's portrait of himself, painted by invitation for the famous Painters' Gallery at the Uffizi, it was not to be expected that any special vigour should be displayed by a hand not greatly accustomed to such a task. Mr. Hook, in his self-presentment, inclines less to the vigorous realism of Sir J. E. Millais, as displayed in a memorable portrait painted of him by the latter, than to the more idealistic and weaker manner which characterises Mr. Watts's later time.

Even Mr. Henry Moore has rarely done better than in his sunset at sea, called "The Setting Sun now gilds the Eastern Sky," showing under the red beams of the departing sun an expanse of agitated yet not angry waves, in which various conflicting currents are marked out with the rarest and most unobtrusive skill. Far less happy—as is usual with this painter—is the cloud-laden sky, finely drawn and modelled, but so heavily and opaquely rendered as to lack true atmospheric effect.

Various causes have combined to render the display of sculpture a less striking and important one than those of the last few years; and yet it is gratifying to observe that the improved standard of general excellence to be observed lately in the productions of the younger English school is on the whole maintained. Several of the most prominent contributions to the sculpture galleries are this time only reproductions in another material of works which have already been seen at Burlington House.

Sir Frederick Leighton's "Athlete Struggling with a Python" is an absolutely identical replica in marble of the well-known bronze original, and recalls with even an added vividness both its merits and defects. We note once more the President's besetting sin as a sculptor, that excessive and over-anxious display of the muscular structure which deprives the human figure of the suppleness of life and of that unity given by the natural envelopment of the flesh. Still, the care and skill with which each part is modelled deserve and command respect.

The late Sir Edgar Boehm's last work, a marble bust, "The Lady Brooke," is not a favourable or a representative specimen of his powers, being too vacant and impersonal for a portrait, and moreover, not remarkable for any special charm either of conception or execution.

Unusually careful, firm, and thorough in modelling is Mr. Alfred Gilbert's simple and charming marble bust, "Daughter of Sir Dyce Duckworth, M.D.," in which, however, the sculptor displays what is for him an unusual lack of taste in the adjustment of the lines of the dress with those of the head. It is questionable whether this same artist's very ingenious experiments in decorative art have not been a trifle overpraised by enthusiastic lovers of innovation; for in them the bold disregard of the trammels of recognised styles, and the equally bold adoption of mannerism, often approach to licence. His little silver statuette of "Victory" has movement and *crânerie* in the bold cast of its voluminous draperies; but it is ill-balanced, and too nearly approaches to that decadent exaggeration—not altogether un-fascinating in its meretricious showiness—which was one of the characteristics of Bernini and his school.

A triumph of subtle and undemonstrative modelling is Mr. Onslow Ford's simple head of a young girl, with her hair closely bound by a kerchief, which he styles "A Study." The art here shown is not of the superficial order, delighting in finish of the obvious and easily

attained kind, but of that which lovingly caresses the marble until it almost breathes into it the breath of life. Much less successful, in our opinion, is the pseudo-Florentine bust in silvered bronze by the same sculptor, described as "Frederica, Daughter of S. Pepys Cockerell, Esq." This just misses a true individualisation of the model, but is highly decorative in general aspect, placed as it is on one of those broad bases familiar to all lovers of early Florentine sculpture. It was a happy idea to incorporate in this base the admirable medallion of the sitter's father, Mr. Cockerell, to render whose expressive features has evidently been to the sculptor a grateful task.

One of the best and most promising things of the year—marred though it is by a certain meanness and timidity of proportion, and by a certain infelicity in the choice of the model used—is Mr. W. Goscombe John's statue, "Morpheus," which presents the god of dreams "drowned deep in drowsy fit," with his head half hidden by his wreathed arms. This work has that rare quality, in which the finest Greek art has remained unapproached, of making the movement and character of every limb, and not only the type and the facial expression, subservient to the due accentuation of the main motive. In this particular Mr. Goscombe John's statue is much superior to Sir Frederick Leighton's "The Sluggard," a bronze statue, in which, as it will be well remembered, it is sought to express a similar subject.

In striking contrast with the subtly wrought, pathetic "Pandora" of last year, comes now Mr. Harry Bates's "Hounds in Leash," a boldly designed bronze group which is the definitive original of a wax model previously exhibited in the same place. The athletic form of the youthful hunter, who restrains with effort a leash of eager hounds, is a good reproduction of the Attic style, but lacks suppleness to give life to its muscularity; the hounds themselves are finely and truthfully modelled, and have more vitality.

Mr. George Frampton has in his "Caprice" chosen a fanciful pictorial motive, and resolutely translated it into a work in the round. The form of this nude damsel, who stands in a disquieting attitude on tip-toe, holding a wand of gilt teazles, does not display modelling of a very searching kind; but the figure imposes itself all the same, and finally succeeds in fascinating the at first unwilling beholder.

Another of the promising younger generation of sculptors, Mr. Henry Pegram, has essayed a lofty flight, indeed, in his large group "Sibylla Patidica," showing the Sibyl, who appears almost wholly shrouded in heavy veils and draperies, in the act of reading the future in the crystal divining ball which she holds in her hand, while across her lap lies prone the wholly nude form of the woman who has come to invoke her aid. The merit of the group lies in the happy pose and finished modelling of the latter figure, the conception of the Sibyl herself being sufficiently trite and uninteresting.

Mr. Hamo Thornycroft has of late devoted himself much to works in high and low relief, in which, to our thinking, he never appears quite at ease. His high relief, "Science," though it does not lack dignity, is a trifle heavy; while the draperies of the symbolical female figures which it exhibits are decidedly wanting in the rare and indefinable quality of style.

Among other things worthy of a more detailed mention than we can here accord to them, are Mr. George Simonds's colossal statue, "The late Hon. Fredk. J. Tollenmache," a simple and dignified but, as to the head, over-wrought performance; Mr. Richard Willis's clever relief in the French style of the seven-

teenth century, "O Love, has she done this to thee?" Mr. Henry Armistead's bust, "Miss Hester Armistead," in which, if the face is dry and overlaboured, the drapery shows great elegance of arrangement; Mr. Adrian Jones's singularly skillful "Triumph: Design for a Quadriga"; and Mr. George Wilson's somewhat timid yet elegant and happily proportioned "Model for a Fountain."

We have reserved for final mention what is, on the whole, the finest piece of sculpture of the year, Mr. Brock's harmoniously proportioned and exquisitely wrought "Genius of Poetry," a statue of which the plaster model has been seen before in the same gallery. There is no extraordinary novelty in this simple and noble conception; but it is flawlessly realised, with a command of means much commoner in French than in English art. The only unsatisfactory part is the back view of the figure, to which the elaborate lyre and the superabundant and not obviously useful drapery give a confused aspect. Still, in contemplating the work, we cannot help rejoicing that we possess a sculptor capable of realising it in so masterly a fashion, and regretting at the same time that the dearth of monumental decoration in the English public buildings of to-day should so limit the suitable opportunities for the display and utilisation of art of this class.

CLAUDE PHILLIPS.

THE FRENCH SALONS.

V.

A THIRD Salon has been opened in the galleries of the Palace of Industrial Arts at the Champs de Mars. This exhibition, exempt from "the tickle and unjust" decisions of juries, has been opened freely to all comers, and each exhibitor has at least one picture on the line. We have heard so many complaints concerning the favouritism displayed by the juries of the other two Salons, that we were led to hope that among the 814 exhibits of these Independents would be found, here and there, a work of merit or originality. Alas, great has been our disappointment. "Impressionists," "tachistes," "plein airistes," and "pointillistes," to use the jargon of the day—terms which cover a multitude of sins against correct drawing and colouring—one and all have had the wished for opportunity of appealing to public taste. But I am afraid the verdict will not be very favourable; for, taken in its *ensemble*, it would be difficult to form a collection of pictures more devoid of technical ability than those exhibited at the Independent Salon.

Among the few which deserve to be singled out of this collection of rubbish and horrors, I would call attention to a fine sea-piece, "The Wave," by M. Brémond, whose wife, Mme. M. Jeanne Brémond, also contributes a portrait and a charming little nude study, "La Baigneuse." M. Antequelin, president of the exhibition, has two clever pastels, studies of the nude, reminiscences of Besnard and Carrière. M. Monchablon (Prix de Rome) sends a good portrait, and "The Death of Elizabeth, daughter of Charles I." The ill-fated Princess is lying on her deathbed, her face resting on an open Bible; in her hands is clasped the letter which her father wrote to her on the morning of his execution. The general effect reminds one of Delaroche. M. Hermann Paul's "Bathing at Guétry" is a good specimen of bold *plein-air*, or rather *plein-soleil*, work. The composition is disconcerting at first, but gradually the eye realises the strange rendering of light and colours which the artist has succeeded in fixing on canvas. This promising young artist also contributes four decorative panels, in which, however, the violet tints are rather too pre-

dominant, a fault common to the followers of the latest form of "impressionism." M. Darrent-Harrison exhibits two good portraits, and two pretty water-colour views of the environs of Aix-en-Savoie. One of the best *plein-air* pictures is M. La Barre-Duparcq's "L'eau est bonne," a band of urchins bathing and playing. Among the curiosities are two views of the coast of Aracania, not at all badly done, by M. Pertuiset, ex-professional lion-hunter. There is a fair show of horrors, horribly painted, while the medal for eccentricity and bad taste might be awarded to M. Bessède's "L'amour tué par le vice"; the subject is best described in the lines written on the frame:

"C'est la nuit, sur un âne une fille chevauche
Guitare en main, au clair de la lune, montrant
Sa croupe veule et son dos nu. C'est la débauche
Pétissant sa victime : un amour expirant."

CECIL NICHOLSON.

NOTES ON ART AND ARCHAEOLOGY.

THE exhibitions to open next week include—an historical collection of book-bindings, consisting of choice specimens of all schools exclusive of living binders, at the Burlington Fine Arts Club, Savile-row; a series of drawings of Egypt, by Mr. A. N. Roussoff, at the Fine Art Society's; a collection of pictures, by Mr. John Lavery, at the Goupil Gallery; old prints and modern pictures by Japanese artists, and examples of oriental art-work, at the Japanese Gallery—all three in New Bond-street; pictures and sketches of Venice and Cairo, and a series of water-colours of places connected with Robert Browning, in London, Asolo, and Venice, by Mr. Felix Moscheles, at Mr. W. J. Stacey's Gallery, Old Bond-street; and Mr. Lavery's painting of the Queen's visit to the Glasgow Exhibition of 1888, at Mr. McLean's Gallery, Haymarket.

THE recently-formed Society of Portrait Painters will hold their first exhibition in the rooms of the Royal Institute of Painters in Water-Colours at the beginning of July. Independently of members' work, the leading English and foreign portrait painters will be represented. The committee includes the Hon. John Collier, Messrs. Jacob Hood, A. Haeker, S. J. Solomon, J. J. Shannon, H. Vos, and A. Stuart Wortley. Mr. F. G. Prange has been appointed manager.

THE catalogue of Mr. F. Seymour Haden's collection of prints and drawings, which are to be sold during the week beginning on June 15, contains a characteristic *Avant-propos*:

"The prints being for the most part singularly uniform both as to condition and impression, the expletives usually employed to express comparative degrees of this form of excellence have not been resorted to. The application of the term 'state' will also be found to be confined to those differences of impression only which indicate a difference of *tirage* (or edition), and which are wholly distinct from those press-side scratches which are made, it may be to complete a defective line or to put the plate into final order for the printer."

THE fourteenth annual meeting of the Society for the Protection of Ancient Buildings will be held in the hall of Barnard's Inn, Holborn, on Wednesday next, June 10, at 8.30 p.m., with Mr. Philip Webb in the chair. A paper will be read by Mr. W. B. Richmond.

AN exhibition of Scandinavian antiquities and other objects, collected by Mr. Alfred Heneage Cocks, is on view during the present month in the rooms of the Royal Archaeological Institute, Oxford-mansions.

MR. ROBERT SAUBER has been elected a member of the Royal Society of British Artists.

THE Rev. Dr. Winslow, of Boston, U.S.A., has received about 800 dollars (£160) towards the fund for the archaeological survey of Egypt, of which a lady, signing herself "Bubastis," gave 250 dollars, as one of the Villiers-Stuart fifty subscribers of £50 each.

THE Arundel Society has issued to its subscribers, to accompany the chromolithographs of the famous frescoes in the castle of Malpaga, a Life of Bartolomeo Colleoni, by Mr. Oscar Browning, who has been able to add something to the known facts by personal researches at Bergamo and its neighbourhood. The volume is illustrated by eight plates, the frontispiece being a very fine reproduction of the head and bust of Verocchio's equestrian statue at Venice.

A POSTHUMOUS publication, *Report on the Excavations at Troy in 1890*, by Dr. Heinrich Schliemann, has just been issued (Leipzig: Brockhaus), with a preface by Mme. Schliemann, and with contributions from Dr. Wilhelm Dörpfeld. There is also a noteworthy letter from Prof. A. H. Sayce, on a whorl containing an inscription, which was found in the sixth Trojan settlement, counting from below. Mr. Sayce writes (we re-translate from the German text):—

"The inscription is one of the best and clearest I have ever seen, and a splendid sample of Kyprian epigraphy. The reading is—*Πα-τω-ρι Τω-ρι*. According to Hesychios, there was a word *πάτορες* signifying 'proprietor.' If, therefore, the inscription is in Greek, we must translate, 'To the Proprietor Tyris.' But it seems to me more probable that the language is Phrygian; and in that case we may look upon *Πατορι* as the equivalent of the Greek *Πατρι*, for Tyris is the god from whom the name of the Phrygian town Tyriaion is derived. Hence the translation of the two words would be: 'To Father Tyris.'"

THE STAGE.

STAGE NOTES.

MR. TODHUNTER's pastoral play, "A Sicilian Idyll," which was seen last year at Bedford Park and at St. George's Hall, is to be produced in a series of matinées at the Vaudeville, commencing on June 15. Miss Florence Farr will resume the rôle of Amaryllis, in which she attracted so much attention, and Miss Lily Lingfield that of Thestylis, with the cymbal dance. Mr. Thalberg will play Aleander, and Mr. Cecil Crefton will again appear as Daphnis. "A Sicilian Idyll" will be preceded by a new poetical play, "The Poison Flower," also by Mr. Todhunter, and suggested by a short tale of Hawthorne's. The principal characters will be played by Miss Florence Farr, Mr. Bernard Gould, and Mr. Thalberg. The new scenery for both plays has been designed by Mr. A. L. Baldry.

"HEDDA GABLER" is dead, as we said it would die. Resurrection, however, has in a sense come to it; for, in the form of an admirable burlesque at Toole's Theatre, it has put on a more glorious body. Mr. J. M. Barrie is, it is reported, the author of this the latest of many witty skits on "Ibsenism." Another little laurel is thereby added to the crown of *Auld Licht Idylls*. But as regards Ibsenism, or rather as regards the dramas of Ibsen, it is Miss Ellen Terry who has dealt the heaviest of blows. That lady has pointed out, as one of the causes for the liking of his dramas by some of the less experienced of her sister artists, that "it is much easier to say *naturally*, 'Take off that bonnet from that chair' than to say *naturally* 'A horse! a horse! my kingdom for a horse.'" In the matter of the dramatist in question, so poetic an artist as Miss Terry is found, of course—with the penetration of real poets—to be upon the side of common sense.

MISS MARY RORKE has left town to take, as it is understood, a two months' rest.

WE hear that a *matinée* of Webster's tragedy, "The Duchess of Malfi," may probably be given at the Shaftesbury Theatre—under the direction of Mr. W. Pool—before the close of the London season. The stage version, which is in four acts, has been arranged by this admirable scholar and practical artist.

MUSIC.

MUSIC OF THE WEEK.

GOUNOD's "Romeo et Juliette" was given at Covent Garden on Tuesday evening, with Mme. Melba as the heroine. Good vocalisation is always acceptable, and this one gets from the Australian prima donna: with more warmth and passion it would be still more acceptable. Mlle. Pinkert, as Stephano, sang with much point, and was, on the whole, satisfactory. Of MM. J. and E. de Reszke (Romeo and Frère Laurent), it will suffice to say that they were at their best. There was a crowded house.

Of Gounod's "Faust"—by the way, the prominent position occupied by this composer during an opera season deserves note—it would seem that there is nothing new to say. And yet the performance "in French" last Saturday and Wednesday leads one to hope that some day, the difficulties of the language notwithstanding, we may hear Wagner's works in German at the so-called Italian Opera. The *début* of M. Plancon as Mephistopheles, on Wednesday, was a brilliant success: his singing is excellent, and his enunciation of words remarkably clear. He is a very fine actor, and makes the most of his part without any trace of exaggeration. Miss Eames is improving in her acting. She is still somewhat frigid in the third act, but in the Cathedral scene she throws herself more into her part; it was also in this scene that M. Plancon reached his highest point. Mlle. Passans, a new comer, gave a fair rendering of the part of Siebel. M. Van Dyck sang wonderfully well as Faust, but there was a peculiar restraint about both his singing and his acting. Was he not in good form? The hopes excited by his performance of Manon were not fully realised. M. Bevilgnani conducted both operas with great care.

The programme of the sixth Philharmonic Concert included Haydn's "Oxford" Symphony. It was thus called from the fact that it was performed at the Oxford Commemoration of 1791, when the composer received the honorary degree of Doctor of Music. But the work was not, as stated in the programme-book, written for the occasion. Haydn had, it is true, specially composed a Symphony; but there was not proper time for rehearsal, and he substituted for it a work written at Vienna or Esterházy, before he had set foot on English soil. So far as we are aware, the real "Oxford" Symphony is not known. Had C. F. Pohl lived to complete his biography of the composer, he might possibly have thrown some light on the subject. The programme included also Goetz's grand Symphony in E. Both works were carefully rendered under the direction of Mr. F. H. Cowen. M. Paderewski gave a brilliant performance of Rubinstein's D minor Concerto, but of this pianist more anon.

Mr. Frank Howgrave gave a pianoforte recital at Princes' Hall, on Friday afternoon. There are so many good pianists at the present day that any new comer must have some speciality to attract notice. Mr. Howgrave has considerable technique; but his reading of Bach's Chromatic Fantasia and Fugue, and of Beethoven's "Eroica" Variations did not show any deep insight into the composers' meaning, and besides, there were many wrong notes.

This may have been due to nervousness, but, anyhow, it was not pleasant.

On Saturday afternoon there were two great attractions—Mme. Adelina Patti at the Albert Hall, and Señor Sarasate at St. James's Hall. Of the former it will suffice to say that she was in excellent voice and that the number of encores equalled the number of her songs. She drew an immense audience. The excellent singing of Miss Alice Esty, who has a pleasing voice, deserves mention. M. Paderewski's rendering of Liszt's "Fantaisie Hongroise" was particularly brilliant and effective. The Nottingham Philharmonic Choir, under the direction of Mr. Marshall Ward, sang two part-songs with fair success. The orchestra was under the direction of Mr. Ganz.

Señor Sarasate's concert opened with Grieg's Suite "im alten Style" (Op. 40) arranged by the composer for strings, and, considering the limitation, with wonderful variety of effect. The concert-giver played first Dr. Mackenzie's Concerto (Op. 32) with his usual skill, though with less than his usual fire. Later on he appears, however, to have been heard to full advantage in Max Bruch's showy Fantaisie Écossaise. There was a good though not crowded house. The orchestra was under the direction of Mr. Cusins.

The programme of the second Richter concert, on Monday evening, had to be considerably modified, as neither of the vocalists announced was able to appear. It commenced with Cornelius' bright and clever Overture to his opera "Der Barbier von Bagdad." The work was produced under Liszt's direction at Weimar, in 1858, but without success. It has, however, been given since in Germany, with better results, and it will soon be brought to a public hearing in London by the students of the Royal College of Music. Herr Richter gave a magnificent rendering of the Introduction to Act 3 of "Die Meistersinger" and of the "Götterdämmerung" March. The programme included the "Siegfried" Idyll and Mendelssohn's "Italian" Symphony. Miss Moore-Lawson sang a Handel Aria in an artistic manner, but Herr Richter gave the orchestral accompaniment in rather a perfunctory fashion.

M. Paderewski's first concert at St. James's Hall, on Tuesday afternoon, drew a large audience. An orchestra under the direction of Mr. Henschel gave an effective rendering of Max Bruch's clever and interesting "Vorspiel zur Lorelei." The pianist then played Beethoven's Concerto in E flat, and displayed his best powers as an artist. The tone at times was somewhat harsh, and at other times somewhat cold, but still we rank this as one of the pianist's most serious efforts. In his Chopin Solos his playing was unequal. The delivery of the noble theme of the C minor Nocturne lacked intensity, and the reading of the A flat Prelude was sentimental to an extreme; but he was far more successful in an Étude, a Mazurka, and the C sharp minor Valse. The programme included Schumann's Concerto, and the Mozart-Liszt "Don Juan" Fantaisie. It is only fair to speak of the brilliant, fiery playing of the latter piece; it was wonderful, but it was not music. M. Paderewski was much applauded during the concert, and recalled twice at the close.

J. S. SHEDLOCK.

MUSIC NOTES.

A CORRESPONDENT writes: On Thursday and Friday of last week the students of the Guildhall School of Music gave two performances of Donizetti's opera, "Lucia di Lammermoor." On each of the nights the two principal parts were taken by different students: that of Lucia by Miss Eveline Bengabatti on Thursday, and

by Miss Agnes W. Matz on Friday; that of Edgardo by Mr. Edwin Wareham on Thursday, and by Mr. Patrick O'Connor on Friday. The rest of the cast was: Alisa, Mme. Leonora Ellerton; Arturo, Mr. J. H. Ireland; Normanno, Mr. Wilfrid Aefield; Enrico, Mr. John Woodley; Raimondo, Mr. Charles Hinchliff. Speaking only of the second performance, Miss Matz seemed rather nervous; but as the opera progressed she soon regained confidence, and in the end left little to be desired, either in singing or in acting. Especially meritorious was her rendering of the mad scene, in the second act. Mr. O'Connor, as Edgardo, was apparently suffering from a cold, and did not sing as well as he could have done under more favourable circumstances. The chorus and orchestra reflect great credit on the principal, Mr. Weist Hill, under whose direction the opera was produced.

Every Evening, at 9, WILD OATS.
Messrs. Charles Wyndham, David James, E. Righton, G. Giddens, W. Blakeley, W. E. Gregory, Valentine, Atherley; Mesdames E. Terriss, J. C. Smith, and Mary Moore.
Preceded, at 8.25, by NINE POINTS OF THE LAW.

DRURY LANE THEATRE.

Sole Lessee and Manager, AUGUSTUS HARRIS.
Every Evening, at 7.45, FORMOSA.

GAIETY THEATRE.

Lessee and Manager, Mr. GEORGE EDUARDES.
This Evening, at 8.30, CARMEN UP TO DATA.
Preceded, at 7.40, by HIS LAST CHANCE.

GARRICK THEATRE.

Lessee and Manager, Mr. JOHN HARE.
Every Evening, at 9, A PAIR OF SPECTACLES.
Preceded, at 8.15, by A QUIET RUBBER.

HAYMARKET THEATRE.

Lessee and Manager, Mr. H. BEERHOIM-TREE.
Every Evening, at 8.10, THE DANCING GIRL.

LYCEUM THEATRE.

Mr. HENRY IRVING, Sole Lessee.
Every Evening, at 8.15,
A REGULAR FIX and THE CORSICAN BROTHERS.

LYRIC THEATRE.

Lessee and Manager, Mr. HORACE SEDGER.
This Evening at 8.15, LA CIGALE.
Preceded, at 7.30, by LOVE and LAW.

OPERA COMIQUE THEATRE.

This Evening, at 8.20, JOAN OF ARC.
Preceded, at 7.45, by CRIME and CHRISTENING.

PRINCE of WALES' THEATRE.

Lessee and Manager, Mr. HORACE SEDGER.
This Evening, at 9, a Musical Play without words, entitled L'ENFANT PRODIGE.
Preceded, at 8.15, by THE GYPSIES.

SAVOY THEATRE.

Proprietor and Manager, R. D'O'LY CARTE.
Every Evening, at 8.30 (Last Nights),
THE GONDOLIERS; or, The King of Barataria.

ST. JAMES'S THEATRE.

Sole Lessee and Manager, Mr. GEORGE ALEXANDER.
This Evening, at 8.30, THE IDLER.

STRAND THEATRE.

Lessee, Mr. WILLIE EDOUN.
Every Evening, at 8.40, A NIGHT'S FROLIC.
Messrs. Edoun, Fawcett, Marshall, Barraclough, and Lugg; Mesdames Atherton, West, Esmond, and Bennett.
Preceded, at 8, by DAGGERS DRAWN.

TOOLE'S THEATRE.

Manageress, Miss FLORENCE M'KENZIE.
Every Evening, at 8.15,
CHAWLES; or, A FOOL AND HIS MONEY.
To conclude with IBSEN'S GHOST.

VAUDEVILLE THEATRE.

Sole Lessee and Manager, Mr. THOMAS THORNE.
Every Evening, at 9, CONFUSION.
Preceded, at 8, by PERFECTION.

SATURDAY, JUNE 13, 1891.

No. 997, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

LITERATURE.

Philomythus: an Antidote against Credulity. By Edwin A. Abbott.

Newmanianism. A Preface to the Second Edition of "*Philomythus*." By Edwin A. Abbott. (Macmillans.)

THIS work of Dr. Abbott's, with its Newmanian supplement, is equally opportune and significant. The death of Cardinal Newman was attended by an immediate discharge of high-flown panegyrics—like a simultaneous flight of gigantic inflated balloons—calculated to surprise, perhaps also to amuse, the cold philosophic observer who stood afar off grimly prospecting the bursting, or at any rate the critical pricking, of some of those windy monstrosities. Though a little puzzling to outsiders who had watched Newman's career from its earliest to its latest deviation, the phenomenon had its pleasing aspect. For many years, and in two of the most powerful Churches in Christendom, he had been the accepted religious teacher of certain minds of peculiar organisation and training. It was, at any rate, pardonable that the Romanising Anglican and the Anglican Romanist, who professed to owe to him some portion of their religious stimulation, should surround his grave with indiscriminate and extravagant eulogy, and seek to embalm his memory by hysterical monographs and Lives which merely revealed the blind infatuation of the writers. On the other hand, the phenomenon had its disquieting and humiliating side. It served to show how largely the spirit and methods which found expression in Newman's life and work had permeated the religious thought of England. It proved—not for the first time in the history of ecclesiastics—how completely the glamour of a high religious profession, profound spiritual introspection, and a pietism as invertebrate as it was tender and sympathetic, could disguise a perverse intellectual formation, a diseased self-consciousness, and an incorrigible tendency to self-mystification and deception. Incidentally, too, it suggested, as an indirect and distant inference, what irreparable mischief the ecclesiastical upstir called "the Oxford movement" may have done to the manhood, the moral rectitude, the simple straightforwardness of religious Englishmen. In the clamour of indiscriminate laudation which attended his death, such a question as the following seems rarely to have suggested itself as a fair criterion of his worth: Suppose that most Englishmen possessed Newman's habit of hyper-religious, sickly introspection, his servile terror of

Deity, and his selfish concern for his soul's salvation: or were governed in their social, commercial, and general life by the principles which dominated his religious life. In such a case only one result would, in my judgment, be conceivable: England, under the influence of this New-mania, would become a veritable Anticyra—an island-abode of the unwise—wherein religion would be so much adulterated with ecclesiasticism and an extreme and morbid pietism as to be absolutely worthless.

Dr. Abbott, then, seems to me to have rendered a most invaluable service to English thought and literature by the critical investigation he has here undertaken of one of Newman's most characteristic works, his Essay on "Ecclesiastical Miracles." If his investigation has resulted in shedding, I will not say a wholly new, but an enhanced ominous and sinister light on Newman's mental conformation, we may accept it as a needed correction of the posthumous hyperlaudation with which our ears have been recently dinned. There are, no doubt, persons who will regard Dr. Abbott's *exposé* as superfluous. Observant and critical thinkers—undemoralised by metaphysical or theological subtleties—have long arrived at a fairly unanimous consensus as to the peculiar qualities of Newman's intellect, as well as to their practical outcome in his life and conduct. Ample data existed for the formation of such a judgment. There is little in his later writings, since he joined the Church of Rome, which the critic gifted with psychological insight and conversant with the subtleties of religious metaphysics might not have adumbrated and foreseen as ulterior stages of his career. His earlier writings clearly indicated unusual metaphysical and spiritual profundity, curiously involved and perverse modes of reasoning—partly in forming premisses, partly in determining conclusions—an undisguised delight in tracking the labyrinthine sinuosities of his own thought, and a conspicuous power of perpetrating what in the Athens of Socrates was regarded as an extreme form of dialectical delinquency, viz., "making the worse appear the better cause."

This allusion, however, suggests one notable defect in Dr. Abbott's work, or, rather, in the studies needed in its preparation. He seems inclined to regard Newman's mental faculties and his employment of them as if they were unique or *sui generis*. He appears to consider him as a rare or curious monstrosity on which he has by chance alighted, and which, to prove its extreme rarity, he is anxious at once to dissect. This I consider not only a mistake, but a mistake not unlikely to engender unfairness. Newman's intellect, allowing for the personal equation of individuality, seems to me a typical one. We have it represented in well-known classes of religious and metaphysical thinkers in every age of the world's history. We find, *i.e.*, men secretive, profound, tenderly mystical, sometimes passionately religious, engrossed in their own intellectual and spiritual speculation, ceaselessly constructing some intellectual or moral labyrinth, careless even as to their own extrication from the mazes of

their self-involvement, for ever distinguishing between indistinguishables, less solicitous to fix truth objectively than to watch its protean shapes and disguises in the kaleidoscope of their subtly changeable intellects and warm-hued imaginations—among, *e.g.*, Indian Pundits, Mahomedan Doctors, Jewish Rabbis, Greek Sophists, medieval Schoolmen, Roman Casuists, and Jesuit Fathers. Comparative psychology is as yet an unknown science; but a wider survey of the vast field of introspective ratiocination, whether metaphysical or theological, would have enabled Dr. Abbott to place Newman—like a new specimen in a cabinet—among the species and genera to which he rightly belongs. A further investigation of the common characteristics of the species would have revealed a kind of unscrupulousness in dealing with the multiform intangibilities of their thought, so that when they have some object to serve, as, *e.g.*, the Greek sophist or modern Jesuit, in making the worse cause seem the better, or like Newman, in bringing all human thought into the captivity of Roman dogma, they find in the inexhaustible armoury of their intellectual subtleties, their dialectical and verbal subterfuges, precisely the weapons which suit their wants.

Coming now to Dr. Abbott's criticism. It is divisible, as one may see from the table of contents, into two parts.

I. Examination of Newman's general principles, especially of his stress on Probability.

II. Criticism of the essay on "Ecclesiastical Miracles."

As to the first, I regret—sympathising as much as I do with Dr. Abbott's object—to have to avow my opinion that it is wholly unphilosophical and inconclusive. Instead of that psychological examination into the grounds of man's belief in speculative and indemonstrable objects, which would have demonstrated the essential similarity in origin, procedure, and conviction of Faith and Probability, he attempts to undermine Probability by wholly differentiating it from Faith. A position more suicidal in itself, and more in antagonism with the best thought of Christian philosophical theology, it would be impossible to formulate. By making the conviction of Faith equivalent to independent or inherent certainty, he has made one of those excessive claims for theology which science has always, and most properly, refused to concede, and has very largely destroyed the only sound basis for religion—as the belief in the unseen. Not to mention Scriptural definitions and the Pauline antagonism—which is as philosophical as it is religious—of Faith and Sight, has Dr. Abbott forgotten the argument of the *Analogy*? Is he unmindful that all our best theological philosophers—Locke and Berkeley, as well as Butler—have been content to base religious truths upon Probability and to denounce the craving for certitude as unsuited for our present state of probation. When Newman, in so many of his writings, asserts, in the words of Dr. Abbott, that "we are to arrive at faith in the living God" by accumulated probabilities, he says no more than what all the best divines would not only allow,

but insist on. The accumulated probabilities would be the reasonable conditions and bases of Faith, and we can have no more than faith—a presumptive, indirect, inferential belief in an unseen being, a “Deus absconditus,” as Pascal termed him. No doubt Newman is shifty and unscrupulous in dealing with Probability, as he is with every mental process into which religious dogma enters; but he is perfectly justified in laying stress on Probability as the sole basis and condition of religious belief. His manipulation of Probability in the interests of dogma may be thus expressed: (1) He was careful not to discriminate between its various kinds and degrees. (2) He demanded assent on religious grounds to critically feeble and ethically unworthy probabilities. (3) By a common but illegitimate hocus pocus he transformed at will his personal conviction of Probability to *ab-extra* and infallible dogma.

These unprincipled expedients—it seems important to note—are not confined to Newman. Dr. Abbott writes as if unaware that in denouncing Probability he is attacking a well-known principle of Romanist casuistry, which has been repeatedly attacked from every conceivable point of view. Taking, *e.g.*, the shifty procedures above enumerated, and which may be discovered in almost every page of Newman’s controversial writing, they are precisely the subterfuges of the Jesuits which Pascal exposed in his immortal Provincials. Thus, the trick of basing conduct—and the same rule holds as to belief—on insufficient probability is admirably exposed in the Fifth Provincial, from which I cannot refrain from making a few extracts. Pascal had been complaining of the diversity of probable judgments, since the dictum of any renowned doctor sufficed to form one, to which the Jesuit Father responds:

“Vraiment l’on sait bien qu’ils ne sont pas tous de même sentiment; et cela n’en est que mieux. Ils ne s’accordent au contraire presque jamais. Il y a peu de questions où vous ne trouviez que l’un dit oui, l’autre dit non. Et en tous ces cas-là, l’une et l’autre des opinions contraires est probable; et c’est pourquoi Diana dit sur un certain sujet ‘Ponce et Sanchez sont de contraires avis; mais parce qu’ils étoient tous deux savans, chacun rend son opinion probable.’

“Mais, mon père, lui dis-je, on doit être bien embarrassé à choisir alors!—Point du tout, dit-il; il n’y a qu’à suivre l’avis qui agréé le plus—Eh quoi! si l’autre est plus probable?—Il n’importe, me dit-il. Et si l’autre est plus sûr?—Il n’importe, me dit encore le père; le voici bien expliqué. C’est Emmanuel Sa de notre Société dans son aphorisme *De Dubio*: ‘On peut faire ce qu’on pense être permis selon une opinion probable, quoique le contraire soit plus sûr. Or, l’opinion d’un seul docteur grave y suffit.—Et si une opinion est tout ensemble et moins probable et moins sûre, sera-t-il permis de la suivre, en quittant ce que l’on croit être plus probable et plus sûr?—Oui, encore une fois, me dit-il; écoutez Filutius, ce grand jésuite de Rome. ‘Il est permis de suivre l’opinion la moins probable, quoiqu’elle soit la moins sûre: c’est l’opinion commune des nouveaux auteurs.’ Cela n’est-il pas clair?—Nous voici bien au large, lui dis-je, mon révérend père. Grâce à vos opinions probables, nous avons une belle liberté de conscience.”

It is evident that Newman, as “un docteur grave,” regarded his own “probable

opinion” as a justificatory persuasive to others of the dogma he adopted (see his letter to Pattison, *Philomythus*, p. 84); and the fact shows his intellectual and moral kinship with the most astute and unprincipled of Jesuit casuists.

In this disingenuous dealing with Probability so as to subserve the cause of Romanist dogma, Newman has offered ample ground for controversial attack, wherein, had he found an adversary with the intellectual acumen and controversial skill of Pascal, he might, for all sane and reasonable men, have been easily crushed. Dr. Abbott, in my opinion, has, in this part of his book, made the mistake of an unexperienced general, *i.e.*, choosing his ground badly. Because Newman misused the argument of Probability for dogmatic purposes, he assumes that the argument is not legitimate for Christian apologetics. Has he ever heard the reply of James II. to the extreme Nonconformists at the Hampton Court Conference—“They used to wear shoes and stockings in times of Popery; have you, therefore, a mind to go bare-foot?” Indeed, Dr. Abbott’s hankering for certainty betrays no small share of that very predilection for dogma which was one main cause of all Newman’s intellectual aberrations and moral perversities. Nor is this all; there is another similarity between the author of *Philomythus* and the dogmatic system which had such fatal fascination for Newman. He indirectly uses threats to deter men from placing their religious belief on a conscientiously attained basis of Probability. He talks ominously of the “terrible possibility of losing it” (p. 77). It is to be hoped that the menace will not weigh much with those who regard honestly sustained belief—just that and no more—as the most precious of all treasures. Certainly a confessed loss of a belief—supposing the probabilities which sustained it gave way—would be infinitely preferable to retaining it when the evidence had declared itself against it. Noble failure is, under any circumstances, preferable to ignoble success. Dr. Abbott will, perhaps, recall the words:

Βούλομαι δ', ἡγιασ, καλῶς
δράν ἐξαμαρτεῖν μάλλον ἢ νικᾶν κακῶς.

Before leaving what I consider the critical defects of Dr. Abbott’s book, there is one more point on which I would insist; and that is the kind of submission to external authority which Newman desiderated as the supremest manifestation of human belief. I need hardly point out this is the well-known *sacrificio dell’ intelletto*, in virtue of which Newman first joined the Romish Church and, after sundry hesitations and equivocal professions, submitted to the stupendous demands of the Vatican decrees. It seems to me that Dr. Abbott might have made more than he has of this repulsive and demoralising position. He could have scored a further point by comparing Newman’s faltering—I had almost said disingenuous—submission with Dollinger’s determined refusal to prostitute his most rudimentary conceptions of truth and honesty before the shrine of a half-imbecile Pope.

“If I did so,” pleaded the great German theologian, “there would then no longer be for me

any such thing as historical truth and certainty . . . I should then have to suppose that my whole life long I had been in a world of dizzy illusion, and that in historical matters I am incapable of distinguishing truth from falsehood.”

My remarks on Dr. Abbott’s criticism of Newman’s general principles has extended to such a length that I have but little space left for his attack on the “Essay on Ecclesiastical Miracles.” Here I have only commendation and congratulation to offer. So far as a book can be controversially crushed, so far as its arguments, with their countless perversities, disingenuous and worthless reasonings, can be torn limb from limb, Dr. Abbot has performed the annihilating operation with a verve and zest which is almost savage in its ruthless intensity. At the same time he must not suppose that his reply, crushing as it is, will necessarily present itself in that light to extreme Newmanites. Newman has more than once been theologically exterminated, as *e.g.* by Archer Butler in his *Letters on Romanism*; but like a battalion in the autumn manoeuvres that has been repeatedly under fire and as often annihilated, the operation does not seem to affect prejudicially the continued existence of Newmanism. There is a refreshing innocence—betokening the inexperienced controversialist—in Dr. Abbott’s expressed conviction that he will “catch our Proteus in a net from which he cannot extricate himself.” He has in the judgment of every sane critic performed this feat over and over in the course of his *Philomythus*; but he has evidently forgotten—perhaps has never learnt—that it is one thing to secure a slippery antagonist in a net, but it is another and much more arduous task to make him and his followers confess that he is inextricably secured. Kingsley was a *retiarus*, neither deficient in skill nor lacking in equipment, who found his direct, straightforward tactics absolutely ineffective against an antagonist who, as often as he was fairly netted, could declare that he was wholly unconscious of the entanglement.

With all its imperfections, however—and some of them seem to me serious—I regard Dr. Abbott’s book as meeting partially a sorely needed want. I will not venture to affirm that he has discovered, or, at all events, provided, a sufficiency of hellebore to thoroughly purge England of this Newmania. Probably this would tax the resources of Anticyra itself. But it is surely time, in the interests of truth and religion, to arrive at some fair estimate of the life and works of John Henry Newman. It is time that his career should be reviewed from the standpoint, not of an effete, self-mystifying ecclesiasticism, but from that of ordinary un-dogmatised Christianity. It is time that psychology should learn to discriminate a type of religionism at once too subtle to be sincere and too profound to be questioned, too serpentine to be imitated and too well intentioned to merit reprobation, too self-conscious to be wholly praiseworthy and too widely sympathetic not to deserve some esteem. It is time that the apotheosis of a career remarkable for its piety, however emasculate and perverted but remarkable

also for spiritual and mental shiftiness, for dialectical and verbal sophistry, for unlimited power and capacity for self-deception, should finally cease. Prof. Pfleiderer closes his recent review of theology in Great Britain (*Development of Theology*, p. 401) with the remarkable forecast:—"The days of a Newman and a Pusey are for ever past for Oxford and for England." While every English well-wisher for the sane religious culture and progressive enlightenment of his country will cordially reciprocate the wish embodied in such a vaticination, we cannot as yet be said to be within measurable distance of its accomplishment.

JOHN OWEN.

One of Our Conquerors. In 3 vols. By George Meredith. (Chapman & Hall.)

THE works of a writer past the prime of life are apt to display a certain excess or extravagance: what was once his strength has now become his weakness, and his virtue has changed into his vice. This is most often seen in the case of very strong and masterful writers; those whose good work is all done in some one *annus mirabilis*, or flowering season, fall into mere decay, as Coleridge or as Wordsworth. It is in writers whose whole life has been full of successful toil and untiring effort, that manner degenerates into mannerism. Such writers, and, indeed, all artists of such a kind, are often men who have discovered some new way in art, and who possess a secret and a power proper to themselves; the world, used to the old and familiar ways, will not at once take notice of them. In proportion to their faith in themselves and their fidelity to their art, these artists, unshaken and undeterred, continue upon their way, rather increasing than relaxing their unappreciated labours. Slowly and gradually the world comes round to their side, is converted to their faith, welcomes them with applause. But what of the artists, all this long time? Is there no danger that, in a kind of unconscious defiance and challenge, they will have gone too far, and grown enamoured of that in their work which the world did well to blame? If the world cried out upon their obscurity, where there was some obscurity but not much, was it not natural in them to have replied with worse obscurities, out of an impatient contempt and exasperation? It is permissible to think that Browning had a little of this feeling, when he filled his later books with so much more argument than imagination. Landor dared to think that Milton, in *Paradise Regained*, was "subject to strange hallucinations of the ear." Now, Milton held, although the world does not, that *Paradise Regained* is superior to *Paradise Lost*. It is as though, foreseeing the "revel of rhyme" that was to supersede his greater harmonies, he gathered himself together, and went nigh to straining the resources of his rhythm beyond its just capacity.

It has been said of late that Mr. Meredith, in his new book, has likewise exhibited "the defects of his qualities;" that his former work reached the farthest limits of successful audacity, and that *One of Our*

Conquerors has passed beyond them. Cordial and enthusiastic admirers of Mr. Meredith are ringing the changes upon "wilful eccentricity" and "wanton obscurity" and "lack of proportion in design." Since the present writer is unable to share these opinions, it is incumbent upon him to acknowledge that, upon reading the book for the first time, he did not reckon it a masterpiece. Read three or four times, the book grows upon the reader, the apparent confusion disappears, the intricacies of design become intelligible, and the whole greatness of design is evident. Hasty impression yields to careful meditation.

Let us take, first, a question of style: is *One of Our Conquerors* written in a style of grotesque and perverted eccentricity, whilst *Richard Feverel* or *The Egoist* is full of true force and beauty? That can be maintained only by one who has not read Mr. Meredith's earlier books for a year at least; one who retains a sense of their greatness, forgetting all but their final and permanent effect. Again, he who maintains that view must have ignored this fact: that with Mr. Meredith style and subject change or grow together. In proportion as the subject is simple, or idyllic, or tragic, or humorous, or rapid, so does the style assume those qualities. If the chief influences brought to bear upon the chief characters be influences of the great and busy world, of crowded and complicated life, then the style reflects the nature of those influences. All Mr. Meredith's books are full of stir and animation; but three of them, in especial, are full of this general or social life, this business and animation felt in the very atmosphere. In *Beauchamp's Career*, and *Diana of the Crossways*, and *One of Our Conquerors*, it is not too much to say that "the world," or "society," or "the public," or "the nation," seems to rank among the *dramatis personae*. Now, most English writers who wish to make an effect of this kind, to suffuse their work with this breath of the general life, attempt it by pages of reflection and description, in which the words are abstract and the sentences are sentiments. Unless the writer be very skilful, his writing will be very dull; at the best, it will too often be mere rhetoric. But Mr. Meredith differs in this from almost every other novelist of eminence: that he sees thoughts as things, emotions as images, the abstract as the concrete. He has eyes for the form and colour of an idea; he presents it to us full of life. It is now a truism to say that a cause is identical with its effects; but the illustration may help us out. When an ordinary writer gives us an idea, he gives it us in a dull and sparing way; the implicit truth is there, but it remains implicit: he states, as it were, a cause. Mr. Meredith states the effects, the explicit operations of the cause; the thought is expressed in concrete terms. His lively phrases are not metaphorical, but logical; the ideas are translated into their equivalent expressions in actual life. Those readers are surely wrong who regard Mr. Meredith's characteristic phrases as so many attempts at epigram and wit. Critics have published lists of Mr. Meredith's "failures" in epigram. They might as well be called his failures in epic. All such

characteristic phrases are rather faithful translations of general and abstract ideas into expressions of their concrete contents of meaning: translations by a humourist, whose humour need not relish the phrase, which may be ludicrous, but the act of making it, the discovery that, do but examine such and such an idea, and the phrase will be found to express it. So that when Mr. Meredith is accused of straining after wit, he is in reality but keeping close to facts, which is apt to be a grimly serious form of humour. It may not be amiss to compare with Mr. Meredith's manner of expressing ideas, his manner of expressing nature. His poems, for keenness of sight, for close contact with the most precise details, have few rivals: and here he reverses his process, and from an expression of the visible or the audible in nature, he passes to its meaning for man in thought. In this way he keeps touch with both sides of life: real and ideal, analytic and synthetic; he cannot understand one without the other.

As is always the case with all true writers, the consideration of Mr. Meredith's style passes insensibly into that of his subject. It may be assumed that most readers of the ACADEMY are now acquainted with *One of Our Conquerors*; so that, instead of a lame description of the book, we may consider one or two points, which are of the greatest interest. To begin with Victor Radnor, and his position. When a young man, he, to put it with all possible crudity, married an old woman for her money. Certain critics have cried "Cad!" and refused to consider the possibility of his ever afterwards redeeming that dishonourable act of youthful folly. Such a criticism shows the inadequacy of petrified moral codes. Victor's act was not merely an offence against conventional laws of honour, which change with time, but against immutable laws of nature; and his next act was in defiance of conventional law, but in harmony with reason and with nature. He took for his true wife, in all but legal rights, a woman prepared to obey her nature and his. The first wrong to nature is redressed by a disregard of convention. Now, all this talk about nature and conventionality might, in the case of a weak writer, have been no more than a somewhat nauseous cant, in the least desirable style of Rousseau. But Mr. Meredith—need it be said?—ignores nothing. With a conception of tragic art and of moral law, which is among his greatest achievements, he shows us the failure of both father and mother, Victor and Nataly. Victor is too enamoured of the world which he has defied and coaxed, and Nataly too afraid of it. But he also shows us their triumph, in their child, in Nesta. We agree with Colney Durance when

"he considered the shallowness of the abstract Optimist exposed enough in Victor's history. He was reconciled to it when, looking on their child, he discerned that, for a cancelling of the errors chargeable to them, the father and mother had kept faith with Nature."

Nesta—neither cherishing a prosperous superstition about the world based upon worldly success, nor a shrinking fear and

deference bred of one noble disloyalty to convention—can face the world upon fair terms. She neither accepts its stupid prose, nor dreams over its false poetry; but, interpreting the reason in nature, she has every true power upon her side. Mr. Meredith has drawn more portraits and characters of true women than any other Englishman, but Shakspeare and Browning; Nesta is, it may be thought, the truest of them all:

“Thou hast left behind
Powers that will work for thee—air, earth, and
skies;
There's not a breathing of the common wind
That will forget thee; thou hast great allies;
Thy friends are exultations, agonies,
And love, and man's unconquerable mind.”

The lines came into our mind, when reading the last pages of the book, as applicable to the woman who, with all her zeal upon unpopular sides and for bold causes, never lost tolerance for the world of folly and of intolerance, except only “when she thought of it as the world condemning her mother.”

LIONEL JOHNSON.

The History of Sicily from the Earliest Times. By E. A. Freeman. Vols. I. and II. (Oxford: Clarendon Press.)

(Second Notice.)

HAVING discussed the problems connected with the prehistoric races, Mr. Freeman devotes the remainder of his space to the foundation and growth of the foreign colonies, Phœnician and Greek. We are here confronted with the question whether the ideal historian should be absolutely free from bias. Ranke, who approaches nearest to this standard, is unquestionably dull, while the unconcealed partisanship of Macaulay, Froude, and Grote have helped to make them readable.

Mr. Freeman being, as everyone knows, a keen politician, it is difficult for him to write political history with impartiality. In fact, the bias is so manifest that it creates a prejudice against the causes which are espoused. A diligent student of Thucydides, he has failed to learn the lesson taught by the great master. Democracy, he says, means “freedom”; it means “fresh life and fulness of life.” Yet his own pages show that democracy may mean despotism of the worst kind—the despotism of ignorant and irresponsible mobs, swayed by demagogues through appeals to their interests or their passions. The “fresh life and fulness of life” at Syracuse began with the lynching of Tydaron and others “by the well-disposed citizens,” the account of which reads like the recent lynching of Italians “by the well-disposed citizens” of New Orleans. The “fresh life and fulness of life” next manifests itself in the odious tyranny of “petalism,” the proscription by secret ballot of citizens who were supposed to be unfavourable to the new order of things, followed by its natural result, the exclusion or the retirement of all the ablest men from politics and public life. When the republican armies are defeated the cry of treason is raised; and, as in the Franco-German war, *Nous sommes trahis* forms the convenient explanation of inevitable disaster. The incom-

petent general, elected by the popular vote, is accused of having wilfully caused the defeat, and is put to death. Twice within a few years after democratic rule began at Syracuse is a defeated general, chosen by popular acclamation, accused of treason, and made the scapegoat for the blunder of the mob which had selected him. In the French Terror we see the Revolution devouring her own children, the Girondists departing in the tumbril from the scene of their triumphs, and Lavoisier, astronomer, chemist, mathematician, sent to the guillotine; so at Acragas we see Empedocles, poet, philosopher, and man of science, as well as leader of the democratic revolution, dying either in exile or by his own act.

Mr. Freeman is far too honest to garble his authorities. But when they recount the natural results which followed on the establishment of mob-rule he thinks that “we may perhaps detect some touches of a pen hostile to democracy” (II. 375). And again, when Diodorus tells us how, when the Syracusan democrats gained the upper hand, “the chief men were sent away, and other good and able men who might have done good service to the Commonwealth were led by these warnings to keep aloof from public affairs,” Mr. Freeman explains away the account as “a picture clearly borrowed from some rhetorical enemy of democracy” (II. 334). And when Aristotle, the great master of political science, speaks of the Syracusan democracy as “unruly and disorderly,” Mr. Freeman observes that this “is the common way of speaking of all democracies by those who stand aloof from practical politics.”

Naturally, Mr. Freeman does scant justice to the wise and splendid rulers—in technical phrase called “tyrants” by the Greeks—to whom the rapid expansion of Sicily in wealth and power must be attributed. They may also claim the merit, or demerit, of that destruction of the Etruscan navy by which the Western Mediterranean was opened to the commercial enterprise of Syracuse; of that crushing defeat of Carthage at Himera which gave the Greeks the dominion of the island, and of the policy which made Syracuse and Acragas the greatest and most splendid cities in the Hellenic world, their munificent patronage bringing about the golden age of Sicilian literature and art.

Mr. Freeman is even more unfair to the well-balanced political institutions of Carthage, praised alike by Aristotle and by Cato—the constitution under which she acquired a vast colonial empire, an immense commerce, and boundless wealth, and which gave her an unexampled political stability, lasting for some 600 years. The secret lay in the checks and limitations of political power. The constitution resembled, in many respects, that which worked so well in Venice. It was aristocratic in its basis, combining monarchical and oligarchic elements, with certain democratic checks which gave the commons a voice and due influence in the state, protecting them from oppression, but not entrusting them with the uncontrolled conduct of affairs.

This is the real “unity of history.” The

unity of history does not mean that there are no differences between ancient and modern times; but it teaches us the lesson that human nature is essentially the same in all ages, and that similar political blunders will bring about similar evils. This is the lesson taught by Athens, Corcyra, and Syracuse; and this is why Thucydides remains the most instructive of all historians.

Mr. Freeman constantly allows his views on the Eastern Question to colour his narrative. Himera, he says, “is a name that calls up one of the brightest and one of the saddest days in the long tale of the Eternal Strife” (I. 265). Which day was bright and which was sad may be a matter of opinion. According to Mr. Freeman (II. 208), the bright day, which “truly was a strife of light and darkness, of good and evil,” was the day when Hamilcar, in alliance with one great Greek city, was defeated by another, and his army put to the sword or reduced to slavery. The sad day was when the grandson of Hamilcar, welcomed to Sicily by the Greeks as their deliverer from the most odious of Syracusan tyrants, avenged the death of his ancestor by razing Himera to the ground, after most of the inhabitants had escaped by night.

The advent of the Greek settlers is called the “coming of the crusaders,” and the Greek attempt to expel the earlier Phœnician colonists is termed a “holy crusade.” As for holiness, it seems strange to employ such a term to the “unspeakable” Greek—cruel, treacherous, and addicted to unnatural vices, though it may be admitted that the “holy crusade” of the Greeks in Sicily was less atrocious than some other holy crusades, such as the extermination of the Albigenses, the merciless crusading massacres at Antioch and Jerusalem, or the pillage of the wealthiest of Christian capitals by the licentious freebooters of the Fourth Crusade.

The Phœnicians are constantly spoken of as “barbarians,” and their religion as the worship of Moloch. The Greeks, doubtless, used the word *βάρβαροι* to designate races whose language differed from their own; but the English word “barbarian” has acquired another meaning, and it is either pedantic or invidious to use it systematically as the term to designate a highly civilised people (I. 271). The Phœnicians may be called “barbarians” in the same sense that the dwellers in the Celestial Empire call the nations of the West barbarians and foreign devils. But when we remember that to these “barbarians” the Greeks owed the first elements of civilisation and artistic culture, it seems strange to read that it was contact with the Greeks that “awakened artistic tastes in the Punic mind” (II. 411). This is a perverse inversion of the facts. It was from these “barbarians” that the rude tribes of Hellas derived their first knowledge of metals and of writing, of precious gums and spices, of ship-building, masonry, and music. A large proportion of the culture-words in Greek are Phœnician loan-words. The terms used by the Greeks to designate musical instruments, such as the harp, the lyre, and the flute, the words for metal, gold, and bronze, for the sapphire and the

jasper, for myrrh, cassia, cinnamon, wax, and wine, for the finer kinds of pottery, for the *chiton* itself, for the linen of which it was made, and for the precious dye which tinged it, are all Phœnician. The *siglos* is the same word as the Phœnician *shekel*, and the *mina* is the *mna*. To the Phœnicians works of supreme artistic excellence are assigned by Homer. Achilles proposes as a prize a silver bowl pre-eminent in beauty, "since skilful Sidonians had wrought it well." Phœnician craftsmen built and furnished the temple of Solomon. Artistic bowls of bronze from Cyprus and Assyria testify to the skill of Phœnician artists, whose very names are found inscribed on the splendid *paterae* from Palestina.

The perpetual talk about the "Eternal Cause," the "Eternal Strife" between "Hellas and Canaan," between "Aryan and Semitic man," is misleading as well as wearisome. In no correct sense can the Phœnicians be called the "men of Canaan," while ethnologists would be supremely grateful for the exhibition of an authentic specimen of "Aryan man." Till this Aryan man is found, the word "Aryan" must be considered merely as a philological term designating a class of inflective languages spoken by races of heterogeneous origin.

It is no less a misuse of words to say of the battle of Salamis that "Hellas against Canaan was the cause to be judged on that memorable day." It would be less incorrect to say that the cause to be judged on that day was the cause of the Asiatic Greeks against their Athenian oppressors than to say that it was the cause of Hellas against Canaan. The Persians were in no sense "men of Canaan"; and in the fleet of Xerxes the ships of the Asiatic and insular Greeks were actually more numerous than the ships compulsorily furnished by the Phœnicians.

It is an abuse of language to call the Phœnicians barbarians, but it is an abuse of history systematically to represent Moloch as the name of the deity they worshipped. Of this there is no evidence, or rather the evidence is the other way. In the Phœnician inscriptions from Sicily, which Mr. Freeman unaccountably omits to notice, we have the names of Phœnician gods, and these names appear again and again in similar inscriptions from Athens, Sardinia, Malta, Carthage, and Sidon; but the name of Moloch is never found. This constant reference to Moloch seems to be intended to suggest, *in invidiam*, that human sacrifice was a chief element in the Phœnician religion. But when Mr. Freeman contrasts what he calls "the creed of Athênê and the creed of Moloch," he should remember that, if human sacrifice was practised in Carthage, it was also practised, as we read in what has been called the Bible of the Greeks, by the Homeric heroes. And when, only the other day, a bottle of blood-red wine was broken by our Queen over the stem of a vessel to be launched, we recognise a survival of human sacrifice as practised at no very remote period by our own Scandinavian ancestors.

The contest between the religions of the

Greeks and Semites is represented as a contest between good and evil, light and darkness. This is essentially misleading. The chief Phœnician deities were Esmun, a beneficent healing deity, to whom the great temple at Carthage was dedicated, and who was identified with Aesculapius by the Greeks. Next comes Baal Samin, the Just One, the "lord of heaven"; and Melcarth, who at Dorian Corinth, and probably at Dorian Syracuse, was revered under his Semitic name of Melicertes, and elsewhere by the Greek name of Heracles. From Sicily itself we have inscriptions to Baal Hammon, the "sun lord," who is identified both with Zeus and Cronus, and to Astarte, "the heavenly maiden," who became the Artemis and Aphrodite of the Greeks. In fact, the Greek mythology, so far as it was not a rude rural paganism, was mainly derived from the Phœnician teachers. The myths of Apollo, Ares, Adonis, Aphrodite, Artemis, Heracles, Cronus, Zeus, are mainly Phœnician loan-myths.

The conquest of Sicily by the Norman adventurers belongs also to the "Eternal Strife." The name of Roger is inscribed "on the bede-roll of the men who won their choicest laurels in the Eternal Cause" (II. 161). Roger comes as the champion of the "creed of Christ" against "the creed of Mahomet." It is true that Roger extorted from the Pope the title of perpetual and hereditary Legate of the Holy See, and the right to wear the mitre and the dalmatic; but, when we find that Rome was pillaged by Roger's Moslem levies, that a descendant of Roger led his Saracens against the Pope, that Turks fought against Venice under the banner of St. Peter, and that the Greek Emperor Alexius enlisted several thousand Turks to fight against Robert Guiscard, the "Eternal Strife," it must be admitted, seems to have got somewhat mixed. And, when we find the hereditary Legate of the Holy See, clad in mitre and dalmatic, discussing ethics or science with Moslem Doctors, or posing as an Oriental sultan in his seraglio, surrounded by eunuchs and odalisques, it becomes difficult to decide what is light and what is darkness in the "Eternal Cause" of which Roger is the laureate champion.

ISAAC TAYLOR.

A Light Load. By Dollie Radford. (Elkin Mathews.)

UNDER the prettily and whimsically modest title of *A Light Load* Mrs. Radford has published a little book of poems, only sixty-four pages in length—a tiny, fragile load, indeed, but not less exquisite than it is unsubstantial. It is a book of songs, and the songs are full of instinctive music, which soars naturally. They have the choice, unsought felicity of a nature essentially lyrical. Always finished in style, with the distinction which can never be acquired, they have almost an air of impromptu, and one might imagine the writer to be little conscious of the process by which they have come to be so finished. With certain delicate, remote echoes of the poets who have written the most haunting lyrics—of Heine, of Tennyson—they have the originality of a single temperament, of

which one feels they are the direct outcome, the spontaneous, sincere expression. And this temperament, emotional as it is, has attained to see life steadily, to accept the hours of joy and of sadness without extravagant outcry. There is a restraint, a sense of measure, in the expression of varying moods, which gives a singular charm to these really passionate and deeply-felt lyrics. In the lines placed by way of dedication at the beginning—lines which any poet might be proud to have written—there is a thrill of profound emotion which comes with all the stronger effect on account of the strenuous quietness of the lines in which it is expressed:

"The love within my heart for thee
Before the world was had its birth,
It is the part God gives to me
Of the great wisdom of the earth."

These four lines seem to have something final about them—seem to say concerning the supreme devotion, the sacrament and worship of love, all that needs to be said. Something of the same fineness of appropriate expression occurs again and again, in something the same inevitable way, in many parts of the book. Here are some lines which have not a little of Wordsworth's "natural magic" of feeling and style—the perfect communion with Nature bringing with it the perfect expression:—

"Upon your brow the great wise trees
Will breathe, and something sweet
Will reach you from the fragrant grass
You press beneath your feet,
And some fair spirit of the fields,
Peaceful and happy-eyed,
Will find a way into your heart,
I think, and there abide."

Again, in another order of emotion:

"Dear love, my pulses throb and start
To-night with longings sweet and new,
And young hopes beat within a heart
Grown old in loving you."

And yet again, in a stanza which has something curiously rare and intimate, so subtle a simplicity, and, in the last line, a touch of inexpressible magic:

"My unseen brother and sister,
Who dwell 'neath the roofs we pass,
Are you sad and weary with toil and care?
My rest is full, I have rest to spare,
I whisper it through your grass."

Here, too—to give a longer quotation—is a lyric which has again something of "natural magic":

"Amid a crown of radiant hills,
A little wood with blossoms rare
Breathes sweetly, while the young lark trills
His new-learned melody and fills
The fragrant air.

Among its boughs the fresh winds play,
And, where the spreading branches part,
The sunlight drops from spray to spray,
And seeks the ferny streams which play
Within its heart.

And there the wild bee fills his cells,
And murmurs through the golden hours,
And charmed fancies and sweet spells
Are woven in the tall bluebells
And cuckoo-flowers.

There many a mossy bank entwined
With shining leaves awaits our choice;
Come swiftly, love, my soul unbind
With thy dear looks, that it may find
Its prisoned voice."

This *Light Load*, this book of songs and snatches, so musical, so finished, so tenderly

sincere, so full of contentment in love, of delight in the flowers and birds of spring, has the charm of a gracious unity—the unity, as I have said, of a special temperament. This augurs well for the future of a very genuine poet, whose first book is already so full of exquisite accomplishment. So small a volume can scarcely be expected to conquer the attention of a public which takes its poetry unwillingly, but in big doses. It will win its way, however, I am sure, to the grateful regard of that select public within the public which really cares for poetry, and would give most opies for a perfect song.

ARTHUR SYMONS.

THREE PLEAS FOR LIBERTY.

A Plea for Liberty: an Argument Against Socialism and Socialistic Legislation. Edited by Thomas Mackay. (John Murray.)

“INTERNATIONAL SCIENTIFIC SERIES.” — *Socialism New and Old.* By W. M. Graham. (Kegan Paul & Co.)

The Eight Hours Day. By Sidney Webb and Harold Cox. (Walter Scott.)

WE have probably to wait a long time for the great work on the politics of an industrial society which shall reduce to order our confused ideas and mark plainly the path of progress. In the meantime we have to piece together our theories as best we may from occasional observation, from blue-books, and from one-sided treatises. For such as are troubled in their minds about the vexed question of state interference, it would be worth while to read one after the other the three books here grouped together. We have put Prof. Graham as the moderate man between the two extremes; but the order of reading matters little. The reader will not find in them, or in all of them together, a solution of the question—when he has read them, he may, like Lord Eldon, simply doubt; but he will at least see that the question is a very difficult one, and that is something.

In *A Plea for Liberty* Mr. Thomas Mackay (the author of a recent book on *The English Poor*, in which “the inoculation of the masses with the instincts of property” was laid down as the true line of social reform) has brought together twelve essays by twelve ardent believers in Individualism, each of whom confines himself more or less closely to a special part of the field, and whose common purpose is to show that the state touches nothing which it does not spoil. Mr. Herbert Spencer crowning the work with an introductory essay entitled “From Freedom to Bondage,” in which he renews, in a tone of gloomy infallibility, his warnings of the fatal result of abandoning the régime of contract for the régime of status. Some of the essays have a general scope; and one of these, on “The Limits of Liberty,” by Mr. Wordsworth Donisthorpe, very brightly written and showing a healthy distrust of abstract principles, serves, though perhaps undesignedly, the useful purpose of correcting the exaggeration of much of the rest of the book.

Industrial legislation, the tyranny and selfishness of state socialism in Australia, trade unionism new and old, the use of capital by the state and by the individual, free education, the housing of the working classes, the post office, free libraries, and electric lighting—those are the texts on which the various writers discourse. The design is to show by illustrations the encroachments on liberty from which we are suffering, and which in their cumulative effect mean, as the editor thinks, “the gradual and insidious advance of a dull and enervating pauperism.”

In his *Socialism New and Old*, Prof. Graham has no particular theory to push. He devotes the greater part of his work to a critical review of Socialism in its different forms, giving special attention to the Collectivist Socialism of to-day, based on Karl Marx’s theory of value; and having reached the conclusion that Universal Collectivism is an impossible cure for the evils most complained of (namely, the undue share which employing capitalists on the one hand, and landlords and other non-workers on the other hand, obtain under the present system), he proceeds to consider how far the more moderate proposals of the state Socialists are practicable, dealing with such matters as landholding, inheritance, wages, the eight hours day, and the extension of government management in the sphere of industry. Speaking very cautiously—so cautiously, indeed, that it is sometimes difficult to understand his exact position—he argues that in many ways the state can exercise a beneficial control, and may usefully extend its functions without fear that the extension will end in the slavery which Mr. Spencer predicts. Yet even if Socialism were slavery, says Prof. Graham, “it would still be a question of the comparison of the degree of slavery under the present system with that under Socialism full-blown.” In our modern communities there is no real freedom for the property-less, and by the force of the state something can be done to diminish the existing inequalities of opportunity. So that Prof. Graham also concludes with a plea for liberty.

Lastly, we have from Mr. Sidney Webb and Mr. Harold Cox a very elaborately constructed argument in favour of state restriction of the hours of labour; and we may say of their work generally that it is in many respects a valuable contribution to the literature of State Socialism, written with great ability, full of information, and grappling with the subject in a serious and practical manner. They sketch the history of the eight hours movement, discuss the economic, sanitary, and social results of an eight hours day, and deal with the different modes of obtaining it. They are in favour of its prompt introduction in government work and in the case of special industries; for the rest, they propose to apply a principle of “trade option,” giving to the majority of the workers in any trade the power to obtain a legal limitation of the hours of labour in that trade. And on what ground do they advocate this interference? Simply on this: that the liberty of some must be curtailed in order that the liberty

of others may be extended. Here also is a plea for liberty.

Which is the wisest plea is not a question for discussion in the columns of the ACADEMY; yet one may fairly protest even here against the calm assumption of Mr. Spencer and his disciples that science is manifestly on the side of Individualism, and that socialistic legislation is the outcome of foolish sentiment and hasty ignorance. What they have done is to set forth in a very forcible way the evils of interference; but they have hardly made any attempt to measure the undoubted evils of uncontrolled competition. This one-sided teaching is useful enough; but it is pamphleteering and not science. And until they show a greater readiness to look at the question in all its aspects, they cannot hope to persuade us that the balance of good is on the side of leaving social evils to settle themselves.

G. P. MACDONELL.

NEW NOVELS.

Creatures of Circumstance. By H. G. Hutchinson. In 3 vols. (Longmans.)

Jerome. By Annabel Gray. In 3 vols. (Sonnenschein.)

Wedlock and its Skeleton Key. By Hope Huntly. In 2 vols. (Sampson Low.)

Orlando Figgins, &c. By Mrs. A. Marks. (Ward & Downey.)

A New England Nun. By M. E. Wilkins. (Osgood & Co.)

Trash. By Mrs. George Blagden. (Ward & Downey.)

A Child’s Romance. By Pierre Loti. (Kegan Paul & Co.)

A Novel Novel. By Twenty Authors. (Offices of “The Gentlewoman.”)

READERS of *Creatures of Circumstance* will, it is to be feared, receive several disappointments. This is to be regretted, because the work appeals in its way to many widely diverse sympathies, and will be enjoyed—in parts—by totally different classes among the patrons of fiction. The author is a sportsman, a cricketer, and the editor of the volume on Golf in the popular “Badminton Library.” His descriptions, where they involve any reference to his favourite subjects, are delightful. Old Slocombe, the cricketing veteran and enthusiast, who was wont to declare that “my fayther was the fastest bowler in all England; he was as big round his arm as I am round my leg,” is a man whose counterpart is to be found in two out of every three village clubs in England; and no sooner do we make his acquaintance than he takes his legitimately earned place among us as a study from the life. Nor is the writer by any means an indifferent hand in the department of pure romance, so that, on the whole, his first volume is a charming one, recalling some of Whyte Melville’s happiest efforts, and raises our highest expectations. The second volume is, unfortunately, a woeful contrast. In order to get over a period of twelve months or so, while events are ripening for the conclusion of the story, we are transferred to America, and treated to a good

deal of commonplace description, which is scarcely likely to prove interesting to a generation heartily sick by this time of ranches, cowboys, and the Wild West. The character of the narrative no doubt improves considerably in the third volume, but it is spoiled by a curiously weak ending. Sybil Davies, who has married Lord Morningham in a fit of pique, and cordially detests him, has been in love with Robert Burscough, the hero, and will continue to be in love with him to the end of the chapter. No one will for a moment believe in the hysterical declaration of hers which ends the story, to the effect that all these deep-rooted feelings of a lifetime are for ever changed, in consequence of a rather cold letter written by Robert with a view of extricating himself from some of the difficulties of the situation. Nevertheless, there is plenty of good stuff in the book, and we shall welcome with pleasure another effort by the same hand, provided there is no Wild West in it.

There are all the materials of a good story in *Jerome*. The artistic young dilettante and enthusiast, hopelessly infatuated with a Parisian *prima donna* nearly twice his age, who, unknown to him, has once been the mistress of his own father; the cynical and sensitive father himself; Mr. North, the rascally family lawyer; Virginia Brooke, the half-savage Creole heiress, and a host of other characters, are all excellent in conception, and, if only they were left in peace to pursue their own devices, would evolve for themselves a sufficiently entertaining series of actions. As it is, the poor creatures are literally done to death. The author, who, somewhere or other, alludes with approval to that "condensation of thought which gives the greatest effect of narrative in a few brief phrases," exhibits in her own writings a singular lack of the faculty of condensation. Opportunity is taken to make capital out of each fresh situation; and the processes of analysis and dissection are carried to such an alarming extent, in flashy imitation of George Eliot, that no one would be more surprised than Jerome Lorimer himself, or his father Harold, or Iris, the opera-singer, at the voluminous machinery actuating their most ordinary proceedings. In the few places where Miss Gray permits herself to write with simplicity, her story is very pleasant reading; but the pages are rare which are not disfigured by tawdry mannerisms and attempts at fine writing embellished by quotations, which often result in such bathos as the following:

"Mighty Sol appeared at the dawn of day, lighting up every nook and corner with his powerful rays; but very often the great luminary of day rendered himself conspicuous by his absence, and, so far as appearance went, made himself 'more honoured in the breach than in the observance.'"

Wedlock and its Skeleton Key is to be included in the category of "novels with a purpose," though the particular breach of moral law which it denounces is scarcely of sufficient prevalence to come within reach of public indignation. Julius Vincent, a famous cabinet minister, while still in the full tide of popularity and success, suddenly

retires into private life, and shuts himself up with his two daughters in a secluded mansion on the coast of Cornwall. He has been mainly instrumental in passing the law which allows a divorced man or woman to marry again; and by a singular fatality the first woman to take advantage of the law is his own divorced wife, who marries the partner of her guilt. It is not quite apparent whether we are to understand that his retirement from public life is due to remorse consequent upon the share he has taken in the enactment of the law. But the story throughout is a commentary on the violation permitted by such law of the teaching contained in the Sermon on the Mount; and the trouble which subsequently befalls Ruby, the elder daughter, arises from the fact that her betrothed husband turns out to be a *divorcé* whose former wife is still alive. Apart from its strongly pronounced views upon this point, about which it is scarcely necessary to offer an opinion, the book contains carefully drawn characters, and is well managed as regards plot and action.

One or two fairly good collections of short tales are on our list this week. "Orlando Figgins," by Mrs. Alfred Marks, is an amusing story, and fully up to magazine mark. "Simp," the second story in the same volume, describes the solution of a difficult cipher, and scarcely calls for any comment; but "Ground up in his own Mill" and "The Ghost in the Albany" are well worth reading.

Another book of the same sort is *A New England Nun*, with which are bound up twenty-three other stories. They are all descriptive of American life of a homely type. Possibly they may be found too homely and too American to secure for their author here the high reputation which she has so quickly attained on the other side of the Atlantic; but they abound in quiet humour and neat character portraits, which suggest, without any conscious imitation, the supreme touch of Jane Austen.

Trash, a book for boys and girls, is a tale of Brittany in the last century. It is prettily told, and is sufficiently stocked with dungeons, hidden treasures, sliding panels, and other mysteries to make it amply entertaining to the readers for whom it is written.

Though there is little that will prove attractive to children in *A Child's Romance*, by the new member of the French Academy, we need hardly say that the book is a genuinely artistic production. It describes with peculiar imaginative force the inner life and emotions of a dreamy, sensitive boy, commencing from the earliest recollections of infancy, and dealing with the history of nearly fifteen years' growth. Some of these reminiscences of the confused ideas of childhood are conveyed with charming skill and exquisite pathos.

The shillingworth entitled *A Novel Novel* is chiefly remarkable for the manner of its production. The first chapter having appeared in the pages of a magazine, continuations of the story were invited from contributors, and each succeeding week a chapter was chosen from those sent in for

competition. The result has been a "literary mosaic," the work of twenty different authors all labouring independently of each other. As for the story itself, it is by no means so incoherent as might be supposed. Starting with the sudden and inexplicable disappearance of Seringa Duchess of Mowbray, on her wedding day, the narrative immediately brings us to the Continent, where we find her in the hands of the villain who calls himself her father, and who by the exercise of almost superhuman ingenuity manages for a considerable time to elude the detectives on his track. The manner in which mysteries are finally solved and due justice awarded is not beyond the bounds of possibility; and as there is plentiful use made of chloroform, drugged potions, daggers, and so forth, the work may be considered a legitimate "shocker."

JOHN BARROW ALLEN.

TWO BOOKS ON CONTINENTAL SOVEREIGNS.

The Sovereigns and Courts of Europe. By Politikos. (Fisher Unwin.) This volume contains a series of biographies of reigning European sovereigns. It is, in fact, a reprint of papers that have appeared in the *Leisure Hour*, though no allusion is made to their earlier publication. Politikos (whoever he may be) is no believer in "the divinity that doth hedge a king," but, on the other hand, he describes kings in a not unsympathetic spirit. Indeed, according to him, all the boys in Dame Europa's school are good boys—all "strive to do their duty in that exalted station of life to which they have been called." When we say all, there is one exception, one black sheep; and that is Milan, ex-king of Serbia. We are far from attempting to whitewash the Charles II. of Serbia, whose selfishness and cowardice have made him a by-word through Europe; but it hardly lies with Politikos to be severe on King Milan, when he passes so lightly over similar conduct in the late King of Holland and another monarch still alive. But the ex-king of the Balkans has offended against the *convenances* as well as against the moralities, and has been sent to Coventry by his brother sovereigns as a disgrace to their cloth. Serbia is not the only little country that has suffered through its ruler. Denmark is another case in point; but then King Christian, though a would-be despot, is a man of irreproachable private character. Therefore Politikos slurs over King Christian's unconstitutional rule by referring to the Danes as "not an easy people to govern," and to the "democratic ideas" that "have considerable vogue" in Denmark:

"It would be difficult to find upon a European throne a person more upright, excellent, and loyal, or a more perfect gentleman in manners and education than the King of Denmark."

This is all very well, but the practical man would ask, How does he transact his business of constitutional sovereign? The answer is, "Very ill." The republican historian of the future will probably have little space to dwell on the private lives of monarchs, but will be more disposed to give a word of commendation to the author of the Serb constitution than to the breaker of the Danish constitution. Politikos writes in a kindly strain of all the leading sovereigns of Europe. Of none does he write with more appreciation than of the Sultan, of none with more discrimination than of the Emperor of Germany. "Can any good thing come out of Turkey?" Politikos answers this

question in the affirmative, so far as the Sultan is concerned.

"That the present Sultan is a serious man whose entire energy and ability are devoted to the affairs of Government, the reforms he has instituted prove. That his private life resembles much more that of an English gentleman than the popular idea of an Oriental prince, is familiar to all who reside at Constantinople. Among other financial reforms, he has consistently discouraged the expenditure on the harem. He himself is practically a monogamist, and has no more legal wives than four, the number obligatory upon a Sultan, and to none does he show special favour. That his harem is nevertheless largely populated arises from the customs of his land and of his dynasty. He, personally, would be glad enough to get rid of his three hundred present spouses, who merely cost him money, and often are the causes of those palace revolutions too common in Oriental lands. But, as we all know, the force of custom is not so easily broken. Thus, on his birthday, and on twenty other days of the year, the Sultan invariably receives from his adopted mother the present of a beautiful slave; and this young lady has forthwith to be transferred to his establishment in the capacity of harem dame, with a household of her own, consisting of at least four eunuchs and six female servants, to say nothing of horses, carriages, and grooms. Multiply the number of these establishments by three hundred, and it ceases to be astonishing that the expenditure on the Sultan's Civil List should amount to £4,000,000 sterling a year. A large item in this sum represents the dowers which the Sultan pays to his slaves when he marries them to favourite officials. About one hundred are married from the palace annually, and each of them is entitled to receive £10,000. Unfortunately, the bridegroom who takes a wife from the Sultan's hands must, at his earliest convenience, make a present of a slave to keep the staff of the imperial seraglio up to its proper figure. The Sultan—those who know him affirm—loathes the whole thing; but there are too many vested interests engaged in keeping the imperial harem supplied with wives, and if the Sultan were to cashier his entire female establishment, he would certainly be deposed or murdered. Sir William White is said to have advised His Majesty to reduce his establishment by not filling up vacancies; but this is not easy, seeing that every cabinet minister and pasha of note looks to passing his daughter through the Sultan's harem as a simple means of securing her a marriage portion, with the title of *sâlidé*, which may be construed as 'princess' " (p. 15).

The article on William II., Emperor of Germany, is excellent both in tone and style. Speaking on February 20 last (since the present work left the press), the young autocrat thus addressed the Diet of Brandenburg: "Brandenburgers, your Margrave is speaking to you! Follow him through thick and thin, wherever he shall lead you." If Politikos cannot be called a follower of the Emperor "through thick and thin," he certainly ranks among his most sympathetic admirers. The following description of William II. of Germany may be taken as a happy specimen of the author's style and critical acumen:

"His psychology is certainly a curious study, and Europe watches with some little astonishment, and no little anxiety, the acts and deeds of the son of Frederick III. It cannot yet understand the abnormal mixture of contradictory qualities exhibited by his conduct, his insatiable activity, combined with a marked tendency to reverie, almost to mysticism, his extraordinary taste for military affairs, his autocracy, and, on the other hand, the passionate initiation he has taken in humanitarian and social reforms, of which the realisation seems totally irreconcilable with the existence of an autocratic and military State" (p. 160).

All who seek for European peace must join in the wish expressed by the President of the Reichstag, in proposing the Emperor's health on his last birthday; that the young Sovereign of Germany, "a captain on the bridge," may

indeed prove to be "a captain with a living consciousness of his responsibility, with a firm will and indefatigable eye, and with the strength of a soldier of God." The present work can be recommended to those who wish to study contemporary history in a pleasant form. It has some interesting illustrations, and has been well got up for publication. We have observed only one misprint, but we miss an index.

Elizabeth of Roumania. By Blanche Roosevelt. (Chapman & Hall.) This book is a study of the work and character of the Queen of Roumania, well known in the world of letters as "Carmen Sylva." Miss Roosevelt describes Roumania as

"a modern kingdom, with gas, electricity, and machinery; and nearly three thousand miles of railway, silvering mountain, and valley and metropolis; Roumania, which has joined her provinces and freed her slaves, whose capital town (Bucharest) is rightly called the Paris of the Orient; whose society is polished like the best European society" (p. 14).

The admiration of Miss Roosevelt for the royal authoress is doubtless sincere; but, if we were to judge by her "study" alone, she knows little of the interesting country of which Carmen Sylva is the queen. In the Preface, which is the most interesting portion of her book, Miss Roosevelt shows that the social triumphs of her heroine are even greater than her literary. The furtherance of home industries and the extension of national education will prove a more lasting monument to her memory even than her poems. The straggling capital of Roumania is said to cover as much ground as the capital of France; but apart from this, any likeness Bucharest may have to Paris is only in the worst features of both. Miss Roosevelt tells us that,

"after long and ardent counsels with prince, ministry, and social personages, it was decided to admit to the drawing-room every lady who had not been divorced more than once." "It was no uncommon thing to notice a lady with her third husband, the two former divorced ones being in the same room, the last having been the first divorced to marry the second, the second put away for the third, the third set aside to take back the first."

No one who has travelled in the Danubian Principalities can charge Miss Roosevelt with exaggeration. The silent king comes in for an appreciative word:

"The king knows everything, is an inveterate reader, but one never hears him speak of his knowledge or his reading tastes—rarely does he commit himself to an utterance which could in any way establish his likes or dislikes. Once touching a volume of her Poems which lay undusted on the table, the Queen remarked with a laugh, 'You see, he [the king] is proud of me and my work, but look at that—I don't believe he has ever read one of my books.'"

That the Queen of Roumania was an angel of mercy during the Russo-Turkish war is well known; but the following anecdote has not, we believe, appeared before in an English book. Many soldiers preferred death to amputation. The Princess Elizabeth thought that if she could get one soldier to submit to a surgical operation others would follow, and thus many useful lives would be saved. Accordingly, she threw herself on her knees by the bedside of an old soldier who had received a compound fracture of the leg:

"'I am not a beggar,' he said proudly; 'I'll lose my life but not my honour.'"

"'Tis true,' said the Princess, 'you are not a beggar, but I am. I have never prayed but to God,' and taking his hand she added, 'but I now supplicate you to listen to His wish and mine. Let your leg be taken off, and spare your life to your family, to your country, and to me—'

'And if I consent, *miea doamna*, what then?'

'What then!' she said joyfully rising, and seizing his hand again. 'Why, I shall give you the most beautiful cork leg that can be made in Europe; it shall work with springs, and when the war is over you shall come and dance at the palace with your sons.'

'I consent,' he said softly, 'but you must hold my hand during the operation' " (p. 96).

The larger part of the volume before us is filled by the translation of two German tales by Carmen Sylva. Miss Roosevelt can find no words too strong to express her admiration for the Queen's writings. She describes the tale entitled "In Fetters," as "the work of a master mind" and "an astonishing study." The characters are, she tells us, drawn "with a directness, naturalness, force, and simplicity beyond all praise." After such eulogy as this, we own to a painful surprise on reading the story. "In Fetters" is unnatural and revolting to the last degree. It is to be regretted that a woman of high position and blameless life should have written a tale which no self-respecting woman should read. "The Mother-in-Law" is more powerful and less painful. The scenes from Roumanian life are well given. The description of the vintage and of the snowstorm are to the life. It is pleasant reading, though a breach of the Seventh Commandment forms the pivot of its plot. It is, after all, impossible to improve on the parable of the Prodigal Son. Undiscriminating and lavish praise is not the only flaw in this book. Its language is involved and high-flown. The following rhapsody (with which our brief notice must close) is a fair sample:

"She [Carmen Sylva] is a perfect Niagara of hidden resource, and has exercised her brains, and, like an acrobat or professional trapeze performer, constant practice has prepared her to be ready at all times for the most daring deeds. She can go on, and on, and on, and there always remains the exhaustless fount of lucid and purring inspiration, the which, without proper technique, would baffle the finest genius in the world to accomplish what Her Majesty accomplishes" (p. 129).

NOTES AND NEWS.

IN correction of an erroneous announcement in a former number of the ACADEMY, we are asked to state that the Hibbert Lecturer for next year is Mr. Claude J. Montefiore, of Balliol College, Oxford; and that the subject of his lectures will be "The Hebrew Religion, its History and Development."

MESSRS. METHUEN & Co. will publish in the autumn a new volume of poems by Mr. Rudyard Kipling.

MESSRS. W. & A. K. JOHNSTON, of Edinburgh, will be the publishers of the work on Heraldry, begun by the late George Burnett, Lyon King of Arms, and completed by the Rev. John Woodward, of Montrose, which has already been announced in the ACADEMY. It deals with the subject in both ancient and modern times, and in all countries. It will be in two volumes, containing forty-eight coloured plates, eight black-and-white plates, and over 100 cuts in the text.

MESSRS. SWAN SONNENSCHN & Co. will commence next week a new series, devoted to *belles lettres*, with the issue of Mr. Herbert Baynes' *Dante and his Ideal*. The volume will contain a portrait after Giotto's fresco.

MESSRS. CASSELL & COMPANY will issue next week *Teaching in Three Continents: Personal Notes of the Educational Systems of the World*, by Mr. W. Catton Grasby. The book embodies the author's observations on the systems of education adopted in Europe, America, and Australia, and includes an introduction by Dr. Harris, the United States Commissioner of Education at Washington.

THE forthcoming work by the Hon. George Curzon on Persia will not be published till the autumn, when it will be issued in two large volumes by Messrs. Longman. The scope of the work has been extended in composition; and it will now supply a compendium of all the available knowledge about Modern Persia, containing, besides a description of the author's own travels, accounts of all the principal provinces and cities in Persia, and chapters upon the Shah, Royal Family, Ministers, Government Institutions and Reforms, Army, Revenue, Resources, Manufactures, Commerce, Roads, and Railroads. In addition, the principal ruins will be described according to the latest results of archaeological research. Finally, there will be a discussion of the political problems involved: of British and Russian policy in Persia; of the connexion of Persia with Central Asia, Afghanistan, and India; and of the probable future of the country. The Geographical Society are constructing a special map of Persia for the book, based upon the latest information; and it will further contain nearly 100 illustrations and a complete bibliography of Persian history, geography, and travel. In fact, it will aspire to be the standard work upon the country.

A SMALL but somewhat daring little work by a new writer from Australia, Mr. Arthur A. Lynch, will shortly be published by Messrs. Ward & Downey. It is entitled *Modern Authors*; and it is a proposal to establish, not canons, but certain plastic principles of criticism, to be applied in a general way to the literatures of England, France, Germany, Norway, &c. The author will be found to break away from established methods of considering the subject, and to have opened up many new paths. He is, we believe, proposing to follow up this volume with others amplifying still further his views.

A SECOND series of "Modern Men," reprinted from the *National Observer*, will be issued shortly by Mr. Edward Arnold. It contains critical sketches of Lord Tennyson, G. R. Sims, Lord Salisbury, Mr. Schnadhorst, Walt Whitman, J. G. Blaine, Caran D'Ache, George Du Maurier, Salvini, Henry Irving, Cecil Rhodes, Henry Labouchere, Lord Justice Bowen, George Lewis, Charles Gounod, Hans Richter, Leo XIII., Archdeacon Farrar, M. de Blowitz, and Mark Twain.

MESSRS. ISAAC PITMAN & SONS are about to issue in their phonetic shorthand a little volume entitled *Two Trips to India*, by Mr. T. A. Reed, giving a narrative of his professional and personal experiences during his recent visits to India as the official reporter of the Indian National Congress.

THE next volume of Mr. Elliot Stock's "Popular County Histories," to be published shortly, will be *The History of Nottinghamshire*, by Mr. Cornelius Brown.

THE new volumes of Messrs. Sonnenschein's "Social Science Series" for June will be *The Co-operative Movement*, by Miss Beatrice Potter, and *Neighbourhood Guilds*, by Dr. Stanton Coit.

MESSRS. HUTCHINSON & Co. will issue immediately *Marie Louise: the Return from Elba and the Hundred Days*, which forms the next volume of their "Famous Women of the French Court" series.

MESSRS. DIGBY & LONG have ready for immediate publication, as Volume IV. of their "Albion Library of Fiction," *A Human Spider*, by Edith Henderson.

THE next volume in the "Camelot Series" will be Rudolph Baumbach's *Tales from Wonderland*, translated by Mrs. Helen B. Dole.

OWING to its having been discovered that "A Freak of Fate" has already been adopted

as a title by another author, the Earl of Desart, whose new novel has recently been announced under that title, is going to call his book "Helen's Vow."

THE foreign refugees in the East of London form the subject of an illustrated article called "A Day in Jew Land," which will appear in *Cassell's Saturday Journal*, to be issued on Wednesday next, June 17. The particulars given are the result of a special investigation by the writer, and they throw considerable light upon the present condition and the general habits of the aliens who are in our midst.

MESSRS. SWAN SONNENSCHN & Co. have been appointed agents for the sale of the publications of the American Economic Association.

THE Jubilee of Cheltenham College is to be celebrated during the last week of the present month. After the prize distribution on Friday, June 26, a meeting will be held to inaugurate a movement for a jubilee memorial (to take the form of a new chapel), and in the evening the Old Cheltonian dinner will be held. Sir Henry James will preside, and the Archbishop of Dublin, Bishop Barry, John Morley, &c., have promised to attend. During the week four representations of the "Birds" of Aristophanes will be given.

THE annual conversazione of the Society of Arts will be held at the South Kensington Museum on Wednesday next, June 17.

THE Académie des Inscriptions has awarded the prix Bordin to M. Samuel Berger, for his treatise on the efforts made during the Carlovingian period to revise the text of the Latin Bible.

SEVERAL interesting leaflets connected with the English Puritan period have been added to the series of "Old South Leaflets," published by Messrs. D. C. Heath & Co., of Boston, U.S. They include the Petition of Right, presented by Parliament to King Charles in 1628, the Grand Remonstrance, the Solemn League and Covenant, the Agreement of the People, the Instrument of Government under which Cromwell began his government, and Cromwell's First Speech to his Parliament.

MESSRS. MACMILLAN have already issued a cheap edition of *He Fell Among Thieves*, the novel written jointly by Mr. D. Christie Murray and Mr. Henry Herman, which originally appeared in two volumes last February. We may also mention that Messrs. G. P. Putnam's Sons have just published a popular edition, containing the two volumes in one, of Mr. C. F. Richardson's *American Literature*, which was noticed in the ACADEMY of July 30, 1887, and February 16, 1889.

THE *Theologische Literaturzeitung*, while warmly praising the new edition of the "Variorum Bible," published last year by Messrs. Eyre & Spottiswoode, remarks that there is no work to be compared with it in Germany.

UNIVERSITY JOTTINGS.

THE name of the Hon. Samuel James Way, Chief Justice of South Australia, has been added to the list of those upon whom the honorary degree of D.C.L. is to be conferred at Oxford.

AT Cambridge, the honorary degree to be conferred on Lord Walsingham, the new High Steward, should have been described as the "complete" degree of Doctor in Law, together with the remission of all charges for fees. We may also mention that the revised Grace correctly gives M. Taine's Christian names as Hippolyte Adolphe.

THE Crewian oration at the Oxford Eneadenia this year falls to be delivered by the professor of poetry, Mr. F. T. Palgrave, who proposes to confine himself mainly to two subjects: the loss which the University has suffered by the deaths of Cardinal Newman and Dean Church; and the recent attacks on the study of Greek.

THE general board of studies at Cambridge has approved the name of Mr. J. N. Keynes for the degree of Doctor in Science. Mr. Keynes, who holds the office of university lecturer in moral science, is best known by his *Studies and Exercises in Formal Logic* (second edition, 1887).

IN Congregation at Oxford, on Tuesday, the statute authorising the establishment of a day training college for teachers in elementary schools in connexion with the University was approved by a majority of 70 votes to 29, despite the strenuous opposition of Prof. Case.

A PORTRAIT of Prof. G. F. Browne, painted by Miss K. M. Humphry, has been presented to the University of Cambridge by Sir George Humphry; and it is proposed to place it in the custody of the syndicate for local examinations and lectures, to which Prof. Browne was for so many years secretary.

We quote the following from the *Oxford Magazine*:—

"The Bodleian is, as usual, the richer for Mr. Greville Chester's return from Egypt. With his customary generosity, he has presented it with a selection of miscellaneous antiquities, ranging from a very early Coptic writing tablet, covered with wax in the Roman fashion for use with the stylus, to coins of the Abbaside Caliphs. We hope that there is some truth in the rumour which promises that the University may also become ere long the richer by a fine collection of scarabs and other early seals."

IN the same connexion we may also quote the following report of the director of the Fitzwilliam Museum at Cambridge:

"A very valuable collection of antiquities of various kinds from tombs in Egypt and elsewhere has been presented to the Fitzwilliam Museum by the Rev. Greville Chester, who on several previous occasions has been a liberal benefactor to the Museum. This last donation includes a large number of interesting objects in bronze, ivory, terra-cotta, glass, and alabaster from Tel-el-Amarnah and from tombs in Upper Egypt. Mr. Greville Chester has also presented a number of valuable coins, including a rare didrachm of Neapolis with the signature of the artist (ΔΙΟΦΑΝΟΥΣ) who engraved the die. The Museum has also acquired a bronze statuette of Aphrodite of the school of Praxiteles, dating from the second half of the fourth century B.C., which is one of the finest bronzes of this class known to exist; Mr. Greville Chester has liberally allowed the Fitzwilliam syndics to purchase this beautiful work of art at less than half its value. The Fitzwilliam Museum owes a real debt of gratitude to Mr. Greville Chester for these very important additions to its collection of classical antiquities."

THE sermon in the chapel of Mansfield College was preached last Sunday by Dr. George Macdonald, the novelist.

MR. BLACKWELL, of Oxford, was to publish at the end of this week the first number of *The Pelican Record*, conducted by members of Corpus Christi College.

WE made last week a stupid mistake—of which it would be tedious to explain the cause—about the number of resident members of Convocation at Oxford. A correspondent points out, in milder language than we deserve, that the total probably amounts to about 450; the members of Congregation, who must live within a mile and a half of Carfax, alone number 391.

VERSE.

MONA LISA—LEONARDO DA VINCI.

(The Louvre.)

HISTORIC, sidelong, implicating eyes;
 Smile on the velvet cushion of the cheek;
 Calm lips the smile leads upward; hand that lies
 Glowing and soft, the patience in its rest
 Of cruelty that waits and doth not seek
 For prey; a dusky forehead and a breast
 Where twilight touches ripeness amorously:
 Behind her, crystal rocks, a sea and skies
 Of evanescent blue on cloud and creek;
 Landscape that shines suppressive of its zest
 For those vicissitudes by which men die.

MICHAEL FIELD.

MAGAZINES AND REVIEWS.

THE *Boletín* of the Real Academia de la Historia for May opens with a valuable article by Gómez Rodríguez, "The Revolt of the Town of Arévalo justified before History." He gives an inedited diploma of Charles V., which recapitulates a series of royal charters from 1311 to 1520, authorising in the strongest possible terms the right of resistance if ever the *fuero* should be violated by the Crown. This right of resistance is expressed in many other *fueros*, but nowhere more energetically than here. José Xiqués prints an Episcopologio of the see of Ceuta, frequently correcting Gam's *Hierarchia Catholica*. Two of the bishops seem to have been of English extraction: Fray Aymar, confessor to Philippa, Queen of Portugal, daughter of John of Gaunt; and Diego de Lancaster. A narrative of archaeological explorations in the north of Palencia, by Romualdo Moro, shows what may be done by a judicious use of the spade on the old Roman sites in Spain. This article is appropriately followed by a Bull of Honorius III., and other documents by Padre F. Fita, giving the mediæval church history of the same district. These documents mark the progress of the Romish over the older Spanish rule; thirty-eight churches "cum omnibus pertinentibus suis" are assigned to the monastery of Aguilar with almost entire independence of episcopal jurisdiction. The notices include Roman and Visigoth inscriptions, and a fine Romano-Christian mosaic. The Spanish edition of the great work of the brothers Siret, *Les primeras edades del metal en el Sudeste de España*, has now appeared at Barcelona.

TWO WYKEHAMICAL BOOKS.

Winchester Commoners, 1836-1890. By Clifford W. Holgate. (Salisbury: Brown; London: Simpkin, Marshall & Co.) About three years ago, when reviewing Mr. T. F. Kirby's *Winchester Scholars*, we expressed a hope that the omission of Commoners from that register might be supplied by some patriotic Wykehamist. Though we knew it not, Mr. Holgate was already engaged on the task; and he has now brought out a first instalment, covering the period from Dr. Moberly's appointment as headmaster down to last year. His reason for beginning at the end must be accepted as adequate, though greater historical interest would undoubtedly attach to the older lists. Not to mention those who are still boys at the school, a large proportion of the others here recorded are yet of that age when their names suggest promise rather than performance; and even the earlier generations have hardly passed into the domain of history. But Mr. Holgate had practically no choice to do otherwise than he has done, if he was to present a continuous register; for, astonishing as it may sound, no lists are known to have been preserved of Commoners who entered under any headmaster before Dr. Moberly. His immediate prede-

cessors—Williams, Gabell, Goddard, and Joseph Warton—are each known to have cherished a warm affection towards the school. It is impossible that they should not have kept proper lists of the boys whom they entered; it is difficult to believe that some of these lists—none more than a century old—may not yet be discovered among their papers. In default of these official records, Mr. Holgate's materials for the earlier and more interesting period will be confined to Long Rolls—lists which were literally "rolls," printed once a year, containing, in Latin, the names of all the boys in the school, with other quaint information. The earliest Long Roll that Mr. Holgate has been able to obtain is that of 1653, and he possesses a continuous set from 1731 onwards; but between those dates he lacks the Rolls for thirty-two years. Under these circumstances, it would manifestly have been premature for him to begin at the beginning, when he might reasonably hope that additional materials of considerable value would be brought to light by means of the publication of the present volume.

It commences in January 1836, when Dr. Moberly returned as headmaster to the school at which he had himself been educated, leaving his tutorship at Balliol to be taken by A. C. Tait, afterwards Archbishop of Canterbury. He seems to have inherited 105 boys, and to have entered 19 in his first half, making a total of 124, exclusive, of course, of College. When he left, in 1867, there were probably about 170, for three tutors' houses (out of the present number of nine) had then been founded, in addition to the building known as New Commoners, which has now disappeared, or at least been converted to other purposes. But the members fluctuated greatly in Dr. Moberly's time. Taking three successive years, 1850 to 1853, we find the admissions to average only 21 per annum; whereas in 1890, the last year of which we have record, the total reaches 85. And it must be admitted that the after career of Dr. Moberly's pupils failed to equal the achievements of their predecessors. It was an earlier generation which gave Wykehamists to boast that they could point to three out of four successive Lord Chancellors, and to five members of a single cabinet, not one of whom owed his position to birth. It may be added that all of these, chancellors and ministers alike, were Commoners. But Dr. Moberly taught at least three bishops, two judges, and two privy councillors, besides a long series of headmasters and college dons, and more generals than we should have expected. Among historians may be mentioned S. R. Gardiner, G. B. Malletson, Mackenzie Walcott, and two names that it is curious to find side by side—T. G. Law and W. H. Bliss. In literature proper, Winchester has never been very conspicuous—she could never show at one time a Coleridge, a Lamb, and a Hunt; but of late she has evinced a peculiar tendency to breed editors.

To an old Wykehamist, as he turns over these memorial pages, two thoughts naturally rise to the mind. One, the more pleasant, is the persistent recurrence of familiar names, even down to the present day. In a list of some 3600 persons, the name of Smith of course takes the first place; but the Moberlys number 21, the Birleys 18, the Hills and the Williams' each 17, the Wickhams 16, the Wigrams 11 (including the present captain of "Lord's"), the Lees 10, the Awdrys and the Teales 9 each, the Bennetts 8, the Du Boulays 7, and the Forts 6. The other reflexion is not unmixed with sadness; for the elaborate researches of the editor have brought home to us the wide scattering of our old schoolfellows over the surface of the globe, and the ill-fate that has befallen some of them. To omit those who fell in the Crimea and are commemorated in the ante-chapel, Herbert Stewart (whom Dr.

Moberly permitted to enter Commoners after being superannuated from College, in order that he might play against Eton for another year) lies near the Wells of Gakdul in the Sudan desert; Moncrieff, Consul at Suakin, was one of the first victims of the same unhappy war; an elder brother of Mr. Cecil Rhodes was burnt to death in Zululand; W. A. Forbes, shortly after being appointed prosecutor to the Zoological Society, died of dysentery while exploring the Upper Niger; H. B. Urmston was killed by Afghans, "in the act of trying to save a wounded comrade"; this very year has seen the massacre of F. St. C. Grimwood in Manipur, without any slur upon his reputation; of a contemporary of his, it is recorded that he was "accidentally drowned in New Zealand, while attempting to save the life of another." "*Quæ regio in terris nostri non plena laboris?*" We should add that Mr. Holgate has given in appendices a complete series of "Lord's" rolls since 1825, collated from various sources; and also the elevens that have shot at Wimbledon.

Winchester Word-Book. Compiled by R. G. K. Wrench. (Winchester: Wells; London: Nutt.) In our judgment, somewhat too much has been made of the slang spoken at Winchester under the general title of "notions." All boys, even at a day-school, will adopt or invent a number of canting words, which rarely find their way into a dictionary, and possess little philological importance. The older the school, the greater the interest of these canting words, simply because some of them go back to an archaic stratum of non-literary speech. But while it is true that boys are the most inveterate Conservatives, of both words and customs, it is equally true that they will attach the spurious sanction of antiquity to the creations of a generation immediately preceding their own. Unless the history of a word can be traced, or its existence in past time can be confirmed, the explanation of canting terms seems to us little better than guess-work. It is otherwise when the word can be associated with an historic custom, or can be proved to have been at one time in general use.

As examples of this latter class we may take "bevers," "gomers," and "remedy." The present writer well remembers partaking of bread and beer in College Hall, as an agreeable interlude in the four hours of afternoon school on a whole schoolday. This institution was precisely the "afternoon's nunchion" of Cotgrave, and we believe that it was preserved at Eton even later than at Winchester. "Gomers" in our time was supposed to mean two very different things: (1) the large pewter dishes used for meat and potatoes; and (2) clothes for going home in, as opposed to the ordinary College dress of waistcoat and gown. As to the first, Mr. Wrench shows conclusively that it is the Hebrew Chomer, the homer or omer of the A.V. As to the second, he says (erroneously) that the word was applied to the chimney-pot hat, "probably from its gomer-like brim." But we never used it for hats, which we wore nearly every day in the week; and we derived it as—"go-homers." Of "remedy" = holiday, the popular explanation was "remi-day," from *remi-*, short for "remission." But this we ourselves never believed; and not only is the word used for holiday in Colet's statutes for St. Paul's School, but an old Wykehamist has lately found it in monkish Latin as early as 1484.

We are unable to accept Mr. Wrench's account of "end"; in our time, it was used solely of persons, not of things. Of "functure" (*sic*) our spelling was always "functor." As the phrase "order your name" is described by him as obsolete, it may be as well to add the explanation that the consequent roll drawn up by the Bible-clerk ran: "*jussu domini—nomen*

—detuli." "Hollis" = a pebble, we used to derive from the name of a traditional occupant of College Mill, over which college juniors were condemned to "splice" stones until they had become expert in the art. Of "hatch-thoke," again, Mr. Wrench writes like a Commoner. College boys will recollect that on those days they procured their breakfast at what hour they pleased from the buttery-hatch. "Harlequin" was not the wooden nucleus of a red india-rubber ball, but the nucleus of a fives-ball, which had black and white thread wound round it. The terminology of the wall game of football at Eton furnishes analogies for the two words "schitt" and "ferk"; and, indeed, we doubt generally whether Mr. Wrench has made sufficient use of the slang of other schools. It is right, however, to say that he has evidently expended much pains upon the work, and that its *format* contrasts favourably with Mr. Holgate's book.

J. S. C.

GREEK IN THE PREVIOUS EXAMINATION AT CAMBRIDGE.

ON Saturday, May 30, a meeting of the Senate was held at Cambridge for the discussion of the following Grace :

"That a syndicate be appointed to consider whether it be expedient to allow alternatives, and if so, what alternatives, for Greek in the Previous Examination, either to all students or to any classes of students other than those already exempted."

The procedure was somewhat unusual, inasmuch as the discussion was proposed before the Grace was put to the Senate. The reason of this was that the Grace had not been unanimously agreed to by the Council; and its justification may be found in the fact that the Council have now amended the Grace, by substituting the words "one of the two classical languages" for "Greek." The amended Grace will be offered to the Senate at an early Congregation at Michaelmas term; and at the same time it will be proposed to nominate a syndicate, with instructions to report to the Senate before the end of Lent term, 1892.

The discussion was opened by Dr. Peile (Master of Christ's), who traced the history of previous proposals for the relief of candidates from compulsory Greek, and adduced the proceedings at the conference of headmasters at Oxford, last December, in support of the proposal. The other speakers on the same side were—Prof. Henry Sidgwick, who doubted whether the university was justified in insisting on maintaining the study of Greek in the present artificial way in opposition to the wishes of the parents of the boys who are concerned; Sir George Humphry, who thought that amount of both Latin and Greek at present required was unworthy of the university, and suggested that an additional knowledge of Latin might be demanded as an alternative for Greek; Mr. Tilley, of King's, who thought that the university had gone too far to go back; and that it should not encourage farmers and engineers to come to Cambridge, and at the same time shut its doors against boys on modern sides who were prevented from coming because they did not know Greek; and Dr. Montagu Butler (the vice-chancellor), who pleaded on behalf of two classes of boys: (1) those to whom the study of two ancient languages was a greater burden than they were intellectually able to bear, and (2) those whose natural gifts led towards some branch of science.

The speakers on the other side included Mr. Austin-Leigh (the Provost of King's), Prof. Mayor, Prof. Jebb, Dr. Verrall, Mr. Shuck-

burgh, and Mr. J. K. Stephen—the last of whom addressed an eloquent appeal to an audience little accustomed to rhetoric.

We quote the words of Prof. Mayor, as given in the *Cambridge University Reporter*:

"I was sorry to hear the Master of Christ's speak of 'dead' languages. No one could so speak who had heard Cobet at Leyden in 1875, indignant with a scurrilous attack then lately made on Madvig by Lehrs in Ritschl's *Rheinisches Museum*, address the Dane in burning words. 'We all acknowledge you to be the prince of living scholars. *Papam te tamen non facimus; pugnabimus tecum, contendemus tecum, eoque vehementius contendemus, quo te vehementius admiramus.*' Madvig—I was sitting next to him—began his reply: 'Post Cobetum Latine loqui vereor.' Nor do I anticipate more Latin from those who bring no Greek. Cambridge for centuries tried the experiment: Erasmus tells us what slanders the monks heaped on Greek and Hebrew, when Fisher first brought them among us. Did Latin suffer? Nay, classical Latin then first arose. May the day never come when the Greek Professor, the Public Orator, and the Latin Professor shall cease to be *docti sermones utriusque lingue* and have candidates to examine alike versed in the sister tongues. As taught in schools, I confess that the languages are dead. The old scholars, Muretus, Victorius, Casaubon, Lipsius, studied the classics to draw from them the wisdom of old time, and their interest in the subject-matter only quickened their sense of the form. Now, school-boys never reach the Canaan of their hopes, the ancient world, for the wilderness of elementary helps through which they are forced to wander. A student educated, like Churchill Babington, in a learned home, or like Luard, never at any great classical school, never a candidate for classical honours, is far more likely to form a life-long study of the great philologists of the past than those who have gone through the routine of our great schools. Twenty-three years ago I dedicated to the master of Shrewsbury School a text-book, in which, following in the steps of Kidd, in his edition of Dawes, I urged the masters at least to teach their pupils the alphabet correctly. Of the seven Greek vowels, four bear in our grammars barbarian names, invented in the middle ages, utterly unknown to antiquity. I spoke to deaf ears. Again and again I have tested candidates for University scholarships and never met with one who knew his Greek alphabet. Of all Cambridge graduates Dr. Scrivener probably has collated most ancient Greek MSS., and I will give my hand to be cut off in, in the oldest, he found the form *ζυγχα*. Yet even he, prejudiced by early training, notes as a wonder on Revel i. 8 that Lachmann, Tischendorf, and Tregelles read *ζυφα* (at ζ). Certainly a boy whose father would read with him Latin for two years, at the rate of fifty pages a day, would by the end of that time peruse an easy book fluently at sight—a power which most who have gone through our schools never acquire. It is said that of the 20,000 boys in secondary schools 10,000 do not learn Greek. It must not be forgotten that a very large proportion of those 10,000 never intend to enter at the university. And for those who do, why should they not, like Prof. Adams, learn enough Greek to pass the Previous Examination without damage to his other studies? Far from thinking a little Greek useless, I only wish that I had been compelled as a child to learn a little Hebrew: the mere acquiring a new character is a great difficulty to me. Mr. Pryke, the headmaster of Lancaster School, feels very strongly the danger which threatens all smaller schools, if the universities cease to require Greek of all students. Eton and Harrow may for a time maintain the study, but the local pressure on smaller schools will choke it altogether. Mention has been made of the requirements of biologists. I hold in my hand a dedication which I have written to one who, I am told, is the last survivor of medical Hellenists in England, of Cains, Linaere, Clement, Lister, Freund, Sloane, Mead, Askew, Francis Adams; I mean, Dr. Greenhill. I say of him '*medicis nostratibus alia omnia agentibus, tantum non obiectam eruditam famam corporis suo iure, sua strenuus opera excolare intendit.*' May our Cambridge school of medicine never forget that all science and all art came to us from Greece."

CORRESPONDENCE.

A WARNING TO LIBRARIANS AND BOOK-COLLECTORS.

Venice: June 1, 1891.

Some time ago I received from abroad the offer of a copy of a Livy, which was stated to have been printed at Venice by Johannes de Spira in 1469. I replied that such an edition could not exist; since the terms of the Privilegium granted by the government of Venice on September 18, 1469, to that printer, and likewise the colophon of the *St. Augustinus de Civitate Dei* (1470), printed by Vindelino, brother of Johannes, exclude it altogether. However, as my correspondent insisted, saying that the book had a special colophon establishing its authenticity, I allowed it to be sent to me for examination.

As soon as I had the book in my hands, I saw that the colophon was identical with that of the *Epistolæ ad Familiares* of Cicero (1469), printed by Johannes de Spira—"Primus in Adriacæ formis . . . &c.," one or two words in the last line only having been changed. It was easy to perceive that this colophon had been reproduced by means of types well imitated from those of Johannes, and then placed at the foot of the last leaf *tergo* of the first volume of the well-known edition of Livy (1470), printed by Vindelinius.

I feel it, therefore, my duty to bring these facts to the notice of librarians and others interested in books, in case the volume should be again put into the market.

CARLO CASTELLANI,

Prefect of the Biblioteca di San Marco.

"THE GREEK MSS. IN THE VATICAN."

[With reference to Prof. Nestle's letter, under the above heading, in the ACADEMY of May 30, the Abbé Batiffol has addressed the following reply to Prof. Sanday, with a request for its publication.]

Paris: June 2, 1891.

Je m'empresse de vous remercier de m'avoir communiqué la note de M. le prof. Nestle. Voici ma réponse:

Si M. Nestle veut bien ouvrir le volume publié par MM. Müntz et Fabre, *La Bibliothèque du Vatican au XVI^e Siècle* (Paris, 1887), il trouvera imprimé (pp. 159-250) l'inventaire des manuscrits latins et grecs de la bibliothèque vaticane rédigé en 1475, sous le pape Sixte IV.

Platina entre en charge et signe l'inventaire des manuscrits que l'on confie à sa garde:

"Ego Platina Sanctissimi Domini nostri Sixti Divina Providentia Papæ IIII Familiaris et Bibliothecarius libros in hoc libro annotatos et in ordinem ac numerum redactos pollicor me conservaturum, redditurumque semper rationem bene atque integre gubernatæ Bibliothecæ. Die xviij Junii 1475" (Müntz et Fabre, p. 249).

Le texte de cet inventaire de 1475 est tiré du MS. Vaticanus Lat. 3954.

J'y vois énumérés d'abord les manuscrits latins au nombre de 1775 (p. 225); à la suite les manuscrits grecs au nombre de 770 (p. 249). Un article est consacré aux manuscrits grecs de la Bible, "*Testamentum Antiquum et Novum*" (p. 244), au nombre de 57. Et parmi ces manuscrits grecs, je n'en vois qu'un qui soit donné comme renfermant la Bible entière. C'est le onzième numéro de la liste: "*Biblia. ex membr. in rubeo*"; c'est à savoir: "*Bible de parehemin à couverture rouge.*"

Nous sommes bien loin de ce qu'a lu Verecillone: "*Biblia in tribus columnis ex membrana*"! Et je serai très reconnaissant à M. le prof. Nestle de s'informer et de nous dire d'où provient cette indication si précieuse, bien convaincu qu'il ne voudra pas s'en tenir au renseignement de seconde main qu'il m'oppose.

PIERRE BATIFFOL.

Post scriptum.—Un article spécial de l'inventaire de 1475 (Müntz et Fabre, pp. 191-193) est ainsi intitulé: "*Libri ecclesiastici repositi in primo hanc in capsâ ipsius quia pretiosi sunt ex serico coperti xlv.*" Il y a, parmi ces manuscrits précieux du premier banc, un "*Evangelistarium Graecum, ex membr. cum tabulis argenteis historiatis,*" etc.; un "*Liber Psalmorum in Graeco, ex membr. in serico salvatico cum tribus seraturis.*" Nulle mention de la "*Biblia in tribus columnis*" mentionnée par Verecillone, "*nel primo banco.*"

THE LITHUANIAN BIBLE OF 1660.

London: June 8, 1891.

In the recent correspondence in the ACADEMY with regard to the lost Lithuanian Bible of 1660,

it seems to have escaped notice that there exists an edition of the London "*Oratio Dominica*," which refers to the existence of this Bible, earlier than 1700. The title of this earlier edition is "*Orationis Dominicae Versiones fermæ Centum.*" There is no imprint or date; but as my copy has a MS. inscription on the title-page recording the gift of the book in April, 1687, and as one of the marginal authorities quoted is 1674, it was evidently issued between those two dates. In this edition, which appears manifestly to have been collected and arranged by the same hand as that which subsequently issued the London edition of 1700 (which, by the way, frankly describes itself as *editio novissima*), the Lithuanian version is given at p. 56, precisely as it appears in the 1700 edition, and with the same marginal reference, viz., "Wilk. n. 35, Conf. Bibl. Lithuan. Lond. 1660."

Chamberlayne's "*Oratio Dominica*" of 1715, as has probably been observed, does not give the same version as the London editor, and adds the Doxology. There is no marginal authority quoted; but Dr. David Wilkins in his preface says it was contributed by the Bishop of Carlisle "*ex Wolfgangi Lazii Lib. de migrat. Gent.*"

Reference has been made to a prospectus of the Lithuanian Bible in 1659. Is it not possible that the Lord's Prayer may have been attached to this document by way of specimen?

T. B. R.

HARLEIAN MS. 7653.

Bardwell Rectory, Bury St. Edmunds: June 10, 1891.

The first verse of the "*Te Deum*" in this MS. runs thus:

"*Te dominum confitemur, te deum laudamus.*"

The first three words were omitted in my letter through an oversight. The first two words and part of the third word are on fol. 5 b of the MS.

F. E. WARREN.

APPOINTMENTS FOR NEXT WEEK.

SUNDAY, June 17, 7.30 p.m. Ethical: "Self-Development and Self-Surrender," by Mrs. Bryant.

MONDAY, June 15, 2.30 p.m. Geographical: Anniversary Meeting.

TUESDAY, June 16, 7.45 p.m. Statistical: "Results of the Recent Census and Recent Death-Rates in the Largest English Towns," by Mr. Noel A. Humphreys.

8.30 p.m. Zoological: "A Contribution to the Knowledge of the Races of *Bana esculenta* and their Geographical Distribution," by Mr. G. A. Boulenger; "Notes on Ungulates," by Mr. Oldfield Thomas; "A Collection of Marine Shells from Aden, with some Remarks upon the Relationship of the Molluscan Fauna of the Red Sea and the Mediterranean," by Mr. Edgar A. Smith.

WEDNESDAY, June 17, 4 p.m. Royal Institution: Faraday Commemorative Lecture, by Lord Rayleigh.

8 p.m. Microscopical.

9 p.m. Royal Society: Conversazione.

9 p.m. Society of Arts: Conversazione.

THURSDAY, June 18, 5 p.m. Zoological: "The Animals Living in the Society's Gardens," IV., by Mr. F. E. Beddard.

8 p.m. Linnean: "An Investigation into the True Nature of Callus," II., and "The Alleged Existence of Protein in the Walls of Vegetable Cells, and the Microscopical Detection of Glucosides therein," I., by Mr. Spencer Moore.

8 p.m. Chemical: "The Action of Sulphuric Acid on Dehydracetic Acid," by Mr. N. Collie; "The Refractive Power of Certain Organic Compounds at Different Temperatures," by Dr. W. H. Perkin.

8.30 p.m. Antiquaries.

8.30 p.m. Historical: "France and Cromwell," by Mr. Herbert Haines.

SCIENCE.

Greek Lyric Poetry: a Complete Collection of the Surviving Passages from the Greek Song-Writers. Arranged with Prefatory Articles, Introductory Matter, and Commentary. By G. S. Farnell. (Longmans.)

WHEN we contemplate the remains of the lyric poetry of Greece, we stand as it were

on the shore of a dark, unfathomable sea. At our feet, wave-worn and disfigured, lies the wreckage of a golden argosy, here a clasped bracelet, and there a broken tiara. We gather up these exquisite fragments with mingled admiration and despair, so perfect is the workmanship of what survives, and yet, alas! so scanty the survival.

"Our knowledge of Greek poetry in general," says Mr. Farnell in his Preface, with absolute truth, "is almost as limited, as if in our own language we read Milton and the Elizabethan dramatists, but knew nothing, or almost nothing, of the great song writers contemporary with them, or of the lyrics of Shelley, Keats, and Tennyson in our own century."

Take Sappho alone, the immortal poetess, whose fame rests on two more or less complete odes, some forty readable fragments, and a small quantity of diamond dust in the shape of half lines and single epithets. What a loss is here! It is as though there existed in the case of Burns but a poor couple of his passionate lyrics, such as "*Mary Morrison*" or "*Ae fond kiss, and then we sever.*" two-score detached stanzas, as for example:

"My love is like a red, red rose
That's newly sprung in June,
My love is like the melody
That's sweetly played in tune,"

and a brief glossary of delicate flower-phrases, or what Lord Tennyson describes as "lonely words," like "*the milk-white hawthorn bush*" or "*the wimpling burn.*" To those who know and love the Scotch poet, no statement of what we lose by the well-nigh total eclipse of Sappho's genius could, we imagine, be more eloquent than this.

Mr. Farnell was well-advised when he determined to present the "surviving passages" of the Greek lyrics in a connected and convenient form. Of course Bergk had done the work with Teutonic thoroughness before him, and the monumental *Poetae Lyrici* of that editor still remains unshaken in its pre-eminence. But Mr. Farnell's book, in which he aims "at including everything that can fairly be regarded as readable," while he secures completeness by relegating the corrupter fragments and single phrases and epithets to the seclusion of an Appendix, will hold a distinct place of its own. The selection seems to us to have been, on the whole, judiciously made; and we do not quarrel with Mr. Farnell for omitting the Epinikian Odes of Pindar, which, as he reasonably says, from their having "by great good fortune," come down to us in an almost complete form, require an entirely separate treatment. The value of the book is also enhanced by the Commentary, which, so far as we have been able to test it, is scholarly and full without being diffuse, and by the various essays prefixed to it, which deal with Greek lyric poetry from every possible point of view in a careful, if somewhat frigid, style. We should have been glad if Mr. Farnell had seen his way towards giving a prose translation of the whole text, which would have been a boon to those whose originally slight, or gradually waning, knowledge of the language debars them from the pleasure of reading Sappho or

Simonides in the Greek. Perhaps, however, he may meditate undertaking this addition to his task in a second volume; and if so, we can promise him, so far as we are concerned, that it would obtain a favourable reception.

To come to details, we have in the several introductory articles much laboriously compiled information on the subject of the lyric poetry of Greece, its rise and decline, and its salient characteristics at different periods. The essays on the dance and on the musical accompaniment of Greek songs are particularly interesting, as relating to matters which are professedly obscure. In speaking of the latter, Mr. Farnell does not, indeed, attempt to set at rest the vexed questions raised by Chappell and other writers; but he makes several acute remarks on the growing importance of music at the expense of poetry, which marked the later epoch of Greek art. With regard to the former, as possessing originally a sacred significance, though in our own times associated with less solemn occasions, Mr. Farnell draws attention to the curious survival seen in the dance of choristers before the high altar at Seville, and in the observances of the *Springende Heiligen* of Luxemburg. He might also have instanced the dancing dervishes of the East, and that strange community, the Shakers of America, to say nothing of the "corybantic Christians" of the Salvation Army. On metre and dialect Mr. Farnell writes clearly and with knowledge. He is a votary of the "time-honoured theory," as he calls it, "of the composite nature" of the lyric dialect; but he gives some prominence to an article by Dr. A. Führer, in which, mainly on a *pricri* grounds, that theory is controverted, and it is asserted that the poets, while using epic forms, employed with this exception their own local dialect. We quite agree with him, however, when he says that scarcely any of the great choral poets could be called local poets at all. He instances Pindar, whose verse "found favour at cities so diverse as Cyrene, Syracuse, and Athens," which it would hardly have done if, instead of possessing an eclectic character, it had been written in pure Theban.

No part of Mr. Farnell's book is more instructive than the Appendix, which he devotes to the later developments of lyric poetry in the hands of the dithyrambists. The subject is doubtless handled as fully as was compatible with the space at his command; but we should like to have more information upon it. The gradual divorce of sound from sense, and the corresponding growth of what Plato calls *ψαλη καθάρσις*, struck the orthodox mind as giving evidence of mere decay. Yet in spite of these philosophic strictures, the emancipation of music from the trammels of verse left it free to take a far loftier place among the arts, by virtue of the very vagueness and aloofness of the sensations that it excites.

Turning to the authors themselves, we find selections from Archilochus, Terpander, Tyrtaeus, Aleman (the less corrupt part of whose Parthenion, discovered in Egypt in 1855, which, *pax* Mr. Farnell, can scarcely be called "recently," is given entire), Alcaeus, Sappho, Stesichorus, Ibycus, Anacreon, Simonides, Timocreon, and

Bacchylides. There are also the detached writings of Pindar, and a number of skolia and other slighter productions by various hands. The scanty details relating to the lives of the poets are neatly summarised in short and well-written biographies. In point of criticism, Mr. Farnell seems to us a little hard upon Alcaeus when he says that he thinks "modern readers will fail to find in his fragments poetry of the highest order." The small quantity of his work that remains scarcely justifies any generalisation; but we find the highest qualities, if not elsewhere, at all events in the stasiotikon beginning *ἀσυνέτημι τῶν ἀνέμων στάσις*; and what could be more beautiful than the line—

ἰόπλοκ' ἄγνα μελλίχμοιδα Σάπφοι—

even if the other half of the couplet (as put together by Bergk) must be ascribed to a different hand? Of Sappho herself Mr. Farnell writes temperately and; generously and as regards the question of her private morality, and the wranglings of Wolcker and Colonel Mure over a somewhat unsavoury subject, he keeps a dignified silence. "What concerns us in this and similar instances is not so much the morality of the writer's sentiments as their poetic depth and value." In that dictum we heartily and unaffectedly concur.

The book is adorned by five wood-cuts from Greek vase-paintings bearing upon the text, of which the third, depicting Eros as described in the lyric poets, is perhaps the most interesting. For so comprehensive a work it is remarkably free from misprints. Outside the list of *corrigenda* we have only noted one, though doubtless others exist. The skolion of Pindar to Theoxenos of Tenedos should be numbered ix., not xi. The indexes, both of subjects and Greek words and phrases, are good and complete.

H. F. WILSON.

SOME BOOKS ON GEOMETRY.

Euclid's Elements of Geometry. Books III., IV. By H. M. Taylor. (Cambridge: Pitt Press.)

Text-Book of Geometrical Deductions. Book I. By J. Blaikie and W. Thomson. (Longmans.)

Foundations of Geometry. By E. T. Dixon. (Deighton, Bell & Co.)

THE second instalment of Mr. Taylor's edition of Euclid's *Elements* contains the third and fourth Books. It is generally acknowledged by teachers of geometry that the third is for learners the easiest of Euclid's Books, and at the same time the least satisfactory in its treatment. It is probable that Mr. Taylor agrees with the latter part of this opinion, for he has made considerable change in the arrangement of the earlier propositions, and in the statement of some of the definitions. For example, the first and second of Euclid's propositions are the fifth and sixth of Mr. Taylor's; Euclid's seventh and eighth are broken up into four parts, and three or four others are relegated to the rank of corollaries. These changes, while they may cause some embarrassment to teachers brought up to consider Euclid's sequence as sacred, will cause none, of course, to those who read Euclid for the first time; and it must be said that they are all, or nearly all, improvements. To signalise only one of the benefits resulting from the rearrangement, young learners have no longer to

encounter in the diagrams any of those misshapen circles which at once offend their eye, and lead them to fancy that geometers are trifling with their notions of what a circle is. It is also to be noted that Mr. Taylor is more precise in his terminology than Euclid and most of Euclid's editors; the word "circle," for instance, he uses uniformly to denote the curved line, and not the figure bounded by it. From the thirteenth proposition to the end of the Book the received text has not been much altered except in four places—the eighteenth proposition, the twenty-seventh, the twenty-ninth, and the thirty-sixth. The fourth Book, with one or two slight changes, is substantially as Euclid left it. Throughout the volume useful notes and corollaries are appended to several of the propositions, and some additional theorems are inserted. The important theorem known as Ptolemy's, which Robert Simson incorporated in his edition as VI. D, Mr. Taylor says *he* has been bold enough to insert as proposition 37 B of Book III., prefacing it by another theorem which appears as 37 A. In this rearrangement Mr. Taylor has the countenance of Thomas Simpson, in whose *Elements of Plane Geometry* (1747) the theorem holds a corresponding place. The appendix to the third Book gives the simpler properties of pole and polar, radical axis, and the theorems of the nine-point circle, and the pedal or Wallace line.

The Text-Book of Geometrical Deductions, by Messrs. Blaikie and Thomson, forms a useful supplement to any of the numerous editions of Euclid's *Elements* which have been published for school purposes. Its aim is to provide a method by which the art of solving geometrical deductions or riders may be systematically taught. It consists of two chapters, the first on theorems, the second on problems. These chapters are divided into sections; and corresponding to each section in the first chapter there is indicated the amount of bookwork assumed to be known before the deductions given in the section can be solved. Each section begins with a deduction, often a standard theorem which does not occur in Euclid, whose solution is developed at length; this is followed by other deductions, to which diagrams and hints for solution are supplied, and a few deductions are left to the unaided efforts of the learner. In the second chapter the bookwork necessary for the solution of the problems is not specified, but general methods (which may be indicated by the phrases, intersection of loci, analysis and synthesis, reduction to a simpler case) are explained by the help of illustrative examples. There is an appendix, consisting of the enunciations of the propositions and corollaries of Euclid's first Book and references to the standard theorems. The book contains more than 500 exercises, which are carefully selected and graduated; it abounds in excellent diagrams, and, regard being had to the extent of ground it covers, is the best we have on the subject.

In the preface to his *Foundations of Geometry*, Mr. Dixon states that he believes the system he has set forth to be logically sound, and that consequently the more it is discussed, the more firmly will it become established. He therefore invites criticism of his views, and specifies certain questions for his opponents in argument to consider categorically. He also states that as his book is intended for the study of geometers, he has not entered upon the question whether beginners could readily be brought to understand it or not, but he does not doubt that it could be drummed into the head of the average schoolboy as easily as Euclid. In this opinion few teachers of geometry will, we suspect, be found to concur. As to the logical soundness of the views set

forth, it is not so easy to form an opinion. Mr. Dixon has raised a host of controversial points, philosophical as well as mathematical; and any adequate discussion of them would require a pamphlet instead of a few lines. It must suffice to say that this attempt to relay the foundations of geometry is a serious one, the outcome of much thought and acuteness, and worthy of attentive consideration. Most of the remarks which follow are not a critical discussion of Mr. Dixon's views, but merely a succinct statement of some of them, as far as possible in his own words.

The book consists of three parts: (1) On the logical status of the science of geometry; (2) a subjective theory of geometry deduced from the two fundamental concepts, position and direction; (3) on the applicability of the foregoing subjective geometry to the geometry of material space. After criticising in some detail Euclid's definitions and axioms, Mr. Dixon affirms that the fundamental misconception of Euclid and of nearly all subsequent geometers is that they regard the conception of space as a fundamental attribute of the human mind. In Mr. Dixon's view the conception of space is not a fundamental one at all, but those of position and direction are more fundamental than it. What explanation, then, can be given of position and direction? Here we come to Part II.

"Implicit definition of position:

"(a) A position may be conceived to be indicated by a portion of matter, called a point, which is so small that for the purpose in hand variations of position within it may be neglected.

"(b) But a position is not the same thing as a point, for a point may be conceived to move, that is, to change its position, whereas to talk of a position as moving, is a contradiction in terms.

"Implicit definition of direction:

"(a) A direction may be conceived to be indicated by naming two points, as the direction from one to the other.

"(b) If a point move from a given position constantly in a given direction, there is only one path or series of positions along which it can pass.

"(c) If the direction from A to B is the same as the direction from B to C, that from A to C is also that same direction.

"(d) If two untermated straight lines which intersect are each intersected by a third straight line in two separate points, any untermated straight line extending in the same direction as this last one, which intersects one of the two former, shall also intersect the other.

Mr. Dixon then explains what he means by dependent and independent directions, and by help of these terms gives definitions of line, surface, space. Parallel he defines as equivalent to extending in the same direction. It will thus be seen that direction holds a prominent place in Mr. Dixon's system; and if readers are satisfied with his definition of it, Mr. Dixon may be said to have gained his case. Part II. consists of two books, the first, containing 23 propositions, on straight lines and angles, the second, containing 17 propositions, on planes and space. It is a distinctive feature of Mr. Dixon's method that he does not separate the text into plane and solid geometry. Of these 40 propositions, 26 have their equivalents in the first or the eleventh Book of Euclid, the others have not.

In the first chapter of Part III., Mr. Dixon says that a rooted prejudice exists, not only among the ordinary public, but even more among geometers, against what they call geometry of four dimensions, but which he calls geometry of four independent directions. "If therefore," he adds, "any of my readers is of opinion" that a fourth dimension

is *a priori* inconceivable, the remainder of this book is not for him; if he reads it and thinks it transcendental folly, let him at least not presume to criticise what, by his own confession, he does not understand."

J. S. MACKAY.

CORRESPONDENCE.

NOTES ON SOME PĀLI AND JAINA-PRĀKRIT WORDS.

Deobam School, Essex.

(1) *Tādin* = *tāyin*.

"Uvānīyatarassa *tāino* bhayamānassa vivik-kam āsanam
sāmāyām āhu tassa jam jo appāna bhaena
dānisae?"

(Sūyagadāngasutta i. 2, 3, § 17, p. 132.)

Of this very excellent holy sage, frequenting a sequestered seat, all declare the virtuous conduct, who then would show himself with fear (in his presence, since there is no harm in him?)

Tāino is explained in the commentary by "*tāyinaḥ parātmopakārināḥ trāyino vā.*"

Sāmāyika (= *sāmāyika*) is glossed by *cāritra*. Dr. Hoernle, who renders it by "inward peace," has a long note on this word in the *Uvāsagadasāo* (i. 5, 3, p. 31). He says that the logical outcome of the scholiast's explanation of the term "is that *sāmāyika* is the same as *saṃatva* or *sāmya*. . . Etymologically the word is always derived by means of the *vriddhi* suffix *ika* from the compound of *sama* ('equal') and *āyu* ('gain, profit')." *Sāmāyika* appears, however, to be a derivative of *saṃaya* ("religious obligation"). The noun *sāmāyika* does not occur in Pāli in the sense of *cāritra*; but we have the use of an adjective formed (by double *vriddhi*) from *saṃaya* in Milinda-pañha (p. 305): "*Sāmāyikam maraṇam upagato*" = "samaye maraṇam upagato."

"Kujāe aparāḷie* jaho akkhehim kusalehim
divayam †
kaḍam evam gahāyano kaḷim no tiyam no ceva
dāvaram †
Evam loḡammi tāinā buie je dhamme anut-tare
tam giṇha hiyam ti uttamam kaḍam iva sesa
vahiya paṃdie."

(Ib. i. 2, 3, vv. 22, 23, p. 136.)

As a gambler, not beaten (at play), playing skilfully with dice, having thus got the lucky throw, (takes) no tray nor deuce, so do thou take that highest good, the law declared by the all-knowing sage to be unrivalled in the world, just as the clever (dicer takes) the winning die, rejecting all else.

The commentators explain *tāinā* by "*tāyinaḥ trāyivā vā*," as well as by *sarvajñena*.

The form *tāyin* occurs in Buddhist Sanskrit; and Prof. Kern has pointed out that the word is common in the "Lotus." He was the first to see its radical connexion with the Pāli *tādin*. "As *tāyana* (Pāṇini i. 3, 38) is explained to have the meaning of thriving, prospering, it may be supposed that *tāyin*, on the strength of its derivation, denotes thriving, prosperous, mighty, holy, as well as making prosperous, blessing, sanctifying. Burnouf derives it from

* Cf. Pāli akkha-parājita.

† Cf. Pāli dibbati and jūtam kīṭṭum (Jāt. iii., p. 188).

‡ The metre of this line is faulty; as *kaḍam* signifies "the lucky die" marked with four spots (cataska), *kaḷim*, "the unlucky die," is quite inadmissible here (cf. Pāli kataggaha and kalaggaha in *Journal of Pāli Text Society* for 1887, p. 159; see also Majjhima Nikāya, i., pp. 403, 407). The last line of this gāthā is incorrect: but it cannot be amended without leaving out *sesa(m) pahāya* (a mere gloss?), and reading *kaḍam se iva paṃdie*.

§ The commentators say he rejects the *trika*, *dvika*, and *ekaka*.

a supposed Sanskrit *trāyin*, and translates it by 'protector.' It is indeed by no means unlikely that *tāyin* was used synonymously with 'nātha' or 'nāyaka'; but it seems not necessary to derive it from *trāyate*" (see *Saddharmā-pundarika*, S. B. E., p. 25).

Prof. Kern has also noticed the false reading *tāpin* for "*tāyin*" which has found its way into some Sanskrit dictionaries. In *Divyāvadāna*, p. 392, l. 4, we find *tāpitā* glossed in the Index of Words "roused," "converted," as if it were the passive participle of the causal of *tap*:

"Udrakārādakā nāma rishayosmin tapovane
adhigatācāryasattvena puruṣhendrena *tā-pitā*."

We ought to read *tāyina*; for *tāpitā* is not in adjectival relation to the subject of the sentence; and in Buddhist phraseology *tāpita* never has the meaning of "roused" or "converted."

The prose passage has the following:

"Asmin praḍeḷe Bodhisattvo rājñā Bimbisārenārddharājyenopanimantritaḥ | asmin praḍeḷe Arāḍodrakam abhigataḥ."

Here we see that *adhigata* = *abhigata*, and that *tāyina* is to be taken with *ācāryasattvena* and *puruṣhendrena*.

The Buddhist-Sanskrit *tāyin* may be referred to a root *tāy* (1) extender, auger; (2) tueri, servare, which seems related to the root *tā*, "to stretch."

But *tāyin* may be a prakritised form of an original *tādin*. Childers derives the Pāli *tādi* from Sanskrit *tādriḥ*, which, however, does not give us a stem *tādin*. He thinks the primary meaning was "such," "like that," then "like that Buddha," holy, tranquil, firm. The form *tādi* (gen. *tādino*) is old (see Thera Gāthā, 878, 905, 1067), and cannot well be connected with *tādriḥ*, either in form or meaning. There seems to have been in Pāli two forms, *tādi* and *tādi* (= "*tādin*"), the latter of which has puzzled the commentators. (See Thera Gāthā, 1096.)

As the Jaina-prākṛit *tāyin* is probably connected with *√tā*, so *tādin* may be derived from *tād*, an extension of the same root. Vanček connects with *√tad* (= "tan"), the Doric *ἐν-τὰδες* (Theoc. 7, 42), "*intente*, sorgfaltig, mit Vorbedacht, absichtlich."

R. MORRIS.

SCIENCE NOTES.

Two lectures in commemoration of the birth of Michael Faraday will be delivered this month at the Royal Institution: the first, by Lord Raleigh, on Wednesday next, June 17, at 4 p.m., when the Prince of Wales has promised to be present; the second, by Prof. Dewar, on Friday, June 26, at 9 p.m.

At the meeting of the Royal Statistical Society, to be held on Tuesday next, June 16, at 7.45 p.m., in the lecture-room of the Museum of Practical Geology, Jermyn-street; Mr. Noel A. Humphreys, secretary of the Census office, will read a paper on "Results of the Recent Census, and Recent Death-rates in the Largest English Towns."

Pantobiblon: International Bibliographical Review of the World's Scientific Literature. Edited by A. Kersha. (St. Petersburg: Fontanka; London: Sonnenschein.) This is the first number of a monthly periodical, conducted by a Russian civil engineer, the aim of which is to supply a classified bibliography of publications concerned with the applied sciences in all the countries of the world. The first number contains the titles of about 1200 books, arranged under twenty-nine different headings; reviews of about 80 more important books; and a summary of the contents of 270 periodicals. The whole forms a volume of about 300 pages, closely printed in double columns. Mr. Kersha

* Prof. Cayley, in his presidential address to the British Association, remarks: "It may be at once admitted that we cannot conceive of a fourth dimension of space."

has paid England the compliment of giving both his title-page and his preface in English, and in English alone; the headings are in Russian, English, French, and German; but the main contents show examples of all the languages of Europe. Whether such an enterprise is capable of being continued on such a comprehensive scale month by month, we do not know; but the present instalment is certainly a proof of marvellous linguistic attainments and infinite perseverance. It is noteworthy that it is issued in this country by the publishers of *The Best Books*.

MR. J. W. TUTT, editor of *The Entomologist's Record*—a monthly periodical, now in its second year, which is devoted to the recording of curious entomological facts mainly relating to the variation of insects—has now advanced one stage further in his laborious task, by collecting into a volume (Sonnenschein) all the evidence relating to the variation of British Noctuae. In a learned Introduction he discusses the causes which produce variation in lepidoptera, an interesting subject in connexion with natural selection generally, about which we have much yet to learn. Then follows a description of the varieties of each species of Noctuae, arranged in the order of their families, &c., with varietal names. The painstaking elaboration of the work may be judged from the fact that Mr. Tutt enumerates as many as twenty-seven varieties of the three species of *Miana*, of which twelve have been observed and named by himself; while of the closely-allied species of *Apamea didyma* he gives fifteen varieties, not counting intermediate forms. Of this species he possesses in his own cabinet a series of no less than 200 specimens. We trust that Mr. Tutt will receive sufficient encouragement from entomologists to carry his undertaking to a successful conclusion.

PHILOLOGY NOTES.

PROF. WEBER, of Berlin, is issuing a protest, in the name of the leading members of the last Congress of Orientalists, against Dr. Leitner's Congress. The title of the pamphlet is *Quousque tandem*.

PROF. WINDISCH, of Leipzig, the distinguished Vedic, Pali, and Celtic scholar, has been elected an honorary member of the Philological Society. The new part of his *Irische Texte* comprises:—(1) Three Middle-Irish Treatises on Metres, edited, with Notes, by Prof. Thurneysen, from MSS. in Dublin and the Bodleian; (2) The Story of the Ordeals, Cormac's Adventure in the Land of Promise, and the Decision as to Cormac's Sword, edited, with an English Translation, by Mr. Whitley Stokes, from the Book of Ballymote and the Yellow Book of Lecan; and (3) The *Cophur in dá muceido*, edited, with a German version, by Prof. Windisch himself, from Egerton MS., 1782, and the Book of Leinster.

THE "Constitution of Athens" is still the chief subject of attention in the *Classical Review* (David Nutt), though we find no reference to the German treatise noticed in the ACADEMY of last week, nor to an elaborate review that recently appeared in the *New York Nation*. To the June number Mr. F. G. Kenyon himself sends a list of nearly forty passages, in which a fresh revision of the MS. has established readings different from those given in the printed text, or has made it possible to fill up lacunae which were there left blank or only tentatively supplied. Mr. J. W. Headlam adduces evidence in support of Aristotelian authorship, from the avoidance of hiatus; while Mr. Herbert Richards collects examples of un-Aristotelian words and usages. Further textual

criticism is contributed by Messrs. W. Wyse, E. S. Thompson, and J. R. Whardale. It is also pointed out by C. S. that an ostrakon is preserved which had been used in the ostracism of Xanthippos. Among the other contents of the same number, we may mention an elaborate description of the harbours of Carthage, by Mr. Cecil Torr, as the result of a recent visit; a learned article on sonant *z*, by Mr. F. G. Plaistowe; a fresh discussion of the vexed question of the difference between the Synoptic Gospels and John in fixing the hour of the crucifixion; and a review of recent French books on palaeography, by Dr. E. Maunde Thompson.

La Littérature Grecque. Par Émile Egger. (Paris: Picard.) This is a selection from M. Émile Egger's minor writings, made in part by himself, and published by his sons. M. Egger's reputation rests upon a solid basis of other work; but the present collection will not do much to increase that reputation. The publication of essays so slight as most of these are is a cruel kindness to a man's memory. They were good in their day, chiefly as spoken addresses, and did good service; but few of them deserve republication. They do not form anything like a history of Greek literature, but are disconnected, and merely grouped under literary heads, as *The Theatre*, *History*, or *The Orators*. Some of them are occasional pieces, *i.e.*, are indebted for their origin to circumstances of the moment; such as the paper on Literature at Athens in Wartime, which was delivered in Paris as a lecture on November 28, 1870, and which owes to the Siege of Paris some of its piquancy. The pen which wrote these essays was a skilful one, and knew how to avail itself of all that could make its topics interesting. The editors have chosen papers fitted to show M. Egger "sous son double aspect de professeur éloquent et d'académicien érudit," but the former aspect is the more distinct. The essays abound in general views, as on the influence which the importation of papyrus into Greece must have exerted upon the letters and the science of that country; and they are not always free from mistakes, as when Melos before 416 B.C. is spoken of as one of the subjects of Athens appealing to Sparta for help in recovering its independence (p. 237). M. Egger is perhaps seen at his best in the French translations from Herodotus, Thucydides, and Xenophon. But there are many good things of his own in the book, too. For instance:

"La Némésis, pour nous, c'est une furie armée du fouet de la satire. La Némésis, pour les anciens, est une divinité plus calme, plus sévère; c'est la déesse des compensations et des répartitions" (p. 41).

"Les Grecs n'ont ni moins erré, ni plus cruellement souffert de leur fautes que les peuples modernes; mais ils ont décrit et expliqué leurs propres misères avec une lucidité de raison, avec une éloquence qui ont vraiment fait d'eux les immortels instituteurs du genre humain" (p. 241).

MEETINGS OF SOCIETIES.

ELIZABETHAN SOCIETY.—(Wednesday, June 3.)

JAMES ERNEST BAKER, Esq., in the chair.—Mr. W. H. Cowham read a paper on "Marlowe's Doctor Faustus." The play of Faustus holds a unique position in the history of the English drama. It may be compared to a glass prism, focussing the colourless light on one side and transmitting the spectrum on the other. The white light is the representative of the preceding drama, the miracle and mystery plays, the spectrum of the glorious wealth of Elizabethan drama which takes its rise with Marlowe. The story of Faustus most probably became known to Marlowe through an English translation of the Volksbuch, published by Spiers, at Frankfort-on-the-Maine, in 1587. An English company of actors, which played

Faustus at Grätz in 1608 may perhaps have had a part in introducing the story to the notice of Marlowe. From the sixth century the idea of a man selling his soul to the devil in consideration for unlimited power to be exercised for a certain period has been very popular. Faustus is an undoubted historic personage, although much controversy might be waged about him. He is alluded to by many writers of note, including Melancthon and Luther. The play is a dramatic poem rather than a drama. It presents many points of resemblance to the old morality plays, as in the dialogues between Faustus and Good and Evil Angels, the procession of the Seven Deadly Sins, the appearances of the Devils, and the Old Man who flees to prayer when assaulted by the evil spirits. Dramatically, the work is weak, both in characterisation, in plot, and in action. Against these defects may be set, first, the great dramatic force of some of the speeches; secondly, the artistic and moral truth of what little plot there is; and, thirdly, the beauty of the language. Faustus himself, the only interesting character, is a personification rather than a person. He belongs to that category of lust, of which Tamburlaine and Barabas are the other members. The great point of interest to critics is the authorship of the comic scenes. The earliest known edition, published in 1604, has a few very poor prose scenes, more pantomimic than dramatic. Two entries in Henslowe's Diary speak of additions to the play before this date. Therefore, say the great majority of critics, these additions must be the comic scenes, because they are so bad that Marlowe could not have written them. This assumption, followed to its conclusion, would lead to the further proposition that Marlowe never wrote a prose scene in his life, as there is not one good one in all his works. Again, Marlowe is distinctly lacking in humour, and that is the great defect of these "comic" scenes. The critics above mentioned must assume that lack of humour is incompatible with lyric and dramatic genius. There only remains, then, the entries in Henslowe's Diary, which, if that volume were above suspicion, would be conclusive. But here one reads that Dekker added to the play, and anything more unlike Dekker's work could not be imagined. The price paid to Bride and Rowley, *viz.*, £4, was far more than Henslowe was likely to have paid for the comic scenes in the edition of 1604, and one cannot assume that they wrote any of the verse. Their additions, it seems very possible, were the extensive new scenes in the edition of 1616. The simplest and most satisfactory position seems to be that whether Marlowe wrote these scenes or not, there is nothing to determine.—The paper was followed by a discussion, which was opened by the chairman, and continued by Mr. Frederick Rogers, Mr. H. Hunt, Mr. T. Adamson, and other members and friends of the society.

FINE ART.

EARLY ENGLISH MASTERS AT
DOWDESWELLS.

THIS small exhibition, composed mostly of small works by those who are now called the Early English Masters, or the "Old Masters of England," reminds one, among other things, of the many excellent English painters who are at present unrepresented in the National Gallery. We are going to mend all this, we know, with a great gallery at South Kensington or elsewhere; but, meanwhile, we wish there were some chance of securing for the nation a few of those fine pictures, daily increasing in value, by English artists who worked at the end of the last and the beginning of the present century. That the public appreciation for them is tolerably keen, the little tickets inscribed with the magic word "Sold" attest on many a frame at Messrs. Dowdeswells', whose collection, small as it is, contains the names of several artists that will be sought for in vain at Trafalgar-square.

There are, for instance, to be seen here a very fine example of George Chambers worthy

to hang with any sea piece by any master, ancient or modern; several Vincents, one of which at least—"A View of Norwich" (77)—we should like to steal for patriotic purposes; a beautiful little De Wint; and not to mention one or two more, a John Robert Cozens, a master scarcely known as a painter in oil, which though a little rubbed in parts, retains still enough rare beauty of colour to show that he should be added to Mr. Orrock's list of water-colour painters who deserve to be ranked among the best of our landscape painters in oil. Passing by such names as Ibbetson, Stannard, and "Jock" Wilson, we come to others who, though represented in the National Gallery, are better represented here—John Sell Cotman, for instance, by whom are five small oil pictures, most of which are at least better than the poor example in Trafalgar-square—and two are excellent and characteristic works. "The Harbour" (No. 6) is distinguished by the breadth and richness of its colour—a harmony of reds—water, boat, and shore dyed deeply with the hues of sunset. Nor of Bonington does the nation possess any example of so fine a quality as the "Houffleur" (141); and it is impossible not to wish that that fine colourist and thoroughly English painter, George Morland, could be represented in the national collection by some other picture than the "Interior of a Stable," although that is indeed a masterpiece. We should like to see on each side of it some of those examples of his free and juicy brush, which make one of Messrs. Dowdeswells' walls like a bouquet of colour. Specially fine examples of the master are "The Sleeping Shepherd" (110), and "Washing Day" (118). Here also are a fine early Turner, "Dunstanboro' Castle" (31), a number of "old" Cromes, somewhat various in quality, but including two or three fine ones like the "Mousehold House" (55a), worthy to rank with the "Chapel Fields" in the National Gallery, and the very luminous and beautiful "Return of the Flock" (48); some interesting small Gainsboroughs, including his portraits of Sir Richard Neave, painted at Bath (small and highly finished), and General Wolfe; two Glovers, one (65) important chiefly from its size, and another (66) which shows the artist at his best; a simple and impressive Barker, of Bath, "A View in Italy" (72); a Wilson of the finest quality, "The Lake of Nemi" (68), fresh and brilliant in colour; and several admirable little Starks and Müllers.

We might add to the list, but enough has been said to show that the collection is well worth a visit from all who are interested in their country's art.

COSMO MONKHOUSE.

MR. COCKS'S SCANDINAVIAN EXHIBITION.

THE exhibition of antiquities and ethnological objects from Norway, Finland, and Lapland, gathered by Mr. Alfred Henneage Cocks, of Marlow, continues on exhibition at the rooms of the Archaeological Institute, Oxford-mansions, near Oxford-circus.

Mr. Cocks, having spent some years in these northern countries, has become well acquainted with the dialects, and consequently has been able to associate with and collect from the peasant proprietors. From Norway are arrow heads and lance heads, and the contents of some barrows. The burials were by cremation, the corpse being laid on or covered by a bear-skin. One find, a gridiron-looking object, is supposed to have been used when "burning the water" for salmon spearing. The "prim stav" calendars of wood, dating from the sixteenth century, are extremely interesting, reminding us of Robinson Crusoe's plan for marking time. On these the

year is divided into winter and summer, one half being on either side the stave. These should be seen and examined. Then there are fine examples of the hand mangle, in Norwegian "fjoel," also dating from the sixteenth century. These things, handsomely carved, are in shape like a large plane as used by carpenters, and were used in the same manner. A curious and remarkable old deed box (No. 115 in the catalogue), will bear examination. Several "beer troughs," large and small, testify to the northern customs, as also a punch-bowl, bearing a runic inscription, translated: "Let me drink: the toast go round: till I reach my proper bound." A series of photographs well shows the various types of the inhabitants.

But the prominent and most valuable objects of this exhibition are the tapestry counterpanes. The oldest known piece is from Thelemarken, dated 1575, and the manufacture ceased about 1720. Ten examples are shown, the Parable of the Wise and Foolish Virgins being the commoner subject. The Visit of the Queen of Sheba to Solomon is very good, the colours being quite bright and fresh. Solomon is represented in trunk hose and high boots. Another example represents Herodias' daughter dancing at Herod's feast. These counterpanes, being hung round the walls, can be seen well and in a good light.

A small charge is made for admission, but an excellent catalogue, now in the second edition, is provided gratis.

ART SALES.

THE last picture which William Mulready ever painted—it is called "The Toy-Seller"—was bought at the Matthews' sale, last Saturday, by Mr. Henry Doyle, for the Irish National Gallery, where, alike because of its excellence and of the fact that its author was an Irishman, it cannot fail to be much appreciated. The price paid for it was only a little over £300, whereas at the sale which took place after Mulready's death, in 1862, it had fetched £1097. Nor do these prices indicate the limits within which it has ranged, for it is understood that the sum paid for it by Mr. Matthews was greatly in excess of the larger of the two sums which we have named. The low price last Saturday must have had about it something of the nature of a happy accident; for while the works of several of Mulready's contemporaries have justly depreciated in money value, there is no cause, and, indeed, no general indication, of a like falling off in work which is from Mulready's hand. The man was too fine a draughtsman for this—and at a time when fine draughtsmanship was comparatively rare. He was too fine a colourist—and at a time when we were relatively poor in that which has generally been a rich endowment of our British School.

They have been selling during the present week, at Christie's, an important collection of the favourite mezzotints after Sir Joshua Reynolds, formed during many years by Dr. Edward Hamilton, whose Catalogue of the engravings after our most popular master of portraiture has long constituted him an authority on Reynolds and the men who reproduced his art.

THE TOMB OF "ARISTOTLE."

WE quote the following from the *Times* :—

"Before a brilliant audience at the Royal Institution on Tuesday evening, June 2, Dr. Charles Waldstein delivered a lecture on his recent discoveries at Eretria, in the island of Euboea. Among them stands foremost a tomb of great magnitude and splendour, which—by a process of subtle inference, from data which, taken singly, might appear minute or insignificant, but assume

a new aspect when they are found to be interdependent and to converge to a common centre—he is led to believe to be that of the great philosopher Aristotle. Dr. Waldstein contributed a short account of his discoveries to the *Nineteenth Century* for May, which may be said to be only of a preliminary character, and in which he confined himself mainly to a narrative of the excavations, and to the negative aspects of the question and the objections which might fairly be urged against the hypothesis that on this spot were interred the philosopher's remains. In the meantime Dr. Waldstein has incessantly been engaged in literary and epigraphical researches, to enable him to arrive at a final conclusion on the subject. These investigations are not yet completed; and he hopes to ransack all the principal libraries in Europe, in search of literary or other *indicia* which may go to support or destroy the theory.

"It should be premised that Dr. Waldstein went to Eretria with no thought of such a discovery. He knew that it was a place of great historical importance and antiquity, and he knew also that there were dispersed among the clandestine dealers in antiquities at Athens many objects which could be traced to that ancient city, so familiar to students of Herodotus and Thucydides. Even if it be found that the explorer is mistaken, there can be no doubt of the great value and interest of the ancient remains which have been disinterred, and of the light which they reflect on an interesting period of Hellenic history and culture. It would be remembered, he said, that Eretria and Chalcis were the two great commercial cities of Euboea, and every reader of Thucydides was familiar with the rivalry which so long subsisted between Eretria and Athens. Its position was on the Euripus, with a beautiful hilly landscape behind and the mountains of Attica opposite on the other side of the channel. Especial attention was drawn to Eretria by the discovery at Chalcis, in 1869, of a long inscription referring to the former city, the date of which lay between the years 340 and 278 B.C. This document embodied a formal contract for the execution of a work resembling that which, in our own times, has been done by the Bedford Level Commissioners. It recited that an engineer, Chaerephanes by name, contracted with the Eretrians to drain their marshes. He was himself to bear the cost of the work, on condition that he was to be allowed to cultivate the reclaimed land for ten years at an annual rental of 30 talents, or about £7000. The work was to be completed in four years. In case of war the ten years' lease was to be prolonged by a like period. There were also provisions for the compensation of persons whose land might be taken for the making of reservoirs or sluices; and the concession was to continue in the heirs of Chaerephanes, and the latter was to find sureties for the due execution of the works. This was one of the many indications of the richness of Euboea as a field for archaeological research, and would be found to have an incidental bearing upon the question at issue.

"At the beginning of the present year Dr. Waldstein, having obtained a concession from the Greek authorities, proceeded from Athens to Eretria for the purpose of digging out tombs, and in particular of discovering, if he could, the temple of Artemis Amarysia. As is well known, the Greeks were in the habit of burying their dead outside the city walls, and at Eretria there was a continuous succession of graves running in different directions from the ancient city. These graves were of different periods, some as late as the Roman period, and many of the persons buried were foreigners. Out of twenty-six inscriptions, he found that no fewer than eight referred to strangers and sojourners in the land. In the course of his excavations he came upon the most beautiful of all the family tombs which had yet been discovered. The lecturer had described the difficulties which he encountered in the labour of excavation in the article above referred to, and, in fact, he and his associates had three times to give up the attempt. In the course of his narrative he gave an interesting account of Greek writing materials—*μύλαν γραφικὴν*, for ink, *καλαμὸς γραφικὸς*, a pen—being the materials used for permanent records on papyrus; while the *στυλὸς* or *γραφὴς* was the stylus used for writing notes of transient importance on waxed tablets. He had already in the article referred to described

the statuettes and ornaments and other things, including the only extant metal pen, so far as he knew, which had been found in Greece.

"As before mentioned, Dr. Waldstein, in his contribution to the *Nineteenth Century*, had dealt in a sceptical spirit with his own discovery. On Tuesday evening he argued the affirmative side of the question, and indicated the considerations which induced him to believe that in the family tomb which he had discovered once reposed the Stagiritic remains. According to the best authorities, Aristotle died at Chalcis in 322 B.C., of disease in the stomach at the age of sixty-three years. The stories that he committed suicide by drinking hemlock and that he drowned himself in the Euripus, in consequence of disappointment at not being able to discover the cause of the ebb and flow of the tide, were both discredited by Zeller and the best authorities. But, it would be asked, as he died at Chalcis, how came he to be buried at Eretria, which was some twelve miles distant from the city of Chalcis? One answer to this objection was that in the Macedonian period the name Chalcis was sometimes used for the whole island of Euboea, so completely had it eclipsed its former rival Eretria. Strabo described Chalcis as τὰ πρῶτα καὶ μητρόπολις of Euboea. He then said, διενερέει δ' ἡ Ἐρέτρια. Thus, the statement that Aristotle died at Chalcis was not inconsistent with his having been buried at Eretria. Further, from the will of Aristotle himself, as published in Diogenes Laertius, it was to be inferred that the philosopher's house was not in the city, but in the country. By that will, which was a most interesting document, he gives his second wife, Herpyllis, a choice of residence; ἐὼν δὲ ἐν Χαλκίδι βούληται οἰκεῖν τὸν ξενῶνα πρὸς τῇ κήρῳ, ἢ ἐν τῇ Σταγείρῳ τῇ πατρὶος οἰκίᾳ. Now, it was well ascertained, first, that the term ξενῶν, or guests' quarters, was at this date applied not to a part of the principal residence, but to a separate house on a gentleman's estate. Thus, in this instance, if the widow elected to live in Euboea, the ξενῶν would be the dower house. Next, it was not customary in Aristotle's time to have gardens in a city, and it was Epicurus who first, in the year 308, attached a garden to an urban residence. Thus the words πρὸς τῇ κήρῳ indicated that the house was in the country. It was noticeable, also, that the contract to which he had referred, though it was to be performed at Eretria, was found at Chalcis; and other similar inscriptions dealing with Eretrian affairs had been discovered at Chalcis and not at Eretria. Again, it was known that Eretria was a philosophic centre; Menodorus, the philosopher, lived there, and the place was also visited by Phaedon. It might, in fact, be regarded as a literary suburb of Chalcis. Then the will contained instructions for the philosopher's burial. In effect, he said, "Bury me where you like. But take up the bones of my first wife and put them in the grave with me." Now, it was clear from the excavations that the tomb was a family grave; and from the will it was apparent that Aristotle would be the first occupant. There was architectural evidence that the particular part of the mausoleum in which the head of the family reposed was built towards the close of the fourth century B.C. Of course the name Aristotle was not unique, and the inscription deciphered on the slab, Βίδη Ἀριστοτέλου, was not conclusive. But it was by no means so common as other Greek patronymies. There were about twenty Aristotles whose names were recorded in literature. But none of these was a Euboean, save one whom he found to be a Chalcidian. We were, moreover, in possession of details of Aristotle's family history. He was twice married, his first wife having been called Pythias and his second Herpyllis. He had two children, a son, Nicomachus, and a daughter Pythias. Nicomachus died without having been married, and Pythias was married three times. By Nicanor, her first husband, she had no children. To Procles, her second husband, who was a descendant of the Lacedaemonian king Demaratus, she bore two sons Procles and Demaratus. By Metrodorus, who was a physician, she had a son who also bore the name of Aristotle. The name was also found in inscriptions in Sicily, where there was a Chalcidian settlement, but it did not appear in Eretrian inscriptions earlier than the second century. In an Eretrian inscription of the second century he had deciphered about 1600 names, among which were found a Nicomachus and a Procles, but no Aristotle.

Now, it was an admissible hypothesis that the family of Pythias, one of whose sons was Aristotle, lived at Eretria or one of the cities of Euboea, because we had also the name of Procles in this inscription. This Aristotle, the son of Pythias, was mentioned in the will of Theophrastus, who was the successor in the Peripatetic School of Aristotle. A curious point arose in connexion with the inscription Βίδη Ἀριστοτέλου. The ordinary genitive of the word was Ἀριστοτέλους. The latter form was invariably found in inscriptions before 350 B.C. But from 350 to 300 the former began to prevail, and the German scholar Meisterhaus had discovered 39 instances of οὐ when οὐς might have been expected. After 300 the latter form was found exclusively on inscriptions. This inscription was assigned by the best epigraphical authorities to the third century B.C. Now, it was clear from an examination of the remains that the principal grave, which was shown by the strigil to be that of a male, belonged to an earlier period than the adjoining graves. This Biote might, from the genitive which follows, have been either the wife or the daughter of Aristotle, the philosopher's grandson. In addition to the inferences which might be drawn from the circumstances which he had mentioned, there were others to be derived from the study of iconography. There were a number of terra cotta statuettes in the grave. But one, in particular, was of a singular and striking character. These statuettes in tombs were known to have relation to and to be frequently descriptive of the persons interred; and this was immediately recognizable as a type of the statues of the fourth century B.C., known as those of philosophers and orators. The figure was draped and the hands folded at the side. The grave was clearly that of a person of great distinction. There was a gold diadem and a band of pure gold about 1½ inches wide, with repoussé patterns fastened round the brow. Then at the head, where a portion of the skull remained, there was another diadem with leaves of conventional ivy attached to it; and there was also, as he had mentioned, a metal pen. Here, therefore, he had discovered a tomb belonging to a great family, the burying place of an eminent man, as was shown by the profusion of gold ornaments, and this man was a man of letters, as evidenced by the pen and styluses, and a philosopher, as indicated by the statuette. When to this was added the startling inscription which was disclosed in the adjoining space, the chain of historical and circumstantial evidence appeared to be almost irresistible.

"The lecturer concluded his discourse with an enunciation of the principles by which in researches of this character—according to the doctrine termed by the late Henry Bradshaw, "prince of librarians and bibliographers," the doctrine of equivalents—a date might be assigned to a book or a work of art by the concurrence of notes or indications which were independently known to have been prevalent at a particular period.

"The lecture was admirably illustrated from photographs taken for Dr. Waldstein by Mr. and Mrs. Gordon Oswald."

CORRESPONDENCE.

A GALLIC FIND IN DENMARK.

Copenhagen, Denmark: June 7, 1891.

An antiquarian find, which will excite interest all over Europe, has lately been made in Rørmose peat-bog, near Høbro in Jutland, Aalborg Amt.

The objects are all of silver, the principal piece being a very large basin, on which have been fastened plates of silver hammered out with figures of men, women, and animals. The basin is twenty-six Danish inches in diameter, but scarcely eight inches high. One or two pieces are apparently wanting; but it is hoped they will turn up when the moss is minutely examined. The eye-holes of the figures are now empty, but have evidently been filled with coloured glass. One of the plates, which is nearly seventeen inches long, shows warriors with helmets and other ornaments. One figure is a god with a wheel at his side, and on another are two elephants. A third

shows a horned god in a sitting posture with his legs crossed orientalwise.

All these have apparently nothing to do with Northern mythology, as was at first supposed. The whole find has now reached the Danish National Museum, and we see that these pieces belong to the god-lore of the Gallic peoples. The god with the wheel, for instance, is the Gallic Sun-god. The whole is the work of a Gallic artist at that early period when the Roman and Gallic peoples first came in contact. Allowing time for these things to wander so far North, the date would seem to be, as regards Denmark, the first century before Christ. Other things belonging to this Gallic group have been found previously in this country. The total weight of precious metal hitherto exhumed is about twenty Danish pounds.

GEORGE STEPHENS.

NOTES ON ART AND ARCHAEOLOGY.

THE June exhibition of water-colour drawings and sketches by members of the Dudley Gallery Art Society will open next week at the Egyptian Hall, Piccadilly.

MR. GEORGE ALLEN will have ready for publication next week a new edition of Mr. Ruskin's *Lectures on Architecture and Painting*, which has not been reprinted for thirty-six years. These lectures were originally delivered at Edinburgh in November 1853, and deal chiefly with mediæval architecture, with Turner and his works, and with Pre-Raphaelitism. The volume will be illustrated with an engraving on steel for frontispiece, and fourteen full-page woodcuts. A limited edition will be issued on large paper.

A VOLUME entitled *Letters to Living Artists* will be published next week by Mr. Elkin Mathews. The Letters are addressed to the President of the Royal Academy, Sir J. E. Millais, Messrs. G. F. Watts, W. P. Frith, E. Burne Jones, Alma Tadema, Walter Crane, H. S. Marks, E. J. Poynter, J. M. Whistler, &c.

MR. CECIL NICHOLSON writes from Paris: A group of American artists have opened an exhibition of their works at Durand Ruel's gallery in Paris. As at the two Salons, the visitor is struck with the want of originality in the works of American painters, who, with few exceptions, appear to be content with imitating, to the best of their ability, the *manière* of the French masters under whom they have studied. Among the 184 exhibits which, with a few bronzes and marbles, compose the American Exhibition, but few are worthy of more than passing notice. For instance, Mr. William Chase's full-length portrait of Mr. Whistler, painted *à la* Whistler; Messrs. Bridgman, Healy, Wyatt, Eaton, and Peixotto contribute several pleasing portraits; Mr. C. Pearce's two rustic scenes are charming; while among original subjects we noticed "An Ostrich Farm in South Africa," by Mrs. Nicholls, and a series of studies of East Indian life and scenery, by Mr. L. Weeks.

THE Académie des Inscriptions has nominated M. Enlart, of the School of Rome, to receive the grand medal awarded annually by the Société Centrale des Architectes Français to a member either of the School of Rome or of the School of Athens.

THE first part has just been published of the report on the excavations at Timgad in Algeria, conducted during the past ten years, chiefly by the late M. Duthoit. The report is written by MM. E. Boeswillwald and R. Cagnat. Timgad was the ancient Thamugadi; and its remains possess the peculiar interest that they show the

condition of the town exactly as it was when destroyed by the Moors in the seventh century, on the approach of a Byzantine army. Another unique feature is that all the public buildings were constructed at the same time and on a uniform plan, in the first half of the second century A.D., as is shown by the inscriptions. Great paved streets have been excavated, terminated at each end by triumphal arches, one of which is almost perfect; also the complete area of the forum, a theatre, and a curious market place.

MUSIC.

MUSIC OF THE WEEK.

MR. AUGUSTUS HARRIS—or we might almost say Miss Eames—revived Gounod's "Mireille" on Wednesday evening at Covent Garden. It is now more than a quarter of a century since the work was produced at the Théâtre Lyrique, Paris; but the music has never really won the favour of the public—with exception, perhaps, of the famous Chanson de Magali from the second act. The charming Provençal idyll, "Mireio," by Mistral, attracted the composer, but the naïve village maiden and her rustic lover can scarcely be recognised when presented in operatic dress. Gounod felt—and indeed has acknowledged—the weakness of the libretto, and several attempts have been made to condense the opera and render it more attractive, but all to little purpose. It contains plenty of charming music and delicate orchestration, but after all it is only a concert of light music in disguise. Miss Eames in the title-role greatly distinguished herself: she has the best part in the work, and made the most of it. Her singing was excellent, and she showed more life in her acting. Miss Eames has rapidly made a name, but fully deserves the success she has obtained. M. Certe took M. Maurel's part at short notice, and acquitted himself well of his task. It was owing to this change at the last moment that the promised "Rhône" scene had to be abandoned. Mlle. Passama as Taven made a good impression, both as singer and actress. Mlle. Pinkert sang the pastoral air with taste. M. Lubert (as Vincent) showed to advantage, but we do not like the quality of his voice. M. Isnardon took the part of Maître Ramon. Sig. Bevigmani proved an efficient conductor. The opera was given in French.

Señor Leo de Silka gave his first pianoforte recital at St. James's Hall last Thursday week. His reading of two short Scarlatti pieces was commendable; but in his rendering of Schumann's "Études Symphoniques" and some Chopin solos—apart from some good though not always perfect technique—we could not perceive anything entitling him to rank among the great interpreters of the great masters. From what we heard, we should imagine that he would show to better advantage in music of a light character.

Señor Sarasate's third concert on Saturday afternoon drew a large audience; but there was nothing in the programme to call for detailed notice. He played magnificently; and his reading of Beethoven's Concerto, if not an ideal one, was in many respects admirable. Two pieces by Saint-Saëns were played to perfection, and his brilliant execution of the "Carmen" Fantasia resulted in four recalls and an encore.

Señor Albeniz gave another concert last Thursday week. His Chopin solos were well received. Herr J. Kruse was again the violinist, and was encored for his excellent rendering of Tartini's G minor Sonata. Miss Liza Lehmann sang with her usual success. There was a good attendance.

The third Richter concert, on Monday, was one of considerable interest. Beethoven's three "Leonore" Overtures were played in the order of their composition, apparently for the first time. Mendelssohn gave them at Leipzig in 1840, and Mr. Manns at the Palace in 1870; but on both those memorable occasions the historical succession was inaccurate. As a rule with Beethoven, a later work means a greater work. But in the third Leonore Overture the composer made no effort to surpass himself: he only undertook, in fact, to write for a performance of his opera at Prague "a new and less difficult" overture. It came as an anti-climax after the other two. Mendelssohn and Manns were artistically right in putting the last first. The performance of the first and second (popularly known as Nos. 2 and 3) under Dr. Richter was extremely grand. These were followed by the second and part of the third scene from "Tannhäuser," with Mr. E. Lloyd, who was in splendid voice, as Tannhäuser, and Mr. Max Heinrich as Wolfram. Then came the closing scene from Act I of "Siegfried." A less suitable excerpt could scarcely have been chosen from Wagner's tetralogy; every note of the music imperatively demands stage action. The programme ended with another anti-climax—Mozart's "Hafner" Symphony. A clever *pièce d'occasion*, written for a wedding festivity, sounded tame after the noble music and imposing orchestration of Beethoven and Wagner.

M. L. Dubouy made his *début* at Mr. Farley Sinkins' orchestral concert at St. James's Hall, on Tuesday afternoon. He played a Vieuxtemps Concerto with great technical skill and with taste. It was a clever performance, but there was too much straining after effect. M. Ernest de Munck gave a good, but mild, rendering of a Concerto of his own composition. Mr. Eugène Ondin was highly successful as the vocalist. The orchestra, under the direction of Mr. F. H. Cowen, played Overtures by Mendelssohn and Beethoven.

The Musical Guild gave its fourth and last concert at the Kensington Town Hall on Tuesday evening. The performances at these musical evenings, with one or two exceptions, have been given by students and ex-students of the Royal College of Music, and an enterprise so beneficial to rising artists well deserves the support of the public. So much music goes on in London that it is impossible to do justice to everything, and hitherto we have omitted to notice the Guild. At this closing concert Mr. Charles Wood's clever and characteristic Quintet in F for wood-wind and horn was well performed: this was the work which, a short time ago, gained a prize offered by the Wind Instrument Chamber Music Society. Mr. Leonard Borwick gave an energetic reading of Schumann's "Études Symphoniques," and after several recalls played a Liszt "Étude" in most finished style. Mr. Daniel Price sang Sullivan's "Thou'rt passing hence," with good taste and expression.

J. S. SHEDLOCK.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON,
186, Strand.

Copies of the ACADEMY can be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of MESSRS. EASON & SON, 40, Sackville-street; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

LITERATURE.

Collingwood. By W. Clark Russell. (Methuen.)

THE splendour of the career of Nelson—in the opinion at least of most Englishmen—effaced that of many of the seamen of his time, and has nearly eclipsed that of his greatest colleague. Yet Collingwood had an individuality of his own; and, though he had qualities akin to some of Nelson's, he was a different naval chief from the first of admirals. In Collingwood we see, as well as in Nelson, professional skill of the very highest order, perfect confidence in the superiority of the fleets of England, a strong sense of duty, and the heroic nature. But Collingwood had not the inspiration of Nelson or the passionate ardour of that impulsive genius; and, though he commanded the respect of the men he led, he did not gain their devoted affection, and indeed, was not a popular or fortunate seaman. On the other hand, as was proved on one great occasion, Collingwood was more profound and sagacious than Nelson; he had a better judgment in affairs of state, which our admirals are often obliged to determine; and he had a more perfect intellectual training. As if, too, to complete the contrast, Nelson's private life was deplorably flawed: in this he had little principle, and was the slave of passion; the private life of Collingwood is one of the most beautiful and touching of which we possess a record.

The purpose of this volume is to give an account of this illustrious and noble life. The biographer of Collingwood is, in one respect, fortunate: the despatches of the admiral and his private letters are models of graceful and simple English; but the reminiscences of contemporaries as regards his career are not copious or of very great value. Mr. Clark Russell has shown discernment in drawing his materials from these sources; he has described Collingwood mainly from Collingwood's writings, and has given but a small space to inferior evidence; and his book gives proof of industry, research, and judgment. Mr. Clark Russell, however, has not the art of portraiture; he does not give us Collingwood's image; he has not put before us the living features of the sailor, the commander, and the high-minded gentleman. His work, too, is overlaid with fine writing, and, as in the case of his sketch of Nelson, does not contain nearly an adequate account of the battles in which Collingwood took a great part and made his personality distinctly felt. Mr. Clark Russell, indeed, only just

alludes to that striking passage in the career of his subject in which Collingwood was clearly superior to Nelson, his insight—though it was partial only—into the deep-laid and masterly plan formed by Napoleon for invading England.

We shall not attempt a sketch of the life of Collingwood; his correspondence reveals what he was, and possesses, besides, a peculiar interest. The future chief was born in 1748, and was a scion of an ancient but decayed family which had engaged in trade but was not fortunate. The boy, though under the cold shade of poverty, had the advantage of an excellent school; he was trained by Moises of Newcastle-on-Tyne, a really famous master of those days—he was the educator of Lords Stowell and Eldon—and probably he owed, in part, to this discipline his remarkable command of felicitous English. Collingwood entered the navy in 1761, and, like Nelson, served before the mast for a time; and possibly his mastery of practical seamanship, as in the case of Nelson, may be traced to this circumstance. The lad rose in the service slowly, saw Bunker's Hill and a good deal of the fighting of the American war, and became associated with Nelson in a brotherhood of arms and a friendship which have become historical, as both gradually made their way upwards. He was already known as an excellent officer when the Great War broke out in 1793; and it is a proof of his penetrating and capacious mind that he appreciated the nature of the contest with France far better than Pitt and most English statesmen:

"This war is certainly unlike any former, both in its object and execution; the object is a great and serious one—to resist the machinations of a mad people, who, under the mask of freedom, would stamp their tyranny on every country in Europe, and to support and defend the happiest constitution that ever wisdom formed for preserving order in civil society. The execution is quite mysterious; great fleets are prepared and lay totally inactive; schemes of conquest are formed and relinquished at the moment when execution is expected."

The navy of England in 1793 was far superior to that of France, which the Revolution had fatally injured. But it had suffered from the effects of the Peace; its organisation was defective, and it was very different from what it became under the discipline and careful hand of St. Vincent. This was pointed out by Collingwood at the time:

"I do think (and it grieves me) that we do not manage our ships with that alacrity and promptness that used to distinguish our navy. There is a tardiness everywhere in the preparation and a sluggishness in the execution that is quite new. The effect is obvious to everybody, and the moment the ships are put in motion they feel it. Lord Howe cannot get down the Channel in fine weather and the middle of summer without an accident. Two ships ran foul of each other, and the *Bellerophon* has lost her foremast and bowsprit, and gone to Plymouth a cripple. This was not the fault of the weather, but must ever be the case when young men are made officers who have neither skill nor attention; and there is scarcely a sloop in the navy that has not an instance that political interest is a better argument for promotion than any skill."

The following belongs to a later period; but it shows the feelings that caused the Mutiny at the Nore:

"When it was known that the French were about to send a great armament to the West Indies, four of our ships, viz., *Téméraire*, *Formidable*, *Vengeance*, and *Majestic*, were fitted for foreign service and ordered to sail—to open their further orders in a certain latitude. It was pretty well understood among the sailors that they were to go to the West Indies, and they peremptorily refused to weigh anchor, except to England."

Collingwood commanded the *Barfleur*, under the flag of Bowyer, on the great day of the First of June; and he has left a good account of that famous action. He confirms the tradition that Howe distrusted more than one of his fair-weather captains; but he was enthusiastic in his praise of Howe's tactics, cautious, and not original, like those of Nelson; and he made them, afterwards, a model for himself when he was lying in wait for a French fleet and hoped to fight a second Trafalgar. He thus describes Howe's advance at Villaret:

"After closing our line and putting in order, between eight and nine, the admiral made the signal for each ship to engage that opposed in the enemy's—came close, and in an instant all the ships altering their course at the same time, down we went on them. 'Twas a noble sight. Their fire soon began; we reserved ours until we were so near that it was proper to cloud our ships in smoke. However, we were determined not to fire until Lord Howe had, and he is not in the habit of firing soon. In three minutes our whole line was engaged, and a better fire was never. It continued with unabated fury for near two hours, when the French broke."

The *Barfleur* distinguished herself greatly; but Collingwood was not mentioned by Lord Howe among the captains deserving promotion. This galled him to the quick, as we see from his letters; but, in truth, Collingwood, though well known as a seaman of remarkable parts, was not liked by his superiors, if we except Nelson. He had keen insight and the critical spirit, was rather a *frondeur* of men in high places; and though his heart was warm, and his affections strong, he was "stand-off" to equals and colleagues. He was in command of the *Excellent* under Hotham, and agreed with Nelson's estimate of that third-rate chief. The following, however, is very different from the impetuous and scornful judgment of Nelson:—

"We should be careful and slow in censure, because men of weakest judgment are most prompt to question what perhaps their want of intelligence makes them not comprehend, and in this instance because the commander has been esteemed a skilful and good officer; yet the opportunity seemed a good one to ruin the French naval forces in this country."

The conduct of Collingwood at St. Vincent is an admirable specimen of his professional zeal, and of the high sense of duty which marked his character. Mr. Clark Russell has not vouchsafed to describe the evolutions of this renowned action. Jervis would have let the Spanish fleet slip; but Nelson brought Cordova to bay by wearing the *Captain* at the right moment. The victory was due to the inspiration of Nelson; but Collingwood nobly seconded his friend,

and the *Excellent* had a large share in the triumph. St. Vincent appreciated both heroes; but he did not select Collingwood to assist Nelson in the celebrated pursuit that ended at the Nile, though the *Excellent* was, perhaps, the crack ship of the fleet, a model of good handling and perfect discipline. The admiral, in truth, disliked Collingwood; there was no sympathy between their natures; but certainly Nelson was the true choice to scour the Mediterranean and to discover Brueys. Collingwood was greatly hurt at being overlooked; but the magnanimity of his noble character is seen in the congratulations he addressed to his friend and companion-in-arms after the great victory.

We must pass rapidly over the following years of Collingwood's career. It was his fortune to do much hard work, and to be seldom engaged in decisive battles; and, though his seamanship was proved in tedious blockades, this has no interest for the general reader. He was afloat once more when the war was renewed, after the armed truce of the Peace of Amiens; and, having justly attained an admiral's rank, he was recognised as second only to Nelson among an illustrious company of naval worthies. Napoleon was now engaged in a death struggle with England; and Mr. Clark Russell ought to have described his celebrated project for a descent on our coasts. Unquestionably, the Admiralty was deceived, and Nelson never guessed the emperor's designs; it is to the lasting honour of Collingwood that he was the only one of our naval leaders who had even the faintest notion about them. If we read the Channel for Ireland Collingwood hit the truth:

"I have considered the invasion of Ireland as the real work and butt of all their operations. Their flight to the West Indies was to take off the naval force which proved the great impediment of their undertaking. This summer is big with events."

When the ill-fated Villeneuve had put into Cadiz, Collingwood actually blockaded him with four ships, an "instance," it has been justly remarked, "of genius and address that is scarcely to be paralleled in the pages of our naval history."

We shall not dwell on the crowning day of Trafalgar: Collingwood nobly joined in Nelson's attack; but it is doubtful whether he approved of it at heart. He was engaged with the *Santa Anna* for nearly half an hour before the *Royal Sovereign* received support, and was literally in the midst of the hostile fleet; and tactics like these, though, as affairs stood, right, were not in accord with his cautious nature. But, in truth, the British fleet could run any risk, its superiority was so immense; and the genius of Nelson secured victory. The following describes the effects of Collingwood's first broadside:

"Don Ignacio Maria D'Alava, whose flag she bore, told me five years afterwards at the Havannah, that one broadside killed 350 men, and he added, 'Il rompa todos'; and though he fought on afterwards for a couple of hours like 'a man of honour and a cavalier,' the first broadside did his business, and there was an end of him."

Collingwood was blamed for not following Nelson's injunctions, and for not anchoring after Trafalgar. De la Gravière, however, thinks that he had no choice, for few of our ships had a whole cable; and St. Vincent, certainly no friend of Collingwood, approved of the sinking of the ruined prizes:

"In the anecdote book, Lord Eldon says—'I heard Lord St. Vincent say that Collingwood's conduct after the Battle of Trafalgar in destroying, under difficult circumstances, the defeated fleet, was above all praise.'"

Collingwood, when Nelson had passed from the scene, was easily the first of our seamen afloat. His career was prolonged for five years; and he was spared to do England excellent service, though, after Trafalgar, she was supreme on the ocean. He commanded in chief in the Mediterranean; and he proved very superior to Nelson in difficult negotiations and affairs of State, which, on several occasions, he had to conduct. The difference between the two men is seen in their attitude to the Court of Naples: Maria Caroline turned Nelson's head, and made him her accomplice in evil deeds; with her followers, she was regarded by Collingwood with disgust. Collingwood showed remarkable tact and prudence in the disputes which led to the expedition of Sir John Duckworth; and he displayed considerable diplomatic skill in this instance. He has been blamed for not catching Ganteaume in the flight of the Frenchman from Corfu to Milan; but the censure seems to be wholly undeserved; Nelson had missed Brueys and Villeneuve in the same way. Collingwood was most eager for a fight with Ganteaume, and issued general orders of attack; but it deserves notice that he adopted in them the tactics of Howe, and not of Nelson.

During this period of command Collingwood was what he had always been—a consummate seaman, an admirable chief, an administrator of no ordinary gifts; but still, as a leader, not inspired with the power of Nelson over his officers and men. He died at sea, worn out, in 1810, having been nearly forty years afloat in a naval career of half a century. We wish we had space to refer to his domestic life, and to his beautiful letters to his wife and his children: these are models of pure and noble affection. Do la Gravière's commentary on Collingwood is just: he had not the gifts of supreme genius; but his professional excellence was of the highest type, and he does enduring honour to a renowned service.

WILLIAM O'CONNOR MORRIS.

Love's Looking Glass. (Percival).

THIS little volume is at once old and new; it solves a previous puzzle and creates a new mystery. *Love in Idleness* was published eight years ago, and is now out of print; the rumour of its triple authorship must have set many readers wondering who had written this and who had written that. The promise of the book was unquestionably high. No poem in it, I think, reached the same level as "In Scheria"; but "A Pastoral" lingered in the memory, and "May Day" and "Afternoon" were some-

thing more than the ordinary sentiment of undergraduate life. And now *Love in Idleness* is reborn as *Love's Looking Glass*. Much, however, has been subtracted and more added; and the authors have acknowledged their respective poems by an initial apiece; B. standing for the Rev. H. C. Beeching, M. for Mr. J. W. Mackail, N. for Mr. J. B. Nichols.

Some of the omissions will strike the possessors of the earlier volume with a sense of loss. I would reckon among such the poem named "Afternoon," and especially the speech of Thyrsis, "Rose ever morning fairer," etc., with its vision of Thermopylae. Perhaps, too, "Santa Cruz," though oddly unlike the poems among which it stood, deserved to live for its force and fire. On the other hand, I respectfully think that the authors were wise in omitting the comic poems, such as "The Last Tennis Party" and "Monologue D'Outre Tombe." They were not bad grins; but still they were mere grins, and had got into company too good for them. "In Scheria" reappears—thanks be to the Muses!—but under new names. Part i. is called "Nausicaa," and Part ii, "The Return of Ulysses;" and they stand now as separate poems. I confess that I regret their disconnexion. Few people can have read the *Odyssey* without a wistful desire to know what became of Nausicaa. Mr. Mackail has gratified that wish. In the Land of Might-have-been Ulysses rejoins her, and this is the last news of them:

"We entered in and at the thwarts sat down;
And at our going all the Scherian town
Stood thronged to speed us; softly in the heat
The water rippled through the oar-blades brown.

"And through the palace garden he and she,
Hand clasped in hand, came down beside the
sea,

And hailed us one by one with voices sweet,
And bade farewell and all prosperity.

"Then our oars dipped together, and the spray
Flashed in a million sparkles round our way,
As we with rowing swift and strenuous
Shot out across the sleeping sunlit bay.

"There on the white sea-verge, till all the strand
Grew dim behind us, still I saw them stand
In the low sunlight: if they looked at us
I know not; but they stood there hand in hand."

It is a beautiful close of a beautiful poem: one can only trust that no one will be Philistine enough to ask if Penelope acquiesces in the arrangement.

But the revelation of the authors' names and shares in the volume creates, as I have said, a new mystery: a wonder how three poets, writing independently, have approximated so closely in style and thought. If any one will study the first twenty or thirty poems in *Love's Looking Glass*, with their author's names subjoined, and then try to infer from them the authorship of the remaining poems, he will, I think, meet with a humiliating failure, and, when he verifies his guesses, will find—if we may so far pervert Calverley's oracle—that "M's and N's are mostly Pronounced like B's." No doubt, a certain community of taste in subjects, a love of the same writers, a brevity that is contented to touch a thought and glance at a situation without dwelling upon them, contribute to this assimilation. None the less,

Love's Looking Glass is a most remarkable instance of successful collaboration; and if, as I think, it raises in us a certain desire to see the writers standing separately and not arm-in-arm, and giving us poems of rather more substance and of more ambitious character, that is a wish which no doubt they may be well satisfied to have caused.

Mr. Nichols' best work is, I think, to be found in his sonnets, and particularly in those inspired by Rome—"Schizzo Dal Vero" (p. 67) and "Caligula" (p. 89). The latter, addressed to that terrible basalt bust of the frenzied emperor which stands in the Capitol Museum, is one of the most powerful things in the book:

"Being in torment, how should he be still?
The slim neck twists; the eyes beneath the wide
Bent Claudian brows shrink proud and terrified;
Along the beardless cheek the muscles thrill
Like smitten lute-strings. Can no strength of
will
Silence this presence ever at his side,
This hateful voice, that will not be denied,
That talks with him, and mutters 'Kill' and
'Kill'?"

"O dust and shade, O dazed and fighting brain,
O dead old world that shuddered on his nod,
Only this iron stone endures; and thence
Looks forth a soul in everlasting pain,
The ghost of Caesar, maniac and god,
And loathes the weakness of omnipotence."

The earlier lines, though effective, are not remarkable. But the last nine deserve the high compliment—paid, I think, by one French poet to another—that they cause us "a new shudder." One almost regrets that the writer who is capable of that, has preserved such a second-rate piece of work as "The Young Landlord" (p. 124). It is not impossible to introduce a tragedy with a jerk, but it is not easy to do it well.

Among Mr. Beeching's pretty poems, readers of the earlier volume will perhaps turn most gladly to the "Song of the Three Kings" (p. 70) and "To Comatas" (p. 16); yet perhaps "Hope" (p. 153), one of his now poems, is better:

"I shall not see him yet, I know, for still
Between us lies an insurmounted hill;
And tho' I hurry and pant, his pace is slow;
Yet shall I see his sunny face and bair
(For he will surely come to meet me) there
In the last valley somewhere—that I know.

"What tho' he pauses in the pleasant wheat
To watch the lark mount skyward, do my feet
Pause or my eyes desert the path they climb?
What tho' he strays where pleasant voices call
Of thrush or dove or woodland waterfall,
My ears hear nothing till that meeting-time.

"Will my strength last me? did not some one say
The way was ever easier all the way,
The road less rough, the barren waste less bare?
The briars are long since past, the stones cut less,
This hill is not so steep; let me but press
Across that peak—I know he will be there."

It is an old theme, an ordinary one; but the treatment of it has a melancholy grace that is by no means ordinary. Who will explain why, where every word is hopeful, the whole effect is sad even to tears? It has what Mr. Arnold so finely called a "ground-tone of human agony."

Of Mr. Mackail's verse a beautiful specimen has been given above; next to that, perhaps the sonnet (p. 101) on "The Debate of the Heart and Soul" might be

chosen to represent his muse on the sombre side. "Only to die" the Heart wails:

"Only to die, if death might ease my smart;
O soul, I am not fashioned as thou art,
Dowered with thine awful immortality.'
And the soul answers darkly: 'Even thus,
Thou and thy bodily vesture shalt decay;
Pain's self through length of pain shall wear
away,
And no new life shall come to quicken us;
Till one dread day in darker silence I
Shall know thee dead and know I cannot die.'"

But there is one poem of such pathetic personal interest, that even those who did not know its subject personally cannot read it unmoved. I scarcely like to make extracts from Mr. Mackail's poem, "On the Death of Arnold Toynbee"; knowing what was to many of his friends, I would rather not intrude with any criticism, and will only say that the poem is on a level with the following stanzas (p. 162):

"Beyond our life how far
Soars his new life through radiant orb and zone,
While we in impotency of the night
Walk dumbly, and the path is hard, and light
Fails, and for sun and moon the single star
Honour is left alone.

The star that knows no set,
But circles ever with a fixed desire,
Watching Orion's armour all of gold;
Watching and wearying not, till pale and cold
Dawn breaks, and the first shafts of morning fret
The east with lines of fire."

There are things in this volume much too slight to last, e.g., such epigrams as those on pp. 92-3. But, on the whole, the writers are real singers, closely resembling one another in vision. In another sense than that of Aeschylus, they are

τρεῖς κυκλόμορφοι, κοινὸν ὄψιν ἐκτεμνένοι.

E. D. A. MORSHEAD.

The Oracles of God. By W. Sanday, D.D. (Longmans.)

THE nine lectures included in this volume treat of the nature and extent of Biblical inspiration, and of the special significance of Old Testament Scripture at the present time. Dr. Sanday holds that the duty of the theological professor is twofold: "to advance by all means in his power the detailed study of the subject committed to him;" and "to do what he can to help the public mind to clear itself in times of difficulty and perplexity." The controversy stirred up by *Lux Mundi* has caused Dr. Sanday to "turn away for the moment with some reluctance and self-distrust" from the first of these duties to the second. He is reluctant, because his line of work "stretches forwards from the New Testament rather than backwards," and he doubts his competence to pronounce on questions outside his special sphere; but it is just because Dr. Sanday is not a professor of Hebrew, and has not made the Old Testament his special study, that his opinion of those who have is valuable. As a student of the New Testament he has the confidence, in a remarkable degree, of all parties of Christians, and we are therefore anxious to know his judgment on the spirit and methods of the suspected critics of the Old Testament; if he hails them as brothers we need not be afraid to learn what they teach. It need

scarcely be added that, in any eyes but his own, Dr. Sanday is a Hebrew scholar. He merely claims for himself a "rather fuller acquaintance with foreign work, as well as with English," than is possible to most of us; but these lectures, with their scholarly notes and valuable appendices, are the work of a man competent at all points to treat of his subject.

The lectures deal with two questions which controversy has joined together to the injury of both. Dr. Sanday's real subject is the nature and consequence of the "change in regard to the conception of the Old Testament as the vehicle of revelation" which criticism has effected. But he is obliged to add a chapter—Lecture VIII.—on Christ's use of the Scriptures, because the acceptance by Christ of the views of His time on the authorship and character of the books of the Old Testament has been held to place those views above criticism. Dr. Sanday's treatment of the question is admirably wise and candid; his lecture makes for peace in every paragraph, and will satisfy all reasonable Christians. He rejects the idea "that our Lord accommodated His language to current notions, knowing them to be false," and prefers to think with Dr. Gregory Smith that He "condescended not to know": it is, at all events, clear that "some humiliation, some circumscription," was involved in the advent upon earth. One point only we should like Dr. Sanday to have added. When Galileo has convinced himself that the earth moves, or a modern scholar feels certain that the Book of Jonah is not literal history, the inquirer has not to choose between his own opinion and Christ's, as the heretic-burner would insist. Galileo's difficulty is that Christ who came in the flesh and Christ who is the Spirit of Truth seem to contradict each other. Treason to Truth the heretic-burner thinks nothing of, but such treason stamps a man at once as a pharisee and not a follower of Jesus of Nazareth. If Christianity is not false, more emphatically even than if it is false, treason to Truth is treason to Christ.

But Dr. Sanday's main subject is the inspiration of the Old Testament, and what he has to say divides itself into two parts. First, he gives us his opinion of the value of recent criticism—he describes its results, he criticises its methods, and lets us know his opinion of the critics; and, secondly, he develops a theory of inspiration. The two subjects are not treated separately; while the theory of inspiration is elaborated, recent criticism is described and exemplified, sometimes in general terms, but occasionally in detail. We cannot help thinking that the treatment of the first of the subjects named is the specially valuable part of the lectures. We all are most eager to know what Dr. Sanday considers proved as to the composition of the Old Testament; our theory of inspiration we shall form for ourselves when we understand what our documents are and how they were written. We note, then, that Dr. Sanday is most profoundly convinced of the sincerity and spirituality of such scholars as Dr. Driver and Dr. Cheyne, that he is content to sit at their feet, assured that their work is necessary to the

progress of Christian thought and knowledge.

Scattered up and down the lectures, sometimes in the text and sometimes in the notes, are many hints and criticisms from Dr. Sanday as to the books and authors most likely to help the student of the Old Testament. The most definite statement of his own position occurs in the words:

"It is agreed on all hands that the Pentateuch is formed by the dove-tailing together of different documents; it is agreed by the great mass of inquirers that nearly all of these documents in their present shape are not earlier than the time of the kings."

When we turn to Dr. Sanday's theory of inspiration we find him less helpful. He insists that

"there are two spheres: there is the sphere of what St. John calls *the world*, and what St. Paul calls *the natural man*; the sphere of eating and drinking, of marrying and giving in marriage, the sphere of trade, of pleasure, of science, of politics; and there is the other sphere intersecting this, though distinct from it, the sphere of a higher, finer, spiritual life, in which *they sow not, neither do they spin*. . . . In a book like Shakspeare's Plays we have the interpretation of the one; in the Bible we have the interpretation of the other."

When we have got over the surprise occasioned by this use of Shakspeare's works, in which for many of us the higher sphere is at least as prominent as in the Books of Samuel and the Kings, we shall not find the first part of the sentence altogether final. It will not do to make the sphere "of trade, of science, of politics," with which the Jewish prophets were so constantly concerned, identical with "the world" of St. John, or we shall all become hermits. Dr. Sanday, indeed, qualifies the words we have quoted. In Lecture VII. he recognises the existence of "divine influences" in India and Greece; and there are passages in the lectures which allow us to find inspiration where we can, even in Shakspeare. The fact is, Dr. Sanday writes with the fear of "making sad the heart of the righteous," and of increasing the "disquietude in the air amongst good people," too much before his eyes. We are not all comforted by an insistence on the uniqueness of Biblical inspiration. To some of us this uniqueness is merely a stumbling-block and trouble. What touches our hearts and cheers our journey is such a detection of the inspiration of the Greeks as Mr. Ruskin makes for us in the *Queen of the Air*, or Browning in his *Balaustion's Adventure*. Critics who spread God's sunshine abroad over the universe surely glorify Him better than those who bottle it up in one corner. Dr. Sanday insists, in his fourth lecture, on the objective character of the impulse compelling the Jewish prophet. "The personality of the prophet sinks entirely into the background: he feels himself for the time being the mouthpiece of the Almighty. Imagine anyone doing this in the present day." Does Dr. Sanday think, then, that God has withdrawn Himself from the world? That is the melancholy conclusion of all this line of argument. It tends to empty of all serious meaning Christ's promise to be with His disciples till the end of the world. We cannot afford to admit that the

world in its old age is further off from heaven than when it was young, although it is quite true that there are many striking differences between God's way of coming to us now and His way of coming then.

RONALD BAYNE.

THE LIFE AND WORK OF CORAY.

Adamantios Korais [Ἀδανάτιος Κοραΐς]. By D. Theroianos. (Trieste: Austrian Lloyd's Press.)

THE subject of this memoir, Adamantios Korais, or, as he is more commonly called in Western Europe, Diamant Coray, is one whose name ought not to be forgotten, and the present work will help to save it from oblivion. Few men have set before them a more definite purpose in life, or have pursued it with more unswerving fidelity and more unflinching self-denial; but his position as an alien in a foreign country, maintaining a life-long struggle against poverty, and supported by his unaided genius and industry in an unremunerative occupation, has tended to confine the number of his admirers to his countrymen and to special students. His life also was, in the ordinary sense of the term, uneventful, and its greatness is only traceable in the steadfastness with which he followed out his aims. These were three in number—the advancement of classical Greek scholarship, the improvement of the Modern Greek language, and the regeneration of the Hellenic people.

Coray was born at Smyrna in the year 1748, and was instructed in the Greek Evangelical school of that city. The merciless use of the rod, which prevailed in that place of education, and drove away his brother for ever from the pursuit of the Muses, did not avail to discourage him; and his ardour in cultivating the study of the classics, and his penetration in perceiving what preparation was necessary for that purpose, displayed themselves at an early age. A copy of the Amsterdam edition of Strabo with Casaubon's notes had descended to him from his grandfather; and the feeling of incapacity which the perusal of it awakened in him, owing to his inability to read those notes, taught him to appreciate, what scholars of Greek nationality are apt to undervalue, the importance of an acquaintance with Latin. In that language he obtained instruction from Bernard Kuen, the pastor of the Dutch consulate at Smyrna, a man to whom he afterwards looked up as his best adviser and chief benefactor. He also taught himself French, Italian, and Arabic. But his first great advance was made in 1772, when his father, who was a merchant, in the hope of extending his business connexion, sent his son Adamantios to Amsterdam—a change which was welcome to him, notwithstanding the expatriation which it involved, because none of his compatriots were disposed to sympathise with him in his studies. As a man of business, as might be supposed, he was not successful; but since Holland was at that time the most distinguished centre of classical learning in Europe, his six years' residence in that country laid the foundation of his accurate and comprehensive acquaintance with

Greek philology. There also he learnt to write Latin fluently, and became acquainted with German. At the end of that time he was recalled, much against his will, to Smyrna, and on his return he found that his father's house had been lately destroyed by an earthquake which had visited that place. The despondency into which he was thrown by this occurrence was deepened into melancholy by the sight of Ottoman tyranny, and still more by the behaviour of those of his countrymen who acted as agents of the Turks; and at the end of four years his parents, fearing lest he should go out of his mind, consented that he should remove to Montpellier in France, where he proposed to study medicine. He arrived there in 1782, and during his six years of residence published his treatise on fevers and other medical works. In 1788 he removed to Paris, in which city the remainder of his long life was spent. He lived through the French Revolution, and has described many of the occurrences of it in his letters. Like most of the literary men of the time, he was at first inspired with enthusiasm for the movement in favour of popular liberty, but soon became shocked and disgusted by its excesses. From the Parisian *savants* he received a hearty welcome, for his fame as a scholar was already established. Before long we find him communicating to Larcher critical notes on Herodotus, which were largely embodied in his French translation of that author; and to Schweighäuser notes on Athenæus, which were gratefully used by him. In 1791 negotiations were carried on by Bishop Burgess with him about printing his notes on Hippocrates at the Oxford Press, of which transaction Mr. Bywater has given an account in the *Journal of Hellenic Studies* (vol. i., p. 305), and though these fell through, yet they prove the esteem in which Coray was held at this time in England. The first-fruits of his work were his edition of the *Characters* of Theophrastus, which appeared in 1799 with a French translation and notes. From that period almost until his death, in 1833, he continued to issue editions of the classics and other literary works, on which the space at our command forbids us to dwell. His merits as a scholar were fully recognised by his contemporaries, especially his acumen in discovering the seat of error in MSS. and suggesting emendations, based as it was on wide reading, sound judgment, and constructive genius.

Coray's biographer remarks that what Herodotus said of Greece was literally true of him, that from first to last poverty was his inseparable companion. For many years he obtained a scanty living by giving lessons in Greek, making copies of MSS. in the Paris library, and translating medical treatises from German and English into French. But at times he was almost reduced to destitution, and nothing but his ardent love of letters prevented him from leaving France. In 1807, he writes concerning his bodily ailments and mental anxieties, "my days are full of pain, and my nights a purgatory from sleeplessness." But, notwithstanding this, he was unwilling to receive money, when by doing so he seemed liable to place himself under an obligation to

any one in high position. Thus, when he was one of the *collaborateurs* in the French translation of Strabo, which was made under the auspices of Napoleon, he declined to receive additional gratuities for the work, lest he should be indebted to that emperor and possibly hampered in his political sympathies.

One of the most interesting questions at the present time connected with Coray's writings is his opinion concerning the regeneration of the Modern Greek language. He professes himself to occupy an intermediate position between the two schools, which already existed at the beginning of this century, and which stand in marked antagonism to one another at the present day—advocating, the one the strict retention of the existing forms of the language, the other a return to the Hellenic prototype. But it is easy to see that while he deprecates any sudden change, his sympathies are with the latter of the two views. He says, indeed, "Our language is the same which has been spoken by all Greeks for many centuries, and a language cannot be remodelled in a few years; it has taken a long period to form it, and in like manner many years are required to reform it." He is also afraid of macaronic expressions and solecisms arising from the ill-advised juxtaposition of words of different dates. His primary object, therefore, is to enrich the language by increasing the vocabulary from the storehouses of antiquity, and to expel Turkish and other words which are essentially alien to the Greek tongue. But at the same time he evidently contemplates an ultimate return to classical forms. Thus he strongly advocates the reintroduction of the lost dative case, though he hesitates about using it in his own writings; and by doing so he condemns by implication the analytic forms by which its use has been superseded. In one passage he broadly enunciates the maxim that the corruption of a language corresponds to the degeneration of those who use it, and that it should be restored by corresponding remedies—a principle the latter part of which is as erroneous as the former part is true, because words in the course of time are apt to lose the consciousness of their earlier significance, and with it the unfavourable element of meaning which they once contained. To take one instance of this, the frequent use of diminutives is a sign of an enfeebled national character, because it arises from an effeminate dislike of "calling a spade a spade"; but not even Coray would have maintained that the ordinary words for "bread," "fish," "eye"—*ψωμί, ψάρι, μάτι*, which are diminutives of *ψωμός, ὄψον, ὄμμα*—and innumerable others of the same kind, both in Modern Greek and the Romance languages, are any the worse now for their traditional form. Possibly, if Coray had lived at the present day, and had been acquainted both with the linguistic study of the last fifty years, which has brought out to view more and more clearly the historical continuity of languages, and with the mediæval Greek literature which has been published during that time, he might have modified his views on this point; nor are we very confident that he would have approved the literary language

which is now in use for prose. But here we are trenching on a subject which involves other than merely philological considerations, and can only be decided by the Greeks themselves.

The regeneration of the Greek people was an object which Coray had continually before his eyes. Both the advancement of Greek study and the improvement of the modern language were regarded by him from this point of view. He introduced this subject and insisted upon it, not only in separate addresses and pamphlets, but even in his editions of the classics, and he added advice for the development of education and culture among the Greeks themselves. His *Σάλπιγμα Πολεμιστήριον*, which was published in 1798 in connexion with Napoleon's Egyptian expedition, was a summons to the Greeks to second the efforts of the French in the East, since it was thought that they would devote themselves to the liberation of the Christians. His *Mémoire sur l'état actuel de la civilisation dans la Grèce* is spoken of by Mr. Fyffe in his *History of Modern Europe* as a historical sketch of great importance. He foresaw the rising of 1821, and supported it when it came; but he did not advocate it, for he considered it premature, since the people were not politically educated, and were likely to give way to party spirit. He lived to see the triumph of the cause for which he had laboured so effectively; but he can hardly be said to have been satisfied with it, for his advanced age—he was in his eighty-fifth year when he died—caused him to be despondent and severe in his judgments.

M. Thereianos has spared no pains in the execution of his task, and has brought great research to bear upon it. He is somewhat uncritical in his eulogies, and he errs on the side of fulness, in consequence of which his book is heavy reading; but we are indebted to him for a very complete account of the life and work of one of the most remarkable scholars of his time.

H. F. TOZER.

NEW NOVELS.

Mea Culpa; A Woman's Last Word. By Henry Harland. In 3 vols. (Heinemann.)

Some One Must Suffer. By H. Cliffe Halliday. In 3 vols. (Chapman & Hall.)

Miss Devereux, Spinster. By Agnes Giberne. In 2 vols. (Longmans.)

The Smuggler's Secret. By Frank Barrett. (Spencer Blackett.)

At an Old Château. By Katharine S. Macquoid. (Ward & Downey.)

The Speculator. By Clinton Ross. (Putnam's Sons.)

Captured in Court. By Sylvain Mayer and Antony Guest. (Eden, Remington & Co.)

THE cleverness of *Mea Culpa* scarcely atones for the unpleasantness of the story. It is clever in more ways than one. The plot is novel; and, while there are only five characters in all, two are fairly new. With five people and no more to do the plotting, talking, and acting, it was impossible that there could be much elaboration. Instead

of it, we have a bold, roughly done, but effective impressionist book. If the story had an agreeable ending, or middle, or beginning, it would deserve to make some mark; but it is depressing throughout. Perhaps it should be allowed that the beginning is dramatically a good one. The reader's attention is caught, and almost before he knows it he has given his sympathy to the young lady whose fortunes—evil for the most part—form the subject of the tale. It is well that this happens so early, for at a later stage the same young lady says and does some very foolish things, which are a sore strain on the regard which the reader has conceived for her. His pity comes to the relief of his judgment, and he has more forgiveness for Monica than she has for herself. When the story opens she and her father—a Russian nobleman suspected of Nihilism—are living in exile in Paris. They are miserably poor, and the daughter bravely sets to work and earns a sufficient livelihood for both. They make the acquaintance of a musical composer, a Frenchman, introduced only as Armidis, who is one of the two striking characters in the tale. He is picturesque and epigrammatic: a poet, composer, and philosopher in one. Outwardly somewhat half-witted, his conversation contains more than the wit his appearance lacks. But it is all so jauntily spoken, and with such Arcadian airs, that it seems perhaps even more sparkling than it is. The other remarkable character is a Russian prince, who is the most unconscionable egoist and the most curious make-up ever presented under the name of Highness. He is repulsive in appearance and vicious in taste; but combined with these qualities he has literary genius and capacities of refinement undreamt of by the reader. He proposes for Monica's hand, and ultimately marries her, but not with her consent. Her heart was given to a young American painter, who took his dinner at the frugal table in the Paris restaurant at which Monica and her father and Armidis usually dined. The painter turns up again when a crisis has been reached in the relations of Prince Léonticheff and his wife, and his reappearance in the story intensifies the sadness of the climax. Monica herself is disappointing; her father is selfish and uninteresting; the painter scarcely belongs to the story until all the sorrows of it are heaped upon his head—but Léonticheff is a personality to be remembered with wonder, if also with incredulity; while Armidis, quaint, genial, wise, and Arcadian, will take a real hold upon the reader's affections.

If the earlier chapters of *Some One Must Suffer* had been ruthlessly cut down, and so much of the story as was worth telling had been compressed into a single volume, "some one," to wit the present writer, would have "suffered" less than he has done. It was quite unnecessary to make the reader wade through all the childish experiences of Lameth Legh, when the interest centred in her does not begin till she has grown up. A well-managed opening chapter would have sufficed to tell all that it is necessary to know of about two-thirds of the history here set forth in three volumes. Mr. Cliffe Halliday seems him-

self to have been conscious of the difference in point of value of the materials he was putting together, for the first two volumes are written in the goody-goody style of infantine literature, while the last contains a powerful presentation of a really powerful story. What on the stage would be called the "properties" of the piece are well suited to the plot. They include an old manorial house, with a mystery attached to it, which at first is only vocal, though afterwards it becomes visible. Altogether in keeping with such associations is the singular personality of Rivers Ravensbourne, a man whose physical deformity suggests quite other possibilities than those which are brought about by the soul of goodness in him. The plot turns upon the deliberate burying alive, for what may seem a sufficient reason, of an unhappy young woman. It is this, and its causes and consequences, which give point to the title of the book. But the suffering, though everybody more or less shares in it, is not unrelieved. The melancholy interest gathered around the memories of Jeanne and Jennette is beautiful as well as sad; and Lameth's presence in the story gives an added tenderness to it throughout, and is ultimately the sun which dispels all the clouds and makes everyone happy. The tale is a striking one, and, except for the defects which have been pointed out, it is well told.

Miss Giberne has set a gratuitous puzzle to her readers by describing *Miss Devereux, Spinster*, as "a study of development." Everybody will, of course, look for some development in Miss Devereux herself. But that demure spinster is only a "study" of arrested childhood, and why her name should have been given to the book is even a greater puzzle than the other. There are some people in the story who do develop—it would be strange if there were not—though it would have been better if Miss Giberne had allowed them to go their way freely, instead of stopping the machinery every now and then to see how the traits of character in her men and women answer to certain known qualities in their ancestors. A "study of development" pursued on these lines is too much like the childish habit of digging up seeds to see how they are growing. It was perhaps with some notion that Miss Devereux would wisely influence the development of her nephew Cyril that this young gentleman was placed under her charge, but one cannot blame him for breaking from his aunt's leading-strings and making his own career. The Trevelyans are in every way the best people in the book. Mr. Trevelyan is a strong, original character, who would relieve the monotony of any circle, while his daughter Jean makes an altogether serviceable heroine. She has much to endure, and she is very noble and generous about it. By way of fual criticism, it may be admitted that the most marked development in the story is that of the general interest it arouses, and which increases right to the end after the first few chapters are past.

Mr. Frank Barrett is an old hand at a yarn; but he has excelled himself in *The Smuggler's Secret*, which is, as he calls it,

a veritable romance, and a very touching and beautiful one. The "secret" has to do with mysterious caves and hidden wealth; but these are very subordinate things. Of far greater interest is the tender life rescued from one peril to be doomed to another, and to grow up under conditions hitherto unknown out of fairy tales. The story Mr. Barrett tells is quite within the bounds of what is possible; but to have imagined it implies rare powers of invention, while it could only have been told by a writer capable of much sympathy, and of a pathos far beyond the ordinary needs of a novelist. Psyche is really a beautiful conception. She is a soul brought to life, and made capable of speech, feeling, intelligence, and affection by the creative art of the romancist. The book has other points of interest: it begins and ends with a love-story; there are vivid portraits in it of two old rascals, one of whom may well stand for the type of smuggler at its worst; there is a confessed crime and a pathetic expiation—but it is Psyche whom alone the reader will care for, and he will regret that the exigencies of the plot did not accord to her a kinder fate.

Mrs. Macquoid is generally successful in her French stories, but *At an Old Château* is not the best of them. Still, an attractive title goes a long way, and the charms of a quaint old house in Brittany, officered by family servants of more than one generation, go still further. The situations of the story were meant to be only pleasantly embarrassing, but they are embarrassing without being pleasant. It is hard to believe that a Frenchwoman, of the position of Manon's mother, would leave the secret of her daughter's marriage to be found out by the girl's brother, after her own death, and after needless complications had arisen. Fortunately, the complications all come right, but they are too obviously invented for the purpose of being removed. The events do not occur naturally; they are made to suit the story-teller's purpose, and the reader is not deceived into believing in them.

The story told in *The Speculator* is the too familiar one of the terrible plunge from wealth to poverty which speculative commercial ventures sometimes result in. This particular story is, no doubt, made more impressive for English readers by its American background. Everything is on a big scale. Samuel Chester, the night before he failed, and when he was reputed to be one of the richest men in New York, gave a sumptuous ball, which emphasised the popular notion of his wealth. It was from this height that he fell. The next morning he suspended payment, and all the markets of the world felt the shock. The story has a pathetic side, too; for the first thing the fallen man did was to revisit the little country town where he began life, and which he had left twenty years earlier when a larger career opened before him. Why he did so the reader sees, but the poor fellow himself did not. He had to go back to his starting-point, and he did it; but the race he had run was not to be run over again.

Captured in Court is rather a weak shilling's-worth, as such things go. The narrative is dull and amateurish; but some strong incidents crop up, of which the capture in court is the most effective.

GEORGE COTTERELL.

THREE CAMBRIDGE PRIZE ESSAYS.

Election by Lot at Athens. By J. W. Headlam. The Prince Consort Dissertation for 1890. (Cambridge: University Press.) It is a great pleasure to find an original bit of work in ancient history done in English, and we welcome Mr. Headlam's dissertation as something which we may set off against the numerous German pamphlets which find their way to this country. Mr. Headlam has a definite theory of the use and objects of the lot, as used in appointing officials at Athens, and he advances it in a vigorous and agreeable way. His investigation will be of great service in clearing and fixing men's ideas upon a subject about which some historians have been very wrong and most historians very vague. We are not sure, however, that he is quite just to Müller-Strübing in seeming to impute to that vivacious writer the view that the lot was introduced "to give oligarchs a chance of being elected"; for we have always understood Müller-Strübing to mean that it did give oligarchs a chance, but not that it was designed so to do. Mr. Headlam himself maintains that "it was introduced, not only to prevent rich men being elected, but to prevent the executive officials being too influential. It was not a δέυτερος πλοῦς to keep down oligarchs, even at the price of putting second-rate men in office; mediocrity in office was its object, because this was the only means of ensuring that not only the name but also the reality of power should be with the Assembly." The device of casting lots was religious in its origin (as we can infer from its being kept up in connexion with so many religious appointments)—an appeal to the decision of the gods—and therefore of great antiquity; but at Athens it was almost completely secularised and turned to the above political purpose. The purpose was a democratic one, and all Hellas recognised that the use of the lot was a democratic institution. The Athenians lost by it control over their elections (with certain exceptions), but that mattered little to them; they never attributed to elections any such importance as we do. There was nothing at all like an elected prime-minister, for the sufficient reason that the Athenians did not want such a person. They preferred to initiate their own policy, and to leave to no official any real independence of action. The lot checked the possible rivals of the Assembly: (1) the Councils; for the incoming of mere chance-appointed Arehons destroyed the mysterious prestige of the Areopagus, while the new Council of Five Hundred was named in the same way and sat only for a year; and (2) the executive; for there was no way in which individuals on boards could rise into a position of power independent of the Assembly. The lots "helped to secure perfect equality among all citizens, a regular rotation in office, and the undisputed authority of the Assembly." They "broke down and weakened all bodies, so as to make of every office nothing more than a committee of the Assembly." Now, this is sensible enough; and it goes on beyond the ordinary vague teaching that the lot was a democratic safeguard, and shows us the practical working and consequences of the arrangement. It is a view which carries its truth on the face of it; and Mr. Headlam also finds a certain confirmation in the new Ἀθηναίων Πολιτεία, c. 4, where it is plainly said that to secure rotation in office

was one object of the lot. But we cannot see how, if the lots were fairly handled, and especially if men might be re-elected, the rotation could be complete. How did the system ensure to everyone a turn of office? In his anxiety to show that there was no organisation possessing real power except the Assembly, Mr. Headlam underrates, we think, the importance of the clubs. He refers us to Vischer, whose essay on the subject, like all others which we have seen, is very meagre and incomplete. Clubs, Mr. Headlam says, "were always attached to an individual." But this surely cannot be affirmed of the *συνετασεις ἐν δίκῃ καὶ ἀρχαῖς* of Thucydides; and the mere name for these in Thucydides seems to contradict another of Mr. Headlam's assertions—that "there was no organisation to support candidates of particular opinions." The conduct of the clubs showed that they held very particular opinions indeed.

The Fragments of Zeno and Cleanthes. With Introduction and Explanatory Notes. By A. C. Pearson. (Cambridge: University Press.) The institution of prize essays is not often successful in calling forth compositions of real and lasting value. Written generally by very young men, and for the purpose of the moment, these essays give promise rather than performance, ἀγώνισμα ἐστὶ τὸ παραχρῆμα rather than κτῆμα ἐς αἰὲν. But every rule has its exceptions. Mr. Bryce's *Holy Roman Empire*, and Mr. McColl's *Greek Sceptics* were important studies of their subjects; and now Mr. Pearson's essay (Hare Prize, 1889) will be of permanent value, not merely for his collection of passages, but also for the skilful arrangement and the learned commentary which set the passages off to the best advantage. He has, of course, had to build upon foundations laid by his predecessors, and he has judiciously gone to the best modern authorities. But he claims to have made and arranged his collection of the fragments of Zeno and Cleanthes before seeing Wachsmuth's two Göttingen programs on those philosophers, and to have added something of his own to the work (though he modestly says that "the additional matter which will be found here for the first time is not large"). It is at least probable that we have now got collected most of the material which is to be found at all for writing the history of the earlier Stoa; and the first result of the collection will no doubt be a rise in reputation for Cleanthes. The philosopher of Assus has hitherto been unduly overshadowed by the philosopher of Citium. Zeller wrote of him that he was incapable of expanding his master's teaching, and even the latest historian of philosophy whose writings we have seen (Windelband, *Gesch. d. Phil.*, 1890) passed him with little notice. On the other hand, Mr. Hicks declared in the *Encyclopædia Britannica* (on the strength, we suppose, of the fragments which Wachsmuth collected) that the contributions of Cleanthes "were more distinctive and original than those of any Stoic." Mr. Pearson does not expressly give his assent to this rather strong statement; but he evidently thinks that Cleanthes has been underrated, and his arrangement of the fragments in natural sequence will assist the formation of a fair judgment. His own verdict is as follows:

"To Zeno belongs the establishment of the logical criterion, the adaptation of Heraclitean physics, and the introduction of all the leading ethical tenets. Cleanthes revolutionised the study of physics by the theory of tension, and the development of pantheism; and by applying his materialistic views to logic and ethics brought into strong light the mutual interdependence of the three branches" (p. 48).

The History and Prospects of British Education in India. Being the Le Bas Prize Essay for 1890. By F. W. Thomas. (Cambridge: Deighton, Bell & Co.) The object of the Le

Bas prize, if we understand aright, is neither to promote specialist research, nor to reward fine writing, but to direct attention towards some subject connected with British rule in India. Of such subjects, none is more important, as regards both the present and the future, than education; but perhaps none is more difficult to treat in an intelligible fashion. The complications of the subject are enormous. Not only does it comprise oriental teaching of different kinds—in Sanskrit, Tols, Muhammadan Madrasahs, and village Pathshalas—as well as education in English; but the systems adopted vary in each province. An additional element of confusion is introduced by the classification of government, aided, and unaided institutions. We are, therefore, paying Mr. Thomas no idle compliment when we say that he seems to us to have found his way with considerable ability through this bewildering jungle, though we do not feel sure that he will have made himself altogether clear to those previously ignorant of the subject. He starts with indigenous instruction, which forms perhaps the most readable of his chapters. Then, after a short account of the educational work of the early missionaries, he describes the first period of encouragement of education by government, which closes with Sir Charles Wood's famous despatch of 1854. In this period, the most interesting stages are—the sympathetic investigations of Mountstuart Elphinstone (whom our author erroneously styles "afterwards Lord Elphinstone") in Bombay; the establishment of village schools in the North-Western Provinces by Thomason; and the heated controversy about giving higher instruction in the English language, with which the names of Dr. Duff and Macaulay are associated on the victorious side. Then comes the modern period, which Mr. Thomas excusably sub-divides into two, drawing a line at the Education Commission of 1882. But, in truth, that Commission—like most Commissions, both in India and in England—was appointed mainly to satisfy a temporary agitation; and its recommendations do little more than emphasise or slightly modify different aspects of the system introduced in 1854. That system had two, or perhaps three, principal objects: (1) the creation of universities, on the pattern of the University of London, which by their examinations should regulate the entire curriculum of higher education throughout the country; (2) the organisation of an Education Department, like that in this country, to administer grants-in-aid by means of inspection; and (3) the special encouragement of primary schools. On the whole, the system started in 1854 has continued down to the present time, with but few developments—such as greater attention given to technical instruction, and to the education of girls and of Muhammadans. Here, we think, Mr. Thomas has somewhat overburdened his pages with details, probably because he was desirous of not seeming to ignore any of the numerous side-issues that have been raised. In a concluding chapter, he discusses some of the larger questions that suggest themselves with regard to the future of education in India. We commend his fairness, but we cannot altogether agree with his conclusions. He seems to us scarcely to realise—though he might have learned it from his Indian fellow-students at Cambridge—the increasing predominance of the English language in India, not only as the medium of instruction and the stepping-stone to official employment, but also as the literary and political link which unites the educated classes in the several provinces, and which symbolises the acceptance of Western civilisation. Not that the educated natives of India will ever forget their own vernaculars, any more than they will abandon their religious and social customs. Their destiny is to become bilingual, and thus to transmit to their less

fortunate brethren the results of the moral and material progress they have themselves acquired. A gradual regeneration of oriental life and character—under the impartial protection of English rule, but carried out by the agency of English-speaking natives—is our dream of what the twentieth century will witness.

TWO FOREIGN NOVELS.

Induleka. A Malayalam Novel. By O. Chandu Menon. Translated into English by W. Dumergue. (Madras: Addison.) Considering that this is the first novel written of Malayalam life and manners, the author has succeeded, to a very fair degree, in making his book interesting and instructive, although it is not altogether free from faults and weaknesses inevitable to a first venture. Perhaps it is in his delineation of the character of Namburis—the Brahmins of Malabar—that his abilities are seen to most advantage; the sketches of Suri and Cherusher are very true to nature, and decidedly the best in the book. The author's peculiar vein of humour finds free play here. Panthu Menon is the old type of the head of a family that is fast disappearing, exacting almost slavish obedience from all under him, rash and wrathful, yet withal kindly and generous when not in a passion. The characters of Induleka and Madhavan serve to show the changes that are taking place in the life and thought of young Malabar, through the spread of Western education. The book, on the whole, is a true picture of the life passed by the members of a rich Nair family of South Malabar at the present day. The weakest part seems to be the plot; there we see the inexperience of the author as a novelist. The several incidents are described rather by themselves than as parts of a connected whole. We notice this specially in chapter xviii., where, in our opinion, the conversation on the Congress and religion is entirely irrelevant. The author would have done better, if he was anxious to air his opinions on these subjects, to have written a separate pamphlet on them. In fact, after Madhavan's departure from Malabar the story loses all interest; the end is exceedingly weak. The translation is as near to the original as possible, without sacrificing clearness, and is, on the whole, well executed. Nevertheless, many ideas which are appropriate to the Malayalam, and even exquisite there, look strange and uncouth in their English garb; some fine pieces of humour are utterly destroyed. We specially commend the beauty of the English verses, into which the Slokas have been translated.

The Strange Friend of Tito Gil. By Pedro A. de Alarcón. Translated by Mrs. Francis J. A. Darr. (New York.) Pedro de Alarcón has written many novels, and one masterpiece, *El Sombrero de tres picos*, a re-setting in modern guise of the old world-wide tale of *The Miller and his Wife*. *The Strange Friend of Tito Gil* is an attempt in the same style, but with by no means equal success. It is the folk-lore tale of the Clever Physician, who, without study, or knowing how to read or write, gains reputation and wealth, because he can see Death, whom he had once unconsciously befriended. The story has been told by Fernán Caballero in her *Cuentos y Poesías Populares Andaluces*, under the title, "Juan Hologado y la Muerte." The first half of Alarcón's tale promises well, though the characters are very faintly drawn. The scene with Philip V., and the death-bed of his son Louis are impressively related; but after that the incidents lose all verisimilitude. The aerial voyage of Tito Gil and Death to the North Pole reads like a bad parody of some of Jules Verne's work; and all the former interest in the chief characters is destroyed by the announcement (p. 125) that

Tito and Elena were dead before he commenced his career as a physician, and, consequently, the scenes described were impossible even in imagination. In all this we may perhaps trace the influence of Alarcón's early friend, the poet Espronceda, and an unhappy mixture of his Byronism with the more recent influence of Jules Verne. The result can attract by its fantastic strangeness only.

NOTES AND NEWS.

WE learn that Mr. Herbert Spencer's new work, entitled *Justice*, is nearly through the press. It forms the fourth division of his "Principles of Ethics," which he has executed out of its turn as being the most important division. Parts II. and III., completing the first volume, will next be undertaken, and afterwards, if he should succeed in completing these, Parts V. and VI., which, with the part now issued, will make up the second volume.

WE are promised a new version of the life-story of Emma Lady Hamilton, retold by Hilda Gamlin from original materials, which are asserted to disprove much that has hitherto been alleged to her injury. Mr. Alfred Morrison has placed unreservedly at the disposal of the author his unrivalled collection of autograph letters bearing on the subject. There will also be printed numerous letters from Greville, disclosing the actual circumstances under which she was transferred to Sir William Hamilton. Evidence will also be adduced to prove that Lady Hamilton was merely the voluntary guardian of Horatia, and that the celebrated series of "Thomson" letters was not written by Nelson. The book will be illustrated with nearly fifty plates, including portraits, views, and facsimiles of letters; and it will be published, in handsome form and in a limited edition, by Mr. Edward Howell, of Liverpool.

THE second instalment of Miss Garnett's book, *Women of Turkey and their Folklore*, is to appear in a few days. The first volume, it will be remembered, dealt with the Christian women of Turkey. The new one is devoted to their Jewish and Moslem countrywomen. To a description of the social status and family life of the women of Turkey is added an historical account of the Osmanli poetesses. Mr. Stuart Glennie's concluding chapter on Folklore and Historical Origin may be expected to shed a new light on certain much discussed problems relating to the origin of marriage, and more especially of its patriarchal and matriarchal forms.

TWO new volumes in Mr. David Nutt's series of "Waifs and Strays of Celtic Tradition" will be published almost immediately: *Folk and Hero Tales from Argyllshire*, collected and translated by the Rev. James MacDougall, with an introduction by Mr. Alfred Nutt; and *The Pians*, traditions in prose and verse, collected during the last forty years by the Rev. J. G. Campbell, of Tiree.

MESSRS. LONGMAN have in the press, to be published in the autumn, a volume entitled *Games, Ancient and Oriental*, by Mr. Edward Falconer, illustrated with ten photographs and other full-page plates.

MESSRS. MACMILLAN & Co. will shortly publish in their "Golden Treasury Series" a selection of the best modern German ballads, edited by Prof. Buchheim as a companion volume to his *Deutsche Lyrik*, which is now in its seventh edition. The book will contain, besides a critical survey of German ballad literature from Bürger to Paul Heyse, brief annotations giving the sources of the ballads and romances.

MR. HUGH L. CALLENDAR has greatly simplified his system of cursive shorthand, by adapting it to the ordinary spelling method instead

of the phonetic standard which he has hitherto followed. The exposition of the system in its revised form is contained in a pamphlet of thirty-two pages, twelve of which are devoted to specimens for reading practice. It will be published immediately by the Cambridge University Press under the title of *A Manual of Orthographic Cursive Shorthand*.

AMONG new volumes of verse announced by Mr. Elliot Stock for early publication are—*Day Dawn, and Other Poems*, by J. Meller; and *Descriptive Poems written in England and India*, by E. Templeman.

THE annual dinner of the Society of Authors will be held at the Hôtel Métropole on Thursday, July 16. Lord Monckswell, who introduced the Copyright Amendment Bill into the House of Lords, will take the chair; and it is proposed to make the occasion one of recognition of the passing of the American Act.

IN reply to a question from Mr. Bryce in the House of Commons on Monday last, the Under-Secretary of State for Foreign Affairs stated that "Her Majesty's Government are advised that the law of this country in the matter of copyright is so favourable to aliens that we may expect to satisfy the conditions of the new American law."

SIR CHARLES DILKE has deposited his valuable collection of Keats' relics in the Chelsea Public Library. They consist of books containing holograph poems and notes by Keats, letters by and to him, and other objects of interest connected with the poet. The collection is arranged in a show case, and exhibited in the reference library.

AT the general meeting of the British Economic Association, to be held on Wednesday next, June 24, at 9 Adelphi-terrace, the chair will be taken by Mr. John Morley, in the absence of the president, Mr. Goschen.

AT the monthly meeting of the Browning Society, to be held at University College on Friday next, June 26, at 8 p.m., a paper will be read by Mr. R. G. Moulton, entitled "'Balaustion's Adventure' as a Beautiful Misrepresentation of the Original."

DURING the first three days of next week, Messrs. Sotheby will be engaged in selling what they describe as the library of an "eminent" collector. It is, indeed, a very choice collection of those books which bibliophiles most affect, including foreign incunabula, first editions of the classics printed at Rome and Florence, Aldines, and—in particular—the highly valued illustrated works which were produced in France in the last century. Some of the books came from the Beckford, the Syston Park, and other historic libraries.

THE funeral of the late Captain Sir Richard Burton took place on Monday, June 15, at the Church of St. Mary Magdalene, Mortlake. The requiem mass was sung by Monsignor Stanley, of Spanish-place Church, assisted by Fathers White, Regan, and Cafferata. The music was by Casciolini, and was rendered by a special choir of professionals. Father Cox's "In Paradisum" was sung on the removal of the coffin from the church to the cemetery adjoining, the concluding prayers being said at the graveside by Provost Wenham, the priest of the mission. A harmonised "Benedictus" was then sung, during which Lady Burton and several friends laid wreaths of flowers by the side of the coffin. The tomb, which is subscribed for by Sir Richard's countrymen, represents an Arab tent, with a star above and a crucifix over the entrance; the interior is a small chapel, with altar and some oriental lights.

THE Italian papers announce the discovery of a valuable library, hitherto hidden in the monastery of Sant Antonio del Monte, near

Rieti. Signor Villari, minister of education, immediately sent to the spot Prof. Monaci, who reports that the library contains about 500 printed books and 69 MSS. Of the latter the greater number are written on parchment, and date from the tenth to the fifteenth century. They are described as having great palaeographic interest, with fine illuminations in some of them. But it does not appear that they include any classical texts. The subjects mentioned are theological and liturgical, civil and canon law; only a few philosophical and literary treatises.

FORTHCOMING MAGAZINES.

THE July issue of the *Antiquary* will contain an illustrated article by Dr. Munro, F.S.A. Scot., on "Prehistoric Beaver Traps." The same number will also include an article descriptive of the little-known but very valuable private museum of Mr. Mortimer, at Driffild, wherein are stored the fruits of much barrow digging on the Yorkshire Wolds.

THE July number of *Harper's Magazine* will have for frontispiece a portrait of Dr. Oliver Wendell Holmes, with a biographical and critical essay by Mr. G. W. Curtis. There will also be the opening chapters of a new novel by Mr. W. D. Howells, entitled "An Imperative Duty."

IN the series of articles which are appearing in *The Bookworm*, entitled "Bookworms of To-day," by Mr. W. Roberts, the subject of the July number will be Mr. Fred. Burgess, whose collection of Dickensiana is second only to that of Mr. W. Wright, of Paris, and whose dramatic library is one of the most extensive in this country. Mr. Burgess' name will be more familiar to the general public in connexion with a certain troupe of minstrels than as a connoisseur in "first editions" and old play-bills.

Literary Opinion will in future be published by Messrs. Hutchinson & Co. The July number will begin several new features, including a portrait of some distinguished living author, with memoir, also a monthly summary of the ever increasing book production of Greater as well as of Great Britain, with special Australian and Continental letters. A portrait of Mrs. T. Humphry Ward will appear in the July number.

MR. MACKENZIE BELL contributes to the *Rural World* a poem entitled "Two Lives," which is a plea for Mr. Chamberlain's scheme of "Old-Age Pensions."

THE extra summer number of *Cassell's Magazine* will be issued on June 25, under the title of "The Crown of the Year." It will contain a complete novel called "A Matter of Skill," by Miss Beatrice Whitley, illustrated by Mr. Percy Tarrant; and other papers for holiday reading.

THE July part of *Little Folks*, which forms the commencement of a new volume, will contain the opening chapters of two new serial stories: "Four on an Island," by L. T. Meade, and "To School and Away," by H. Atteridge.

WITH the next number of *Ariel* will be issued, as a supplement, on specially fine paper, the first of a series of coloured cartoons by "Cynicus." It will be entitled "Truth."

UNIVERSITY JOTTINGS.

THE Rev. Henry Melville Gwatkin, sometime fellow of St. John's College, has been elected to the Dixie chair of ecclesiastical history at Cambridge, vacant by the transfer of Dr. Creighton to the see of Peterborough. Mr. Gwatkin is best known by his *Studies of*

Arianism, and by a popular volume on the same subject which he contributed to the "Epochs of Church History" series in 1889.

M. TAINÉ and Prof. Weierstrass were unable to be present to receive their honorary degrees at Cambridge on Tuesday.

MR. PETER GILES, of Emmanuel College, has been elected reader in comparative philology at Cambridge, in the place of Dr. Peile, who has resigned that office in view of his approaching vice-chancellorship.

THE general board of studies at Cambridge have approved the name of Mr. T. G. Tucker for the degree of Doctor in Letters. Mr. Tucker—who is, we believe, professor of classics in the University of Melbourne—will be remembered for his critical edition, with translation, of the *Supplies of Aeschylus* (1889).

The following is the text of the speech of the Public Orator (Dr. Merry) on introducing Dr. Wright for the degree of M.A. *honoris causa*, at Oxford:—

"De grammaticis historicisque linguarum ac dialectorum studiis apud nos Oxonienses indies invalescentibus bene augurari licet, quod vir doctissimus Iosephus Wright, philologiae comparativae professor deputatus in hac Academia nuper est electus. Cuius quidem litterarum accuratam cognitionem testantur non solum nostrates, verum etiam eruditissimi in Germania doctores, quorum praelectiones quum diu diligentissime audivisset, in fidem ipse studiis summam laudem consecutus est.

"Mihi quidem horum insignium virorum tabellas commendaticias perlegenti persuasissimum est professorem nostrum in omnibus quibus operam impenderit rebus strenuum Britannorum ingenium eum argutiore Tentonum subtilitate coniunxisse, nec minore successu doctrinam aliis impertiri quam sibi ipsi parere consuevisse. Quapropter Academiam de studiis philologicis optime esse meritum censeo, quae tam praeclari viri auxilium sibi adseverit, nec sine certa quadam confidentia spero hodie vos, Academici, doctum virum vel arctiore vinculo vobis esse consociaturos."

THE Rev. Dr. Cunningham, who has just been elected a fellow of Trinity, has resigned the post of university lecturer in history at Cambridge.

IN his presidential address on "The Progress of Geography," at the anniversary meeting of the Royal Geographical Society on Monday last, Sir Mountstuart E. Grant-Duff was happy to be able to report that their efforts to promote geographical education at Oxford were being crowned with success, thanks to the enlightened views now prevailing there, to the powerful assistance of the Warden of Merton and other friends in high place, and to the zeal and high intelligence of Mr. Mackinder, who was rapidly winning not only golden opinions for himself, but an excellent place for his science on the banks of the Isis. Negotiations were now in progress which would, he hoped, result in the establishment of a travelling scholarship at the joint expense of the society and of the University of Oxford. On Tuesday, Convocation at Oxford voted a grant of £50 for four years, to meet a like sum provided by the Geographical Society, for a scholarship to be held by a student engaged in geographical research.

THE *Oxford Magazine* records the acquisition of historical relics by two colleges. The late Dr. Bloxam has bequeathed to the President of Magdalen Addison's shoe-buckles, together with six chairs and a lamp-stand, to be preserved in the president's lodgings; and Mr. Henry Willett, of Brighton—who is not, we believe, himself a university man—has had restored, in order to be returned to Queen's College, a battered effigy of Queen Philippa, which had for long been lying neglected in the neighbouring village of Wolvercote.

THE Lord Chancellor of Ireland, Lord Ashbourne, presided last Wednesday, in the Middle

Temple Hall, at a dinner attended by Irish gentlemen in England who had graduated at Trinity College, Dublin, to commemorate the terecentenary of their University.

THE senate of Durham University have adopted a scheme for two new degrees—that of Bachelor and Doctor in Hygiene. Candidates for the former, who must be already registered medical practitioners, will be required to have spent one year of professional study at the Newcastle-on-Tyne College of Medicine. Candidates for the latter must further have been engaged for two years in practice as medical officers of health.

THE University of Adelaide, South Australia, has been admitted to the privileges of affiliation at Cambridge.

THE annual meeting of the Chelsea centre of the University Extension Society will be held at St. Mark's College on Thursday next, June 25, at 8.30 p.m., with Lord Monkswell in the chair. The certificates will be presented to students by the Marchioness of Ripon; and a lecture on "India," illustrated with lantern slides, will be delivered by Mr. C. L. Tupper.

WE may mention here the article on "Oxford," which has been contributed to the new edition of *Chambers's Encyclopaedia* (Vol. VIII.) by the Rev. Andrew Clark. It covers sixteen closely printed columns, and may be called exhaustive—like of the topography, the history, and the educational system. This last is almost entirely ignored in the corresponding article in the *Encyclopaedia Britannica*, which is also much shorter. The only omission we have noticed is any reference to the extinction of at least two historic Halls in recent years. But Mr. Clark has not only written a condensed guide-book to the town and the university, he has also found space to include not a little criticism. After giving a table of the honours lists for 1890, in which the several branches of science are classified, he adds:

"A comparison of the above table with the list of professors, lecturers, and demonstrators yields the ridiculous result that, to produce 26 candidates graduating in honours in science, the university employs a staff of 27 teachers, and that these require the assistance of several college lecturers."

And again, when enumerating the features which distinguish Oxford from other universities, he says:

"The Oxford course is entirely out of touch with the professional education of the country. The Oxford undergraduate, entering the university at 19 or 20, finds himself at 23 or 24, after the expenditure of £800 or £1000, and the formation of idle habits and expensive tastes, with his whole life to begin afresh."

Some severe but not unjust comments are likewise passed upon "the excessive luxury and idleness" of the students. It is curious, too, for one who remembers the reforming enthusiasm of twenty years ago, to find the old system of prize fellowships described as the "best feature" of Oxford.

ORIGINAL VERSE.

THE CHARM OF THE RUE.

Why do you come to disturb me?
I laid you away to rest,
With red rose-leaves for your pillow,
And rosemary over your breast.
There was lavender all around you,
I knew that your grave was deep;
There were king-cups growing above you,
And yet you have stirr'd in your sleep.
I promised that you should have flowers;
And I did not forget the rue;
But sometimes I think you forgot, dear,
All the old-world spells that I knew.

You said that I must not remember,
But bury you out of my sight;
I might strew the red rose-leaves upon you,
And then must forget you quite.

But I knew you would one day waken,
If only the rue was there;
That the past it would all come back, dear,
Some day when the skies were fair.

You know that you bade me forget, dear,
All the love that you told long ago;
To bury it deep, nor regret you,
It had passed with the last year's snow.

But for years I hoped you would waken,
For I knew that the rue it was there;
But I thought that the charm was broken,
No answer there came to my prayer.

And now you have slept so soundly,
'Mid roses, rosemary, and rue,
That I have had time to remember
It was I, not you, that were true.

But the charm it has worked, and you waken;
The spell of the rue holds you fast;
The grave has no power to keep you,
Your love it is mine at last.

And, dear, you should not reproach me,
Remember that I was true;
Red roses and rosemary wither,
You took no heed of the rue.

But yet for the sake of the past, dear,
And the days e'er you proved untrue,
I would I had left you to sleep, dear,
With never the charm of the rue.

FLORENCE PEACOCK.

OBITUARY.

JOHN BOXWELL.

JOHN BOXWELL, B.C.S., Commissioner of Dacca, one of the Indian civilians who, like Colebrooke, were equally distinguished as administrators and as scholars, died last month, of cholera, at the seat of his commissionership. The following order by the Lient.-Governor of Bengal appears in the *Calcutta Gazette* of May 20, 1891, and records the opinion of the local government under which Mr. Boxwell served:

"The 18th May, 1891.—The Lieutenant-Governor has heard with deep regret of the loss which the Government and the public have sustained in the sudden death of Mr. John Boxwell, C.S., Commissioner of Dacca, and formerly Commissioner of Patna. An accomplished scholar of wide and varied culture, his large sympathies and elevated character endeared him to all with whom he came into contact during his long service in Bengal. Sir Charles Elliott wishes to express his personal sympathy with the general sorrow which will be felt at the death of one who was not less loved in his private life than esteemed as a public officer."

It is hardly necessary to add that such a man received none of the honours which the Government of India has scattered so profusely during the last ten years.

Mr. Boxwell is known to the readers of the *ACADEMY* and to the members of the Philological Society as the author of a remarkable Latin version of *Rigveda* x. 108 in the metre of the original (the *ACADEMY* for November 20, 1886, p. 245), a paper on the place of Sanskrit in the development of Aryan speech in India (*ACADEMY*, February 12, 1887, pp. 116, 117), and a report on the language of the Santals (whom he ruled as Commissioner for some years), which has appeared in the *Proceedings* of the Philological Society. He also contributed to the *Journal* of the Asiatic Society, Calcutta. His gift for language was sedulously cultivated; thus during one of his furloughs he attended Prof. Brugmann's lectures and mastered the methods of the modern philology.

In his honesty, energy, and charm of manner Mr. Boxwell resembled his countryman, Lord Mayo. Like Lord Mayo, too, he was a good

rider, a keen sportsman, and, physically, a veritable *ἀναξ ἀνδρῶν*. He leaves a widow, five children, and many mournful friends.

W. S.

MAGAZINES AND REVIEWS.

THE ornament of the June *Livre Moderne* (the last number of the third volume of that ingenious publication) is a full-page lithograph, or rather aquatint etching, after no less a person than the mighty and naughty Félicien Rops, as much in his peculiar style as could be ventured on in a publication intended for general reading. A sober bibliophile sits in an armchair studying a folio; but on the back of that armchair and comfortably supporting herself also on the bibliophile's neck and shoulders is a gigantic female figure with as little clothes on as Mrs. Midshipman Easy had when Mr. Midshipman Easy first saw her, and probably less. She is masterly enough, this *succuba insidens*, and considerably more decent than some saints of our English Academicians' creating. The letterpress contains a bundle of unpublished letters (we hope, by-the-way, that this fashion will not make its way into England), M. Gausseron's usual *compte-rendu* of recent books, and the index for the half-year.

WE have received the first number of the *Revue des Bibliothèques* (Paris: Bouillon), which is edited by M. Emile Chatelain. Its object is not to compete with the many bibliographical reviews that are already published in France, but to supply to library officials the means of making their stores better known to "the studious public." Consistently with this conception, the three first articles have to do—not with library appliances, nor even with books—but with MSS. M. H. Omont prints, from the British Museum, the catalogue of the MSS. of the Benedictine abbey of Lobbes, near Liège, drawn up in the year 1049; M. Chatelain himself gives an account of the library of the Collège du Trésorier, at Paris, tracing all the MSS. from it that are now known to exist; and he also identifies a new leaf of a fragmentary MS. of Virgil in the Bibliothèque Nationale, which he has already described in the *Mélanges Renier*. The reviews likewise are almost entirely concerned with catalogues of MSS. There is, however, one article which our librarians will be interested to note: an appeal, signed by M. Ch. Mortet, of the Bibliothèque Sainte-Geneviève, for the establishment of an association of French librarians, after the pattern of those in America, the United Kingdom, and Germany.

THE HONORARY DEGREES AT CAMBRIDGE.

THE following are the speeches delivered by the Public Orator, Dr. Sandys, in presenting to the vice-chancellor the several distinguished persons on whom honorary degrees were conferred at Cambridge on June 16:

LORD WALSLINGHAM.

"Multum in summo Seneschallo nostro nuper amissimus; qui duodevigiinti annos amplissimo illo functus officio, aureo uumismate carmini heroico Latino per annos complures donato, et insignem litterarum humaniorum amorem et eximium erga Academiam benevolentiam testabatur. Carmen autem audietis hodie praemio illius ornatum, carmen Timoleontis in laudem conscriptum, qui olim Crimisi (ut meministis) ad ripam progressus militibus suis omne tristi attonitis egregie ostendit apii coronam non mortuorum modo sepulcris sed etiam ante omnia victorum frontibus esse idoneam. Ergo Seneschalli a nobis abrepti sepulcro corona nostra quantalacumque non sine reverentia imposita, hodie successorem eius illustrem, certaminum complurium victorem, libenter coronamus. Olim Etonae, postea Cantabrigiae, in ludo campestri spectandus, saepenumero erat

(ut Gracce dicam) *ἐὶς τῶν ἑνδεκα*. Suo igitur in foro iuventuti Academicae iudex nullus erit benignior, nullus gratiosior. Idem, avium ferarum venator acerrimus, quot in campis quantas strages edidit. Scientiarum amore instinctus, quot terras longinquas obivit. Etiam papilionum genera minutissima, microlepidoptera nominata, curiositate subtilissima perscrutatus est, rerum naturam in minimis quoque maximam esse arbitratus. Musea vero nostra rerum naturae illustrandae dedicata, quot et quantis muneribus ornavit. Nuper autem, cum id agebatur ut Academiae inter studia etiam agri culturae locus tribueretur, Academiae consilium quanta cum dignitate, quanta cum comitate interfuit. Ergo scientia illa, senectutis inter voluptates a Tulio laudata, patriae totius ad communem fructum, etiam iuventutis nostrae inter studia fortasse aliquando numerabitur. Qua de re ut Tullii verbis utar, 'possum persequi permulta oblectamenta rerum rusticarum, sed ea ipsa quae dixi sentio fuisse longiora.'"

THE MARQUIS OF DUFFERIN AND AVA.

"Titulo nostro primum omnium hodie ornamus virum titulis quam plurimis aliunde decoratum, qui (ne minora commemorem) orbis terrarum in regionibus inter sese remotissimis, inter omnium approbationem Reginae ipsius vicarius exstitit. Quid referam sex annos in provincia Canadensi feliciter exactos, ubi (ut poetae locum ab ipso quondam non sine lepore laudatum usurpem)

Hyperionis instar

Solis in occidenti solio flammarum sedebat;

ubi 'occidentis usque ad ultimum sinum' inter omnium plausus velut triumphans ibat; ubi in colonis illis fidelissimis Reginae erga ipsam amorem indies flagrantem incendebat? Quid annos quattuor dicam imperio nostro inter Indos non modo prudenter conservando sed etiam fortiter prorogando dedicatos? Etenim in orientem versus solem regionem ipsa Britannia tribus partibus maiorem imperio nostro addidit, novo cognomine Burmanicus appellari meritis. Idem in legationibus obeundis quam exercitatus, quam praeclare versatus. Olim in Syria Christianorum sanguinis viudex; postea velut uno tenore Petropolis a pruinis Bospori atque adeo Nili ad soles transitit, quolibet sub caelo ubique felix, etiam Italiae in luce aliquando non minus quam antea illustris futurus. Legati sane inter virtutes taciturnitas quaedam non immerito numeratur, quae in hoc certe viro cum admirabili consentanea est eloquentia. Oratoris igitur eloquentissimi, comœdiorum scriptoris lepidissimi pronepos, neque una in tellure neque una in lingua dedit insignia eloquentiae documenta. Olim etiam in ultima Thule Latine locutus, postea semel saltem Graecam inter Canadenses, Persicam inter Indos, Gallicam coram Galliae comœdis praestantissimis habuit orationem. Patrio autem in sermone quam promptus, quam peritus, quam perfectus dicendi artifex. Nuper vitam ante actam memoria remensum, etiam iuventuti Caledonicae, prudentissimis mortalium, Mentor fuit. Neque vero verbis dicendis magis quam rebus gerendis studuit, sed ubique terrarum trans lata maria gloriae Britannicae velut imaginem ante oculos habuit, nihil antiquius arbitratus quam Britanniae famam veterem factis extendere, nihil pulchrius quam patriae prodesse."

SIR ALFRED LYALL.

"In imperii nostri Indici quasi corpore non satis est quod caput egregium gubernat omnia; etiam brachiorum, pectoris, ceterorum membrorum, opus est auxilio. Viri autem huiusce prudentia et sapientia imperio nostro longinquo diu profuerunt. Ibi primum domesticis, deinde externis rebus administrandis praepositis, Indiae septentrionalis provinciae mediae maxima cum laude erat praefectus. Quod si illa demum beata est civitas, in qua aut philosophi regnant aut reges philosophantur, quam fortunata erat illa imperii nostri provincia ubi eodem in rectore et philosophi et proconsulis partes erant feliciter consociatae. Origium antiquarum in studiis eruditus versatus, idem nostri saeculi in negotiis agendis erat indefessus. Nuper, magno laborum spatio decurso, patriae redditus, consilio Indico summa cum dignitate adscriptus est. Interim ne subsicivi quidem temporis otium perire passus, quanquam lyram ipsam non neglexit, sermonis pedestris Musam severiorem summo cum fructu coluit. In

versibus quidem eius hominum vita qualis inter Indos philosophanti appareat, patet quasi vota in tabella non minus fideliter descripta quam ipsius imago quae, a pictore eximio nuper depicta, principum Indicorum in eum benevolentiam in perpetuum testabitur. Ceteris autem in scriptis quam praeclare ostendit, et in provinciis domi administrandis et in rebus foras gerendis, inter nostrum imperium Indicum et Romanorum imperium antiquam quanta similitudo intercedat. Idem quam erudite, quam luculenter, etiam de Indiae religionibus disputat. Ceterum tanto de argumento plura hodie dicere non nostrum est: crastino die in hoc ipso loco ipsum audietis."

SIR ARCHIBALD GEIKIE.

"Salutamus deinceps virum et scientiarum et litterarum laude illustrem, in Academia Edinensi quondam geologiae professorem, Britanniae et Hiberniae explorationi geologicae praepositum, societatis Regiae socium, societatis geologicae praesidem, societatis denique Britannicae scientiarum terminis prorogandis praesidem designatum. Geologiae et geographiae studiosorum in manibus sunt scripta eius plurima, scientiis illis aut docendis aut illustrandis destinata. Etiam aliis loquuntur libri eius elegantissime conscripti, quorum in uno Caledoniae montes vallesque per immensam saeculorum seriem causis cotidianis minutatim excelsas fuisse demonstrat; in altero vitam et res gestas geologi magni, quem Siluriae regem nominaverim, ea quae par est dignitate describit. Viri talis laboribus non modo geologiae fines latius indies propagantur, sed etiam populo universo studia illa praeclara commendantur."

DR. W. H. FLOWER.

"Quod e sapientibus septem unus dixisse fertur, ἀρχὴ ὄντος δέξαι, de hoc certe viro, per honorem cursum satis longum probato, verum esse constat. Regio Chirurgorum in Collegio, primum museo conservando praepositus, deinde physiologiam et comparativam quae dicitur anatomiam professus, deinceps Musci Britannici auditio novo rerum naturae studiis dedicato praefectus est. Idem societati et zoologicae, et anthropologicae, et Britannicae, maxima cum laude praefuit. In museis autem ordinandis quam perspicax; in scientiarum studiis populo toti commendandis quam disertus; hominibus in diversis generibus capitis mensura inter sese distinguendis quam subtilis; maris denique in monstris immensis describendis quam minutus. Ergo, velut alter Neptunus, intra regni sui fines etiam 'immania cete' suo sibi iure vindicat; idem, anthropologiae quoque in studiis versatus, ne barbaras quidem gentes contempsit, sed, velut alter Chremes, homo est; humani nil a se alienum putat."

M. ELIAS METSCHNIKOFF.

"Sequitur deinceps vir, qui scientiarum in provinciis duabus, et in zoologia et in bacteriologia quae dicitur, famam insignem est adeptus. Primum Ponti Euxini in litore septentrionali zoologiam professus, multa de morphologia animalium, quae invertebrata nominantur, accuratissime disscruit. Deinde Parisiis rerum naturae investigatori celeberrimo adiutor datus, eis potissimum causis perscrutandis operam dedit, per quas genere ab humano morborum impetus hostiles possent propulsari. Nam, velut hominum in mentibus virtutes et vitia inter sese confligunt, non aliter animantium in corporibus contra pestium exercitus copiae quaedam sanitatis et salutis ministrae concertare perhibentur. Mentis quidem certamen olim in carmine heroico, Psychomachia nominato, Prudentius narravit. Inter eos autem qui corporis certamen experimentis exquisitis nuper explicaverunt, locum insignem sibi vindicat vir quidam summa morum modestia praeditus, qui, velut vates sacer, proelium illud sibi sumpsit celebrandum, in quo tot cellulae vagantes, quasi milites procurantes, morborum semina maligna corripunt, correpta comprimunt, compressa extinguunt. Talium virorum auxilio febrium cohortes paulatim profigantur, et generis humani saluti novum indies affertur incrementum."

MR. W. E. H. LECKY.

"Etiam Musae historicae cultorem illustrem, Academiae celeberrimae Dubliniensis alumnum, hodie salutamus. Diu legentium in manibus fuerunt opera illa magna stilo lucido conscripta et

Europae in historia tractanda occupata, quorum in uno de vi rationis in hominum opinionibus commutandis disputat; in altero de saeculi cuiusque moribus inter Augusti et Caroli Magni aetates describit. Opere in utroque diu agnovimus scriptorem et doctrina varia et veritatis amore insignem. Hodie vero eundem titulo nostro idcirco decoramus quod, non iam Europae totius sed patriae potius historiam aggressus, saeculi prioris rebus gestis enarratis, opus ingens ad finem feliciter perduxit. Quot Thucydides libros bello Peloponnesiaco narrando dedicavit, totidem volumina magna, non minorem veritatis amorem testantia, saeculi unius rebus gestis conscribendis consecravit. Opere in toto libenter admiramur scriptorem veracem, sine ullo patium studio fidelem, rem namquamque curiositate minuta prosequentem. Hiberniae vero, patriae eius natalis, annales nemo adhuc minutius, nemo accuratius exploravit; quod patriae totius, his praesertim temporibus, quantum intersit, quis est quin statim agnoscat? Qui quondam patriae natalis duces ingenue admirabatur, nunc certe patriae universae commoda ante omnia putat esse praeponenda. Qua de re audite paulisper Tullium ipsum in libro de Legibus incripto disserentem. 'Omibus municipibus duas esse censeo patrias, unam naturae, alteram civitatis... sed necesse est caritate eam praestare quae... universae civitatis est, pro qua mori et cui nos totos dedere et in qua nostra omnia ponere et quasi consecrare debemus. Dulcis autem non multo secus est illa quae genuit quam illa quae exceptit. Itaque hanc meam esse patriam prorsus nunquam negabo, dum sit illa maior, haec in ea continentur.' (De Legibus, li. 2 § 5.)

HERR ANTONIN DVORÁK.

"Oratoribus antiquis in peroratione praesertim animi motus varios aut excitare aut sedare licebat: artis musicae magistris idem facere ubique licet. Ergo nos quoque, statim peroraturi, virum libenter laudamus in animi affectibus inter sese diversissimis arte musica exprimentis solertissimum. Olim Bohemiae in rure remoto in lucem editus, et per ardua, per adversa, in altiora evectus, patriae famam suo illustravit ingenio, patriae in arte musica quicquid proprium esset fideliter interpretatus. Testantur cantus eius vocibus duabus accommodatis, Moraviae Musas ipsas spirare visi; testantur choreae Slavonicae, quae fautoris et adiutoris eius magni choreas Hungaricas aemulantur; testantur symphoniae, partim elegorum modis flebilibus contristatae, partim fidium furore tremendo agitatae: testatur denique, velut Lemurum e regno egressa, formidulosa sponsae per tenebras abreptae fabula. Idem arte quali etiam alienigenarum musicam aut aliquatenus imitando aut in melius commutando expressit, sive tribuum errantium cantus tristes effingit, sive Italorum carmina sacra misericordiam moventia operis magni argumentum sibi sumit. Qua de re non aliorum eget testimonio; vos de matre dolores, iuxta cruceam lacrimosa, carmen hesterno die egregie recitatum audivistis."

CORRESPONDENCE.

DISCOVERY OF A FRAGMENT OF "THE SHEPHERD OF HERMAS."

Trinity College, Dublin: June 15, 1891.

It will interest readers of the ACADEMY who study palaeography to know that we have identified the text reproduced by Wilcken in the third of his recent *Tafeln zur älteren griechischen Palaeographie*. He entitles it "Bruchstück einer unbekannten (?) Christlich-theologischen Schrift," and gives the decipherment of a few lines.

Mr. Bernard, my colleague who recently identified the fragments of Cyril in the Petrie papyri, read it with me yesterday; and he brings me the news that he has found the text in the Second Similitude of *The Shepherd of Hermas*. The fragments of the next column visible in the right are from the Fourth Similitude.

The text is on papyrus, not in book shape, but in parallel columns. The handwriting may be as old as any extant of the *Shepherd*. In any case it gives quite a new interest to the fragment to have its author and context determined. The passage has some variations from the text published by Harnack. Whether they are important or not remains to be seen. Mr. Bernard is preparing a critical notice.

J. P. MAHAFFY.

MR. ISAAC TAYLOR ON SICILIAN HISTORY.

Wells, Somerset: June 15, 1891.

The ACADEMY is one of the few places where one answers one's critics. But I do not think that I should have answered Mr. Isaac Taylor's two articles on my History of Sicily, if he had only kept to generalities, and had not in some cases ventured to meddle with facts.

It is perfectly natural that Mr. Taylor and I should look at the history of the world from different points of view. I am φιλόδημος τὴν φύσιν; I am also φιλέλλην, or rather what Lord Strangford used to call φιλορωμέος. Mr. Taylor is clearly φιλοβόρβωρος; he seems also to have taken the famous oath καὶ τὸ δῆμα κακόνους ἔσομαι. About such things it is no use erying. He certainly will not convince me, and I have still less hope of convincing him. I will only tell

him that he is wrong as a matter of fact when he says, "Mr. Freeman constantly allows his views on the Eastern Question to colour his narrative." By "the Eastern Question" Mr. Taylor most likely means some matter of our own day, say the betrayal of Jóannina, or the present state of Armenia. It is possible that my views of those events may be coloured by the belief that I learned, from the opening chapters of Herodotus, a much older and wider Eastern Question. In any case that is the order of thought, and not the other.

Mr. Taylor complains that I use the words "tyrant" and "barbarian" in their Greek sense. Writing on a scientific subject, I do use scientific terms in their scientific sense. Mr. Taylor can use them in any penny-a-liner's sense that he pleases. He may, if he likes, say that Gelón "received an ovation" on his return to Syracuse. I shall keep the word for Marcellus. He may say that the army of Himilcón was "decimated" in the marshes by Syracuse. I shall not say so unless Mr. Taylor can show me the exact figures. It is, in Mr. Taylor's view, "pedantic and invidious" to use the word "barbarian" systematically as the term to designate a highly civilised people. I could judge better of the charge if the word "barbarian" were found in vol. i. p. 271 of my book, to which Mr. Taylor refers. I had thought that I had drawn a not unkind picture of Gelón; but Mr. Taylor is dissatisfied with my treatment of all tyrants. To tyrants, according to Mr. Taylor, was owing "the crushing defeat of Carthage at Himera which gave the Greeks the dominion of the island." I have had my say about Himera, at which I think Gelón would not be displeased; but it is from Mr. Taylor that I hear for the first time that the battle "gave the Greeks the dominion of the island." I will not dispute with him about democracy, a word which he oddly thinks synonymous with "mob-rule." I shall some day get, and I hope he will too, to the great definition of δημοκρατία, given by Athénagoras. I will only say that Mr. Taylor objects to my "historical parallels" as "frequently misleading and always inexact." I could have told Mr. Taylor beforehand that all historical parallels are "inexact." No event can exactly reproduce any earlier event, if only because the earlier event has gone before it. But, when used with this caution, it does not follow that all historical parallels are "misleading." But when Mr. Taylor goes on to draw his own historical parallels between what he is pleased to call the "lynching of Tyndarión" at Syracuse, and the late "lynching" of Italians at New Orleans, I venture to think that Mr. Taylor's narrative is a little "coloured" by his "views" of recent events—in short, that his parallel is not only "inexact," which it cannot help being, but even altogether "misleading."

About skulls I will not dispute one word with Mr. Taylor. I do not think the time for so doing has come. My grandchildren and Mr. Taylor's may perhaps dispute about them to some profit; I do not think that we can ourselves. Meanwhile, Mr. Taylor is well employed in getting together all the facts that he can find about skulls; but he will be wiser if he keeps himself from forming theories.

It is comforting to be told that I am less "immeshed in entangling details" than I was in the earlier volumes of the *Norman Conquest*. It is comforting, because, though I do not exactly know what "immeshed" means, it sounds as if it meant something unpleasant. But it seems that, in the *History of Sicily*, as "compared with the earlier volumes of the *Norman Conquest*," I escape being "immeshed in entangling details" by "judiciously reserving them for appendices of ample bulk." In the first volume of the *Norman Conquest* there are seventy-one appendices, some of them of "ample

bulk," most of them dealing with "details" which were possibly "entangling." In the first volume of the *History of Sicily* the appendices have shrunk to twenty-one.

But Mr. Taylor goes on to say that I am "more at home with the topographic and literary evidence than with certain subsidiary sources of information, which he had no occasion to use in his previous works." When I have to "deal with numismatics, epigraphy, and prehistoric archaeology, or with any of the physical sciences, such as geology, or anthropology, his touch is rather that of an amateur than that of a master." I keep aloof the -ologies, but what can Mr. Taylor mean by saying that I had "no occasion to use numismatics in my previous works"? Not even in Sicily itself is the evidence of coins of more importance than it is in the history of the Achaian League. In dealing with the history of that League I once did a good deal in the numismatic way in fellowship with the present Lord De Tabley. I say in fellowship, because I believe that the result could not have been got at either by me or by Lord De Tabley alone. And "immeshed" among the "entangling details" of an appendix to the first volume of the *Norman Conquest* Mr. Taylor will find something about the coinage of Harold, which I had great occasion to use in that volume. I cannot, I may explain to Mr. Taylor, conceive of any time in European history where there is not some "occasion" to "use" numismatics, though there is much more occasion in some times than in others. Still, if the word "amateur" means that I have not gone so deeply into numismatics as I have into some other things, I do not refuse the name. For I do not profess to be a special expert in numismatics. There are those who care for a coin in itself; I care only for it so far as it proves something. And I do not venture to talk about Sicilian coins without consulting Mr. Arthur Evans. But by his help, I think, I have made them prove a thing or two, and I hope, as I go on, to make them prove a thing or two more. As for "epigraphy," that means inscriptions, and that means documents written on a certain material. I think that I have said something about all of the very few that come within my period, and in Note xxxii. in the Appendix to the second volume, I fancy I got fairly "immeshed" in some "entangling details." Happily Mr. Hicks was good enough to keep the amateur right as to purely technical points. The -ologies I give up to Mr. Taylor. I had no notion that I had presumed to touch them even as an amateur. Only I must claim geology in any case, and ethnology, in the sense that the word bore when I was young, as something higher than "physical sciences."

Of numismatics I presume Mr. Taylor is a "master." The amateur mind was therefore a little startled at his very positive saying that the Elymians "used the Phoenician alphabet, as is shown by the fact that the early coins of Segesta, the chief Elymian city, are in the Phoenician character." Had we all, one asked, been utterly wrong in believing for so many years that no coin of Segesta ever bore a Phoenician legend? The amateur thought well to strengthen himself by the masters, Head and Poole, against the other master, Mr. Taylor. Not one Phoenician coin of Segesta does either of them know. The only guess that I can make is that Mr. Taylor took the mysterious ΕΙΒ, or whatever it is, for Phoenician. And it must have been in a very amateur way that Mr. Taylor read the opening chapters of the sixth book of Thucydides when he can give us as a summary of them that "the Phoenician Eryx is reputed to have been originally an Elymian city."

I must not be thought to accept every charge of Mr. Taylor's which I do not answer. I have

too much thought for your space. But I must pick out one or two cases. I will not argue with Mr. Taylor about the Sikels. He seems to think—for I do not above half understand him—that the notion of their Italian origin is some private fancy of my own, founded on the single word *Gela*, instead of being, as it is, the general belief of scholars, founded on the general consent of the ancient writers. That belief I largely illustrated, and tried to bring it into its full prominence; but I did not treat it as a point open to controversy. The point fairly open to controversy, and which I treat as such, is the relation between Sikans and Sikels. For the whole evidence for the Italian origin of the Sikels, evidence founded on a much wider examination of language than Mr. Taylor thinks, I must refer to Appendix IV. of my first volume. But one saying of Mr. Taylor's I must quote:

"Mr. Freeman, with his usual candour, notes that he has come across a river *Gela*, in Caria, nearly opposite Rhodes, whence came the founders of the Sicilian colony of Gela. This fact at once disposes of the argument that the name of the Sicilian Gela is necessarily Latin."

I do not see the remarkable "candour" shown in bringing in every piece of information. The compliment is like another, when Mr. Taylor says that I am "far too honest to garble my authorities." I do not know what may be the standard among Mr. Taylor's barbarian acquaintance; in the Hellenic and Teutonic fellowship to which I am used we do not praise one another for not "garbling" our authorities, because it does not come into our heads that any of us could "garble" them. But to come back to Gela. If Mr. Taylor will look to p. xxxiv. of my first volume, he will see that neither I nor anybody else ever "noted" anything about "a river Gela" in Caria. The passage in Stephen of Byzantium to which I refer—it would almost seem as if Mr. Taylor had not referred to it—stands thus:—

Συνάγεται, πόλις Καρίας, ἐνθα ὁ τάφος ἦν τοῦ Καρῆος, ὡς δηλοῖ καὶ τοῦνομα· καλοῦσιν γὰρ οἱ Κάρες σοῖαν τὸν τάφον, γέλαν δὲ τὴν βασιλείαν.

Mr. Taylor seems to fancy that the connexion between *Gela* and *gelu* is a guess of mine. It comes from Stephen's article Γελα, where he says that the river Gelas was so called, ὅτι πολλὴν πᾶσιν γενεῇ ταύτην γὰρ τῇ Ὀπικῶν φωνῇ καὶ τῶν Σικελῶν γέλαν λέγεσθαι. In other words, Stephen's authority held that the Sikels called the river by a name which, in their Italian (Opic and Sikel) tongue, expressed its coldness. Mr. Taylor must think that the colonists, somewhat unaccountably, called the river by the Karian name for a king. *Utri creditis?*

But one is yet further startled when in his second article Mr. Taylor tells us that "the grandson of Hamilcar"—that is, Hannibal the destroyer of Himera—was "welcomed by the Greeks as their deliverer from the most odious of Syracusan tyrants." Now we know the story only from Diodoros. In his narrative, Hannibal, ὁ μισέλλην, the ruthless destroyer of Greek cities, has not a single Greek ally; he has some Greek mercenaries, who are melted to pity at his treatment of their countrymen. And all that Hannibal did was done at a time when there was no tyrant anywhere in Sicily. Where did Mr. Taylor find his story? If he had found a Carthaginian account unknown to Diodoros, he would surely be so well pleased with the find that he would have told us. Anyhow, when a man who takes on himself to correct and rebuke others makes such an astounding statement as this, we have a right to ask for chapter and verse; and I do ask Mr. Taylor for them.

It is the same to the end. It seems to Mr. Taylor that at one stage the "Eternal Strife got somewhat mixed." I suppose that remark is

clever. But Mr. Taylor's ideas have certainly got "somewhat mixed" in his highly picturesque scene of a Roger in "mitre and dalmatic," and surrounded by Moslem doctors and "odalisques." As the Bishop of Oxford says of the Hughes, "How many Rogers go to make up his personality?" I think I see a certain "mixing" of Roger the Count and Roger the King; and I am not sure that I do not see touches both of William the Bad and even of William the Good, as he is not quite fairly reported by Ibn Djobeir. On the whole, it would perhaps be wiser in Mr. Taylor to put off reviewing the facts that are to come in my future volumes till he has the volumes themselves to review.

To end kindly, I have to thank Mr. Taylor for some very pleasant generalities, though I do not feel at all so sure as he does that I shall "never write a better book" than the *History of Sicily*; and I thank him for speaking of me throughout by a rational description, and not thrusting any ugly and meaningless handle on to my name. I do not doubt that I shall win somewhat of Mr. Taylor's favour by, in return, forbearing to misuse his name in the like sort, as I have known some do.

EDWARD A. FREEMAN.

ON THE ETYMOLOGY OF "LETUM."

London: June 13, 1891.

Since the old spelling (*lethum*) and the old connexion with *λήθη* have been given up, no one, I think, save Vaníček and Fick, has attempted to trace the Latin *letum* to its source. Vaníček compares *letum* with *λοιμή*, and its cognate *de-lère* with the Skr. *ri-lī*, "verschwinden"; but there is no sure instance of Lat. *ē* = Gr. *ω*, or Skr. *ī*. Fick (*Wörterb. des indogerm. Sprachen*, fourth edit., i. 538, s.v. 2 *leya-*) would bring *letum* from a ground-form *leieto-*, cognate with Skr. *liyate*, "verschwinden"; but the difficulty of treating a Latin *ē* as = *ie* seems insuperable, and most of the words which he quotes as cognate (*λεῖρος*, *λοῖσθος*, Lith. *leilas*, &c.) differ too greatly in meaning from *letum* to be connected with it.

I venture to think that *letum* is an example of the well-known change in Latin of *d* to *l*. *Letum*, I suggest, comes from **deto-m*, just as *lacrima*, *lautia*, *lēciv*, *limpidus*, *lingua*, come from *ducruma*, *dautia*, *dēvir* (*δαῖρ*, *devar-*), *dūmpidus*, *diugua*.

This **deto-m* is not only cognate with Lat. *dē-leo*, from **dē-deo*, but with the Vedic *√dā*, "abmāhen, abschneiden," whence *dātṛ*, "reaper, mower," *dātṛa*, "sickle, sithe," where the *ā* represents an Indo-European *ē*, as it does in *dāna*, *prāta*, *nās-*, *rāj*, *vātī*. Longfellow's conception of Death as a reaper thus seems to be primeval.

Our **deto-m* is also cognate with the Old-Irish *dith*, "destruction," where the long *i* represents an Indo-European *ē*, as in the following instances:

crin, "dry, parched, withered," from **krēno-s*, Skr. *√crā*, "to cook."

dīnu, "lamb," *dith*, "suxit"; Gr. *θηλή*, Lat. *fēlare*.

fīr, "true"; Lat. *vērus*, O.H.G. *wār*.

līuam, "I fill"; Lat. *plēnui*, *ex-plēnui* (Festus), Gr. *πλήθω*.

mē, gen. *mēs*, "month"; Gr. *μήν*, Lat. *mēnsis*. *ro-midar*, "judicavi"; Goth. *mētum* (plur. perf.).

mīl, "beast"; Gr. *μήλορ*, Aread. *πολυ-μήλορ*.

mīr, "morsel," from **mēm̐sren*, Gr. *μυρρός* (from *μμησρο-s*), Skr. *māṃś*, "flesh."

rī, gen. *rīg*, "king"; Lat. *rēx*, *rēgis*.

sīd, "peace"; Lat. *sēdo*.

sīl, "seed"; Lat. *sē-men*, O.H.G. *sāmo*.

sīr, "long"; Lat. *sērus*.

tīr, "laud"; Osc. *terām*.

To these instances (most of which have been already collected by Osthoff, *Zur Geschichte des Perfects*, pp. 10, 602) we may, perhaps, add *i-*, the reduplication-syllable of the *s*-future of *oryim*, "caedo, occido": e.g., *i-[u]rr* (gl. occideris), *MI. 77^a 10*; *i-urth-und* (nos occidet), *LU. 108^a*; *i-uras* (qui occidet), *LU. 87^b 37*; *i-urad* (occideret), Book of Armagh 180; *i-urthar* (occidetur), *LU. 88^a 5*; *friss-i-urr* (gl. aversabor), *MI. 37^c 12*; *fritam-i-or-su* (gl. me adficiet), *MI. 32^d 27*. Here *i-* from *ē-* seems comparable with the *η* of the Homeric *δη-δέχαται*, *η-οικύει* (for which the editors give us *δειδέχαται*, *ειοικύει*), the *ā* of the Vedic *sā-sātha*, &c.

WHITLEY STOKES.

GENERAL AVITABILE.

Gainsborough: June 15, 1891.

This Italian (as I have heard from one of his numerous heirs) was originally a non-commissioned officer in the Neapolitan army who deserted and fled to India. There he entered the Sikh service, and his former experience of the military career enabled him to train and drill the natives more or less in European fashion. His astute and energetic character caused him to rise very high in the confidence of Ranjit Singh, who loaded him with wealth and honours. Thus influentially placed, he is said to have sold state secrets to the English. Some twenty years ago his surviving relatives used to exhibit with pride the empty case which once held the sword of honour presented to the General by the Honourable East India Company. Having by cautious degrees exchanged beforehand his gold and non-portable treasures for bills drawn upon the English, he one night mounted a fleet white horse and crossed the border into a safe refuge. A medallion representing his flight is placed on the middle of the floor of one of the rooms in the Villa Belvedere at Castellammare, overlooking the Bay of Naples.

Besides this villa, General Avitabile, by means of his vast wealth, built another near the coast, just visible from the sea, on an eminence not far distant from Amalfi. It is of immense size and construction. In his extreme old age, the story runs that he induced the parents of a young girl to dispose of her to him in marriage, although she was already betrothed to a young lover of her own humble station. Soon wearying of her burdensome grandeur, the youthful wife is traditionally accused of having hastened the end of her husband by poison. Whether she did so or not, popular superstition attributed the aged general's death to that cause; and his ghost is still said to haunt the house of Castellammare, now transformed into a pension for strangers.

WILLIAM MERCER.

THE ORIENTAL CONGRESS.

Louvain: June 16, 1891.

Allow me to state, although it is of little importance, that I have nothing more to do with the Oriental Congress of the present year.

C. DE HARLEZ.

APPOINTMENTS FOR NEXT WEEK.

TUESDAY, June 23, 5 p.m. Statistical: Annual General Meeting.

8.30 p.m. Anthropological: "Tasmanian Stone Implements," by Mr. H. Balfour; "The Primitive Characters of the Flint Implements of the Chalk Plateau of Kent, with reference to the Question of their Glacial or Pre-Glacial Age," by Prof. Joseph Prestwich, with Notes by Messrs. B. Harrison and De Barri Crawshaw.

WEDNESDAY, June 24, 4 p.m. Society of Arts: Annual General Meeting.

5 p.m. British Economic Association: General Meeting.

8 p.m. Geological: "Wells in West Suffolk Boulder Clay," by the Rev. Edwin Hill; "The Melaphyres of Caradec, with Notes on the Associated Felsites," by Mr. Frank Rutley; "The Geology of the Tonga Islands," by Mr. J. J. Lieter.

8 p.m. Cymmrodoriou: Annual Reunion and Conversation.

9 p.m. Royal Academy: Soirée.

THURSDAY, June 25, 5 p.m. Zoological: "The Animals Living in the Society's Gardens," V., by Mr. F. E. Beddard.

8 p.m. Chemical: Extraordinary General Meeting.

8 p.m. Victoria Institute: Annual Meeting; Address by M. Naville.

FRIDAY, June 26, 5 p.m. Physical: "The Construction of Non-Inductive Resistances," by Prof. W. E. Ayrton and Mr. T. Mather; "The Influence of Surface-Loading on the Flexure of Beams," by Mr. C. A. Carus-Wilson; "Pocket Electrometers," by Mr. C. V. Boys; "Electrification due to the Contact of Gases with Liquids," by Mr. J. Enright.

8 p.m. Browning Society: "Balaustion's Adventure" as a Beautiful Misrepresentation of the Original," by Mr. R. G. Moulton.

9 p.m. Royal Institution: Faraday Commemoration Lecture, by Prof. Dewar.

SATURDAY, June 27, 3.45 p.m. Botanic: General Fortnightly Meeting.

SCIENCE.

TWO PSYCHOLOGICAL TEXT-BOOKS.

Outlines of Psychology. By Harold Höffding, Professor at Copenhagen. Translated by Mary E. Lowndes. (Macmillans.)

Outlines of Physiological Psychology. A Text Book of Mental Science for Academies and Colleges. By J. T. Ladd, Professor of Philosophy at Yale. (Longmans.)

THE appearance in England of two text-books in psychology so soon after Prof. W. James's elaborate treatise is suggestive. It was not so long ago that students of the science in this country were practically shut up to one text-book. Now, perhaps, they are likely to suffer from an *embarras de richesses*. However this may be, one cannot help being grateful that a science which is unique in its interest and its disciplinary value, and to which large and important additions have been made in late years by the introduction of methodical experiment, is now coming to be better represented in English literature. The existence side by side of different text-books dealing with somewhat different aspects of the subject, and reflecting, as they ought, the individual mind of the authors, will do much more good than harm. It will save the unwary examinee from supposing that any single tome contains the Alpha and the Omega of the science; it will stimulate the genuine student to critical comparison and to independent reflection.

The two works just published are, while both reflecting the present condition of psychology, curiously different. Both the Danish and the American professor look at mind in its connection with the nervous system, and are familiar with the newer psycho-physical research. But here the likeness ends. Prof. Höffding is before all things a *littérateur*. His chapters read like charming essays. They are about as unlike the conventional text-book as can be imagined. This is seen by a glance at the form of the work, in which there are no staring headings, and of which the flowing, leisurely style is suggestive of the man of letters unfettered by thought of time-pressed student or exacting examiner. Prof. Ladd, on the other hand, though he has strong predilections of his own, keeps his eye warily on the student. Short, crisp paragraphs, plenty of headings in big type, at once tell us that this is a *bona-fide* text-book. One other point of contrast must not be omitted, though this is not

suggestive of any difference of intention in the authors. While Prof. Ladd's volume is excellently printed on a good page, Prof. Höffding's work, presumably for cheapness' sake, is introduced to English readers in a form that will rouse the ire of all but those gifted with a microscopic eye. It is odd that publishers should completely ignore the obvious principle (psychological by the by) that economising of the eye-work of readers is urgent in the ratio in which their brain-work increases. In reading a psychological treatise we might surely be spared the miseries of a small type packed into every available square inch of the page, fringed with footnotes in a yet smaller type that demands a good-sized lens. One protests the more in the present case, because Höffding's book is a piece of good writing, and ought to be read by many others besides the young sharp-eyed examinee.

A word or two on the peculiar features of each of these handbooks. Höffding's work gives, on the whole, a clear and fairly complete sketch of the present aspect of the psychological domain. In its plan it has much to recommend it, though its faults are on the surface. For example, chaps. i. to iii., or just one-fourth of the whole work, are taken up with introductory matter—an arrangement which is surely rather unskilful in an elementary work. The tendency to what the Germans call *Weitläufigkeit*, the want of a rigorous delimitation of the field which this introduction suggests, shows itself further in the amount of metaphysical matter mixed up with the properly psychological, and this in spite of the author's own announcement at the beginning that he is going to be psychologist *pur sang*. In spite of faults of structure, however, and of a style which, to say the least, has not the directness, the pointedness desiderated in a text-book, Höffding's work will be a valuable addition to the library of the English student of psychology. It comes near enough to his native treatises to be intelligible, while it is far enough off to be new and stimulating. The translation, made from a German version of the original Danish, has been well carried out, and the book reads as well as one that has undergone a double process of verbal substitution can be expected to read. It is particularly interesting from its numerous references to the more picturesque and striking manifestations of mind in genius, insanity, hypnotic sleep, &c. Its literary allusions are also frequent and happy.

Professor Ladd in his *Outlines* boils down his rather ponderous treatise, *Elements of Physiological Psychology*, and invests it with the regulation text-book appearance. The new volume will serve as a very useful introduction to the domain of modern physiological psychology. The descriptive account of the nervous system, together with the connected organs of sense and movement, is well carried out, and is illustrated by a sufficient number of good drawings. The results of recent experimental inquiries into variations in the quality and quantity of sensation, the duration of psycho-physical process (reaction time), and so forth, are given with tolerable

fulness, though a student who wishes to understand more of the experiments themselves must still have recourse to the larger volume. The whole account of space-perception might with advantage have been simplified. Prof. Ladd in this part of his exposition follows Wundt with almost irritating closeness, and Wundt's theory is anything but a simple and easily intelligible one. Whether the medical and other students who take up the volume will find the author helpful at this particular point is doubtful. A much more serious objection than this is the retention in reduced form of the concluding chapter on the ultimate nature of mind and its relation to body. This is of course going outside psychology, and suggests, hardly less in the new volume than it did in the old one, that the whole investigation into psychophysical phenomena was undertaken solely in the interest of a particular metaphysical conclusion.

JAMES SULLY.

TWO BOOKS ON JEWISH LITERATURE.

To lovers of Hebrew literature the *Bibliotheca post-Mendelssohniana*, by William Zeitlin (first half, A—M), may be heartily recommended. The work contains all or most of the recent publications in the new Hebrew language since the age of Moses Mendelssohn to the year 1890. The difficulties of the task were enormous, owing to the number and often the remoteness of the seats of Jewish literature; and the merit of the editor is proportionally great. He has produced undeniable evidence of the continued strength of the old Jewish feeling. The notices of Elie Hilevy, Max Letteris, and S. D. Luzzatto have specially interested us.

Die im Talmud vorkommenden Angaben über Hariz's Leben, Studien und Reisen. Von Karl Albrecht. (Göttingen.) This is a study, the result evidently of much careful and painstaking research, on the *Talmud* of the famous mediaeval Jewish poet, Jehudah al-Harizi, of Toledo. In this poem the author gives the narrative of his travels: leaving Toledo, he passed through Egypt to the Holy Land, thence to Damascus, Mosul, Bagdad, Susa, and other places in the far East, and then back again through Antioch, Cyprus, Greece, Germany, and France to his home in Spain. The different places which he visits, with their inhabitants, he describes, and often, indeed, satirises with no sparing hand, in rhymed verses, constructed largely of Biblical phrases cleverly interwoven. Dr. Albrecht collects the notices of these places, in cases of ambiguity or difficulty examines what places are meant, compares his descriptions with those of other ancient or mediaeval travellers, and illustrates the method of composition followed by the author. The brochure is not (as might be inferred from the title) a mere statistical register; it is well-written, and contains much topographical and other interesting information. And Dr. Albrecht displays in it a capacity of patient and thorough research which makes us hope that we may meet him again in some other field of literary investigation.

FURTHER DISCOVERIES AMONG THE BRITISH MUSEUM PAPYRI.

WE quote the following from the New York Nation:—

"A small volume will appear containing the unpublished papyri of literary interest in the British

Museum. Their preparation and publication is under the direction of Mr. Kenyon, to whom is due the *editio princeps*, so justly admired in Germany and America, as well as in England, of Aristotle's 'Constitution of Athens.'

"The most noteworthy addition to the known body of Greek literature which the new volume will bring, is seven poems of about 100 lines each, written by Herodas (Herondas or Herodes). From these, scholars will doubtless be able to determine, if not the orthography of his name, at least the time when this poet lived. The date hitherto assigned has varied between the early period of Hipponax and the Alexandrine age of Callimachus. The twenty-five lines of his composition hitherto known consist of fragments, the longest and least obscure of which comprises four lines. All but one are in the hobbling iambic metre invented for satirical purposes by Hipponax and called the choliambic measure. It is interesting to find that all the new verses of Herodas are in this same comically hamstrung rhythm. They are described by Mr. Kenyon as 'dramatic idylls,' and are chiefly of domestic interest. One contains an account of the visit paid by a party of women to a temple of Aesculapius. Interesting allusion is made to works of art in the temple, and a well-known passage in the 'Ion' of Euripides may possibly have been in the mind of the poet. This has its bearing upon the date of composition, and may give support to Bergk's surmise that Herodas was a contemporary of Xenophon, whose son Gryllus he is supposed to mention. The characteristic liveliness of our 'iambographer' has full scope in another of the new poems, where the mother of an incorrigible 'mauvais sujet' brings him for salutary flogging to the schoolmaster. It is to be hoped that the boy was not old enough or not clever enough to turn upon his wrathful mother with that charming line of Herodas which declares that 'an agreeable woman is bound to stand anything.' The diction of these poems, like that of the shreds and patches of Herodas already known, is very strange. The MS. is a long and narrow papyrus-roll, well preserved only in the middle. One end is badly rubbed, while the words have had their way with the other.

"A second papyrus contains nine narrow columns of an attack—presumably, but not certainly, by Hyperides—upon a political opponent whom he arraigns for violation of the Constitution. The beginning of this speech is lacking: its ending is preserved intact.

"Together with this absolutely new material will also appear at the same time collations of parts of works already well known. These papyri contain nearly the whole of three Books of the *Iliad* (ii-iv), considerable fragments of two Books (xxiii and xxiv), and small bits from four others (i, v, xvi, and xviii). The back of the papyrus containing *Iliad* ii-iv has written upon it the text of a grammatical treatise bearing the name of Tryphon. It is to be hoped that this also may be published, as well as a collation of *Isocrates de Pace* and of the third epistle of Demosthenes, both of which are among the treasures of Mr. Kenyon. Treasures they surely must be called, since their date appears to range between 100 B.C. and 500 A.D.

"LOUIS DYER."

SCIENCE NOTES.

THE Albert Medal of the Society of Arts for the present year has been awarded by the council, with the approval and sanction of the president, the Prince of Wales, to Sir Frederick Abel, "in recognition of the manner in which he has promoted several important classes of the arts and manufactures by the application of chemical sciences, and especially by his researches in the manufacture of iron and of steel, and also in acknowledgment of the great services he has rendered to the State in the provision of improved war material and as chemist to the War Department."

MR. WORTHINGTON G. SMITH is preparing for the public gallery of the botanical department of the British Museum a series of ninety-six tables illustrating the British Fungi. Every

species of the Hymenomycetes will be figured in its natural colours, the drawings being taken from Mr. Smith's own series already in the Museum, with others from original figures lent by Mr. Plowright, &c.

THE president of the Institution of Electrical Engineers and Mrs. Crookes have issued invitations for a conversazione, to be held in the galleries of the Royal Institute of Painters in Water-colours, Piccadilly, on Monday evening, July 6.

THE following awards have been made by the Institution of Civil Engineers:—*For Papers read and discussed at the Ordinary Meetings:* Telford medals and Telford premiums to Messrs. L. B. Atkinson and C. W. Atkinson, for their joint paper on "Electric Mining Machinery"; a Telford medal and a Telford premium to Mr. R. E. Bell Crompton, for his paper on "The Cost of the Generation and Distribution of Electrical Energy"; and Telford premiums to Mr. F. E. Robertson, for his account of "The Lansdowne Bridge over the Indus at Sukkur"; to Mr. E. W. Stoney, for his description of "The New Chittravati Bridge, Madras Railway"; to Prof. J. Milne and Mr. J. Macdonald, for their joint paper on "The Vibratory Movements of Locomotives, and Timing Trains and Testing Railway-Tracks"; to Mr. W. Langdon, for his paper on "Railway-Train Lighting"; and to Mr. W. T. H. Carrington, for his paper on "The Reception and Storage of Refined Petroleum in Bulk."

THE Edinburgh Observatory Circular of June 10 states that Mr. A. Stanley Williams, of Burgess-hill, Sussex, has discovered three delicate but distinct markings in the equatorial regions of Saturn. The first and third of these are round bright spots, somewhat brighter than the white equatorial zone in which they occur. The second is a smaller dark marking on the equatorial edge of the shaded belt which forms the southern boundary of the white zone. Mr. Williams has obtained abundant proof of the reality of these markings, but points out that it requires patience and practice to observe them readily. It is very desirable to obtain repeated observations of their times of transit across the planet's central meridian.

ON behalf of Prof. E. C. Stirling, of the University of Adelaide, South Australia, Prof. Newton communicated to the Zoological Society of London, at its last meeting, a figure of the new Australian Marsupial, originally described by Dr. Stirling in *Nature* (vol. xxxviii. p. 588), together with some notes on this extraordinary animal. *Notoryctes typhlops*, as Dr. Stirling now proposes to call it, is a small mole-like animal belonging to the order of Marsupials, of which it forms an entirely new type. A general description of it has already been given, as above referred to, but Prof. Stirling now adds that the Marsupial bones are exceedingly small nodules, and escaped his notice at first. Four or five of the cervical vertebrae are fused, and there is a keeled sternum, an enormously thick and short first rib, which serves a purpose of buttressing the sternum in lieu of coracoids, and a bird-like pelvis. The eyes are mere spots underneath the skin. The four specimens as yet received of *Notoryctes typhlops* were obtained in the centre of Australia, on the telegraph line between Adelaide and Port Darwin. The animal is said to burrow in the sand with great rapidity.

A NEW department has been established at the Smithsonian Institution, Washington, for a physical and astro-physical laboratory, which has been furnished with specially designed apparatus for the prosecution of investigations in radiant energy and other departments of telluric- and astro-physics. The communication of memoirs bearing in any way on

such researches is requested. Mr. S. P. Langley has resigned the directorship of the Allegheny Observatory in order to devote himself entirely to his duties as secretary of the Smithsonian Institution.

MESSRS. NEWTON & Co. have been appointed philosophical instrument makers to the Royal Institution.

PHILOLOGY NOTES.

A NEW part of the second volume of Prof. Ascoli's work on the Old Irish codex in the Ambrosian Library has just appeared. It contains the continuation of his version of the glosses on the St. Gall Priscian (pp. 39^a-75^a of the codex), and letters L and R (down to -*rig*-) of the Glossarium palaeo-hibernicum.

PROF. MAURICE BLOOMFIELD has reprinted from the *American Journal of Philology* a paper on "Adaptation of Suffixes in Congeneric Classes of Substantives." Under this somewhat deterrent title is contained a valuable contribution to that department of etymology which seeks to explain the origin of the terminations of certain nouns by help of analogy. For example, Prof. Bloomfield starts with the Greek *τοὺς*, the diphthong in which has never been accounted for satisfactorily, but which he believes to be formed in direct imitation of *δούς* = "tooth."

"Designations of parts of the body exercise strong analogical influence upon one another, and occasionally the suffix of some one of them succeeds in adapting itself so as to be felt the characteristic element which bestows upon the word its value. That is to say, when such a suffix has spread analogically to a greater or less extent within the category, then the meaning of the category may be felt to be dependent upon the special form of the suffix; or, stated conversely, the suffix may be infused with the special characteristic of the category: after that, when occasion arises to form new words of this same class, the suffix is put into requisition as though it were the essential element which imparts to the word its special significance."

As early as Indo-European times, a considerable group of designations of parts of the body were formed after a peculiar heteroclitic declension; namely, neuters having the casus recti in -*r* and the casus obliqui in -*n*. For example, Greek *ἥπαρ*, Latin *hepar*, Sanskrit *yakrt*, Lithuanian *ješn-os*, English *liver*; Greek *ὄστρον*, Latin *ostrea*, Sanskrit *ashtra*, English *adder*. Again, the Greek suffix -*κο*-, -*κ*- (nom.-*ς*) is largely pre-empted by designations of animals (especially birds) and of plants. English "hawk" and "pinnock" exhibit the same suffix adapted to the same function; and Prof. Bloomfield would also explain in this way the *ν* of *πτερυγ*. Again, the metaplastic declension in -*r* and -*n* has gained quite a considerable footing within the semasiological category which includes the designation of seasons and divisions of time. As other examples of analogy within this category, Prof. Bloomfield mentions: *diurnus*, patterned after *nocturnus*, and *nocturnus*, patterned after *diu*; *au(c)tumnus* and *vertumnus*; and Sanskrit *vasantā*, "spring," and *hemantā*, "winter." He then refers to the suffixes -*ter*- and -*er*- as the prevailing forms of the earliest Indo-European category of nouns of relationship. Finally, we may mention a few miscellaneous categories of words for office in Latin: the denominative word *iudicare*, from *iudex*, naturally forms an abstract in -*tu*-, *iudicatu-s*, "office of judge"; of the same sort are *senātu-s*, *principātu-s*, *ducitu-s*, *pontificatu-s*, none of which have a verb corresponding to *iudicare* by their side. A movement in a similar direction is at the base of the Latin group *dominus*, *decanus*, *patronus*, *tribunus*; the primary formation *dominus* (= Sanskrit *dāmanā*, "conquering") may have started the category. Prof. Gildersleeve has observed that the suffix

-*γξ*, in *αἰγίγξ* "pipe," *σάλπιγξ* "trumpet," *φάρυγξ* "wind-pipe," *λάρυγξ* "throat," *σπηλινγξ* "cave," owes its considerable scope to adaptation. Is it possible that the secondary suffix -*ma* of *lacruma*, *lacruma*—which is otherwise unknown in Latin, and not to be traced in the related words (*δάκρυ*, &c.)—may be borrowed from *spīma*, "foam"?

MEETINGS OF SOCIETIES.

CLIFTON SHAKSPEARE SOCIETY.—(Saturday, May 23.)

MISS FLORENCE HERAPATH, president, in the chair.—Mr. S. L. Gwynn read a paper on "Massinger's Style," taking exception to the favourable criticism which had been passed upon Massinger by so many writers. Massinger should be looked upon, not as a poet, but as a playwright, whose dramas can be read with pleasure for their stories. But in this light "The Virgin-Martyr" poorly represents his skill. There is a want of delicacy in Dorothea's portraiture, the play contains too many soliloquies, and its comic parts are not in Massinger's usual style. Massinger's comedy is simple and more natural. He might be called an excellent constructor of scenes, but not a delineator of character. A comparison of Massinger's "Picture" should be made with De Musset's "Barberine." It would be easier to write verse like Massinger's than prose like De Musset's.—Prof. C. H. Herford, in a paper on "The Defects of 'The Virgin-Martyr,'" said that the play, like Marlowe's "Faustus," is interesting as a phenomenon, and for somewhat the same reason. Both are daring attempts to introduce a strictly exotic product which, not without germs of affinity to native art, was in the main of foreign origin, and also addressed itself in the main to emotions and sympathies more richly developed abroad than in England. It is possible that the pecuniary success of Marlowe's effort may have been alluring to Massinger, who was, as is well known, in money difficulties in his early dramatic career. "The Virgin-Martyr" is the first notable example of that class of "Christian tragedies," of which the other chief examples in European literature are Calderon's "The Joseph among Women," and Corneille's "Polyeucte"—both about a generation later. The germ of this class is to be found in the Miracle-plays in the stricter sense. These were, of course, intimately bound up with the saint-worship of the Roman Church: they were also popular: that is, they were edifying spectacles for the multitude, not literary efforts for the court. Hence they nowhere persisted as a normal and vigorous element in the modern drama, except in the one country in which that drama was at once popular and Catholic—in which it effectively resisted both the classicism of the New Learning and the Protestant rejection of saint-worship, viz., in Spain. In France, where the drama was Catholic, but classical and learned, and in England, where it was popular and national but quite alien from the Catholic temper and tradition, the revived Miracle-play was alike, though not quite in equal degree, exotic. And the national antipathy to Spain, which by no means ceased when the English government became under James a tool of Spanish policy, did not tend to reduce the normal dissonance between English society and such topics as "The Virgin-Martyr." It must be allowed that Massinger has striven hard to accommodate his subject to the traditions of English audiences; and also that in doing so he has only partially grasped either its capacities or its perils. It was for him, perhaps beyond any of his contemporaries, rich in both. No one else was so well fitted to render, without intrusion of alien elements, the abstract and unearthly spirituality of the Dorothea of legend, or to depict in unexceptionable black the Roman persecutors as the legend conceives them. Massinger's drawing of character tends to fall into sharp contrasts, and the subject flattered this tendency only too effectively. The chief beauty of the drama, the character of Dorothea, is closely bound up with one of its main defects, the glaring and crude antitheses and the savage realism with which the powers of evil are painted. Here the example of "Measure for Measure" is particularly instructive. The subject suggested a similar contrast of good

and evil, and Shakspeare has not feared to paint it with terrible force. Yet we are plainly moving among men and women, not among fiends and angels. Isabel is perhaps the most kindred figure to Dorothea to be found in the Elizabethan drama; she is not less committed to the specifically Christian conception of life, she is not less devout nor less resolute. Yet she is full of human touches compatible with this conception, but not derived from it; whereas every word and act of Dorothea flow immediately from the simple and absolute idea of a Virgin-Martyr. It is only another phase of this defect that there is no gradation in the development of character. Changes no doubt occur, but by processes which, in spite of the rhetorical exuberance of Massinger's debates, are psychologically inscrutable. A third defect is the excessive simplicity, the bareness, so to speak, of the dramatic motive. Tragedy implies stress of mind, a conflict between contending passions or instincts; and this is not realised either by the pressure of bodily suffering or by the mental calm of resolved expectancy. In other words, the subject can be made tragic only by enriching the element of martyrdom with the element of conflict. The tragic poets—in all the three cases mentioned, devout Christians and, perhaps, devout Catholics—have on the whole been more loyal to the claims of piety than of poetry. In Calderon's great drama, *Eugenia*, the gifted lecturer on philosophy at Alexandria is very little moved at the indignation with which her father (like Massinger's Theophilus, a zealous persecutor of the Christians) receives the news of her conversion; Polyeucte endures with equal stoicism the protests and the pleadings of his unconverted wife; and the daughters of Theophilus follow the lead of Dorothea with unperturbed alacrity. Of the three, Corneille must be allowed in this respect the pre-eminence, in spite of the brilliant and glowing poetry of which the Spanish play is full, and which is tamely enough reflected in the stately periods of the French play. For his Pauline, pagan wife of the martyr, is a genuinely tragic figure, the pathos of whose fate is worked out with the finest sympathetic insight; while her resistance to her husband's impending doom is made a source of true dramatic retardation and suspense. While admitting, then, that Massinger's drama is gravely defective from the point of view of tragic art, and also that, as a piece of writing, it is, apart from a few speeches, rather meritorious than distinguished, we may give him the praise of one who introduced for the first time a subject capable of profound effects, but beset with immense difficulties which greater dramatists did not wholly vanquish.—Mrs. H. F. Rankin read "A Short Note on 'The Virgin-Martyr,'" in which she said that the play, although fine and edifying, is one in which the *dramatis personae* are little more than marionettes. The serious, intense, elaborately-drawn characters do not live for us in a way at all to be compared, for instance, with even the tightly and sketchy characters of so badly a conceived play as Shakspeare's "Troilus and Cressida."—Mr. Walter Strachan read a paper on "The Moral of 'The Virgin-Martyr,'" saying that the poet, the dramatist, and the philosopher are often credited with a didactic intention which they never possessed, but we may see in Massinger's noble and soul-stirring lines a strong emphatic appeal against religious intolerance. The buffoonery of Hircius and Spungius, which has caused the play to be much decried, is not without its use. These two show the natural consequence of hypocrisy. Having before us the touching and beautiful way in which Dorothea endures to win the martyr's crown, it is perhaps too prosaic to adopt the nineteenth-century view that martyrs should be protected from themselves. The moral which Massinger enforces in this play can teach us, as it taught those of two centuries and a half ago, that the greatest of all virtues is charity.—Miss Louisa Mary Davies, in a paper entitled "Massinger in the Pulpit," said that in reading "The Virgin-Martyr" we feel that in plays, no less than in the orthodox morocco folding cases, sermons are sometimes imprisoned as palpably to the wistful eye as is the fly in the amber drop. The sermon in this play is not tacked on at the end in the shape of a prosy moral, or delivered at intervals in didactic speeches, but is burning right at its very heart, diffusing warmth

and beauty through the whole. The story embodying the sermon is one of the gems of legend-lore, one that we may be quite sure would often have been selected to be read in the convent refectory, being free from the puerilities which half amuse, half disgust, in so many of the monkish narratives. The diction of the play might be called Scriptural; and it is remarkable how one verse after another of the inspired writers is suggested by the verse of Massinger, who must certainly have had them floating in his memory as he wrote. Following out the quaint Puritan fashion of the day, his discourse may be divided into three sections, (1) Preparation, (2) Percussion, (3) Resolution; and, although the intervention of visibly miraculous agencies lifts the subject a little out of the plane of our ordinary life, the practical application is there, and it has, for seventeenth and nineteenth century alike, the lessons for everyday use: (1) that each of us must choose his master wisely, and (2) that we must never veil our colours. —This meeting brought to an end the work of the society's sixteenth session. The plays chosen for next session are "Cymbeline," "The Duke of Milan," "The Winter's Tale," "The Tempest," "The Birth of Merlin," "Henry VIII.," "The Two Noble Kinsmen," and "A New Way to Pay Old Debts." The Hon. Sec. (9, Gordon-road, Bristol) will gratefully acknowledge the receipt of anything for the society's library, which now consists of 511 volumes.

PHILOLOGICAL SOCIETY.—(Friday, June 5.)

HENRY BRADLEY, Esq., president, in the chair.—Prof. Windisch and Prof. Zupitza were elected honorary members of the society.—Prof. Skeat read a paper on "Miscellaneous English Etymologies." *Alaum*, a mastiff; *O.F. alan* (New English Dictionary). The *O.F.* word represents Latin *Alanus*, originally Albanian; *alan* is a dog from Epirus. *Beggar*, originally a Beguin; *Beggar* translates *O.F. Beguin*; Rom. of the Rose, 7254. *Colè*, an accolade (Barbour); this is misprinted *tole* in Weber, King Alis. 815. *Derring do*, i.e., a daring to do, is not a compound word, but two separate words; Chaucer, Troil. v. 835. *Dirk*, perhaps from *O.Irish delg*, pin; cf. *A.S. dale*, the same. *Gofish*, in Chaucer, Troil. iii. 584, is a misprint, in old editions, for *gosish*, goose-like. *Loigne*, a leash, Rom. Rose, 3882; *O.F. loigne*, *F. longe*, Low Latin *longia*, a tether; from *longus*. *Lunes*, a hawk's jesses; originally the same as *loignes* (above). *Lyngell*, in Ritson, Met. Rom. ii. 37; probably for *O.F. lince*, linen vesture; from *linceum*. *Mistery*, in the sense of "ministry," occurs in Chaucer, ed. Morris, iii. 348; Low Latin *misterium*, a contraction of *ministerium*. *Oubit* (Kingsley); Scotch form of *M.E. woolbode*, "woolly beetle"; hence, "hairy caterpillar"; cf. *A.S. ucl*, wool; *budda*, beetle. *Pentacle*, corruption of *M.E. pentangel*, Grene Knight, 627; a six-sided figure, but originally a five-sided figure, as the etymology shows. *Pomet touris*, Ritson, Met. Rom. ii. 55; for *pomed touris*, towers ornamented with pomes or knobs. *Posset*, *O.F. possette*, Palgrave. *Pray*, in gloss, to Weber, Met. Rom., means "a flock," or "a host"; from Latin *præda*; see Ducange. *Malice prepnise* was originally *malice purpnise*; from prefix *pro-*, not *præ-*. *Quert*, in Stratmann, from Old Scand. **kwert*, neuter; cf. Icel. *kyrr*, *kvirr*, calm; Goth. *kwairrus*; in *quert* meant "in peace and safety." *Rankle*, hitherto of undiscovered origin; *O.F. raonele*, originally *draonele*; Low Latin *dracuncul*, a rankling sore; from Latin *draco*; see Godefroy and Ducange. *M.E. rehten*, to cheer; from the same source as *F. sou-hait*. *M.E. rencian*, Old Eng. Misc., p. 92, l. 70; it means "cloth of Rheims"; *O.F. raencien* (Godefroy). *Rideled*, pleated, Rom. Rose, 1235; lit. pleated like a curtain; from *O.F. ridel*, *F. rideau*. *Scale*, of a fish; not *E.*, but *F.*; *O.F. escale*. *Soak*, *A.S. soecian*, occurs in Cockayne's Leechdoms, ii. 240; iii. 11. *Tawt*, *M.E. toht*, *toght*, pp. from Icel. *toga*, to draw, pull, tow. *Trayeres*, ships (Weber); error for *crayeres*, *craves*, ships. *Venter*, a greyhound-keeper; Grene Knight, 1116; see Gloss. to Babees Book; the same as *feuter-cr*. *Wayz-goose*, originally "stubble-goose," see Bailey; *M.E. warse*, also *wase*; Swed. *vase*, sheaf; Swed. dial. *vase*, *vrase*, corn left on the field; Dan. dial. *vase*. This way, better *wase*, *warise*, is for *warse*; allied to *E. writhe*, *wreat*, *ureath*.

ARISTOTELIAN SOCIETY.—(Monday, June 8.)

SHADWORTH H. HODGSON, Esq., president, in the chair.—The report of the executive committee and the financial statement were read and adopted. The following were elected officers for the ensuing session: Mr. Shadworth H. Hodgson, president; Mr. S. Alexander, Dr. A. Bain, and Mr. G. F. Stout, vice-presidents; Mr. B. Bosanquet, editor; and Mr. H. W. Carr, hon. secretary and treasurer. —Mr. A. Bontwood read a paper on "The Philosophy of Rosmini." Rosmini was fundamentally a scholastic, and taught a modified form of the doctrine of St. Thomas Aquinas. He was, however, an independent thinker, and his attitude towards Aristotle is, in its perfect independence, in strong contrast with that of St. Thomas. He criticised Kant on account of the subjectivity of his forms and categories, but he did not quite escape a similar error himself. Idea and cognition are used almost interchangeably, and the mental process which, according to Rosmini, exists in our ideas also appears to have a share in the actual formation of the objects of cognition. He starts with the intuition of Being in the mind, and endeavours to show how from this, on the occasion of feeling and sensation, we obtain our conceptions of our own selves, of our bodies, and of external things. After criticising Rosmini's logical principle, and remarking the purely metaphysical manner in which he treated the questions of Theism and Natural Religion, the paper examined some of the main points of Rosmini's teaching as follows: That we have clear and indisputable knowledge of the soul; that we also know of the union of the body with the soul as one co-existent subject; that we know of the existence of external bodies, but that the so-called qualities of these bodies are purely subjective, being simply modes of our own sensitivity.—The paper was followed by a discussion.

FINE ART.

REPRESENTATIONS OF COMBAT IN ANCIENT ART

Kampfgruppe und Kampfertypen in der Antike.
Von Oscar Bie. (Berlin: Mayer and Müller).

THE aim of this work is to deal with ancient representations of combat with regard both to their composition and to the action of single figures.

The friezes of the so-called Theseion and of the temple of Athena-Nikè have hitherto been criticised with reference to their meaning. Dr. Bie passes on to another province of criticism, "das der Statik des Körpers, der Körperstellungen, und der Beziehungen der Figuren zu einander, der Gruppierung."

Between the two parties of seated deities on the eastern frieze of the Theseion, we find on each side a group of pursuers and pursued, then on the right a group of fighters armed with stones attacking a hero whose commanding form towers above them in the centre as an apex of the whole composition. This group is balanced on the left by another formed of warriors hastening onwards, and including the despoiling of a fallen foe. In this we have traces of the old realistic idea of representing combatants in rows, for which Attic art substituted a succession of varied groups. Such succession is seen in full force in the western frieze, where the isolated groups of Centaurs and Lapiths might have come straight from the metopes of the Parthenon; while, on the other hand, the eastern frieze, with its conspicuous centre, reminds our author of a pedimental composition. Yet this rhythmic symmetry is not

wholly wanting in the western frieze, where the Kaineus-group, if not strictly in the middle, practically forms the central point of a series of fairly corresponding scenes. Such rhythmus was due to architectonic influence; and the diminution of this centripetal tendency, together with the spread of the principle of simple idealistic grouping, constituted the progress shown in the frieze of the Temple of Athena-Nikè. This principle gradually prevailed, as satisfying the eye, which cannot so well take in long rows of figures leading to a central point.

Realism in depicting warfare is characteristic of Assyrian art, which, besides decapitation of prisoners, &c., gives rivers, woods, and other details of the background, so completely absent from Hellenic work. Characteristic, too, are the rows of warriors whether in fight or in triumphal procession. This is called by our author the "Epic" style, as opposed to the "Dramatic," or idealistic art of Greece. These rows of figures appear in the oldest Greek imitations of Oriental art; they appear again (though ennobled by Greek influence) on the Lycian monuments; in Hellenistic times they receive a sort of official sanction; and they complete their course of development on the banks of the Tiber.

In Homer the evolutions of the masses serve only as a framing for the single combats of heroes. On the monuments of Asia Minor the monotonous files of soldiers hold their ground, even in the Gjölbaschi frieze, despite its Attic character. But it was in Rome that the realistic representation of warfare ultimately triumphed, where centralising despotism crushed the individuality so essential to Hellenic art. Thus on Trajan's Column the well-known Greek motive of a fallen hero forming the centre of a group of combatants is translated into two armies, divided by a heap of corpses. With the sarcophagus of Helena we arrive once more at the Assyrian standpoint.

The old Ionic art, of which Klazomenae is the chief representative, has supplied three typical "schemata" or forms of group: (1) Single combats, often over a fallen warrior. (2) Pursuit; a figure striding after another, who looks back in his flight. (3) Victory; a figure striding towards another, who kneels and looks back to his pursuer.

Such a group may form a centre to several single figures added on each side ("Gruppenconcentration"); or in later fashion there may be several independent groups in succession ("Gruppencoordination"). These two classes are traced in their development on Korinthian, Chalkidian, and Attic vases: especially on the François vase, in the war between cranes and pygmies. They are traced, too, in the sculptures of the Megarian Treasury, of Selinus, and of pre-Persian Athens, till in the Aeginetan pediments the last vestige of realism disappears, and the warriors stand forth with helm thrown back and body-armour cast aside.

The friezes of the Theseion represent a wonderful development of the combat-scene, transferred from the metope and the pediment to a space less cramped and more

suiting for its display. The highest point of this development is reached, however, only in the frieze of the temple of Nikè, not so much by the creation of new types as by evolution from those already established.

As time goes on, there is greater demand for activity. The simple combat of two is avoided; and so are lifeless forms. Of the hundred figures in the Phigaleian frieze only two are dead. Variety is sought by placing figures with the back to the spectator. One of the Mausoleum friezes affords a striking example of a position apparently much in favour in sculpture of the fourth century—one leg kneeling to the front, while the other leg is seen in profile. In this frieze, however, there is little new, only an improvement of what has gone before. Here, as elsewhere, the types are to be traced back to Athens.

In Hellenistic times the fourth century group of a standing figure supporting one sinking—as the Niobid with his dying sister—is retained without essential alteration. To the original type a new and sterner expression of wild passion is imparted, and we have the Ludovisi group of the Gaul and his slain wife. Progress in the composition as a whole was more marked than in the individual types; as may be seen in the Gigantomachia from Pergamon. A new type, however, at last appears in the seated barbarian prisoner, with hands bound behind his back.

The battle-picture carved in relief, originating in Hellenistic buildings commemorative of victory, appears in the Augustan age in Southern Gaul (at St. Rémy), and then passes on to Rome. The series of warriors in parallel lines, so utterly opposed to the principle of grouping, asserts itself more and more. The group is more and more neglected, the type loses its power. Realism makes swifter progress; at the end of the third century its triumph is complete.

Such is the gist of the treatise before us, a learned treatise such as is common enough in Germany, and in Germany alone. In our own country few would be competent to write such a book, and none willing; for who would read it? It is hardly probable that any English examiner will propound questions as to *Kampfgruppe* or *Kämpfertypen*.

TALFOURD ELY.

THE PICTURES AT THE GERMAN EXHIBITION.

VERY few opportunities are afforded us in London of seeing the tendencies and productions of modern German painting. No adequate ones, indeed; for, though not a few of the enterprising London dealers—Mr. Wallis, Mr. Maclean, and Mr. Tooth, for example—acquire from time to time, for spring or autumn picture-shows, canvases that are of German origin, these are selected, not to be representative, but to be popular with English picture-buyers; and, after seeing them, we remain in a condition of uncertainty as to what is really the development of German art. Now Mr. Whitley, the director of the German Exhibition, has naturally and rightly gone upon a different tack. He has charged Mr. Gurlitt—the great Berlin dealer, to whose initiative, by-the-by, we owe the best of the modern reproductions

of the Tanagra figures—to secure for the inspection of English folk a thoroughly representative collection. The task has been ably fulfilled, and Mr. Gurlitt places before us important works which show at once the merits and defects of the schools and men of Munich, Berlin, Düsseldorf, and I know not what besides. Without attempting to generalise, to dogmatise, to deduce conclusions, I shall mention a few pictures which, from one point of view or another, seem to be noteworthy.

Anton Werner, the President of the Royal Academy of Arts, one of the two chief artistic corporations in Berlin, contributes what is practically a large portrait group of the German Imperial family. It has, of course, historic interest, and is not without technical merit; but one has not to go far before one finds it surpassed in dignity and charm. More of dignity and charm, for example, belong to the works of Prof. Oswald Achenbach, of Düsseldorf, whose elaborate design and refined and, within certain limits, complete execution are made evident in the first instance by a "View of Rome" (No. 3)—a landscape of realism, it is true, rather than of poetry—and again, by a "Burial on the Island of Ischia," which catches the luxuriant nature of the South and the glow of a Southern sun. The now famous "Lachende Erben" of Prof. Becker is contributed from Berlin. Like a good deal of modern German pictorial work, it is not above fulfilling the function of the story-teller. Here, indeed, is a measure of caricature; here, also, is a more constrained and reserved satire. A group of self-seeking relations fill the foreground of the canvas, and in the background is the faithful retainer—the Jaques or the George Barrett of German comedy or melodrama—who alone, with sincerity, regrets his departed lord. The weakness of the un-instructed is cleverly satirised by Ferdinand Brühl in "In the Picture-Gallery." This shows us the resort of student and idler at a moment when a pedantic little copyist—perched upon his little ladder—is beheld, in pride of achievement, receiving the homage of the folk to whom a dexterous imitation counts for much more than originality. Dücker, of Düsseldorf, has a thoroughly studied, yet, it must be confessed, not very attractive, sea-piece (No. 87). We believe that Mr. Gurlitt may be credited with the invention of the convenient term *Hellmalerei*. He will not, however, claim to have invented the thing; no, no! for that, so far as work of our own day is concerned, is of French *provenance*. Of this *Hellmalerei*, one of the best examples is Julius Exter's group of croquet-playing young people.

Harburger, of Munich, sends a delicately wrought *genre* picture, called "The Sempstress." Its handling is of admirable certainty, and likewise of the facility which charms. What it represents is but a pleasant bloude, in a dull black gown, working upon some large and flowing draperies of blue-white muslin. "Dying Words," by Kampf, is more dramatic, and it is intensely realistic. In it one who has been done to death makes his last doleful utterances. Quite a match for this, however, in realism, and, strange as it may appear, hardly so grim, is the picture by Seligmann, of Vienna, of Prof. Billroth and the medical students in an operating room with a patient in act to inhale chloroform before the knife of the expert does its work. Again—but here indeed realism ceases altogether to be repulsive—a water-colour of Herr Menzel's should be seen and done justice to. It represents the interior of a Lutheran church during sermon-time. The portraiture of Director Kaulbach, of Koner, and of Conrad Kiesel, is worthy of attention; though the artist pre-eminent in portraiture is, I take it, Prof. Lenbach, a painter who, owing something to tradition, owes much to keen personal observa-

tion and to a wisely restrained power of hand. Lenbach's "Bismarck" (No. 272) is assuredly the best and most penetrating portrait ever painted of the Ex-Chancellor.

FREDERICK WEDMORE.

THE EGGER COLLECTION.

ON Thursday and Friday of next week (June 25 and 26) Messrs. Sotheby will be engaged in selling the superb collection of bronze arms and implements, and of ornaments in gold, silver, and bronze, which was formed several years ago by the late Dr. S. Egger, of Vienna. It may be safely affirmed that such a representative series of the prehistoric art of a particular district has never before come into the market; and we can only express our surprise that the Austrian Government has permitted it to be brought over to this country for sale.

An admirable catalogue—with a preface by Dr. F. von Pulsky, of the Buda-Pesth Museum, and illustrated with no less than twenty-six plates—enables us to appreciate the extraordinary richness and variety of the collection.

It covers the entire evolution of early culture in the central basin of the Danube, from the neolithic age, through the bronze age (including the Hallstadt and La Tène periods), down to the Roman occupation and the later invasion of barbarian tribes. Specially interesting is the evidence of a period preceding the bronze age, when hammered copper was used for tools closely resembling those of the polished-stone age. In the bronze age proper, the objects found in Hungary are much simpler than those of Scandinavia, Germany, and the North. There are also several peculiar weapons, such as the war-hammer and war-axe, the square plates of bronze wire for the protection of the forearm, and the sword with a cup-shaped pommel, perforated to allow a leather strap to be passed through, by which it hung, without a sheath, from the belt. Another point of interest is the introduction of Celtic art at about the time of Roman domination. Examples of this are the torques or twisted collars of metal, the fibulae with turned-up feet, the jointed bronze chains and other horse-trappings, the specifically Celtic ornamentation developed from the circle and triangle, and (lastly) the use of enamelled jewellery, in brick-red, blue, and white colours.

Of great importance is the hoard of silver ornaments, &c., found at Aszár in 1884, which are to be sold in one lot. In a large bronze culinary vessel, with the maker's name—CARATVSVS—punched on the handle, were found, together with the ornaments, two oblong tablets of thin bronze, with inscriptions on each side. These inscriptions record that, in the year A.D. 148, during the reign of Antoninus Pius, one Atta, son of Nivio, an Azal (consequently a Celt), received the Roman citizenship in reward for twenty-five years' service with the Pannonian cohort. Another inscription recites that the decree was engraved on the wall at the back of the Temple of Minerva at Rome.

We may also mention here that Messrs. Sotheby were also to sell, on Thursday of this week, a collection of Greek, Etruscan, and Roman bronzes, formed by Herr Georges von Ráth, of Buda-Pesth. Though this collection is not so unique as the other, it comprises some very fine and curious pieces, as may be seen from the photographs in the catalogue.

NOTES ON ART AND ARCHAEOLOGY.

THE exhibitions to open next week include: a collection of Mr. Walter Crane's works, at the Fine Art Society's, New Bond-street; original sketches of the Burmese War and the Nile Expedition, by Mr. Melton Prior, the special

artist of the *Illustrated London News*, at Mr. Mendoza's Gallery, King-street, St. James's; and what we believe to be the first exhibition of a new body, the Artists' Alliance—who invite exhibits from their own members in all forms of artistic work—at the Marlborough Gallery, Great Marlborough-street.

LORD JUSTICE BOWEN has consented to preside at the annual meeting of subscribers to the British School at Athens, which will be held at 22, Albemarle-street, on Friday, July 3, at 5 p.m.

THE sale of the late Koeley Halswelle's "remaining works," at Christie's last Saturday, realised altogether £6708. Most of the lots were only simple sketches; but of the four catalogued as finished pictures, "The Witches' Scene in 'Macbeth'" realised 250 guineas, and "Venice: Moonrise" and "Rokeby: the Junction of the Greta and the Tees," 200 guineas each.

THE prix du Salon has been awarded, at the third ballot, to M. Paul-Jean Gervais, for his picture entitled "Les Saintes-Maries," representing three nude, or almost nude, women in a boat.

THE Accademia dei Lincei is proposing to undertake the publication of two important archaeological works. One is an exhaustive description of the excavations which have recently been conducted at Civit  Castellana, the site of the ancient Falerii, the results of which are now exhibited in the Villa di Papa Giulio at Rome. All the photographs, plans, drawings, &c., made in the course of these excavations have been placed at the disposal of the Academy by Prof. Villari, the minister of education. The other work is the archaeological map of Italy, which the government has had in hand for some years past, under the direction of Commendatore Gamurrini, who has himself paid special attention to the territory of the Falisci. This map will ultimately cover the entire area of the peninsula. Different colours will show the state of culture, as revealed by excavation, at each epoch, from the most ancient times, through the ages of stone and bronze, down to the close of the Roman empire.

AT two recent meetings of the Acad mie des Inscriptions, M. Albert L b gue read a paper upon the discoveries made during recent excavations at the little town of Martres-Tolosanne, in the department of Haute-Garonne. The site had formerly been examined by Dum ge, who found two classes of statuary, one very fine, the other of a style so strange as to suggest forgery. But the recent explorations have removed this suspicion. An immense number of sculptures have been brought to light of very varied character—some incorrect, but many delicate, many vigorous, and almost all showing much expression: in particular, bas-reliefs representing the labours of Hercules, portrait-busts, and children's heads of an exquisite grace. The material of all is a local marble, and, therefore, they must be the work of native artists of the Gallo-Roman period. A large number of traces of foundations of buildings have been found, but apparently no inscriptions; for it is stated that not even the name of the ancient town has been preserved.

MUSIC.

RECENT CONCERTS.

OF new pianists there seems to be no end. Last Friday week the latest comer, Mme. Olga Vulliet, gave a recital at Princes' Hall. This lady certainly has talent, and a good touch, and understands and feels the music which she interprets. She commenced her programme with a movement from Brahms's Sonata in F minor, followed by three pieces from the same composer. This prominence given to Brahms

deserves notice, if only for its novelty: it was a pleasant change from the "Chromatic Fantasia," or transcription of a Bach organ Fugue, with which so many of our pianists commence their programmes. Mme. Vulliet was most successful in soft, quiet passages; when vigour was needed her tone became hard. She played a number of short pieces by various composers, including a neat *El gie* of her own, and a Gavotte from a violin Suite of Bach's, arranged for the left hand by Joseffy. The latter was cleverly performed.

Mr. Augustus Harris's operatic concert at the Albert Hall, on Saturday afternoon, was long, but interesting. When the history of music in England during the second half of the nineteenth century is written, the chapter dealing with Wagner will be one of the most attractive. Explain it how one may, the fact remains that Wagner, long ignored and fiercely opposed, is now so popular that his name, even on an "operatic" programme, is an attractive feature; at the concert under notice, Mozart and Beethoven were each represented by one Aria, but Wagner by no less than nine excerpts from his operas and music-dramas. A detailed notice of the concert is unnecessary: the principal artists of Mr. Harris's company appeared with distinguished success. The special feature of the afternoon was the appearance of M. Van Dyck. He has been heard at the Opera, and has won well-deserved praise. But in the "Graf's Erz hlung" from "Lohengrin," in Siegmund's "Liebesgesang" from the "Walk re," and in the "Schmiedelieder" from "Siegfried," he sang with marvellous dramatic force. His powers as an exponent of Wagner have not been over-rated. It is to be hoped that his services have been secured for Wagner's works at the Opera next season. The conductorship at the Albert Hall was divided between Signori Mancinelli, Randegger, and Bevington.

A concert was given at the Guildhall, Cambridge, by the Musical Society, on Monday afternoon, in honour of Herr Antonin Dvor k, on whom the University of Cambridge has conferred the degree of Doctor of Music. This recognition of his genius is doubly welcome: it shows the interest that is taken in music and musicians, and it will probably have a beneficial influence on the composer and stimulate him, if possible, to still higher efforts. The programme of the concert, devoted entirely to Dvor k's works, commenced with the "Stabat Mater," which, since its first production by the London Musical Society under Mr. Barnby in 1883, has been universally recognised as one of the most original and one of the most powerful sacred compositions written within the last quarter of a century. The rendering, under the composer's direction, was not free from reproach. The orchestral playing was somewhat rough, and the quality of tone of the Cambridge choir somewhat hard. But any shortcomings were well atoned for by the earnestness shown by all who took part; there was evidently but one desire, viz., to do justice and honour to the composer. The soloists, of whom the same can be said, were Mme. Albani, Miss Hilda Wilson, and Messrs. Lloyd and Henschel. Mme. Albani sang the first solo from the "Spectre's Bride," for which she was recalled. The concert concluded with the Symphony No. 4 in G (Op 88), first heard in London at a concert of the Philharmonic Society on April 24, 1890. The music is unmistakably fresh and picturesque. We are told Dvor k "confessed" that, while composing this Symphony, he had a programme in his mind. This was a confession of which he had no need to be ashamed. We imagine that the division of music into "abstract" and "poetical" is an artificial one. We know that some of the greatest musicians, and we fancy

all, worked to a programme; but we think they were wise in keeping it, as a rule, to themselves. The peculiarity in the form of the first movement of Dvor k's Symphony is peculiar, but once understood there is no difficulty in following it. The Adagio, with its pensive opening minor theme, and its fascinating theme in the major and subsequent workings, is certainly one of the composer's most striking movements. Then the quaint Menuet and dainty Trio, and the humorous Finale, complete a work as full of skill as it is of imagination. Dvor k was greeted with loud applause at the close; and, indeed, throughout the concert the enthusiasm was great. The composer will certainly not be of opinion that we are a musical nation.

The programme of the fourth Richter concert, on Monday evening, commenced with the "Tannh user" Overture, of which a remarkably fine performance was given, and included the second scene from the same opera with the alterations made for the production of the work at Paris in 1861. Wagner once found fault with Berlioz for retouching his "Benvenuto Cellini," for putting new wine into an old bottle; and yet he afterwards did the same thing himself. The changes, however, show a master hand. Mrs. Moore Lawson and Mr. Barton McGuckin strove hard to do justice to their parts. The remainder of the evening was devoted to Brahms's Requiem. The solemnity and nobility of the music are beyond dispute; but the difficulties to be overcome are so great that no one can listen to it without a certain sense of pain, and much pity, especially for the chorus. And then again in passages in which the voices are at their loudest, and the orchestra at its strongest, one longs for a hall larger than that of St. James's. Apart from these inevitable drawbacks, the performance under Herr Richter was excellent. The chorus sang with vigour and precision, and the orchestral accompaniments were effectively rendered. Mrs. Moore Lawson sang her trying solo with fair success; and Mr. Santley, who appeared for the first time since his return from America, showed his usual artistic taste.

Se or Sarasate gave his fifth concert on Wednesday evening. His performance of the Mendelssohn Concerto was excessively brilliant, though we think his tone in past seasons has been fuller. The Finale was taken at the usual rapid rate. The Raff Suite displayed the violinist's powers as a virtuoso; an encore was accepted. The hall was well filled.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

History of the Church of England, from the Abolition of the Roman Jurisdiction. Vol. IV., 1553-1558. By Richard Watson Dixon. (Routledge.)

CANON DIXON'S new volume is devoted to the reign of Mary. It opens with that "strange interregnum of a fortnight during which Northumberland struggled to lift his own family into the throne over the unburied coffin of Edward VI.," and it closes with a portrait of the dying Queen, when "she beheld the Court passing and repassing, as they took the road to Hatfield to salute Elizabeth."

The interval between these two events is the most wretched and shameful period of English history. In politics, England was little more than a dependency of Spain: Philip, it is true, had no regular nor constitutional position, and his duties were limited with the utmost care by Gardiner's treaty; but his influence with the Queen was unlimited; the whole conduct of our affairs was subordinated to his interest, and our foreign policy was altogether at his disposal. In religion, England was more dependent upon the Holy See than it had ever been since the minority of Henry III. But the peculiar and abnormal relations of the Papacy with that sovereign were political and secular: Innocent III. had managed to become the feudal superior of the English king; and his enlarged authority is not the measure of his predecessors' ecclesiastical jurisdiction over the national Church. Under Mary the new methods of the counter-Reformation were established among us; the Legate came over with "pardons" and principles "from Rome, all hot"; and all the bishops, in fact as well as in theory, were Papal delegates. Calais was lost, through the blindness of a feeble and wayward administration; the people were disheartened; and the whole state appeared to be at once deprived of good counsel, of courage, and of hope.

"The rest of the reign," says Canon Dixon, "was spent in a miserable war of efforts of recovery; in gathering armaments that seldom sailed, in bidding musters that were thinly kept by men of hangdog look, in 'negotiating for foreign mercenaries who never came.'"

Or, as an old writer says, with something more of harmony and strength:

"The people went to the musters with kerchiefs on their heads, they went to the wars hanging down their heads, they came from them as men dismayed and forlorn."

Pestilence and famine were no less destructive than the bishops; and the most

malignant efforts of nature and of grace were equally discharged against the prospect of the unhappy kingdom.

It is of such a period, ill-omened, tempestuous, and cruel, that Canon Dixon has had to write; and it must be allowed that he has written with more calmness and discrimination than several of his predecessors. We are spared the ordinary flow of sentiment for Edward VI., and for the Lady Jane. The one was undoubtedly a precocious youth, if his diaries be authentic; and it is probable that both himself and his people are to be congratulated, not commiserated, for his premature decline. The other was an usurper, whatever may have been her private virtue, her accomplishments, or her good intention: an usurper, because she was not supported by popular feeling, nor justified by constitutional authority *Capax imperii*, the beautiful and interesting pupil of Ascliam can still be thought, *Maria capaxior*; but she committed the unpardonable blunder of having reigned, and incurred the certain penalty of an unsuccessful and unpopular usurpation. Although Canon Dixon has no emotion to squander upon Edward or on Jane, he offers many apologies for Queen Mary and for Bonner.

"Seldom in history," he says, "have noble qualities and bright opportunities fallen in failure so utter, so terrible and gloomy. The character of Mary was strong and magnanimous: her conduct in the selfish relations of life showed a rare example of feminine delicacy and propriety: as a sovereign she was of the great kind: and before her accession there was no person so beloved in the realm."

I don't know precisely what "the selfish relations of life" can mean; or how "delicacy" and "propriety" can ever be exhibited in what is "selfish": from a clerical instructor, I shall be happy to learn that soothing and comfortable knowledge. If the words refer to Mary's uncontrollable desire to marry Philip, at any risk to her kingdom and her subjects, or to her feverish anxiety to possess him always, we may, indeed, with Horace, describe her *flagrans amor et libido* as "feminine," and, with Canon Dixon, as "selfish": but it was hardly "delicate" in her, and where is the "propriety"? Instead of "selfish," it might appear that Canon Dixon should have written "private" or "domestic"; and in early life, as a sister and as a daughter, the character of Mary was unimpeachable. Not that I would venture myself, with Pole and other admirers, to compare her to the Virgin Mary: Paul IV. knew not how to describe the mature bride of King Philip, the betrothed of so many deceased and worn-out sovereigns; but in her latter years she reminds me too much, I am afraid, of the forlorn and phrensied Lydia. Unlike Lydia, she may be suspected of a blameless youth; but her unquiet maturity and her stormy ending have too much resemblance to the impotent anguish, to the querulous exit, of that *anus flebilis et flagrans*.

Canon Dixon's last phrases, too, are surely a satire upon what goes before; it may be kindly meant, but is not kindly expressed, to say that a most popular heir apparent departs as a gloomy and terrible sovereign.

Mary, in truth, was not a great sovereign. With unbounded popularity, with a splendid opening for moderation and for a stable settlement, her reign was a miserable failure: she reigned, indeed, but never ruled; she chose to favour an alien and an un-English party, when she might have been the leader and the restorer of her people; and she died in more than contempt, baffled, hated, and disobeyed. For her most active agent, Bonner, Canon Dixon has undoubtedly prepared a better case. Bonner was not so dark as he is painted; his character was not so bloody as his reputation. A frank, bluff Englishman, scorning half-measures and theological subtleties, of a coarse and blustering nature, he performed courageously and brutally what he had to do. But his hectoring way, his loud arguments, his personal assaults were all meant in kindness to his victims; so too were the beatings in the orchard, the uncomfortable medicine of the stocks, the strait and tedious imprisonments in the "coal-house," with which he managed to subdue the resolution of more than one aspiring martyr. So argues Canon Dixon, and he argues plausibly. Nor are his arguments based upon imagination alone, but upon documents and statistics; and it is clear that Bonner has too often received the odium which should have been bestowed on Pole. That sophistical rhetorician was not so innocent of the persecution as it has been usual to assert, and as he evidently desired it to be supposed. *Quod facit per alium, facit per se*, is an axiom of the moral theology; and Pole, high in the favour of the Queen, and wielding all the powers of metropolitan and legate, cannot be absolved from the responsibility of the persecution. With Pole there came into England that new spirit of the counter-Reformation, which had been slowly forming within the Italian Church, and which was officially defined and promulgated at the Council of Trent. It is difficult to say whether the Jesuits were its inventors, or only its most zealous pupils and exponents; at any rate, it mounted the Apostolic throne in 1555 when Cardinal Caraffa was transformed into Paul IV., "the man who gave to the austere spirit that was entering into the papacy the bent which it has never lost." And by a consistent modern Romanist, the age of Mary should always be admired as the most blessed and fruitful epoch in English history; for in his eyes the independence of the mediæval bishops must often border upon disloyalty and schism, but under Mary the genuine successors of the Apostles were for the first and only time supreme among us. Formed upon the latest Italian modes, the bishops of the counter-Reformation were commissioned, each like "a prophet now-inspired," to reveal the true meaning of the evangelical precepts and to show how the gospel should be practised. For the religion, which was established under Mary, was not the mediæval catholicism which had formerly existed under Henry VIII.: as Canon Dixon well remarks, "the papacy existed not henceforth for the Christian religion, as under Gregory the Great; but for its own claims, which were continually increased."

Canon Dixon has done well to bring out this distinction between the Catholicism of the mediæval Churches, and the narrow Romanism of the post-Tridentine Church. Of the term "protestant," when applied to the Church of England, he says it "declares no more than her accidental relation towards another church"; "it is not found in the formularies of the Church of England." It is, perhaps, not historically true to describe the Church of England as "the most ancient national Church that has opposed itself to the claims of Rome"; but it is true to describe it as the most vigorous and active asserter of constitutional independence; and, in these days, it may be described as an opponent whose organisation and existence are something more than national. We may assert, however, of the ancient Church of England, that it was protestant, not in its doctrine, but in its attitude to Rome, "long before the Reformation."

In Canon Dixon's History, it is the personal element, rather than the controversial or the constitutional element, which is valuable and for which his readers have to thank him. He has pondered his materials with the greatest care; he has lived with the personages whom he describes, and he is able to fill them with human interest. It is amusing in his pages to follow the course of Pole's alienation from Paul IV.; and, indeed, a less vigorous and patient ruler might well be exasperated with Pole's verbosity, and with his failure in administration. His facile eloquence, his pedantry, his bad statesmanship, his obtrusive piety, his interminable letters, his elastic conscience, and his wonderful compromises were fortunately rare among English public men in the sixteenth century: it would be difficult to say whether he did most mischief to his friends, to his country, or to his Church. Incomparably greater than Pole is Gardiner, the restored bishop of Winton and Mary's chancellor. Under Henry VIII. he had accepted Catholicism without the Pope; and he wrote a treatise, *De Vera Obedientia*, in defence of the Anglican position. Under Mary he submitted to the papal obedience; but his book was turned into English for him, and circulated widely; it was always being quoted against him by the martyrs. Nor is he the only theologian who has been puzzled as a "Romanesque" to answer what he wrote as an English churchman. Cardinal Newman wrote in 1827: "I must express my belief that *nothing* will satisfy the Roman Catholics"; and I would give some such answer to the attacks upon Elizabeth and Cecil for their compliance during the reign of Mary. They did what the great majority of the clergy and people did under Henry and Edward; they practised themselves what they enforced afterwards, that the ceremonies and the uniformity of religion were the affairs of government. For the substance, they were either impartial or indifferent; or they may have adopted the wise maxim of Tiberius: *Deorum injurias Dis curae*. Not so the body of the people, who objected loudly to the alterations in the ritual; "nobody even who understood the Latin language could understand the Latin service, the priests so champed and chewed their

words, and posted so fast." The leading martyrs are very distinct in Canon Dixon's pages. Latimer, too old to argue, but answering with all his vigour when he is pressed, and going bravely to the fire; Ridley and Hooper, one argumentative and sour, the other gentle and persuasive, both dying with prolonged and frightful torment. Cranmer is always very human, if not always heroic. In the history of his trials we get an interesting account of Oxford in the days of Mary; and, after all, much must be forgiven Cranmer for the sake of his fine English. It would be difficult to name a prose which is more musical, more direct and dignified, more strong and flowing, than the prose of Cranmer, the prose of the English Litany.

The same compliment may not be paid to the Histories of Canon Dixon: their style, I grieve to say it, is the worst thing about them. The author is too fond of awkward and abstruse inversions, which always make his phrases clumsy and sometimes obscure. An inversion should be even more sparingly used than an alliteration; the force and beauty of either are destroyed when they are vulgarised and squandered. He is too fond, also, of strange words: "debellate," "evitate," "nulled" for annulled, are specimens of what I mean. It is not witty, nor satirical, but merely incorrect, to speak of "Duke Dudley" instead of "the Duke of Northumberland." It is worse than incorrect in a theologian, an Anglo-Catholic, to speak of people "taking the Mass": you may hear Mass, if you be a layman; you may say it, if you be a priest; but you only receive or take the Holy Communion. It is not fair to violate the laws of good writing, and to distract the reader, by a riddle of this kind: "the brother of the late wife of the deceased brother of his departed enemy Somerset." "Vulgarity doubtless," Canon Dixon says of the martyrs, "the English failing, beset and spoiled in many examples the dignity of sacrifice": vulgarity, that English failing which we have inherited from our Germanic ancestors, spoils too much, not only of our conduct, but of our art, our writing. And something that goes very near to vulgarity often spoils the interest and the pleasure, and cannot fail to diminish the permanent value, of Canon Dixon's laborious but slovenly, discursive, and eccentric histories.

ARTHUR GALTON.

Pearl: an English Poem of the Fourteenth Century. Edited, with a modern rendering, by Israel Gollancz. (David Nutt.)

THE *Pearl* is one of the "alliterative poems" issued by the Early English Text Society in the first year of its existence (1864). Five years later a revised edition was published, and there seemed little likelihood, at that time, of another edition being called for outside the Society's publications. The first editor was attracted towards these poems chiefly by the dialect in which they were written; though he was not unmindful of their literary merit, which recent writers on English literature have fully recognised,

and to which the present editor of *Pearl* does ample justice.

Mr. Gollancz has made a full and complete study of the first of these "alliterative poems," and he has, we think, done well to give the results of his valuable labours to the general public. His modern and rhythmical translation will prove most helpful to the reader who desires to make himself acquainted with a poet that, notwithstanding the archaic form of his language, "stands on the very threshold of modern verse." It is true, as the editor himself admits, that his rendering is often periphrastic and free, yet it seldom misinterprets the author's meaning. His notes are few, but always acute and suggestive. The attempt to connect *westernys* (26.7) "perversely" with the Old French *bestorneis* is very ingenious, though not altogether convincing. The Glossary is a careful piece of work; its only fault is that the meaning assigned to some of the words differs from that employed in the editor's modern rendering of the poem. Mr. Gollancz has not been content to take the text as he found it, but has evidently studied the original MS. carefully, and has, we gladly note, amended some false readings in the earlier editions of the *Pearl*, the most important of which are *furdokked* for *furdokked* (I.11), *mys* = *amys* for *uiys* (17.5), *freuch* for *french* (91.6).

There are many word-puzzles in this poem which the editor has not attempted to pass over in silence, but has skilfully dealt with a number of knotty problems. Here and there he has, we venture to believe, been somewhat too hasty in his conclusions. His weak point is in Middle-English syntax; and, at times, we find him quoting modern English or Lowland Scottish idioms, in order to settle a construction that can only be properly dealt with by a reference to older syntactical usage. Thus in 51.9 the phrase "to dare to" (=to stand in fear of) is compared with Scottish "to dare at" a person; but the phrase "to dare to" in this sense does not, as far as we know, ever occur in Early or Middle-English. It is simply the editor's guess, in his endeavour to explain some very puzzling lines. Without inventing a new construction, we must try to explain the verb "dare" according to its usual acceptation in Middle-English. We give the original with Mr. Gollancz's translation:

"He lavez hys gyftez as water of dyche,
Other gotez of golf that never charde;
Hys fraunchyse is large that ever dard
To hym that macez in synne rescoghe;
No blysse beez fro hym reparde;
For the grace of God is gret inoghe."

He lavisheth (his) gifts as water from weir,
Or streams of the deep that never turn.
Large is man's franchise, when he hath feared
Him that maketh a rescue in sin;
No bliss shall be denied to him;
The grace of God is great enough.

Briefly, the meaning of the above passage is this—God's gifts are inexhaustible as the deep, and endless. His liberality, which has ever been unsearchable, abounds to all. To the man who makes amendment for sin (or repents) no blessing shall be denied, for the grace of God is sufficiently great. The writer seems to have had in his mind St.

Paul's exclamation in Rom. xi. 33: "O the depth of the riches both of the wisdom and knowledge of God! How unsearchable are His judgments, and His ways past finding out."

Charde (51.8) does not signify "turn," but rather "has turned aside, ceased, stopped"; compare Gen. and Ex. 3055, Moyses do this weder *charen*. *Dard[e]* is from the verb "dare," "to liehid, to be out of sight," hence "to be unsearchable?" The other sense of "dare" to tremble, be afraid, also occurs in the poem (70-11).

Mr. Gollancz has missed the true construction of *elem* (not in the Glossary) in 69.10:

"Hymself ne wroghte never yet non [synne],
Whether on hymself he con al *elem*."
Yet He Himself wroght n'er one sin
Though He laid claim to all."

"Whether on Hymself he con al *elem*" seems to signify "nevertheless He laid on Himself all (men's sin)." The writer was thinking of Isaiah liii. 6: "And the Lord hath laid on Him the iniquity of us all." The following line in the text is from the eighth verse of the same chapter.

If we look carefully at the rhyming words, we find that *Jherusalem* rhymes with *ben* (beam), *drem* (dream), as well as with *elem*, so that this last cannot be rendered *claim*—Middle English, *cleime*. *Clem* must be referred to A.S. *clēman* M.E. *cleme*; and the phrase "*cleme uppon*" (the wound) in *Palladius* 3 st. 125 may be compared with *elem* on in the passage now under discussion.

Another instance of this kind is seen in the note on *toez* (goes 43. 9). This verb is referred to M.E. *ton*, A.S. *tēon*, and the infinitive "to" is supported by a quotation from *Gawain*, 1671, "For hit was negh at the terme that he *to schude*"=for the term was close at hand to which he was bound. Here "to" is a preposition and "that . . . to"=to which. For the ellipse after *schulde*, compare Chaucer's *Knights Tale* 1696—"But thider he *shall* by force, and ther abyde."

The writer (57.6), quoting from Ps. xv. 1-6, says two kinds of folk will be saved—the righteous man and the innocent.* The latter is called "the harmlez hathel" (57. 3); and in l. 9, below, "innocent men" are alluded to as "hondelyngez harme," rendered by Mr. Gollancz as "servants whose hands," and in the notes by "servant's arm." Bearing in mind such phrases as "edye men and *arme*," the expression "hondelyngez harme" probably signifies "poor innocent underlings," thus corresponding to "harmlez hathels." In connexion with the allusion to Ps. xv., it may be mentioned that the words (58.3) "that takez not her lyf in vayne" cannot mean "who taketh not his life in vain," but "who taketh not his life (neighbour's) life away wantonly," a very free rendering of "nec fecit proximo suo malum."

With regard to the vexed word *strothe* (10. 7), we do not think that it can mean "strawed" or "thatched"; it is too far-fetched to make "strothe men" mean "men sleeping beneath their thatches," or "strowed

about on the floor asleep." We feel disposed to connect *strothe* with A.S. *strūdan*. *Myrthez* (12. 7) seems to be an error of the MS. for *myrchez* or *merchez*, i.e., marches, borders, or shores. Mr. Gollancz suggests "joyous shores." *Adyt* (30. 1) is a romance form, not derived from *adihten*, compare *dyt* (contrives, 57. 9), which may, however, be an error for *dyzt* or *dyghtt*. In the phrase "in blysse to *brede*" (35. 7), the last word hardly signifies "to revel," but "to be nourished or nurtured," representing A.S. *brēdan*, "to nourish," while *brede* (68. 10), "to stretch or spread," is from A.S. *brēdan*.

We have here and there had occasion to differ slightly in some minor details from the views expressed by Mr. Gollancz; but, in taking leave of him, we feel that his edition of the *Pearl* is a real gain to English scholarship, and we trust that he will before long give us further proof of his intimate acquaintance with, and interest in, our earlier literature by bringing out an *editio princeps* of an important Middle-English text.

R. MORRIS.

Essays of Leigh Hunt. Selected and edited by Reginald Brimley Johnson.

Poems of Leigh Hunt. Selected and edited by Reginald Brimley Johnson. (Dent.)

SEEING that these volumes belong to the "Temple Library," it is needless to say that they are pleasant to the eyes as well as good for food. With regard to the volume of *Essays* which contains Mr. Johnson's biographical introduction, we may add that it is a book to be desired to make one wise—wise, at any rate, concerning one matter which cannot be regarded as altogether unimportant, the true character of a man of genius to whom thousand of readers owe some of the most delightful of their solitary hours. I say the matter is one which cannot be regarded as altogether unimportant, because I have never been able to sympathise with, or even to understand, the feeling of those who contend that appreciation of literary art should be dissociated from personal considerations. Literature—especially that literature which has the quality of intimacy—is not the mere product of an endowment, but the expression of a personality. The fact that Villon and Wainwright were criminals and blackguards does not blind us to the other facts, that one wrote fine verse and the other fine prose; nay, it even imparts to those facts an interest similar to that aroused by the examination of a *lusus naturae*. But there is something more than interest—there is genuine instructive pleasure—in the knowledge that the books of a man like Milton or Wordsworth or Lamb are not mere books, but revelations, projections of the nature behind them; and that in acquainting ourselves with the "works" we enjoy in the truest sense the companionship of the worker. I make no excuse for devoting what may seem a disproportionate amount of space to Mr. Johnson's introductory *apologia*, because it does not merely justify a personal emotion; it quickens and intensifies a general delight.

To those who know them, Hunt's life and

character, though not faultless, are so winning and attractive that, at the first blush, they find it difficult to understand how it is that the writers who have treated Hunt sympathetically have one and all assumed, as if under compulsion, an attitude of polemical vindication. The difficulty is, perhaps, not so great as it really seems. The very qualities which constituted Hunt's charm for those who were admitted to his intimacy are qualities so apt to degenerate into their defects that the world is ready, upon the slightest encouragement from those who speak with authority, to take the existence of the defects for granted, or at any rate to accept it as proved on the evidence of malicious or, more probably, ignorant rumour. In this respect Hunt has been singularly unfortunate, especially so inasmuch as the blow which has undoubtedly inflicted the most widespread and permanent injury upon his reputation with the world at large was struck, not wilfully by an enemy, or aimlessly by a stranger, but carelessly by a friend and admirer. In the brief space at his command, Mr. Johnson has been compelled to confine himself to vitally essential material, and to omit much that in a fuller narrative would have been found not merely interesting but significant; but he would have made a serious mistake had he ignored the effect produced by what may be called the great Skimpole libel. "A lie which is half a truth is ever the blackest of lies," and the popular belief that Leigh Hunt served as a model for the sentimental sponger who is such a prominent figure in Dickens's *Bleak House* owes its injurious effect to the fact that it is not wholly baseless. When Leigh Hunt was dead, and when nearly every one who knew him by name only had become assured that in the person of Harold Skimpole was to be found a portrait drawn from the life, the creator of Skimpole published in an early number of *All the Year Round* a remorseful confession that he had indeed, for artistic purposes, decorated his imaginary scoundrel with some of "those graces and charms of manner" which were characteristic of his living friend, but that

"he had no more thought, God forgive him! that the admired original would ever be charged with the imaginary vices of the fictitious creature than he has himself ever thought of charging the blood of Desdemona and Othello on the innocent Academy model who sat for Iago's leg in the picture."

Of course the rhetoric of the passage is in the writer's most strained and effusive manner, but this was Dickens's way; and, allowing for the way, there is no mistaking the accent of sincerity. True, Mr. Saintsbury's account of the affair is that Thornton Hunt "forced from Dickens a contradiction, or disavowal, with which I am afraid the recording angel must have had some little difficulty"; but surely it is difficult to believe that Dickens could have been "forced" into a bogus confession of culpable carelessness, expressed in a statement which was from beginning to end a gratuitous and elaborate perjury.

Apart from the Skimpole legend, Hunt's fame has suffered most from the accounts of his relations with Byron, which have been given with varying degrees of misrepres-

* *Qui ingreditur sine maculo* applies to the spotless and innocent; *et operatur justitiam* to the righteous.

sentation by Byron's numerous biographers who have held briefs for their somewhat unheroic hero, and have repeated each other's blunders with a tiresome iteration. The true story of the Italian episode in Hunt's life, compiled from documents easily accessible to all the world, was briefly told rather more than four years ago by the present writer (*London Quarterly Review*, January, 1887); and though Mr. Johnson tells it still more briefly, his one short paragraph is a concise statement of facts which amply suffices to dispose of the absurd fiction that Hunt was the recipient of favours from Byron which he repaid with the basest ingratitude. In this affair, indeed, the defence is easy, because the case for the prosecution lacks even the half truth which is often so difficult to deal with. In his transactions with Byron Hunt was not the benefited but the injured party; and in after years he regretted the publication of his book on *Lord Byron and His Contemporaries* simply because his kindly spirit prompted him to regard with exaggerated disfavour the utterances of a mood of natural resentment. Perhaps if he had expressed no regret at all, but had stuck to his guns, he might have been judged less harshly; for, by a certain unworldly recklessness of candour which endeared him to those who knew him, Hunt more than once put weapons into the hands of those who knew him not, and they, applying a generally sound rule to a particular instance in which it does not hold good, have said in effect, "If this or that is confessed, something more must remain behind." Only by such a method of interpretation could Mr. Saintsbury have arrived at the conclusion that Hunt himself, in the *Autobiography and Correspondence*, supplies evidence for the charges which it has become fashionable to bring against him. The fact is, that Hunt's "confessions" are to be accepted with caution, not because they are uncandid or incomplete, but because they are too injudiciously unguarded, because in writing about himself, as in writing about everything else, he seems to take it for granted that he is chatting to a company of friends, not holding converse with a police constable who is listening with a view to the witness-box.

Mr. Johnson's biographical sketch does justice to Hunt the man, his selections do satisfactory all-round justice to Hunt the essayist and poet; but in his work, as in most works of this kind, both the inclusions and the exclusions lend themselves to not unreasonable criticism. This remark applies specially to the prose volume, though it is only fair to admit at the outset that Mr. Johnson has had peculiar difficulties to contend with. Hunt differs from the majority of writers, inasmuch as his best work is by no means always identical with his most characteristic work; and therefore an editor engaged in the task of representative selection has to choose whether he will give prominence to special excellence or special idiosyncrasy. It is clearly his duty to ignore neither, since acquaintance with both is essential; and in this respect Mr. Johnson is certainly free from reproach, for he has given us both matter which is noticeably

good and matter which is noticeably Huntian. But—whether on principle or by accident I cannot say—he has allotted much more space to the latter than the former, a proceeding which seems to me a violation of the true order of proportion. If one were compelled to characterise Hunt's literary manner by a single epithet, one would describe it as a "chatty" manner. Indeed, this was Hunt's own word—witness the memorable letter in which he so terribly alarmed Mr. Macvey Napier by proposing to write "a chatty article" for the *Edinburgh Review*. Now, chattiness itself is a good thing; but when a man writes constantly and hastily under the inspiration of the *res angusta domi* it is apt to degenerate into chatter, which is by no means so good; and such degeneration is not infrequent in Hunt's work, especially when he let himself go in elaborate discourse upon some inherently trivial theme. When he wrote *con amore* of his favourite authors and books he almost invariably chatted; when he produced "copy" about "Getting up on Cold Mornings" or "Seamen on Shore," he was tolerably sure to lapse into chatter somewhere. Mr. Johnson not only gives equal honour to both classes of work, but even a certain advantage to that which is inferior. The selections from the purely critical *causeries*, in which—after the delightful *Autobiography*—Hunt is seen at his best, are not deficient in quantity, but they leave a rather irritating feeling of scrappiness. Many of them are too brief to be at all satisfying, and several of the most interesting—"An answer to the question, 'What is Poetry?'" "Wit and Humour," and "Gray"—are so cut down that Mr. Johnson is occasionally compelled to interpolate a word or two to secure intelligibility, while on the other hand a long essay like that on "Coaches," which (*pace* Charles Lamb) is by no means good throughout, is left un-mutilated.

The volume of poetical selections—in which are to be found the prefaces to Hunt's various periodicals and a capital bibliography—yields little material for remarks which have even a savour of complaint. Personally, I regret the absence of the lines "To a Spider running across a Room," which appeared in the third number of *The Liberal*, and provide as good an example as could well be found of Hunt's touch in light serio-comic satirical verse; but preferences are so various that any omission stands a chance of being resented by somebody. There is, however, one poem wanting which ought not to be absent from any selection which professes to represent Hunt's poetical contribution to literature—"The Fish, the Man, and the Spirit." The special omission is inexplicable, for it seems impossible that Mr. Johnson could have overlooked the poem, and incredible that, knowing it, he should deliberately have set it aside. Its conception has such freshness of fancy, and the execution is such a perfect example of the adaptation of artistic means to a worthy imaginative end, that it must be regarded as one of Hunt's masterpieces. If, as seems the only possible explanation, Mr. Johnson has been repelled by the fantastic treatment of the first of the three connected sonnets, a

second glance would have sufficed to convince him that this, so far from being a blemish, is absolutely a necessity to the production of an effect the nature of which is not realised until the work is surveyed as a whole.

I hope that the two or three complaints in which I have indulged—perhaps with needless elaboration—will cast no suspicion upon the sincerity of my gratitude for two most delightful volumes, by which Mr. Johnson has put all Hunt lovers deeply in his debt. Some books are bought, but not read; others are read once and never returned to; others, again, are taken down from the shelves, say, once in a decade; but these are books whose happy lot it will be to become companions, intimates, familiar friends. Even Hunt's chatter has an agreeable quality, and his best chat is good talk which appeals to us irresistibly in any and every mood.

JAMES ASHCROFT NOBLE.

The History of Sicily from the Earliest Times. By E. A. Freeman. Vols. I. and II. (Oxford: Clarendon Press.)

(Third Notice.)

Few things have escaped Mr. Freeman's acuteness and research, and it is only when he has to deal with branches of knowledge which lie out of the track of his previous studies that his learning is at fault. In questions of anthropology and ethnography, as we have already seen, it is possible for him to err; it is the same, to some extent, with numismatics, epigraphy, and the physical sciences. He is at home with his books, but shows there is some truth in Prof. Mahaffy's allegation that even eminent English Hellenists are found to be helpless in face of a Greek inscription. Thus, when he comes across the dedication by Hieron to Olympian Zeus of an Etruscan helmet from the spoils taken at Cumae, which, hanging as it does in the entrance gallery of the British Museum, is perhaps the best known of all Greek inscriptions, it is curious to find him observing, with an air of surprise, that to one to whom Greek comes most commonly in the form of printed books "there is something really startling in the look of an inscription such as this," as if Hieron could be expected to write in the Greek minuscule of the eleventh century A.D., which we happen to have adopted for our printed books.

Want of familiarity with the elements of epigraphic science is shown by the repetition, without comment, of the impossible story that the letter Omega was invented by Simonides—a story disproved by the fact that the letter Omega was first used in the Ionic alphabet, appearing in an inscription from Miletus written before Simonides was born; while eighty-two years after his birth it had not yet reached Dorian Sicily, as is shown by the dedication on Hieron's helmet, where it is replaced by a clumsy substitute. So, also, the attribution to Heracles of the lion's skin, the club and the bow, originated in the East rather than in Sicily, as Mr. Freeman suggests (II. 152). As early as the seventh century, Peisander, the Rhodian, in

his poem on the exploits of Heracles, gives him, doubtless from ancient monuments, the lion's skin, the club, and the bow. Mr. Freeman laments that "we do not know the Semitic name of the greatest Semitic city on Sicilian soil" (I. 302). But if, as seems possible, we may attribute the coins with the legend *ain* to Palermo, we should have for the settlement on the Conca d'Oro the appropriate Semitic name of the "shore" or "coast."

Mr. Freeman misunderstands his own authority when he says Mr. Head implies "that the Sikiliot Greeks adopted a non-Hellenic standard for their coins." This was not the case except so far as all the Greek standards were obtained from the East. The Aeginetic was derived from the Phoenician silver stater, while the Attic, Euboic, or Corinthian standard, which replaced the Aeginetic in Sicily, was ultimately of Babylonian origin. The first Siciliot standard was the Aeginetic, which was followed in the earliest coins of Zancle, Naxos, and Himera, as well as in those of Cumae. It should also have been noted that the early coins of Naxos, which follow the Aeginetic standard used in Cumae and Etruria, exhibit the Latin X and not the Greek Xi. But when the Aeginetic weight standard was exchanged for the Attic, the Attic Ξ replaced the earlier X. That, after the introduction of coinage, there was an effective commercial intercourse between Sicily and Central Italy is shown by the fact that the unit of the earliest Etruscan silver coins is identical in weight with the Sicilian silver *lira* of 13½ grains. Mr. Freeman does not seem to be aware of Dr. Deecke's allegation that the change in the Etruscan coins to the weight-standard of Syracuse dates from the decisive defeat of the Etruscans by Syracuse at Cumae. The theory is not universally accepted; but even if the Syracusan standard was partially adopted in Etruria before the fight at Cumae, the change is a striking proof of the growing commercial importance of Syracuse.

Mr. Freeman seems to be unacquainted with the important Phoenician inscriptions from Sicily, six of which (two of considerable length) are reproduced in the *Corpus Inscriptionum Semiticarum*, and, together with two others—presumably forgeries—are discussed by Schröder and Ugdulena, whose important works he has omitted to notice. Facsimiles of these inscriptions, as well as autotype reproductions of a few of the more notable Sicilian coins, would have added greatly to the interest and value of the book.

A few similar oversights may here be noticed. Mr. Freeman accepts without question the curious blunder of Strabo, who thought there were gold mines in the volcanic isle of Ischia (II. 251). It is impossible that the *latomie* of Syracuse could have been designed or intended as defensive works. They are plainly mere quarries, excavated at the spot nearest to Ortygia where good building stone is found. For purposes of defence the enormous depth of 130 feet would not be required, and a shallow continuous trench, such as we find at Epipolae, would have sufficed; whereas the *latomie* are isolated pits separated from

each other by considerable intervals, and hence offering no obstacle to an enemy's approach.

Mr. Freeman endeavours to explain why the Greeks did not occupy such an attractive site as the peninsula of Xiphonia—a site apparently as desirable as the island of Ortygia. He finally acknowledges that his attempt "is hardly satisfactory, but it is not easy to suggest anything better" (I. 389). The obvious explanation is the want of any spring of fresh water at the extremity of the long peninsula. The haven of Xiphonia might be as good as the haven of Ortygia; but it was the copious, never-failing fountain of Arothusa which made possible the greatness of Syracuse. The all-important question of the water supply is one which Mr. Freeman leaves out of account in discussing the causes why certain sites were selected, and why, with the increase of population, it became necessary, as in the case of Mineo and Palica (II. 366), to abandon lofty but arid sites for others less defensible but with a more adequate supply of water.

The remark about the *Civitas Ruthenorum* (I. 508) seems to be a grim joke—grim but dangerous, as some of his readers may take it as an inexplicable blunder, and others as a valuable piece of information. The injunction Pythagoras gave his disciples to abstain from beans can hardly be called "one of his most mysterious precepts." It was a plain parable advising them to keep aloof from politics, of the same class as our Lord's warning to His disciples to beware of the leaven of the Pharisees.

Mr. Freeman necessarily fails in his futile attempt to write Greek names with a Latin alphabet in what he calls Greek fashion. To use a Latin alphabet according to the rules of Latin orthography, is, he says, a "superstition against which all sound study of language, all sound study of history, must for ever strive." Surely a sound study of orthography and some acquaintance with the history of the alphabet might also be useful. When he writes *ruθrōn* he is not, as he imagines, writing Greek fashion. His use of the circumflex shows that he is using an alphabet which does not contain symbols for Eta or Omega, and the symbol *ii* denotes in Greek a vowel and not an aspirate. If he had used Theta, or even Thorn, he would be writing Greek fashion, but the use of *th* shows that he is necessarily writing Latin fashion, because he is using a Latin and not a Greek alphabet.

He writes Xerxes, Carthage, Hamilkar, and Hannibal. On his own principles, "all sound study of language and all sound study of history" should have taught him that Persian names should be written Persian fashion and Punic names Punic fashion. Cuneiform and Punic types are to be had; but at all events he might have given us Khshayārshā for Xerxes, or even the Asiatic form Ahasuerus, which we have in the Book of Esther. Carthage should be Qrthdst, as on its own coins, or, at least, Karthada, Cartago, or Karkhédōn; Hamilkar should be Hmīlgrt, and Hannibal Hnb'ol or Hubaal.

As for the native Sicel names, he says: "As I write Greek names Greek fashion, I write Sicel names Latin fashion, to point

out what the real tongue of the Sikels was." It has been already shown that it is a very dubious proposition that the Sicels spoke Latin; but if they did, we ought to write Sicel, and not Sikel, as *k* was not a Latin letter. Moreover, the Sicels themselves, as we see by their coins, used the Greek and not the Latin alphabet.

We should have been glad of the familiar name Palermo or even Panormus; but Mr. Freeman might have been content with Panormos without indulging, with wearisome iteration, in the affectation of calling it "The All Haven." So "New City," instead of Carthage, is all very well for once, but when frequently repeated it becomes tiresome. In like manner it is pedantic to substitute for the familiar name of Corfu the archaic term Koryphō. In vain we look for the familiar names of Selinunto, Girgenti, Solanto, and Taormina, and have to be content with Selineus, Akragas, Soleus, and Tauromenion.

It is annoying to find the great central street of Palermo—we beg pardon, of the "All Haven"—perhaps the noblest street in the world, not once mentioned by any of its familiar names. Of course we do not ask for the modern official designation, "Via Vittorio Emanuele"; but to call it only by the Norman name, Via Marmorea, or the Arabic Casr, is an affectation. Locally called the Cassaro, it is known to all Sicilian travellers as the Toledo, a name Phoenician in origin and significance, and historically interesting as having been imported from the greatest of the European lands which the Phoenicians conquered to designate the greatest street in the greatest of the European cities which the Phoenicians founded.

It is because this book is so great, because it must be ranked among the most important historical works of our own generation, because it cannot fail to become the standard work on the subject, that it has seemed worth while to devote so large a space to its few shortcomings. If Mr. Freeman could moderate his political and ethnic hatreds, if to his own massive erudition and rugged honesty he would add a few small literary graces, above all the supreme merit of lucidity and simplicity, if he would resolutely eschew allusiveness, pedantries, affectations, and the "barbarism" of using English words in senses which they do not bear in English—if, in short, he would supplement his own historical virtues with the literary charms of Mr. Froude's matchless style, his works would find more readers, because they would be easier to read. But in any case it must be hoped that the remaining volumes, some of which we are told are in an advanced state of preparation, may follow at no distant interval.

ISAAC TAYLOR.

"THE BADMINTON LIBRARY." — *Riding*.
By Capt. Robert Weir, Riding Master,
R.H.G.

Polo. By J. Moray Brown. (Longmans.)

THIS volume, as usual with the series to which it belongs, is written by a number of authors, whose work varies greatly in quality.

The editor states that the object of the series is to produce a cyclopaedia to which the inexperienced man can turn for information on all British sports and pastimes. Captain Robert Weir's information on Training the Young Horse, on Horsemanship, and on Hand and Seat is quite encyclopaedic; but I would guarantee an inexperienced man to rise from its perusal in as complete practical ignorance, after going through that painful performance, as he could have been in before. It is difficult to imagine any sane man, quite ignorant of the art of riding, going to a book for printed instructions; and it is therefore clear that encyclopaedic information such as Captain Weir attempts to impart is out of place on such subjects, and would far better have been omitted. Thirty Riding Lessons, by the same author, are described with tedious technicality. And, though these descriptions are relegated to an appendix, it would really appear as if this kind of teaching in print, by which no one can by any possibility profit, is meant to constitute the *raison d'être* of the whole work, and that the few readable chapters are thrown in as plums to reward the weary reader.

The chapter on the Saddle Horse, by Mr. Watson, is not comparable to his chapter on Race Riding, the best literary effort in the book, which, with Lord Suffolk's Riding to Hounds, may be fairly placed beside Apperley's articles in the *Quarterly* on the same subjects fifty years ago. I think, however, that to most Englishmen Lord Onslow's chapter on the Colonial Horse will be found to be the most interesting contribution to the volume. The account of racing and hunting at the antipodes is to some extent novel to English sportsmen; and the cleverness shown by New Zealand horses and the pluck of their riders in negotiating wire fences should alter the view of English cross-country riders, who have hitherto looked on wire as the destruction of their sport.

An enthusiastic account of polo by Mr. Moray Brown completes the work. Assisted by Mr. Dadd's admirable illustrations an excellent idea of this grand game is afforded, and the descriptions given only fill me with regret to think that its introduction into India was so long after my own time. I cannot imagine a better school of horsemanship than the practice of this game by the young men of the present day.

As usual in this series, the illustrations add greatly to the interest of the work; and, where all the artists employed are so good, it seems invidious to award the palm to any one of them. The illustrations to the chapter on the colonial horse, by Mr. Stuart Allan, are very characteristic; the pictures of English hunting and racing, by Mr. Giles, are simply perfect in their way; and yet the spirited sketches by Mr. Dadd of polo and its various incidents must, I think, be set down as best when all are good.

JAMES INNES MINCHIN.

NEW NOVELS.

The Hermits of Crizebeck. By Henry Cresswell. In 3 vols. (Hurst & Blackett.)

A Hidden Foe. By G. A. Henty. In 2 vols. (Chapman & Hall.)

Eric Brighteyes. By H. Rider Haggard. (Longmans.)

The Girl he did not Marry. By Iza Duffus Hardy. (Hutchinson.)

Sir George. By Florence Henniker. (Bentley.)

Amaryllis. By ΓΕΩΡΓΙΟΣ ΔΡΟΣΙΝΗΣ. (Fisher Unwin.)

The Little Lady of Lavender. By Theodora C. Elmslie. (Ward & Downey.)

Sunny Stories. By James Payn. (Chatto & Windus.)

IN *The Hermits of Crizebeck*, Mr. Cresswell appears not as a novelist in the ordinary sense, but as a laborious chronicler. This second rôle does not suit him so well as the first: *A Wily Widow* is preferable to *The Hermits of Crizebeck*, which, though a painstaking attempt to describe the rise and fall of an Anglican monastic establishment, becomes very tiresome, before the end of the second volume is reached. Happily—in a sense also unhappily—some of the hermits are not altogether unsociable, and do not object even to the company of girls. Still more, the girls, so far from objecting to the company of the hermits, seem ready to fall in love with them on the smallest provocation. Especially susceptible is Rosie, one of the two nieces of the supposed narrator of this story. She first of all takes to adoring an athletic young man, who saves her from being crushed or burned to death in a theatre. But she throws him over on becoming acquainted with his brother, who is one of the Anglican "Fathers"; and the athletic young man takes to drink. Meanwhile "Father"—he is also brother—Nolan has been appropriated by a magnificent young woman, with the magnificent name of Diana Vining. Rosie thereupon abandons the ascetic Anglicanism she had, under the "Father's" guidance, gone in for, and takes to Atheism or something like it. Finally, after considerably waiting to see her sister Mab married, she commits suicide. Rosie's story is the most melancholy element—or segment—of *The Hermits of Crizebeck*, but it is also that which is best worked out. Diana Vining has the makings of a Junoesque heroine in her; but as she figures here she is rather hard and unsympathetic, while Mab, Rosie's sister, is a trifle too inane. The details of the experiment made by the hermits would be interesting in a work descriptive of Anglican monasticism, but they are rather out of place in a novel.

Mr. Henty would seem to have set himself deliberately in *A Hidden Foe* to curb his power of manufacturing and depicting adventure, so that it should not be said of him that, while writing a book ostensibly for adults, he had in reality produced one for boys. Perhaps in consequence of this, *A Hidden Foe* is a somewhat conventional story, with an essentially conventional plot. Mr. Henty must, indeed, have felt himself

cramped when he wasted time in describing modern Bath, and in sneering at it in this fashion:

"So impressed are the inhabitants with the idea that external dirt is an evidence of internal respectability that they make no effort to brighten the houses by window decorations, and nowhere else are dingy blinds the rule and clean blinds the exception as at Bath."

His hero, Philip Clitheroe, is the familiar noble young man who, discovering, as he thinks, his mother engaged in a conspiracy to defraud a young woman of her rights for his sake, declines to benefit by any such trickery, tells his mother indignantly of the discovery he has made, and exiles himself from her and from England. Of course it is the most natural thing in the world that he should find himself on board the same ship as this ill-treated young woman, and that she, being on the way to Australia to find means for asserting her rights, should think him a scoundrel. Mr. Henty warms somewhat to his work when he introduces a shipwreck and its sequel into the plot of his story. It is needless to say how Philip Clitheroe and Constance Corbyn settle their differences. Mrs. Clitheroe as a clever woman whom affection for her son has made unscrupulous, Constance Corbyn as a high-spirited English girl, and her delightfully French companion, are very well sketched; while the villain, who—and not Mrs. Clitheroe—steals out of the marriage-register the leaf which is of the utmost importance to Constance, is one of those thorough-going scoundrels that young readers get positively to like. Still, *A Hidden Foe* does not show Mr. Henty quite at his best.

Mr. Rider Haggard may have a more weird imagination than Mr. Hall Caine, but *Eric Brighteyes* does not prove that he will be able to produce a better Saga, either of the old or of the new sort. In fact, it is neither slaughter, athleticism, witchcraft, and essentially animal love, in which Mr. Haggard delights in the disguise of an Icelandic Saga. A few heads are knocked off in more nor less than one of those stories of almost every chapter, and so *Eric Brighteyes* is as readable as need be. The plot is almost modern in its conventionality. Eric Brighteyes, Thorgrimur's son, the bravest and unluckiest man that lived in Iceland before "Thangbrand, Wilibald's son, preached the White Christ" there, gets entangled with two women, Gudruda the Fair and Swanhild the Fatherless, who were born in the same house, and were half-sisters, for although Swanhild is nicknamed the Fatherless, she was universally understood to be the illegitimate daughter of Groa the Witch and Asmund Asmundson, the Priest of Middalhof, whose other daughter, Gudruda, was the offspring of his marriage. Eric loves Gudruda, but Swanhild loves him, and schemes to get him into her possession. She conducts herself as a sensual woman of fashion would conduct herself in the present day, only that the sensual woman of fashion does not, as a rule, contrive to have her rival killed by means of an enormous sword. As for the various adventures of Eric and his grotesque Sancho Panza, Skallagrim Lambstail, the Baresark,

the admirer of Mr. Rider Haggard must follow these up himself. He will probably be thoroughly exhausted before he gets half through them. *Eric Brighteyes* is, in our judgment, the poorest book its author has written.

Miss Duffus Hardy has curiously misnamed her new story. It should have been styled not *The Girl he did not Marry*, but *The Boys she did not Marry*. For Hazel Marsh is the leading personage in the story; and she is engaged in turn to Charlie Tempest, to Norman Holyoake, and to Philip Chester, who "talked of impersonal subjects to his betrothed, discussed literature and high art and political economy—strove to enlighten the darkness of her mind on astronomy, ethnology, and the occult sciences." Yet she marries nobody and runs away with nobody. She has indeed a chance of an elopement, when, owing to an accident, she can only be said to "have been good-looking once." Charlie Tempest, very much married to "a good specimen of the brilliant yet delicate type of American beauty," with "wavy blonde hair and a charming figure shown to advantage by a tight-fitting tailor-made walking dress, elegant and striking in its perfect simplicity," asks Hazel to go off with him in his yacht. She refuses, whereupon Charlie goes off with some friends and is drowned. *The Girl he did not Marry* is, in truth, a rather dull story, in spite of Hazel's agonies and troubles, and the extraordinary amount of fashionable dressing and undressing to be found in it.

"There was nothing" we are told, "that Hazel disliked more than being brought into contact with the 'masses'; but a 'class' crowd, especially in evening toilette, she enjoyed all the more that now and then in such a crowd, in the glare of gas-light, roving eyes must fall upon her face, and were likely to linger there." Miss Duffus Hardy, like Hazel, evidently prefers the "classes" to the "masses"—especially when "the classes" are distinguished by "the costly elegance of dress—which displays the 'superb abundance' of snowy arms and shoulders." *The Girl he did not Marry* is a story to be read in what the Solicitor-General—in his capacity as Sir Edward Clarke—differentiates as What-is-called-Society.

So far as plot goes, *Sir George* is a very commonplace novel. It is, indeed, the familiar story of an old man supplanting a young one in the affections of his ward. Sir George Gresham, however, is different from most oldsters of his class, in that his treachery to his nephew Harold is not intentional. It is not so much that he courts Olive Garforth, as that Olive falls out of love with Harold and in love with him. *Sir George* is, indeed, a very elegant and refined version of the almost too familiar and helpless "Oh! the pity of it!" The final blinding of its unfortunate hero-villain seems a rather unnecessary aggravation of his troubles.

The name of the latest addition to the "Pseudonym Library" is idyllic, and certainly there is a great deal of very sweet simplicity in *Amaryllis*. The plot is boy-and-girlish to a fault. Two old modern

Greeks—Messrs. Aristides and Anastasius—enter into a conspiracy to make their young folks Stephen and Amaryllis fall in love with each other. They succeed. That is all, except that the scene of *Amaryllis* is laid in a pretty corner of Greece, and that, in addition to an incident in which a revolver plays a curious part, the book contains a fair amount of passable Arcadian—but not quite Theocritean—verse.

Had *The Little Lady of Lavender* appeared during the gift-book season—as it perhaps ought to have done—it would to a certainty have achieved a phenomenal success; for it is one of the best stories intended for, or at least about, children that have appeared since *Little Lord Fauntleroy*, which indeed it recalls in tone, though not in plot. But it would be unfair to tell how little Evangeline Herbert penetrates into the castle of the ogre, *alias* Captain Ransom, and conquers him, how she brings her father and mother together, and how generally she plays the part of a "Christmas angel." No sweeter, healthier, more humorous, or less maudlin story of this particular kind has ever been published.

Mr. Payn always maintains—although he might easily rise above—a certain standard of excellence, and especially of humour, in the sketchy stories he writes for magazines, and republishes at intervals in volume form. So not much need be said of the first section of this book, containing the *Sunny Stories* which give a title to the whole, except that they are up to the usual mark. "Dauntless Kitty," in particular, shows admirably how a reputation may be made under false pretences, and the dog-fancying White-chapel hero of "Mrs. Blodgers' Apology" is one of Mr. Payn's best sketches of low-life. In the second part of the volume, "Gleanings from Dark Annals," Mr. Payn, however, sets himself to give the air of geniality to the gruesome, and succeeds wonderfully. Some of the chapters, such as "Modern Amazons," "Inadequate Motive," and "Coming to Life again," prove how detective fiction ought to be—though it very seldom is—written.

WILLIAM WALLACE.

SOME ECONOMICAL BOOKS.

The Principles of State Interference. By David G. Ritchie. (Sonnenschein.) This little volume is a reprint of some clever and brightly-written review articles on Herbert Spencer, J. S. Mill, and T. H. Green from the Neo-Hegelian Liberal point of view. Mr. Ritchie seems to make out very convincingly, as against Mr. Spencer, that English Liberals, when they abandon the doctrine of *laissez-faire*, do not necessarily give up the essential principles of Liberalism nor adopt those of the opposite party. He is equally successful in showing that the theory of organic evolution has nothing to say against sanitary legislation or against State education. He also makes out a good case against Mill's belief, shared to a certain extent by Mark Pattison, that an *a priori* philosophy is the natural ally of Toryism. In this connexion, the points of agreement between T. H. Green's ethics and Utilitarianism are well brought out. But the criticism of Mill's doctrine of Liberty is far too slight, and a summary reference to Sir J. F. Stephen's volume cannot be held to

exonerate the controversialist from the duty of making an independent examination. As Green said of Hegel's Logic, "it will all have to be done over again."

Principles of Political Economy and Taxation. By David Ricardo. Edited by E. C. K. Gonner. (Bell.) Mr. Gonner has done a service to that numerous class of readers who are content with the chief treatise of a great author, and make no demand for his complete works. The editor has provided an explanatory preface, a running commentary (with collation of texts, &c.), and an apologetic appendix. The whole is carefully, loyally, and intelligently done. The rearrangement of chapters (on p. xxvi.) is only one out of many instances where the student gets valuable help from this edition; and, if the complaint might be made that Mr. Gonner leaves his readers too little to do for themselves, he would no doubt reply that Ricardo, like Sophocles, cannot be made too easy. Like every writing on Ricardo, these commentaries are full of debatable matter. The attempt (on pp. xlvi., xlix.) to show that Ricardo in his theory of value erred no more by pursuing one extreme than the mathematical economists by pursuing the other, seems to imply the belief that a middle way must be the way to truth, without regard to its breadth or narrowness. The attempt to confine the theory of rent to cases where there are different grades of fertility (p. lv.) seems unfortunate. If the fertility were uniform, but land yielded a greater profit than manufacture, then land would yield a rent. In this, as in other points, the weight of modern criticism bears on the whole in favour of Malthus, and not of Ricardo. As regards Ricardo's supposed bias and bad faith in writing, there has hardly been in this country such a general sympathy with the declamations of Held and other foreign economists as to justify Mr. Gonner in devoting so long an appendix to the refutation of them.

The Conflicts of Capital and Labour. By George Howell. Second and Revised Edition. (Macmillan.) So much has happened in the industrial world since 1878, the date of Mr. Howell's first edition, that his work has had to be "practically re-written," or, at any rate, considerably augmented. The author has not followed the commendable practice of indicating all the changes which he has made. For the convenience of those who have invested in the first edition, we may notice that the new matter has often been inserted at the end of a chapter. Among fresh contributions to industrial history may be mentioned the analysis of the proceedings at recent trades union congresses, and the estimate of the progress which co-operation has made during the last few years. All new developments do not command Mr. Howell's admiration. He is very severe upon the so-called "new trade unionism." "It seeks to effect by statute and by municipal law what can only be effected by mutual arrangement on equal terms of negotiation." Mr. Howell's ideal may be summed in the following words:

"The equitable proportion of work to wages must be settled by workmen and employers. Wrongful claims will be abandoned, and rightful dues will be conceded, when fair-minded men on both sides sit at the same table on an equal footing, to discuss the terms and conditions of employment with the view of settling them upon an equitable basis."

The difficulty of defining what is equitable does not obtrude itself on Mr. Howell. Yet it is a difficulty which has puzzled philosophers from the age of Plato. But abstract speculations do not much trouble Mr. Howell's cheerful common sense. His chapter on "Political Economy and Trade Unions" still retains passages to

which the theoretical purist may take exception. However, he has made some alterations—which seem to us improvements—in his critical remarks on political economy. He admits that “a broader and more humane political economy” has grown up. It is pleasant to think that not only political economy and trades unionism, but also Mr. Howell’s treatment of both subjects, have improved.

The Labour Movement in America. By Richard T. Ely, Ph.D. (Heinemann.) The contents of this book are not entirely new. Several of the chapters have been published in American periodicals; and the whole volume, if we mistake not, appeared in its present form in the United States two or three years ago. But the interesting information with which these pages abound is still fresh; and the good advice of which the author is not sparing bears repetition. Mr. Ely begins his historical studies by a chapter on Early American Communism. He gives a graphic and impartial account of the Oneida Free Love Community.

“Odious as their practices must appear to one who believes in the divinity of the monogamic family, it seems necessary to admit that they lived quietly and peacefully, and conscientiously discharged all financial engagements so as to win the goodwill of many of their immediate neighbours.”

Among existing organisations the “knights of labour” are particularly distinguished. Their federation is of a higher type, Mr. Ely thinks, than the ordinary trades union. They justify their name by the chivalry with which they have defended the cause of women. Mr. Ely’s picture of the Internationalists is less reassuring. Their organ, *Most’s Freiheit*, advocates a new genealogy traced from mothers, whose names, and not that of the fathers, descend to the children; “in order that the old family may completely abandon the field to free love.” Here are some extracts from an article headed “Revolutionary Principles”:

“The revolutionist has no personal interest, concerns, feelings, or inclinations, no property. . . . He is the irreconcilable enemy of this world; and, if he continues to live in it, it only happens in order to destroy it with the greater certainty. He knows only one science, namely, destruction.”

The principle of the Miltonic Satan—“All pleasure to destroy save what is in destroying”—appears to have been adopted by these Internationalists. Discussing the remedies for these social diseases, Mr. Ely does not abide by Prof. Walker’s dictum that the economist should teach, not preach. Indeed, some parts of the work, if we remember rightly, were first uttered in the form of a “lay sermon.” He writes—

“A wider diffusion of sound ethics is an economic requirement of the times. Christian morality is the only stable basis for a state professedly Christian. . . . Manufacturers should cultivate the true humility of great souls, and adopt a more conciliatory attitude towards their labourers. . . . Working men must remember that they too often give just cause for complaint to their employers, by reason of carelessness, wastefulness, poor workmanship, neglect of trusts committed to them, bad faith, distrust and downright insolence. . . .”

These are good words; let us hope that they may have some effect in arresting an outbreak of that revolutionary Socialism which the author justly regards with alarm.

NOTES AND NEWS.

MR. GERALD PORTAL, C.B., who has just been appointed H.M. Consul-General at Zanzibar, in succession to Sir Euan Smith, has written a narrative of his adventurous mission

to Abyssinia in 1887-1888, when the British Government sent him to endeavour to mediate between King Johannis and the Italians after the massacre of Dogali. Accompanied only by two Europeans and a few native servants, Mr. Portal penetrated for several hundred miles into the interior, successfully overcoming the grave difficulties of the route, and the undisguised hostility of the Abyssinian General, Ras Alula. Even when he reached the King’s quarters, he was imprisoned for a considerable time while the Great Council of Chiefs was deciding whether he and his companions should be put to death or allowed to return home; fortunately the decision was in Mr. Portal’s favour. The book, which will be illustrated, will be published shortly by Mr. Edward Arnold.

WE understand that Mr. E. Poste, the editor of *Gaius*, has nearly finished an English translation of “Aristotle on the Constitution of Athens,” which will be published by Messrs. Macmillan & Co.

MR. HENRY LITTLEHALES, of Clevelly, Bexley Heath, proposes to reproduce, by photolithography, a facsimile of the Durham Liber Vitæ, provided that a sufficient number of subscribers come forward. The value of such a work lies chiefly in the fact that each page will display the arrangement of the names by successive scribes from the ninth century; and, where a later insertion has been entered among these of an earlier period, the approximate date of such entry will be supplied by the form of its appearance. The size of the reproduction will be 129 pages, quarto. A second part, containing a short introduction, will be issued subsequently.

THE next volume of the “Catholic Standard Library,” published by Mr. John Hodges, will be a series of essays on *The Relations of the Church to Society*, by the late Father Edmund J. O’Reilly, edited, with a biographical notice, by the Rev. Matthew Russell, S.J. The same publisher also announces, as nearly ready, a second edition, with a preface, of Father Gasquet’s *Edward VI. and the Book of Common Prayer*, which has attracted so much attention among English liturgiologists.

A VOLUME entitled *The Co-operative Movement of To-day*, by Mr. George Jacob Holyoake, will shortly be published by Messrs. Methuen & Co. Its object is to show that distributive co-operation—the only portion officially carried out—does not touch the problem of capital and labour, and that the principle of profit-sharing in production, the earlier and nobler part of Co-operation, does.

THE next volume of the “Gentleman’s Magazine Library” is announced by Mr. Elliot Stock for immediate publication. It will commence the topographical section, and will contain the local information found in the *Gentleman’s Magazine*, classified alphabetically under each county.

MESSRS. EDEN, REMINGTON & Co. will in a few days issue a new work by the Hon. Albert S. G. Canning, entitled *Thoughts on Religious History*.

WE hear that the second edition of *A Girl in the Karpatis*, by Mémie Muriel Dowie, is already out of print.

MR. JOSEPH HATTON has returned from New York with an armful of reasons for international copyright in America, including five editions of *By Order of the Czar*, from which he derives no benefits. But he is to be congratulated upon the issue in London by Messrs. Hutchinson of a fifth and popular edition of this novel, completing ten thousand copies for the English market.

THE first edition of Mr. Arnold Forster’s work *In a Conning Tower*; or how I took H.M.S. “Majestic” into action, has already been exhausted, and a second edition will be issued next week by Messrs. Cassell & Company.

THE Marquis of Bute has been elected president of the Honourable Society of Cymmrodorion in the place of the late Earl of Powis.

M. PAUL BLOUËT (Max O’Reil) will sail, on October 21, for a third lecture tour in the United States and Canada, to be immediately followed by a twelve months’ tour in the Australian colonies.

LADY BURTON writes as follows about the MSS., &c., left by Sir Richard:

“My husband left his *magnum opus*, “The Scented Garden,” completed save half a page. [The whole of this she has thought it her duty to burn.] His “Pentaméron” is ready for press. Disjointed, and not quite complete, is “Catullus,” a scrap of “Ausonius,” various small fragments, and poetry. Part of the second Part of his great work on *The Sword*, of which the first part appeared (there were to be three), and one almost written book on the gipsies, also several unpublished MSS. of former travels. Everything possible will see the light by degrees in his own name; and the unfinished things and the poetry in magazines or a book of fragments.”

THE Académie Française has decided to award the prize of 20,000 francs (£800) to the widow of Fustel de Coulanges. The Duc de Broglie, it will be remembered, felt himself compelled to decline the honour; and it was rumoured that the second recommendation of the committee was in favour of M. Elisée Reclus.

DURING Monday, Tuesday, and Wednesday of next week Messrs. Sotheby will be engaged in selling the large collection of autographs and historical documents, formed in the first half of the present century by the Rev. Dr. Thomas Raffles, of Liverpool, and a near relation of Sir Stamford. The general collection consisting of sign manuals of English kings, letters of statesmen, soldiers, authors, &c., which is contained in forty folio volumes, will first be offered in one lot, at a reserve price; and if not so sold, in 544 lots. Included in this is the holograph MS. of Heber’s hymn, “From Greenland’s icy mountains.” Then follow special lots, such as a complete set of the signers of the American Declaration of Independence, and of Presidents of the United States; bound volumes containing letters of noblemen, bishops, nonconformist divines, &c. The whole collection is profusely illustrated with portraits and personal relics.

M. CÉLESTE, city librarian at Bordeaux, has printed, in the first number of the *Bulletin* of the Société des Amis de l’Université de Bordeaux, a hitherto unpublished letter of Montesquieu. It is addressed to President Barbet, under date of December 20, 1741, and thus refers to the *Esprit des Lois*, which was not published until 1748:—

“J’y travaille huit heures par jour; l’ouvrage est immense, et je crois avoir perdu tout le temps où je travaille à quelque autre chose qu’à cela. Il y aura quatre vol. in-12 en 24 livres. [It was actually published in two quarto volumes, divided into thirty-one books, which in some editions are grouped in six parts.] Il me tarde fort que je sois en état de vous le montrer. J’en suis extrêmement enthousiasmé. Je suis mon premier admirateur, je ne sais si je serai le dernier. Je ne vous le montrerai que lorsque je n’aurai plus rien à y faire, ce qui, je crois, sera à la première vue; mais j’exigerai que vous ne m’en disiez rien, que vous ne l’ayez lu tout entier, si vous voulez le lire, et j’ose vous dire que je ne crois pas qu’on y perde son temps, par l’abondance des choses.”

THE last number (72) of the admirable series of Catalogues issued by Signor Ulrico Hoepli,

of Milan, deals with bibliography, libraries, and printing. It comprises more than 1400 lots, most of which seemed to be priced very low. We notice super-illustrated copies of the first edition of Bryan's *Dictionary of Painters* (1816), and of Joubert's *Manuel de l'amateur d'estampes* (1821); copies of the *Index Librorum Prohibitorum* from 1628 to 1880; and a series of publications connected with the name of Libri. The highest priced lot of all seems to be the fifth edition of Brunet (eight vols., 1860-1880), and next the latest edition of Quaritch's General Catalogue (6 vols., 1880-1887).

MESSRS. MACMILLAN have begun a cheap re-issue of the works of Mr. Henry J. Shorthouse with *John Ingelant*. According to the bibliographical record on the verso of the title page, this romance was first published in two volumes in 1881 (in the month of June, we believe), ignoring the edition printed for private circulation in the previous year. No second edition was required for six months; but then the demand immediately became so great that each month of 1882 saw an edition of its own, in two volumes; and in every subsequent year there has been a single volume edition.

FORTHCOMING MAGAZINES.

THE forthcoming number of the *Contemporary Review* will contain an important article on "The Union of the Australias" by Sir Henry Parkes, premier of New South Wales; also "The Finest Story in the World," by Mr. Rudyard Kipling.

THE July number of *Merry England* will be devoted to a collection of "Letters on Subjects of the Day," by Cardinal Manning. The illustrations will include an impressionist drawing of "A Reception at Archbishop's House," made last May by Mr. Ponsonby Staples, to whom the cardinal has since given several sittings. A variety of the autographs of the cardinal will be shown in facsimile.

THE July number of the *Imperial and Asiatic Quarterly Review* will be devoted largely to the programme of the forthcoming Oriental Congress. Among the papers promised, we may mention: a report on the progress made since 1883 in the study of African languages, by Captain T. G. de Guiraudon; "The Dignity of Labour in the Talmud," by Rabbi H. Gollancz; and a joint account of "Kohistan, including Gabriel," by Mir Abdulla (a native of that country) and Dr. Leitner, which will be illustrated with several portraits of the inhabitants, from photographs. There will also be an article on "Recruiting the Anglo-Indian Army," by Surgeon-General Sir W. Moore.

THE *English Illustrated* for July will have for frontispiece an engraving, by Mr. Lacour, of Mrs. M. L. Waller's picture, "A Fencing Lesson"; and descriptive articles, each profusely illustrated, on Fawsley Park in Northants, Cookham and its neighbourhood, Nymegen in Holland, and Dartmoor. Mrs. W. K. Clifford also contributes "On the Wane: a Sentimental Correspondence."

THE *Genealogist* for July will contain a paper entitled "Further Notices of William Stanley, sixth Earl of Derby, K.G., as a Poet and a Dramatist," by Mr. James Greenstreet, wherein he discusses, in continuation of his article in the April number of that magazine, the question of the authorship of certain of the "Shaksperian" comedies.

THE July number of the *Strand Magazine* will contain an article on "Captain Mayne Reid: Soldier and Novelist," from the pen of Mr. Maltus Q. Holyoake. It will include a personal reminiscence and unpublished letters, and will be illustrated with several portraits of Mayne Reid and his child wife.

MESSRS. GRIFFITH, FARRAN & Co. are about to issue, beginning with the July number, an English edition of the *Art Amateur*, which was founded in America about twelve years ago by Mr. Montague Marks. It appeals to all learning or teaching oil, water-colour, or china painting, charcoal, crayon or pastel drawing, etching, pen-drawing, book illustrating, art needle-work, wood carving, fret sawing, brass hammering, &c. Special features are the colour studies, of which three are given with each part, and the supplementary designs in black and white, with full directions for treatment.

THE *Reliquary* for July will contain: "Matres Ollototae," by the Rev. Dr. R. E. Hooppell, with a plate of the Roman altar lately found at Binchester; "Village Antiquities," by the Rev. P. H. Ditchfield; "The Church Plate of Leicestershire," with two plates and several illustrations; A Study on some Archaic Place-names, by the Rev. Dr. J. C. Atkinson; Parochial Papers relating to Glaston in Rutland, III., by the Rev. Chr. Wordsworth; "The Smaller Irish Cathedrals, II., Leinster," with six illustrations; Notes on Cadney, Lincolnshire, by Mr. Edward Peacock; "A Palimpsest Brass at Clifton Campville, Staffordshire," by Mr. Thomas Wareing, with plate and an illustration; "Encaustic Tiles at Dale Abbey and Morley, Derbyshire," by Mr. John Ward, with illustrations.

THE next number of *Y Cymrodor*, which is edited by Mr. Egerton Phillimore, will include articles on "The Ancient Welsh Church," by Mr. J. Willis-Bund; "The Council of the Marches," by Mr. David Lewis; "Early Celtic Art," by Mr. T. H. Thomas, of Cardiff; and "Wat's and Offa's Dykes," by Mr. A. N. Palmer, of Wrexham.

It is proposed to suspend the issue of *Free Life* next month. During its suspension, Mr. Auberon Herbert proposes to form a company for carrying it on in an enlarged form. It will remain the organ of a thoroughgoing Individualism, but will contain a summary of weekly news, probably a story, and other attractive features of interest to the general reader. At the same time a sixpenny quarterly explaining Individualistic opinions, and edited by Mr. Auberon Herbert, will be brought out. The first number is to appear in October.

UNIVERSITY JOTTINGS.

THE University of Dublin proposes to confer the honorary degree of LL.D. upon (among others) Prince Edward of Saxe-Weimar, Lord Ardilaun, Lord Iveagh, Sir Dennis Fitz-Patrick, and Mr. D. H. Madden, the Attorney-General for Ireland. Prof. Mahaffy will, at the same time, receive the degree of Doctor of Music.

THE University of Durham has conferred the honorary degree of LL.D. upon Prof. G. F. Browne, of Cambridge, Mr. Gainsford Bruce, Mr. Lewis T. Dibdin, Sir Albert K. Rollit, and Mr. G. F. Holmes.

MR. SIEGRIED RUHEMANN, of Christ's College, has been appointed a university lecturer at Cambridge in organic chemistry.

THE first Liddon studentship—of the value of £80, tenable for two years, but capable of being renewed for a third year—will be filled up next August. Candidates must have graduated with honours in some school at Oxford, and must also signify their intention to take orders.

MR. CLAUDE G. MONTEFIORE has endowed a prize at Girton College, in memory of his late wife, who was a certificated student in honours of the college. It consists of the interest on a sum of £1700, to be given annually to a student who shall have obtained a first class in one of

the tripos examinations, and who shall be intended either to follow the teaching or medical profession, or to pursue some specific literary or scientific work.

THE general board of studies at Cambridge have recommended that a sum of £50, from the common university fund, be placed at the disposal of the special board for moral science, for the purchase of instruments needed for research and demonstrations in psycho-physics, a room for conducting psycho-physical experiments being now available in the new physiological laboratory.

MAGDALEN COLLEGE, Oxford, is to have a statue of its titular saint, St. Mary Magdalene, placed in a niche in the college wall.

IN the list of lectures proposed for next term by the board for oriental studies at Cambridge, we notice that Mr. S. A. Strong will lecture on Assyrian, provided that a class can be formed.

CONVOCATION at Oxford has voted grants of books printed at the Clarendon Press, of the value of £25, to each of the following free public libraries:—Fulham, West Norwood, Ealing, Clerkenwell, Stalybridge, Hammersmith, Handsworth, Barnsley, Croydon, and Harrogate.

A TABLE in *The Times* shows that 209 candidates satisfied the examiners in the several honour examinations for the the B.A. degree held during this term at Cambridge, of whom 28 obtained a first class, 62 a second, and 119 a third. It seems noteworthy that, while six colleges are not represented at all in the first class, Ayerst's Hostel has two firsts, and Cavendish Hostel and Non-collegiate one each. Of the total number of graduates, Trinity comes first with 31 (though surpassed in the number of firsts by St. John's, Pembroke, and Clare); then follow Pembroke 22, Clare 21, Trinity Hall 20, St. John's 17, Jesus 15, and Christ's and Selwyn Hostel 10 each.

THE first number of the *Pelican Record* (Oxford: Blackwell) contains a poem by Mr. Robert Bridges, a rendering into Greek elegiacs by Z. of the now famous verses by J. K. S., which end

"When the Rudyards cease from kipling
And the Haggards ride no more; "

and reviews of some half-dozen books published recently by old members of C.C.C.

THE president, council, and members of the teaching staff of University College, London, have issued invitations to a conversazione on Tuesday next, June 30.

A REMARKABLE volume will soon be presented to the Harvard University Library. It contains manuscript copies of all the commencement programmes of the college from 1780 to 1890, and specimens of the order of commencement exercises at intervals from the first graduation in 1612 to the Revolutionary War.

ORIGINAL VERSE.

JUNE.

If June would stay, and pour her faery weather
On heads made hopeless by the fraud of May,
We should not fear July with scorching ray,
Nor glow of August on the thirsty heather,
September with his ever-dwindling day,
Or chill October's presage of decay;
November moulting an ensanguined feather,
Nor Winter wearing us with dull delay—
If June would stay—
Between the upper mill-stone and the nether;
But no! In spite of all that man can say,
Our bliss has only thirty days for tether.
Joy go with June, when June is gone away;
Would she could wait till we might go together,
If June would stay!

H. G. KEENE.

IN MEMORIAM.

HENSLEIGH WEDGWOOD.

HENSLEIGH WEDGWOOD—born at Gunville, Dorset, in 1803, died in Gower-street on June 2 of this year—was the youngest son of Josiah Wedgwood, of Maer Hall, Staffordshire, and grandson of the man known to the world by that name. His mother, Elizabeth Allen, of Cresselly, Pembrokehire, was painted by Romney, and the portrait attests the family tradition of her beauty. His uncle, Thomas Wedgwood, dimly remembered by our generation as the Mæcenas of Coleridge, and a possible forerunner of Daguerre (see an article on him in the *Photographic News* of December 20, 1889), was regarded in his own generation with an amount of attention rarely attracted by any life so short and so hampered by unceasing illness. A certain turn for metaphysical study seems to have been common to the uncle and the nephew, though the world knows nothing of its development in either. Thomas Wedgwood died when this nephew was an infant. He was tenderly remembered by the elder children of the family even in extreme old age.

Hensleigh Wedgwood was educated at Rugby, and entered St. John's College, Cambridge, whence he migrated as an undergraduate to Christ's. He was seventh wrangler in the Mathematical Tripos of 1824. The Classical Tripos was initiated that same year; and his name, appearing as the last on the list, was commemorated for nearly sixty years by a little *jeu de mots*. The last of the Junior Optimes (the third class in the Mathematical Tripos) has been for centuries called "the wooden spoon"; and by an obvious play on Mr. Wedgwood's name, the holder of the last place in the Classical Tripos was called "the wooden wedge" up to 1883, when the names were for the first time arranged alphabetically in the several classes. His connexion with Christ's College, of which he became a fellow, was pleasantly recalled in the last year of his life by the invitation of the Master, Dr. Peile, to be present at a dinner, given to inaugurate the opening of new buildings, at which he would have been "the oldest Christian." It may perhaps claim attention on grounds of a certain historic importance if, as seems probable, it was the result of his impressions and career at Christ's which led to his cousin, Charles Darwin, being sent there four years after he took his degree.

After leaving Cambridge Mr. Wedgwood went to London to read for the Chancery Bar, at which, however, he never practised. It was the acceptance of a police magistracy in 1832 which enabled him to marry Frances, daughter of Sir James Mackintosh. His resignation of this office a few years later may be noted as the most characteristic incident of his life. With an increasing family and small means of his own, he threw up an income sufficient for ease and comfort, from a scruple as to the lawfulness for Christians of administering oaths—a scruple which, to many of those connected with him, seemed extravagant. It may be mentioned that one of those to whom he appealed for co-operation, in his endeavour to remove the solemn form which he believed a violation of many a conscience, was Mr. Gladstone, then a very young man, from whom he received a letter expressive of sympathy, but declining to take part in the movement. He met with little sympathy in his views fifty years ago; but the legislation of late years has borne tribute to their root in the national conscience, and that his name was in no way associated with the reform that followed his efforts was a matter of perfect indifference to him. The loss of income was partly made up in 1838 by

the post of Registrar of Metropolitan Carriages, which he held till its abolition in 1849. He occupied himself at the same time with literary work, publishing in 1844 a little work on *Geometry*, calling in question the method associated with the time-honoured name of Euclid; and in 1848 an essay on *The Development of the Understanding*. Neither of these books found any readers outside the circle of those who loved the author: and it has to be confessed that their perusal is difficult. Mr. Wedgwood had very little power of expressing his ideas. All who knew him feel convinced that he had something to say on the subjects concerned, but have to allow that, from his lack of capacity for illustration and expansion, these contributions to thought remain mere fragments of suggestion.

Perhaps this very difficulty of expression was an advantage in the work of his life—his *Dictionary of English Etymology*, first published in 1857. It may be that hindrance in the power of expression fastens the attention on the vehicle of expression, and that none are better fitted to study the history of words than those who lack fluency and promptness in using them. From this, or from some other cause, Mr. Wedgwood was led to ponder on the origin of language. He was one of the original members of the Philological Society, founded in 1842; and its *Transactions* contain many papers from his pen, preparing the way for the work which set forth his belief that the vehicle of all human communication was no miraculous endowment, but the elaborated imitation of instinctive vocal sounds whether among men or animals. This belief, received at first contemptuously, became suddenly more credible when animals and men were connected as ancestors and descendants. The work, whatever be thought of the theory, has taken its place as a permanent contribution to philology, and Mr. Wedgwood's name is known to all students of language. His interest in it, as attested by his contributions to the ACADEMY, lasted into the clear evening of his life; nor was it possible for those who aided in his latest etymological researches to detect the slightest relaxation of his sense of relevance, his keenness of perception, or his clearness of memory.

Any notice of him would be incomplete which omitted the fact that, after having treated Spiritualism with great contempt, he became, from experience, convinced of its truth, and ended life as a confirmed Spiritualist. He was a contributor to *Light*, and a diligent student of that and other Spiritualistic journals. His own simple faith needed no such support, and did not connect itself with these investigations, which belonged merely to the intellectual side of his nature. He was, till his health failed, a member of the Unitarian congregation in Little Portland-street, and struggled with the disadvantages of increasing deafness to remain an attendant there. His memory is cherished in obscure and grateful hearts, for whom the experience of life was softened by patient kindness of which often his nearest kindred knew nothing.

MAGAZINES AND REVIEWS.

Folk-Lore for June (David Nutt) is a particularly interesting number. Miss M. C. Balfour opens it with three Legends of the Lincolnshire Cars—the Cars being the local name of the reclaimed marshes in the Parts of Lindsey, in the north of the county. Two of these legends have to do with the reclaiming of the marshes. They are told in dialect such as Mr. Edward Peacock has made a study of for the Dialect Society, but which differs a good deal from Tennyson's dialect in "The Northern Farmer"; and we can well believe that they have been taken down faithfully.

Like most genuine English stories, they are emphatically of a grim purport. The Hon. John Abercromby brings the Amazons of the Greeks into relation with a custom still practised by some tribes of the Caucasus, in whom he would find the descendants of the Sarmatæ. Mr. Joseph Jacobs returns to "Childe Rowland," printing the original version preserved by Jamieson, but not otherwise adding much to what he has already written in his *English Fairy Tales*. Dr. M. Gaster continues his examination of the legend of the Grail, this time pointing out not classical but oriental influences. Though his series of papers is not yet concluded, Mr. Alfred Nutt already replies to him with an unhesitating avowal of his belief in an essentially Celtic origin. In a sort of Appendix to the number, Mr. Nutt also reprints from the *Revue Celtique* an elaborate defence of the main positions of his "Studies on the Legend of the Holy Grail" against the strictures of three German scholars—Foerster, Zimmer, and Golther. Finally, in a paper entitled "Report on Greek Mythology," Mr. F. B. Jevons gives an exhaustive review of three recent foreign works, nothing published in England being apparently worthy of inclusion.

THE CAMBRIDGE LIBRARY.

WE quote the following paragraphs from the annual report of the Library Syndicate at Cambridge:—

"Two important purchases were made during the year. Through the kindness of the Hon. and Rev. S. W. Lawley the syndicate were able to buy the unique York Breviary formerly Mr. Sherbrooke's, which they had not succeeded in securing at the sale in 1886. And towards the end of the year Mr. Samuel Sandars suggested the desirability of buying, if possible, the famous Red Book of Thorney Abbey, which Mr. Quaritch had bought at the sale of Lord Westmoreland's books in 1887. Mr. Sandars enforced his suggestion by generously offering to contribute £50 towards the sum required; and the book is now in the library. Among other additions may be mentioned a MS. (xiii-xiv. cent.) of Cicero's *Tusculanæ, De senectute, De officiis, and Paradoxa*: a MS., dated 1354, of the Roman *de la Rose*; and a copy of Sir John Harrington's *Epigrams* (8vo. London, 1618).

"The syndicate wish to record here the names of the benefactors who are commemorated by statues placed in the niches of the old gateway. On the outside, in the lowest row, Henry VI. (included because of his connexion with the site), between Sir R. Thorpe and Archbishop Rotherham; above them, Dr. Andrew Perne, between Archbishop Parker and Bishop Tunstall; and at the top Dr. Holdsworth, between Bishop Hacket and Mr. Henry Lucas. On the inner front is placed George Villiers, Duke of Buckingham, between Mr. Rustat and Mr. Worts. A statue of Mr. Hancock, whose bequest of £10,000 was expended upon the new building, stands in the N.W. corner of the court. The cost of these statues was defrayed out of the donation of Dr. Taylor, in whose vice-chancellorship the work was mainly done."

WE also add the following report, issued on the library of the Divinity School by Prof. Lumby:—

"The library of the Divinity School has this year been enriched by the bequest of books under the will of the late Bishop of Durham. Between 3000 and 4000 volumes in various branches of theological literature have furnished us at once with the foundation of an excellent working library. These books are now arranged and catalogued, and it is hoped that they will soon be made accessible to the divinity students of the university. The collection of Bibles which we have received by this bequest is a very valuable one. The division of Bishop Lightfoot's library between the Universities of Cambridge and Durham leaves in our collection considerable gaps, but these we trust to the liberality of future benefactors to fill up. We have also received from the executors of the late Prof. Selwyn about 140

volumes, which by his will were to be given to the library after the death of Mrs. Selwyn. These comprise a few very fine editions of the Fathers, and many books of great value for the study of the Septuagint. They are all in most excellent condition. From the syndics of the University Press we have received a copy of the facsimile edition of the Prayer Book which was attached to the Act of Uniformity of 1662."

BOOKS PUBLISHED IN INDIA.

WE quote the following from the annual address delivered to the Bengal Asiatic Society by the president, Mr. H. Beveridge, whose name is well known in England by his contributions to the literature of Warren Hastings and Nanda Kumar (Nuncomar):

"Among many valuable works published in India last year I may notice the *History of Civilisation in Ancient India*, based on Sanskrit literature (three volumes), by our member, Romesh Chunder Dutt, B.C.S. Mr. Dutt has now completed his work; and it may be recommended to all unprejudiced inquirers as very pleasant reading, and as giving a very fair account of early Indian civilisation. Naturally the author has offended some of his countrymen. Mr. Dutt's History should partially take the place of Mrs. Manning's, which has long been the only popular book on the subject. The publication, in parts, of Babu Pratap Chandra Rai's translation of the Mahābhārata still goes on; the translator has now issued Part 63, containing a portion of the Santi Parva. Dr. Watt's great work, the *Dictionary of the Economic Products of India*, is now far advanced. Four volumes are ready, and two more will be published this year; the seventh will contain the index. Prof. Forrest's *Selections from India State Papers, 1772-1785*, are an important addition to Hastings literature. Mr. Forrest would confer another boon on historical inquirers if he would republish with notes the trial of Nanda Kumar.

"The Report on Indian publications during 1889 shows that the minds of the people are being considerably stirred, especially about religious questions. The Madras Report observes that the preponderance of religious works is very marked, and that they amounted to 45 per cent. of the literature published during the year. There were 611 religious books and tracts, of which 384 were Hindu, 157 Christian, and 49 Muhammadan. In Bombay at least one valuable historical book was published—a translation, by Munshi Husain Khan, of the Ruzgāt Alamgiri, or Letters of Aurangzib (Elliot, vii. 203). Among the Marāṭhi publications were the Līlavati, the Chronicle of Panipat, written two years after the battle by Raghu Nāth Yādav; and a drama, called the Nyāyaviyaya Nāṭak, on the Crawford case. In Gujarāṭhi there was a translation of *Lady Audley's Secret*. Other important publications in Bombay are the Rig Veda, with Saynāchārya's Commentary, of which about three-fourths has been issued; and Prof. Peterson's edition of Bāna's Kadambari. Mr. Satyendra Nath Tagore's *Bombay Sketches*, though the work of a Bombay civilian, was published in Calcutta.

"I should add to these works Mr. Lewis Rice's *Inscriptions at Sravana Belgola*, which was published at Bangalore by the Archaeological Survey of Mysore in 1889. This is a very valuable book. It contains a photograph and description of the colossal statue of Gomata (Gomatesvara), and copies of 144 inscriptions. Inscription No. 1, called the Bhadrabāhu inscription, is perhaps older than any of Asoka's.* It is on the hill called Chandragiri, which is said to derive its name from Chandragupta, of Patna, the Sandrakottos of the Greeks. According to the Southern India tradition, Chandragupta was a Jain, and a disciple of Bhadrabāhu. He is said to have abdicated, and to have assumed the name of Prabhuchandra on entering into religion. It is under this name that he is mentioned in the Bhadrabāhu inscription. Mr. Rice gives an account of the curious rite of *sallekhana*, or the obtaining of euthanasia by fasting. Many inscriptions record such religious suicides by men and women.

* We are altogether unable to accept Mr. Rice's arguments for attaching such antiquity to this inscription.—Ed. ACADEMY.

"I have omitted to mention three important Indian publications. One is the Bhaktiratnakar, or Sea of Devotion, by Pandit Ram Narayan Tarkaratna. This work is in fourteen parts, and was completed in 1889. The Vaishnavs regard it as one of their standard books, and it is interesting for the general student on account of its giving a picture of Bengal three hundred years ago. One Srinivas carried the Sanskrit MSS. written by Rup Sanatan, and others of Chaitanya's immediate followers, from Brindaban in [?] into Bengal. His adventures on the journey are described, and how he made a disciple of the Bishenpur Raja. This mission was nearly half a century previous to the Catholic mission to Bakla (Bakarganj), and the founding of Bandel Church at Hugli. Chronologically Chaitanya corresponds to Luther; and it is interesting to find that the sixteenth century was a time of religious ferment in India as well as in Europe. A second work is the Panchasiddhāntikā of Varaha Mihira, published at Benares. This is an astronomical work, and, as its name implies, is a compendium of the five systems in vogue in the author's time. The work is edited by Prof. Thibaut and Mahāmahopādhyāya Sudhākara Dvivedi; and Prof. Thibaut also supplies a translation and an introduction. The third work is *The Butterflies of India, Burma, and Ceylon*, by Mr. de Nicéville, of which vol. iii. has just appeared.

"Among works which are about to appear I may mention an elaborate edition of Hafiz, by Col. Willoughby Clark. It is a matter for congratulation that the long-promised index to the *Tabaqāt-Nasiri* is nearly ready. It is a pity that it could not have been prepared by the author, Major Raverty."

In an appendix, the following note on Indian publications received in 1890 is contributed by Pandit Hara Presad Sāstri:

"The Bengal Catalogues contain the names of 1,179 books. Among these may be mentioned the biography of the celebrated dacoit Tantia Bhil; and the Beshvanathi Rāmāyan, which attempts to prove that the Rāmāyan shows the spiritual side of Vedic society, while the Mahābhārata shows the ritualistic side. The Bombay Catalogues exhibit a marked tendency among the Marhattas to study biography. The publication of the Letters of Nana Farnavis shows that they prize the records of their great men of the past. The Catalogues for the North-Western Provinces contain a number of works on the Congress and on the cow-protection movement. In the Madras Catalogues we have the Peria Purān, or the great legend in Tamil containing an account of the sixty-three special devotees of Siva; and the Churāmāni, containing an account of a Buddhist king by a Buddhist author in Tamil. The Punjab Catalogues contain several works giving an account of the Purān Bhakat, which appears to be very popular in the province; they also mention the publication of chap. i. of the Korān, with vernacular commentaries."

CORRESPONDENCE.

THE NEW COINAGE.

Bromley, Kent: June 20, 1891.

The prospect of a carefully considered coinage raises a hope that it may be better mechanically, as well as artistically, than the present issues.

The essential principle for saving wear is the broad brim and dished faces, which were systematically introduced by Boulton and Watt in 1797. The raised rim has been almost abandoned, being reduced to less than $\frac{1}{16}$ inch wide on Jubilee sovereigns, and thus left so slight as to be a positively weak point, and an edge to attach the faces of other coins. The dishing is however greater in the Jubilee than in the previous issues.

Why designers should be so afraid of a fair protecting rim is not clear; or rather its utility seems to have been overlooked. In any case it would be well if its breadth was $\frac{1}{16}$ of the diameter of the coin, so as to be of real service. Boulton and Watt's plan of sinking the lettering in a still wider brim is excellent, and it would be a great gain if we reverted to it. Another point is that no sharp edges should be left externally, as they are easily worn, and they cut the faces of other coins; and also no sharp recesses should be allowed, as they are mere dirt and germ traps. The present deep notched border inside the rim is only a tradition from the days of clipping and filing; a rim should slope down to the face in a cyma curve, and have its outer edge rounded.

It might be considered if it would be practicable to shield all gold coins by striking them inside hard steel collars, which would protect them from wear, and from drilling; these would also confound the electro-plating forger, and prevent metal being dissolved off the coin by acid. The initial cost would be much less

than the loss by wear in the unprotected state.

What delightful small types a Greek would have adopted, we may easily imagine; the rose, crown, lion's head, lion, anchor, St. George's banner, Union Jack, and others would fill our small coins, in place of screwing down a whole Britannia into a fourpenny, or defacing a threepenny with a bald and hideous 3. If we want amusement, we might place heads of deceased cabinet ministers on the reverses of the bronze. Gold being practically international should be changed as seldom as possible; but there seems no reason for the fossilising of our silver and bronze types.

W. M. FLINDERS PETRIE.

DISCOVERY OF A FRAGMENT OF THE "SHEPHERD OF HERMAS."

Trinity College, Dublin: June 22, 1891.

In reference to the new fragment of the *Shepherd of Hermas*, an account of which was sent to the ACADEMY by Prof. Mahaffy last week, kindly permit me to say that I have today received a communication from Prof. Harnack, of Berlin, to whom I had written on the subject, from which it appears that the fragment was identified by him some two months ago. He and Prof. Diels have published the text in the *Sitzungs-berichte* of the Berliner Akademie d. Wissenschaften for May 8; so that priority as to this new find rests with them, and not with us as we had supposed.

J. H. BERNARD.

OLD-ENGLISH "EFENEH(U)."

Ann Arbor, Michigan: June 1, 1891.

The Chronicle for 891 contains the passage:

"Pa ne mehte seo fird hie ná hīndan of faran, ær hie wæron inne on þæm ge weorce; besæton þeah þæt geweorc utan sūme twegen dagas, 7 genamon ceapes eall þæt þær buton wæs, 7 þa men of slogeon þe hie foran forrīdan mehton butan geweorce, 7 þæt corn eall forberīdan, 7 mid hira horsum fretton on ælcere efenehðe."

This is, so far as I know, the only place where the last word occurs. A has *n*; B, C, and D have *m*. Bosworth* innocently translated *efenehðe* "night." The Bosworth-Toller Dictionary has "*efen-(n)ehþ, a plain*," and Plummer translates "a plain." Earle annotates:

"On *releere efenehðe on every plain*, or pasture [where corn grows?] field. The substantive *efenehð* is the abstract of *efen* = even, smooth; and corresponds to the O.H.G. forms *ebanōd m*, *ebanōti f.* = planities."

Sweet says, "*efenehþ sf. plain (?)*, neighbourhood (?)." Kluge has "*efennehþ f. Nachbar-schaft*."

We have thus three notions: (1) the word is some sort of a byform of *ēfen*; (2) it means "plain or field," and is either (a) an unexplained compound of *efen* ("even") or (b) an abstract noun from the same word; (3) it means "neighbourhood," being a compound of *efen* and *neahþu*, a hypothetical abstract of *neah*, "near."

Of (1) no more need be said; (2b) is out of the question for anyone who is unwilling to

* My friend, Prof. E. M. Brown, of the University of Cincinnati, calls my attention to a passage in Ettmüller's Lexicon, to which I have no access. He writes: "The following quotation from Ettmüller (*Lex. Angls.*, p. 25) will show where Bosworth got his idea of 'night,' and Sweet and Kluge the meaning 'neighbourhood'—*efennehð, -e, f. concivina, propinquitas. on ælcere efennehðe, in omni concivina*, Chron. Sax. (36, 8) Lib. MS. *efenehðe præbet, quam vocem Ing., quo jure nescio, 'vesperam' (-a-fenōð?) interpretatus, Gibson contra suo Marte 'omnino junctim.'*"

ignore the letter *h* as Earle does; (3) is, to say the least, unsatisfactory, for it assumes one element (*neahþu*) and does not explain the other (*efen*). Moreover, what does "in every neighbourhood" mean? We have left (2a), which I would explain as follows:

efen-neahþ(u), or *-h(i)ehþ(u)*, (Kluge, *Stamm.*, §§ 120-121; Sievers², § 255 3, § 144 b, § 222 1), > *efen(n)ehþ(u)*, (for the loss or assimilation of *h*, cf. *on(n)ettan < on-hátjan*, &c., Sievers, § 218 A'; for the following *e* see Sievers, § 43 3 and A'), literally "even height"—that is, "table-land, elevated plain or field," later "field" in general (cf. O.H.G. *ebental*, "convallis," and German *Hochebene*, "table-land, elevated level land").

The geography of the neighbourhood of Chester* (the scene of the passage from the Chronicle) would not justify the translation "table-land"; but there is no violence whatever in the assumed change of meaning, especially if we think of grain fields as generally occupying higher ground than meadows.

Emmeth, near Wisbech, may be, as Prof. Earle says, from *efenehþ*; but one would expect the *h* to be treated as it was in the accented *height < hieht(u)*, which would give us "Emnet" or "Emmet."

GEORGE HEMPL.

"A COLONIAL TRAMP."

London: June 23, 1891.

Will you kindly permit me space to answer a few questions which the reviewer of my book, *A Colonial Tramp*, asks in the ACADEMY of May 30? My replies will point to the questions, and so save time and space.

Yes; rabbits in Australia grow in some cases to over three times the size of rabbits in England, and breed in proportion. The gum-trees I speak about were planted by John Lang Currie, a well-known squatter in Victoria, in 1851, on his estate of Lara, Camperdown, and some of them had reached the height of 150 feet in 1886. I expect them to be higher now. The mistake which startled him in the first volume, and which was rectified in the second, was a printer's mistake, a "y" having been overlooked. The book has neither index nor map because it does not require them, and so they were purposely left out. The asylums for the destitute I speak about were in New South Wales, and are the result of free trade and old convictism—nowhere else; therefore, I warn poor men against emigrating to New South Wales. The eight hours' demonstration in Melbourne I eulogised because it was a magnificent gathering of splendid men; but I could not mention the end of the Australian strike, because it had not begun then. I have read the last work on Nelson, but I fail to see how it could alter what I wrote about him in my "Tramp." Being a native of Great Britain, I have no hatred, but rather the reverse, for my native land, yet, as an old traveller, I cannot altogether shut my eyes to a few of our insular defects and prejudices when we go abroad, and only give a warning to travellers, so that they may be able to sail along smoothly. Lastly, permit me to repeat my advice to poor men about to emigrate: Do not go to any city overcrowded, and particularly one which has a free port open to foreign trade. If you must stick to cities, go where the *ad valorem* duty protects you just a little, so that you may be able to charge a fair price for your work; but, better than all, go to a country where there is elbow-room for poor and rich alike, such as Queensland or Western Australia.

HUME NISBET.

* I am indebted for information as to the country about Chester and Emmeth to the Ven. Edward Barber, Archdeacon and Canon of Chester, and to the Rev. E. H. Lovelock, vicar of Emmeth.

"OXFORD" IN THE "ENCYCLOPÆDIA BRITANNICA."

Oxford: June 20, 1891.

On p. 585 of the ACADEMY of this day, in comparing the articles on "Oxford" in *Chambers's Encyclopædia* and the *Encyclopædia Britannica*, you remark that in the latter the "educational system . . . is almost entirely ignored." That is true; but I may be allowed to point out that the history of the University was excluded from that article by the plan of the work, and will be found under the heading "Universities," where the subject is treated at some length. This arrangement, whether good or bad, was twice notified (in a cross-reference) by THE WRITER OF THE ARTICLE "OXFORD" IN THE *Encyclopædia Britannica*.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 29, 8.30 p.m. Geographical: "The Yoruba Country, West Africa," by Mr. Alvan Millson; "Journey through Gazaland with Gungunhana's Envoy," by Mr. Denis Doyle.

TUESDAY, June 30, 9 p.m. University College: *Conversazione*. THURSDAY, July 2, 4 p.m. Archaeological Institute: "Pola and Aquileia," by Prof. Bunnell Lewis; "The Episcopal Seals of Carlisle," by Mrs. Ware; "Rude Implements from the North Downs," by Mr. F. C. J. Spurrell.

5 p.m. Zoological: "The Animals Living in the Society's Gardens," VI., by Mr. F. E. Beddard.

FRIDAY, July 3, 8 p.m. Geologists' Association: "The Geology of the Country between Bridlington and Whitby, the District to be visited during the Long Excursion," by the Rev. Prof. J. F. Blake.

SCIENCE.

AN ITALIAN EDITION OF THE "COMA
BERENICES."

La Chioma di Berenice col testo Latino di Catullo riscontrato sui codici. Traduzione e Commento di Costantino Nigra. (Milan: Hoepli.)

THIS book is the newest, fullest, and in many ways ablest work which has appeared on the Continent lately in connexion with Catullus. Part of its author's purpose, no doubt, was to add another translation of the *Coma* in Italian verse to the twenty-seven, perhaps more, which have appeared in that country since 1740. Signor Nigra has a chapter on them, as also on the version of the well-known poet Ugo Foscolo. The former of these can interest the general public but little; the latter has a literary attraction in the name of Foscolo, which will, even in England, command the attention of many readers. Foscolo added a lengthy commentary to his translation, which still has its value; but modern criticism will turn, I think, with pleasure and relief to the more scientific and enlightened dissertations of Signor Nigra.

The discussions are arranged in the following order: (1) The historic basis of the poem, reviewing the narratives of Hyginus and Justin; (2) the merits and character of the *Coma* as a poem; (3) history of the Liber Catulli from the earliest times to Bishop Rather, of Verona, and the re-discovery in the early fourteenth century of the MS.; (4) editions and commentaries; (5) Nigra's Italian version; (6) Latin text; (7) variants of the MSS., with notes on the readings; (8) the winged messenger of Arsinoë; (9) merits of Catullus' translation as compared with the surviving fragments of the Greek original by Callimachus; (10) other Italian versions of the *Coma*; (11) the version of Ugo Foscolo; (12) the MSS. of Catullus.

In so large a variety of material it is not easy within the compass of a short notice to do justice to the care for accurate detail which throughout distinguishes Signor Nigra's work. He has left no source of knowledge unexamined. In particular, those Italian discussions to which the poet Vincenzo Monti's now well-known theory (that the *ales equos*, or *alisequos*, was an ostrich) gave occasion, most of them written in the early part of the present century, were as entirely unknown (I blush to confess it) to me as I fear they will be to most Englishmen, and even Germans. They are, indeed, a little disappointing as regards positive result; for Signor Nigra's pages are enough to prove how uncertainly criticism, even now, is compelled to move in the dim twilight of pedantic mythological allusion, made even more obscure by the Latin medium in which alone the poem has been preserved. Yet they had the merit of calling constantly new attention to the most difficult, if not the most inspired, of Catullus' poems; and this at a time when in Germany Doering was thought adequate to explain the countless difficulties which each section of the Liber Catulli presents, and before Lachmann had risen to introduce light into the bewildering chaos of MSS.

Signor Nigra's judgment of the poetical worth of the *Coma* is unfavourable, in marked opposition to Foscolo, who had pronounced it unsurpassed by any lyric (should he not have said elegiac?) poem of antiquity:

"If there is any poem of Callimachus to which the words of Ovid, *Quamvis ingenio non ualet, arte ualet*, may properly be applied, it is the *Coma*. It was, in fact, an act of bold and ingenious flattery to the king of Egypt and the two queens Arsinoë and Berenice. It is the work of a court poet, and bears the stamp of being so. Yet this poet possessed a marvellous skill, and succeeds in the difficult task of treating such a subject without falling into absurdity. A discreet scepticism, a certain air of indulgent incredulity which pervades the whole composition, make the improbability of the story pardonable. We are conscious that the display of feeling does not rise from the heart, that the maledictions are conventional, the vows not serious, and that the moral tone enforced is only severe in appearance. Still, the original must have been composed in verses of a subtle harmony, only little of which survives in the comparatively rude translation of Catullus. Neither the Greek original nor the Latin version can have been among the best works of their authors."

The most elaborate of Signor Nigra's dissertations is on the *ales equos* or *alisequos* of Arsinoë, and the eight vv. (51-58) in which it occurs. The result of his closely reasoned pages (71-101) is to reject Monti's ostrich theory, and to return to the earlier view that the winged messenger is Zephyrus. Accepting *e locridicos alis equos*, the reading of G and O, as representing the MS. tradition most faithfully, he elicits from this, not *Loeridos ales equos*, but *Loericos alisequos*. This latter word I have myself supported against *ales equos* in the last edition of my Commentary. Against *Loericos* is the fact that it does not seem to exist elsewhere in Latin; nor does Signor Nigra's argument that the epithet, where it conveys the name of a place, in Alexandrian poets regularly precedes the substantive it qualifies, a rule liable to many excep-

tions, seem to have any preponderant weight on the other side; nor, palaeographically, is it as likely that *e locridicos* should be a corruption of *loericos* as of *loeridos*. It is argued that the winged page is as appropriately called *Loerian*, meaning *zephyrian*, and conveying the idea of Zephyr, as Memnon two lines before is called *Aethiopian*, and that the two local designations are meant to help each other out, and to contrast the sultry region of Africa with the western clime from which the Zephyr blows. This is a little fanciful; and so, I think, is the suggestion, in the discussion whether Arsinoë could be called *Loeris* (p. 89), that she was so styled from the close connexion of the Eastern Locrians of Greece with the Phthiotic territory, so that *Loeris* might connote Macedonian.

It is, however, on this part of his dissertation that Signor Nigra has brought to bear his learning most conspicuously, and this will be found the most profitable portion by anyone who cares to examine the question from many sides. In particular, the criticism in which he has attacked my view that Arsinoë is alluded to by the author of the *Ibis* in the distich:

"Quaeque sui uenerem iunxit cum fratre mariti
Loeris in ancillae dissimulata nece,"

is, I feel obliged to confess, nearly conclusive; I should say quite, were it not that in the loss of so much literature relating to the Ptolemies we cannot feel sure that Arsinoë had not detractors who represented her, not merely as artful and cruel, but licentious, incestuous (Aris. Mosell. 315), and possibly as in some way causing the death of her three successive husbands. I feel very differently towards another point in the same dissertation, first raised by Zannoni, which seems to assume that, in the lines of Ausonius' *Mosella* describing the image of Arsinoë suspended by a magnet in the air in a temple at Alexandria,

"Spirat enim teeti testudine chorus achates
Afflatamque trahit ferrato crine puellam,"

the word *chorus* may be right, as if the *achates* had an afflatus like the wind *Corus*, and this could, in some strange way, either represent or suggest Zephyrus. In an article on Ausonius, published in the Dublin *Hermathena* for 1886, I proposed to read *chlorus* or *χλωρος*, citing the Orphic *Λιθικά*, 611 sqq.; and I prefer this conjecture to any that I have yet seen mentioned, not excepting that of the Bordeaux philologist, M. de Mirmont, *caerula cautes*, "loadstone."

The weak point of Signor Nigra's reasoning seems to me to lie in his putting out of view the many possibilities which a word like *Loeridos* may contain, none of them recorded, yet any one of them conceivable. For instance, why should Arsinoë have a statue at Helicon? Does not this suggest a connexion (not otherwise known) with Greece?—especially as the antithesis of *Gratia* (*Gratia*) to *Canopiceis* goes far to settle the truth of this emendation of the MS. reading *Gratia* against *Grata* in the v. *Gratia Canopiceis incolae litoribus*; and if Arsinoë was "a Greek settler on Canopic shores," the natural inference that Callimachus here explained himself, and that she was originally a Loerian, not of Magna Graecia but Greece Proper, becomes to say the least,

more than possible. Signor Nigra, however, consistently with his theory, prefers to return to the old correction *Grata*. But here again, unless my palaeographical experience is at fault, probabilities are against him. The discussion, however, must be read as a whole to judge it fairly; I can promise those who read it that they will find it most interesting and stimulating from first to last.

The chapter on the history of the Liber Catulli is a good *résumé* of the facts, with some new and important data supplied by Signor Nigra himself. That on the MSS. gives some fresh details on codices either unknown or at present imperfectly examined. I hope to return to this important work elsewhere.

ROBINSON ELLIS.

CORRESPONDENCE.

PROF. KIELHORN ON THE VIKRAMA ERA.

Edinburgh: June 15, 1891.

In the *Nachrichten* of the Göttingen University for June, Prof. F. Kielhorn, C.I.E., has published a very ingenious theory of the origin of the designation of the Vikrama era, which ought to attract attention.

When the late James Fergusson broached his hypothesis that it might have derived its name from Vikramāditya of Malwa, about A.D. 543, no earlier dates in this era were known than the tenth century. Since then the Dhulpur inscription has been found, dated in the 898th year elapsed *kālasya-vikramākhyaśya*, and at least two earlier dates in "the era of the Mālava kings," which must belong to the same era. It hence appears that between the sixth and ninth centuries the designation had been changed, though even in the ninth century it was only the "*vikrama* time." No allusion is necessarily made to a king Vikrama. But the years of this era then always dated from the month Kārttika (October-November). Now this was the time when kings went out to war; autumn was thus specially the *vikrama-kāla*. This the poets, as Prof. Kielhorn remarks, know as well as the writers of the *Niti-* and *Dharma-Sāstras*. Rāghu undertakes his *digvijaya* in autumn. Autumn (*sarad*), decorated with lotus flowers, approaches him as a second Rājālakṣmī, inviting him to set out even before Rāghu himself had taken the resolution. In autumn also the bulls seek to equal him in *vikrama*; and as Kalidāsa, so Bhāravi speaks of autumn at the marching out of Arjuna. In autumn Rāma sets out to slay Rāvana and regain Sitā. In the *Gāndarvaho*, Yasovarman goes out at the end of the rainy season, in autumn, to subject the world to his sway. In the *Harshacharita*, Bāna compares the beginning of autumn (*sarad-ārambha*), white with flowering grasses, to a cup drunk at war-time (*vikrama-kāle*).

From autumn (*sarad*), as the true *vikrama-kāla*, it is but a short step to the year (*sarad*), according to the *vikrama-kāla*; and Prof. Kielhorn believes that the Hindus had taken this step, and that the later reckoning of the Mālava era, as that of a king Vikrama, owes its origin to a misunderstanding. If they were accustomed to speak of autumn as *vikrama-kāla*, the connexion of *vikrama-kāla* with the notion of "year" followed; and the practice of denoting the year as *vikrama-kāla* was the more natural as it expressed the distinction between the Mālava and the *Saka* year—namely, the fact that the Mālava year begins in autumn. When they had been accustomed to speak of years as *vikrama-kāla* or *vikrama* years, nothing was more natural than that later ages should seek to interpret this in the manner of their

time, and so ascribed the establishment of the era to a king Vikrama, who, like their own kings, had counted the years from his accession.

Such is Prof. Kielhorn's argument, and its naturalness and probability will commend it as an ingenious and most plausible explanation of the designation. How the Málava era itself originated is, of course, a different matter.

JAS. BURGESS.

SCIENCE NOTES.

THE fifty-ninth annual meeting of the British Medical Association will be held at Bournemouth, on July 28, and the three following days, under the presidency of Dr. J. Roberts Thomson. Addresses will be given by Dr. Lauder Brunton in medicine; by Prof. Chiene in surgery; and by Dr. Cox Seaton in public medicine.

MR. J. C. STEVENS will sell on Monday, July 6, and the three following days, the celebrated collection of shells formed by the late Sir David W. Barclay, together with his conchological library. The collection comprises about 30,000 specimens, many of which are very rare, and some are believed to be unique.

MESSRS. MACMILLAN have added to their series of Mr. A. R. Wallace's works a new volume, which consists mainly of a reprint of two volumes of essays—*Contributions to the Theory of Natural Selection*, which appeared in 1870, with a second edition in 1871 (on the verso of the title-page it is stated that the book was reprinted in 1875); and *Tropical Nature and Other Essays*, which appeared in 1878. In his preface, Mr. Wallace gives a careful account of the changes made in this new edition. Apart from a few omissions—of technical details or of subjects more fully treated by the author elsewhere—the most important change is the addition of two later papers: "The Antiquity of Man in North America," which was first published in the *Nineteenth Century* for November, 1887; and "The Debt of Science to Darwin," contributed to the *Century Magazine* for January, 1883, a few months after Darwin's death. We observe, also, that in a note on p. 337, Mr. Wallace duly records that recent researches have thrown doubt upon the theory that there is any close affinity between the swifts and the humming-birds. It is right to add that the book is admirably printed, and has a copious index.

THE last number of *L'Anthropologie*—the bi-monthly periodical in which are incorporated the *Matériaux pour l'Histoire de l'Homme*, the *Revue d'Anthropologie*, and the *Revue d'Ethnographie*—contains an elaborate article, illustrated with photographs, upon the Vedda of Ceylon, by M. Emile Deschamps, who visited the island in the course of an official mission of ethnological research in the East. Though he has not added much to our actual knowledge of this curious people, his conclusions as to their probable origin differ in several important respects from those generally received. In the first place, he would regard them as of Aryan blood, having reached Ceylon from India in prehistoric times, and being identical with the Yakkhas, demon-worshippers whom Vijaya found there when he conquered the island in 477 B.C. Secondly, he considers their present degraded condition to be due, not to the absence but to the loss of a previous culture, owing to their having taken refuge in the jungles from the tyranny of their conquerors. Their physical traits he attributes to an early mixture with aboriginal races. The Singhalese proper are the result of an admixture of the conquerors with a subjugated portion of the Yakkhas or Vedda, and also with another early race of Aryan origin who are to be traced at the present time in the

Rhodias. M. Deschamps' theories seem to us to be inspired by an excessive respect for the legends of the Mahavamsa.

THE last number of the *Internationales Archiv für Ethnographie* (Leiden: Brill) contains an article by Dr. Heinrich Schurtz on the geographical distribution of negro costume; and a continuation of Dr. J. D. E. Schmeltz's account of the ethnographic collections from Corea in the Leiden Museum. Both of these papers are illustrated with admirable coloured plates.

PHILOLOGY NOTES.

THE new number of the *Revue générale du droit* contains the continuation of the lectures on the ancient laws of Ireland, which Prof. D'Arbois de Jubainville is delivering in the Collège de France. He points out one of the innumerable blunders in the official edition of those laws. The words *nó chíis nemid* ("or a lord's rent") being printed (vol. iv., p. 20, l. 3) *nochis nemead*, and translated "which is a 'Nemeadh'-person's." In the same page the words *tír cuind cétoraig* (the land of a person *sui juris* who for the first time contracts with a tenant) are actually rendered by "the land of Conn Cétoraich."

AT a recent meeting of the Académie des Inscriptions, M. Théodore Reinach commented on three passages in the *Ἀθηναίων Πολιτεία*, which he contended must be spurious. One is that attributing to Draco a constitution which presents extraordinary analogies with the oligarchic constitution introduced in 411 B.C.; the second is that referring back to Solon the institution of the lot for magistrates; the third is that assigning to Themistocles an active part in the overthrow of the Areopagus. M. Reinach suggested that these spurious passages might be derived from a work which we know to have been conceived in the same spirit—that of Critias, the disciple of Socrates and one of the Thirty Tyrants. M. Viollet, without opposing this suggestion, remarked that one must not credit Aristotle with infallibility; a statement in his works may very well be erroneous and at the same time genuine.

The Science of Language: founded on Lectures delivered at the Royal Institution in 1861 and 1863. By F. Max Müller. In 2 vols. (Longmans.) Notwithstanding the alteration in the title, this is substantially a seventh edition of the brilliant *Lectures on the Science of Language* which have done so much to excite an interest in comparative philology among the general public of educated English readers. The last edition, we observe with some surprise, was published so long ago as 1871. We are glad to find that the new revision is not of such a character as to affect the essential identity of the book, which has attained something of the position of a classic. Errors of detail have been corrected, and notices of recent discoveries have been inserted, so far as it could be done without interfering too much with the original structure of the work. The general point of view, however, is, as the author himself intimates, that of thirty years ago. In the preface, Prof. Max Müller refers briefly to various important results of modern investigation which his plan did not permit him to notice in the body of the work; and he recognises fully the greatness of the advance that has been made in Aryan comparative philology during the last twenty years. Although the book still needs to be read with a careful recollection of its original date, it has never been superseded as a preliminary survey of the whole subject. A few of the positions which Prof. Max Müller reaffirms, e.g., with regard to the producing cause of the Indo-European "sound-shifting," seem to us un-

tenable in the light of modern research; but as the book deals with general principles rather than with details, by far the greater portion of it is still valuable. The grace of style and felicity of illustration characteristic of the original Lectures have, fortunately, not evaporated in the process of revision.

THE *Philologische Wochenschrift* (No. 23) contains a very favourable review of Prof. Mahaffy's "The Greek World under Roman Sway," which it characterises as a book of the highest importance. The same number condemns as worthless a work of Zanardelli on Etruscan, Umbrian, and Oscan.

MEETINGS OF SOCIETIES.

EDINBURGH MATHEMATICAL SOCIETY.—(Friday, June 12.)

R. E. ALLARDICE, Esq., president, in the chair. The papers read were on a representation of elliptic integrals by curvilinear arcs, by Mr. John McCowan; on the transformation and classification of permutations, by Mr. T. B. Sprague; on the numerical values of the roots of a trigonometrical equation, by Mr. T. H. Miller; on the Wallace line and the Wallace point, by Dr. J. S. Mackay; on an equation of motion, by Mr. A. J. Pressland.

STATISTICAL SOCIETY.—(Tuesday, June 16.)

DR. F. J. MOUNT, president, in the chair. A paper was read by Noel A. Humphreys, Secretary of the Census Office, entitled "Results of the Recent Census and Estimates of Population in the Largest English Towns." The first part of the paper was devoted to the consideration of the recently-issued results of the census in April last in the twenty-eight large English towns dealt with in the Registrar-General's weekly returns. It was pointed out that, although the increase of population within the present boundaries of these towns showed an increase of nearly a million in the last ten years, the increase was less by considerably more than half a million (605,318) than would have been the case if the rate of increase had been the same as in the preceding ten years, 1871-81; and that the rate of movement of population showed striking variations in the different towns. Liverpool was the only town of the twenty-eight in which there was an actual decline of population (amounting to 34,521), which was equal to 6.2 per cent., while the largest rate of increase, which was 55.7 per cent., occurred in Cardiff, also a port. The rate of increase in these twenty-eight towns, it was stated, has pretty constantly declined in recent years, and has fallen with scarcely a break during the last five intercensal periods from 24.3 per cent. in 1811-51 to 11.0 per cent. in 1881-91. The percentage of increase within the boundaries of registration London (practically those of the county of London) declined in the same period from 21.2 to 10.4. The rate of actual decline of population in central London continues to increase, and the rate of increase of the other parts of the metropolis, including even the aggregate outer ring of suburban districts, continues to decline. Examined in detail, the provincial towns show, with few exceptions, the operation of similar laws: actual decrease in the central portions, and marked decline in the rate of increase in the other portions, the latter being especially noticeable in those towns with comparatively restricted areas. This examination, while showing the marked general decline in the rates of increase in these towns, discloses striking variations in the rates of increase in successive census periods. Thus, for example, in the last two decennia the percentage of increase declined in Salford from 41.2 to 12.4; in Nottingham, from 34.3 to 13.6; and the decline in Liverpool was from an increase of 12.0 to a decrease of 6.2; while, on the other hand, the percentage increased from 12.7 to 24.4 in Portsmouth, and from 13.2 to 28.1 in Newcastle-upon-Tyne. It was pointed out that these striking changes in the rates of movement of population in the large towns interpose the greatest difficulty in estimating, even approximately, their population in intercensal periods. The estimate of population

in Liverpool, based upon the rate of increase between 1871 and 1881, exceeded the recently enumerated number by more than 100,000, or by 20 per cent.; while in Salford the percentage of over-estimate, by the same method, was 26 per cent. Thus, the recent birth-rates and death-rates in these two towns have been under-estimated by no less than a fifth and a fourth, respectively. In proof of the assertion that growth by aggregation in very many of our largest towns, judged by the results of the recent census within the arbitrary boundaries fixed years ago for local government, has practically ceased, it was pointed out that the increase in the enumerated population in the last ten years has fallen far short of the natural increase (excess of births over deaths) in London, Liverpool, Birmingham, Bristol, Salford, Nottingham, Sheffield, and Leicester. It was also pointed out, however, that in other towns the excess of births over deaths was far below the enumerated increase during the last census period, these facts, in addition to the marked and increasing decline of the birth-rate in recent years, conclusively proving that excess of births over deaths alone is absolutely useless for measuring movement of population in towns. The various methods that have been at different times suggested for estimating the population of towns in intercensal years, in substitution of Dr. Farr's method, still used by the Registrar-General's department, were severally considered in the paper, and it was shown that no hypothetical method yet devised affords reasonable promise of satisfactory results. It was therefore urged that a quinquennial census will supply the only real remedy for the present difficulty, which threatens to impair the public faith in death-rates, the failure of which would most seriously hinder and imperil the health progress of the country.

ROYAL HISTORICAL SOCIETY.—(Thursday, June 18.)

H. E. MALDEN, Esq., in the chair.—A paper was read by Herbert Haines on "France and Cromwell," with the object of showing that the Protector, having the destinies of Europe in his hands, might have found himself engaged in a French war which would probably have proved disastrous to his own rule. Therefore Cromwell's foreign policy cannot be regarded as disinterested, and was certainly disadvantageous to England in the future. Mr. Haines's paper led to an animated discussion.

FINE ART.

MR. SEYMOUR HADEN'S SALE.

THE prices fetched by Mr. Seymour Haden's collection of old masters' drawings—Claudes, Rembrandts, and the like—do not happen to have reached us; but we are in possession of the prices given for many of the prints in a collection which it took Messrs. Sotheby about three days to sell, and this collection of prints was, as has been said before, extremely noteworthy.

Mr. Seymour Haden was the owner of about twenty Dürers. A clear and beautiful impression of the "Adam and Eve," on paper with the ox-head water-mark, and signed "P. Mariette, 1668"—thus attesting its ownership by an early collector who was actually contemporary with Charles the First's Lord Arundel—fell to the bid of £100. "The Knight and Death" fetched £70. The "Arms with the Skull"—from the St. Aubin and Galichon collections—realised £51. We have not the prices of the few Vandycks. Among the Claude etchings, £41 was given for an impression of "Le Bouvier"—clear, but not particularly rich. The "Dance under the Trees" fetched £10; a very interesting first state of the "Shepherd and Shepherdess conversing"—from the collection of Mr. Julian Marshall—£7; the "Forum," £6 6s.; the "Village Dance," £4 8s.

After these came the great array of the etchings of Wenceslaus Hollar, some of which were sold cheaply, and others at very full

prices, according to the opinion of the expert. The fine view of "Antwerp Cathedral" was knocked down for £8 (Harvey); the "Six Views about Islington," £2 10s.; the "Six Views of Albury," £4 6s.; the "London from the Top of Arundel House," £9 12s. (Gutekunst); the "Royal Exchange," first state, £16 (Harvey); and the finest impression certain experts had ever seen of the "Inner View of St. George's Chapel" for £9 9s. (Thompson); the "Theatrum Mulierum," a complete set, somehow sold for the unexpectedly low price of £11; the "Winter Habit of an English Gentlewoman" for £8 12s.; and the "Set of Sea Shells," an almost complete set—four numbers only wanting—for £67 (Deprez). After these, the next most interesting things that followed were certain etchings of Ostade, among which was a singularly perfect and delicate impression of "The Peasant Paying his Reckoning."

The Rembrandt etchings were reserved for the third day of the sale, and really constituted its principal feature. Among the earlier lots was a noble impression of the "Great Jewish Bride," from the Hippley collection. The impression of "Rembrandt leaning on a Stone Sill"—from the collection of the late Mr. Charles Sackville Bale, a veteran collector of the most exquisite taste—fetched £91. The print known as "Rembrandt's Mill" sold for £69 (Deprez); the "View of Amsterdam" for £10 10s.; the "Landscape with a Cottage and Dutch Haybarn" for £38; the "The Woman in a Large Hood"—in other words, "The Dying Saskia"—£6 6s.; "A Cottage with White Pales," £25 10s.; the "Three Trees," £148; "Six's Bridge," £12 10s. (Bouillon); the "View of Omval," £24 (Meder); "A Village with a Canal and a Vessel under Sail," £19. The sum of £168 was obtained for the "Cornelius Sylvius"; a very perfect impression of the "Jan Six"—the youthful burgomaster reading a manuscript at a window—sold for £390. Mr. Haden had himself bought it for £270—if our notes are accurate—at the sale of the excessively choice collection of the late Sir Abraham Hume. An "Ephraim Bonus" went for £60; a "Hundred Guilder Piece" for £170; the "Landscape with a Ruined Tower," first state, £182, and another impression of this noble design, which was in the third state, for £51. This impression came from the Kalle collection, at the sale of which it appears to have realised exactly the same figure. Mr. Deprez, for the sum of £39, became the fortunate possessor of an irreproachable impression of one of the most masterly of landscapes ever wrought since the beginning of art—"The Goldweaver's Field." It is asserted that he was fully prepared to give a very much larger sum for it. Why did the pathetic and expressive little picture—the print known as "Tobit Blind"—fetch only £4 15s.? The "St. Jerome Reading" reached £58. This was a first state, from the collection of the late Firmin-Didot. Another impression—a second state, from the collection of Lord Aylesford—fetched £37. Mr. Seymour Haden had no less than five or six impressions of the "Clément de Jonghe" portrait. A late state of it fetched £20. The "Lutna," before the window and bottle, fetched £170; a splendidly luminous and fleshy impression of "The Woman Holding an Arrow"—by far the most attractive of the nude subjects of the master—realised £42 (Salting); the "Adoration of the Shepherds"—a night-piece, sixth state—reached £20 (Gutekunst). It came from the Bale collection. The "Presentation" was knocked down to Mr. Duprez for £81; and the highest price of the sale was realised by a first state of "Our Lord before Pilate," which was acquired by Herr Meder—the well-known dealer in Berlin—for the sum of £1,000.

The Seymour Haden collection realised altogether something less than £8,000. F. W.

OBITUARY.

By the death of Mr. Thomas Farrer, which occurred last week, to the deep regret of his friends, we lose, prematurely, a poetic and interesting artist, whose feeling for romantic landscape on the coast or in some

"Wooded, watered country, England's best"—to quote the words of Mr. Browning—was shown first in painting, and secondly in the revived art of etching. Mr. Farrer's etchings, of which he produced as great a number as was consistent with the elaboration he bestowed upon each separate copper which he handled, were popular in England, and yet more popular in America, where he had probably as many friends as in this country, and to which he occasionally resorted. A close student of poetic landscape, and, as certain of his Venetian etchings attest, a student likewise of architecture, Mr. Farrer was very specially distinguished by his effort to convey upon the etched plate more intricate and varied representations of sunset and moonlit-skies than have generally been attempted by etchers with any measure of success. Most of his etchings were completed pictures, rather than summary sketches.

NOTES ON ART AND ARCHAEOLOGY.

MR. FRANK DICKSEE has been elected a full member of the Royal Academy, in the room of the late Edwin Long. It is just ten years since he first became an Associate.

THE first exhibition of the Society of Portrait Painters will open next week in the galleries of the Royal Institute, Piccadilly. We may also mention that Messrs. Hollender & Cremetti have now on view, in the Hanover Gallery, New Bond-street, Millet's pastel of "The Angelus."

A PENSION of £100 per annum on the Civil List has been granted to Mrs. Redfern, widow of the late James Redfern, the sculptor, who died in 1876 at the early age of thirty-eight.

ON Tuesday next, June 30, Messrs. Puttick & Simpson will sell a very large collection of old copper-plate and wood-blocks, which had been formed by the late H. G. Bohn with a view to republication. They include etchings by Cruikshank, Chippendale book-plates with blanks for names, sporting and humorous subjects, portraits of actors, &c. A few of the engraved plates (which come, we fancy, from another collection) have been framed as decorations, the burnished surface being protected against oxidation. The Catalogue is illustrated with some fine examples of engraving on copper.

DURING next week Messrs. Sotheby will sell several interesting collections of coins, &c.: on Thursday a collection consisting mainly of Greek coins of Italy and Sicily; Italian cinquecento medals and plaques, and German mediaeval medals; on Friday the collection of the late C. Roach Smith; on Saturday some good English coins; and on the following Monday a quite exceptional series of tradesmen's tokens of the seventeenth century—issued in London, Middlesex and Southwark—comprising 576 specimens in one lot.

THE Guild and School of Handicraft were to celebrate this afternoon (Saturday) their third anniversary, and also the opening of their new workshops and hall, by a reception and garden party at Essex House, Mile End-road. The Marquis of Ripon has promised to deliver an address.

ON Monday last, June 22, the gold medal annually given by the Queen, on the recom-

mendation of the Royal Institute of British Architects,

"on such an architect or man of science, of any country, as might have designed or executed a building of high merit, or produced a work tending to promote or facilitate the knowledge of architecture or the various branches of science connected therewith."

was presented by the president to Sir Arthur Blomfield, A.R.A.

MR. WALTER CRANE's many designs, now exhibited at the Fine Art Society's, show the inexhaustible fertility of this agreeable and ingenious artist—his pleasant sense of composition, his frequent taste as a colourist—and show likewise his most notable deficiency as a draughtsman of the figure. Mr. Crane is an ornamentist of tolerably wide sympathies. He takes his material from many sources, and has what may appear at times to be a fatal facility in adaptation. Often engaging, he is rarely perfect, though his imperfections do not—let it frankly be admitted—often extend so far as in the drawing of a young woman's back in a drawing that has been elsewhere commented upon. Here, indeed, Mr. Crane is at his weakest. Why was there no one by him to address him, at the right moment, in a phrase which, with a single word altered, is Molière's own?—

"Couvrez-moi ce 'dos,' que je ne saurais voir."

AT the annual meeting of the Society for the Protection of Ancient Buildings, held on June 10, Mr. W. B. Richmond delivered a lecture on "The Impossibility of Restoration." He said that restoration was a fallacy; they could not bring history back to life again. No man could repeat the thought of another man; it had died with its life. Each special thought, through which had been produced a work of art, had died in the production of it; the result lived. It had been an isolated thought for the time being, belonging to the individual who conceived it, and it was gone for ever except in his transmission of it. In all great works of art the merits were of so delicate a nature as to be, he believed, scarcely perceptible to anyone but the authors of them. They alone knew at what they aimed; they alone were aware of the fine line which divided their achievements from the commonplace. Subtle proportions, delicate curves and turns, a peculiar handling of the brush or use of the chisel special to their work, were as much a part of the conception as the conception was a part of the artist. To arrest the progress of decay was all the preserver would presume to do; but the destroyer would attempt to restore. We knew too much and we knew too little to cast our minds in the moulds of past generations, even if by any natural process it were possible to do so. What had been already taken away from British architecture could never be restored; for it had been, as it were, a series of murders of artistic creations, a general slaughter of historical associations never to be replaced or mourned over sufficiently. War and men's passions had done their worst to rid the world of treasures, but so-called restoration had, indeed, done nearly, if not quite, as much: it had left England well nigh bare of her finest monuments.

CAPTAIN LÉON BERGER, military attaché of the embassy at Constantinople, has sent to the Académie des Inscriptions the rubbing of a bas-relief which he took, at the height of 250 metres from the ground, in the gorge of Cheikane, in the mountainous region, hitherto little explored, which separates the ancient Babylonia from Media and Persia. The design resembles a bas-relief from the same tract recorded by Sir Henry Rawlinson. Despite the coarse execution, it is evidently the work of a people under the influence of the ancient Chaldean civilisation, anterior to the style

properly called Assyrian. The figure is that of a man with hair and beard shaven, his waist girt with a fringed cloth, and on his head a turban, the mitra which, according to Herodotus, distinguished the Kissaci. At the side is an inscription in cuneiform characters, arranged in vertical lines and divided by compartments, as upon the statues of Tello.

THE STAGE.

THE THEATRES.

THE good, thorough-going, unmistakable Ibsenite—the disbeliever in beauty, the scoffler at the ideal, the wholly faithful worshipper of whatsoever things are hideous and of evil report—must, last week, if his sympathies permitted him to gaze beyond Norway, have had something like a good time of it even at the French plays at the Royalty Theatre. For—anxious, no doubt, to be "*dans le mouvement*," although the "movement" has indeed been suddenly arrested, and Ibsen himself is heard of no more—M. Meyer, the enterprising manager, gave us a play by M. Jules Lemaitre. As a critic, M. Jules Lemaitre is a smart writer—not exactly healthy, like M. Sarcy, or well-balanced, like M. Augusto Vitu—but ingenious, paradoxical, at times even epigrammatic. He says things well; and, though the big public has not very much regard for him, his literary brethren cannot but succumb to the temptation of reading everything that is written by a man who says things well. 'Tis a very pardonable weakness—thus to be fascinated. Now even in his newish play—which they did last week at the Royalty—M. Jules Lemaitre writes with point as well as boldness. The theme itself is a little strong. It is just the sort of theme that is the envy of slightly gifted literary youths in England, who, having failed thus far to impress us by their treatment of the permissible, the decent, and the charming, make no doubt of their ability to take us all by storm could they but have done once for all with an unattained art and, instead of it, popularise an inexact physiology. Yet somehow the theme, treated by M. Lemaitre unquestionably not only with boldness but with real skill, failed to attract the world in very great numbers to the little theatre in Dean-street. Mdlle. Reichemberg, Mdlle. Du Mesnil, and M. Febvre were not enough. Since then, they have changed the bill, and one of the brothers Coquelin has come to the rescue.

THE theatrical season is practically over. What are you to do at the end of June, against Naval Exhibitions, German Exhibitions, and the charms of the river? Nearly half of our managers have given up the game. Then, again, there has been such a paucity of plays that have hit the public taste. Mr. Pinero's important play at the Garrick—clever as it was—did not please like some of his other work. Its place has had to be taken by a revival of "A Pair of Spectacles." At the Adelphi they have closed for the time being. At Terry's, Mr. Terry is out of his own house. The Strand has been empty. One hears nothing of the Avenue. The Olympic has been closed for some weeks already. Mr. Toole is leaving London, for so few people are really in-

terested in Ibsen himself that even the cleverest of all possible satires upon him cannot reasonably hope to draw the town. A few exceptions, of success, prove the rule of failure. At the Haymarket they have been proud of full houses, and at the Lyceum an admirable spirit of enterprise assists the prestige of what has by this time become classic ground. The theatrical collapse, generally, is the result of coincidences: the result of a chapter of accidents. When October comes round, and people think once more of play-going, the influenza will probably have ceased to trouble and the German Exhibition be at rest. Then, too, may the playwrights prove to have been inspired to happier efforts than any which have been theirs during the dull months we have left behind. But for what remains of the summer there is no chance. A theatrical season of curious barrenness—a time of unhappy effort on the part of the profession, and of timid and half-hearted response on the part of the public—is now over.

FREDERICK WEDMORE.

STAGE NOTES.

MR. WILSON BARRETT has been appearing with his customary success as Hamlet—and likewise in other characters—at Norwich, Yarmouth, and Colchester, during the last week or two. Miss Lillie Belmore has been promoted to the principal juvenile heroines, and has accordingly played Ophelia to the Hamlet of Mr. Barrett.

MR. BEERBOHM TREE has decided, it is said, to play Hamlet in the country during the autumn. Mrs. Beerbohm Tree will play Ophelia—one of the Shaksperian rôles for the performance of which she has obvious advantages. Mr. Fernandez will presumably be included in the cast, and, of course, in an important part, while Mr. Frederick Harrison will play the King.

WE received an invitation too late for it to be possible for us to be present at the production of Mrs. Musgrave's new play at the Vaudeville on Saturday afternoon. Miss Dorothy Dorr—a young American actress who knows her art thoroughly, as we have before had occasion to notice—and Mr. H. B. Conway and Mr. Fred Thorne and others took part in the performance. We suppose it to be possible that the Vaudeville will re-open with this piece in the autumn. At present its doors are closed.

MUSIC.

THE HANDEL FESTIVAL.

I.

THE tenth Triennial Handel Festival commenced last Monday, and for the rest of the week the name of the great Saxon composer will be held in special honour. In all great movements, many people, no doubt, are led by sentiment, or by fashion; but we believe that with the mass of the English people the enthusiasm for Handel's music is genuine. And this triennial glorification serves useful purposes. In the first place, the numerous rehearsals, which take place in various towns long before the Festival, spread a knowledge of, and kindle an interest in, great music. And again, this week devoted to Handel is a protest against contemners of the past as antiquated. Handel's works, like those of Bach, certainly bear the impress of the age in which they were written; and this is not only natural, but a proof of their genuineness. Certain harmonic progressions, cadences, "divi-

sions," have passed out of fashion; but it is only in works of mediocre composers that such appear dull. In Handel and in Bach, one not only tolerates all that savours of the past, but rejoices to see how genius triumphed over form. A similar spirit has prompted some moderns to condemn Haydn and even Beethoven; but it is a spirit of narrow-mindedness, the result of ignorance. Persons of this stamp will in the future sneer at Schumann or Wagner, for they too, in their turn, will become old. It is, of course, possible to go to the other extreme, and to admire the old at the expense of the new, but this usually happens only to those who have grown up without becoming acquainted with modern music; and nowadays that is an extremely rare occurrence. Handel worship, as well as Bach worship, is a good thing; it is a solid foundation which helps one the better to appreciate and the more to enjoy later manifestations of genius.

"The Messiah" was performed last Monday, and the choral singing was magnificent. The tenors, once or twice, showed a tendency to drag, and the quality of tone of the sopranos in the high notes was not, perhaps, of the best; but for vigour of attack, precision, fulness, and also delicacy of tone this chorus will compare favourably with any of the past Festivals so far as we can remember. Mme. Albani sang the soprano music with great effect. Miss Marian McKenzie, in the contralto music, was heard to much advantage; she sang in an artistic and dignified manner, and with a little more fervour would have obtained a still more marked success. Mr. E. Lloyd was in admirable voice, and Mr. Santley, who was at his best, was received with tremendous enthusiasm. Mr. A. Manns conducted with his usual skill and energy, and once again proved himself fully equal to his gigantic task. Mr. C. Jung was leader of the vast army of instrumentalists.

The programme of the "Selection" day (Wednesday) included a "Gloria Patri" for double chorus and double orchestra. It was written at Rome in 1707, and is supposed to have been intended for the close of one of the Vesper Psalms. It is short, but contains some solid contrapuntal writing. One of the subjects recalls a passage in the "Hallelujah" chorus of the "Messiah," and another was actually used afterwards by the composer for the "Alleluia" of his "Deborah." Another novelty was a selection from one of the "Chandos" Anthems (Psalm xcvi.). As these works rank "among the most beautiful of the great master's compositions," it is strange that not one has been given hitherto at these Festivals, and even now only portions of one. But there are certain favourite songs and choruses which the public expect, and the programme has to be trimmed in accordance with popular taste. The true lovers of Handel must regret that the middle programme of the Festival contains so much that is familiar, while there are still so many of his works still known, at least to the public, only by name. The portions of the Anthem consisted of a Sonata for orchestra, a florid tenor solo, and two choruses full of power. The fresh, vigorous Overture to "Giustino" was another interesting novelty, and the performance was admirable. Mr. Manns' band had, however, further opportunities of showing its powers in the delightfully winning "Menuet" from the opera "Berenice," and in the quaint and attractive "Bourrée" from the celebrated "Water Music." The Overture and the Bourrée were interesting studies in eighteenth-century orchestration. Handel had as lively a sense of contrast as any of the modern composers. The applause at the close of the latter was so great that Mr. Manns repeated the first part. A charming duet, "Caro Bella" from "Giulio Cesare," was well rendered by

Mme. Nordica and Mr. Santley; the music is as fresh as if only just written, and the opening phrase brought to mind a familiar chorus in Mozart's "Don Giovanni." Mme. Albani sang in brilliant fashion a pleasing Aria "Mio caro bene," from "Rodelinda," but took many liberties with the music. Another novelty was the majestic chorus "By slow degrees," from "Belshazzar." Mme. Albani sang besides "Angels, ever bright and fair," but it was a pity to make the Aria last so long: the rendering of a fine song, to be truly artistic, should be simple. But while she was pausing we had time to reflect on the unsatisfactory mode of accompanying most of Handel's songs. In the Aria from "Rodelinda," mentioned above, the additional accompaniments of Robert Franz were used, and thus a proper substitute for the harpsichord was provided. It is, however, the usual practice to give only a skeleton accompaniment, and this is called doing reverence to the composer's intention. We stick to the letter, and lose the spirit. The programme included many familiar pieces—"Sound An alarm" admirably sung by Mr. Lloyd; "Let the Bright Seraphim," well rendered by Mme. Nordica, although her voice was not in the best order; "O voi dell Erbeo," sung with great success by Mr. Santley; and "Waft her, Angels," by Mr. Barton McGuckin, for which he received much applause. The performance ended with four Airs and the "Wretched Lovers," from "Acis and Galatea," and "See the Conquering Hero comes," from "Joshua." The choral singing throughout was extremely grand, and Mr. Manns conducted with great skill and energy. Mr. W. T. Best performed with his customary skill the fine organ Concerto in F (No. 4), with orchestral accompaniment. J. S. SHEDLOCK.

"LE REVE."

"LE REVE"—a lyrical drama in seven tableaux, adapted from Zola's novel by M. Gallet, music by M. Alfred Bruneau—which was recently produced at the Opera Comique, is quite different in every respect from the conventional opera. The poem offers a strange combination of mysticism and naturalism; the dialogue, characters, dresses, and scenery are essentially modern, yet the action is interrupted, at times, by the voices of an invisible chorus of angels.

M. Bruneau is a pupil of Massenet, and an *ex-pri*s of Rome. The influence of Wagner is very marked: the music is made to follow the text of the poem word for word, under the form of a "continuous melody" accompaniment; there are no duos, trios, *airs de bravoure*, grand finales, or any of the conventional *fleuritures* of operatic music. It is more like a lyrical conversation; and if now and again the words of the poem grow more passionate, or the situation more dramatic, the orchestra proceeds to develop the intensity of the *andante* or *crescendo* movement. At first, the effect produced is monotonous; but gradually the intelligent listener follows the rhythm of the accompaniment, and realises the composer's intention. The score is rather intricate and difficult for the orchestra; the harp plays an important part, while, at times, certain apparently impetuous discordances of the wind instruments are quite startling. But we must accept the new opera on its own merits, for M. Bruneau has made the following frank statement: "I have done my utmost to produce a clearly written work quite modern in style; this I have done to the best of my ability—simply, religiously, with all my heart and enthusiasm."

After a short overture the curtain rises on the simple home of the Huberts, embroiderers of sacred vestments. Angélique, their adopted daughter, has dropped her embroidery and is lost in a dream; seraphic voices are heard,

those of the saints and martyrs of whom she daily reads in her old folio, "The Golden Legend." She is awakened from her trance by Hubertine, who gently reproves her for neglecting her work; she immediately takes up her needle and Hubert comes to her assistance. While they are working together, Mounseigneur Jean d'Hauteceur, bishop of the diocese, calls to see what progress has been made with a piece of embroidery he has ordered. The four personages engage in a sort of lyrical conversation, in which Angélique explains that at times St. Agnes and St. George and her other guardian saints seem to float around her, sweetly singing. After blessing her, the bishop leaves. "How sad he looks," exclaims Angélique; and Hubertine explains that his sorrow is due to his having lost a dearly loved wife, after whose death he entered the Church; and that his son "who is as beautiful as an angel and as rich as a king," is to be a priest also. Then Angélique relates how constantly she dreams that she is to marry a prince; that their love will be pure with no sad awakening; for her dream, though ending in death, will be renewed to all eternity in heaven. Hubertine reprimands her for her foolish thoughts; but Angélique again falls into a dreamy state, during which she sees the vision of her coming lover. Next day, as Angélique is prosaically washing the family linen in the meadow at the back of their house, Félicien, the bishop's son disguised as a young artist, who has been watching her for days past, comes forward and greets her. 'Tis love at first sight. Their meeting, their avowal of mutual love and eternal fidelity, and their talking, offer the strangest mixture of prose and poetry ever seen on the stage of the Opera Comique; while the composer's rendering of the scene is quite in keeping with the various episodes of the poem.

In the following act the Huberts witness from their window the procession of Corpus Christi; and each in turn describes the various phases of the pageant, so as to produce the illusion that they are speaking, not only to each other, but also to the audience. At last, Angélique perceives her lover walking beside the bishop, and at once recognises that he is no other than the bishop's son. Her dream is realised! The fourth tableau, "L'Évêché," consists of a series of dramatic scenes between the bishop, the Huberts, Félicien, and Angélique, who, each in turn, come to plead their cause. But Mounseigneur is inflexible; he has decided that his son shall enter holy orders, and never will he consent to his union with Angélique. All this part is treated with great dramatic effect by the composer, who has been obliged in some scenes to return to a certain extent to the formulas of conventional opera. For instance, the bishop's soliloquy, his interview with his son Félicien, the pathetic scene with the Huberts and Angélique, contain some pieces which might almost pass muster as recitatives, duos, and ariosos.

The third act is a long duo between Angélique and Félicien, who wants her to elope with him; but at the last moment, when she is ready to fly, she hears the seraphic voices bid her remain. She resists the temptation, and Félicien leaves her. In the last scene Angélique lies dying; Félicien succeeds in persuading his father to visit her. The scene is a partial representation of the last rites of the Roman Church, and the music an arrangement of the Latin prayers chanted on such occasions. After anointing the face, eyes, and mouth of Angélique, the bishop takes a lighted taper from an acolyte and attempts to put it in the dying girl's hand, murmuring the last prayer, "Accipe lampadem ardentem. . ." But Angélique neither sees nor hears. The bishop then tries the effect of a miraculous gift enjoyed by his ancestors; he kisses Angélique, and addresses an ardent prayer to Heaven for her recovery, exclaiming:

Si Dieu veut, je veux! Thereupon Angélique gradually awakens from the sleep of death, takes the lighted taper, slowly rises from her couch, and while her parents, Monseigneur, and the two acolytes sing the "Laudate, pueri, Dominum," she gently drops into her lover's arms:

"Cher seigneur, je suis votre femme;
Enfin mon rêve est accompli! . . .
Le ciel s'ouvre! Ah, nocces radieuses!
Je meurs d'amour sous ton premier baiser!"
and dies.

The cast of "Le Rêve" is excellent. Mlle. Simonet achieved quite a triumph in the difficult part of Angélique; M. Engel, though an accomplished artist, has not sufficient voice to do full justice to the part of Félicien; M. Bouvet, as Monseigneur d'Hautecœur, sang with great dramatic effect. Mme. Deschamps-Jehin, who graciously accepted the secondary part of Hubertine, and M. Lorrain, as Hubert, contributed to the perfection of the *ensemble*. Above all, unreserved praise is due to M. Daubé and his admirable orchestra for their perfect execution of a score so different to the music they are accustomed to play. M. Carvalho, the manager of the Opera Comique, also deserves his share of commendation for having produced with so much artistic taste the work of a new comer.

The first two performances of "Le Rêve" have met with great success. It remains to be seen whether the general public will ratify the favourable verdict of the select and essentially artistic audience of the *Première*. To the impartial critic, M. Bruneau's lyrical drama is a most interesting novelty. The simplicity of the poem, the limited number of characters, and the absence of choruses, pageants, ballet, gorgeous scenery, and all the usual sensuous attractions of the opera have rendered the task of the musician all the more difficult; therefore we hope that the young and talented composer will meet with the success he merits.

CECIL NICHOLSON.

RECENT CONCERTS.

WE can only attempt a brief record of some of the more important concerts of the week.

ON June 18, Signor Sgambati gave a chamber concert at Princes' Hall, with a programme consisting, with one exception, entirely of his own compositions. His second Quintet in B flat for pianoforte and strings, is an exceedingly clever work, and one notes in it a curious mixture of Italian lightness and German solidity. It was admirably interpreted by the composer and Messrs. Sauret, Raggianti, Van Waefel-

ghem and Piatti. Mrs. Henschel sang some graceful songs, and Mr. Henschel was much applauded for his vigorous rendering of Schumann's "The two Grenadiers." Signor Sgambati played some effective solos: he is a brilliant pianist.

A pianoforte Trio by M. Breton was performed at Señor Albeniz's concert in the evening of the same day. The writing shows ability, but lacks individuality; the Scherzo is the best movement.

On Saturday afternoon there was a concert at the Albert Hall, at which Mme. Adelina Patti appeared with brilliant success. She sang a light, showy Waltz by Signor Ardit, and a new, graceful song by Gounod, entitled "Only." Messrs. Lloyd and Santley were enthusiastically received. Chevalier Bach gave a neat, though tame, performance of the first movement of Beethoven's Concerto in C minor, into which he introduced a cadenza by Beethoven with sundry interpolations. Part songs were sung by members of the Leeds Choir.

On the same afternoon Señor Sarasate gave the last of his series of concerts. Owing to the severe indisposition of Mme. Berthe Marx, Herr Schönberger was the substitute, and, as may be supposed, a satisfactory one. The programme included familiar works. The eminent violinist was received by a crowded audience with immense enthusiasm. None but a remarkable player could venture to announce, as he did, six concerts; and the immense success which he has obtained will be repeated whenever he chooses to give further exhibition of his powers.

The bright Overture "Der Barbier von Bagdad" was repeated at the fifth Richter concert on Monday evening. An interesting feature of the programme was the Introduction and First Scene from "Das Rheingold." Mr. Henschel as Alberich sang with great declamatory power. He was also heard in other familiar excerpts, and took part with Mrs. Henschel in the duet from Act II. of "Die Meistersinger." The performances of these excellent artists gave great pleasure. M. Paderewski played his pianoforte Concerto in a most brilliant manner, and was recalled no less than five times.

This pianist gave his last recital on Tuesday afternoon, and played with his usual skill, and with more than his usual feeling and charm. His reading of Beethoven's Sonata in A flat (Op. 110), was somewhat effeminate at times, but it was poetical: the technique was of the neatest. Of his Chopin pieces we enjoyed most the Impromptu in F sharp and the G minor Ballade. There was an unusually large audience.

MR. WM. HEINEMANN begs to announce that *Mr. Hall Caine's New Book, "THE LITTLE MANX NATION,"* is now ready at all Booksellers and Bookstalls. Price 3s. 6d. in cloth, or papers covers 2s. 6d.

LONDON: 21, BEDFORD STREET, W.C.

FOOTSTEPS of FATE, by Louis Couperus, Translated from the Dutch by Clara Bell,—Forming the Seventh Volume of "Heinemann's International Library,"—is now ready at all Booksellers and Bookstalls. Price 3s. 6d. cloth, 2s. 6d. paper.

LONDON: WM. HEINEMANN, 21, BEDFORD STREET, W.C.

Messrs. William Blackwood & Sons' NEW PUBLICATIONS.

THIS DAY IS PUBLISHED.

FOR GOD AND HUMANITY:

A Romance of Mount Carmel.

By HASKETT SMITH, M.A.,

Author of "The Divine Epiphany."

3 vols., post 8vo, 25s. 6d.

*** "While Mrs. Oliphant's 'Memoir of Laurence Oliphant' continues to run through numerous editions, a further illustration of the Life and Teaching of the Haifa Mystic is about to be published by Messrs. Blackwood & Sons. The author of the work which has been thrown into the form of a novel, is Mr. Haskett Smith, a clergyman, who embraced Laurence Oliphant's views and became a member of the Haifa Community, which is we believe now under his direction. The scenes are laid chiefly in Palestine, at Haifa, or in the mountain home of the community at the Druse village of Dalish, and Oliphant's special views and methods of influence are all elucidated in the course of the plot."—*Athenaeum*, June 20th, 1891.

FIFTH EDITION. Now ready.

MRS. OLIPHANT'S

MEMOIR OF THE

LIFE OF LAURENCE OLIPHANT, AND OF ALICE OLIPHANT, HIS WIFE.

2 vols., post 8vo, with Portraits, 21s.

"This is the book of the season."—*Daily Chronicle*.

"Never in the exercise of her imagination has Mrs. Oliphant drawn anything more remote from ordinary life."—*Standard*.

"A delightful and sympathetic memoir. . . . There has seldom been a more striking subject for picturesque biography than Laurence Oliphant."—*Times*.

"It forms a combination of the pathetic, the humorous, and the wonderful not often to be met with."—*St. James's Gazette*.

"The most interesting book we have read this year."—*Punch*.

"It is a fascinating book on a fascinating subject."—*Globe*.

THIS DAY IS PUBLISHED.

GALLOWAY in ANCIENT and MODERN TIMES. By P. H. M'KERRIE, F.S.A. Scot., F.R.G.S., &c., Author of "Lands and their Owners in Galloway." Crown 8vo, 7s. 6d.

THIS DAY IS PUBLISHED.

IT HAPPENED YESTERDAY: a Novel. By FREDERICK MARSHALL, Author of "Claire Brandon," "French Home Life." In One Volume, crown 8vo, 6s.

THIS DAY IS PUBLISHED.

The Sixth Divisional Volume, completing the work.

STEPHENS' BOOK of the FARM.

Fourth Edition, Revised, and in great part Rewritten, by JAMES MACDONALD, of the "Farming World," &c. Illustrated with numerous Portraits of Animals, Plans of Farm Buildings, and Engravings of Implements, &c. Price 10s. 6d.

[Divisions I. to V. Price 10s. 6d. each.]

BLACKWOOD'S MAGAZINE.

No. 909.—JULY 1891.—2s. 6d.

CONTENTS:—LAURENCE OLIPHANT.—THE EVE OF ST. JOHN IN A DESERTED CHÂLET.—RECENT FRENCH NOVELS.—CHRONICLES OF WESTERLY: A PROVINCIAL SKETCH.—A DAY'S RAID INTO NORTHUMBERLAND, by Professor Veitch.—STUDIES IN TACTICAL PROGRESS DURING THE LAST TWENTY-FIVE YEARS.—A ROADSIDE NATURALIST, by a Sod of the Marshes.—TELEPATHY, by Bishop Courtenay, D.D.—PEEL, by Herbert Cowell.
